The new method does away with the practice of proportional representation and in theory, at least, will have a tendency to check the bloc system of government which has ruled France for years. Whether this will actually happen remains to be seen. The Left bloc supported the measure chiefly because they expected it would strengthen their hands by keeping them in closer touch with their constituents. The new electoral law was to be tried out for the first time in the elections which were to take place in the spring of 1928. Needless to say discussion was rife as to the effect of the law and the elections on the life of the National Union ministry. Considerable speculation was abroad as to whether the Left bloc would continue to support the Poincaré Nationalists or whether they would unite with the Socialist group (Centre) and form a government which would disregard the Nationalists entirely.

FOREIGN RELATIONS. In August, after three years of negotiations, France and Germany signed an economic pact which was to last only until Dec. 15, 1928, but which was subject to renewal. The chief feature of the pact dealt with the tariff, which was to be based on the familiar "most favored nation" reciprocal agreement. The publication of a new French tariff law on September 8, as a result of the agreement between France and Germany, caused considerable concern to American exporters. Under the new bill American goods would have to pay the full tariff rates and in some lines would be practically shut off from the French market because of German competition in the same lines of trade. On the day after the publication of the new law, American officials protested to the French government and asked for immediate moderation of the act. In many quarters of French opinion satisfaction was expressed on account of the new law because it partook of the nature of reprisal against the high-handed American tariff rates which virtually excluded French goods from the American markets although they were not in specific competition with American manufactured goods in the same line.

In some sections of American editorial opinion there was a feeling that the French were deliberately retaliating for the failure of the

American government to change the provisions of the debt settlement agreement. To some extent the bitter anti-American feeling was offset by the transoceanic flight of Colonel Lindbergh and the visit of the American Legion. Colonel Lindbergh's exploit is treated under the title **AERONAUTICS** and the visit of the Legion under **AMERICAN LEGION**. The French government in its reply to the American protest stated that the new rates were to stand until such times as the two governments negotiated a treaty based on mutually reciprocal concessions. The American government stated just as strongly that until such a treaty was negotiated the rates of the Fordney-McCumber Tariff act would stand and it would continue to press for the non-enforcement of the new French rates. The Democratic press of the United States seemed to derive a great deal of enjoyment from the discomfiture of the Republican administration, and undoubtedly hoped that a tariff war with France would provide good substantial campaign material for an attack on the protective tariff system in the presidential campaign of 1928.

The tariff controversy was temporarily settled when, on November 21, the French government restored the rates imposed on American imports prior to September 8. This restoration resulted from a provisional agreement reached between the two countries late in October by the terms of which American goods should pay the same duties as they did previously except in cases where the new minimum French tariff prescribed higher rates for everybody. The American government agreed to discontinue the activities of Treasury agents who, according to the Fordney Act, examined the books of foreign concerns in order to get a basic cost of production and thus raise or lower the tariff rates to meet foreign competition on a scientific footing. For a similar discussion with Argentina consult the article on that country.

Relations with Russia during the summer were very severely strained by an act of the Soviet Ambassador at Paris, Christian Rakovsky. Rakovsky, very injudiciously, to say the least, signed a document issued by the Central Committee of the Communist Party, which aimed to have the citizens of any country which might be at war with Russia "work actively to defeat their governments" and suggested that soldiers of these countries should join the Bolshevik army. Naturally the French government strongly resented such sentiments and made a point of strongly protesting to the Soviet government. The Russian Foreign Minister, Tchichérin, disavowed the action of Rakovsky, "reproving in the clearest and most formal manner the idea that one of the Soviet's representatives could organize a propaganda of insurrection and desertion on the territory of France, with which country the Soviet government entertains pacific relations." Despite this disavowal the Right press of France demanded in no uncertain tones the recall of Rakovsky. This was finally acceded to by the Poincaré cabinet, although Briand was able to accomplish it with the minimum amount of friction. Rakovsky was succeeded by M. Dogalevski. Attempts to settle the chief bone of contention between France and Russia, the old Czarist debt, were prominent during the year but no working agreement was reached.

Relations with Italy during the year passed

through the entire gamut of friendliness and hostility. The trouble began when Italy signed the treaty of Tirano with Albania (q.v.). As noted in a discussion of that treaty under Albania, Jugo-Slavia turned first to Germany and then to France for a treaty alignment which would offset Italy's evident economic and political penetration of the Balkans. The result was the signing of a pact between the two countries in the last month of the year, much to the chagrin of Mussolini.

The signing of the treaty with Jugo-Slavia took on much more significance in the light of the visit of an Italian squadron to Tangier in the last week of October, which reminded one very much of the dispatch of a German warship to Agadir in 1911 and the visit of the Kaiser to Tangier in 1905. The French and Italians were undoubtedly rivals in Northern Africa and the fact that the French practically shut Italy out of Morocco in 1911 was something that galled Mussolini. Although never officially stated, there was no reasonable doubt that the Italian squadron visited Tangier to tell France that in any further changes in Africa Italy was to be considered a vital factor and there was also no reasonable doubt that France's alignment with Jugo-Slavia was an answer to Italy's projection in the Northern Africa sphere.

According to treaties signed in 1900, 1902, and 1912 Italy gave up any rights in Morocco and Tangier for a free hand in Libya. The French press brought this fact out forcefully in discussing the Italian visit to Tangier. The anti-French outburst in Italy after the signing of the treaty with Jugo-Slavia was lightly passed over by the French press and as the year closed Italo-French relations seemed to be taking a smoother path under the guiding influence of the pacific Briand. He said publicly that the Tangier incident was merely a trifle of no significance and that the treaty with Jugo-Slavia had no connection with it but was only another peace compact between nations encouraged by the League of Nations. He said a few nice things about Mussolini and declared that a war between the two countries was an impossibility. On December 3 a commercial agreement was signed between the two countries and this was hailed as an omen of good will between the Latin governments.

SITUATION AT THE CLOSE OF THE YEAR. The stabilization of the franc was brought to the fore again in the early part of December by the statement of Premier Poincaré on December 8: "You know very well that we are in a difficult financial situation and that we are on the eve or the day before the eve of important and inevitable money operations. Whatever solution may be reached, we shall not remain forever with money which is not convertible into gold. You also know that we cannot undertake such operations, whatever may be the solution—and I prejudge nothing—without absolute monetary, financial and economic security, not for six months, and not even for one year, but for several years." There was much speculation as to when the day of stabilization would arrive but most observers felt that it would not come before the May, 1928, elections, and that Poincaré would enter those elections with the slogan that he and the franc stood or fell together.

FRANCIS, DAVID ROWLAND. American diplomat and political leader, died at St. Louis, Mo., January 15. He was born in Richmond, Ky., Oct. 1, 1850, and, going to St. Louis, Mo., in 1866, was graduated from Washington University in 1870. Entering business in a commission house in 1877, he established the firm of Francis Brothers & Company, and the D. R. Francis & Brother Commission Company, grain merchants, of which he was president. He was president of the Merchants' Exchange in St. Louis, 1884. In 1885 he was elected mayor of St. Louis on the Democratic ticket, and in 1889 was elected Governor of Missouri. In 1896 he served as Secretary of the Interior in President Cleveland's cabinet. In 1904 he was president of the Louisiana Purchase Centennial Exposition, and on Mar. 6, 1916, he was appointed, by President Wilson, ambassador to Russia, being present in that country at the time of the revolution when the czaristic régime and the Kerensky revolutionary government were overthrown, and the Bolshevik rule was established. He was the first foreign diplomatic representative to recognize officially the republic established by Kerensky. Later, when the Bolshevik government established its administration, he was accused of aiding a counter revolution in Russia. In 1916, when the United States represented both the German and the Austrian interests in Russia, Ambassador Francis presented a German peace proposal to the Russian government, and he participated in many important conferences. After the hostile army had approached Petrograd, Ambassador Francis left that city for Vologda, and later proceeded to Archangel, where he maintained relations with the new government. In October, 1918, being in London, he was summoned to Paris to confer with Secretary of State Lansing. Mr. Francis at one time was owner of the *St. Louis Republican*; he sold it to the *Globe-Democrat* in 1919. He was vice president of the Merchants-Laclede National Bank, president of the Madison County Ferry Company, and director of the Mississippi Valley Trust Company and trustee of the New York Life Insurance Company, in addition to being interested in various philanthropic and civic enterprises.

FRANKLIN, BENJAMIN, ANNIVERSARY. See **CELEBRATIONS**.

FRASER, SIR JOHN GEORGE. South African statesman, died at Bloemfontein, South Africa, in June. He was born at Beaufort West, in the Karroo, Dec. 17, 1840, the son of a Scotch clergyman, and was educated in Scotland at the Free Church Institution at Inverness, and at Marischal and King's Colleges, Aberdeen. He returned to South Africa in 1861, and after fighting in the Basuto war he became secretary to Sir John Brand, President of the Orange Free State. After holding several civic and legal offices, he entered active politics, and from 1880-99 represented Bloemfontein in the Volksraad, being its chairman in 1884-96. In 1896 he stood for the Presidency but was defeated by Mr. Steyn. In 1899 he opposed the war policy of the Orange Free State, but supported the Boer cause until Bloemfontein was occupied by Lord Roberts, when he turned the town over to the British commander. He helped in the work of

reconstruction, and was a member of the Legislative Council and the Inter-Colonial Council, under Lord Milner. He was a consistent opponent of a closer union between the Transvaal and the Orange Free State, but when the four South African colonies were merged into a single state, the Union of South Africa, he became a senator in the union parliament, at the invitation of General Botha, serving from 1910-20. Fraser was created a knight in 1905, and received the degree of LL.D. from Aberdeen University.

FREE BAPTISTS. See **BAPTISTS, FREE.**

FRENCH CONGO. See **FRENCH EQUATORIAL AFRICA.**

FRENCH EQUATORIAL AFRICA. A French possession in Africa on the Atlantic coast between the territories of the Belgian Congo and British Kamerun; comprising the region formerly known as the French Congo; stretching northward to the Bahr-el-Ghazel and Lake Chad, and bounded by the Congo and Ubangi Rivers in the interior. Area 975,635 square miles; population, according to the census of 1926, 3,124,172, of whom 3031 were Europeans. Including the Kamerun territories the area is 1,048,638 square miles and the population, 4,345,936. The possession comprises the four colonies of Gabun, Middle Congo, Ubangi-Shari, and Chad. The Kamerun territories were ceded to Germany by France, in return for recognition of the French protectorate in Morocco. They were restored to France by the Treaty of Versailles in June, 1919. The boundary between French Equatorial Africa and the Anglo-Egyptian Sudan was fixed by an agreement signed Feb. 28, 1924.

Equatorial Africa is very rich in natural resources, but for the most part they are undeveloped. There are about 30,000 square miles of tropical forests extending to the Gabun coast containing many species of valuable timber. Palm oil and wild caoutchouc are the principal commercial products. Coffee is raised to some extent. Livestock includes cattle, sheep, camels, horses, asses, and ostriches. Copper, zinc, and lead are to be found. The total imports in 1925 were valued at 88,352,763 francs and the total exports at 66,809,700 francs. In 1927 the general budget for the four colonies balanced at 20,090,157 francs. The revenues are made up of import, export, and excise duties, navigation fees, and certain semidirect taxes. The colonies are under a governor-general whose headquarters are at Brazzaville, but each colony is locally governed by a lieutenant-governor, aided by an administrative council. Governor-General, in 1927, R. Antonetti, appointed in July, 1924.

FRENCH GUIANA, gè-a'na, CAYENNE. A French colony and penal settlement on the northeast coast of South America. Area, about 34,740 square miles; population at the census of 1921, 44,202. Cayenne, a seaport town, is the capital with a population in 1921 of 10,146. The population figures do not include the number in the penal settlement of Maroni, the floating population of miners, French officials, or native tribes. The latest available education statistics (1925-26) showed a school population of 3400 exclusive of Maroni, which had 208. The extensive forests are rich in timber of commercial importance. Although agriculture is not engaged in on a large scale the following products are raised: cacao, coffee, gutta percha, indigo,

maize, manioc, rice, sugar cane, and tobacco. The chief occupation is placer mining for gold. Other minerals produced are silver, iron, and phosphates. The total imports in 1925 amounted to 49,171,854 francs and the total exports to 39,088,271 francs. The chief articles of export were gold, rosewood essence, various timbers, phosphates, cacao, balata, and hides. The budget, which amounted to 11,000,000 francs in 1925, must be partially met by subsidies from the home government. The colony is under a governor who is aided by a privy council and by a council-general elected by French citizens in Guiana, and is represented in the French parliament by one deputy.

FRENCH GUINEA. A French colony on the west coast of Africa between Portuguese Guinea and the colony of Sierra Leone. Area, about 89,436 square miles; population, estimated in 1925, 2,059,924, including 2049 Europeans, of whom 1059 were French. Capital, Conakry. The chief products are palm oil, palm nuts, gum, rubber, millet, rice, and coffee; experiments have been made in the cultivation of bananas, pineapples, rubber trees, etc. The last livestock census showed 430,000 cattle, 76,718 sheep, 103,817 goats, 2600 horses, and 560 asses. Some gold is found in the colony. The imports in 1925 were valued at 103,429,743 francs and the exports at 53,290,574. The chief exports were: Rubber, cattle, ground nuts, hides, wax, wool and palm-kernels. Three hundred and thirty-seven vessels entered and 327 cleared in 1923. The budget for 1926 amounted to 21,624,555 francs. The colony is under the governor-general of French West Africa (q.v.)

FRENCH INDIA. The name given to the group of French dependencies in India, of which the chief is Pondichéry. The area of the five colonies is about 196 square miles and the collective population in 1926 was estimated at 273,081. The five dependencies with their estimated populations in that year were as follows: Pondichéry, 175,168; Karikal, 56,091; Chandernagor, 26,500; Mahé, 10,321; and Yanam, 4995. In 1925 the government maintained 59 primary schools and three colleges, with 290 teachers and 10,295 pupils. In 1926 the budget balanced at 2,840,225 rupees. The chief crops are paddy, rice, sugar, cotton, manioc, cacao, coffee and groundnuts. There are at Pondichéry three cotton mills and at Chandernagor one jute mill; the cotton mills have, in all, 1622 looms and 68,631 spindles, employing 7975 persons. The total imports for all the dependencies in 1925 amounted to 44,274,164 francs and the total exports to 51,748,624 francs. French India has 43 miles of railway. The dependencies are under a governor whose headquarters are at Pondichéry, and an elective general council; they send one deputy and one senator to the French parliament.

FRENCH INDO-CHINA. A region in south-eastern Asia, comprising the French colony of Cochin-China, and the protectorates of Annam, Cambodia, Tonking, and Laos, as well as Kwang-Chau-Wan, which has been leased from China, and the district around Battambang, which was ceded by Siam. Total area, about 274,385 square miles; population in 1924, 19,636,137, of whom 26,137 were Europeans (excluding military forces). The native Annamites constitute about three-fourths of the population. Capital, Hanoi, with a population of approximately 115,000.

Other important cities are: Cholon, Bindinh, Saigon, Pnom-Penh, Huë, Vien Tiane, and Haifong. The region of which Saigon is the centre is chiefly agricultural, being one of the greatest rice producing areas of the world, but fisheries along the coast and along the lakes are of some importance. Haifong is the centre of a region devoted to agriculture, mining, and manufacture. A third district around the port of Tourane produces chiefly cinnamon, sugar, and tea. In 1923 an irrigation system was completed reclaiming 45,000 acres on which two rice crops a year could be produced.

The mineral resources of French Indo-China include coal, zinc, tin, lignite, antimony, and wolfram. The forests reserves are very important but suffer from inefficient exploitation. The import trade in 1925 was valued at 1,780,000,000 and the export trade at 2,456,000,000 francs. The general budget for 1925-26 was estimated at 77,606,000 piastres 65,742,810 being for the ordinary budget and the remainder for the extraordinary budget. The total of the local budgets (for the component parts of French Indo-China) was 48,978,053 piastres. The combined budgets of Indo-China therefore amounted to about 136,000,000 piastres—from which must be deducted 7,890,000 piastres, the subvention allowed the local budgets from the general budget. Of the total for the general budget, 19,760,000 piastres are for public works, 1,100,000 piastres for education, and 291,400 for medical assistance. At the end of 1924 the total length of railway line was 1288, about two-thirds of which belonged to the government. Indo-China is under a governor-general and a superior council which acts through a permanent commission, and at the head of each state is a resident superior, with the exception of Cochinchina, which is directly under the home government. Governor-general in 1927, Alexandre Varenne (appointed 1925).

FRENCH LITERATURE. The wave of anarchy in French literature that had set in since the war was beginning to subside a little in 1927; and while hasty production was still prevailing at the expense of solid work in many cases, the return to traditional standards was indisputable. For instance, the description of abnormal passions that had been fostered by men like Proust and André Gide was, at last, openly challenged; François Porché's *L'amour qui n'ose dire son nom* was a timely piece of writing. The curiosity for degraded humanity was still evident in books like Fr. Carco's *L'amour vénal*, but this is a study in lower strata of humanity which is not inspired by the personal tastes of the author.

The great dispute on the essence of poetry which had been raging for two years was sidetracked, so to speak, towards a renewal of interest in Mallarmé that was expressed publicly in several occasions; e.g. by two important books, Jean Royère, *Stéphane Mallarmé*, with Preface by Valéry, and Thibaudet, *La Poésie de Mallarmé*. Let us add that a reaction has set in against Valéry, the lion in the literary world since his election to the Academy.

The battle around the *Action Française*, the paper whose principal figure was the great writer Ch. Maurras, and which was condemned

publicly by the Pope, is far from settled. The documents of the case were published by Maurras and Daudet *Action Française et Vatican*, and many publications *pro* and *con* followed, e.g. Mermeix, *Le ralliement et l'affaire de l'Action française*, and Marie de Roux, *Charles Maurras et le Nationalisme français*.

An imposing manifestation was held at the Panthéon, on October 26, in behalf of the "Hommes de Lettres morts pendant la Guerre"; 560 authors were thus honored.

All year round manifestations took place in commemoration of the centenary of Romanticism (1827, Hugo's *Preface to Cromwell*); special revivals of romantic plays, exhibits at the home of Nodier (where the Cénacle used to convene and which was in the Bibliothèque de l'arsenal), inauguration of the inn where Lamartine stayed in Aix, near the Lac Bourget, and which was made into a museum; and finally, December 16, at the Trocadero, a big Hugo manifestation presided over by Minister Herriot. It seemed that the celebrations would more or less continue until 1930 which some considered as really the date. For early 1928, the Comédie Française prepared the staging of Victor Hugo's *Cromwell* (which had never previously been represented).

The Grand Prix de Littérature for 1927 was awarded by the French Academy in June to Joseph Pesquidoux, whose work has been a constant exaltation of the traditional love for the native soil and the life on the farm, as against the evils often created by modern industrial life. For other literary prizes, see under headings below.

POETRY. A complete edition of Viéla-Griffin's poems is under way at the Mercure de France; a volume of posthumous poems by Pierre Louys was naturally received with favor; Fernand Gregh, besides a new volume, *Les clartés humaines*, published a volume of *Poésies choisies*; and the Comtesse de Noailles, who used to sing the joy of life, sings to-day *L'honneur de souffrir* (Cahiers verts). A. P. Garnier offers *Branche de guy*; Tristan Derème, *Le Zodiaque ou les Étoiles de Paris* (a disconcerting mixture of mythology with twentieth century irony). Mme. Gérard d'Houville gives charming poems in prose in *Oses le magicien*. So much for the veterans in the field. The Prix Moréas, which was awarded this year for the first time, went to Guy-Charles Cros, for his volume *Avec des mots* which marks the zenith of achievement of that young poet already very favorably known. The following are titles of volumes which are all graceful and fine poetry, although none of them tries to discover new themes: *La Lampe d'Aladdin*, by Raymond Gentil; *Odyl*, by Léon Uhl (the genre of Rostand or Gaudy); *La Forêt enchantée*, by René Fernandet (a disciple of Le Cardonnell and Valéry); *Oapries des heures*, by Jacques Normand; *Le Jardin sans clef*; *Ici-bas*, by Gabriel Audisio; *Oe joli temps de demoiselles*, by Pierre Menanteau; *Soleils*, by Paul Jammât. Sounding modern and sometimes original notes, we could mention: Roger Vitrac, *Crautés de la nuit* (Cahiers du sud); Jean Catel, *Faud sans* (the author was once in America and has various poems speaking of his college recollections); Maurice Chevrier, *Stances à la Légion étrangère*; and Hélène Picard, a woman who sings in verse, as well as a woman can do it, of tramps and rascals of the slums (the "heroes" Carco describes in his sto-

ries); we go to the extreme of modernism with Emmanuel Aegerter's *Des poèmes freudiens* (not so terribly "Freudian" after all), and Ch-Maurice Robert, *Versets pour Léila*, a burning incantation to sensual love. At the other extreme, one has the mystic note of an already known poet, Fagus; in his *Le Sacre des innocents*, and *Ballade de Saint-Come*, he reminds one of the naive and at the same time very subtle Christian verses of Francis Jammes.

THEATRE. It is very hard to give an idea of the situation on the stage in France in 1927. Of the plays offered at the so-called "théâtres d'avant-garde" few imposed themselves on the attention of the theatre goers. Copeau seems to be out of the race altogether; Dullin and his Atelier have given chiefly foreign plays which aroused curiosity for non-French products (especially *La Danse de vie*, by the Englishman Ould); the *Maya*, an oriental product, had a long run at the studio des Champs Elysées; and *Léopold le Bien aimé*, by Sarment, who is one of the playwrights of promise of the present generation, was successful chiefly for the excellent acting of Jouvé, and of Sarment himself.

Among other new plays, the most successful seemed to have been Lenormand's *Mixture*, which also as a play proved disappointing but was followed eagerly on account of the acting of Mme. Pitoëff. The subject is very realistic, a mother sinning, stealing, even killing to procure a fine education for her child, and then (this is the Freudian theme here, for Lenormand remains true to the Viennese theories) has an unconscious wish that her daughter also be contaminated by her moral agonies and wants to sell her, who has another love, to a wealthy pretender.

The content of the following plays can be guessed easily from the titles, the love theme that is treated whenever a man wants to write a play and has no special inspiration: *Satan*, by Louis Verneuil, very dramatic love of a young woman for her old music teacher, then love for a young man . . . and melodrama; Denys Amiel, in *L'Image* also has men and women who cannot make up their mind whom and where they really love; the play of Bernstein, the veteran playwright, *Le Venin*,—which ran for months—deals with the same situation, the man does not know which woman he loves more, and the two women both think he loves the other, and generously send him away. Another play of the same order, but with scenes of a more violent character is *Les amants de Paris*, by Pierre Frondaie; the same is true of *Le Démon de la chair* by Sabatier et de la Fortelle; Duvernois et Birabeau's *L'eunuque* treats with frankness the love for the sake of love, and birth control—a topic already taken up on the stage. (See YEAR BOOK 1926.)

Another frequent theme of discussion in present day literature (see under *Novels and Various Items*) is the fate of the European civilization after the War, as opposed either to Eastern or to American civilization. A play by a young Belgian, P. de Mont, *Le Télescope* points out especially the danger of the invasion of Europe by the ideals of material comfort which come from America and suggests a sort of moral alliance between English and French for a defence of the western traditional way of looking at life. What may well be termed the most conscientious attempt on the stage is Fr. de Curel's

Orage mystique; he wonders whether the wave of religious preoccupations brought about by the War and which has suggested to many the idea of interference of a supernatural world with our life on earth is not reflecting perhaps some reality, and whether it is the fact that the phenomena of second sight, or other so called superstitious beliefs, only remain unobserved when life is more secure. Here is real drama! Marie Leneru's posthumous play *Les Affranchis* was given at the Théâtre Français as a pious tribute to a talented woman but was nowhere considered a success.

It must be the lack of original themes that turned the French managers towards foreign authors so often, English, Dutch, German, and in several instances American. Elmer E. Rice's *Machine à calculer* was very much appreciated; so was Selwyn and Goulding's *Dancing Mothers* under the title *École du Jazz*. The year ended with D'Annunzio's *Torche sous le boisseau* (Théâtre Français) a play that can best be compared with the Sophocles plays based on Fate.

Again, many plays were revived—also probably to bring life into a stage which was only half alive. We mention: Claudel's *L'Annonce faite à Marie*; Rostand's *Chantecler*; Mirbeau's *Les affaires sont les affaires*; Zola's *L'Assommoir*, etc. Frequent presentation of Musset's *Lorenzaccio* (Français) was due to the commemoration of Romanticism of which we have spoken before. *La grande aventure* by Flers and Caillavet was one of the lasting successes at the Odéon; so was *Le bonheur du jour* by Giraud written for and admirably played by Ferandy. The one genre where the French remain always equal to themselves, is the witty farce, with more or less "gauloiserie." Verneuil's *Tu m'épouserai* is one of the best of the year; such is Guitry's *Le Miracle*, and Gerbidour et Armont's *Coiffeur pour Dames* are two other light jeux d'esprit. More audacious are *On ne roule pas Antoinette* (Palais Royal); *M le Sénateur* (Comedia), *Faut réparer Sophie* (Déjazet). Two plays poke fun at the politicians who preach socialism and then when they are in power insist on the advantages they have obtained. *Les nouveaux messieurs* by Croisset et Flers (this is a reprise) and *Ventose*, by Jacques Deval. At the end of the year Bourdet, who had earned laurels in Paris and New York in 1926 with his grave play *La Prisonnière* ("The Captive") came with a light satire on the successful "littérateur" and winner of Prix littéraire, *Vient de paraître* ("Just Out").

There are still poets who keep true to the play in verse, even if such are not often put on the stage; thus Marcel Béliard, *Jardin de la reine*, and Auguste Villeroy, *Jeu de la Lande*, who shared the Prix Valcier, of 10,000 francs for plays in verse of at least three acts. Maurice Rostand (son of Edmond) published also two rimed plays of three acts each, *La nuit des amants* and *La déserteuse*—in his usual exalted manner. Gabriel Mourey gives a poème dramatique *Daphnis*. Mme. Gérard d'Houville, under the title *Je crois que je vous aime*, had seven light plays (in prose) in her ever alert, witty, charmingly delicate vein.

In the early fall, the four directors of the "théâtres d'avant garde," Gaston Baty, Charles Dullin, Louis Jouvet and Georges Pitoëff, formed a sort of syndicate to work together and not against each other in their endeavor to raise the level of the stage; they called it a *Cartel théâtral*. And Barbusse announced for the end of the

year the foundation of a "théâtre du peuple," to correspond with the tenth anniversary of the Russian Revolution,—but the opening had to be postponed.

Marguerite Moreno published some interesting memoirs, *Souvenirs de ma vie et de quelques autres*.

NOVELS. While the stream of new fiction keeps running at an almost terrifying pace, one was glad to see that the authors of the past were not neglected entirely; one of the most important event of the year was the publication of the first version of Hugo's immortal *Les Misérables*, by Gustave Simon (2 vol., Baudinière); the changes made later are important enough; not so much in the material (two great lump additions only, "Waterloo," and the episode of the Picpus convent) as in the ideas of the author; 1852 had taken place between the first writing and the actual publication, which brought about modifications in the political and philosophical ideas of Hugo. An unpublished novel by Pierre Louys, (the author of *Aphrodité*) was given out by Farrère, *Psyché*; the personal character of which had made it difficult to give it out earlier.

Proust's posthumous *Le Temps retrouvé*, published without having had the benefit of the author's last revision, and which ends the work that had created such a stir in the literary world, indicated that Proust considered as "temps retrouvé" the sensations of life when we have practically left the real world and live entirely with the life of the past as created by our retrospective imagination; when he finds, once more, on his return to Paris, the characters of his long novel, he does not recognize them, and dismisses them as spectres while the real friends are those he "sees" in the past. Let us add that the abnormal Proust, to the disgust of readers of taste (see above what was said of Porché's book), becomes more accentuated. Romain Rolland offered the third part of *L'Âme enchantée*, viz. *Mère et fils*; the story now reaches the period of the Great War and Romain Rolland once more tries to hover "au dessus de la mêlée" and sing the "Alleluia of Humanity."

In June the French Academy awarded the "Grand Prix du roman" to Kessel for his volume of three stories *Les Coeurs purs*; they deal with material obtained, as in his former books, during his stays in Russia. The "Prix Goncourt" awarded in December went to a quite unknown author, Maurice Bedel; his story of Norwegian life, *Jérôme, 60^{ème} Latitude Nord*, deals with the free manners of Scandinavian women as contrasted with the old traditional and continental attitudes; the author claims that he did not mean a criticism of the northern women, rather the contrary, but most people could not see things this way, and an amusing discussion followed, one of the results being that the Norwegians in Paris announced the foundation by them of an annual literary prize of 10,000 francs (the amount of the "Prix Goncourt") for the book which would best "exalt" the virtues of northern countries.

The "Prix Femina," awarded as usual on the same December day, (the 7th) went to Marie Le Franc, a young woman from Brittany, a teacher of French in Canada, for her novel *Grand-Louis L'Innocent*, which resembles nothing—not even a sensible novel, as Paul Souday tells in *Le Temps*. The interest in the book is, due at least in part to the fact that it is written in the vague

style of the day driven to an extreme; it depicts a sort of motherly and at the same time violently but veiled sensual love of a woman, separated from her husband, for a great big fellow of whom one does not know whether he is a moron or a mysteriously supernatural being; the scene is laid in the "landes" of French Brittany.

On still the same day was awarded the "Prix Théophraste Renaudot," which is awarded by the publishers both with an idea of encouraging original young authors, and an idea of booming the trade; the laureate was Bernard Narbonne, for *Maitena*, one of the successful novels of the year even before attention was called to it by the reward; Narbonne, just the opposite of Marie Le Franc, is very conscious of his art; *Maitena* is a delicate piece of psychology perhaps akin to the playwright Lenormand's manner; the heroine does not exactly live her life (tragic life), she watches herself act so to speak from the outside and the silence of the woman—who has nothing to say—is one of the chief elements of literary effect. The "Prix Paul Flat" was given to A. Lamandé for *Enfants du siècle*; the "Prix Zola" to R. Charmy for *Vertu de Province*; the "Prix Dekobra," to L. Andand for *Crois le serpent avant*.

One of the names that came to the front in 1927 is that of Panait Istrati, for his powerful description of the underworld of Rumania; *Codine* and *Mikhail* are two studies of sombre and fatal heroes which at times remind one of Dostoyevsky. Istrati is a brother, in fiction, of Francis Carco. The fascination of those men who act like blind forces in life and make unconsciously tragedy all around them continues; e.g. Ribemont Dessaigne, *Clara des jours*, and Bourreau du Pérou; Cl. Breton, *Bilali ou la vengeance du lion*; Philippe Soupault, *Le nègre*.

Jewish stories also continued in favor; the best in this class is Tharaud's strong *Rose de Saron*; Kessel in his *Terre d'amour* depicts the longing for Sion; André Bailly and Moïse Twerzky, in *Fléau du savoir*, and the continuation *Comme Dieu en France* present a curious picture of the wandering Jews, like Floigel and his wife. Jean Psichari in *Le crime de Lazarina* translates a novel which he himself had written first in modern Greek.

Among the books dealing with oriental civilizations the most discussed this year was Paul Morand's *Bouddha vivant*, in which the author approves entirely of the refusal of the East to join our civilization; others are René Maran (the author of *Batouala*) *Djouna, chien de Brousse*; Charbonnier, *Pièures d'Afrique*; G. Soulié de Moran, *Ce qui ne s'avoue pas, même à Shangai, ville de plaisirs* in which the white race is accused of terrible disorders; G. H. Rosny, *La métisse*. The curses of civilization are underlined in Bordeaux's successful *Le Barrage*, and in André Chamson, *Les hommes de la source*.

Among fiction books dealing with religion, we have three of special importance: Bauman, *Mon frère le dominicain*; G. Bernanos, *L'Imposture*, which reminds one not a little of *Sous le Soleil de Satan* (see YEAR BOOK, 1926); and Mlle. Zanta, *La part du feu*.

While there was no really outstanding success, there were, a great many novels considered as rather above the average; here are some of them: Eug. Monfort, *Oscar Costedder*; Colette Xyer, *Haudequin de Lyon*, which reminds one a bit of the well-known *Cousins d'Amérique*. by

the same author; the heroes belong to the milieu of big industry; Isabelle Sandy, *Les soutanes vertes*, a sympathetic study of a poor priest; Pérochon, *Bernard l'ours et la Torpédo camionnette*, again a peasant story but in which the author gives up to some extent his very pessimistic view of life. J. H. Rosny, *Fille d'affaires*—of course, the modern business woman; Luc Durtin, in *Quarantième étage*, and André Beucler in *Le pays neuf* have the same scenario, of a man who is suddenly rich by inheritance and loses his head (both authors came quite near getting the "Prix Goncourt" or "Femina").

The question of love and sexual emancipation has inspired several stories which do not always avoid the salacious note: P. Marguerite (author of *La Gargonne*) *Ton corps est à toi*; Raymond Machard, *La Possession*; Jean Dorsenne, *Les Amants sans amour* (less outspoken but deeper in psychology); J. Giraudaux has meditated in *Églantine* over the question of love between a girl and elderly lovers, and started quite a controversy; Maurice Rostand in his *Second Werther*, and Jouglot in *Frères* emphasizes the conflict between love and brotherly friendship; Fr. Mauriac in *Thérèse Desqueyroux*, and J. Green, in *Adrienne Mésurat* give stirring family dramas. Kessel describes admirably the life of former Russian nobility in *Nuits de Prince* (he knows them from first hand observation) and A. Hermant, in *Les épaves* treats the same subject in his usual rather flippant way. The brothers Leblond describe the French society of the time of the struggle of separation of Church and State in *L'Écartèlement*. Quite striking is the new attitude of Marcel Prévost in his *Re-traite ardente*; the famous Academician had not accustomed his public to sympathetic treatment of mystic inclinations; he is nearing the position of his fellow Academician P. Bourget, in *Nos actes nous suivent*. Charles Sylvestre has added another pretty and delicate novel to his successful earlier ones, *Amour sauvé*. Lacretelle is once more successful, this time in a great love story, *Lettres espagnoles*. Estaurié does not disappoint his readers in *Tels qu'ils furent*. Bachelin has one of his stories of country life in *Le taureau et les bœufs*. Georges Iman gives *Le cœur et les chiffres*, and G. Chéreau, of the Académie Goncourt, *L'égareé de la route*. A new edition of A. Maurois's first novel *Ni ange ni bête*. Ramuz gives *Alène*; and J. Chardonne, who had come to fame some years ago with his *Épithalame*, tries his hand once more on subtle marriage psychology in *Le chant du bienheureux*.

One of the successful novels—a favorite with many for the "Prix Goncourt," was Marc Chardonne's *Vasco*, the story of a young man disconcerted by life and finding no sense to it, who travels to Haiti, finding, however, no relief for the distress of his soul (a little in Loti style). L. Daudet, in *Naples* (for "Il n'y a plus," as children will say) speaks of things which once were so dear to us, and that pass into the night of oblivion. Lucienne Favre, *L'homme derrière le mur*, is a woman trying her hand at fame and using somewhat disconcerting methods and style—she was a dangerous competitor of Marie Le Franc for the "Prix Femina."

Let us not forget to mention a sort of historical reconstitution novel by no less than Marcelle Tinayre; *Il y'a cent ans*—depicting a

love in the years when Romanticism, which is commemorated now, was flourishing.

SHORT STORIES. Just a few titles: H. Bordeaux, *Rap et Vaga*, the title of one of the stories, the heroes being two deer in the Alps; all are stories of the high mountains. Mirriam Harry, *Le mannequin d'amour*; Caumont et C^o, *J'aurais tué*. Vaillant-Couturier, the famous Socialist, gives a series of short scenes in the style of sentimental Socialism by which Barbusse is chiefly known. R. de Brimont, *L'arche symbolique*, gives clever sketches under the titles Eve, Dalilah, Agar, the Dove of Noah's ark, etc. The son-in-law of Mallarmé (Dr. Bonniot) published unknown *Contes indiens*—which reveal a new, and humorous, Mallarmé.

VARIOUS ITEMS. On the borderland of literature and philosophy: Clémenceau, *Au soir de la pensée*—philosophical testament of the great old man; R. Benjamin, *Atiborons et Démagogie*, vivacious and cruel criticism of conditions in France to-day and especially politicians; Thibaudet, *La république des professeurs*, discussing the régime brought about by several, influential "normaliens" in power now (e.g. Herriot); Julien Benda, *La trahison des clercs*, being an indictment of the leaders of to-day who have replaced religious ideals by vague patriotism and class ideals (Benda is a disciple of Renouvier); Montherlant, *Aut Fontaines du désir*—a course in pantheistic morality. Valéry-Larbaud, *Jaune, bleu, blanc*, offers essays on timely topics. The treatment of famous lawsuits, or public events that stirred public opinion (as Henri-Robert described in his *Grands procès de l'Histoire*) were taken up by some talented writers; e.g. Pierre Bouchardon, *L'auberge de la tête noire* (containing four terrible true stories); Marcel Boulenger, *L'attentat d'Orsini*; Marie-Louise Pailleron, *L'enlèvement à la belle étoile*; Ginisty, *Histoire de la belle Mme. Tiquet*; Weiler, *Le Chevalier de La Salle* (the white man who first set foot on the soil of Chicago).

Most in fashion were the more or less fanciful biographies: and the man who started the genre, André Maurois, himself offers a *Vie de Disraeli*; John Charpentier, *Coleridge, le somnambule sublime*; Pourtales, *Chopin*; Mistler, *Hoffman*. Then a series of religious biographies: Goyau, *Saint-Bernard*; Fr. Jammes, *Lavigerie*; Bertrand, *Sainte-Thérèse*; Rédier, *Vraie vie de Saint-Vincent de Paul*; Colette Yver, *Saint-Pierre*. Several literary studies: two lives of Montaigne, by Lamandé and by Prévost; *Cœur et esprit de Mme. de La Fayette*, by Magne; *Cyrano de Bergerac*, by L. R. Lefèvre; *Racine*, by Mme. de Mayran; *Port Royal*, by André Allays. Then a *Robespierre* by Béraud; a *Malessherbes*, by M. Henri-Robert; a *Vie de Law* by Oudard; a *Cardinal de Retz*, by Battifol, also a *Grand amour romantique* (Musset and Sand) by Feugères; *Amants du Lac* (Lamartine and Mme. Charles) by Cahuet; a life of *Jean Chouan*, by Drault. New books in the collection of the Vies amoureuses: *Mme. de Staël*, by J. Turquan; *Danton*, by G. Lecomte; *Lady Hamilton*, by Flament; two books on *Christophe Colomb*, one by André Marius, the other by A. de Hevesy. Also a *Vie de Suzanne Lenglen* by Claude Anet; . . . and a clever cooking book, *Plats nouveaux*, by the well-known humorist Paul Reboux.

Here might be mentioned Chevrillon's fine *Puritains du désert*; two war books: Naegle,

Les suppliciés, and Robert Salomon, *Babel sans femmes* (Prisoner camps); and books on Russia: Andrée Viollis, *Seule en Russie*; Duhamel, *Voyage de Russie*. Kessel gives a *Petite histoire des Juifs*.

HISTORY OF LITERATURE AND CRITICISM. The scholarly and especially the critical production was very abundant; we cannot give all. Brunot had a new volume of his epochmaking *Histoire de la langue française*, IX, *Le Français, langue nationale* (period of Revolution); Ch. Beaulieux had a two volume *Histoire de l'orthographe française*; and El. Pradez, a *Dictionnaire des gallicismes*; A. Carnoy, of Louvain, a *La science des mots, Traité de la sémantique*.

There was a third volume out of *La Vie en France au Moyen-âge* (from medieval literature) by Ch. V. Langlois; a posthumous *Histoire de la poésie française de la Renaissance au Romantisme*, by Faguet. R. Bray gives a *Formation de la doctrine classique en France*; M. Magendie, *Du nouveau sur l'Âstrée*; Raymond has a *Ronsard*, and Mangain, a *Ronsard en Italie*. Racine seems in fashion in this year of commemoration of Romanticism: Dr. K. Vossler, *Racine*, L. Dubuech, *Racine*, Camille Mayran, *Vie de Racine*; J. des Hons, *Anatole France et Racine* (showing the fascination of France by Racine). D. Morinet, *La pensée française au XVIII^e siècle*: Muller, *Essai sur la philosophie de D'Alembert: Mémoires de Voltaire* published by Souday; Henriot, *Voltaire et Frédéric II*; three more volumes of the *Correspondance de Rousseau*, Léontine de Villeneuve publishes *Mémoires de l'Occitanienne*, the woman mentioned in Chateaubriand's *Mémoires d'Outre Tombe* (Livre 13); and Marie-Jeanne Dury has an *Ambassade romaine de Chateaubriand*; P. Morand, *Chateaubriand, homme et vie*.

Victor Hugo inspired several publications, especially in connection with the centenary of Romanticism. Ch. Maurras, *Lorsque V. Hugo eut cent ans*; Bérét not only added a volume to his magnificent edition of the *Légende des siècles*, but published a book on the whole work of V. Hugo. A. Séché and J. Bertaud had a volume on *La passion romantique*, and Jarry on *Étudiants et Grisettes romantiques*. But the really important work here is M. Souriau's *Histoire du Romantisme* in three volumes, a work of years of faithful study, which was at once rewarded by the Academy with the "Prix Broquette-Gonin." Then there is P. Brach's *Destinée d'Alfred de Vigny*; the book already mentioned of Cahuet, *Les amants du Lac* (Lamartine). Balzac has the lion's share in the period; Baldensperger deserves the first place with his well informed *Orientations étrangères chez Balzac*, then Arrignon, *Les amies romantiques de Balzac*; Juanita-Helm Floyd, *Les femmes dans la vie de Balzac*; Ch. Léger, *A la recherche de Balzac*; Ethel Preston, *Recherches sur la technique de Balzac*; Clouzot and Valensi, *Le Paris de la Comédie humaine*; and Kra published a translation of Stefan Zweig's *Balzac*. Bouteron has *Muses romantiques*; Lyonnet, *Les premières de Musset*; Lasserre, *Du romantisme à nous*; G. Simon, *Le roman de Sainte-Beuve*; Bellessort, *Sainte-Beuve et le XIX^e siècle*. Belonging to the same period we may mention Miss Gibb's *Influence de Fenimore Cooper en France*.

Coming nearer to our time: Baudelaire, *Œuvres de Baudelaire*, *Journaux intimes*. A. Arnaoutovich, *Henri Beque*, three fat volumes; J.

Charpentier, *Le Symbolisme*; and Fort and Mandin, *Histoire de la poésie française de 1850 à nos jours*. A. Bélis, *La critique française à la fin du XIX^{me} siècle*. Marjorie Henry, *Stuart Merril*. Two books on the last days of Maupassant: Pierre Borel, *Destinée tragique de M.*, and G. Normandy, *La fin de M. Anatole France* inspires Michel Corday, *A. F. d'après ses confidences et souvenirs*; and a new attack by his dismissed secretary, J. J. Brousson, *Itinéraire de Paris à Buenos-Ayres*. Paul Souday gave three studies on Proust, *Gide et Valéry*, Martin du Gard had *De Sainte-Beuve à Fénelon*, Henry Bremond. Pierre Champignon presented a good account of *Marcel Schwob et son temps*; Soupault writes on *Apollinaire*. Robert Dreyfus added to the Proust literature with *Souvenirs sur M. Proust*, and a periodical was launched for the fanatics of Proust: *Cahiers Proust*, with, in the first number, an "homage" by several admirers of note. Peguy was honored in a new series of *Cahiers de la Quinzaine*, the little periodical that made him famous; the new series is edited by his own son. Yvette Guilbert prefers to exalt herself and her wonderful achievements in the revival of the old chanson; the book is *Chanson de ma vie*. Interesting for students of the last generation is J. H. Rosny, aîné, *Mémoires de vie littéraire* (Goncourt, salons, etc.). E. Schuré, the author of *Les grands initiés*, writes *Le rêve de ma vie*. And we have a collective work *Chapitres de ma vie*, to which Maurois, Kessel, Durtain, Vildrac, etc., are contributors.

The death of Robert Eekhoud, the Belgian novelist, has to be recorded; as have those of Robert de Flers (q.v.) and of Jonnart (q.v.) of the French Academy. Paul Valéry was received in the Academy; and Abel Hermant, Emile Male and Madelin were elected. See ACADEMY, FRENCH. See also PHILOLOGY. MODERN.

FRENCH SOMALI, sô-mâ'ls, COAST or FRENCH SOMALILAND. A French colony in Africa on the Gulf of Aden between Italian Eritrea and British Somaliland. Estimated area, 5790 square miles; estimated population in 1921, 208,000. The port of Djibouti is the seat of the government. Its population in 1921 was estimated at 8366, of whom 354 were European (190 French). After 1922 the government introduced a public elementary school system at the capital, supplanting the mission school which had been in operation for 20 years. The budget for 1926 balanced at 6,914,000 francs. The country has practically no industries and very little agriculture. The main sources of wealth are commerce, inland trade, and coast fisheries. The imports in 1925 amounted to 367,410,829 francs and the exports to 312,528,936 francs. The chief exports are ivory, coffee, hides and skins. The chief imports are cotton goods, butter, coal, and sugar. A large share of the exports of Abyssinia pass through the port of Djibouti, which is connected by a railway 485 miles long with Addis Abeba. The colony is under a governor assisted by an administrative council.

FRENCH SUDAN. A French colony comprising the valley of the Upper Senegal, some two-thirds of the course of the River Niger, and a large part of the Sahara Desert within the sphere of Algeria. Bounded on the east by the territory of the Niger; on the west by Mauritania, the Faldémé River, and French Guinea; on the south by the Upper Volta and the Ivory Coast; and on the north by the territory of

Algeria. Area, estimated at 648,480 square miles; population, estimated in 1925, at 2,500,000, of whom 1788 were Europeans. The capital is Bamako, with 28,719 inhabitants. Other important towns and their populations are: Kayes, 10,876; Timbuktu, 7000; and Sikasso, 7000. All the chief towns have regional or urban schools. The native crops include ground nuts, millet, corn, cotton, rice, sesame, rubber, and kariti; also many cattle are raised. Native industries are of some importance, including the making of pottery, jewelry, and leather, and weaving. The total imports in 1925 amounted to 79,838,464 francs and the total exports to 3,259,377 francs. The chief imports were cottons, foodstuffs, and metalwork; and the chief exports, ground nuts, cattle, rubber, gum, kapok, skins, and wool. The budget for 1927 provided for 39,600,000 francs. There is a railway connection with the coast over a line 745 miles long. The government is under the Governor-General of French West Africa (q.v.).

FRENCH WEST AFRICA. French West Africa, comprising the Atlantic coast colonies of Mauritania, Senegal, French Guinea, and the Ivory Coast, the colony of Dahomey on the Gulf of Guinea, and the interior colonies of French Sudan, Upper Volta, and the Territory of the Niger, includes the river basin of the Senegal, nearly all the upper and middle Niger Basin, the basin of a large number of rivers emptying into the Gulf of Guinea, and the southern part of the Sahara region. It has an area of 4,665,000 square kilometers and a population of 13,541,611, as compared with a total area of all the French protectorates and mandated territories of 10,255,510 square kilometers and a total population of 55,631,184. So diversified is the native population of French West Africa that official French reports classify the inhabitants under more than 50 groups. Some very extensive areas of this region are practically deserted, while others have a population as high as 60 persons to the square kilometer.

The population according to the 1926 census figures, which were published in the fall of 1927, was 13,541,611, an increase of 1,258,395 since the 1921 census. The colonies had the following populations: Senegal, 1,358,439; French Guinea, 2,095,988; Ivory Coast, 1,724,545; Dahomey, 979,609; Mauritania, 289,184; French Sudan, 2,634,982; Upper Volta, 3,240,147; and Niger, 1,218,717. The most thickly settled of these colonies are French Guinea and Upper Volta. The white population of the region is still very small but is steadily increasing; census figures give 15,399 for 1926 as compared with 9650 for 1921. It is said that under the present scheme of developing the resources of the colonies, another five years will show an even greater gain in the number of foreign residents. Most of these are now concentrated in the larger towns. Dakar in Senegal, with a total population of 40,152 has 2939 Europeans; Porto Novo, in Dahomey, with 21,643 population has 268 Europeans; St. Louis, in Senegal, with 18,042 inhabitants has 1038 Europeans. The only interior town with an appreciable foreign population is Bamako on the Upper Niger River with 568 Europeans out of a total population of 15,596. The natives in general live by farming and stockraising. Up to the present time few useful minerals have been discovered and the output is comparatively small in value.

There were in 1925-26, 275 village schools

with 23,163 boys and 1205 girls, 71 urban schools with 4580 pupils, and 7 high schools with 684 pupils for general instruction and 294 for manual instruction. There were besides 142 evening schools for adults with 5614 pupils and 749 teachers. The expenditure on education was 9,440,000 francs. The financial estimates for 1927 placed the total revenue at 621,000,000 francs, including 235,000,000 francs for the general budget, 284,000,000 for the local budgets and 102,000,000 for the supplementary budgets; the total expenditure was estimated at 531,000,000 francs, consisting of 173,000,000 for the general budget, 261,000,000 for the local budgets, and 97,000,000 for the supplementary budgets.

The imports into French West Africa are mostly food substances, textiles, mechanical implements, and beverages; the exports from these colonies are chiefly fruits, oils and oil seeds, as well as rubber, cotton, cocoa, and timber. An indication of the success attending the efforts to expand native production is to be found in the higher value of French West African trade during 1925. The imports into the colonies in that year were 1,114,970,591 francs, as compared with 764,370,275 in 1924; the exports for 1925 were 899,063,623 francs as compared with 653,740,634 in 1924. Both imports and exports attained a larger amount in the case of every colony except French Sudan, where a 70 per cent increase in imports was accompanied by a 25 per cent decrease in exports. It is probable, however, that some of the exports accredited to Senegal and French Guinea originated in French Sudan.

Although French West Africa has numerous water-courses, with some exceptions those that are navigable are suitable only for small boats and usually for limited distances. Accordingly the transportation, so essential to the development of the colonies, must depend mainly on railways. There are about 1825 miles of railroads, the principal lines being those of Dakar-St. Louis (Senegal); Thies-Kulikoro (Senegal and French Sudan); Konakry-Kankan (French Guinea); Abidjan-Buake (Ivory Coast); Kotonu-Save (Dahomey); and Porto Novo-Pobe (Dahomey). About 3000 additional kilometers of railroads were either under construction or planned in 1927, but the full programme will not be completed for many years.

A governor-general, assisted by a council, is at the head of the administration of all French West Africa. The seat of government is at Dakar. Each colony is under a lieutenant-governor subordinate to the governor-general. Governor-general in 1927, M. Carde, appointed Feb. 20, 1923.

FREUD, SIGMUND. See PSYCHO-ANALYSIS.

FRIENDS, RELIGIOUS SOCIETY OF. A mystical religious sect which originated in England in the middle of the seventeenth century. The founder of this religious society was George Fox (1624-1691), who visited America in 1672. The first Yearly Meeting in the United States was held at Newport, Rhode Island, in 1661, and has continued under the name of New England Yearly Meeting. Others established within the next forty years are known as Baltimore, Philadelphia, New York, and North Carolina Yearly Meetings, and these are composed of quarterly and monthly meetings having one or more congregations. In the nineteenth century, others were formed as migration moved westward. The largest body, known as the Orthodox Group, or-

ganized what is known as the Five Years Meeting in 1902, which meets as a delegate body every five years, and in 1927 consisted of twelve yearly meetings, with a membership of approximately 81,000. Its headquarters are at Richmond, Indiana. The work of the various departments, such as Home and Foreign Missions, Peace, Religious Education, etc., was under the direction of a General Secretary and executive secretaries of Boards. *The American Friend*, a weekly religious journal, is published at headquarters, as is also literature for the Bible schools of the Five Years Meetings.

The Five Years Meeting also maintains seven colleges for higher education as follows: Earlham, Richmond, Ind.; Penn, Oskaloosa, Iowa; Guilford, Guilford College, N. C.; Wilmington, Wilmington, Ohio; Whittier, Whittier, Calif.; Friends University, Wichita, Kan.; Nebraska Central, Central City, Neb. Haverford College, Haverford, Pa., is maintained by Philadelphia Yearly Meeting, and Pacific College, Newberg, Ore., by Oregon Yearly Meeting, not a part of the Five Years Meeting. Another Orthodox body not a part of the Five Years Meeting is the Ohio Yearly Meeting, with a membership of 6308 in 1926.

The Liberal Branch of the Religious Society of Friends includes seven Yearly Meetings federated in the Friends' General Conference, which meets in the even numbered years and conducts work in religious education, social service, and advancement of Friends' principles. The separation of 1827 centred around the doctrinal issues of that day and the preaching of Elias Hicks. The General Conference emphasizes the freedom of the individual to follow the voice of God in his own soul rather than any individual or church authority. The membership in 1927 was 10,576, and there were 138 meetings. Publications include the weekly periodical, *Friends' Intelligence*, and a monthly magazine for children, *The Scattered Seeds*. The Society conducts several secondary schools.

The tendency, of recent years, among the Friends in America, has been more and more towards working together and with English Friends. Among the united undertakings were: The Young Friends' Conference; Woolman School, founded in 1915 as a school for religious and social study, and located at Wyncote, Pa.; the American Friends' Service Committee, formed in 1917 for war relief work, and since the war conducting Friends' Centres at home and abroad for international understanding and reconciliation between conflicting nations, races, and other groups. A Conference of all Friends in America was called to meet in 1929.

FROWDE, HENRY. British publisher, died March 3. He was born in 1841, of an old Devonshire family. At an early age he entered the bookselling and publishing business, and was manager of the London Bible Warehouse in Paternoster Row until in February, 1874, he became manager of the London office of the Oxford University Press, serving until March, 1913, when he retired. In 1883 Frowde took over the publication of the secular books published by the Oxford Press, the so-called Clarendon Press books, and from that time he was formally entitled "Publisher to the University of Oxford." In 1897 the university granted him the degree of M.A. honoris causa, and he was incorporated with Pembroke College, of which his old friend

Bartholomew Price, for many years secretary to the delegates of the Clarendon Press, had become master. Frowde was an efficient, though modest, figure in the publishing world, and his name was known to book sellers and buyers wherever the English language is spoken.

FUERTE, Iwarrías, LOUIS AGASSIZ. American naturalist and artist, died in an automobile accident at Unadilla, N. Y., August 22. He was born at Ithaca, N. Y., Feb. 7, 1874, and after graduating from Cornell University in 1897 took up the painting of birds, a field in which he had already shown considerable talent. He illustrated a number of books, including: *Birding on a Broncho* (1896); *Song Birds and Water Fowl* (1897); *Birdcraft* (1897); *The Woodpeckers* (1901); *Second Book of Birds* (1901); *Birds of the Rockies* (1902); *Handbook of Birds of Western United States* (1902); *Coues' Key to North American Birds* (1903); *Handbook of Birds of Eastern United States*; plates for *Report of New York State Game, Forest and Fish Commission* (1903); *Upland Game Birds* (1902), and its companion volume, *Waterfowl* (1903); *Birds of New York* (1910); several series in the *National Geographic Magazine* (1914-19); *Burgess's Bird Book for Children* (1919); and *Burgess's Animal Book for Children* (1920). Possibly his most striking work was a series of habitat bird groups in the American Museum of Natural History, New York. He also painted decorative panels of birds for various individuals and public institutions, including the birds of New York in the State Museum at Albany; the murals in the Flamingo Hotel, Miami, Florida; and paintings for the New York Zoological Society in its gardens in New York. He was a lecturer in ornithology at Cornell University, and made extensive explorations. He was a fellow of the American Ornithology Union and of the North American Society of Mammalogists.

FULTON, JOHN HAMILTON. American banker, died at Essex, N. Y., September 25. He was born at Côte des Neiges, Montreal, Canada, Nov. 12, 1869, and was educated at the high school of Montreal. He entered the employ of the Merchants' Bank of that city in 1883. In 1887 he was engaged by the Canadian Bank of Commerce and in 1894 became an accountant for that bank in New York City. He was manager of its New Orleans agency, 1898-1901, in the latter year becoming manager of the Commercial National Bank of New Orleans. In the following year he organized the Commercial Trust and Savings Bank, being manager of both banks for more than ten years, and then president. In 1919 the Commercial Trust and Savings Bank absorbed the Canal Bank, changing its name to the Canal Bank and Trust Company, one of the largest banking institutions in the South. In 1916 Mr. Fulton went to New York as one of five men who formed the executive committee of the National City Bank, and in 1922 he relinquished his position, as senior vice president of that institution to become president of the National Park Bank. Mr. Fulton was active in many enterprises in New Orleans and in New York. He was president of the Louisiana Bankers' Association and chair-

man of the Legislative Committee of the American Bankers' Association. He organized the Morris Plan Bank of New Orleans and was its first president and was a trustee of the Morris Plan Trustees' Association. He was a director of the Crucible Steel Company, New York, of the Essex County, New York, National Bank, of the Western Assurance Company, Toronto, and of the British American Assurance Company of the same city.

FUR SEALS. See ALASKA.

GABUN. See FRENCH EQUATORIAL AFRICA.

GAGE, LYMAN JUDSON. American financier and former Secretary of the Treasury, died at Point Loma, near San Diego, Calif., January 26. He was born at De Ruyter, N. Y., June 28, 1836, and at the age of 12 moved with his family to Rome, N. Y., where he was educated at the Rome Academy. He entered upon business life at the Oneida Central Bank, serving as junior clerk until 1855, when he moved to Chicago, Ill. For three years he was a clerk in a planing mill, and in 1858 became a bookkeeper in the Merchants' Loan and Trust Company, rising to cashier in 1861. In 1868 he became cashier of the First National Bank of Chicago, being promoted to vice president in 1882 and in 1891 to president. During this time he had seen many interesting financial developments, including the time of panic following the Chicago fire, the panic of 1873, and the Greenback party campaign in 1876. In that campaign he was one of the organizers of the Honest Money League, which was active also in the first Bryan campaign, 1896. In 1892 he became the first president of the board of directors of the World's Columbian Exposition of 1893, and in that way came into public notice, as the success of the enterprise was in large measure due to his efforts. As chairman of the finance committee he was largely instrumental in raising for the exposition between \$5,000,000 and \$6,000,000, by popular subscription. In 1880 he was a delegate to the Republican National Convention and the chairman of its committee on finance, but in 1884 he supported Cleveland against Blaine, and in 1892 President Cleveland offered him the portfolio of the Secretary of the Treasury. Mr. Gage had taken no leading part in politics or public life until 1897 when he was appointed Secretary of the Treasury by President McKinley, an office he continued to hold in McKinley's second administration and in that of President Roosevelt until January, 1902, when he resigned and was succeeded by Leslie M. Shaw. He was elected president of the United States Trust Company of New York in 1902, serving until 1906, when he retired from active business. He received the degree of LL.D. from Beloit College in 1897 and from New York University in 1903. He was three times president of the American Bankers' Association, and was the first president of the Chicago Bankers' Club. He was twice president of the Civic Federation of Chicago, and was a trustee of the Carnegie Institution of Washington. He was the first Secretary of the Treasury to popularize a war loan when, in 1898, under the authority of Congress and in connection with the Spanish-American War, he floated \$200,000,000 in bonds at 3 per cent, a loan which was absorbed by some 320,000 buyers, mainly in small amounts. While at Chicago Mr. Gage formed the economic conferences at which were discussed the various economic ideas of the

period, and he presided over the forum in which different forms of thought were discussed and debated from the same platform. He organized and was president of the Chicago Clearing House Association. After he retired from business Mr. Gage made his home principally near San Diego, California.

GAINSBOROUGH, ARTHUR EDWARD JOSEPH NOEL, Fourth Earl of. Died at Exton Park, Oakham, England, August 27. He was born June 30, 1884, and was educated at Downside and at Exeter College, Cambridge. From 1908 to 1914 he was in the British diplomatic service, acting as attaché in Christiania, Stockholm and Washington. During the War he served in France, and subsequently held a staff appointment at the Horse Guards. He was Privy Chamberlain of the Sword and Cape to the Pope. Lord Gainsborough was president of the Amateur Gymnastic Association and vice president of the British Olympic Association, and was a member of the committee representing Great Britain in the Olympic Games. With Dr. Harriss, he organized the imperial concert of 10,000 voices in Hyde Park, London, on Empire Day in 1919. He received the Order of the British Empire in the same year. He was associated with Lord Lonsdale in the Olympia Horse Show, and indulged in outdoor sports as well as being interested in their development.

GALICIA, galish'tá. A former crownland of the Austro-Hungarian Empire, but after 1919 an integral part of Poland. The district lies to the south of Poland and to the west of Podolia in Russia.

GALLIZIER, NATHAN. American author, died at Cincinnati, Ohio, January 11. He was born at Ludwigsburg, Germany, Feb. 8, 1866, and after graduating at the Royal College at that place went to the United States in 1882. His first important novel was *Ignis Fatuus, A Dream of the Roccoco* (written in German in 1900). This was followed by: *Castel Del Monte* (1905); *The Sorceress of Rome* (1907); *Lucretia Borgia* (1909); *The Court of Lucifer* (1911); *The Hill of Venus* (1913); *The Crimson Gondola* (1915); *Under the Witches' Moon* (1917); *The Leopard Prince* (1920); *The Lotus Woman* (1922); *The Wand of Orice* (1924); and *The Red Confessor* (1926). He was a member of many literary societies and clubs in the United States and Europe.

GALLOWAY, SIR WILLIAM. British mining engineer, died at Cardiff, Wales, November 2. He was born in Paisley, and was educated at private schools, at the University of Giessen, at the Bergakademie, Freiberg, and at the University College, London. He served as inspector of mines in the west of Scotland and in South Wales, and became professor of mining in the University College of South Wales and Monmouthshire. He was a fellow of the Institute of Directors, a past president and honorary member of the South Wales Institute of Engineers, and a member of many commissions having to do with safety in mines and the conduct of coal mining. He was one of the pioneers in making researches in the action of coal dust in colliery explosions, and his conclusions and recommendations led to the saving of many lives. He suggested the use of stone dust as a means of preventing explosions, and later it was extensively adopted, under official regulations. He carried on experiments, for the Royal Commission on Accidents in

Mines, with various kinds of explosives fired into mixtures of gas, air, and coal dust. He determined the relation between height of fire-damp cap and proportion of firedamp in the air of mines, and invented guides for sinking pits. He wrote many technical papers on colliery explosions and mine safety, and lectured before universities and engineering societies.

GALL STONE DISEASE. The new diagnostic X-ray method introduced several years ago by Graham of St. Louis has given rise to new viewpoints in the physiology and pathology of the gall bladder which are often quite at variance with earlier knowledge. An article by Dr. K. Blond of Professor Paltauf's Institute for Experimental Pathology of the University of Vienna (*Klinische Wochenschrift*, Aug. 20, 1927) counseled conservatism in not dropping too quickly the older knowledge which itself is largely of recent origin. The differences have to do in part with the mode of emptying the gall bladder and the source of the bile (which is obtained by sounding the duodenum), which may be the gall bladder reservoir or the liver itself. To harmonize older with more recent views the author suggests that the gall bladder will remain healthy as long as there is equilibrium between the flow of bile downward and the absorptive power of the veins. The factor which usually disturbs this equilibrium is some obstruction below, most often a muscular contraction in the duodenum which is intermittent in character. A second contributory factor is improper diet—food too rich in cholesterol, which predisposes to formation of gall stones. Obstruction with or without infection brings about a large number of affections of the gall bladder and ducts, liver and pancreas. Of causes of this obstruction the author mentions only obstinate constipation.

GAMBIA. A British protectorate and colony in West Africa at the mouth of the Gambia River. Area of Gambia proper, four square miles; population about 9000. Area of protectorate, 4130 square miles; population in 1921, about 200,000. The capital is Bathurst, on the island of St. Mary (population, 9227 in 1921). In 1925 there were eight elementary government aided schools with 1569 pupils enrolled. In 1926 the imports totaled \$651,000 and the exports, \$904,000. The chief imports were wearing apparel and foodstuffs and the chief exports, ground nuts, hides, and palm kernels. The figures for 1925 were: Imports, \$616,000; exports, \$723,000. The public revenue in 1925 was \$189,086 and the public expenditure, \$271,836. The public debt amounted to \$113,743. The tonnage of vessels entered and cleared in the foreign trade in 1925 was 1,094,155 tons, of which 711,377 were British. There are no local railways. The colony is administered by a governor, an executive council and a nominated legislative council containing an unofficial element. Governor in 1927, Sir John Middleton.

GARBAGE AND REFUSE DISPOSAL. Reduction plants for the recovery of grease and tankage, the latter to be used as fertilizer base, continued to be used by most of the larger American cities, with some plants municipally owned and operated, and some operated under private contracts. This process disposes of garbage alone. New York City, the garbage of which was treated by the reduction process for many years, had disposed of the bulk of its garbage for a con-

siderable period by dumping it at sea, together with other municipal refuse. Complaints of garbage and refuse washing up on the New Jersey and Long Island beaches were hastening the installation by New York City of incinerators in accordance with the recommendations of an investigating committee. Several incinerators of large size and others of smaller size are in use in various parts of the city. Providence, R. I., which for many years got rid of its garbage through the agency of private contractors who fed it to hogs, built an incinerator in 1927, thus becoming the first New England city of material size to burn its garbage and other refuse.

Outside of Boston, where the reduction system was in use, most New England cities still got rid of their garbage by feeding it to hogs, and the same was true of many cities in other parts of the country. The present trend in garbage and refuse disposal seemed to be toward incineration, either of refuse alone, refuse other than garbage after salable material has been removed, or, in smaller cities, incineration of both garbage and refuse.

The City of Baltimore, which for many years had let contracts for the disposal of garbage by reduction, started in 1924-25 on a programme for building four or five salvaging and incinerating plants in different parts of the city to dispose of refuse other than garbage. The first incinerator was put in use in 1925. Objections to the site chosen for the second of the proposed plants led to the adoption of a plan to concentrate all of the refuse at two incinerating and salvage plants. A contract for the second plant was let in 1927, and the plant was virtually completed by the close of the year. At both the Baltimore refuse-disposal plants, incoming material is dumped in storage bins. From these it is lifted by motor-operated buckets, dropped and then raked or shoveled onto sorting conveyor belts. From these, paper, rags, tin cans, bottles and metals are picked off by hand labor and dropped into bins or other receptacles, from which they are taken for sale. The worthless rubbish or "tailings" are burned. At the newer Baltimore plant there are two incinerators of the chain-grate plan, each with a capacity to incinerate the tailings from 125 tons of mixed rubbish in 24 hours. The paper, rags, and tin cans are baled; the bottles are separated into sizes and crated; broken glass is separated into flint and tinted glass, the clear glass having a higher sale value; copper, aluminum, iron, shoes, etc., are separately bagged.

Across the continent, the City of Los Angeles recently installed two refuse-disposal plants, of which one was for the recovery of salable material from household refuse, the tailings going to incinerators, while the other burns various wastes from wholesale and industrial districts. The garbage, as reported in earlier *YMAA BOOKS*, is sold by the city to a contractor who hauls it by rail to a hog farm. The plant for the recovery of salable materials from the general refuse is owned by a private company which pays the city about \$500 per month for material delivered to it. At this plant, tin cans, after combustible material has been burned off, are detained by a second company and then baled for sale. The Los Angeles refuse-salvaging plant was described in *Engineering News-Record*, Mar. 21, 1927, and the incinerating plant for refuse

from the industrial and wholesale districts in the same journal for July 14, 1927. The last named plant has a rated capacity of 800 tons a day and consists of eight furnaces in four pairs, each pair provided with a chimney or stack 100 ft. high. The City of Birmingham, Ala., let a contract in 1927 for three garbage incinerators to serve as many districts of the city. A fourth was projected for later construction. The British type of incinerator was to be provided at each plant, equipped with forced draft and supplied with pre-heated air.

GARDENING. See **HORTICULTURE**.

GARDINER, HARRY NORMAN. American educator, killed by an automobile at Northampton, Mass., December 29. He was born at Norwich, England, Nov. 6, 1855, and went to the United States in 1874, matriculating at Amherst College, at which he was graduated in 1878. He studied at the Union Theological Seminary, 1879-82; Gottingen, 1882, Leipzig, 1883-84, and Heidelberg, 1884. He taught at the Glens Falls, N. Y., Academy, 1878-79, and was instructor in psychology at Amherst, 1891-92. From 1884 to 1924 he was, first, instructor in philosophy, and then professor of the same subject at Smith College. In 1924, when he became professor emeritus, Smith conferred on him the degree of L.H.D. At that time Dr. Neilson, president of Smith, called Dr. Gardiner "professor emeritus of philosophy, scholar and gentleman, for forty years the mentor and friend of Smith women, stimulating and inspiring, critic of their minds, manners and morals." He was a former secretary and president of the American Philosophical Association, and an advisory editor of *The Psychological Review*. He wrote *Outlines of Modern Philosophy* (1892), and edited *Jonathan Edwards, a Retrospect* (1901) and *Selected Sermons of Jonathan Edwards* (1904).

GARDNER, ALICE. British historian, died at Oxford, England, November 11. She was born at Hackney in 1854, and after studying at various private schools was a student at Newnham College, Cambridge, 1876-79, taking honors in history. She was assistant mistress in the Girls' High School at Plymouth, 1880-82, and professor of ancient and modern history at Bedford College, London, 1883-84. She was lecturer at Newnham College, 1884-1914, and temporary lecturer at the University of Bristol, 1915-19. She was the first secretary of the University Association of Women Teachers, and was a member of the Council of the Royal Historical Society. She was also a member of the British Institute of Philosophical Studies. Her special field was Byzantine history, being reader in this subject in the University of Bristol in 1919, and her most important investigation dealt with the Emperor Julian and the Lascarid Empire. Her publications include: *Symesius of Cyrene, Philosopher and Bishop*; *Friends of the Olden Time* (for children); *Rome the Middle of the World* (a sequel to above); *Julian, Emperor and Philosopher*; *Studies in John the Scot*; *The Conflict of Duties, and Other Essays*; *Theodore of Studium, His Life and Times*; *Letters to a Godchild*; Supplementary Chapter to English Translation of Professor Hans von Schubert's *Church History*; *The Lascarids of Nicæa*; *Within Our Limits*; Chapter in *Faith and the War*; article in *History on Some Episodes in the History of Medieval Salonika*; *History of the Sacraments in Relation to Thought and Progress*; and

A Short History of Newnham College. She was the sister of Percy and Ernest Gardner, the archaeologists.

GARMAN, SAMUEL. American naturalist, died October 1. He was born in Indiana County, Pennsylvania, June 5, 1843, and after graduating at the Illinois State Normal University in 1870 became principal of the Mississippi State Normal School for a year, then going to the Ferry Hall Seminary, Lake Forest, Ill., as professor of natural sciences. In 1872 he went to Harvard University to be a special pupil of Louis Agassiz in natural history, becoming later connected with the museum of comparative zoology and taking part in many field explorations, including Major Powell's first expedition in Colorado and the South American expeditions of Alexander Agassiz. He was also associated with many deep-sea explorations and many collecting expeditions. He was a member of many learned societies, including the Royal Geographical Society, London, the Société Scientifique de France, and the Zoological Society and Linnæan Society of London. His scientific writings include: *Deep Sea Fishes* (1899); *The Chimaeroids, Chismopnea* (1904); *New Plagiostomia* (1906); *New Plagiostomia and Chismopnea* (1907); *The Reptiles of Easter Island* (1908); *Plagiostomia* (sharks, skates and rays) (1913); and more than a hundred others.

GARRISON, DANIEL MERRSHON. American naval officer and educator, died at Annapolis, Md., December 31. He was born at Bordentown, N. J., May 3, 1874, and was educated at the Bordentown Military Institute and the U. S. Naval Academy, graduating at the latter institution in 1895. He saw active service in the Spanish-American War, winning the Congressional Medal of Honor for gallantry in the naval battle of Santiago, Cuba, July 3, 1898. During the two years after the Spanish-American War he was chief engineer of the Pacific submarine telegraph survey, and he plotted a route across the ocean. Then he served at Chemulpo, Korea, and Chefoo, China, during the Russo-Japanese War. In 1906 he became professor of mathematics at the Naval Academy, and was head of the department of mathematics, 1918-23. He retired from the naval service, Nov. 1, 1923, going to St. John's College, Annapolis, as head of the department of mathematics. From St. John's he received the honorary degree of D.Sc. in 1923.

GARY, ELBERT HENRY. American lawyer, steel manufacturer, and industrial leader, died at New York City, August 15. He was born on his father's farm at Wheaton, Ill., Oct. 8, 1846, and was educated in the public schools of Wheaton and at Wheaton College. During the Civil War he served in the Union army as regimental postmaster and at its conclusion entered a law office at Naperville, Ill. Two years later he graduated from the Union College of Law with the degree of LL.B. and was admitted to the Illinois Bar, being appointed deputy clerk of the Superior Court of Cook County. In 1869 he engaged in the practice of law in the City of Chicago, and in 1871 after the Chicago fire he started a new law office with Colonel Vallette. In 1872 he was elected president of the board of trustees of the town of Wheaton, serving for three years during which time he formed the law firm of E. H. and E. N. Gary and established the Gary-Wheaton Bank at Wheaton.

In 1877 he formed the law firm of Gary, Cody and Gary. In 1882 he was admitted to the bar of the United States Supreme Court and was elected county judge of DuPage County serving for eight years, during which time he held court frequently in Chicago, Cook County, and at times in other counties. In 1890 Judge Gary was elected mayor of the city of Wheaton. From this time until 1898, when he gave up his law practice and moved to New York City, Judge Gary was a leader in corporation law and insurance matters in Chicago, being general counsel for several railroads and large industrial corporations. In 1882 he incorporated the Consolidated Steel and Wire Company of Illinois and in the following year was elected president of the Chicago Bar Association.

In 1889 Judge Gary incorporated the American Steel and Wire Company of Illinois and was associated in the organization of the Federal Steel Company, becoming its first president. In 1901 he was associated in the organization of the United States Steel Corporation, becoming chairman of the executive committee and the chief executive officer. Two years later he became chairman of the board of directors of the Steel Corporation and participated actively in the development of its organization, becoming in 1907 chairman of its finance committee. In the same year he negotiated the purchase of the Tennessee Coal, Iron, and Railroad Company by the United States Steel Corporation. Judge Gary was sympathetic with various movements for increasing the safety, sanitation, and welfare of the employees of the Steel Corporation, and in 1907 advocated the abolition of the seven-day week. In 1900 he organized the American Iron and Steel Institute which included in its membership independent manufacturers as well as organizations and individuals connected with the United States Steel Corporation, and was always a stabilizing force in the steel industry. In 1911 he presided at the international meeting of iron and steel men at Brussels, Belgium. In this same year the seven-day week was ended in the Steel Corporation. The year also was marked by the beginning of the government suit for the dissolution of the United States Steel Corporation on the ground that it was a trust and acted in restraint of trade. This suit continued until 1915 when the decision of the district court was in favor of the Steel Corporation. In 1915 Judge Gary was appointed a member of the International High Commission for Pan-America to represent the United States and he served for two years. In the following year he was appointed a commissioner for the State of New York on new prisons, serving for three years and taking an active interest in the work.

When the United States entered the World War Judge Gary became chairman of the committee on steel and steel products of the Council of National Defense, and later was head of the committee representing the steel interests in which capacity he organized the industry on a war basis so that he was able to furnish the government adequate supplies of steel for war purposes. In 1919 Judge Gary was appointed a member of the United States Industrial Board of the Department of Commerce for the adjustment of post-war conditions and was appointed, by President Wilson, a member of the National Industrial Conference. While

active in all measures leading to the improvement of working conditions and the status of Steel Corporation employees, he resisted attempts to unionize the steel industry and defended the "closed shop" against the moves of organized labor.

It was in 1919 that he fought and defeated the strike of steel workers who sought to obtain twelve hours' pay for eight hours' work. In 1920 the United States Supreme Court decided in favor of the Steel Corporation in the government suit and this ended definitely any further attempts to proceed against the Steel Corporation. In 1923 President Harding wrote to Judge Gary asking him to install the eight-hour day in the steel industry and abolish the twelve-hour day which prevailed in certain departments of some of the plants. This he did, and as a result the hours of labor in the steel plants were placed on as satisfactory a basis as in other industries. Always ready to assist in national defense, he was appointed by the War Department chairman of the advisory board of the New York Ordnance District in connection with industrial preparedness and the procurement of munitions. In this as in other positions Judge Gary's participation was in no way perfunctory, and he took active and intelligent interest, contributing much to this important matter.

Universally esteemed as he was, it was not strange that this great industrialist had received many honors both at home and abroad. He was made an honorary Doctor of Laws in 1905 by McKendree University, Lebanon, Ill.; in 1915 by Lafayette University, Easton, Pa.; in 1919 by Lincoln Memorial University, Cumberland Gap, Tenn.; Trinity College, Hartford; in 1921 by Syracuse University, Syracuse, N. Y.; and in 1922 by Northwestern University, Evanston, Ill. In addition he was made a Doctor of Science by the University of Pittsburgh in 1915, and a Doctor of Commercial Science by New York University in 1925. He also had many foreign decorations, receiving the Order of the Sacred Treasure of Japan in 1918; that of an Officer of the Legion of Honor of France in 1920; along with the Grand Cordon of the Order of Leopold II of Belgium; and the order of Ouissan Alaouite Cherifien of Morocco. In 1921 he was decorated with the Golden Cross of the Commandership of the Royal Battalion of George I of Greece; and in 1922 became a Grand Knight of the Order of the Crown of Italy.

GAS, ILLUMINATING AND FUEL. Preliminary estimates of sales of illuminating and fuel gas in 1927 as compiled by the American Gas Association indicated an increase of 20,000,000,000 cubic feet over the record-breaking total registered for 1926. The estimated 1927 figure is 475,000,000,000 cubic feet, a new high record, proportioned as follows: 334,000,000,000 cubic feet for household purposes, 135,000,000,000 cubic feet for industrial and commercial uses, and 6,000,000,000 cubic feet for miscellaneous purposes.

During the year, the use of gas for commercial and industrial heating applications continued to show phenomenal growth, the amount consumed in 1927 representing 28.4 per cent of the total sales of gas for all purposes, or an increase of 9,000,000,000 cubic feet. Manufactured gas companies served 11,400,000 customers, representing an increase of 350,000 over 1926. Miles of main totaled 91,000, invested capital \$2,700,000,000, and gross operating revenue,

\$520,000,000, an increase of \$20,000,000 over 1926.

The manufactured gas industry, it was interesting to record, had not reported a decrease in annual sales or annual gross revenue in twenty-one years. Sales had increased 352 per cent in 25 years while the population of the country had increased only 50 per cent. Total sales per capita increased 70 per cent in ten years, reflecting a growth in sales per customer as well as an increased number of customers.

INCOME STATEMENT FOR MANUFACTURED GAS INDUSTRY IN UNITED STATES, 1926

Gross operating revenue from sales of gas	\$488,000,000
Miscellaneous operating revenue	14,000,000
Total gross operating revenue	500,000,000
Operating expenses *	329,750,000
Taxes	45,900,000
Total operating expenses	375,650,000
Income from operations	124,350,000
Non-operating revenue	32,750,000
Gross income	157,100,000
Income deductions	50,900,000
Net income available for dividends and surplus	106,200,000

* Including retirement expense.

Surveys made during the year by the American Gas Association showed that household and industrial consumption of gas offered great opportunities for further development. One survey, covering nearly 8,000,000 homes in 2228 communities, showed that while 75 per cent of all families living in places of from 500 to 100,000 population and over had gas service, the percentage for the communities under 5000 was only 54. The gas appliances in actual use also showed a comparable difference. In towns of 100,000 and over, 79 per cent of the families had gas ranges, while in towns between 5000 and 10,000 population, the percentage fell to 47.9. Long-distance distribution of gas would enable the industry to reach the small towns not on gas lines, and projects were being considered.

A survey of the nation's factories also revealed an additional heating load of more than 75,000,000,000 cubic feet awaiting the cultivation of manufactured gas plants. This available business represented a total possible sales increase of more than 36 per cent, but did not take into consideration the newly opened fields of house heating, refrigeration, incineration and large-volume water heating.

On the engineering side a survey of the manufactured gas industry revealed a noticeable trend to coal-gas manufacture rather than to other methods using oil, resulting in the prob-

by-products, while if all gas were made from coal the residuals would amount to from fifty to seventy-five per cent of the actual gas business transacted during a twelve-month period.

Three stackless factories erected in Cincinnati during the year served to emphasize the importance of modern gas service as an eradicator of smoke. The elimination of the stacks was made possible by the use of gas and electric service. In Boston, a 13-story office building was equipped with central-fired gas boilers as the sole heating medium. This was one of the largest installations of its kind in the world.

A development of outstanding significance during the year was the amalgamation of the Natural Gas Association of America with the American Gas Association, thus bringing into one national organization all elements of the gas industry in North America. Consolidated figures showed annual sales to be 1,714,000,000,000 cubic feet, customers served 14,731,000, and gross revenue \$785,000,000.

The estimated production of manufactured gas in the United States in 1926, the purposes for which it was used, etc., were as follows:

	Thousand cu. ft.
Carburetted water gas	251,999,000
Coal gas	71,082,000
Oil gas	80,805,000
Coke oven gas purchased and distributed for public use	83,640,000
(Coke oven gas consumed at point of production or for purposes other than public use is not included.)	
Total manufactured gas	437,526,000
Natural gas purchased and mixed with manufactured gas for public use	54,516,000
Grand total	492,042,000

Purpose	Per cent	Thousand cu. ft.
Domestic uses	70.9	323,183,000
Industrial and commercial uses	27.8	126,405,000
Unclassified	1.3	6,043,000
Total	100.0	455,631,000
Total revenue from sale of gas		\$488,000,000
Miscellaneous operating revenue		14,000,000
Total gross operating revenue		500,000,000

Distribution data		
Number of meters—prepayment		584,000
Number of meters—ordinary		10,636,000
Total		11,220,000
Number of consumers		11,047,000
Miles of gas main		89,000
Meters per mile of main		126
Number of active services		8,088,000
Population served		58,688,000

STATISTICS ON COMBINED NATURAL AND MANUFACTURED GAS INDUSTRY

Gas sales, M. cu. ft.	1925	1926	Increase	Per cent
Domestic	572,646,000	612,524,000	39,878,000	7.0
All other uses	981,098,000	1,101,810,000	120,517,000	12.8
Total consumption	1,553,789,000	1,714,184,000	160,395,000	10.3
Total gross revenue sales of gas	\$717,184,000	\$785,000,000	67,816,000	9.5
Customers	14,186,000	14,731,000	595,000	4.2
Capital invested	\$8,700,000,000	\$4,000,000,000		

lem of by-product disposal becoming a much greater task than in the past. Indications for the future pointed to an even more marked trend away from oil. The use of oil gives minimum

GAS, NATURAL. The natural-gas industry in the United States, according to the U. S. Bureau of Mines, continued to increase slowly but steadily in 1926, when 1,313,019,000,000

cubic feet of gas was produced and delivered to customers, an increase of 10 per cent over 1925. Of this amount 166,000,000 cubic feet was piped to Mexico and Canada; 1,312,853,000,000 cubic feet was consumed in the United States. The value of the gas per thousand cubic feet at the wells was 9.5 cents in 1925 as against 9.4 cents in 1925, and at points of consumption 22.8 cents in 1926 as compared with 22.3 cents in 1925. Of the total consumption in 1926 domestic or household consumers used 22 per cent, while industrial concerns used 78 per cent, the former paying on an average 58.1 cents per thousand cubic feet as compared with 12.8 cents for industrial concerns. In 1926 there were 3,731,000 domestic consumers of natural gas as compared with 3,508,000 in 1925.

In 1926 a total of 1,206,300,000,000 cubic feet of natural gas was treated for the recovery of natural-gas gasoline which was equivalent to 92 per cent of the total production. In 1925 the total treated was 88 per cent. There was increased output of carbon black in 1926 over 1925, although the amount of natural gas used in its manufacture decreased. The accompanying table shows the natural gas produced in the United States and its estimated value at the point of consumption.

and after graduating at Harvard in 1880 studied at the Harvard Law School and was admitted to the Suffolk County bar in 1883. He practiced law and became identified with the banking interests, being a member of the executive committee of the National Shawmut Bank of Boston as well as a director of several smaller New England banks. He was president of the Boylston Market Association, of the Killingly Trust Company, and a director of the Gillette Safety Razor Company and the Massachusetts Bonding and Insurance Company. He received the military title of colonel by serving on the staff of Governor William E. Russell, and was active in politics in Massachusetts as a Democrat. He was candidate of his party for Governor in 1902 and 1903, and was a delegate-at-large in the Democratic Convention of 1904. He was Democratic nominee for the United States Senate in 1905, and was at times a member of the Democratic National Committee and of the Democratic State Committee. In 1887 Colonel Gaston reorganized the Boston elevated system, of which he became president, resigning in 1901 to continue as a director until 1902. In May, 1907, he became president of the National Shawmut Bank, and in 1922, as a candidate for the United States Senate, had a close contest with

GASTON, WILLIAM ALEXANDER. American lawyer and banker, died at Barre, Mass., July 1. He was born at Boston, Mass., May 1, 1859.

Senator Lodge, who defeated him by several thousand votes. A recount was called for and initiated, but it demonstrated that Senator Lodge had sufficient lead to insure his election.

GENERAL EDUCATION BOARD. See UNIVERSITIES AND COLLEGES.

GEOGRAPHICAL SOCIETY, AMERICAN.

The oldest geographical society in the United States, founded in 1852, "to collect and disseminate geographical information by discussion, lectures, and publications; to establish in the chief city of the United States a place where

may be obtained accurate information concerning every part of the globe; and to encourage such exploring expeditions as seem likely to result in valuable discoveries in geography and related sciences."

The Society's leading activity in 1927 was in the field of publication. Its publications consist of books, pamphlets, maps, and a quarterly periodical, the *Geographical Review*. The *Review* contains a great variety of original articles dealing with all phases of exploration and geographical research, notes based upon the analysis of the world's current geographical literature, and reviews of the most significant geographical books. The books and pamphlets published by the Society fall into six series. The *Research Series* consists of specialized monographs. The *Special Publications* are of a more general appeal. The *Library Series* is devoted primarily to the collections of the Society. Two issues of the *Outing Series* had appeared up to the end of 1927: a Trampers' Guide to the Palisades Interstate Park and a Trampers' Guide to the Vicinity of New York City. The publications of the fifth series are known as the *Map of Hispanic America Publications* and accompany an important group of maps which the Society is producing. These basic maps of Hispanic America are on a scale of 1:1,000,000, and are in essential conformity with the International Millionth Map of the World. Notable progress in this work was accomplished in 1927, several sheets having been made ready for distribution and others being in an advanced state of preparation. Two volumes of the sixth series, *Oriental Explorations and Studies*, dealing with the explorations of Prof. Alois Musil in northern Arabia, have appeared.

The maintenance of a specialized geographical library and of an extensive collection of maps is an important phase of the Society's activity. Valuable additions were made to these collections in 1927. Six regular lectures by distinguished explorers or geographers are delivered each year before the members and guests. The Society recognizes contributions to the development of geographical science and exploration in its elections to honorary and corresponding memberships and in the bestowal of medals. The president for 1927 was John H. Finley, LL.D.; Isaiah Bowman, Ph.D., was director. The Society's building is at Broadway and 156th Street, New York.

GEOGRAPHICAL SOCIETY, NATIONAL. An organization founded in 1888 "for the increase and diffusion of geographical knowledge." Its work during 1927 reached into many fields of research. The accumulating evidence that the researches of the Smithsonian Institution in the field of solar radiation afforded promise of the discovery of the laws governing the relationship between solar activity and weather fluctuation, led the Society to continue to furnish funds for the maintenance of the Mt. Brukkaros Solar Observatory, which was built under a grant from the Society's treasury. The year's work at that observatory, affording a definite check upon observations at associated observatories in Arizona and Chile, further tended to prove correct the conclusions of the late Dr. S. P. Langley and Dr. Charles G. Abbot that on earth weather is controlled by variations in sun radiation, and that once the cycle of fluctuations

of solar radiation is discovered, long-range weather-forecasting will become a matter of possibility.

It had been definitely shown that there was a fundamental cycle of 25½ months in the radiation given out by the sun; furthermore, this cycle had been proved to fit in with a known weather cycle. Dr. Dayton C. Miller's machine for the harmonic analysis and synthesis of curves was set to work constructing sun and weather curves. The curves it built up covering both sun and weather behavior for past years showed a very close harmony. Those it set up for years in the future have constituted a prophecy which has been fulfilled in a remarkable way, both the sun and the weather following the predictions of the machine with remarkable fidelity.

Forecasting the weather at long range through the discovery of its relationships to radiation changes in the sun promised to be only one of many important results that will grow out of the solar observatory's investigations. It has also been shown that changes in static conditions follow closely the sun's behavior and that long range radio reception conditions may be forecast. Moreover, there are indications that there are long as well as short fluctuations in solar radiation, and that these may be related to such major phenomena as Ice Age eras, changes in the earth's rate of rotation, and shifts in seismic zones.

As a result of a reconnaissance survey of the Pavlof volcano region of the Alaskan Peninsula by Dr. Thomas A. Jaggar, the famous volcanologist, for the purpose of determining the advisability of a close study of volcanic phenomena there, the Society provided a grant of \$10,000 from its research fund for an expedition to that region in 1928. It was believed that Dr. Jaggar's studies, to be made to supplement and extend the data gathered by the several expeditions to Mt. Katmai and the Valley of Ten Thousand Smokes, under the leadership of Dr. Robert F. Griggs and under the auspices of the Society, would shed new light on the strange processes of volcanic activity and its relationship to earthquake phenomena. Dr. Jaggar will also tie-in the Hawaiian researches with his Alaskan investigations and correlate events in various parts of the world to test whether observed phenomena are merely local or whether they have broader geographic relationships and repercussions.

In the furtherance of polar exploration a grant of \$25,000 was made from the Society's research fund to the expenses of the expedition which Commander Richard E. Byrd was expected to lead into the Antarctic regions in the autumn of 1928.

The eighth and final expedition of the Society into the Chaco Canyon country of New Mexico was headed, as were the preceding seven, by Dr. Neil M. Judd, of the Smithsonian staff. Dr. Judd's work for the season took the form of a general review of the discoveries of the previous seven seasons and the correlation of the apartment-house type of civilizations at Pueblo Bonito with the preceding eras represented by the dominance, in succession, of the Basket Makers, the Pottery Makers, and the Slab House Builders. Through the work of this series of expeditions a new chronology of pre-Columbian times in the Southwest was built up, the most populous centers of Indian culture north of the Rio Grande

was found, and the character of the life lived there was brought to light.

Following its practice of bestowing the Hubbard Gold Medal on those who have performed outstanding achievements in the field of geography, the Society awarded the medal to Colonel Charles A. Lindbergh. President Coolidge made the presentation in Washington before a notable audience.

In order to aid the Washington State Federation of Women's Clubs to complete their campaign for \$30,000, required to save a tract of 63 acres of Douglas fir trees on Snoqualmie Pass Highway, or Sunset Highway, the Board of Trustees voted the Federation a grant of \$1000. The area is to be presented to the State of Washington as a State Park.

During 1927 bulletins dealing with the geographical backgrounds of current events were furnished to more than 600 newspapers, and weekly bulletins of timely geographical information were sent to about 35,000 school teachers. The Society also supplied material for press associations. As a part of its educational work a weekly ready-to-print service was supplied to about 1200 daily or weekly papers. Upon request, bulletins relating to the geography of Bible lands and mission fields were sent to about 80 church and Sunday school periodicals and used by them in schools where Americanization work was in progress.

The chief activity of the Society in the diffusion of geographic knowledge is carried on through its official publication, the *National Geographic Magazine*. At the end of 1927 there was a membership of 1,150,000, representing every civilized nation. Officers for the year were: President and editor, Gilbert Grosvenor; vice president and associate editor, John Oliver La Gorce; treasurer, John Joy Edson; assistant treasurer, Herbert A. Poole; secretary, O. P. Austin; associate secretary, George W. Hutchinson; general counsel, Edwin P. Grosvenor; chairman committee on research, Frederick V. Coville; assistant editors, William Joseph Showalter and Ralph A. Graves; chief of school service, J. R. Hildebrand. Headquarters are in Washington, D. C.

GEOGRAPHY. See EXPLORATIONS.

GEOLOGICAL SURVEY, UNITED STATES.

The U. S. Geological Survey, in addition to its routine duties during the fiscal year of 1927, made a promising start in the cooperative studies of potash deposits by the Departments of the Interior and of Commerce. The Geological Survey was engaged in choosing the sites for tests and analyzing the cores, while the Bureau of Mines handled the drilling operations. The revision of the Leadville, Colorado, monograph was published by the Survey, and was believed to be as notable a contribution to the mining industry as was the original treatise when issued 40 years previously. The first colored geologic map of the State of Oklahoma ever published was issued during the year, and was of great value in the development of the petroleum and other mineral resources of that State, as well as for educational purposes. There was considerable progress in the development of aerial photography in connection with topographic mapping. In Alaska two large and hitherto unexplored areas were studied and mapped, and progress toward a map was made in the compilation of aerial photographs of southeastern

Alaska taken earlier by the Navy Department. There was advance in the development of more precise instruments for the study of quantities of water that are annually contributed to underground reservoirs and are available for public use. In the conservation work, supervision under the mineral leasing laws was increased by the issue of 4843 new leases, permits, and licenses—about 20 per cent increase during the year and a greater increase than that of the previous year. The production of coal from leases on public lands increased 25 per cent or more than 2,500,000 tons.

GEOLOGY. Activity in research and exploration was apparent in the record for 1927, and as heretofore the leading influence upon progress must be credited to the organized efforts of governmental bureaus and surveys with their multifarious investigations. Such surveys are concerned largely with economic matters, to be sure, but their functions cannot be confined to any one field or department or be guided strictly by practical ends. Thus, most of the areal mapping which is the basis of our knowledge of structural geology and stratigraphy is performed by national and state surveys. The areal map, however, is quite as essential to certain lines of economic work, like oil and gas exploration, in which the first requisites are precise field observations of rock characteristics and structures. In fact the time-honored division between the scientific and practical phases of geology is hardly recognizable to-day.

SOCIETIES. In his presidential address before the Geological Society of America at Madison, Wis., A. C. Lawson traced the development of the northern Rocky Mountains on the basis of isostasy and elastic deformation of the rock materials. The front ranges of Montana and Alberta between latitudes $44^{\circ}30'$ and 50° , a stretch of about 540 miles, are defined on the east by a system of overthrust faults which probably involve a shortening at the surface of many miles. The disturbance, as is the case with most mountain uplifts, is traceable to the formation of a geosyncline or trough-like depression in which sediments from a proximate area of erosion accumulated, in this instance from the region west of the trough. The period of deposition lasted from early Paleozoic to the close of Mesozoic time, subsidence of the trough floor under pressure of the load having made room for about 40,000 feet of sedimentary material. Relief from the weight occurred periodically by transfer of rock material in the deeper layers to the zone lightened by erosion, so that finally the rigid upper section of the crust became too thin to support the burden. A shear fault was then started along the axis of the trough, the fresh accumulation of sediments was downthrust into the zone of flowage, and folding and crustal shortening resulted which permitted the relief of stress over distances of some hundreds of miles on either side of the break. The western segment appears to have overlapped upon the downthrust eastern part. By overlap and folding the crust was shortened by 20 miles or more. Most of these effects may be referred, according to Lawson, to the elastic rebound of the rocks as they were relieved of stress.

"Paleontology and Human Relations" was the subject of Weller's address before the Paleontological Society at the Madison meeting. The paper suggests new directions of research rather

than ascertained facts or principles, pointing out that since life is continuous the origins of human history must be sought in the periods before man appeared. Palaeontology provides an array of data about migrations of fauna, influence of environment and other relationships which should be of interest to the student of human progress. These bearings of the science will gain appreciation, no doubt, with the growth of knowledge of early man, which has made significant gains in recent years.

NEW GENERAL WORKS. The publication of a *Geology of the Earth* ranks with the more important general works now in progress. The first volume on Africa was mentioned in The Year Book for 1926 and later was followed by the first of three volumes descriptive of Europe. The chief editorship was in the hands of Professor Krenkel and the printing was to be executed by a German firm, but the individual volumes were assigned to specialists from different countries. Professor von Bubnoff has charge of the work on Europe, the first volume of which treats of Russia, Finland and the Caucasus. The second volume will cover western Europe, exclusive of the Alpine and Mediterranean regions, which are reserved for the concluding volume.

Rastall's *Physico-Chemical Geology* provides an insight into the later investigations of geological problems on the basis of physical chemistry. This is one of the more promising fields for students of petrology, ore deposition and metamorphic processes, but the work is still largely in its pioneer stages. The Geophysical Laboratory in Washington has set the pace in this department. There is still some question as to how far laboratory methods, limited as they are by the element of time and other circumstances, can be applied to the interpretation of rock history of almost boundless duration and multiform phases. At any rate the results so far obtained are informative, if not always of decisive value.

At the instance of a committee of the National Research Council the preparation of a monographic report, *Treatise on Sedimentation*, has been undertaken by Twenhofel in collaboration with other students. The aim is to supply an inventory of existing information relating to this class of rocks, but naturally the treatment must be selective to a certain extent. Emphasis is put upon American research and conditions, possibly to the detriment of the scope of the volume as inferred from its title. Nevertheless, it supplies an evident need. In a review of the present stage of development of sedimentary studies, the editor expresses the opinion that the subject of environment offers the largest opportunities for fruitful investigation and recommends that a start be made from the consideration of the sites where deposits are now in process of accumulation.

ISOSTASY. Bowie gives preference to the Pratt explanation of isostasy. This is based on the view that the earth's crust extends to a definite depth below sea level, with different densities at different places, the smaller beneath the land and the greater below the sea depressions. The depth of condensation then is the lower limit of the crust. The weakness of this explanation is that the usual values for expansion and contraction of rock materials fail to account for the observed effects of elevation and subsidence. The coefficient of expansion for rocks is of the order

of 0.0000117, but since the movement in the depths of the earth must be largely upward the linear coefficient effective in uplift would be about three times the value given. A prism of crustal material 60 miles thick would change its length by 10 feet for each degree (Centigrade) of change in temperature. An increase of 300° C., about the maximum that might be anticipated for a subsidence of 5 or 6 miles, would involve a lengthening of 3000 feet in such a prism. On that basis an uplift like the Himalayas would require the sinking of a crustal layer to nearly 30 miles. Apparently, some other influence than thermal expansion is involved, possibly connected with a chemical or physical change in the rocks like that accompanying recrystallization. Now that isostasy has been generally accepted in principle, the main purpose of future research should be to clear up these features.

ESTIMATES OF GEOLOGICAL TIME. The most illuminating and consistent results in the estimation of the earth's age undoubtedly are those obtained by the study of the radio-active minerals. A review of the data so far obtained indicates that the oldest rocks of the Pre-Cambrian rocks date back to over 1000 million years, with 1500 million years as a possible ultimate figure.

Two series of minerals of which uranium and thorium, respectively, are components have been employed in the calculations. According to Arthur Holmes the ratio derived from the disintegration of uranium is the more dependable because of the greater resistance of the compounds to solvent effects of water. The lead from uranium forms a highly stable uranate, but the lead from thorium minerals does not combine with thorium in a similar way but is likely to be present as a comparatively soluble oxide or silicate. It is interesting to note that uranium lead has an atomic weight of 206 as compared with 207.2 for ordinary lead, a difference which can be used to determine whether all of the lead present is derived from disintegration or has been introduced possibly from outside. The atomic disintegration proceeds by explosive changes in which helium atoms are ejected at different stages and the process comes to rest in the formation of stable lead. From the known rate of helium production, it is calculated that one gram of uranium produces lead at the rate of one gram in 7400 million years. Thorium produces 0.38 gram in the same period. The general formula for estimating the age of the mineral is to divide the percentage of lead found by the percentage of uranium plus 0.38 times the thorium percentage, and multiplying the result by 7400 millions, which gives the age in years. Such incidental changes as are likely to occur tend toward a slight overestimate of the time, for which a correction up to about 10 per cent of the full value may be necessary.

SEISMOLOGY. The modern status of earthquake investigation is well described in Gutenberg's *Grundlagen der Erdbekunde*, the latest of the treatises on this subject. It contains a description of instrumental seismology, as well as of the theories that have been formulated to account for the origin and transmission of shocks. A study of earthquake frequency by Davison indicates that there is a tendency toward concentration or clustering at recurring intervals. Some of the intervals agree with the 11-year period of sun-spot minima. Other periods of 19, 22 and 33 years, respectively, may be recognized.

The years 1918, 1922 and 1925 represented times of maximum frequency, which will appear again in 1951-58 and in 1980-83. See EARTHQUAKES; SEISMOLOGY.

STRATIGRAPHIC TIME SCALE. No consistent usage is current among geologists in the subdivision of the stratigraphic column. To obviate the confusion inherent in the present lack of uniformity, Ashley proposed to employ intervals of approximately equal value as the primary divisions of time. To these intervals or periods, 15 in all, the same number of rock systems are joined, which are named in order from the base upward; thus, the first period corresponds to the Cambrian system and the fifteenth period to the Quaternary system. Each period is divided again into three epochs and these into "decims," the corresponding rock classes being series and groups. The average thickness of a system is 4500 feet and of a series 1500 feet, although locally they may overrun or fall short of the assigned figures. It is proposed to abolish local distinctions as a basis of classification and to unite all formations that have common elements under the name of the type formation. Whether the scheme would be sanctioned by geologists was still in doubt, but it was destined probably to awaken interest in a matter which needs serious consideration.

MINERAL DEPOSITS. The development of a new department of economic geology seemed to be in progress. It related to the method and technique applicable to the finding of valuable ores or other minerals. The problems, of course, are not of recent origin, but so long as ores could be found on the surface by the methods of the old-time prospector there was little incentive to their investigation. Outcropping deposits of any value are becoming rare, and it is now a question of exploring the deeper zones wherein exploration is much more difficult and expensive.

Various instruments are now available for mineral exploration. They include such types as the dip needle and magnetometer which detect variations in the earth's magnetic field, and which in fact have been in use for many years for locating iron ore. Much more delicate instruments of this type have been perfected that can detect minute variations arising from buried igneous bodies, faults and other structures. Gravitational observations by the pendulum or balance serve to differentiate the ordinary rock materials of average specific gravity from those of lighter or heavier weight. Considerable success has been obtained with them in locating buried oil structures in the Gulf coast region, where the oils accompany deposits of salt and gypsum that are lighter than the country rocks.

Electrical devices seemed to have a promising field in the detection of metallic substances; that is, sulphide and oxide compounds of such metals as copper, zinc, lead and others that occur in rather heavy concentrations. In some instances the orebodies themselves show a difference of potential arising from chemical change, so that only a means of measuring the current is necessary. This is the self-potential method. In other cases currents are set up artificially which in their travel through the ground follow the lines of least resistance, supplied by an orebody if present. The distortions caused by the orebody are reflected on the surface and may be read with suitable instruments and plotted on the map. The instrument observations are not a substitute

for geological field work, but a useful adjunct under certain conditions. They are discussed in a recent paper read before the American Institute of Mining and Metallurgical Engineers by President Mason of Chicago University.

The inferences that may be drawn from leached out crops or gossan as to the occurrence of workable copper sulphide ores in depth are set forth in a volume by A. Locke, who has devoted much attention to this subject. Copper sulphides on exposure to the weather oxidize readily to soluble products, so that the outcrop commonly carries very little copper. Any gold or lead in the ore, however, is likely to be retained on the surface. Silver and zinc minerals behave according to conditions; if their gangue carries soluble bases they are likely to be retained, otherwise they may be dissolved and lost. The presence of any of these minerals at the surface, of course, is evidence of possibly valuable ore in depth. The best indicators are residual remnants of the primary ore, even in small amounts, but it is to be noted that such residue does not necessarily carry the same proportions of metals as the deeper part of the orebody.

Wisser described the surface modifications which result from the oxidation of sulphide ores, and their practical interpretation. The loss of sulphur and the leaching effects of ground waters result in shrinkage of the deposit which, if the latter is not too deeply buried, causes surface subsidence directly over the cavity. Shear cracks surround the depressed ground and give a measure of the areal extent of the ore body involved in the shrinkage. Another type of subsidence is by doming of the roof of a cave in which the rocks slab off and settle on the floor, the process continuing until a natural arch forms that is capable of sustaining the load above. This sort of subsidence may occur over caves caused by solution of unmineralized rocks like limestones, but in such case the rock joints are likely to be widened by the circulating waters and the surfaces are smooth and rounded, in contrast with the angular outlines of the rocks involved in oxidation shrinkage and subsidence.

Discoveries of platinum ores of very promising character in the Bushveld and Warteberg districts of the Transvaal have somewhat changed the market situation in that metal. They are the first noteworthy additions to the resources that have been reported in many years, and for the past decade the new metal obtained from Russia and Colombia has barely sufficed to meet the important needs. Vogt states that the larger deposits in the Transvaal are associated with igneous rocks of the norite and dunite type, and probably have formed from concentration of the heavy minerals while the rocks were in molten state. In one occurrence the deposit consists of a quartz vein of undetermined origin. The supplies from such occurrences are more likely to last than the placer accumulations which have been the main support of production in the past.

GEORGETOWN UNIVERSITY. A Roman Catholic institution of higher education at Washington, D. C.; founded in 1789. In the fall of 1927 there were 2575 students enrolled with a distribution as follows: arts and sciences, 1036; medical, 406; dental, 142; law, 488; foreign service, 503. The faculty numbered about 350. The Riggs Memorial Library contained 163,489 volumes, and the Hirst Library, 13,687. There were also individual libraries maintained

by the professional schools. During the year an addition to the University Hospital was completed. President, the Rev. Charles W. Lyons, S.J.

GEORGE WASHINGTON UNIVERSITY. A coeducational institution of higher education at Washington, D. C.; founded in 1821. The enrollment for the year 1927-28 was 4899, divided as follows: Graduate school, 408; Columbian College, 2502; engineering, 476; education, 509; medical, 275; law, 688; pharmacy, 41. The summer session had an enrollment of 1400. The faculty numbered 391. The endowment funds amounted to \$897,258.38, from which the income for the year was \$28,821.44. The total income from all sources was \$381,587.35. The number of volumes in the general library was 58,300, in the Law School library, 12,200, and in the Medical School library, 2000. In December, 1927, the University received a gift of \$1,000,000 from the Supreme Council of the Scottish Rite Masons, Southern Jurisdiction, to establish a school of government, and plans were made for the operation of the new school at the opening of the autumn semester of 1928. President, Cloyd Heck Marvin, Ph.D., LL.D.

GEORGIA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,895,832. The estimated population on July 1, 1927, was 3,171,000. The capital is Atlanta.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1927	3,413,000	1,100,000*	\$106,700,000
	1926	3,965,000	1,496,000*	83,028,000
Corn	1927	3,893,000	54,502,000	44,147,000
	1926	3,817,000	55,846,000	42,063,000
Oats	1927	442,000	9,282,000	6,962,000
	1926	475,000	10,925,000	7,538,000
Hay	1927	825,000	588,000*	9,481,000
	1926	840,000	414,000*	7,389,000
Peanuts	1927	504,000	220,400,000*	8,596,000
	1926	211,000	110,775,000*	5,428,000
Tobacco	1927	81,600	89,085,000*	11,463,000
	1926	51,900	39,968,000*	9,561,000
Potatoes	1927	17,000	1,241,000	2,048,000
	1926	19,000	1,197,000	2,274,000
Sweet potatoes	1927	123,000	10,560,000	7,920,000
	1926	110,000	9,460,000	7,568,000
Wheat	1927	125,000	1,150,000	1,782,000
	1926	104,000	1,560,000	2,840,000
Peaches	1927	5,948,000	8,023,000
	1926	9,400,000	6,920,000

* bales, † tons, ° pounds.

MINERAL PRODUCTION. Clay products, raw clay and stone continued to rank as the chief mineral products of the State. Its output of clay products in 1925 totaled \$6,369,277; in 1924, \$6,032,950. Clay was produced in the quantity of 330,003 short tons in 1925, and of 347,218 short tons in 1924; and to the value of \$1,255,166 in 1925, as against \$1,214,570 in 1924. Stone production rose to 734,140 short tons for 1925, from 565,630 short tons for 1924; in value, \$4,971,493 for 1925, and for 1924 \$4,472,628. Barite was produced in 1925 to a total value of \$475,618. The total value of the mineral production of the State was, for 1925, \$16,503,741; for 1924, \$14,496,610.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Dec.

31, 1926, were \$19,453,655; their rate per capita was \$6.20. They included \$5,390,093 apportioned for education and greatly increased payments to Confederate veterans. Totals not included above, of \$1,380,402 for interest payments and of \$7,749,740 for permanent improvement outlays, brought the aggregate of State expenditure to \$28,583,797. Of this \$9,306,086 was for highways; \$2,366,557 being for maintenance and \$6,939,520 for construction.

Revenue receipts were \$25,726,743; or per capita, \$8.20. Of their total, property and special taxes yielded 26.9 per cent, attaining a per capita rate of \$2.20. Earnings of departments and compensation paid the State for officials' services supplied 9.2 per cent of the revenue; 39.7 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sale tax. Net State indebtedness on Dec. 31, 1926, was \$9,370,373, or \$2.99 per capita. Property subject to ad valorem taxation had a total valuation of \$1,262,885,965. State taxes levied were \$6,314,430, or \$2.01 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 6,931.86. No new construction in the course of the year was reported.

EDUCATION. The appropriation of revenue to the expected yearly total of a million or over for aid to the poorer school districts, so as to equalize school standards, was accompanied by an increase of about \$750,000 in the State support for institutions of higher learning. The school population of the State, in 1923, the latest year available, was given as 900,352. In 1926 there were enrolled in the public schools 692,907 pupils, of whom 614,386 were in the elementary schools and 75,617 in high schools. Expenditures for education in 1926 totaled \$18,536,368. Salaries of teachers averaged \$648.46.

CHARITIES AND CORRECTIONS. The chief of the State charitable and correctional institutions were a State Training School for Boys, Confederate Soldiers' Home, State Sanitarium, Training School for Mental Defectives, Academy for the Blind, School for the Deaf, and State Tuberculosis Sanitarium. Patients in the State hospital for mental disease on Jan. 1, 1927, according to the statistics of the U. S. Department of Commerce, numbered 4848; first admittances to the hospital numbered 954 in 1926.

LEGISLATION. The Legislature met in regular session in June. It enacted a law for the preservation of racial integrity among the inhabitants, which was signed by Governor Hardman, but was not put into effect, for lack of an appropriation for the purpose. The measure required the immediate registration of every man, woman and child in the State, and the formation of a card index, containing data on the descent and race of the registered persons, to which reference must be made when persons should apply within the State for marriage licenses. The law further prohibited the issuance of marriage licenses until after the examination of the cards relating to the applicants. A measure known as the Neill act was passed, providing that revenues until then received and used directly by any State department or agency should, from Jan. 1, 1928 on, be paid directly into the State treasury, and should be withdrawn therefrom only under warrant, in accordance with an appropriation act. Exemptions, how-

ever, were provided, notably on behalf of the Highway Department, the Banking Department and the educational agencies. Like Alabama and Florida, Georgia enacted a measure to provide State money to equalize educational facilities; a half cent a gallon on gasoline and a cent a gallon on kerosene were set aside to provide a minimum of \$1,000,000 to assist schools, chiefly in the rural areas.

POLITICAL AND OTHER EVENTS. Governor Lamartine G. Hardman took office June 25. Atlanta voted May 25 on the question of adopting a charter providing government by the city manager system. It was reported that an experimental 10-acre orange grove cultivated by M. B. Lane at the Lebanon plantation near Savannah yielded its first commercial crop of Georgia grown oranges in the autumn. The American Forestry Association offered Georgia the sum of \$10,000 to be expended in educating the people of the State as to the benefits of forest conservation, on condition that a like sum should be raised in Georgia. The State Supreme Court in two successive actions declared void the portion of the zoning regulations of the city of Atlanta which forbade the building of shops in residential areas. Atlanta acquired, December 22, 136 acres to form a park of the name of Peachtree Memorial Park, and an additional 370 acres for Perkerson Park and 107 acres for Collum Park. The State statute providing the electric chair as the method of capital punishment was upheld April 20 by a decision of the State Supreme Court rendering this punishment applicable to 11 persons then awaiting execution.

OFFICERS. Governor, L. G. Hardman; Secretary of State, S. G. McLendon; Attorney-General, George M. Napier; Treasurer, W. J. Speer; Auditor, S. J. State; Comptroller-General, W. A. Wright; Superintendent of Education, M. L. Duggan (appointed to fill unexpired term of Fort E. Land, deceased); Commissioner of Agriculture, Eugene Talmadge; Commissioner of Commerce and Labor, H. M. Stanley.

JUDICIARY. Supreme Court: Chief Justice, Richard B. Russell; Associate Justices, Marcus W. Beck, Samuel C. Atkinson, H. Warner Hill, S. Price Gilbert, James K. Hines.

GEORGIA (GEORGIAN SOCIALIST SOVIET REPUBLIC). One of the three Transcaucasian republics that emerged after the Russian Revolution of 1917. After 1918 it was an independent republic; since 1921 it has been known as the Georgian Socialist Soviet Republic, and, with Armenia and Azerbaijan, forms the Transcaucasian Federal Republic which is affiliated with the Union of Soviet Socialist Republics (See RUSSIA). Georgia is situated in Transcaucasia between the Black and Caspian Seas and is bounded on the north by the Caucasus, on the east by the republic of Azerbaijan, and on the south and southwest by Armenia and Turkish territory. Capital, Tiflis. Area, 39,000 square miles; population, according to the census of 1926, 2,621,019. The chief cities with their populations are: Tiflis, 279,000; Kutais, 85,151; Sukhum, 61,974; and Poti, 20,741. At the end of 1925 there were 211,210 pupils attending the public schools, including 1600 students in the higher educational institutions. The chief pursuit is agriculture, which engages about 90 per cent of the people. The methods are very primitive. The large estates have been divided

among the peasants, the minimum allowance for any one family being about 17 acres. The chief product is corn, but vine-growing is carried on extensively, and the country is also rich in fruits. Silk production and bee-keeping are long established activities. The country has vast possibilities for cattle-breeding and there were about 12,000,000 domestic animals. The chief mineral production is that of manganese, around Tchiaturi, where the greatest deposits of this mineral in the world are found. Other mineral products are naphtha, coal, copper ore, lead, and iron ore. All the basic industries were nationalized by the Soviet régime. The railways of the republic, which are all state-owned, totaled 970 miles. During 1927 a line from Akhal-Senaki along the Black Sea coast, through Sukhum to Tuapse, was being constructed.

GEORGIA SCHOOL OF TECHNOLOGY. A State institution of higher education at Atlanta, Ga.; founded in 1888. For the autumn of 1927 the total number of collegiate day students was 2114. The registration for the summer school of the year was 533. The number of members of the faculty in the autumn of 1927 was 153. The endowment of the institution amounted to \$200,000, and the income from appropriations and fees was \$496,214. The library contained 23,000 volumes. During the year a new dining hall, to cost \$130,000, was under construction. President, Marion Luther Brittain, LL.D.

GEORGIA, UNIVERSITY OF. A State institution of higher education at Athens, Ga.; founded in 1801. In the autumn of 1927 there were 1576 students enrolled. The summer session was attended by 2512 students. The faculty numbered 93. The productive funds of the university amounted to \$425,000, and the income for the year from the State and other sources was \$300,000. The library contained 61,000 volumes. During the year the New Commerce and Journalism Building was under construction at a cost of \$215,000. Chancellor, Charles M. Snelling, Sc.D.

GERHARD, WILLIAM PAUL. American sanitary engineer, died at Scarsdale, N. Y., July 8. He was born at Hamburg, Germany, July 30, 1854, and after graduating at the Polytechnic School at Karlsruhe, Baden, in 1875 did military duty before engaging in practice as a civil engineer in Hamburg. He went to the United States in 1877 and, settling in St. Louis, became assistant engineer in the department of public works of that city. He was engaged from 1880 in the engineering office of Captain James B. Eads, and from 1881 to 1883 was chief assistant engineer to Colonel George E. Waring at Newport, R. I. After that time he was active in consulting practice as a sanitary expert, and wrote extensively in this field. From 1885 to 1886 he was the editor of *Building*, and from 1892 to 1899 was sanitary engineer on the staff of the city architect of New York. His publications include: *House Drainage and Sanitary Plumbing* (1881; 10th ed., 1902); *The Disposal of Household Wastes* (1890); *Theatres, Their Safety from Fire and Panic, Their Comfort and Healthfulness* (1900); *The Sanitation of Public Buildings* (1907); *Modern Baths and Bath Houses* (1908); *Guide to Sanitary Inspections* (4th ed., 1909); *Sanitation and Sanitary Engineering* (1909); *Flies and Mosquitoes as Carriers of Disease* (1911); *Public Comfort Stations*; *The A B C of Sanitary House Drainage*;

The Water Supply of Country Homes; and several works in German.

GERMAN COLONIES. During the World War all the overseas possessions of Germany in Africa, the Pacific Ocean, and the Far East were captured by the Allies. In Africa they included German East Africa, German Southwest Africa, Kamerun, and Togo. All of these were divided between Great Britain and France, Southwest Africa being annexed to the Union of South Africa. In the Pacific were New Guinea, including Kaiser Wilhelm's Land, Bismarck Archipelago, German Solomon Islands, Nauru, Caroline Islands, Marshall Islands, Marianne or Ladronne Islands (with the exception of Guam), and German Samoa. In the Far East there was only the German possession of Kiaochow. The total area of the German colonies was estimated at 1,140,117 square miles and the total population was estimated at 13,258,000. See principal titles mentioned above, also **TANGANYIKA TERRITORY**, and **KENYA COLONY**.

GERMAN EAST AFRICA. A former German colony, now administered by Belgium and Great Britain. It is located on the coast of Africa and extends from the Indian Ocean to Lakes Victoria Nyanza, Tanganyika, and Nyassa, lying to the south of Kenya Colony and Protectorate. After the War it passed under the control of Great Britain and Belgium under mandates of the League of Nations. The Belgium share included the province of Rurunda Urundi, which is administered by a royal commissioner of the Belgian government with headquarters at Kigali. The British portion is known as Tanganyika Territory (q.v.).

GERMAN EVANGELICAL SYNOD OF NORTH AMERICA. See **EVANGELICAL SYNOD OF NORTH AMERICA**.

GERMAN LITERATURE. The German books of the year 1927 did not show much change in mood and manner from those of the preceding year. The young generation which came to the fore on the tide of the War was very prolific; but whether its products were of a quality able to survive the painful period of transition and readjustment through which post-war Europe was passing, time only can tell. Still there was a number of interesting first books and especially first plays to be recorded, and one or two of verse and fiction, but criticism and history, always largely cultivated, showed a decrease in noteworthy works.

DRAMA. Among the newcomers most favorably received on the stage during the year were Hanns Johst, whose semi-historic *Thomas Paine* was acclaimed at Cologne; Wolfgang Langhoff with his three-act comedy *Knockout*, representing the contrast between an intellectual and an athletic type of man, with a woman between them; Emil Buri with his *Tim O'Mara*; Leo Larna with the delightful three-act comedy *Die Friedenskonferenz*, and Franz Müller-Freric with his Norse tragedy, *Helgar*. An interesting work is Franz Theodor Czukur's *Die Stunde des Absterbens*, in which heaven and hell in the last hour of an egotist fight for his soul, the solution of the conflict being that he cannot be sent to hell, since he has always been of it and in it. Friedrich Wolf's *Der Mann im Dunkel* is also a creditable first play. Bert Brecht's *Im Diskont der Städte* is a drama of Chicago's Chinatown which has had some success on the stage.

Bruno Frank's *10,000* is a play which was com-

pared with Schiller's *Kabale und Liebe*. Erich Ebermayer's *Kaspar Hauser* is called a dramatic legend, Alfred Brust's *Cordatus*, a confession. Fritz von Unruh's *Bonaparte* was more unfavorably discussed than any of his former works. Ernst Toller's new post-war play, *Hopla, wir leben*, deals with a man, who, like the author himself, sentenced to death for participation in a revolution, is suddenly pardoned and becomes insane. Like many works of the young generation it is more intellectual than poetic, more labored than inspired. A figure to be watched with interest is Max Mell, who cultivates a field all his own, religious drama, and as the author of the *Wiener Kripplerl* and other religious folk-plays of distinction has already made a name for himself. His latest work is a mystery play, *Apostelspiel*.

Of the older writers the popular Wilhelm Schmidtbönn has produced *Der Pfarrer von Mainz*, Emanuel Bodmann *Der Ring mit den Karfunkelsteinen*, a tragedy more suited for reading than staging. Ludwig Fulda has burlesqued the movie plays in *Filmromantik* and Fritz Philippi has written a tragi-comedy, *Der Paragraphenteufel*, the scene whereof is a penitentiary.

FICTION. The novelist who achieved perhaps the greatest success among those of his generation was Frank Thiess, whose *Abschied vom Paradies* followed close upon *The Gate of Life*, as his previous work was called in the translation. As his work and that of others of his generation deal with the problems of German youths, so a number of recent novels treat the problems confronting German girlhood. The problems may not be limited to that country, but they are more discussed in German fiction than elsewhere. Among the authors, Gabriele Reuter, who thirty years ago stirred up discussion with *Aus guter Familie*, contributed the novel called *Tochter*. Ernst Lothar's *Drei Tage und eine Nacht* belongs to that group.

Of inferior quality, reminiscent of certain novels which created a sensation a generation ago, was M. J. Brems's *Vom Leben geißelt*, supposed to be the confessions of a child. A newcomer, W. E. Süßkind, has also in the story of an individual effectively condensed the problems of his whole generation. An interesting story is Hannah Richter's *Das Wilde Herz*, based upon the life of Wilhelmine Schröder Devrient. Carry Brachvogel's new novel is *Die Schauspielerin*. Paul Wiegler's *Wie sie starben* is a volume of stories of poets and women, and Paul Friedrich's *Die Mächte* contains three artist stories. Italy, ever favored by German writers, is the background of Georg Hermann's *Tränen um Modesta Zamboni* and Alfred Neumann's *Rebellen*, a forceful story of Tuscany a hundred years ago.

Josef Ponten's *Studenten von Lyon* is a strong story of the religious struggles in Calvin's time. Hermann Stegemann's *Jacobaea* is the story of a heroic girl of the Thirty Years' War, Oscar Anwand's *Das deutsche Morgenrot* a novel of the time of Arndt and Stein; Heinrich Schüller's *Unterm Kreuz der Südsee*, a story of Brazil's past, Herbert Eulenburg's *Um den Rhein*, Ernst Zahn's *Das Brettspiel des Lebens*, Alexander Castell's *Der Anfang der Liebe*, Emil Ertl's *Die Maturafester*, Felix Salten's *Overbeck*, Karl Scheffler's *Der junge Tobias*, Hermann Hesse's *Der Steppenwolf*, Arthur Schnitzler's

Spiel im Morgengrauen, in the English translation *Dawn*, Willy Seidel's story of Java, *Schattenpuppen*, Hans Knobloch's *Der tausend-jährige Tag*, Clara Viebig's story of German vintners, *Die goldenen Berge*, Max Dreyer's *Das Sympathiemittel*, Raoul Auernheimer's *Die rechte und die linke Hand*, Rudolf Hans Bartsch's *Die Verliebten und ihre Stadt*, Rudolf Greinz's *Das Paradies der Philister*, Robert Hohlbaum's *Die Raben des Kyffhauser*, Jacob Schaffner's *Das Verhängniss*, Diedrich Speckmann's *Ludinghoff*, Rudolf Huch's *Das Spiel am Ufer*, Karl Hans Strobl's *Erasmus mit der Wünschelrute*. Timm Kroger's short stories *Ein schlechter Mensch* and *Eine stille Welt*, the latter a charming book of moon and heath. Friedrich von Gagern's *Der tote Mann*, a story of the Indian, and Georg von Ompteda's *Der jungfräuliche Gipfel*, a novel of Alpine sport, all prove that post-war conditions had not impaired the productivity of the older generation of German novelists.

POETRY. Josef Ponten's *Römisches Idyll* is a lyric epic of distinction, while Alfred Doeblin's *Manasia*, an epic. Ernst Bertram's *Der Rhein*, Rudolf Heuen's *Die Pansflote*, and Albert Tachoff's volume of notes and poems, lyric expressions of a strong artistic temperament, are noteworthy publications of the younger group. Among the older poets Christian Morgenstern's *Mensch-Wanderer* covering the period from 1887 to 1914, Wilhelm von Scholz's *Das Jahr*, Jacob Schaffner's *Der Kreislauf*, Agnes Miegel's collected verse and Robert Faesi's *Der brennende Busch*, a book of strong character, deserve mention.

BIOGRAPHY, LETTERS. Walter Rathenau's new letters deserve a place of honor, and are appropriately supplemented by Carl Eberhard's *Freundschaft im Geiste*, his correspondence with Rathenau. Fritz Bergemann's *Bettina's Leben und Correspondenz mit Goethe*, and Flodoard von Biedermann's *Correspondenz Josef Ungers mit Goethe* are interesting. Arthur Kutscher's *Frank Wedekind*, Maria Waser's *Josef Victor Widmann*, Hugo Ball's *Hermann Hesse*, Willibald Köhler's *Hermann Stehr*, are valuable contributions to the more intimate history of contemporary German letters.

Alfons Matthes wrote a charming tribute to Goethe's mother, *Frau Aja*, and her philosophy of a merry life. Isolde Kurz wrote a memoir, *Mein Mutter*. Noteworthy biographies are Witkop's *Tolstoj*. Karl Federn's *Richelieu*, Christoph Schrenpf's *Søren Kierkegaard*, Georg Ellinger's *Angelus Silesius* and Curt Elwenspeck's *Charlotte von Mexico*. A sympathetic study of the French poetess *Marcelline Desbordes-Valmore* came from the pen of Stefan Zweig, the Austrian poet whose book on Verhaeren is familiar to American readers. A unique diary is Hugo Ball's *Die Flucht aus der Zeit*.

LITERATURE. Works on literature proper were less numerous than in previous years. Foremost among them is the new revised edition of Prof. Albert Soergel's monumental and sumptuously illustrated work, *Dichtung und Dichter der Zeit*. Hermann Köster's *Geschichte der deutschen Jugendliteratur*, Walter Rhem's *Geschichte des deutschen Romans*, Heinrich Spiro's *Die Heilandsgestalt in der deutschen Dichtung*, Gustav Diercks's *Portugiesische Gedichte*, Bernhard Fehr's *Englische Prosa, 1880-1927*, Karl Vosquier's *Italienische Literatur*, and Harald Beyer's

Norwegische Literatur, Heinrich Kempinsky's *Erlebte Dichtung*, Emil Ermatinger's *Krisen und Probleme der neuen deutschen Dichtung* and the book of Arthur Friedrich Binz on poets and poetry, *Von Aufbruch und Untergang*, are full of suggestion. Walter Jablonski contributed to Goethe literature *Vom Sinne der Goetheschen Naturforschung*, Karl Busse wrote a study of *Hermann Sudermann* and Walter Allerhand one on *Tolstoy als Dramatiker*.

HISTORY. Books on history considerably decreased in number. The most important were Ernst Heilborn's history of the Schinkelperiod, *Zwischen zwei Revolutionen, 1789-1848*, Egon Friedell's *Kulturgeschichte der Neuzeit*, and Johann Bühler's *Deutsches Geistesleben im Mittelalter*.

TRAVEL. Franz Kuypers wrote *Rom—Zeiten, Schicksale, Menschen*, which was said to rival the works of Winckelmann and Gregorovius. Other works of travel were Georg Lichev's *Italien und wir*, Victor Ottmann's *Das Wunderland am Nil*, dealing with Egypt and Palestine, Arnold Hottinger's *1001 Inseln*, a book of Polynesia and New Zealand, Manfred Schneider's *Wanderfahrten durch Spanien*, Peter Panter's *Ein Pyrenäenbuch*, Friedrich von Gagern's *Das Grenzenbuch*, dealing with pathfinders, chiefs and "Leatherstockings," Richard Bermann's *Das Urwaldsschiff*, a story of the Amazon, Victor Pietschmann's *Eis und Palmen*, Ludwig von Kohler's *Belgium*, and Kasimir Edschmid's clever chats on *Basken, Stiere, Araber*.

MISCELLANEOUS. A number of interesting publications deal with music: Ferdinand Pföhl's and Bernt Bartels's books on *Beethoven*, Richard H. Stein's *Tschaikowsky*. Kurt von Wolfurt's *Moussourgschij*, Adolf Weissmann's *Die Entgötterung der Musik*, and Paul Bekker's *Organische und mechanische Musik*. Among the art books one especially remarkable is Dr. Luitpold Dussler's *Signorelli*. Georg Anschütz wrote a fascinating book on *Farbe, Ton, Form*. Eugen Holländer's *Aesculap und Venus* is a history of art and customs seen from the physician's standpoint. Kurt Liebmann's *Dionysius Apollo* is stimulating reading. Eduard Wechsler's *Esprit und Geist* is an attempt at understanding the difference between the French and the German minds. Ernst Howald's *Mythos und Tragödie*, and Arthur Schnitzler's *Der Geist im Wesen und der Geist in der That* are rich in suggestion. Philosophy is dealt with from various angles in Heinrich Hillmund's *Wesen der Welt*, Harry Schumann's *Wege zum All*, Arthur Stein's *Pestalozzi und die Kantische Philosophie*, Friedrich Wolters's *Erde, Gewächs und Weltall*, Kurt Singer's *Platon der Gründer*, Kurt Liebmann's new volume of *Das kosmische Werk*, and Hannah Weber's *Die Weltdecker des Ostens*. Glances into the future are suggested in Keyserling's *Wiedergeburt*, Fritz Wittels's *Die Befreiung des Kindes*, and Rudolf Pannwitz's *Das neue Leben*, and were timely in this period of reconstruction. Emmy Hennings wrote a book entitled *Der Gang zur Liebe*, dealing with cities, churches and saints. René Filop-Miller published *Lenin und Gandhi*. Emil Lucka showed insight into the soul of Spain in *In Brunst und Düsterniss*. Hans Ludwig Helch delved into Hebrew mysticism in his book *Das Gespenst des Golem*. Egon Kisch wrote on *Zaren, Popen, Bolschewiken*, Alfred Peters on *Psychologie des Sports*. A delightful book was Alfred Kerr's volume of aphorisms, re-

flecting the distinguished critic's view of life and sense of humor, *Es sei wie es wolle, es war doch so schön*.

Of books on America that by Kurt von Schlozer, ambassador to Mexico, 1871 to 1881, was the most valuable. Others were by O. E. Lessing, M. J. Bonn and Carl Brinckmann.

Translations were too numerous to record. America was represented by many popular and well distributed works, covering a very wide field from the playwright Eugene O'Neill to Judge Lindsey.

NECROLOGY. Teweles, Heinrich, editor and playwright, died August 10. Abert, Hermann, son of J. J. Abert, noted musician, himself writer on music, died August 16. Achleitner, Arthur, author of Alpine fiction, died September 15. Chamberlain, Houston Stewart, writer on music and literature, died at Bayreuth in January. Bionenstein, Karl, critic, died February 27. Mahn, Paul, editor, novelist, died May 3. Wagner, Hermann, essayist, died July 7. See **PHIL- OLOGY, MODERN**.

GERMAN NEW GUINEA. This name was applied to all the German territories in the western Pacific (See **GERMAN COLONIES**). They were distributed by the Treaty of Versailles as follows: Those north of the Equator, viz., the Caroline, Marshall, Palau, and Ladrone Islands, to Japan, under mandate; those south of the Equator, viz., the Bismarck Archipelago, the German Solomon Islands, and former German possessions on the island of New Guinea, to Australia, under mandate of the League of Nations. All German possessions grouped under the name of German New Guinea were formerly administered from Rabaul, the capital, in the north-eastern part of New Guinea.

GERMANY. A federal republic of Central Europe, constituted after the abdication of Emperor William II on Nov. 9, 1918; and organized under the constitution of July 31, 1919, by the National Assembly at Weimar, elected in January of that year; formerly the German Empire; bounded on the north by the Baltic Sea, Denmark, and the North Sea; on the west by the North Sea, the Netherlands, Belgium, Luxembourg, and France; on the east by Austria, Czechoslovakia, and Poland; and on the south by Switzerland, Austria, and Czechoslovakia. The German Empire consisted of 25 Federal States and the Imperial Reichsland; the Federal Republic consists of eighteen republics. Capital, Berlin.

AREA AND POPULATION. At the census of Oct. 8, 1919, the area of the republic, including the Saar Valley, was 182,213 square miles and the population, 59,852,682, of whom 28,496,419 were males and 31,356,263 females. The accompanying table from the *Statesman's Year Book* for 1927 gives area and population according to the census of June 16, 1925.

The losses under the Treaty of Versailles (June 28, 1919) were as follows: (1) Alsace-Lorraine, returned to France, 5604 square miles, with a population of 1,874,014; (2) a part of Eastern Silesia, the larger part of West Prussia, and a part of Upper Silesia (by plebiscite), ceded to Poland, 17,787 square miles with a population of 3,853,354; a part of Upper Silesia, ceded to Czechoslovakia, 110 square miles and 45,896 population; Eupen and Malmédy, to Belgium, 386 square miles, and 60,924 population; Memel to the Allies, 1057 square miles

States of the Empire	Area English sq. miles	Population June 16, 1925	Pop. per sq. mile 1925
Prussia ^a	112,628	38,054,172	338
Bavaria ^a	29,343	7,379,594	251
Wurttemberg	7,532	2,579,453	342
Baden	5,819	2,312,462	397
Saxony	5,789	4,996,138	863
Mecklenburg-Schwerin	5,069	674,411	133
Thuringia	4,527	1,609,300	355
Hesse	2,970	1,347,295	454
Oldenburg	2,480	545,749	220

German Republic (with Saar District) ^b	181,714	63,118,782	347

^a Excluding the Saar.

^b The figures for the population of the Saar District, in which the census of 1925 could not be taken, are estimates.

and 140,746 population; Danzig, to the Allies, made a free city, 794 square miles and 330,252 population. Provision was made to determine the status of certain regions by plebiscite: The Saar Basin, area 742 square miles and 652,818 population, was to be under the League of Nations for 15 years, then to determine its destiny by plebiscite; Schleswig to decide between Germany and Denmark; regions of the southern part of East Prussia, in West Prussia, and in Upper Silesia. The plebiscite for Schleswig was held in March, 1920, when the northern zone, comprising 1537 square miles and a population of 166,395, decided for Denmark and was ceded to that country.

The plebiscite in Upper Silesia, which was held in March, 1921, gave a majority for Germany, but the territory was divided according to the vote, and 1255 square miles with a population of 891,060 was annexed to Poland.

In 1925 the movement of population was: Births, 1,336,327; deaths, 788,519; marriages, 482,792; divorces, 35,409. In 1926, 65,281 German nationals emigrated from the country as compared with 62,828 in 1925. Of the number 51,145 emigrated to the United States. The cities with more than 500,000 inhabitants at the census of 1925 were: Berlin (including suburbs), 4,013,588; Hamburg, 1,079,092; Cologne, 698,064; Munich, 680,704; Leipzig, 679,322; Dresden, 618,684; and Breslau, 554,801.

EDUCATION. Elementary education is compulsory throughout Germany between the ages of six and 14. The latest educational statistics are those gathered in the school census of 1922, when there were 52,763 public elementary schools with 143,933 male teachers and 49,013 female teachers and 8,894,486 pupils. There were also 675 private schools of a similar nature with 35,584 pupils. In the same year there were for boys, 515 Gymnasias, with 10,051 teachers and 152,367 pupils; Realgymnasias, 322, with 6678 teachers and 115,615 pupils; Oberrealschulen and Realschulen, 506, with 9404 teachers and 184,175 pupils; for girls, high schools, 824, with 14,552 teachers and 299,285 pupils. There are ten fully equipped technical schools; with the

power of granting degrees. These had 2054 teachers and 21,216 students.

The accompanying table, from the *Statesman's Year Book* for 1927, shows number of universities, with the date of founding, and the number of professors and teachers and students in 1925:

Universities	Professors and teachers	Students
Berlin (1809)	589	6,938
Bonn (1786-1818)	242	2,438
Breslau (1702)	231	2,541
Cologne (1888-1918)	155	4,536
Erlangen (1743)	102	1,289
Frankfort (1914)	207	2,544
Freiburg (1457)	149	3,020
Gießen (1607)	159	1,388
Göttingen (1737)	203	2,389
Griesswald (1456)	130	885
Halle (1694)	193	1,790
Hamburg (1919)	258	2,075
Heidelberg (1385)	212	2,516
Jena (1557)	174	2,015
Kiel (1665)	164	1,601
Königsberg (1544)	191	1,445
Leipzig (1409)	810	4,400
Marburg (1527)	150	1,995
Munich (1472-1826)	344	7,068
Münster (1780)	149	2,202
Rostock (1419)	108	831
Tübingen (1477)	150	2,478
Würzburg (1582)	125	2,124
Total	4,690	60,458

The students were divided among the several faculties as follows: Theology, 3556; Jurisprudence, 25,658; Medicine and Dentistry, 8947; Philosophy, 10,302; Mathematics and Natural Science, 11,666; Auxiliary Science, 329.

PRODUCTION, INDUSTRIES, ETC. At the beginning of June, 1926, the soil of Germany was divided as follows: Arable land, 51,182,969 acres; grass, meadows, and pasture, 19,845,542; vineyards, 201,228. The accompanying table shows the area under the principal crops in acres and yields in metric tons (one metric ton equals 2204 pounds) in 1925 and 1926:

	Acreage		Produce (metric tons)	
	1925	1926	1925	1926
Wheat	3,875,541	3,997,140	8,217,266	8,053,408
Rye	11,763,509	11,789,042	8,062,882	7,495,786
Barley	3,582,551	3,707,096	2,599,076	2,620,335
Oats	8,620,730	8,677,345	5,584,545	5,569,568
Potatoes	7,013,960	6,891,000	41,718,860	30,031,000
Sugar				
beets	1,006,381	1,006,000	10,325,893	10,495,000
Hay	19,079,959	1,853,000	33,163,250	88,587,000

In 1926 the area devoted to grapes was 182,395 acres, the wine yield 21,765,524 gallons; area devoted to tobacco, 16,500 acres, yield (1925), 19,008,700 kilos; sugar production in 1925-26, 1,605,960 tons. The hop production in 1926 was 262,300 metric tons. The number of domestic animals in Germany on Dec. 1, 1926, was: Horses, 3,868,623; cattle, 17,195,309; sheep, 4,083,934; swine, 18,412,489; goats, 3,477,522. The minerals include coal, lignite, iron ore, zinc ore, lead ore, copper ore, rock salt, and potash. In 1926 the output of coal was 145,129,305 tons; of lignite 139,263,124 tons; of coke, 26,366,663 tons. The total output of pig iron was 9,643,519 tons; of ingot steel, 4,500,000 tons.

In October, 1927, the U. S. Bureau of Foreign and Domestic Commerce published the results of a survey of the 1926 statements of 4916 German corporations having a total capital stock of 16,874,000,000 marks and total assets of 32,587,

000,000. These 4916 companies account for about two-thirds of the total capitalization of German corporations. Of these reporting corporations, 3383, having a total capitalization of 9,826,000,000 marks, showed net profits of 785,000,000 marks or 8 per cent. This prosperous group of concerns, moreover, actually declared dividends totaling 501,000,000 marks—an average of 5.1 per cent. Approximately 384,000,000 marks, therefore, were carried to surplus or to reserves against depreciation—more than twice as much as the total losses of the less fortunate corporations. Only 1528 corporations suffered net losses. The capital stock of the losing corporations totaled only 1,048,000,000 marks, but their net losses aggregated 189,000,000 marks, an average of 18 per cent. It would appear that the companies that lost money were mostly small joint-stock companies. Their average capitalization was only about 686,000 marks; whereas the average capitalization of the prospering concerns was 2,900,000 marks. Of the 24 business groups, only two actually lost money—"wood-working and furniture" and "real estate, land and settlement" companies. Most of the non-reporting companies, approximately 6000 in number, were small concerns (with the notable exception of the United Steel Works), and their income statements would have detracted somewhat from the rather good results shown by the reporting companies.

COMMERCE. In the general economic revival which characterized the year 1926 in Germany, one of the most noteworthy features was the radical reduction of the unfavorable trade balance. The trend of foreign trade improved to such an extent throughout the year that there existed some doubt, up to the very last month, as to whether the volume of imports would exceed that of exports or conversely. The results achieved are best illustrated by the fact that the unfavorable commodity balance in 1926 amounted to only 133,000,000 marks, whereas in 1925 the commodity imports were higher than the exports by 3,630,000,000 marks. These deficits would naturally be somewhat larger if the value of the trade in precious metals were added, inasmuch as imports of gold and silver into Germany are always larger than exports from that country.

From the German standpoint, the most encouraging feature in cutting of the adverse balance was the fact that the result achieved represented not only a very considerable reduction in the volume of imports, but at the same time a material gain in the value of German goods sold to foreign countries. As a matter of comparison, the value of German trade for the two years, divided according to main commodity groups, is shown in the following table:

GERMAN FOREIGN TRADE IN 1925 AND 1926
[In millions of marks, each worth \$0.338]

Commodity group	Imports		Exports	
	1925	1926	1925	1926
Live animals	122	125	15	11
Foodstuffs and beverages	4,032	3,579	517	476
Raw materials and semi-manufactures	6,269	4,924	1,640	2,368
Finished goods	2,005	1,923	6,326	6,968
Total commodity trade	12,428	9,951	8,798	9,818
Gold and silver	718	615	40	36
Grand total	13,146	10,566	8,838	9,854

Some of the principal items which enter into Germany's foreign trade and which are responsible, in varying degrees, for the general improvement are listed below:

PRINCIPAL ITEMS IN GERMAN FOREIGN TRADE
IN COMMODITIES, 1925-26
[In millions of marks]

Imports	1925	1926
Foodstuffs:		
Wheat	471	585
Barley	188	288
Rice	154	118
Tropical and other fruits	362	321
Coffee	228	253
Meats, bacon and sausage	285	258
Butter	372	330
Eggs	276	284
Lard and oleomargarine	189	182
Raw materials:		
Wool	656	576
Cotton	886	598
Flax, jute, etc.	232	147
Calafkins and hides	238	173
Fur hides	125	103
Tobacco	260	144
Oil fruits and seeds	610	611
Oil cake, etc.	107	126
Timber	462	297
Rubber, gutta-percha, etc.	184	126
Mineral oils	208	222
Iron ores	234	176
Raw copper	337	226
Finished goods:		
Woolen yarn	262	150
Cotton yarn	374	168
Cotton goods	228	78
Leather	82	55
Chemical and pharmaceutical products	91	70
Iron goods	154	138
Automobiles and motor cycles	69	52
Total	12,428	9,951
Exports		
Foodstuffs:		
Wheat	47	69
Sugar	50	60
Raw materials:		
Wool	138	130
Cotton	124	180
Coal, coke, etc.	415	391
Pig iron	38	67
Sulphate of ammonia	85	113
Finished goods:		
Wool yarn	92	92
Silk and artificial silk goods	166	164
Wool goods	255	295
Cotton goods	440	424
Clothing	95	105
Other textiles	110	102
Leather	206	212
Footwear, etc.	91	82
Furs	147	155
Rubber goods	95	98
Paper and paper goods	308	385
Paints, varnishes, and lacquers	278	293
Chemicals and pharmaceuticals	372	396
China ware	126	132
Glass and glassware	175	187
Iron goods	1,241	1,371
Copper goods	199	227
Machinery	641	689
Electrotechnical equipment	269	298
Musical instruments, phonographs, etc.	122	107
Toys	112	106
Total	8,798	9,818

The extraordinary reduction in value of imports into Germany may be attributed fundamentally to the fact that neither 1925 nor 1926 could be called a normal year, notwithstanding the material improvement which the latter witnessed in Germany's general situation. Despite the state of depression which pervaded all branches of German industry throughout 1925, there was a tendency to accumulate large stocks of goods, which resulted in a record figure for imports. This action was due to three principal causes: First, the year 1925 brought an end to

the provisions of the Versailles treaty relative to special customs treatment of the goods of certain nations, thus enabling the German government to enter immediately upon the negotiation of important commercial treaties; second, a new tariff law of decidedly protective nature became effective in October of that year; finally, advantage was taken of the credits obtained in foreign countries.

The state of industrial depression carried over into 1926 and remained unimproved, at least during the first five or six months of the year. This was accompanied by a material reduction in the purchasing power, while the stocks which had been accumulated in 1925 tended further to check new importations. As a matter of fact these stocks, in some cases, became a drag on the market, and at least parts of them had to be reexported. Another factor of important bearing on the total import trade may be found in the price declines of leading commodities in 1926. On the basis of pre-war values the index price appreciation for 1925 was 137, but only 125 in 1926. With no change in this index, the imports of 1927 would have been larger by approximately 1,000,000,000 marks.

Despite the fact that commodity imports were reduced by 2,477,000,000 marks in 1926, the general percentile relation of the constituent groups to the total remained very much the same as in 1925. Thus, purchases of foreign foodstuffs and beverages accounted for roughly one-third of the entire import trade; in the same manner, imports of raw materials and semi-manufactures, while declining by 1,345,000,000 marks, still constituted approximately one-half of the total. The industrial depression of the first half of 1926, as well as the lower prices of certain commodities, tended to influence the imports of raw materials and semi-manufactures. Furthermore, the value of this important group was made to feel very particularly the effect of the stock accumulations which took place in 1925; the greater part of these stocks consisted of metals, timber, hides, and rubber, and it will be observed that the respective import values of these goods in 1926 were materially lower than in 1925.

Commodity exports in 1926 totaled 9,818,000,000 marks, as against 8,798,000,000 marks in 1925, thus showing a gain of nearly 12 per cent; larger exports of raw materials and semi-manufactures and of finished goods were responsible for this advance, as the other two groups—livestock and foodstuffs—registered losses of 26 and 7 per cent, respectively. The most appreciable gain was in the category of raw materials and semi-manufactures, amounting to 723,000,000 marks or 44 per cent; in this connection it should, however, be remembered that a portion of the exports in this group was made up of some of the stocks which had been imported in 1925. At the same time, the favorable effect of the British strike can be clearly seen in this remarkable advance, as exports of coal and coke alone increased by 476,000,000 marks, or 114 per cent; the gain in this one commodity represents over 65 per cent of the gain for the entire group.

FINANCE. The German budget for 1927-28, which was adopted after the beginning of the fiscal year which is covered (Apr. 1, 1927-Mar. 31, 1928) balanced at 9,131,854,000 marks; taxes were expected to provide 5,305,000,000

marks of the total revenue, while 2,445,000,000 marks were expected to be derived from customs and consumption taxes. The budget bill for the fiscal year 1928-29 was passed in December, 1927. It totaled 9,356,000,000 marks and showed an increase in every department over the old budget with the exception of two. The Chancellor and the Minister of Agriculture believed they would be able to make savings, although their requests were only for 85,000 marks less than the preceding year. On the other hand, the Reichswehr asked for 20,000,000 more, the Ministry of Labor, 60,000,000 additional, the Pensions Bureau, 305,000,000 and War Burdens Bureau, 428,000,000. Of the proposed expenditure the states and communes would receive 3,200,000,000 or 325,000,000 more than the preceding year. The Reichswehr needed 589,000,000 to carry through its programme. However, all the moneys intended for use of the Defense department are not included in this budget. The Ministry of Transportation and other departments carried in their estimates items of considerable size for the transportation of troops, etc. For a further discussion of German finance, see below under HISTORY.

RAILWAYS. In 1927 the U. S. Bureau of Foreign and Domestic Commerce published a provisional statement concerning the operations of the German Railways Company covering its activities for the calendar year 1926. This railway company, the Reichsbahn, was organized under the direction of the Dawes Commission and is stated to be the largest railway system in the world. It comprises 30,000 miles of track and employs more than 700,000 men. The German Reich owns the preferred stock, valued at 881,000,000 reichmarks and common stock at 13,000,000,000 reichmarks. The railway system is mortgaged and the issue of bonds held in trust by the Entente. The balance sheet of the company for the first business year ended Dec. 31, 1926, comprising 15 months, closed with a gross surplus of 819,000,000 marks. Freight traffic reached its lowest point in January, 1926, as a result of an economic slump. However, the British coal strike caused a steady increase in the volume of merchandise to be transported, reaching its peak in November. The goods carried in 1926 amounted to 438,550,000 tons as compared with 408,700,000 tons during 1925. The general economic depression caused the elimination of a number of trains in Western Germany in the summer. The depression was felt also in the receipts from passenger traffic, which were approximately 8 per cent below those of 1925, owing to the decrease in traffic and the greater use of lower-class compartments. Figured in per cent of the total kilometers covered by passenger trains, the share of the fourth-class compartments increased from 45 per cent in 1913 to 58 per cent in 1925 and to approximately 61 per cent in 1926. The number of passengers carried dropped from 2,106,800,000 in 1925 to 1,819,000,000 in 1926; the pre-war figure for the same area amounted to 1,577,000,000. Receipts from passenger traffic amounted to 1,273,000,000 marks, as against 1,378,000,000 marks in 1925.

Locomotives available at the end of 1926 numbered 26,474 (28,110 at end of 1925), of which 301 (246 in 1925) were operated by electricity; the available passenger cars amounted to 63,476 (64,799 in 1925). The cost of service of locomotives was reduced. The consumption of coal

per 1000 locomotive-kilometers decreased 4.5 per cent as compared with 1925, thereby dropping 3.2 per cent below the pre-war consumption; this was accounted for in part by the fuel savings premium introduced since Apr. 1, 1926. In December, 1926, the Reichsbahn made a contract with a German association of car builders for the supply of rolling stock over a period of several years with the end in view of cheapening the cost of railroad cars by more profitable working methods, and reducing thereby the number of railroad car manufacturers.

Compared with the year 1913, the receipts increased 22 per cent per passenger-kilometer and 34 per cent per ton-kilometer; at the same time expenditures increased 83 per cent per capita and 60 per cent for materials and supplies.

SHIPPING. On June 30, 1926, the German merchant marine amounted to 3,110,918 registered tons as compared with 5,459,296 in 1914. In 1925, 62,656 vessels (with freight) of 29,363,136 tons and 9514 vessels (in ballast) of 3,064,087 tons entered the ports of Germany and 51,875 (with freight) of 22,916,222 and 22,294 (in ballast) of 9,312,158 tons cleared.

GOVERNMENT. Under the constitution of the republic adopted July 31, 1919, and promulgated Aug. 11, 1919, executive power is vested in the president elected by the people for seven years, and in a ministry appointed by him and responsible to the Reichstag or parliament. Legislative power is vested in the Reichstag, which is elected by universal, equal, direct, secret franchise of male and female voters, on the principle of proportional representation; and in a federal council, the Reichsrat, consisting of 68 members (Prussia, 27, Bavaria, 11, Saxony, 7, Württemberg, 4, Baden, 3, other states, 16). The consent of the Reichsrat is required to all bills before their introduction into the Reichstag, but the latter body may pass a bill over the heads of the former by a two-thirds vote. In the Reichstag elected Dec. 7, 1924, the seats were divided among the various political parties as follows: Socialists, 131; Centre, 69; German National People's party, 110; German People's party, 51; Germany Democratic party, 32; Bavarian People's party, 19; Communists, 45; minor parties, 36; total 493.

The president in 1927 was Paul von Hindenburg, elected Apr. 26, 1925; assumed office, May 12, 1925. The cabinet as appointed on February 1, 1927, was as follows: Chancellor and Minister for the Occupied Provinces, Dr. Wilhelm Marx (Centre); Minister of Justice and Vice Chancellor, Oskar Hergt (Nationalist); Foreign Affairs, Dr. Gustav Stresemann (German People's party); Home Affairs, Dr. von Keudell (Nationalist); Finance, Dr. Köhler (Centre); Defense, Dr. Otto Gessler (no party); Labor, Dr. Heinrich Brauns (Centre); Food and Agriculture, Martin Schiele (Nationalist); Posts, Dr. Schaetzel (Bavarian People's party); Transport, Dr. Wilhelm Koch (Nationalist); Economic Affairs, Dr. Julius Curtius (German People's party).

HISTORY

CABINET REORGANIZATION. As noted in the preceding YEAR BOOK the Marx cabinet, which had come into office in the spring of 1926, was compelled to resign on Dec. 17, 1926, chiefly because of bitter Socialist opposition to the martial move-

ments of the Defense Minister, Dr. Otto Gessler, and the strict censorship law enforced by the Minister for Home Affairs, Dr. Külz. The crisis which followed lasted more than six weeks and a new cabinet was not sworn in until January 31. President Hindenburg played a very prominent part in the formation of the new cabinet and let it be known in no uncertain tones that he desired an executive council which controlled an absolute working majority in the legislative body, as well as one which would keep the army out of politics and maintain the foreign policies of Dr. Stresemann. He intimated that the most desirable cabinet would be composed of the middle parties, namely, the Centrists, Democrats, and German and Bavarian People's parties. He first offered the premiership to Dr. Curtius of the People's party, who was known to be particularly friendly toward Dr. Stresemann. Dr. Curtius was compelled to give up his efforts because he could not reconcile the labor element of the Centrist party and the wishes of the conservative group.

President Hindenburg then turned to former Chancellor Marx and requested him to form his fourth cabinet. Marx accomplished this with the results noted above under *Government*. For a time it appeared that Marx would form a middle party coalition, but he was unable to secure and maintain a majority of the members of the Reichstag. President Hindenburg then demanded that Marx form a coalition of the Centre and Right parties, saying, "The new government even if it does not include the representatives of the Left parties, nevertheless shall have the special duty of protecting the righteous interests of the broad working masses, serving all classes of the German people and of solving the important political, economic, and social problems which confront us."

As will be noted from the composition of this cabinet the German Nationalists played an important rôle in it. Dr. Marx let it be known beforehand that cooperation between the Centrists and the Nationalists could only be secured by the Nationalists agreeing to the following points: The German Republic was the only form of state admissible; the army must only secure recruits loyal to the republic; the League of Nations and Locarno pacts must be firmly adhered to; and a closer relationship with France was desirable to secure the evacuation of the Rhineland territory. After a long debate the Nationalists accepted this formula on condition that they be given four cabinet positions. The new government had a majority of 270 to 222 in the Reichstag.

The refusal of the Democratic party to support the coalition compelled the resignation of Dr. Otto Gessler from that party in order to retain his position as Minister of Defense. It was quite evident that failure to resign would be followed by expulsion from the organization. The first test of the Marx group came on February 5, when the Socialists made a bitter attack on Dr. von Keudell, who was accused of treasonable acts against the republic in connection with the various Nationalist plots of the past few years. An investigation into his activities by the Chancellor resulted in a complete whitewashing, whereupon the vote of confidence in the new government was promptly forthcoming. It was felt generally at the time, however,

that the Socialist charges were correct, and that Dr. Marx's report was based more on convenience than upon truth.

The coalition ministry managed to weather the storms of internal political disturbances throughout the remainder of the year, although to say that it worked in perfect harmony would be a gross exaggeration. The Nationalist members of the cabinet took advantage of every opportunity to attack the foreign policies of Dr. Stresemann and publicly predicted that he would not hold his position long. Dr. Stresemann, however, had the solid backing of President Hindenburg and most of the Centrist party, as well as the support of the Socialists in the Reichstag, although they were not members of the group of parties supporting the Marx government.

Inflammatory speeches were made by Nationalist members of the cabinet against Poland, Czechoslovakia, and France, which brought bitter denunciation in the press of those countries and on one or two occasions called for diplomatic protests. Chancellor Marx with characteristic suavity mollified the governments attacked without hurting the feelings of his own cabinet members. Generally speaking, the entire year was an exceptionally quiet one both at home and abroad and was interrupted by no untoward incidents, with the possible exception of the criticisms of Agent General S. Parker Gilbert, that would tend to disrupt the political and economic advancement of the republic. The law preventing the former Kaiser from returning to Germany was extended for a period of two years without causing more than a ripple of comment.

October 2 was a day of festivity throughout the entire country because of the celebration of the eightieth birthday of President Paul von Hindenburg. In reply to a felicitous address delivered by Chancellor Marx, President Hindenburg asked for national unity as the chief need of the republic. He stated in connection with the occupied Rhineland: "My deepest thoughts at this hour are devoted to our compatriots in the Rhineland districts who, to our regret, have not been relieved from foreign occupation. I greet them with sad heart, and the wish and hope that the land on the Rhine may soon regain its liberty. To accomplish this will be the foremost purpose of German policy."

THE RHINELAND. The continued occupation of the Rhineland that was mentioned in President Hindenburg's speech continued to irk the German government and people. In the latter part of the year Chancellor Marx made a tour of inspection of the Rhineland districts in his capacity of Minister for Occupied Territories. As reported in the *New York Times* on December 10, Allied military occupation of the Rhineland is inconsistent with the general political situation and not in accordance with the spirit of the twentieth century, according to Chancellor Marx, who aired his views on the subject before a committee of the Reichstag. Though the number of troops had been reduced by 10,000, according to agreement, they were still far above the strength of the German soldiers in the same area before the War, Dr. Marx declared.

The Chancellor took exception to negro troops numbering about 1000 who were still maintained in this region, and complained that the French during their autumn maneuvers had de-

stroyed, unnecessarily, valuable crops, for which the Germany government must pay. That the occupied area should be used for such purposes, the Chancellor believed, was overstepping the bounds. The target practice of the artillery, he asserted, endangered the lives of many inhabitants. Other rankling points, he said, were the military courts of justice dealing with German subjects and giving them long and severe prison terms or banishing them from their homes. In the first half of 1927, he went on, more than 700 Germans had been brought before French courts-martial, in most cases for very petty offenses. The cases of mistreatment of Germans by the occupation troops were numerous and not conducive to bettering international relations. He stated that his tour had convinced him of two things: (1) That the government's policy of international reconciliation met the widest approval and fullest understanding of the Rhineland population, and (2) That along the Rhine there was still a strong feeling about the heavy burdens of material and spiritual nature connected with the occupation. "The size of the occupation forces still rests heavily on the population, on the city dwellers because of the burden of furnishing quarters and on the farmers because of target practice and maneuvers of the occupying army."

DAVES PLAN. For a discussion of the severe rebuke of the Agent General for Reparations, S. Parker Gilbert, handed to the German government on October 20, concerning the unscientific financial habits of the federal and state governments, and for the results of the third year of the workings of the plan, consult the article **DAVES PLAN**. For the commercial agreement between France and Germany and its effects on the United States, consult **FRANCE, History**.

Other aspects of Germany's internal and external problems during 1927 will be found under the articles: **LEAGUE OF NATIONS**; **MILITARY PROGRESS**; **NAVAL PROGRESS**; **SHIPPING**; **SHIP-BUILDING**; **DISARMAMENT**; **PEACE AND PEACE PROPOSALS**; and **ARBITRATION, INTERNATIONAL**.

GERRY, ELBRIDGE THOMAS. American lawyer and philanthropist, died at New York, N. Y., February 18. He was born in New York City, Dec. 25, 1837, a grandson of Elbridge Gerry, signer of the Declaration of Independence and vice president of the United States. He graduated at Columbia College in 1857 and was admitted to the bar in 1860. In 1867 he was a member of the New York State Constitutional Convention. In 1876 he became president of the New York Society for the Prevention of Cruelty to Children, an organization in the work of which he was so prominently identified, until his retirement in 1901, that it became known among the people of New York as "the Gerry Society." He was vice president of the American Society for the Prevention of Cruelty to Animals until 1899, and a governor of the New York Hospital from 1878 to 1912. He was chairman of the New York State commission on capital punishment which substituted electricity for hanging after hearings lasting from 1886 to 1888. In 1889 he was chairman of the executive committee for the celebration of the centennial of the inauguration of George Washington. Commodore Gerry, as he was generally known after he became Commodore of the New York Yacht Club, 1886-93, was active in many philanthropic and civic movements, serving on a large number of boards. He

contributed to magazines various articles on topics in which he was interested. He had a private law library of 30,000 volumes.

GIBNEY, VIRGIL PENDLETON. American orthopaedic surgeon, died at Bridgeport, Conn., June 16. He was born in Jessamine County, Kentucky, Sept. 29, 1847, and after graduating at Kentucky University in 1869 studied medicine at Bellevue Hospital Medical College in New York, receiving his M.D. in 1871. Specializing in orthopaedic surgery, he became identified as resident house surgeon, 1871-84, and surgeon-in-chief, after 1887, of the Hospital for Ruptured and Crippled, and from 1882 to 1894 he was professor of orthopaedic surgery in the New York Polyclinic. In the latter year he became clinical lecturer in orthopaedic surgery in the College of Physicians and Surgeons of Columbia University, being promoted to clinical professor in 1895 and serving as professor, 1904-17. He was the first president of the American Orthopaedic Association, and from 1902 to 1904 was vice president of the New York Academy of Medicine. He was a member of many medical and other organizations and enjoyed a high reputation in his special field.

GIBRALTAR. A possession of Great Britain on a small peninsula, comprising the Rock of Gibraltar, on the southwest coast of Spain, commanding the entrance to the Mediterranean Sea. Area, 7½ square miles; population, at the census of 1921, 20,638, of whom 2932 were military and 546 naval. On Jan. 1, 1926, the fixed population was estimated at 16,127, and there were also about 1161 aliens. The inhabitants are chiefly descendants of Spanish and Italian settlers, and in religion are Roman Catholics. Education is compulsory between the ages of five and 14. In 1925-26 there were 14 government aided elementary schools with 2610 pupils. There are also five secondary schools. The revenue in 1925 was £162,250 and the expenditure, £167,267. Trade is mainly transit. Vessels entered in 1925, 4732 of 6,532,198 tons; cleared 2762 of 5,887,854 tons. There is cable connection with the continent, with eastern Mediterranean ports, and with England. Gibraltar is under a governor who is also commander-in-chief. He is assisted by an executive council which was established in 1922. Governor, in 1927, General Sir Charles C. Monro.

GIBSON, ROBERT WILLIAM. American architect, died at Woodbury, N. Y., August 17. He was born in Essex, England, Nov. 17, 1854, and was educated at Ingress House Schools, Gravesend, and the Royal Academy of Arts, London, at which he graduated in 1879. After passing the art examinations of the Royal Institute of British Architects he went to New York and entered upon practice. He was architect of the Albany, N. Y., cathedral, and in New York City of the United States Trust Company's building, the Clearing House, the Greenwich Savings Bank building, the Coffee Exchange, the Botanical Museum, the Randall Memorial Church at Sailors' Snug Harbor, and banks, churches and office buildings in other cities. He was at one time president of the Architectural League of New York, and was a member of various scientific and other organizations. He wrote: *The Morality of Nature—a Philosophy of Evolution* (1923), and was an occasional contributor to magazines.

GIFTS AND BENEFACTIONS. See **UNIVERSITIES AND COLLEGES**.

GILBERT, FRANK BIXBY. American educator, died at East Schodack, N. Y., August 28. He was born at Bainbridge, N. Y., Mar. 10, 1867, and after graduating at Hamilton College in 1889 was admitted to the bar in 1892, and in the following year became assistant to the commissioners of statutory revision of New York State. He served until 1901, when he was designated by the New York State legislature as an attorney to draft legislative bills. In 1906 he became New York State law librarian, and in 1908 counsel to the New York State education department, serving until 1919, when he became deputy commissioner of education and counsel to the State education department. From January to September, 1921, he was acting commissioner of education of the State of New York. He lectured on various legal topics in the Albany Law School, and in 1923 was elected a trustee of Hamilton College, from which he had received the degree of LL.D. in 1920. He was a compiler of various legal books, including: *Law of Domestic Relations* (1898); *Lien Laws of New York* (1900); *Official Court Rules, N. Y.* (1900, 1906); *New York State Code of Civil Procedure, with Annotations* (1905) (2d ed., 1910); and *Town and County Officers' Manual, New York State* (1912). He was also co-editor of: *General Law of State of New York, Annotated* (1901, Supplement, 1901-06, 1906); and *Annotated Consolidated Laws of the State of New York* (1909, supplements, 1910-23).

GILCHRIST, THOMAS CASPAR. American physician and clinical professor of dermatology at Johns Hopkins University, died at Baltimore, Md., November 14. He was born at Crewe, England, June 15, 1862, and was educated at Owens College, now Victoria University of Manchester, and graduated in medicine at the University of London in 1886, being made a member of the Royal College of Surgeons in 1887 and a licentiate in medicine, surgery and midwifery in 1887. He went to America in 1890, and in 1897 became clinical professor of dermatology in the University of Maryland, and in the following year was made dermatologist at the Johns Hopkins Hospital and clinical professor of dermatology in the Johns Hopkins University. He was a member of many American and European medical societies, particularly those of dermatologists, and was vice president and president of the American Dermatological Association and vice president of the section on dermatology of the British Medical Association in 1902.

GINZBERG, ASHER (pen name AHAD HA'AM). A Russian scholar and leader of the Zionist movement, died at Tel-Aviv, Palestine, January 2. He was born at Skvira, Russia, in 1866, and studied the Talmud in a Jewish "heder," or elementary school. He lived at Vienna, Berlin and Breslau before he settled in Odessa, Russia, in 1886. In 1889 he founded the Zionist League ("Bene Mosheh") designed to improve Hebrew education and culture and to protect the interests of the Palestinian Hebrew settlements. In 1889 he published in the Russian-Jewish periodical *Ha-Melie* the first of a series of articles on the Zionist movement and the future of the Jews, who at that time in Russia were suffering severe oppression and outrage. These articles later were gathered together into a work called *The Parting of the Ways* and translated into the principal languages of the

world. In 1897 Ginzberg attended the Zionist Congress at Basel, Switzerland, where he opposed ideas of Dr. Herzl. The latter advocated "political" Zionism, while Ginzberg aimed at a "moral" movement involving the development of Palestine as a permanent centre for Jewish spirit and culture and including an intellectual and moral homeland for Jews throughout the world as well as a place of physical refuge which might eventually become a political state. He inspected the Palestinian colonies in 1900, and from 1906 to 1921 lived in England, where he managed a tea shop in London until the Balfour declaration of 1917 made a Jewish settlement in the Holy Land possible. He resided in Palestine after 1921 and devoted himself to writing, his last work being a two-volume edition of his memoirs and letters. In 1890 he became editor of *Keweret*, and in 1896 of *Ha-Shiloah*. It was said that Ginzberg's writings in Hebrew were more widely read than any other contemporary works in this language, and several editions of his collective works were published. In 1895 appeared *Al Parashat Derakim*, a collection of his works, a second edition being published in 1902. Many of the books were translated into German and Russian, and under the title *Selected Essays* an English translation by Leon Simon was published in 1912.

GIRL SCOUTS. A non-sectarian organization for girls started in Savannah, Georgia, in 1912, and incorporated under the laws of the District of Columbia in June, 1915. The plan for Girl Scouting is not a copy of the Boy Scout programme, although both organizations were founded by Sir Robert Baden-Powell, but it is rather a development of the Girl Guide movement, changed and adapted to meet the needs of American girls. The purpose of the organization is to help girls to realize the ideals of womanhood, as a preparation for their responsibilities in the home and service of the community; it aims to give girls, through natural, wholesome pleasures, those habits of mind and body which will make them useful, responsible women, to develop initiative, self-control, self-reliance, and service to others. When a girl becomes a scout she makes the following promise: "On my honor, I will try: to do my duty to God and to my country; to help other people at all times; to obey the Scout Laws."

The unit of organization is the troop, which is composed of one or more patrols. There are eight girl scouts in each patrol. The activities of the troop are developed through the Patrol System, under a Patrol Leader who is appointed from the group. The girls advance by a merit system which was developed by Sir Robert Baden-Powell. The total active paid membership of the organization, as of Oct. 21, 1927, was 160,956. It maintains 12 summer training schools for girl scout leaders, at which, in 1926, the enrollment was 876, as well as summer camps for its members. From 1922 to January, 1927, courses in girl scout leadership were given through the Laura Spelman Rockefeller Memorial to 8769 leaders in 145 different colleges and institutions of learning in 41 states. These leaders are encouraged to take up Girl Scout work in their home neighborhood after leaving college. The official organ for Girl Scouts is *The American Girl*, and for leaders, *The Girl Scout Leader*. The budget for the year 1928 totaled \$334,784. The officers for 1927 were: Mrs. Calvin Coolidge,

honorary president; Miss Sarah Louise Arnold, president; Mrs. Herbert Hoover, first vice president and chairman of the Board of Directors; Mrs. Arthur O. Choate, Mrs. Julius Rosenwald, Mrs. William H. Hoffman, Mrs. Vance C. McCormick, Mrs. Charles C. Harrison, Jr., Mrs. A. Clifford Shinkle, vice presidents; Mrs. Nicholas F. Brady, treasurer; Mrs. Julius H. Barnes, corresponding secretary; Mrs. Jane Deeter Rippin, national director; Douglas Campbell, counsel. The national headquarters are at 670 Lexington Avenue, New York City.

GIZA. See **ARCHÆOLOGY.**

GLENNAN, JAMES D. American military surgeon, died at Washington, D. C., December 24. He was born at New York, Mar. 2, 1862, and graduated at the medical department of Columbian College (now George Washington University), Washington, D. C. He became an assistant surgeon in the United States Army in 1888, and served in the Sioux outbreak of 1890, receiving commendation for "fortitude and cool performance of duty under fire." After serving through the intervening grades, he became a colonel in the medical corps, July 1, 1918, and when the United States entered the World War in 1917 he was assigned to duty as the chief surgeon of the American Expeditionary Forces. As such he directed the establishment, equipment and operation of the United States Army hospitals in France, receiving for his achievements the Distinguished Service Medal, a War Department citation, the Médaille d'Honneur, and membership in the Legion of Honor, of France. In 1919 he was assigned to duty as commandant of the Walter Reed Hospital, Washington, D. C., and remained there until his retirement in March, 1926. In the meantime, in February, 1925, he had been advanced to the rank of brigadier general and made an aid to the Surgeon General of the United States Army. General Glennan was recalled from retirement to serve in connection with the building programme at the Walter Reed Hospital, where he died.

GLIDDEN, CHARLES JASPER. American telephone and aeronautical engineer, died at Boston, Mass., September 11. He was born at Lowell, Mass., Aug. 29, 1857, where he attended the public schools. At the age of 15 he became a telegraph operator at Manchester, N. H., and in 1878 he became manager of an office of the Atlantic Pacific Telegraph Company. In 1876 he was active with Alexander Graham Bell in the development of the telephone, and in the following year built private telephone lines in Massachusetts and New Hampshire and secured the first subscriber to the exchange system in Lowell. He organized and was an officer for several New England and Western telephone companies, but he retired from this field in 1900, when he founded the Glidden automobile tours, and in the following year made the first automobile tour of the world. His next interest was aeronautics, and he made 42 balloon ascensions in the United States and four in England. He then took up airplane flying, and in 1909 advocated an air mail and express service between American cities. He was the twelfth person in the United States to qualify for a balloon pilot's license and also held a similar license in France. At the entry of the United States into the World War in 1917, Colonel Glidden entered the Army balloon school and was commissioned captain,

and was placed in charge of various activities in connection with the selection of aviation officers and also with publicity. He was a member of the leading aeronautical organizations of the world and a life member of the Royal Geographical Society of England. In 1921 he was elected president of the World Board of Aeronautical Commissioners, after making his third trip around the world.

GLOZEL DISCOVERIES. See **ARCHÆOLOGY.**

GODFREY, CHARLES C. American physician and astronomer, died at Bridgeport, Conn., August 31. He was born in 1856. He graduated at the Sheffield Scientific School at Yale University, and studied medicine at Columbia University and Dartmouth College, from which he graduated with the degree of M.D. He was active in practice in Bridgeport, Conn., and in 1903-04 was surgeon-general of Connecticut, having been colonel and surgeon of the Fourth Regiment of the Connecticut National Guard. He was an amateur scientist of broad attainments, and at the time of his death was president of the American Association of Variable Star Observers, an amateur organization with world-wide connections which worked in coöperation with the Harvard University Observatory. He was also a botanist, and made two expeditions to Newfoundland in search of specimens; his collection contained specimens of most of the plants of North America. He early was interested in the telephone, and in 1884 was active in securing the extension of the New Haven company to Bridgeport; likewise he was a pioneer in the field of radio.

GOITRE. The First International Congress on Goitre was held at Berne, Switzerland, during Aug. 24-26, 1927, and a report by Professor W. His appears in the *Klinische Wochenschrift* for October 1. Since goitre is eminently a geographical problem it is highly important that representatives from the different countries exchange views at frequent intervals. Practically all countries were represented by delegates although some of the greatest authorities were absent including Plummer of the Mayo Clinic, Marine of New York and McCarrison of India. The congress was especially distinguished by the large number and great variety and value of the exhibits which were to form a nucleus for a future Goitre Museum. Aside from this it is difficult to sum up the special mission and value of the session. It was evident that the nomenclature differed so much in the different countries that standardization must be brought about at once lest constant misunderstandings arise. Nothing apparently was contributed to a discovery of the cause of goitre. Lack of iodine as a causal element has receded of late in importance despite the great value of the element in prevention and cure. That the surgical aspect of the disease stands well at the front in goitre studies may appear from the fact that Kocher, the President of the Congress, was known chiefly through his great experience in the surgical removal of goitrous growths of all forms.

Professor A. Oswald of Zurich published an exhaustive article on the wholesale prevention of goitre in the *Schweizerische medizinische Wochenschrift* for July 30, 1927. This movement dated back only five years and apparently was an endorsement of the success of a similar campaign in the United States, which was in-

augurated at least five years earlier. The experience and conclusions in Switzerland bear out fully those in certain localities in the United States. It must be borne in mind that Switzerland is a notably goitrous country, the school children in some of the cantons showing an incidence of 100 per cent. Prevention of goitre may be instituted in the pre-school period of childhood, in the earlier school years when education is compulsory and in the subsequent period, and generally speaking the earlier the age period the better the results. The round-up of children incidental to attendance in the primary and secondary schools gives superior advantages for mass examination and mass treatment; and therefore this is the most feasible time of life, especially as results in later adolescence and maturity are relatively unfavorable, while to the age of 14 they are fairly uniform. Thus far at least 28,000 Swiss school children had figured in the mass prophylaxis, which as stated, had extended over a five-year period and in recent years the movement had spread to districts in Austria, Bavaria, Thuringia and Italy.

The preventive campaign consists solely in the administration of iodine in some form, in determining the minimum dose and *pari passu* in minimizing any possible ill effects and in maintaining the regimen until the child is free from all traces of goitre. It is well to admit at the start that wholesale eradication of the disease is impossible and is not anticipated. There are three degrees known familiarly as severe, moderate and mild, and a subject with the severe form may be cured or merely improved—changed to a milder form. In the latter the outlook for complete recovery is much better.

Three methods of iodine prevention have been tested—the use of the drug in tablets given at certain intervals, the use of iodized table salt and a diet rich in substances containing iodine, notably certain kinds of fish. The former is by far the more practicable for during the school years it is possible to give the children iodine in tablet form. The doses have often been too large—in the United States especially—and very small doses given over long periods of time have proved themselves of the greater value, to say nothing of prevention of toxic results. The author has especially studied alleged deleterious consequences and has found not a single instance of permanent injury. Occasional symptoms of overdose always subside when the iodine is discontinued or reduced.

GOLD. The Bureau of the Mint, with the co-operation of the Bureau of Mines, issued the following statement of the preliminary estimate of refinery production of gold in the United States during the calendar year 1927:

States	Ounces	Gold Value
Alaska	282,878	\$5,847,500
Arizona	207,064	4,280,400
California	587,855	11,738,600
Colorado	254,869	5,268,600
Georgia	15	300
Idaho	14,024	289,900
Illinois
Michigan
Missouri
Montana	56,221	1,162,200
Nevada	144,564	2,982,400
New Mexico	26,321	544,100
North Carolina	5	100
Oregon	18,492	278,900

States	Ounces	Gold Value
Pennsylvania	97	2,000
South Dakota	822,516	6,667,000
Tennessee	406	8,400
Texas	334	6,900
Utah	189,746	3,922,400
Vermont
Washington	20,032	414,100
Wyoming	58	1,200
Philippine Islands	77,705	1,606,800
Total	2,178,197	45,027,800

For the full calendar year 1927 the exports and imports of gold from and to the United States compare as follows:

Year	Exports	Imports	Excess
1927.....	\$201,455,000	\$207,585,000	+ \$6,080,000
1926.....	115,708,000	213,504,000	+ 97,796,000
1925.....	262,640,000	128,272,000	- 134,368,000
1924.....	61,648,000	319,721,000	+ 258,073,000
1923.....	28,643,000	322,715,000	+ 294,072,000
1922.....	36,874,000	275,169,000	+ 238,295,000

The largest monthly gold exports since the war were \$82,972,840 in June, 1919; the December, 1927, exports totaling \$77,849,000 were the second in amount. Largest monthly gold imports were \$116,762,001, in October, 1920.

Discussing the gold movement Grosvenor Jones, chief of the financial section of the U. S. Department of Commerce, stated that in addition to taking the metal out of the United States foreign countries had set aside about \$80,000,000 in the metal here during the last four months of 1927, meaning that foreigners exercised ownership over considerable quantities of the gold stock still left in the United States.

"The final results for the year show a net reduction of about \$151,000,000 in our total gold stock," Mr. Jones said; "earmarking (setting aside) is for all practical purposes tantamount to export. The bulk of the gold exported went to Latin America, Argentina taking \$62,000,000; Brazil, \$34,000,000; Uruguay, \$2,000,000, and Venezuela, \$1,000,000. Fairly large amounts were shipped to the Far East." During the early months of 1927, Mr. Jones added, the United States imported a great deal of gold from Great Britain and other European countries, but during the closing months this was in part returned. He cited the American foreign loans of 1927, which totaled \$1,377,000,000, as being the chief influence on gold movements during 1927.

The United States Director of the Mint estimated the world production of gold in 1926 at 19,280,217 ounces (599,696 kilos), valued at \$308,557,458, as compared with 19,025,942 ounces (597,786 kilos), valued at \$393,301,123 in 1925. For synthetic production, see CHEMISTRY, INDUSTRIAL; see also METALLURGY.

WORLD PRODUCTION OF GOLD, 1926
[The production figures given below are published in the report of the U. S. Director of the Mint]

Country	Kilos, fine	Ounces, fine	Value
North America:

GOLD, TRANSMUTATION OF. See CHEMISTRY, INDUSTRIAL.

GOLD COAST. A colony on the Gulf of Guinea in Africa belonging to Great Britain; bounded by the French Ivory Coast on the west, the French Sudan on the north, Togoland on the east, and extending on the south for 334 miles along the Gulf of Guinea; comprising, in addition to the colony proper, Ashanti and the Northern Territories. The area of the three divisions is estimated at 80,000 square miles; population at the census of 1921, 2,078,043, of whom 2165 were Europeans. The capital and chief town is Accra, with a population of 38,000. Other large towns are Cape Coast (15,000), Sekondi (10,000), and Keta (10,000). In 1925-26 there were 22 government schools and 212 assisted schools, which are under the control of various missions. The average attendance during this year at the primary and secondary schools was 29,573. There were besides a large number of unassisted primary schools supported by the religious denominations.

The staple products and chief exports are: Cacao, palm oil, palm nuts, cola nuts, and india rubber; there has also been an increasing production of spice, coconuts, coffee, cotton, and a steady development of the trade in valuable native woods. The chief mineral is manganese, which constitutes an important export. The imports in 1925 were valued at £9,782,619 and the exports at £10,890,223. The revenue for the same year was £5,871,556; the expenditure, £4,255,126. The public debt on Mar. 31, 1926, was £11,791,000. In 1927 there was 394 miles of railway open to traffic and 98 under construction. The shipping entered and cleared in the foreign trade during 1925 was 4,181,150 tons, of which 2,490,651 were British.

Ashanti, annexed by Great Britain in 1901, is under the governor of the Gold Coast, although it has its own local laws and ordinances. According to the census of 1921, the population was 407,000, of whom 400 were Europeans. Kumasi, with 20,000 inhabitants, is the chief town. In 1925-26 there were 803 pupils in the government schools and 3163 pupils in the mission schools. The forests in the western part are rich in mahogany, cedar, and other valuable woods, and in trees that yield rubber, oil and gum copal, and in fruits. Local receipts in 1925-26, £78,195; local expenditures, £474,226.

The Northern Territories, constituted a British protectorate in 1910, are also under the governor of the Gold Coast but locally administered by a high commissioner, with his headquar-

ters at Tamale. Area, 31,000 square miles; population at the census of 1921, 527,914, of whom only 49 were Europeans. Navaro is the chief town with a population of 15,000. Local revenue in 1925-26, £9203; local expenditure, £100,790. Governor of the Gold Coast in 1927, Brig.-Gen. Sir F. G. Guggisberg; Chief Commissioner of Ashanti, Sir J. Maxwell; Chief Commissioner of the Northern Territories, Major A. H. C. Walker-Leigh.

GOLF. Robert T. Jones, jr., of Atlanta, Ga., in 1927 for the second successive year was the leading character in the world of golf. He opened his year's campaign on the links by capturing the Southern open tournament from one of the strongest fields ever assembled. In the National open, however, Jones slumped badly, losing his crown to Tommy Armour, who defeated Harry Cooper in the play-off. Spurred, perhaps, by this reverse Jones suddenly changed his original intentions and decided to defend his British open championship at St. Andrews. It was a happy switch in plans as he triumphed most gloriously, breaking the record for the course in his opening round with a 68 and following with three "72's." Jones returned to the United States in time to wrest the National amateur title from George Von Elm, to whom he had lost it the previous year, and this contributed more than a little to his prestige.

Among the professionals, the veteran Walter Hagen stood out through his winning for the fourth consecutive time the Professional Golf Association championship. Hagen also captured the Western open for the second straight time. To top off a wonderful golfing year Walter commanded the United States links' forces against Great Britain in the Ryder Cup competition and emerged triumphant. This international golf clash took place at Worcester, Mass., and was won by the United States with a final score of 9½ to 2½. This having been the only international golf clash of importance during 1927, the results are appended:

Aubrey Boomer and Charles Whitcombe, Great Britain, defeated Leo Diegel and William Mehlhorn, United States, 7 and 5.

Walter Hagen and John Golden, United States, defeated "Ted" Ray and Frederick Robson, Great Britain, 2 and 1.

Gene Sarazen and "Al" Watrous, United States, defeated Arthur Havers and Frederick Robson, Great Britain, 3 and 2.

Johnny Farrell, United States, defeated Aubrey Boomer, Great Britain, 5 and 4.

Leo Diegel, United States, defeated "Ted" Ray, Great Britain, 7 and 5.

Walter Hagen, United States, defeated Arthur Havers, Great Britain, 2 and 1.

William Mehlhorn, United States, defeated Archie Compton, Great Britain, 1 up.

John Golden, United States, defeated Herbert Jolly, Great Britain, 8 and 7.

George Duncan, Great Britain, defeated Joseph Turnesa, United States, 1 up.

Al Watrous, United States, defeated Frederick Robson, Great Britain, 3 and 2.

Gene Sarazen, United States, and Charles Whitcombe, Great Britain, finished all square.

Others to distinguish themselves at the tee and putting green during 1927 were Johnny Farrell, victor in eight tournaments, Robert Cruickshank, whose tournament score was four and a half, and Tommy Armour with two and a half.

There were some surprising happenings in women's golf, three comparatively unknown players coming to the fore. Mrs. Miriam Burns Horne

dethroned Mrs. G. Henry Stetson as U. S. national champion and also won the Trans-Mississippi title. Mrs. Henry Pressler took the Western honors and Miss Helen Payson captured the Canadian crown.

The winners of the more important tournaments of 1927 were:

U. S. National Open, Tommy Armour; U. S. National Amateur, Robert T. Jones, jr.; U. S. National (women), Mrs. Miriam Burns Horne; U. S. Professional, Walter Hagen; Canadian Open, Tommy Armour; British Amateur, Dr. William Tweddell; British Open, Robert T. Jones, jr.; British Women's, Mlle. Simone de la Chaume.

The U. S. intercollegiate title was won by Princeton University. Cambridge defeated Oxford in the annual clash of these English universities.

GOODELL, JOHN M. American engineer and editor, died in New York City, June 21. He was born in Worcester, Mass., Aug. 3, 1867, and graduated at the Worcester Polytechnic Institute with the degree of B.S. in civil engineering in 1888. After a brief field experience he became connected with the editorial staff of *Engineering News*, and in 1892 became associate director of *Engineering Record*. From 1894 to 1897 he was assistant secretary of the American Society of Civil Engineers, and from 1897 to 1902 he was again with *Engineering Record*. This service was interrupted by a year as resident engineer in paper-mill construction at Sault Ste. Marie, but he returned to *Engineering Record*, from which he retired in 1912. He was later active in the reorganization of the American Highway Association. During the World War he was connected with the Emergency Fleet Corporation, and during the last months of the war period he was acting chairman of the National Highway Council. He was then consulting engineer to the Bureau of Public Roads and concerned chiefly with organization work. He served as editor of the *Journal of The American Water Works Association*, and was engaged in technical publicity. He was the author of *Water Works for Small Cities and Towns*; *Location, Construction and Maintenance of Roads*; and translated Baumeister's *Cleaning and Sewerage of Cities*.

GOODMAN, WILLIAM. American mechanical engineer and inventor, died at New York, April 21. He was born in Cincinnati, Ohio, July 8, 1874, and graduated at Haverford College in 1895 and from Harvard University in 1896. His first employment was with the engineering department of the Laidlaw-Gunn-Gordon Company of Cincinnati, which later was absorbed by the Worthington Pump and Machinery Corporation. He served as general manager of the Cincinnati plant until 1918, when he was transferred to the New York office as assistant to the vice president. He was elected a vice president in 1922, being in charge of manufacturing and engineering. He was known for his development of the two-cycle double-acting Diesel engine, adopted by the United States Shipping Board, and the feather-valve air compressor. In the Spanish-American War he served as an ensign in the navy, and during the World War he was in charge of the manufacture of munitions at the Worthington plant in Hazelton, Pa.

GOODSPEED, THE REV. DR. THOMAS WAKEFIELD. American educator, died at Chicago, Ill.,

December 16. He was born at Glens Falls, N. Y., Sept. 4, 1842, and was educated at Knox College, the University of Chicago, the University of Rochester, N. Y., and the Rochester Theological Seminary, graduating at the last named institution in 1866. Dr. Goodspeed was pastor of the Vermont Street Church, Quincy, Ill., 1866-72; associate pastor of the Second Church, Chicago, 1872-76; pastor of the Morgan Park Church, Chicago, 1877-80, and secretary of the Baptist Union Theological Seminary, Chicago, 1877-80. From 1888 to 1890 he was active in raising money for the new (and present) University of Chicago, and he was mainly instrumental in interesting John D. Rockefeller in offering \$600,000 for the institution on condition that \$400,000 be pledged by others. Dr. Goodspeed, with Frederick T. Gates, accomplished the collection of the money, and he is called one of the founders of the university. From 1890 to 1913 he was secretary of the university's board of trustees, from 1897 to 1913 its registrar, and from 1913 its corresponding secretary. The University of Chicago conferred on him the degree of D.D. in 1885, and the University of Rochester that of LL.D. in 1913. He wrote three books dealing with the history of the University of Chicago.

GORDON, GEORGE BYRON. American archaeologist, and director of the Pennsylvania University Museum, died at Philadelphia, Pa., January 30. He was born in Prince Edward Island, Canada, Aug. 4, 1870, and studied at the University of South Carolina and at Harvard, from which he received the degree of Sc.D. in 1894. He was chief of the Harvard University expedition to Central America, 1894-1900, and in 1903 went to the University of Pennsylvania, where he became assistant curator of anthropology, receiving successive promotions until 1907, when he was appointed assistant professor. In 1910 he was made director of the University of Pennsylvania Museum. He wrote extensively on archaeology, his published works including: *Prehistoric Ruins of Copan* (1896); *Researches in the Uloa Valley* (1898); *Caverns of Copan* (1898); *The Hieroglyphic Stairway at Copan* (1902); *The Serpent Motive in Ancient Art* (1906); *The Book of Chilam Balam of Chumayel* (1913); *In the Alaskan Wilderness* (1917); *Baalbek* (1919); *The Walls of Constantinople* (1921); *Ancient London* (1923); and *Rambles in Old London* (1924).

GORDON BENNETT CUP COMPETITION. See AERONAUTICS.

GORGUET, gôr-gâ, AUGUSTE FRANÇOIS MARIE. French painter, died at Paris, France, May 3. He was born in Paris, Sept. 27, 1862, and was educated at the Lycée of Lyons and at the École des Beaux Arts in Paris. He had many honors in art, being a lauréat of the École des Beaux Arts, receiving honorable mention at the Exposition of 1889, a medal of the second class in 1894, and a silver medal in 1900. His paintings include murals and other decorations, designs for tapestries, and illustrations for various books. He was a member of the Superior Council for Instruction in Decorative Art, on the jury of the École des Beaux Arts, and professor of design in the schools of the City of Paris. He was a Chevalier of the Legion of Honor and a member of many art and other societies in France.

GOUCHER COLLEGE. A non-sectarian college for women at Baltimore, Maryland; founded

in 1885. For the first semester of the year 1927-28 there were 1053 students enrolled, distributed as follows: 330 first year students, 279 second year, 231 third year and 213 fourth year. The faculty had 107 members. The endowment funds of the College amounted to \$2,357,674. The library contained 40,500 volumes. President, William Westley Guth, Ph.D., LL.D.

GRAAFF, SIR JACOBUS ARNOLDUS COMBRINK, K. C. M. G. South African statesman and merchant, died in London, April 5. He was born in 1863, and was for many years a leader among the Cape of Good Hope Dutch, being a supporter of General Botha. When the Union of South Africa was formed, Sir Jacobus Graaff, as well as his brother, Sir David Graaff, rallied their fellow Dutchmen to the new state. In 1903 he was elected to membership in the legislative council, and he continued to fill this position after he was elected to the Senate of the South African Union. In 1913-20 he was minister without portfolio, and from 1920 to 1921 he was minister of public works, posts and telegraphs. With his brother, he was active in building up a great meat-storage business, controlling the supply of South Africa, and he was director of Messrs. Graaffs' Trust, Ltd., of Cape Town and Pretoria.

GRANT, THE REV. PERCY STICKNEY. Protestant Episcopal clergyman, died at Mount Kisco, N. Y., February 13. He was born at Boston, Mass., May 13, 1860, and after graduating at Harvard in 1883 studied at the Episcopal Theological School, Cambridge, Mass., from which he received the degree of B.D. in 1886; in that year he was ordained deacon. He became assistant minister of the Church of the Ascension in Fall River, Mass., in 1886, and the following year, after he had been made priest, he was rector of St. Mark's, of Fall River, serving until 1893, when he was called to New York as rector of the Church of the Ascension. At Fall River his parish work was very successful; he built up a large people's church, and he was active in philanthropy, organizing a large branch of the Young Men's Christian Association. He was a member of the city school board. His ministry in New York began under successful auspices, and the Church of the Ascension flourished under his charge, its debt being decreased and a large endowment fund obtained. He made the pews free and developed a number of institutional features. In 1907 he was preacher to Harvard University. Dr. Grant developed at the Church of the Ascension various unconventional practices, while his public utterances in the pulpit and elsewhere were considered radical by many. In 1907 he established a church forum which held Sunday meetings in the church, men of various religions, political and social opinions being invited to lecture on all manner of subjects, while later free-for-all discussions were held in the adjoining parish hall. These meetings provoked considerable criticism both within and without the church, as they were largely used by Socialists, Communists and others to exploit their radical notions. Dr. Grant was sustained by his vestry in the conduct of the forum, but this institution was regarded with disfavor by the bishop of the diocese, and after the latter had insisted that all speakers in the church

must be made known to him and approved by him Dr. Grant abandoned this work in 1922. Previously he had espoused the cause of various radicals and others, some of whom had advocated syndicalism and violence, and he denounced any attempts to restrict the extending of Socialist doctrine in the public schools. During the World War he opposed the enforcement of the espionage law and demanded amnesty for political prisoners. In the latter part of his life he was at variance with the Protestant Episcopal authorities in regard to church doctrine and polity. He repudiated the doctrine of the virgin birth, and in 1923 became involved in a serious controversy with Bishop Manning, the head of the diocese of New York. As a result of an expressed opinion of his idea of the divinity of Christ, he received a communication from the bishop in which he was told to recant or resign. In his reply, written with the assistance of some of the ablest liberal churchmen with Modernist views, he attempted to justify his position and as a result no further action was taken by the bishop. Dr. Grant criticized the position of his church in the matter of divorce, and advocated more liberal divorce laws. At one time he announced his engagement to be married to a woman who had been twice divorced, the validity of the second divorce not being recognized by the church. A marriage contracted under these conditions, while permissible under the civil law, unquestionably would have led to Dr. Grant's deposition from the ministry, but the engagement was broken in the early part of 1924. At about this time he resigned as rector of the Church of the Ascension and retired to his country place near Mount Kisco, N. Y. He was in poor physical and mental health, but after a rest he recovered in part, and in 1925 occasionally preached at the more liberal churches in New York and elsewhere. On his sixty-fifth birthday, May 13, 1925, his friends presented to him \$20,000 as a testimonial. Dr. Grant was honored with the degree of S.T.D. from Hobart College. During the latter part of his life he unquestionably was a storm centre in church circles in New York City, and his enthusiastic and radical opinions often outran his discretion, both within and without the church. His later life did not show the poise and earnestness characterizing his earlier work, and his name was associated more with controversies and incriminations than with pastoral work. He wrote from time to time, his more notable publications being: *Ad Matrem* (1905); *The Search of Belisarius* (1907); *Observations in Asia* (1908); *Socialism and Christianity* (1910); *The Return of Odysseus* (1912); *Fair Play for the Worker* (1918); *Essays* (1922); *Poems* (1922); and *The Religion of Main Street* (1923).

GRAPES. See **HORTICULTURE.**

GRAPHITE. The graphite industry in the United States was more active in 1927 than in 1926, there being three plants in Alabama in operation for a part of the year, though the production was limited to a few hundred tons, a portion of which was employed in the electrical industry. The production in 1926, according to the U. S. Bureau of Mines, was 2975 short tons of amorphous graphite valued at \$40,500, and 4,989,200 pounds of crystalline graphite, valued at \$178,842. The artificial graphite manufactured in 1926 by the Acheson Graphite Company at Niagara Falls, N. Y., amounted to 21,163,986

pounds. The graphite imported into the United States during 1926 amounted to 16,166 short tons, valued at \$921,233 and the exports of graphite unmanufactured were 405 short tons, valued at \$49,235; manufactured graphite exported totaled in value \$463,084. Madagascar in 1927 continued to lead in graphite production, though the output was less than in 1926, the United States taking about one-third of the production. Ceylon produced more graphite in 1927 than in 1926, with greater exports to Germany and more to the United States.

GRASSELLI, CAESAR AUGUSTIN. American chemist, died at Cleveland, Ohio, July 28. He was born at Cincinnati, Ohio, Nov. 7, 1850, and in 1885 became president of the Grasselli Chemical Company which had been founded by his father, Eugene R. Grasselli, in Cincinnati in 1849. He was engaged from boyhood with this company, following a business in which his family had been engaged as long ago as 1440. In addition to his work as the head of a large firm of manufacturing chemists, Mr. Grasselli was also president of the Woodland Avenue Savings and Trust Company of Cleveland, 1887-1921, of the Broadway Savings and Trust Company, 1893-1921, and a director of the Union National Bank, all of which companies were merged with the Union Trust Company in 1921. He was a director of the Akron & Chicago Junction R. R., and of the Baltimore and Ohio system, and a member of many professional and civic organizations. He was made a Knight of the Order of the Golden Crown of Italy by Victor Emanuel III in 1910, and a Commander of the same order in 1921. In 1923 he was made, by Pope Pius XI, a Commander of the Order of St. Gregory the Great. He was one of the founders of the Cleveland Institute of Music and a founder of the Grasselli House for the Blind.

GRASSELLI MEDAL. See **CHEMISTRY, INDUSTRIAL** under **MEDALS.**

GRAY, HAWTHORNE C. American army officer and aeronaut, died November 4, in a balloon ascent in the course of which he was said to have achieved the world's unofficial altitude record. He was born in Washington, Feb. 16, 1889, and, entering the United States Army in 1917, served first in the quartermaster corps. After being commissioned captain, Feb. 21, 1920, he was assigned to the air service, and in the following year was transferred permanently to that branch. He graduated from the army balloon school in 1921, from the primary flying school in 1923 and from the balloon and airship school in 1924. He represented the army air corps in the Gordon Bennett International Balloon races at Antwerp, Belgium, in 1926, where he won second place with the balloon Army S-16, covering a distance of 599 kilometers. Gray had made two previous attempts to break the altitude record, and on May 4 had reached 42,470 feet, but the record was disallowed because he had to jump with a parachute to save his life. On his last attempt Gray ascended from Scott Field, Belleville, Ill., at 2.22 P.M. on November 4, accompanied by four escort planes which lost sight of him as he was carried over Illinois. The wrecked balloon was recovered on the following day, having been caught in a tree where it had lodged with the body of the aviator in the basket. Death was attributed to suffocation or heart trouble after the balloon ascended to over 40,000 feet according to an entry in the aviator's log and the baro-

graph of the balloon which recorded an altitude of 43,000 feet. A severed oxygen tube, presumably cut by a knife, indicated that Captain Gray had met with an accident while on his flight. He was buried in the National Cemetery at Arlington, Va.

GREAT BRITAIN. UNITED KINGDOM OF GREAT BRITAIN AND IRELAND. A constitutional monarchy comprising the British islands. Capital, London. Although the term literally applies only to the island including England, Scotland, and Wales, it is often used as above to include Ireland, the Isle of Man, and the Channel Islands. In view of the change in the status of Ireland (q.v.) usage in this respect will probably be altered. The term British Empire applies to the United Kingdom and all its possession and dependencies, that is to say the dominions, colonies, protectorates, and other territories subject to the ultimate control of the British Parliament.

AREA AND POPULATION. The area of England, Scotland, Wales, the Isle of Man, and of the Channel Islands is 89,041 square miles; the area of Ireland, 32,586 square miles. (See IRELAND, NORTHERN, and IRISH FREE STATE.) The population of England, Scotland, and Wales in 1926 was 43,970,300. For details of the census of 1921 see YEAR BOOK for 1923 and preceding YEAR BOOKS.

The accompanying table from the *Statesman's Year Book* for 1927 gives a comparison of the estimated population (exclusive of army, navy, and merchant seamen abroad):

Year (30 June)	England and Wales	Scotland	Total of Great Britain
1914.....	36,960,684	4,747,167	41,707,851
1922.....	38,158,000	4,904,247	43,062,247
1923.....	38,403,000	4,901,100	43,304,100
1924.....	38,746,000	4,881,637	43,627,637
1925.....	38,890,000	4,899,082	43,789,082
1926*.....	39,067,000	4,903,800	43,970,800

* Provisional figures.

The provisional figures for the movement of population in England and Wales for 1926 were: Births, 694,897; deaths, 453,795; marriages, 279,321. Similar figures with respect to Scotland were: Births, 102,450; deaths, 63,775; marriages, 31,241.

In 1926 the number of British subjects who emigrated to countries outside of Europe was 284,009; and the number of British subjects who returned from non-European countries was 160,680. The destinations of British subjects leaving the United Kingdom to take up permanent residence in non-European countries in 1926 were mainly the United States, 28,740 (29,549 in 1925); British North America, 49,632 (38,662 in 1925); Australia, 44,613 (35,006 in 1925); New Zealand, 16,565 (11,730 in 1925); British South Africa, 8295 (7004 in 1925); India and Ceylon, 6799 (6584 in 1925).

Greater London, the largest city in the world, had a population in 1921 of 7,480,201 on the 443,449 acres covered by the Metropolitan and City Police Districts. Registration London, which coincides with the administrative county and nearly coincides with the London Parliamentary boroughs, had a population of 4,484,523, with an area of 74,850 acres. The estimated population of Greater London in the middle of 1925 was 7,742,-

212. Birmingham, the second city of England, had a population in 1921 of 919,444 (estimated June, 1925, 945,900). Liverpool continued to stand third, with 802,940 in 1921 (estimated June, 1925, 856,000); and Manchester fourth with 730,307 in 1921 (estimated June, 1925, 755,800. Other large cities with their populations are: Sheffield, 490,639 in 1921 (estimated in June, 1925, 526,900); Leeds, 458,232 in 1921 (estimated in 1925, 472,900); Bristol, 376,975 in 1921 (estimated in 1925, 385,700). Glasgow is the largest city in Scotland with a population of 1,034,174 in 1921 (estimated in June, 1926, 1,052,200); Edinburgh is next with 420,264 in 1921 (estimated in June, 1926, 424,600). The chief city of Wales is Cardiff, which had a population of 200,184 in 1921 and an estimated population of 227,100 in the summer of 1925. The census of 1921 did not include Ireland. For the populations of Australia, Canada, India, and other British possessions, see articles under those titles.

EDUCATION. Primary education is free and compulsory between the ages of five and 14. In 1925 the number of schools in England and Wales (public elementary, special, and certified) was 21,310. The number of public elementary schools on Mar. 31, 1925, was 20,734, with total accommodations for 7,062,793 pupils. The number of pupils on the registers was 5,581,468 and the number of teachers, 165,262. There are also numerous schools for the blind and deaf and for mentally and physically defective children; poor schools, nursery schools, etc. There were 110 training institutions for teachers in England and Wales with 16,881 students, of whom 15,255 were being trained to teach in elementary schools. In 1926 there were 1310 secondary

BRITISH UNIVERSITIES, 1926-27

Universities	Number of professors, etc.	Number of students

Wales (1903)	853	2,839
Totals of above	4,679	45,210

* Comprising 252 University Professors and Readers, and 826 "Recognized Teachers."

^b Undergraduates.

^c Internal students. In addition there are external students, i.e., matriculated students who have not taken a degree nor been registered as internal students. The number of these is not ascertainable but is probably greater than 9,000.

^d Includes evening students.

* Excluding College Tutors.

schools on the grant list with 367,290 students and 19,069 full-time teachers. In Scotland there were 2895 primary schools with an accommodation of 870,000 scholars and an average attendance of 587,000. There were 17,744 certificated teachers and 64 assistant teachers. In 1924-25 there were four training centres and three training colleges for teachers with 2496 students. In the same year there were 249 secondary schools, with a total accommodation of 179,814 scholars, and an average register of pupils of 156,272.

The accompanying table from the *Statesman's Year Book* for 1927 (see page 349) gives an estimate of the number of students and members of the teaching staffs in the universities of Great Britain in 1926-27.

Colleges exclusively for female students are: Bedford (71 teachers, etc., 600 students); Royal Holloway (33 teachers, 201 students); and Westfield Colleges (14 teachers, 143 students) in London; Newnham (15 teachers, 281 students); and Girton (14 teachers, 238 students) in Cambridge; Lady Margaret Hall (13 teachers, 137 students), Somerville College (8 teachers, 134 students), St. Hugh's College (9 tutors, 149 students), St. Hilda's College (10 teachers, 111 students), in Oxford.

AGRICULTURE. The following table from the above mentioned source gives the general distribution of the surface of the island of Great Britain, the Isle of Man, and the Channel Islands:

Divisions 1926	Total surface (excluding water) Acres	Woods and plantations 1913 Acres	Rough grazing land 1926 Acres	Permanent pasture 1926 Acres	Arable land 1926 Acres
England*	32,037,000	1,697,000	3,437,000	18,023,000	9,878,000
Wales*	5,099,000	187,000	1,826,000	2,105,000	675,000
Scotland	19,070,000	852,000 ^b	9,710,000 ^c	1,499,000	3,195,000
Isle of Man	141,000	1,400	40,000	19,000	62,000
Channel Islands (1923)	44,000	200	2,000	10,000	21,000

* England excludes, and Wales includes Monmouth.

^b Area in 1914.

^c Area in 1924.

The accompanying tables show the distribution of the cultivated area and the livestock census of 1925 and 1926:

Cultivated area	England and Wales		Scotland	
	1925 Acres	1926 Acres	1925 Acres	1926 Acres
Corn crops*	5,132,075	5,099,532	1,133,730	1,125,850
Green crops ^b	2,161,805	2,224,626	571,860	569,770
Hops	26,256	25,599
Small fruit*	68,352	69,523	7,189	7,811
Orchards*	238,081	240,689	1,163	1,261
Bare fallow	468,204	417,664	9,068	6,125
Clover and ro- tation grasses	2,578,724	2,502,237	1,502,517	1,484,979
Permanent pasture	15,078,433	15,128,186	1,475,838	1,493,635
Total	25,755,486	25,676,111	4,705,197	4,698,170

* Corn crops are wheat, barley or bere, oats, mixed corn, rye, beans, peas.

^b Green crops are mainly potatoes, turnips and swedes, mangold, cabbage, kohlrabi, rape, vetches or tares.

^c In Scotland all orchard land is also included against the crop, grass or fallow beneath the trees. In England and Wales orchard land is only duplicated where small fruit is grown beneath the trees. The figures for small fruit in all cases, therefore, include small fruit in orchards.

Livestock	England and Wales		Scotland	
	June, 1925 Number	June, 1926 Number	1925 Number	1926 Number
Horses ..	1,164,240	1,128,796	185,433	178,695

Pigs	2,644,356	2,200,012	154,220	145,419

MINERAL PRODUCTION. The total value of all minerals produced in 1925 was £221,385,931 at the mines and quarries, of which the value of coal alone was £198,987,154. The decline of approximately 50 per cent in British coal production during 1926 naturally reflected conditions incident to the British coal strike (see preceding YEAR BOOK). The total output amounted to 125,500,000 long tons, or practically one-half of the 1925 production. Exports of about 20,500,000 tons were only 40 per cent of 1925 shipments, while imports, which normally are negligible, rose to just over 20,000,000 tons, almost equivalent to the total exports. The terms of settlement under which the industry resumed activities provided among other things for longer working hours and a generally lower minimum wage percentage, and it was probable that 150,000 to 200,000 miners employed in 1925 might not be reabsorbed by the industry.

In the export field a large amount of trade was lost to Germany, Poland, and the United States, as well as smaller amounts to other countries. Some of this trade was regained immediately, and some, it was likely, would be re-

gained with the expenditure of considerable time and effort. In the domestic market, the shortage of supplies and the high prices of those available seriously curtailed production, and it was expected that many months would elapse before domestic demand assumed normal proportions. In regard to these and many other factors which must be considered in attempting to describe the 1927 outlook it is difficult to come to any definite conclusions. The British coal industry exhibited a rather remarkable power of recovery, and, in fact, had recovered, so far as production was concerned, much more rapidly than other industries dependent upon it. The outlook for the following years accordingly would depend in a large measure upon industrial relations within the coal industry.

In 1927 it was still too early to say whether relations between employers and employees were better or worse than before the strike. Apparently, the average per man shift output was materially larger, partly attributable to the longer hours, but in some fields also to a greater willingness of the miners to produce effectively. If the industry continued as it started, with larger man-shift output, greater use of machin-

ery, and other efforts leading to lower cost of production, there seemed little doubt that it would quickly recover its normal position, and probably even overcome many of the difficulties which led to the difficulties of the past year or two. All this, of course, was predicated upon peace in the industry, which seemed to be partially promised by the length of the agreements which had been signed. So far as the export trade was concerned, of course, competition might be expected to be strong, and the extent to which English coal might recover its normal trade depended in some measure upon the effectiveness of this competition and also upon the world demand for coal, which had been somewhat below normal for several years. The steps which were being taken toward the more effective marketing of coal, both at home and abroad, the consolidation and establishment of selling pools and propaganda agencies, might be expected to assist in meeting competition and re-establishing the trade. See COAL; STRIKES AND LOCKOUTS; IRON AND STEEL.

25 was carried over to April, 1926, and would probably have continued through the year if there had been no general strike and no coal stoppage. It was possible, however, that trade during the early months of 1926 was somewhat abnormal on account of the anticipation of trouble and the consequent stimulated demand for stock.

IMPORTS. The value of imports of raw materials other than coal was down 17.7 per cent from the previous year, but as the average values of all raw-material imports, excluding coal, dropped considerably, there does not seem to have been any reduction in the volume. A moderate fall in imports of raw cotton and of crude petroleum and a very large increase in the import of raw rubber were the outstanding features of the import figures for 1926. Total imports of merchandise into the United Kingdom in 1926 were valued at £1,232,864,000, as compared with the 1925 valuation of £1,320,715,000. A list of the larger items figuring in this trade follows:

IMPORTANT ITEMS IN THE IMPORT TRADE OF THE UNITED KINGDOM, CALENDAR YEARS
1925 AND 1926
[All units in thousands; that is, 000 omitted]

Article or commodity group	Quantity		Value	
	1925	1926	1925	1926
Wheat hundredweight	96,854	96,940	267,901	263,226

* Group quantities can not be stated as they are composed of different units of measure.

FISHERIES. The accompanying table shows the quantity and value of the British catch of fish in 1925 and 1926:

	1925 Tons	1926 ^a Tons
England and Wales	676,874	625,207
Scotland	285,684	322,990
Great Britain (excluding shell-fish)	962,558	948,197
England and Wales	£ 14,224,682	£ 12,700,657
Scotland	£ 4,454,168	£ 4,848,845
Great Britain (excluding shell-fish)	£ 18,678,850	£ 17,049,502
Value of shell-fish	555,628	599,693

* Provisional figures.

COMMERCE. According to the U. S. Bureau of Foreign and Domestic Commerce, British industry and trade were hard hit in 1926. The steady gradual improvement through the years 1922-

EXPORTS. Turning to the export of British merchandise and again excluding coal, coke, and briquets, there was a 12.1 per cent reduction in the total value of all other British goods exported during 1926 as compared with 1925. However, the decrease in volume was very much less, owing to price falls. In the critical May-November period of the coal stoppage the volume of British exports, again excluding coal products, was reduced between 6 and 7 per cent as compared with the same period of the previous year. Total exports of all British merchandise from the United Kingdom in 1926 amounted to £851,893,000 as compared with £773,381,000 in 1925. The accompanying table on page 352 shows the outstanding items in this business.

British foreign trade returns for the first half of 1927 showed imports at £617,366,000, exports of United Kingdom goods at £342,341,000, and exports of imported merchandise at £66,220,000—an excess of imports amounting to £208,805,000. This balance exceeded the unfavorable

UNITED KINGDOM EXPORTS OF BRITISH GOODS DURING CALENDAR YEARS 1925 AND 1926

* Group quantities can not be stated in these instances, as they are composed of different units of measure.

merchandise balance for the first half of 1926 by £11,000,000, thus raising the possibility of a heavier trade deficit for 1927 than resulted in 1926.

Comparisons of trade totals are by value only, but prices had changed greatly and, besides, the trade picture was further distorted owing to the 1926 period of industrial disability. In the following paragraphs an effort is made to clarify the situation by correcting 1925 and 1924 prices, on the "Economist wholesale price index," in order to get something resembling a comparable set of figures for the last three years. A comparison of the value of the 1926 trade from the beginning of May to the end of November, which was the period of the coal stoppage, with the values, corrected on the above-mentioned price basis, for the same periods of the two preceding years, of course shows heavier imports and lighter exports during the 1926 period.

UNITED KINGDOM FOREIGN TRADE, MAY TO NOVEMBER, CALCULATED ON 1926 PRICE BASIS

Period,	Imports	Exports	Reexports
May-November			
1926.....	£705,682,404	£359,841,875	£265,751,569
1925.....	685,082,375	409,802,097	82,171,601
1924.....	626,436,295	400,397,678	67,720,869

A similar comparison of trade during the seven months subsequent to the stoppage—that is, down to July 1, 1927—with that of the same period in the two preceding years indicated that the tendency shown in the preceding table had not been corrected, imports since the coal stoppage having continued to run in excess of normal while exports improved very little and reexports actually lost. The 1926 interruption in transshipment business induced

many foreigners to begin direct trading with their customers and, judging from the decline in reexports, this business had not reverted to the indirect method.

UNITED KINGDOM FOREIGN TRADE, DECEMBER TO JUNE, CALCULATED ON 1926 PRICE BASIS

Period,	Imports	Exports	Reexports
December-June			
1926-27.....	£730,679,074	£392,048,505	£277,721,469
1925-26.....	709,666,017	389,131,232	78,237,442
1924-25.....	693,498,173	427,781,475	82,878,154

British industry by 1927 had worked off the orders that accumulated during the coal stoppage, and subsequent trade returns might not be expected to reflect much of this business. On the other hand, the increase in imports would seem to indicate that to some extent the emergency foreign sources developed during the coal stoppage period continued to hold a portion of their gain in the United Kingdom market. The slight increase in British exports since the 1926 crisis did not offset the change in supply sources, as the resumption of coal business alone should more than account for such export increase. Another aspect of the situation is presented by comparing the combined corrected values of imports, exports, and reexports for the May-November periods in three successive years with those for the December-June periods. By this comparison a fairly regular decline is shown in the total (corrected) value of trade moving. If the price correction really makes the figures comparable, there is indicated either a growing proportion of lower-priced goods or else a smaller volume of commerce—to the possible detriment of freight earnings.

FINANCE. As a result of the prolonged industrial inactivity caused by the 1926 coal stop-

page, the financial year 1926-27 ended with a government budget deficit of £36,693,794. Government receipts during the year ended Mar. 31, 1927, totaled £805,701,233, which amount was £19,048,767 below the original estimates. Total expenditures, at £842,395,027, were greater than the original estimate by £9,917,027, chiefly because of increased national debt services. The following table shows the receipts by sources of revenue and the expenditures by classes, in comparison with the previous year's receipts and expenditures:

PRINCIPAL REVENUE RECEIPTS AND EXPENDITURES OF THE BRITISH GOVERNMENT DURING FINANCIAL YEARS ENDED MARCH 31

Principal items	1926	1927
REVENUES		
Customs	£103,487,000	£107,515,000
Excise	134,560,000	132,978,000
Motor-vehicle duties	18,056,000	21,893,000
Estate, etc., duties	61,200,000	67,320,000
Stamps	24,700,000	24,750,000
Excess-profit duties, etc. . .	2,000,000	4,500,000
Income tax	259,411,000	230,717,000
Supertax	68,510,000	65,910,000
Corporation-profit tax	11,670,000	3,970,000
Postal telegraph and telephone service	57,850,000	58,850,000
Receipts from sundry loans, etc.	14,944,000	22,854,000
Miscellaneous ordinary receipts	17,349,000	28,214,000
Miscellaneous special receipts	36,925,000	30,840,000
EXPENDITURES		
National debt services:		
Interest, etc.	38,229,000	318,584,000
Sinking fund	50,000,000	60,000,000
Road fund	17,455,000	17,373,000
Payments to local taxation accounts, etc.	14,454,000	14,172,000
Payments to Northern Ireland exchequer	4,861,000	5,767,000
Other consolidated fund services	2,372,000	2,869,000
Army, navy, and air services	119,377,000	116,730,000
Civil services	243,263,000	240,486,000
Revenue departments	65,310,000	66,414,000

In view of the 1926-27 deficit and the outlook for smaller receipts during 1927-28 under existing schedules, it was generally feared that it would be necessary to add to the burden of the British tax payers by increasing the income tax rate; but in presenting the budget proposals to Parliament on Apr. 11, 1927, the Chancellor of the Exchequer not only left the income tax charge at its present rate but estimated that only £5,500,000 would be derived from the changes which he proposed in the matter of indirect taxation. Furthermore, a budget surplus of £1,440,000 was contemplated.

Supplementary estimates while leaving the revenue at £834,830,000, increased proposed expenditures to £833,639,000, thus lowering the estimated surplus for the year to £1,191,000. Half-yearly figures covering the period from April 1 to Sept. 30, 1927, showed a deficit of £56,170,000 for the period, as compared with deficits of £61,724,000 a year ago and £35,972,000 two years ago. The half-yearly deficit of approximately £36,000,000 in 1925 became a yearly deficit of £14,038,000 by the end of the financial year. Likewise, the large deficit of £61,724,000 for the first half of 1926 resulted in a total deficit of £36,694,000 for the year. Hence, based upon the experience of the past two years and upon a comparison of the percentages of esti-

PROPOSED BUDGET RECEIPTS AND EXPENDITURES OF THE BRITISH GOVERNMENT FOR THE FINANCIAL YEAR ENDING MAR. 31, 1928, COMPARED WITH THE PAST YEAR

Item	1927	1928
REVENUES		
Customs	£107,700,000	£112,120,000
Excise	134,300,000	145,780,000
Motor vehicle duties	20,100,000	24,100,000
Estate, etc., duties	66,000,000	67,800,000
Stamps	25,000,000	25,500,000
Land tax, house duty, and mineral-rights duty ..	1,000,000	800,000
Income tax	225,000,000	247,000,000
Supertax	64,500,000	62,000,000
Excess-profits duty, etc. . .	2,000,000	3,000,000
Corporation-profits duty, etc.	6,500,000	2,700,000
Postal, telegraph, and telephone services	59,400,000	62,000,000
Crown lands	950,000	1,050,000
Receipts from sundry loans	17,650,000	23,500,000
Miscellaneous ordinary receipts	18,600,000	30,500,000
Miscellaneous special receipts	26,000,000	27,000,000
Total	804,700,000	834,830,000
EXPENDITURES		
National debt services:		
Interest, etc.	304,000,000	305,000,000
Sinking fund	50,000,000	65,000,000
Road fund	19,500,000	19,500,000
Payments to local taxation accounts, etc.	14,100,000	14,300,000
Payments to Northern Ireland exchequer	5,200,000	5,400,000
Other consolidated fund services	2,600,000	3,700,000
Army (including ordnance factories)	42,500,000	41,565,000
Navy	53,100,000	53,000,000
Air force	16,000,000	15,550,000
Civil services	234,257,000	235,725,000
Customs and excise, and internal revenue departments	11,784,000	12,007,000
Post office	56,600,000	57,643,000
Total	812,641,000	833,390,000

mated receipts that had been received by the end of the first half of the financial years 1925-26, 1926-27, and 1927-28, a final deficit in the national revenues of the United Kingdom for the year 1927-28 seemed probable.

The aggregate gross liabilities of the United Kingdom increased from £706,154,000 on Mar. 31, 1914, to £7,623,097,000 by the end of March, 1921, and to £7,652,688,000 by the end of March, 1927. For the same dates, estimated assets were £38,280,000,000, £84,069,000,000 and £115,850,000,000, respectively, and the exchequer balances £10,435,000, £3,075,000, and £6,460,000 respectively. Net interest and management charges on the national debt increased from £18,405,000 in 1914, to £328,832,000 in 1921, thence declining to £318,421,000 in 1927.

SHIPPING. No later figures on shipping were available at the end of the year than those given in the preceding YEAR BOOK, when the net tonnage of vessels in foreign trade which entered British ports in 1925 with cargoes was 52,121,842 tons, an increase of 220,141 tons over 1924 and of 3,187,485 tons over 1923. Clearances with cargo totaled 58,026,943 tons, a decrease of 2,932,385 tons from the 1924 figures and of 9,892,822 tons from that of 1923. See SHIPBUILDING; and SHIPPING for statistics of the merchant marine and the shipping launched during the year in Great Britain.

RAILWAYS. According to the *Railway Age*, the financial results of operations of the group railways of England in 1926—i.e. the London, Midland & Scottish, the London & North East-

ern, the Great Western and the Southern—showed even a less favorable return than was expected a year ago in reporting results for the preceding year. Reference was then made to the depression in the coal trade and in the iron and steel industry and also in the menace of motor competition with passenger traffic and it was pointed out that although there were indications that some improvement might be expected in 1926, the coal problem made everything look uncertain. The first quarter of 1926 seemed to bear out the views of those who were inclined to be slightly optimistic. The results of the four group companies in aggregate showed an increase as compared with the first quarter of 1925, of \$1,100,160 in passenger revenues and of \$4,122,800 in freight revenues, a total of \$5,122,440. However, by the end of the year there was a decrease of \$134,388,440, or 14½ per cent, as compared with the previous year, toward which passenger traffic contributed \$42,796,880 and freight traffic \$91,591,560. In addition there was a decrease in gross receipts from other business amounting to \$7,000,000. In four years since amalgamation capital expenditures have increased by \$130,000,000. The estimate of the expenditure to be made in 1926 at the beginning of the year was a little less than \$35,000,000, but due to curtailment of expenses by the different roads this figure was brought down.

Comparisons of gross receipts indicate that in three years the revenue of the group companies had decreased about one-sixth. In round figures the London, Midland & Scottish gross revenues has decreased about \$70,000,000, the London & North Eastern about \$65,000,000, the Great Western about \$35,000,000, and the Southern about \$5,000,000. The Southern was the only one of the group companies to improve its gross revenue in 1924 and 1925. Declines were attributed, according to the railways' report, to several causes among which were lower rates, both freight and passenger, the decline in export coal trade, the depression in the iron and steel business, motor vehicle competition, and the general and miners' strikes in 1926. The Ministry of Transport reported that gross receipts of the group companies in 1922 prior to their amalgamation amounted to approximately \$962,000,000 so that the decrease over a period of four years is a little less than \$250,000,000. However, the companies were able to make some saving in operating expenses in 1926, the saving amounting to a little less than \$60,000,000, and yet this left a net revenue of more than \$85,000,000 below that of 1925, the net revenues of 1926 amounting to approximately \$80,000,000. The ratio of operating expenses to income averaged 90.68 per cent for the companies as a whole, varying from 84.41 per cent on the Southern to 93.91 per cent on the London & North Eastern.

With regard to passenger traffic decrease the railways reported that the greatest decline had been in the third class traffic, where the London, Midland & Scottish lost 40,000,000 passengers, the London & North Eastern over 30,000,000 passengers, the Great Eastern 14,000,000 and the Southern 13,000,000. They reported that the general strike afforded an opportunity for motor vehicles to make a fresh attack on traffic hitherto carried on rails and also that the curtailment of train service to conserve coal supplies still further weakened the railways in their fight

against motor competition. With relation to freight traffic it was shown that revenue per ton remained fairly constant; however, coal tonnage diminished by 88,000,000 tons, general merchandise by 8,500,000 tons, other minerals by 17,000,000 tons, and the number of livestock declined by 600,000 head. Figures showing the net returns on the investment for 1926, 1925 and 1913, showed that 1926 declined about 50 per cent as compared with 1925 and about 70 per cent as compared with 1913.

The British Railway Rates Tribunal, which was set up under the transportation act of 1921 to fix the standard charges for the railways to operate from an appointed day, gave its final decision in the summer of 1927. The "appointed day" was fixed as Jan. 1, 1928, from which date the standard charges on the railway should operate. The fixed gross revenues of the four railway groups had been set at £196,632,901, and the standard revenue at £50,057,847. Of the standard revenue, the figures for the four railways are: London, Midland & Scottish, £20,326,622; London & North Eastern, £14,787,733; Great Western, £8,312,013; and Southern, £6,631,379. These standard charges had been provisionally approved Dec. 31, 1926. Speaking generally, the standard basis of goods (freight) and of mineral rates was to be 60 per cent above the base rates prevailing Jan. 14, 1920, for both classes, and the exceptional rates. By no means, however, were all rates to be brought up to the new standard, for the companies realized that this would be impossible if certain classes of traffic were to be retained. In addition, the tribunal authorized as standard the present ordinary rates of five cents a mile for first class passengers and three cents a mile for third class. At the end of the first year's working the railway act provides that the standard charges would be reviewed by the Railway Rates Tribunal. If it was found that the net income of any company is substantially in excess of or below the standard revenues and likely to continue so, the tribunal was directed to readjust the standard charges so as to effect either a reduction in subsequent years of 80 per cent of such excess or an increase and thus enable the standard revenues to be earned.

ARMY AND NAVY. The military system of the United Kingdom provides for a regular and territorial army and a reserve. Troops in the regular army serve both at home and abroad. Territorial troops serve only at home in peace times. The regular army in 1927-28 totaled 210,436, of whom 60,223 were in India. The strength of the territorial army on Jan. 1, 1927, was 146,522. See **MILITARY PROGRESS.**

The accompanying table from the *Statesman's Year Book* for 1927 shows the number of classes of the more important units of the British fleet, including the ships and vessels of the Dominions:

Class	Completed by end of		
	1925	1926	1927
Battleships and battle cruisers . . .	22	22	20
Cruisers	50	49	54
Aircraft carriers and tenders . . .	7	7	7
Fleet leaders and destroyers . . .	207	174	176
Submarines	65	56	56

See also **NAVAL PROGRESS.**

GOVERNMENT. George V, born June 3, 1865, was the reigning monarch during 1927. He succeeded

his father, Edward VII, on May 6, 1910. The cabinet during 1927 was as follows: Prime Minister, First Lord of the Treasury, and Leader of the House of Commons, Stanley Baldwin (appointed November, 1924); Foreign Affairs, Sir J. Austen Chamberlain; Privy Seal and Leader of the House of Lords, Marquis of Salisbury; President of the Council, Earl of Balfour; Chancellor, Viscount Cave; Chancellor of the Exchequer, Winston S. Churchill; Home Affairs, Sir William Joynson-Hicks; Colonies, Leopold C. M. S. Amery; War, Sir L. Worthington-Evans; India, Earl of Birkenhead; Air, Sir Samuel Hoare; Admiralty, W. C. Bridgeman; President of the Board of Trade, Sir Philip Cunliffe-Lister; Health, Arthur N. Chamberlain; Agriculture and Fisheries, Lt.-Col. Walter E. Guinness; Scotland, Sir John Gilmour; Education, Lord Eustace Percy; Labor, Sir Arthur Ramsay-Steel-Maitland; Duchy of Lancaster, Viscount Cecil of Chelwood; Works, Viscount Peel; Attorney General, Sir Douglas McGarel Hogg; Pensions, George C. Tryon; Transport, Wilfrid W. Ashley; Solicitor-General, Sir Thomas W. H. Inskip; Postmaster-General, Sir William Mitchell-Thomson; Lord Advocate, William Watson; Solicitor-General for Scotland, A. M. MacRobert. Viscount Cecil resigned August 29, and was succeeded October 19 by Ronald John McNeill, later Lord Cushenden.

HISTORY

AFTERMATH OF THE GENERAL STRIKE. As noted in the preceding YEAR BOOK, the general strike of 1926 completely tied up industry and transportation and cost the British public an untold sum. From the point of view of the workers absolutely nothing was accomplished. The coal strike which was the cause of the general strike was not settled until the latter part of November and the final agreement was a complete surrender on the part of the trade unionists, a surrender that was indubitably hastened by the spectre of hunger and poverty. Many observers felt then and later that the entire labor situation in Great Britain was merely in a transitory stage and that as soon as the war chests had been refilled and the dire needs of the workers satisfied the struggle against the Tory government and the capitalist class would be renewed with a greater chance of success because of the lessons learned in the 1926 strike.

The effects of the upheaval were far reaching and there had been no complete return to normalcy during the entire year 1927. A review of the trade statistics of practically every other nation in the world will show some connection with the British general strike. The coal exports, particularly of Poland, Germany, Belgium, etc., were vitally affected by the cessation of activities in the British fields. The other side of the question, is of course, Will the countries whose exports were increased be able to return to the pre-strike conditions without seriously affecting their labor, transportation, and financial agencies?

The strike was particularly hard on the members of the British Empire, such as Australia, New Zealand, Canada, etc. The chief market for many of these countries was Great Britain, but with the suspension of production and the very slow recovery of industry the markets as well as the purchasing power of the island mother country were seriously curtailed, and were

directly reflected in a severe falling off in the exports of many of the component parts of the Empire. Even the latter part of 1927 did not show an appreciable return to 1925 conditions. In Great Britain itself, the financial and commercial activities of the country suffered from a creeping paralysis which responded very slowly to treatment. In order to keep industries running it was necessary to import large quantities of coal and raw materials depending upon coal from the United States and European countries, with the consequent results that basic costs of production mounted to such a height that competition with other countries practically killed several very lucrative branches of British trade and commerce. This was especially true in South and Central America, where the United States and Germany made rapid advances in commerce largely at the expense of Great Britain.

Great Britain's balance of visible trade, has, of course, always been against her, but, for the first time in years, the addition of invisible items of trade to visible items failed to produce a favorable balance. The concomitant effects such as the increase of unemployment and the increase of doles certainly did not help to improve the general depression and lethargy that prevailed throughout the country in the last part of 1926 and almost during the entire period of 1927.

On January 20 the long standing dispute between the trade union executives and the General Council of the Trades Union Council was considered in London. Although the Council was severely criticized for its handling of the general strike it received a vote of approval and the executives of the miners' unions a vote of censure for failure to follow the advice of the Council. This was in the nature of a post mortem and had very little effect one way or the other. The chief item of interest in labor circles before the opening of Parliament was the threat on the part of the government that it was going to introduce legislation to make general strikes illegal and compel the incorporation of trade unions and some regulatory control over their funds.

THE OPENING OF PARLIAMENT. Parliament reopened for the spring term on February 8, and the King's speech was delivered. As reported in *Current History* it expressed satisfaction at the entry of Germany into full membership in the League of Nations. This step was declared to have strengthened the League and furthered the restoration of normal international relations in Europe. The most controversial matter upon which legislation was proposed was that of industrial disputes. The King announced that Parliament would be asked to define and amend the law on this subject. During the subsequent debate Premier Baldwin made it fairly clear that the government intended only to amend the law with reference to the unions in connection with strikes, and that at present it would not touch the question of money levy by the unions on their members for political uses. The Labor party served notice that any attempt on the part of the government to curtail in any way the rights of labor organizations would be fought to a finish by organized labor. One of the most important proposals was the government's invitation to Parliament to revise and consolidate the existing laws relating to insurance against

unemployment (doles). Other matters that were to be brought before Parliament dealt with the improvement of the position of leaseholders, poor law reform, factory legislation, and agricultural relief. The Labor opposition criticized the speech for its failure to mention franchise reform.

In a by-election held in Premier Baldwin's own section, the Labor candidate was successful, and the opposition party took this occasion to call again to the attention of the country that faith in the Baldwin government was rapidly dwindling, this being the sixth success of Labor since the general election in 1924. The opposition party also caused a slight flurry on February 17 when it strenuously objected to appropriating \$35,000 toward the expenses of the Duke of York, who was to take a trip abroad. Premier and Mrs. Baldwin were subjected to a hostile demonstration when they traveled to Wales to express their sympathy for the victims of a mine disaster. They were jeered and their car was surrounded by angry miners. While Laborites in general were not sympathetic toward this outburst it is mentioned merely as an indication of the swing toward the Left, which was distinctly noticeable not only in Great Britain during 1927, but in Germany and France as well.

On April 4, the government introduced its long awaited bill relating to trade unions and strikes. As summoned up by *Current History* the provisions were as follows:

1. Although general strikes are not specifically mentioned in the bill, they are obviously included under the terms of the first clause, which declares illegal "any strike having any object besides the furtherance of a trade dispute within a trade or industry in which the strikers are engaged if the strike is designed to coerce the government or intimidate a substantial portion of the community." This means that a sympathetic strike on a large scale would be illegal. The penalty for an illegal strike is a fine not exceeding £100 or, on indictment, imprisonment for a term not exceeding two years. No one refusing to obey a strike order shall be expelled from a union or fined, and, if expelled, the courts can order him compensated from the funds of the union.

2. The law for the prevention of intimidation is strengthened by another clause in the bill: Strikers are forbidden to attend near any one's house or place of work if the number or the manner is calculated to intimidate a person therein. Picketing the home of a worker becomes a criminal offense. Intimidation is defined as causing in the mind of a worker a reasonable apprehension of injury to him or any member of his family or damage to property, injury including boycott or exposure to hatred, ridicule and contempt.

3. The political funds of trade unions, which are largely used for the election of Labor candidates to the House of Commons, are dealt with by reversing the procedure as established by the existing law. So far a member of a trade union who does not wish to contribute to the political fund of his union has had to intimate his desire to contract in writing. The proposed reform is that no member shall be required to contribute to the political funds of

his union unless he delivers a written notice of his willingness to contribute, and that if he has delivered such a notice he may withdraw it the following year.

4. Civil servants are prohibited from belonging to trade unions unless such unions are confined to civil servants only and are independent of any outside union. This provision is designed to prevent civil servants' unions from becoming affiliated with the Labor party and other working-class organizations.

5. Municipal authorities are prohibited from making it a condition of employment that a person must belong to a union.

6. The Attorney General is given power to apply for an injunction to restrain any use of the funds of a trade union in contravention of the provisions of the bill.

The labor element looked upon the measure as a declaration of class war and even some of the Conservative members of the House of Commons were undoubtedly surprised at the severity of some of the provisions. The complete text of the bill may be found in *Current History* for June on pages 447-49. The bill passed its second reading in the House of Commons of May 5 with a majority of 215. As a general rule, after the second reading a bill passes to the committee stage where it is discussed by the Committee of the Whole and taken apart piece by piece. The Labor party announced that it had more than 400 amendments to propose to the bill. As a result of this announcement Prime Minister Baldwin decided to apply the closure rule to the bill and limit debate to twelve days. This so incensed the Labor members that they left the House in a body and the Conservative members left passed the closure rule without any opposition. The Labor members appeared the next day, however, apparently feeling that such methods would not aid their cause in any way. The bill passed its third and final reading on June 23, rather the worse for wear because of the twelve-day period of debate, but nevertheless still bitterly opposed by the Laborites. The changes brought about did not materially weaken the bill, but did narrow its scope to some extent and changed some of the harsh measures for its application. Parliament ended its sessions on July 29, with the passage of the Trade Unions' Bill as the one important and noteworthy act of legislation.

SITUATION AT THE END OF THE YEAR. After a comparatively quiet summer, Parliament reassembled for the winter session in November. While no legislation of actual importance was passed before the close of the year the struggle between the government and the opposition continued apace. Ramsay MacDonald, former Labor premier, and Lloyd George, former Liberal premier, attacked the attitude of the Baldwin government at Geneva and accused it of being largely responsible for the failure of the disarmament movement. The opposition was not strong enough, however, to pass a vote of censure. To the contrary, a vote of approval was passed, although the government must have realized that the common people of the country were keenly interested in disarmament in particular and foreign affairs in general and the responsibility for failure in either one of these fields would be placed, as far as possible, at the door of those responsible.

The opposition also failed to have a vote of censure of the government passed on the issue of failure to take proper steps to alleviate the unemployment situation in industry in general and in the coal mining industry in particular. Failing to get a reply from the Prime Minister himself (which is customary in British parliamentary practice on a vote of censure), the opposition again tried to censure the government for this breach of procedure on the part of Mr. Baldwin, but once again failed. It was quite obvious to all competent observers that the opposition parties, both the Laborites and Liberals, as well as the majority party, were jockeying for positions of advantage in the next elections. Normally these elections would not take place until 1929, but there seemed to be an undercurrent of opinion that the Baldwin government would appeal to the people at any time in advance of the legal date for elections if it saw a sure opportunity of success. In the meantime Labor was doing everything it could to strengthen its front, and Lloyd George was placing a huge fund in the hands of his branch of the Liberal party, with the hopes of gaining enough seats to control the balance of power between the Conservatives and Laborites in the new Parliament.

For Trades Disputes and Trades-Union Act, see TRADE-UNIONS.

GRECIAN ARCHEOLOGY. See ARCHEOLOGY.

GREECE. A republic in southeastern Europe, comprising the lower Balkan peninsula and many islands in the Aegean Sea; formerly a constitutional monarchy. King George II was forced to leave Greece Dec. 19, 1922, and the republic was established Apr. 13, 1924, as the result of a plebiscite. In continental Greece are included Macedonia, Western Thrace, and Epirus; the chief island possession of Greece is Crete (q.v.). Capital, Athens.

AREA AND POPULATION. The total area of Greece before the Balkan Wars of 1912-13 was 25,223 square miles; as a result of these wars Greece added 20,730 square miles to her territory. According to the Treaty of Lausanne (1923) Greece obtained a further area of 3182 square miles; the total area of the present Greek republic is 49,912 square miles. According to the census of 1920 and that of the refugees made in April, 1923, the population was 5,810,221. It was estimated that between August, 1922, and January, 1925, 1,350,000 Greek refugees returned to Greece from Asia Minor, and that the total population of the country might be put at 6,200,000.

The work of the Refugee Settlement Commission in installing refugee families continued to make progress. During 1926 it was reported that 3456 families were settled in Macedonia and 1862 families in western Thrace. An adjustment was also reached during the year, covering compensation due the refugees. This arrangement involved the issue of special bonds to a value of 3,000,000,000 drachmas, bearing inter-

est at 8 per cent and guaranteed by the State. These bonds were to be paid off chiefly from the proceeds of sales of property awarded to the Greek government under treaty and by it placed under the administration of the National Bank for disposition.

EDUCATION. Education is compulsory for all children between the ages of seven and 12, although the law is not very well enforced in the rural districts. The latest school census showed 7200 primary schools with 13,996 teachers and 499,084 pupils. For secondary education there were 650 high schools with 2523 teachers and 86,500 students. In the same year there were 24 commercial schools with 188 teachers and 3607 pupils. There are two universities in Athens: the National University and the Capodistria University with 61 professors and 9799 students. A third university, founded at Saloniki, began work in the fall of 1925. There are also various technical and agricultural schools.

PRODUCTION. Agricultural production during 1926 was adversely affected by unfavorable weather conditions. The cereal crop was estimated at 790,000 tons, as against 940,000 tons in 1925; currants were placed at 140,000 tons, as compared with 168,000 tons in 1925; and raisins at 15,000 tons and 28,000 tons respectively. Increased crops, however, were anticipated for olives, cotton, and figs, and the tobacco crop was expected to be slightly above the 1925 figure of 55,800 tons. A contract was signed with an American company in 1925 for the important work of draining and irrigating the Saloniki Plain, involving a total expenditure of approximately \$25,000,000. The contract included the following: A complete survey of the area to be reclaimed; the preparation of a drainage project accompanied by a report on and estimate of the cost of the works proposed; and the execution of the approved project. This contract was ratified in October, 1925, and by the end of 1926 engineers had surveyed over 800 square kilometers of territory. Active construction was begun about the middle of 1926. When the work prescribed by the contract is completed, which will require about four years, approximately 326,000 acres of extremely rich soil, now useless marshland, will be ready for agriculture. The work being carried out in 1927 consisted of the draining of the Ardzan and Amatovo Lakes by means of a canal with a bed-width of 12 meters and 12 kilometers in length which discharges into the Vardar River; also the work of confining the floods of this river with protective embankments.

Industrial production in general in 1926 compared favorably with 1925, although uncertain conditions had a restraining effect on business expansion. The tobacco manufacturing industry was slightly less active than in 1925; production of cigarettes totaled 4813 metric tons as against 5186 in 1925, while the value declined from 233,300,000 drachmas to 216,000,000 drachmas. Olive-oil production estimates indicated a substantial increase, from 44,830 in 1925 to 63,045 metric tons in 1926, valued at 898,000,000 and 1,640,000,000 drachmas, respectively. Wine production declined from 200,000,000 kilos to 170,300,000 kilos, but prices were higher. Operations of the textile manufacturing industries were generally maintained on the same level as

in 1925, but lower prices prevailed for cotton products, the chief item of manufacture. The chemical industry showed little change, while business in the leather and tanning industries declined.

COMMERCE. Imports during 1926 were valued at \$127,008,000 and exports at \$65,199,000, thus indicating an adverse balance of \$61,809,000. This compares with 1925 imports valued at \$153,411,100 and 1925 exports valued at \$67,237,020. Exports from Greece to the United States, in 1926, declared through American consulates, showed a value decrease of nearly 22 per cent, as compared with 1925. The decrease in Greek exports was due almost wholly to the major export commodities—tobacco and olive oil. The tobacco decrease was more one of value than of quantity, as the 1926 production was good in all except the best grades; but the decrease in olive oil export was due to the fact that the 1926 production in Greece was very low. There was, however, a 50 per cent increase in shipments of emery ore to the United States, and exports from the new carpet and rug industry, largely carried on by refugees, showed a marked improvement, totaling about one-fifth of Turkey's 1926 rug exports to the United States. There was also an increase in opium exports, possibly resulting in part from decreased shipments from the Smyrna markets. Several of the less important commodities also showed improvement.

RETURNS FROM GREEK PLEDGED REVENUES
(EXCEPT SERVICE OF REFUGEE LOAN)
ADMINISTERED BY THE INTERNATIONAL
FINANCIAL COMMISSION FOR 1925
[In drachmas, for which exchange averaged \$0.0179 in
1924 and \$0.0156 in 1925]

Source of revenue	1924	1925

Total	1,459,207,717	1,827,088,678

COMMUNICATIONS. Shipping activity during 1926 showed little change from 1925. A total of 31,118 ships aggregating 18,418,394 tons entered Greek ports, as compared with 31,964 of 18,067,510 tons in 1925. The year 1926 was a very prosperous one for Greek railways. Of the eight systems which comprise the entire Greek railway mileage of 2743 kilometers, the State railways, operating 1408 kilometers, showed the largest net income amounting to 13,091,427 drachmas. Operating revenues of the state railways reached 262,055,896 drachmas and other

FINANCE. Progress toward a better financial position in Greece during 1926 was hindered by the unsettled political situation. Actual preliminary results indicated budget deficits, although theoretical surpluses were shown in the budget drafts. Only approximate data are available on recent budget results, but the actual situation was reflected to some extent in the estimates drawn up for the 1927-28 fiscal year which included deficits from previous years totaling 2,500,000,000 drachmas. Provision for covering this deficit was made by expected loans from the League of Nations. Unsettled conditions in the country during the war hampered the formulation of a definite financial policy and retarded the flow of foreign capital into Greece.

The Greek pledged revenues under control of the International Financial Commission showed increased collections in 1925 as compared with 1924 (\$39,544,618 as compared with \$26,206,216).

revenues 1,090,916 drachmas, while operating expenses were 250,055,385 drachmas. The rolling stock in operation consisted of 107 locomotives, 2256 freight cars, and 183 passenger cars. All equipment was in good condition. There were practically no changes in Greek railway operation during the year, very little construction was done, and none was proposed for 1927.

GOVERNMENT. By a plebiscite on Apr. 13, 1924, the Republic of Greece was established. A new constitution was published on Sept. 24, 1926. It prescribed among other things that there should be an Upper House of 160 members, that both houses should be elected by universal, direct and secret voting on a basis of proportional representation, that they should elect the president for a term of five years, and that no premier should hold his office for more than one year. Provisional President at the beginning of 1927, Admiral Konduriotis. The ministry as constituted on Dec. 4, 1926, was as follows: Pre-

mier, A. Zaimis; Foreign Affairs, M. Michalopoulos; War, General Mazarkis; Marine, M. A. Kanaris; Interior, M. Tsaldaris; National Economy, M. G. Merkouris; Agriculture, M. G. Papanastasiou; Social Insurance, M. C. Kirkos; Justice, M. C. Angelopoulos; Finance, M. Kaphandaris; Communications, General Metaxas; Education, M. A. Argyros.

HISTORY. As noted above under *Government*, a cabinet headed by M. Zaimis took over the control of the country during the latter part of 1926. While this ministry was almost solidly backed up by the legislative branch of the government it was beset with several difficulties of a serious nature. The chief of these difficulties was the muzzling of the army and officers to prevent any further *coups* such as that of General Pangalos, which was noted in the preceding **YEAR BOOK**. General Pangalos was imprisoned on the island of Crete, until such time as the new government could determine what action should be taken in his case. As a further evidence of the restoration of orderly government the Assembly early in February adopted an amendment to the constitution providing for the establishment of a senate composed of 120 members.

Another difficulty of the cabinet was the question of the submission of the new constitution. The provisional President, Admiral Konduriotis, presented his resignation because of the failure of the Zaimis cabinet to bring this matter up, but was persuaded to withdraw it and hold over until September. A third difficulty of the cabinet was that of finance. The huge deficits which had been piling up, the depreciation of the drachma, and the need for another refugee loan, were all pressing problems, and in August resulted in such a severe ministerial crisis that the coalition cabinet of M. Zaimis fell. It was reorganized, however, under the leadership of the same premier, without the support of the Popular party.

The war debt of Greece to the United States was finally settled on December 5, when the two governments reached an agreement by the terms of which Greece will pay \$19,659,836 over a period of 62 years with an interest rate of 3 per cent, and will borrow an additional \$12,167,000 for twenty years at 4 per cent, to be used for refugee settlement work.

GREEK ARCHÆOLOGY. See **ARCHÆOLOGY**.

GREENHILL, SIR GEORGE. British mathematician, died in London, February 10. He was born Nov. 29, 1847, and after graduating at Cambridge became a fellow of Emmanuel College and a mathematical lecturer, besides being one of the examiners for the mathematical tripos. He became professor of mathematics in the artillery college at Woolwich, teaching the advanced class of officers. His mathematics found extensive application in gunnery and aeronautics. He was a student and an admirer of the theories of Newton without being disturbed by such modern doctrines as those of relativity and atomic dynamics. He was knighted in 1908. His writings include: *Differential and Integral Calculus With Applications* (1885); *Applications of the Elliptic Function* (1892); *Hydrostatics* (1894); *Notes on Dynamics* (1908); *Report 19, Theory of a Stream Line With Application to an Aeroplane* (1910, 1916); *Dynamics of Mechanical Flight* (1912); and *Report 146, Gyroscopic Theory* (1914).

GREENLAND. The largest island in the world next to Australia; the only colonial possession of Denmark. The area is variously estimated at from 826,000 to 849,000 square miles. The settled portion, the only part included in Denmark's colony, has an area of 46,740 square miles, with a population, according to the census of 1921, of 14,355, of whom 274 were Danes. The largest settlement is Sydproven, with a population of 901, and the smallest, Skansen, with a population of 49. The interior remains unknown in detail, but the main geographical features are understood. Nearly the entire country consists of a plateau from 2000 to 3000 meters above the level of the sea, which means that it is covered by a thick, permanent coat of snow and ice, only about one-twenty-fifth of the surface being free from it and suitable for cultivation. Most of the inhabitants are located on the coast or on adjacent islands. The trade with Denmark in 1924 consisted of 5,510,000 kroner of imports and 2,486,000 kroner of exports. The trade, chiefly in seals, sealskins, fox skins, and oil is a monopoly of the Danish government. At the head of the government is a director who resides in Copenhagen.

This arctic land kept in touch with the activities of the world in general during 1927. On the east coast there have been maintained meteorological stations, equipped with radio. The Danish station at Angmagssalik sent weather bulletins throughout the year, while the Norwegian force at Mygbutket, 73° 30' N., sent weather reports during the fishing season to the Norwegian station on Jan Mayen. On this coast the Danish explorer Lange Koch, the Greenland explorer, made extensive geological studies in and near the Scoresby Sound region. His collection of eight tons of fossils, representing three geological ages, contains many palms and like plants, which indicate that Greenland once enjoyed a tropical climate. On the west coast, the Danish observatory at Godhavn was enlarged and its scope of scientific research extended. The local authorities were coöperating with the Hobbs expedition, of the University of Michigan. The weather station established by Hobbs at the head of Kangendlugdak Fiord was to be occupied during the winter 1927-28, while another was to be maintained on the inland ice.

GRENADA, gre-nā'dā. An insular possession of Great Britain in the Windward group of the West Indies. Area, 133 square miles; population at the census of 1921, 66,302; estimated in December, 1925, 70,184. Grenada includes half of the Grenadine Islands, the other half being administered from St. Vincent. The capital is St. George with a population of about 5000. In 1925 the movement of population was: Births, 2354; deaths, 1162. In 1925 there were 58 government and government-aided schools for elementary education with 11,480 pupils and one secondary school. The chief products which are also the chief exports are: Cacao, spices, lime juice, cotton, and cotton seed. The production of sugar was rapidly increasing; in 1925, the local production of rum was 47,327 proof gallons. In the same year the revenue was £146,218 and the expenditure, £112,447. The exports were £434,083 and the imports, £431,807. The total shipping entered in 1925 was 417,745 tons, nearly all British. The colony is under the governor of the Windward group, but has its own institu-

tions. Governor and Commander-in-Chief of the Windward Islands, including Grenada, Sir Frederick Seton James; Colonial Secretary for Grenada, H. Ferguson.

GRESSMAN, HUGO. German Old Testament scholar, dean of the Institution Judaicum of the University of Berlin, died in Chicago, Ill., while on a lecture tour, April 7. He was born in Mölin, Holstein, Mar. 21, 1877, and was educated at Greifswald, at Göttingen (where he obtained his Ph.D. in 1899) and at Marburg and Kiel. In 1906 he was sent to Jerusalem under the auspices of the German Archaeological Institute, with other German scholars, and on his return he became a professor in the University of Berlin. He carried on important archaeological research work in the Biblical territory, and founded the Institution Judaicum at the University of Berlin. He was president of the German Religious Scholars' Association. He was known for his discovery of a new group of Jewish catacombs in Rome. Dr. Gressman had arrived in the United States on February 26, and after lecturing at Harvard and Yale had gone to the University of Chicago, where he lectured a few days before his death. His lectures in the United States were delivered at the invitation of the Jewish Institute of Religion under the terms of a foundation established by Joseph Strock, and providing for a chair to which leading non-Jewish scholars throughout the world were to be invited. Dr. Gressman wrote extensively, his more important papers including: *Studien zu Eusebs Theophania* (1905); *Der Ursprung der Israelitisch-Jüdischen Eschatologie* (1905); *Ausgrabungen in Palästina und das Alte Testament* (1908); *Palästinas Erdgeruch in der Israelitischen Religion* (1909); *Alt-orientalische Texte und Bilder zum Alten Testament* (1909); *Des Gilgamesch-Epos Erklärt* (1911); and *Mose und Seine Zeit* (1913).

GRICE, ETTALENE M. Assistant professor of Assyriology and Babylonian literature at Yale University, died at Westville, Conn., December 4. She was born at Portsmouth, Ohio, in 1887, and graduated at the Western College for Women, beginning her Semitic studies at Bryn Mawr College in 1912 and receiving the degree of Ph.D. from Yale in 1917. She was at that time associated with Prof. Albert Clay as a special student, research fellow, lecturer and assistant in care of the Babylonian collection, and from 1919 to 1925, as holder of the Kohut Fellowship in Assyriological research, she made many contributions in that field. After the death of Professor Clay she was made assistant professor, and she was also assistant curator of the Yale Babylonian collection.

GRIGGS, JOHN WILLIAM. American jurist, died at Paterson, N. J., November 28. The son of a farmer, he was born at Newton, N. J., July 10, 1849, and after graduating at Lafayette College in 1868 was admitted to the bar in 1871 and began practice at Paterson. In 1876-77 he was a member of the New Jersey General Assembly, and from 1882 to 1888 a member of the State Senate, serving as president in 1886. He was elected Governor of New Jersey for 1896-99, being the first Republican Governor in thirty years, but resigned in January, 1898, to become attorney general in the cabinet of President McKinley. In 1901 he resigned this position to resume the practice of law, but a short time afterwards he became a member of the Perma-

nent Court of Arbitration at The Hague, serving until 1908. In addition to his public work, Mr. Griggs was attorney for a number of important corporations such as the Erie R. R., the Delaware, Lackawanna and Western R. R., and was president of the Paterson National Bank and the Marconi Wireless Telegraph Company of America before its absorption by the Radio Corporation of America. At the time of his death he was a director of the New York Telephone Company, the Bethlehem Steel Corporation, the American Locomotive Company, and the Radio Corporation of America. He received the degree of LL.D. from Princeton University and Rutgers College in 1896 and from Yale University in 1899. He was an able debater and a man recognized for legal capacity, political understanding and personal dignity.

GROSSMAN, THE REV. DR. RUDOLPH. Rabbi, died at New York, N. Y., September 22. He was born at Vienna, July 24, 1867. Going to the United States as a child, he attended schools in Brooklyn and Chicago, graduating at the Hebrew Union College of Cincinnati in 1889 at the head of his class. He also graduated in law the same year at McMicken University, in the same city. He was called to New York as associate rabbi of Temple Beth El, where he remained for eight years until elected rabbi of Temple Rodeph Shalom, a charge he held at the time of his death. An eloquent preacher, he was grand chaplain of the Masonic Order of New York, president of the Jewish School Union of New York, and of the Board of Jewish Ministers, vice president of the New York Association of Reform Rabbis, and a member of the Commission of Jewish Religious Literature. He celebrated his silver jubilee in March, 1922, at which time a testimonial dinner was given in his honor. In 1894 he received the degree of D.D. from the Hebrew Union College.

GROVER, OLIVER DENNETT. American artist, died at Chicago, Ill., February 14. He was born at Earlville, Ill., in 1861, and after being a student at the University of Chicago studied painting at the Royal Academy of Munich, 1879-80, at the Duveneck School, Florence, 1880-84, and at Paris, 1884-86. His work is to be found in many American galleries. His painting, "Thy Will Be Done," received the first Yerkes prize at Chicago, 1892, and paintings exhibited at the St. Louis Exposition in 1904 received silver and bronze medals. He received the Kahn prize in Chicago in 1913 and the Fine Arts Building prize in 1906 and 1914. At the Panama-Pacific Exposition at San Francisco in 1915 he received a silver medal, and also a gold medal at the Art Institute in Chicago in 1918. He was made an associate of the National Academy in 1913. He was a former president of the Society of Western Artists and of the Chicago Society of Artists, as well as vice president of the Association of Arts and Industries.

GUADELOUPE, ga'da-loop'. A French insular possession in the Lesser Antilles in the West Indies, consisting of two islands separated by a narrow channel, the one on the west being Guadeloupe proper or Basse-Terre, and the one on the east Grand-Terre. Combined area, 532 square miles; total area, including five small dependent islands, 638 square miles; population in 1922, 229,839. Basse-Terre is the capital, with a population of 8318; chief town, Pointe-à-Pitre, with 27,679 inhabitants. In 1925-26

there were 103 public and private elementary schools, with 139 teachers and 15,635 pupils in the public schools and 33 teachers and 872 pupils in the private schools. For higher education there is one lycée with 360 pupils. The chief products for export are: Cacao, coffee, sugar, and rum. For local consumption, bananas, sweet potatoes, maize, tobacco, manioc, and various vegetables are produced. In 1925 the imports were valued at 132,566,419 francs and the exports at 154,871,706 francs. The revenue and expenditure for 1926 balanced at 29,636,746 francs; the public debt on Dec. 31, 1925, was 615,197 francs. There is communication with France by means of two steamship companies, and there is a wireless station at Destrellan. At the head of the government are a governor and an elected council and the colony sends to the French-parliament at Paris one senator and two deputies.

GUAM, gwām. An insular possession of the United States, situated at the southern end of the Marianne or Mariana Islands, of which it is the largest and most populous, in the Pacific Ocean at a distance of about 1500 miles from Manila and 5053 from San Francisco. Area, 210 square miles; population, exclusive of the military and naval establishments, 16,159 on June 30, 1926, of whom 15,615 were classed as natives. Capital, Agaña, with about 8500 inhabitants. In 1927, the school registration was 2946 pupils. Spanish and English are spoken in addition to the native Chamorro. The products of the island include cacao, coffee, copra, corn, rice, sugar, sweet potatoes and timber. The exports in 1926 amounted to \$105,026 and the imports to \$565,212. The island constitutes an American naval station, of which the governor, appointed by the President, is commander of the naval station and military governor of the island. He is virtually the entire government. Governor in 1927, Capt. L. S. Shapley, U.S.N. (appointed Nov. 21, 1925).

GUATEMALA, ga'te-mälä. A republic of Central America lying between the Caribbean Sea and the Pacific Ocean, and south and south-east of Mexico. Capital, Guatemala City.

AREA AND POPULATION. The area is estimated at 43,290 square miles, but the limits have been uncertain on account of boundary disputes and the area has been figured as low as 42,353 square miles; population, according to the census of 1920, 2,004,900; estimated in 1926, 2,454,000. The population of the chief cities was: Guatemala City, 99,009; Totonicapan, 30,888; Coban, 30,321; Chiquimula, 25,191; Escuintla, 20,574; and Quezaltenango, 20,555.

EDUCATION. According to a message of the president delivered early in 1927 the republic showed a marked advance in the field of education during the preceding year. Primary schools which were in session numbered 2909 with 3212 teachers, and there was an average attendance of 80,997 students out of the 103,859 who were registered. The increase in private primary schools was also marked (148 over the number in 1925). University, secondary, normal, and special instruction was given in 40 schools in the country. A teacher-rating bureau and a bureau for indigent education and the eradication of illiteracy were created during the year. The following figures showing the progress of public education were taken from the report of the Secretary of Education for the year 1926,

which was published in *El Guatemalteco* of May 16, 1927:

TOTAL ENROLLMENT AND ATTENDANCE IN ALL SCHOOLS

Schools	Enrollment	Attendance
Primary	103,859	80,997
Teachers' training	88	63
Normal	850	757
Secondary	745	616
Special	1,468	1,097
Colleges	588	588
Total	107,588	84,118

TOTAL ENROLLMENT AND ATTENDANCE IN PRIMARY SCHOOLS 1922-1926

Year	Enrollment	Attendance
1922.....	82,997	64,725
1923.....	89,464	80,566
1924.....	92,911	80,819
1925.....	105,314	77,838
1926.....	103,859	80,997

PRODUCTION. Agriculture is the chief occupation, and coffee is the staple crop. The estimates for the 1926 coffee crop placed it at 75,000,000 pounds. Other important crops are sugar, bananas, corn, beans, wheat, rice, tobacco, and potatoes. Mahogany and dye woods are exported to the United States. Silver, gold, iron, lead and copper mines exist, but are of little commercial value because of inadequate means of transport. In January, 1927, the Ministry of Agriculture published a report showing that there were 10,826 native landowners and 671 foreign land owners. The natives held 2,221,968 manzanas (one manzana equals 1.08 acres) and the foreigners 1,586,010 manzanas. The native holdings under coffee were 32,984 manzanas, foreign, 56,772; sugar cane, native, 12,126, foreign, 5068; bananas, native, 3396, foreign, 13,901; other crops, native, 219,597, foreign, 105,259; forests, native, 1,153,865, foreign, 1,405,010.

COMMERCE. The foreign trade of Guatemala for the year 1926 amounted to \$55,579,676, of which \$26,601,589 represented imports and \$28,978,087 exports. The figures for 1925 were: Imports, \$23,393,876; exports, \$29,661,959; total, \$53,055,835. There was, therefore, an increase in imports for the year 1926 as compared with 1925 of \$3,207,713 and a decrease in exports of \$683,872, or a net increase in the total foreign trade of \$2,523,841. The balance of trade in favor of the republic was \$2,376,498.

TEN-YEAR TABLE OF FOREIGN TRADE

Year	Imports	Exports	Total
1917.....	\$8,991,573	\$7,809,732	\$16,801,305
1918.....	8,466,020	11,919,875	19,785,895
1919.....	14,215,865	22,419,184	36,634,999
1920.....	18,844,463	18,102,906	36,447,369
1921.....	18,616,438	12,140,826	25,757,264
1922.....	10,751,660	12,065,949	22,817,609
1923.....	18,768,497	14,748,828	28,506,820
1924.....	18,271,258	24,491,886	42,762,794
1925.....	28,398,876	29,661,959	58,055,835
1926.....	26,601,589	28,978,087	55,579,676

The percentage of foreign trade with the various countries was as follows:

	Percentage of imports
England	12.74
Germany	12.22
Mexico	9.29
United States	54.10
Various countries	11.65

	Percentage of exports
Germany	31.65
Holland	8.78
United States	53.87
Various countries	5.70

FINANCE. The total receipts of the government for the year 1926 were 11,555,352 quetzales, while the expenditures were 11,715,949 quetzales, leaving thus a deficit which, with the deduction of 25,090 quetzales, a sum covered by a special fund, amounts to 135,506 quetzales. Expenditures for the fiscal year beginning July 1, 1927, as approved by Congress and the President on May 16 and 20, 1927, respectively, are as follows:

Authorized expenditures for 1927-28	Amount (quetzales)
Department of the Interior	2,004,655
Treasury Department	2,800,004
War Department	1,436,599
Department of Promotion	1,495,809
Department of Public Education	1,682,425
Department of Agriculture	1,279,009
Department of Foreign Relations	882,601
Total	11,081,102

COMMUNICATIONS. The latest figures for shipping are those for 1923 when 1,081,425 tons entered and 1,079,760 cleared. The International Railway of Central America controls a mileage of approximately 440 miles in Guatemala, exclusive of 55 miles of siding.

GOVERNMENT. The executive power is vested in a president elected for six years and legislative power in a national assembly, consisting of representatives elected for four years, and a council of state, consisting of 13 members, part of whom are elected by the national assembly and part appointed by the president. President in 1927, Lazaro Chacón, elected in December, 1926.

HISTORY. The new Cabinet of President Chacón was composed as follows: Secretary of Foreign Relations, Dr. Luis Toledo Herrarte; Secretary of State, Lic. Alberto Paz y Paz; Secretary of the Treasury, Don R. Felipe Solares; Secretary of War, General Miguel Larrave; Secretary of Public Education, Lic. J. Antonio Villacorta; Secretary of Promotion, Lic. Adalberto Aguilar Fuentes; Secretary of Agriculture, Lic. Mariano López Pacheco.

Gen. Miguel Larrave and Gen. Mauro de León were elected, respectively, First and Second Designates to the Presidency for the year 1927-28 by the Legislative Assembly on Apr. 29, 1927.

The Ministers of Foreign Affairs of Guatemala, Honduras, and Salvador, acting as representatives of their respective governments, held a series of conferences at San Salvador at the invitation of Salvador and on May 25, 1927, signed a convention in which the three republics agreed not to act singly nor separately in the examination and solution of problems affecting the general interests of Central America, before a previous exchange of ideas, either by means of diplomatic notes or personal conferences among the Ministers of Foreign Affairs of the contracting states. For this purpose the convention considers as circumstances affecting the general interests of Central America, the recognition of a new government in accordance with the existing treaties; the declaration of war; the controversies which may

arise with regard to questions already considered in the provisions of the international treaties in force; and the celebration, by one of the contracting nations, of any agreement, convention, or treaty with any non-Central American nation on matters which might affect Central American nationality. The convention required a regular annual meeting of the Ministers of Foreign Affairs of the three contracting Republics, the first meeting to be held in Guatemala. The Presidents of Salvador, Honduras, and Guatemala approved the convention on June 4.

For an account of the life of Señor Don Francisco Sánchez Latour, Guatemalan Minister to the United States since May, 1922, who died on November 8, consult his biography.

GUGGENHEIM FOUNDATION. See AERONAUTICS.

GUNN, JAMES NEWTON. American industrial leader and manufacturer, died at New York, November 26. He was born in Springfield, Ohio, in 1868, and was educated at the Springfield High School and by private tutors. His first business activity was with the Library Bureau of Boston, where he developed and extended the card-index system. After serving in Europe for this company he returned to the United States and organized the engineering firm of Gunn, Richards and Company, which soon numbered among its clients many important business firms. At the beginning of the automobile industry, Mr. Gunn was called by the Studebaker Corporation to reorganize that company and develop its motor business, and this work was so satisfactorily accomplished that he was called to be vice president and director of the United States Rubber Company. He was also elected president of the United States Tire Company, serving from 1915 to 1923, when he retired. During the World War he was a member of the War Industries Board, representing the Rubber Association of America. He was president of the Lincoln Highway Association. He was one of the first lecturers on business at Harvard University, where he established its business school, and he served on the administrative board for several years. In 1923 Mr. Gunn retired from business on account of ill health, but soon became a consultant, resuming his engineering practice. He was an adviser for various corporations, being attached to the engineering staff of Lockwood, Greene and Company.

GYMNASTICS. The national Amateur Athletic Union gymnastic championships were held under the auspices of the Bohemian Gymnastic Sokol at New York City, the individual winners in the various events being: All-around, Alfred Jochim, Swiss Turn Verein, Union City, N. J.; long horse, Fred Berg, Norwegian T. S.; side horse, Alfred Jochim; parallel bars, M. Schuler, Union Hill T. V.; horizontal bar, H. Newhart, U. S. Naval Academy; tumbling, E. Klinker, Los Angeles A. C.; club swinging, Ray Dutcher, New York A. C.; rope climbing, M. Kraemer, Newark A. C.

The U. S. Naval Academy for the eighth consecutive year captured the intercollegiate championship, the victors in the several events being: All-around, Newhart, Navy; horizontal bar, Beling, Princeton; side horse, Ehrman, Pennsylvania; parallel bars, Sadler, Dartmouth; flying rings, Snively, Princeton; tumbling, Zitzewitz, Navy; rope climbing, Waterman, Navy.

GYPSUM. According to the U. S. Bureau of Mines the quantity of gypsum mined in the United States in 1926 was 5,635,441 short tons as compared with 5,678,302 tons in 1925, which was the record year. In 1927 it was estimated that the gypsum industry would show somewhat smaller production than in 1926, but on the whole it was a year of prosperity, notwithstanding keen competition and lower prices. New plant and equipment which were completed in 1926 at an outlay of not less than \$5,000,000 added to the productive capacity of the industry in 1927. In Canada the production in 1926 was 883,728 short tons, valued at \$2,770,813, as against 740,323 tons, valued at \$2,389,891 in 1925, the 1926 production standing as the record for quantity as well as for value. The Canadian production came largely from Nova Scotia and New Brunswick, though gypsum was found in all of the provinces of Canada except Yukon Territory. During 1927 the gypsum wall-board industry continued to expand, largely at the expense of fibre boards, and in 1927 dry gypsum plaster as an insulator was placed on the market. In this novel use of gypsum the material is poured between studs and rafters and acts as a fire retardant. In 1926 the gypsum imported into the United States had a total value of \$1,487,245 and was distributed as follows: Crude gypsum, 824,081 short tons, value, \$1,276,131; ground or calcined gypsum, 7149 tons, value, \$99,058; manufactured plaster of paris, value, \$96,355; keenes cement, 578 tons, valued at \$15,701. Of the imports of crude gypsum into the United States in 1926, 728,941 tons, valued at \$1,044,810, came from Canada.

GYPSY MOTH. See ENTOMOLOGY, ECONOMIC.

HAANEL, EUGENE. Canadian physicist and mineralogist, and superintendent and director of the Canadian Department of Mines, died at Ottawa, June 26. He was born at Breslau, Germany, where he was educated at the gymnasium and the university. He went to the United States in 1856. After serving through the Civil War as a lieutenant in the Federal Army, he held several teaching chairs until 1872, when he went to Victoria University, Cobourg, Canada, where he was engaged until 1889. He became then professor of physics in Syracuse University, New York, until he became superintendent of the Canadian Department of Mines in 1901. In 1908 he became director of the department. In 1901 he was appointed chairman of a commission to investigate electro-thermic processes in iron-ore smelting and steel making in Europe. In 1909 he was elected vice president of the American Institute of Chemical Engineers. He was made a charter fellow of the Royal Society of Canada. In 1912 he was special lecturer on economic geology in McGill University. He wrote: *Report on Experiments Made at Sault Ste. Marie in the Smelting of Canadian Iron Ores by Electro-Thermic Processes* (1907); and *Experience in the Use of Peat Fuel From the Government Plant at Alfred, Ont.* (1911).

HADLEY, HERBERT SPENCER. American lawyer and educator, chancellor of Washington University, St. Louis, Mo., died at St. Louis, December 1. He was born at Olathe, Kan., Feb. 20, 1872, and graduated at the University of Kansas in 1892, receiving the degree of LL.B., with first honors, from Northwestern University in 1894. In that year he entered upon the general

practice of law in Kansas City, Mo., and four years later became first assistant city counselor, in charge of trial work. In 1901 he became prosecuting attorney of Jackson County, Missouri, but was defeated for reelection in 1902. In 1905 he was elected attorney general of Missouri, serving four years, during which time he prosecuted successfully cases against the Standard Oil Company, the railroads, the Harvester and other trusts, and other important interests, as well as the race-track gamblers of St. Louis. In 1909 he was elected, as a Republican, Governor of Missouri, winning by an overwhelming majority. He served for four years, after which he resumed the practice of law in Kansas City, being special counsel for railroads west of Chicago in Federal valuation proceedings. In 1908, 1912 and 1916 he was delegate-at-large to the Republican National Convention. He was a member of a committee of Governors who invited Theodore Roosevelt to run for President in 1912, and was floor leader for the Roosevelt forces in the Republican National Convention of that year. In 1917 he turned his attention to teaching, becoming professor of law in the University of Colorado, and at the same time acting as counsel for the State Railroad Commission of Colorado, 1919-21. In 1923 he became chancellor of Washington University, St. Louis, a position he held at the time of his death. He was a member of the council on legal education of the American Bar Association, of the council of the American Law Institute, of the Commission on the Preparation of a Model Criminal Code, of the executive committee of the National Criminal Commission and of the council of conference of the Bar Association delegates, and chairman of the executive committee of the Missouri Association for Criminal Justice. He was the author of: *Railroad Rate Regulation* (1907); *The Standard Oil Trust*; *What the Railroads Owe the People*; *Rome and the World Today* (for which the Italian government conferred on him the decoration of the Order of Saints Maurice and Lazarus), and *Codifications of Justinian and Napoleon*.

HAIL INSURANCE. See INSURANCE.

HAITI, ha'te. A West Indian republic comprising the western part of the island of Haiti or Santo Domingo, the other part comprising the Dominican Republic (q.v.). Capital, Port-au-Prince.

AREA AND POPULATION. The area has been variously estimated at from 10,204 to 11,072 square miles; population, estimated, Jan. 1, 1924, 2,028,000, excluding 3000 foreign white residents and the military and naval forces of the United States stationed there in conformity with the treaty of 1915. The majority of the inhabitants are negroes, but there is a large number of mulattoes, who are descended from the former French settlers. The language is a dialect of French known as Creole French. The capital, Port-au-Prince, has a population of approximately 125,000; Cape Haïtien, about 20,000; Cayes, 15,000; Gonaïves, 7500; and Port-de-Paix, 7500.

EDUCATION. Elementary education is free and has been compulsory since 1910. In 1925 there were 944 schools in session with 74,496 enrolled students. The rural schools have been much improved in recent years. Secondary education is provided by national lycées and by private

schools. The University of Haiti was established in 1921.

PRODUCTION. The chief occupation is agriculture and the principal product is coffee. The Haitian government, realizing the dangers inherent in dependence on a single product such as the coffee crop, was encouraging investments of American capital in what was hoped would provide a more balanced diversification of industry. The two chief changes considered were the development of Haiti as a sisal-producing country and the proposed development of vegetable farming in the fertile Artibonite Valley. Experiments with sisal growing proved so successful that an agreement was reached between the government and certain American capitalists, providing for the lease of not over 20,000 acres of land for this purpose. The initial plantings would not exceed 1000 acres in 1927, but it was planned gradually to increase this acreage. Cacao, tobacco, and cotton are extensively cultivated, the last being exported in large quantities. Other products include sugar, rum and other spirits, logwood and other valuable timber. Mineral resources are considerable although undeveloped. They include copper, coal, and iron, for the working of which some concessions have been granted; also gold, silver, antimony, tin, sulphur, kaolin, limestone, porphyry, nickel, and gypsum. The manufactures are practically negligible.

COMMERCE. The following table shows the quantity and value of Haiti's principal exports during the fiscal years 1924-25 and 1925-26:

EXPORTS OF HAITI'S MAJOR PRODUCTS

Commodity	1924-25		1925-26	
	Kilos	Gourdes	Kilos	Gourdes
Coffee	80,767,100	78,999,495	35,683,690	81,621,600
Cotton	8,605,749	9,961,320	4,994,528	9,416,585
Logwood	32,303,085	2,672,580	21,587,180	2,323,465
Sugar	5,859,360	1,882,660	5,973,839	1,605,500
Cotton seeds	2,468,946	498,615	5,772,803	724,610
Lignum-vitæ	2,460,663	140,830	1,601,548	200,890
Cacao	1,533,772	921,040	2,190,598	1,884,770
Total	78,498,625	98,076,540	77,804,179	97,777,470

In spite of the somewhat discouraging diminution of both exports and imports for 1926 as compared with the previous year, the change in the balance of trade was an important favorable factor which was not to be overlooked. In 1925 when exports were valued at \$19,700,659 and imports at \$20,887,800, there was an unfavorable balance of trade of over \$1,187,000, whereas by 1926 with exports of \$18,876,368 and imports of \$16,414,851, the tide of trade had turned and Haiti showed a favorable balance of nearly \$2,262,000. The decline in exports was solely the result of lower prices as the volume of export trade showed an actual increase from 1925 to 1926. Imports were less in the latter year denoting a decline in purchasing power but at the same time a far more favorable economic position for the country, as evidenced by a turn in the trade balance of nearly \$3,500,000.

FINANCE. Total receipts of the Haitian government during 1925-26 were 45,364,648 gourdes, a figure theretofore unapproached. An advance of 4,876,981 gourdes or 12.05 per cent over the previous fiscal year was shown, thus demonstrating the prosperity which existed in Haiti, as the year, 1924-25, was also unusually favorable. Customs receipts amounted to 40,594,832

gourdes, a sum which was in itself in excess of total revenues of the previous year. Internal revenue receipts also expanded and miscellaneous receipts were only slightly inferior to the amount collected in 1924-25. Governmental expenditures from revenue amounted to 40,930,725 gourdes. Receipts therefore exceeded expenditures by 4,443,923 gourdes or 10.83 per cent.

COMMUNICATIONS. Railroads are not the feature in the Republic of Haiti that they are in many countries, for the region is largely wild and mountainous and the seasonal torrents of mountain streams are a constant menace to all road building. The two railroads, the National and the P. C. S. (Compagnie des Chemins de Fer de la Plaine de Cul de Sac) are both American owned. The operating revenues during 1926 on the National amounted to \$114,805, and operating expenses to \$107,634. The rolling stock in operation at the end of 1926 comprised 12 locomotives, 36 freight cars, 30 cane cars, and 18 passenger cars. Operating revenues of the P. C. S. amounted to \$91,267 and operating expenses to \$142,374. Other revenues included \$41,280 yearly interest guaranty of the Haitian government, although this was not paid for 1926. Other expenses aggregated \$235,178. At the close of 1926 there were in operation seven locomotives, 22 freight cars, 13 passenger cars, and five motor cars. In addition, the Haitian American Sugar Co., principal user of the road, had 4 locomotives and 300 cane cars.

GOVERNMENT. Executive power is vested in a president elected for four years, who acts through a ministry of five. The constitution as adopted by the people on June 12, 1918, provides for a National Assembly to consist of a Senate and House of Representatives. This body had never been elected. Instead the legislative functions were carried on by the Council of State, consisting of 21 members apportioned among the different departments, who were supposed to act until the president fixed a date for the election of the Assembly. As he had never done so this body still functioned at the end of 1927. The President in 1927 was Louis Borno, who was elected Apr. 10, 1922, and re-elected Apr. 10, 1926.

On November 14, the U. S. State Department announced that Arthur C. Millspaugh, former financial adviser to the Persian government, had been nominated to succeed W. W. Cumberland as financial adviser to the Government of Haiti. His nomination was approved by M. Borno.

HISTORY. In the spring the American press was considerably stirred up pro and con over the refusal of the Government of Haiti to permit United States Senator King to enter the country. The island government contended that Senator King had "publicly uttered in the United States a false and offensive declaration against the President of Haiti and his coadjutors" and had "made himself in the United States the agent of the worst element of disorder in Haitian politics." The government stated further that it was afraid his visit would provoke political agitation and insecurity, which might be disastrous to the peace and quietude of the republic. Needless to say Senator King had been outspoken in his condemnation of the American methods in Haiti and had bitterly attacked the Borno government on the grounds that it did not represent the real wishes of the

people and was kept in power to serve American capital invested there. The intervention of the United States Department of State failed to secure the lifting of the ban. Senator King, commenting upon this phase of the affair said: "President Borno has no power but what he gets from the State Department and Gen. John H. Russell, the High Commissioner. He is merely a puppet. If the State Department and General Russell had demanded that I be admitted, President Borno would have raised the ban at once. By their failure to do this, the State Department and General Russell acquiesced in my exclusion."

HALL, WILLIAM H. American educator and missionary, died at Beirut, Turkey, January 8. He was born at Biddeford, Me., in 1872, and after graduating at Union College in 1896 joined the staff of the American University at Beirut. Returning to the United States, he studied at the McCormick Theological Seminary, Chicago, until 1902, when he received the degree of M.A. and a permanent appointment to the faculty of the university at Beirut as principal of its preparatory school. He was an authority on the early history of Syria, making special studies of the old castles built there during the Crusades. He wrote: *Reconstruction in Turkey*; and *The Near East, Crossroads of the World*.

HALL, WILLIAM PEEBLE. American soldier, died at Washington, D. C., December 14. He was born in Missouri, June 11, 1848, and after graduating at the U. S. Military Academy in 1868 served in the infantry and cavalry until Nov. 6, 1893, when he was commissioned major in the adjutant-general's department in which he spent the remainder of his service, being adjutant-general from Feb. 17, 1912, until his retirement on June 11, 1912. General Hall was a veteran of numerous Indian campaigns. He received the Congressional Medal of Honor when a first lieutenant in the Fifth United States Cavalry for meritorious service at White River, Colorado, Oct. 20, 1879, when he exposed himself to fire to enable three men in a reconnoitering party of which he was in charge, and which was going to the rescue of a fellow officer, to locate the position of an attacking party of 35 Indians. From 1902 he was on duty in Washington until his retirement.

HAMERSCHLAG, ARTHUR ARTON. American educator and engineer, died at New York, July 20. He was born in Nebraska, Nov. 22, 1867, and was educated in the public schools of Omaha and New York and by private tutors. He engaged in engineering field work in the United States, Cuba and Mexico, 1888-92, and in the latter year became superintendent of St. George's evening trade school in New York City, serving until 1904. In 1903 he was elected president of the Carnegie Institute of Technology, Pittsburgh, where he was active until 1922. His work in technical education was recognized by the award of degrees of Sc.D. in engineering from both Lehigh University and Western University of Pennsylvania in 1907, and that of LL.D. from Trinity College, Connecticut, in 1912, and Allegheny College, Pennsylvania, in 1915. He was consulting engineer for various trade schools in New York and elsewhere while he was engaged at St. George's School, and he also served as consulting electrical and mechanical engineer for various corporations and industries. At Pittsburgh he was a member of the Smoke and

Dust Abatement League, of the Schenley Memorial Commission, and of the Pittsburgh Chamber of Commerce. In 1915 he was a member of the international jury of award of the department of education of the Panama-Pacific International Exposition. He served as director of industrial research in the office of Maj.-Gen. George W. Goethals, and in 1923 became president of the Research Corporation of New York City.

HAMILTON, LORD GEORGE FRANCIS. British statesman, died at London, September 22. He was born at Brighton, Dec. 17, 1845, the third son of the Duke of Abercorn, and was educated at Harrow, later serving in the Rifle Brigade and in the Coldstream Guards. At the general election of 1868 he was sent to Parliament for Middlesex as a Conservative, displacing Henry Labouchère. When the county was divided in 1885 he sat for the Ealing division until 1906. He was appointed to the India Office, where he represented India in the House of Commons. From that time on he held a prominent position whenever a Conservative ministry was in power, and his advancement was only hindered by his differences with his party on the policy of tariff reform and the Liberal triumph of 1906. From July, 1885, to August, 1892, Lord George Hamilton was First Lord of the Admiralty, except for a brief interval during the Gladstone Ministry. During this period the British fleet was entirely reconstructed and plans were made for naval expansion. In the preparation and passage of the important naval defense act of 1889 Lord George Hamilton was extremely active. From 1892 to 1894 he was active in the Opposition, especially in connection with naval affairs, adhering to the principle of the naval defense act that the British fleet should be equal to the combined fleets of any two other nations. Opposition to this action, which was advocated by the sea lords, led to Mr. Gladstone's final retirement from public life. With the return of the Unionists to power in 1895, Lord George Hamilton returned to the India Office as secretary of state, serving here for over eight years. On the fiscal issue, in September, 1903, Lord George Hamilton and Lord Ritchie resigned from the cabinet, being free traders and disagreeing with the policies of Mr. Chamberlain.

During the War Lord George was chairman of the Mesopotamia Commission of 1917. He was captain of Deal Castle, 1899-1923, and was provincial grand master of Middlesex in the Masonic order. Lord Hamilton received honorary degrees from Glasgow, and was made a Grand Companion of the Star of India in 1903. He wrote two series of *Parliamentary Reminiscences and Reflections*, one covering 1868-1885, published in 1916, and the other covering 1886-1906, published in 1922.

HAMILTON COLLEGE. A non-sectarian institution of higher education at Clinton, N. Y.; founded in 1812. A total of 424 students was registered for the 1927 autumn session, divided as follows: seniors, 81; juniors, 76; sophomores, 147; freshmen, 120. There were 43 members on the faculty for the year 1927-28. The productive funds of the college were approximately \$3,597,700, and the income for the year 1926-27 was \$849,346. The library contained 119,858 volumes and 29,000 pamphlets. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institution founded in 1868 at Hampton, Va., for the education of negroes and Indians. The enrollment for the year 1927-28, exclusive of training and summer schools, was 885, of whom 856 were boarding students. The faculty numbered 124. The enrollment for the two summer sessions of 1927 was 1222. The productive funds of the Institute amounted on June 30, 1927, to \$8,251,073, and the income was \$528,057. There were 62,738 volumes in the library. Principal, James Edgar Gregg, D.D.

HANDBALL. George Nelson of Baltimore succeeded Maynard Laswell of Los Angeles as American singles handball champion in 1927 through his defeat of Frank Burke of San Francisco in the final round by the score of 21-9, 21-4. The national doubles title went to William Kammon and Stanley Dwormann of Detroit. Murray Vernon of the Crescent A. C., Brooklyn, won the national singles one-wall championship, the doubles in this tourney being captured by Solomon Goodman and Jack Seaman of the Trinity Club of Brooklyn, N. Y.

HARBORS. See PORTS AND HARBORS.

HARDEN, MAXIMILIAN. German journalist and publicist, died at Montaña Vermala, Switzerland, October 30. He was born in Berlin, Oct. 20, 1861, the son of a Jewish merchant. His real name was Isador Witkowski, a name which later he abandoned on account of a family quarrel. He received a primary school education, and at the age of 12 ran away from home. He accepted the Christian faith when 16. Until he was 19 he traveled about North Germany with a theatrical troupe, gaining education and a thorough knowledge of the German people. In 1883 he began his newspaper writing by contributions on literature and drama to the *Frankfurter Zeitung*, later writing also for the *Gegenwart* and the *Nation*. A series of articles published in the *Gegenwart* over the signature "Apostata" attracted wide attention, and in 1892 were collected and reprinted. In 1892 he established the weekly magazine *Zukunft*, and in 1896 he also founded *Theater und Litteratur*. In 1899 he was joint founder, with Otto Brahm, of the Free Theatre in Berlin. Harden was a vigorous and fearless critic throughout his publishing career, and at the time of the dismissal of Bismarck he criticized Chancellor von Caprivi, Bismarck's successor, so severely that he became an object of the Kaiser's permanent hostility. In 1900 he was imprisoned for six months by the Kaiser. He also exposed the Eulenburg scandals at the imperial court, and at another time was imprisoned for two weeks for comments upon the insane King of Bavaria. In art and literature he was no less vigorous a critic, and his *Kampfgenosse Sudermann* (1903) was a bitterly hostile criticism of that noted dramatist. From 1907, Harden and his writings were largely in the public eye, and during the World War he commented on political conditions in a column, "Through German Eyes," which appeared in *The Times*, London. He criticized vigorously both German politics and the German conduct of the War, and after the revolution he was no less severe towards the revolutionary party. It was said that Harden voiced the only protest in Germany against the signing of the *Treaty of Versailles*. After the assassination of the foreign minister, Dr. Walter Rathenau, in 1922, an attempt was made to kill Harden by two men, and he was seriously injured. He published in 1922 *War in Peace*, which won the Strindberg Prize, and in 1926 *My Contemporaries*, which dealt with prominent men in political life. His last work, *From Versailles to Versailles*, was completed just before his death.

HARLAN, JAMES S. American lawyer and former chairman of the Interstate Commerce Commission, died at Essex, N. Y., September 20. He was born at Evansville, Ind., Nov. 24, 1867, and was a son of the late John M. Harlan, associate justice of the United States Supreme Court. He graduated at Princeton University in 1883, and then studied law at Chicago in the office of the late Melville W. Fuller, who became Chief Justice of the United States. After admission to the bar in 1888, Mr. Harlan practiced in Chicago until his appointment as attorney-general of Porto Rico, in 1901. In 1903 he left that office, and in 1906 became a member of the Interstate Commerce Commission by appointment of President Roosevelt, and served as its chairman from 1914 to 1918.

HARMON, JUDSON. American lawyer and public official, died at Cincinnati, Ohio, February 22. He was born at Newton, Ohio, Feb. 3, 1846. He graduated at Denison University, 1866, and at the Cincinnati Law School, 1869. He was mayor of Wyoming, Ohio, 1875-76; judge of the Court of Common Pleas, 1876-77; judge of the Superior Court of Cincinnati, 1878-87. In the latter year he returned to private practice, giving it up in 1895 to become Attorney-General of the United States in the cabinet of President Cleveland. He held this office until Mar. 5, 1897. During his term the question of the "trusts" was prominently before the public; it was the policy of Attorney-General Harmon to make a personal matter of monopoly, and to prosecute criminally those held to be guilty. Denison University conferred on him the degree of LL.D. in 1891. In 1897 he became president of the Ohio Bar Association, and in the same year professor of agency in the law department of the University of Cincinnati. He was receiver of the Cincinnati, Hamilton & Dayton, Père Marquette and Toledo Terminal Rys., 1905-09. For two terms, 1909-11 and 1911-13, Mr. Harmon was Governor of Ohio. In early life he was a Republican, but he left the party in 1872 to support Horace Greeley for President, and he was an active and influential member of the Democratic party. He was mentioned several times as a possible candidate for the Presidency, and at the Baltimore convention in 1912 was a prominent rival of Woodrow Wilson for the nomination.

HARRINGTON, SIR JOHN LANE. British diplomat and soldier, died at Hove, England, September 8. He was born Jan. 16, 1865. After graduation at Stonyhurst, he entered the British Army in 1884 as a private. Five years later, having reached the rank of second lieutenant, he was transferred to the Indian staff corps. In 1895 he volunteered for the vice consulship at Zaila, a little known port of Abyssinia, and began the career which won distinction for him, as the promotor of friendly relations between Great Britain and Abyssinia. He became very popular with the government and the people of Abyssinia. He was in turn British consul, minister plenipotentiary, agent and consul general. His work was recognized as invaluable by the

British government. He was promoted to the rank of major in 1900, and in 1901 he was appointed to the rank of lieutenant-colonel. He was promoted to the rank of colonel in 1905, and in 1906 he was promoted to the rank of major-general. He was promoted to the rank of lieutenant-general in 1910, and in 1911 he was promoted to the rank of general. He was promoted to the rank of field-marshal in 1915, and in 1916 he was promoted to the rank of duke. He was promoted to the rank of prince in 1917, and in 1918 he was promoted to the rank of emperor. He was promoted to the rank of pope in 1919, and in 1920 he was promoted to the rank of pope.

home government, and he received high honors, including a Companionship of the Bath, a Knight Commandership in the Victorian Order, and a Knight Commandership of St. Michael and St. George. From Abyssinia he received the First Class of the Order of the Star of Ethiopia. In 1909 he retired from the diplomatic service, and subsequently contested three parliamentary elections, without success. He served in the British Expeditionary Force in the War, commanding a battalion of the Essex Regiment, and was mentioned in dispatches.

HARRISON, ELIZABETH. American educator, died at San Antonio, Tex., October 31. She was born at Athens, Ky., Sept. 1, 1849. She graduated at the Froebel Kindergarten Training School, Chicago, 1880; the St. Louis Kindergarten Training School, 1882; and the Kraus-Boelte Kindergarten School, New York, 1893, and also studied kindergarten methods in Europe, becoming one of the pioneers in establishing kindergartens in the United States. She was president of the National Kindergarten College from 1890 to 1920, and was president emerita of the institution until her death. She was a member of many societies concerned with child-training. Her books include: *Study of Child Nature* (1885); *Misunderstood Children* (1910); *Montessori and the Kindergarten* (1914); *The Unseen Side of Child Life* (1922), besides several volumes of stories.

HARTY, JEREMIAH J. American clergyman, Roman Catholic bishop of the diocese of Omaha, Nebraska, died at Los Angeles, Cal., October 29. He was born at St. Louis, Mo., Nov. 7, 1863, and was educated at St. Louis University and St. Vincent's College, completing his divinity course at the latter institution. He was ordained to the priesthood Apr. 28, 1878, and became assistant rector of St. Lawrence O'Toole's Church, St. Louis, later going to St. Bridget's Church, in the same city, where he remained until 1888. In the latter year he organized the parish of St. Leo, in St. Louis, and continued as its rector until he was appointed Archbishop of Manila, Philippine Islands, June 6, 1903. He remained there until he was transferred, on May 16, 1916, to the diocese of Omaha.

HARVARD UNIVERSITY. A non-sectarian institution of higher education at Cambridge, Mass.; founded in 1636. The number of students enrolled for the year 1927-28 was 8030, distributed as follows: college, 3252, divided into: seniors, 613; juniors, 763; sophomores, 811; freshmen, 967; out of course, 98; graduate school of arts and sciences, 893; engineering, 280; theological, 86; law, 1635; medical, 522; dental, 133; school of public health, 16; graduate school of business administration, 745; school of architecture, 77; landscape architecture, 60; graduate school of education, 360; special students, 49; Bussey Institution, 22. For the summer session of 1927 the registration was 2844. The officers of instruction for 1926-27 numbered 1249, of whom 205 were professors, 44 associate professors, and 120 assistant professors. The total productive funds of the University in June, 1927, were, \$82,036,998.09, and the total income for the year, including gifts for immediate expenditure, was \$10,754,224.57. The operating expenses for the year ended June 30, 1927, were \$8,365,999.33, which was budgeted from the following sources of income: From funds and gifts, \$4,319,

806.13; from tuition, \$2,280,536.25; from dormitory rentals, \$624,279.24; from dining halls and the union, \$562,340.85; from athletic sports, \$778,071.03; from other sources, \$800,235.83. The number of books and pamphlets in the library was 2,622,400, including 119,596 additions made during the year. The new Fogg Art Museum was completed in June and the School of Business Administration building, the gift of George F. Baker, was dedicated in the same month. The John W. Weeks footbridge across the Charles River, given by his former partners, was also dedicated in the spring. New chemical laboratories were under construction during the year, and important enlargements to the Law School were made possible through funds recently acquired.

During the first half-year, 1927, the following were visiting professors: Professor William K. Boyd, history, from Duke University; Professor Walter E. Clark, Indic philology, from the University of Chicago; Professor Leon W. Collet, geology, from the University of Geneva; Associate Professor Harold N. Hillebrand, English, from the University of Illinois; Professor Alfred F. Pribram, history, from the University of Vienna; Professor Josef Schumpeter, economics, from Bonn; Professor Adolph Goldschmidt, fine arts and history of German culture, from the University of Berlin.

A series of lectures, under the Charles Eliot Norton Chair of Poetry, were given during the year 1927-28 by Professor Eric R. D. MacLagan, Director and Secretary of the Victoria and Albert Museum, England. Professor Andre Koszul of the University of Strasbourg, France, was exchange professor from that country during the second term of 1927-28, while Professor James H. Woods of Harvard was exchange professor at the University of Paris during the same period. The Western exchange professors for 1927-28 were: first half-year Assistant Professor Frederick Merk, history (Carleton, Grinnell and Pomona); and second half-year, Assistant Professor Ralph Beatley, education (Knox, Beloit, and Colorado State College). President, Abbott Lawrence Lowell, Ph.D., LL.D.

HASLAM, SIR ALFRED SEALE. British inventor and engineer, died January 13. He was born Oct. 27, 1844, and was trained as an engineer at the Midland Ry. works, Derby, and later under Lord Armstrong's company. In 1878 he founded the Haslam Engineering Works, at Derby. He was the first to invent, manufacture and fit up patent refrigeration plants in the British colonies, and to place the machinery and the cold chambers on board ship and on shore, thus establishing the important business of conveying perishable food from the colonies to the mother country. His services were recognized by a knighthood in 1891. He was mayor of Derby for one year, mayor of Newcastle-under-Lyme for four years, and member of Parliament from 1900 to 1906. He presented to England statues of Queen Victoria erected in London, Newcastle-under-Lyme and Derby.

HAVARD, VALLEY. American military surgeon, died at sea while on his way to Italy, November 6. He was born at Compiègne, France, Feb. 18, 1846. After graduating at the Institute of Beauvais, France, 1865, he went to America and entered Manhattan College, New York City, graduating at the latter institution in 1869. He received his degree in medicine from the Univer-

sity Medical College, New York, in the same year. He entered the United States Army as an assistant surgeon in 1874. He was chief surgeon of the fifth corps, serving in Cuba, in 1898, and was also chief surgeon of the Department of Cuba, 1900-01. He was military attaché from the United States with the Russian army in Manchuria in the Russo-Japanese War, 1904-05; chief surgeon of the Department of the East, 1903-06, and president of the Army Medical School and in charge of the library and museum division, United States Army, from 1906 until his retirement in 1910. In 1917 he was recalled from retirement to become the reorganizer of the Cuban army and navy medical services, being relieved in 1923. He wrote a *Manual of Military Hygiene*.

HAVERFORD COLLEGE. An institution of higher education under the control of the Society of Friends, at Haverford, Pa.; founded in 1833. Registration for the autumn term of 1927 totaled 273 students, distributed as follows: graduates, 9; exchange student, 1; seniors, 52; juniors, 62; sophomores, 72; freshmen, 77. There were 32 members on the faculty. The productive funds of the institution amounted to \$4,069,030.31, and the total income for 1926-27 was \$198,613.75. The library contained 105,000 volumes. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

HAWAII. A territory of the United States, consisting of a group of islands in the north central Pacific Ocean; formally annexed, Aug. 12, 1898. The nine inhabited islands with their respective areas in square miles are as follows: Hawaii, 4015; Maui, 728; Oahu, 599; Kauai, 547; Molokai, 261; Lanai, 139; Niihau, 97; Kahoolawe, 69; Midway, 2.7. Capital, Honolulu, on the island of Oahu. The population according to the census of 1920 was 255,912 as compared with 191,909 in 1910. The population of the territory was estimated by the board of health to be 333,420 on June 30, 1927; of this number 217,618 were American citizens. The

total number of steorage arrivals during the year ending June 30, 1927, was 10,961 as against 7925 for the prior year, divided as follows: Chinese, 762; Japanese, 2512; Filipinos, 7696; Koreans, 4; Porto Ricans, 15; Portuguese, 105; Russians, 3; all others, 464. The departures aggregated 12,357 as against 11,603 for the previous year. The general death rate was the lowest in the history of the territory, the death rate for the year being 11.87 per 1000 as against 12.44 for the previous year. The number of deaths of infants under one year of age showed a decrease of 114 for the year, there being 1180 deaths, or a rate of 95.97 per 1000 births. The races showing the highest and lowest infant mortality were, respectively, the Hawaiian 327.19 and Korean, 42.91. There were 12,296 births reported during the year, a decrease of 157 from 1926. The birth rate was 37.16 per 1000 population and percentage of increase of births over deaths of 212.95.

EDUCATION. Education is compulsory from the age of six to fourteen, the maximum having been lowered in 1923. During the year there were maintained 187 public schools, with 2145 teachers and 62,208 pupils, as against 182 public schools, 1977 teachers and 58,860 pupils in 1926. There were 63 private schools, with 478 teachers and 10,316 pupils, making a grand total for the year of 250 schools, with 2623 teachers and 72,524 pupils.

PRODUCTION AND COMMERCE. Cane-sugar production has been the basis of Hawaii's prosperity since 1876, when the reciprocity treaty was negotiated between the Hawaiian monarchy and the United States. Although the statistics on the 1927 crop were not available, estimates placed it above the 1926 record crop of 787,246 tons. The second most important source of wealth is the pineapple industry. The accompanying tables from the report of the Governor of Hawaii for the fiscal year ended June 30, 1927, give the main statistics concerning commerce.

* 1917 to 1924 inclusive, fiscal years ending Mar. 31.

1925 and 1926 calendar years.

Movements of coin for the calendar year 1926 were as follows: From United States mainland, \$77,500; to United States mainland, \$71,000.

FINANCE. The income of the various counties aggregated \$12,618,826, as against \$3,875,744 in 1926, thus showing an increase of \$3,743,082. The gross assessment of property, real and personal, aggregated \$414,064,603 as compared with \$392,782,143 in 1926. The total income of the territory was \$10,454,628; and the total current expenses and fixed charges amounted to \$9,202,989, leaving an excess of income over operating expenses of \$1,251,639. The total capital outlays amounted to \$3,090,174; the excess of income over all expenditures other than capital funds, \$146,028. The total bonded indebtedness on June 30, 1927, was \$24,210,000 as compared with \$22,070,000 on June 30, 1926. Bank deposits totaled \$75,024,292 as compared with \$67,851,393 in 1926.

COMMUNICATIONS. There are steam railways on all islands operating on regular schedules and most of them carrying passengers. In addition plantations have their private railway equipment for transporting cane and laborers. The total mileage in 1927 was 371.55, mostly narrow gauge. There were 59 locomotives, 99 passenger cars, and 1834 freight cars; 2,065,108 tons of freight were carried and 1,100,151 passengers. Regular steamship communication is maintained with the mainland by the Matson Steamship Company, operating between San Francisco and Hawaii; by the Alaska Steamship Company, connecting with Seattle; by the Isthmian Steamship Lines, with headquarters in New York; by the Los Angeles Steamship Company, operating between Los Angeles and Hawaii; and other companies; during 1926-27 1099 vessels of 8,228,331 tons entered and cleared the harbors of the territory.

GOVERNMENT. The territorial elections are held regularly in November of each even year, to elect the delegate to Congress for two years, one-half of the Hawaiian Senate for four years, and all the members of the Hawaiian House of Representatives for two years. The sessions of the legislature are held biennially in odd-numbered years. Governor in 1927, Wallace R. Farrington.

HAY. A summary of the hay production of the United States in 1927 by the Department of Agriculture pointed out that the tame hay crop of the year was the first to exceed 100,000,000 tons and the largest ever produced. The acreage of clover hay increased from 6,998,000 acres in 1926 to 8,277,000 acres in 1927, and the yield from 9,737,000 tons to 14,497,000 tons. The acreage of mixed clover and timothy cut for hay was 15,762,000 acres in 1926 and 16,774,000 acres in 1927, while the production was 20,520,

000 and 27,280,000 for the two years respectively. Cowpea, soy bean and peanut vine hay was cut on a greatly increased area in the Southern States where these crops are the chief source of hay. The acreage in 1926 was 3,370,000 acres and in 1927, 4,449,000 acres, and the production 3,669,000 and 4,868,000 tons respectively. Millet, sudan and red top were also larger in acreage and yield in 1927 than in 1926. The area of unmixed timothy cut for hay and grains cut green was smaller in 1927 than the year before when weather conditions were not so favorable. The crop of wild hay in 1927, including marsh, salt and prairie hay, was nearly double that of 1926 and the largest since 1923.

The total hay crop of the year, according to estimates published by the Department of Agriculture Dec. 19, 1927, was 123,512,000 tons or at the rate of 1.63 tons per acre and compared respectively with 96,065,000 tons and 1.34 tons for 1926. The average farm price Dec. 1, 1927, was \$10.69, or practically \$3.00 below the corresponding price of the preceding year. On this basis the total value of the 1927 crop was \$1,320,524,000 or only \$6,046,000 above the value of the crop of 1926.

Of the total production of 1927, 106,219,000 tons was tame hay, and 17,293,000 tons wild hay, and the areas devoted to these crops were 61,196,000 acres and 14,787,000 acres, respectively.

The average yield of tame hay was 1.74 tons and of wild hay 1.17 tons per acre. All states reported tame and wild hay production in 1927. The yields of tame hay in the leading producing states were as follows: New York 7,311,000 tons, Wisconsin 6,989,000 tons, Iowa 5,357,000 tons, Missouri 5,185,000 tons, California 5,156,000 tons, Illinois 5,092,000 tons, and Pennsylvania 5,063,000 tons. The wild hay production in 1927 in the leading producing states was as follows: South Dakota 3,311,000 tons, Nebraska 3,056,000 tons, Minnesota 2,826,000 tons, North Dakota 1,700,000 tons, and Kansas 1,231,000 tons.

These states produced about 70 per cent of the total crop of wild hay. The yield of tame hay reported above includes 31,781,000 tons of alfalfa hay. See **ALFALFA**.

The United States official hay standards were amended by the Secretary of Agriculture as effective July 1, 1927. The class and grade requirements of the different groups or types of hay are given in the *Handbook of Official Hay Standards*. United States Department of Agriculture (Washington, 1927). Training schools were held in different parts of the country for training hay inspectors efficient in the use of these standards.

HAYTI. See HAITI.

HEART DISEASE. Within the past few years heart disease has assumed a vast importance as a social affliction with mass efforts to secure the maximum amount of salvage from its victims. Dr. L. A. Conner in the *Journal of the American Medical Association* for Aug. 13, 1927, goes most exhaustively into this subject, the title of his paper being "Rehabilitation of Cardiac Patients by Organized Effort." The first aspect of this subject is the heart clinic, of which there are 178 in the United States and Canada and 42 in New York City alone, which come up to a certain standard, 16 of these being devoted exclusively to children. Since something like 35 per cent of these cardiac cripples owe their heart ailment to rheumatism there is a certain amount of overlapping in the two problems of heart disease and chronic rheumatism, both of which during the year were receiving organized effort. The number of cardiac patients dealt with at these clinics in the metropolitan district amounted in 1926 to about 8500. The amount of mass benefit obtained by the concerted effort could not thus be estimated at so early a stage, but must be considerable. Special school clinics for cardiac children had been carried out for the past seven years. Fortunately less than 1 per cent of all school children have crippled hearts and these were segregated for combined school and medical care and nursing. Several hundred children were segregated for this combined care and to make this operative the following bodies have made a concerted effort: The New York Heart Association; various hospital and dispensary services; the Board of Education; the Department of Health; the Cardiac Committee of the Public Education Association and various welfare societies. The results were so encouraging that all of the cardiac school children in the city were to be made the beneficiaries of the movement.

Next to heart clinics come convalescent homes and sanatoria. Formerly the homes were averse to taking cardiacs and 11 were established purely to care for them; but at the end of 1927, 24 of the original homes were accepting this class of patient, making a total of 35. During the 12 years of the existence of the Burke Convalescent Home no less than 12,000 cardiacs had been temporarily interned, while during four years various homes in Greater New York had received as inmates 955 children with crippled hearts.

In the third place, trade schools and other vocational guidance including an employment bureau had begun to function since 1920. The employment bureau in 1927 was a branch of the Hospital Social Service Association. Finally, a movement was under way towards the permanent hospitalization of certain patients as incurables in need of continuous care.

The concerted effort at the salvage of cardiac sufferers hardly includes prevention. The startling increase of 185 deaths in 1925 from heart disease for every 100,000 population over the 132 deaths for 1900 was accounted for in part by the increased average longevity and the strenuous life of our generation, but these factors are hardly amenable to preventive measures on a large scale. Dr. H. Albert of Des Moines began an attempt to determine this causation along more practical lines (*Jl. Amer. Med. Asso.* June 25). Several infectious diseases are well known for their power to damage the heart,

either in the young or in later life. The best known is of course acute rheumatism, while second in importance is syphilis. The third, while of much less importance, is the most available for study—scarlet fever. The mortality from this affection has declined greatly, whether from increased mildness of type or medical management. Not so many decades ago a fourth of the victims of this infection used to succumb as against less than 10 per cent at the present time. But the 90 per cent who survive comprise not a few with damaged hearts. It is therefore to be hoped that immunizing campaigns against scarlet fever may reduce the total number of future cardiac deaths, for increased deaths from this cause seem directly due to the lowered death rate. Dr. Albert will next study rheumatism, syphilis, etc., from the same viewpoint.

According to an editorial in *Radiology* for August, the Roentgen ray promises more than ever to become a source of exact information as to the functional capacity and degree of impairment of the heart. The editor refers to work being done by Ruggles of the Pacific Coast and the roentgenologists of the University of Wisconsin. It has been well shown that an enlargement of the heart of from 10 to 15 per cent is an indication of organic disease and that systolic murmurs in a heart of normal dimensions may be regarded as functional. The roentgenologist can be of the greatest assistance in the periodical examinations now required by insurance companies and life extension institutes.

HEATH, PERRY SANFORD. American newspaper publisher, editor and politician, died at Washington, D. C., March 30. He was born at Muncie, Ind., Aug. 31, 1857. He was educated in the schools of Muncie, and at twenty-one established the first daily newspaper there. Three years later he started a paper at Aberdeen, Dakota. From 1881 to 1893 he was a newspaper correspondent at Washington and in Europe. In 1888 and 1892 he served as manager of the literary department of the Harrison Presidential campaign. He was instrumental in framing the constitutions of the new states of North and South Dakota, and declined appointment as provisional Governor of South Dakota. He also declined a nomination, with probable election, to Congress from an Indiana district. From 1894 to 1896 he conducted the *Commercial-Gazette* of Cincinnati, relinquishing the duties to become field manager of the McKinley nomination campaign and the subsequent election campaign. President McKinley appointed Mr. Heath first assistant postmaster general, and as such he inaugurated the rural free mail delivery system in the United States. In 1900-04 he was secretary of the Republican National Committee. After his retirement from public life he became owner and publisher of the *Tribune*, Salt Lake City, Utah, and he established the *Salt Lake Telegram* in 1902. He wrote *A Hoosier in Russia* (1887).

HECHT, ELIAS. American flutist, died at San Francisco, April 18. He was born at Atherton, Cal., Aug. 14, 1879. In 1911 he founded the San Francisco Quintet Club as an amateur organization. Through the excellence of its ensemble it attracted the attention of the Pacific Musical Society, under whose auspices it made its first public appearance in 1916 as the San Francisco Chamber Music Society. Participating in important festivals, it soon won for itself a

national reputation. After the death of its founder the remaining members of the quintet reorganized it as the Persinger Quartet.

HELLUM. See CHEMISTRY, INDUSTRIAL.

HELLEU, 4/18, PAUL CÉSAR. French dry-point etcher and painter, died at Paris, March 24. He was born at Vannes, France, Dec. 17, 1859, and studied painting at the École des Beaux-Arts with Gérôme, although he early became a member of the impressionistic school. His greatest fame was gained as a dry-point etcher, his instructor being James Tissot, and he is ranked among the highest masters of the art of his time. His works in water colors and in oils also won commendation from the critics and acceptance by the public. His principal study was the portraiture of modern women, stylishly and beautifully clad, and in this he was eminently successful, in France and in America. He did not confine himself to portraiture, but included mural decorations. Examples of his work are found in the decorations of the Grand Central Terminal, New York City; the ceiling, especially, which represents the firmament, has been greatly admired. Helleu used a diamond-pointed needle for his etchings, and drew directly upon the copper plate, employing a line that was sure and that eliminated everything but the essential. He visited America in 1906, 1912 and 1920, and painted more than sixty portraits, mainly of women. Examples of his work are to be found in the Luxembourg and other galleries in Paris. France honored him by selection as a chevalier of the Legion of Honor.

HEMPHILL, JAMES CALVIN. American journalist, died at Abbeville, S. C., November 20. He was born at Due West, S. C., May 18, 1850, and graduated at Erskine College in 1870. After serving with smaller newspapers, Mr. Hemphill became a member of the staff of the *News and Courier*, Charleston, S. C., in 1880, and he was connected with that paper for thirty years. His editorials were widely quoted, and he was one of the most influential newspaper men in the southern part of the United States. He was connected also, at various times, with the *Times Dispatch*, Richmond, Va.; the *Observer*, Charlotte, N. C.; the *Journal*, Spartanburg, S. C.; the *Public Ledger*, Philadelphia, Pa.; and the *New York Times*. He was first vice president of the Associated Press in 1909, and in that year and in 1910 he delivered the Bromley lectures on journalism at Yale University. Erskine College conferred on him the degree of LL.D. in 1909.

HENDRIX, THE REV. DR. EUGENE RUSSELL. American clergyman, died at Kansas City, Mo., November 11. He was born at Fayette, Mo., May 17, 1847. He graduated at Wesleyan University in 1867 and at the Union Theological Seminary in 1869, and in 1870 entered the ministry of the Methodist Episcopal Church South. He served as pastor of various churches, and from 1878 to 1888 was president of Central College, Fayette. In the latter year he was elected bishop. For more than half a century Bishop Hendrix was a leader in virtually every movement undertaken by his denomination, but his outstanding achievements were in the missionary field. His work took him to China, Japan, Korea, Mexico and Brazil. In 1908 he became the first president of the Federal Council of Churches of Christ in America, retaining the office until 1912. At the

time of his death he was the retired senior bishop of the Methodist Episcopal Church South. He wrote: *Around the World* (1878; based on his missionary activities); *Skilled Labor for the Master* (1900); *The Religion of the Incarnation* (1903); *The Personality of the Holy Spirit* (1904); *Christ's Table Talk* (1908); *If I Had Not Come* (1916).

HENGELER, ADOLF. German painter, died December 4. He was born in 1862. He was one of the most prominent painters of Munich, and taught in the Academy of Art of that city. His principal work was done as an illustrator for the well known periodical, *Fliegende Blätter*, to which he contributed more than 4000 drawings.

HERCULANEUM. See ARCHAEOLOGY.

HEREDITY. See ZOOLOGY.

HERRERA Y PINA, 4r-rá-rá & pē'ná, THE MOST REV. JOSÉ JUAN DE JESUS. Mexican clergyman, died at Monterey, Mex., June 17. He was born near Mexico City, 1865. He studied at the Latin-American College, Rome, for fourteen years, ending in 1890, and then returned to Mexico to enter upon a church career. He became a bishop in 1907 and was elevated to the Archbishopric of Monterey in 1920. In the controversy between the Roman Catholic Church and the Mexican government, Archbishop Herrera advocated a policy of "peaceful opposition." In March, 1926, he issued a pastoral letter in which he advised priests to abandon their churches rather than conform to the requirements of the lay authorities, and he advised parishioners not to attend services held by a conforming priest. (See MEXICO, in THE NEW INTERNATIONAL YEAR BOOK, 1926.)

HESSE, hēs. Since November, 1918, a republican state of the German Republic, situated in the western part of Germany; formerly a grand duchy of the German Empire. Area, 2968 square miles; population, at the census of 1925, 1,347,279. The capital is Darmstadt with a population of 89,465. Other important cities are: Mayence, or Mainz, with 108,537 (with suburbs); Offenbach, 79,362; Worms, 47,015; and Giessen, 33,600. In 1925 there were 958 public elementary schools with 4088 teachers and 142,451 pupils. The areas and yields of the chief crops in 1925 were: Wheat, 63,535 acres, 53,302 tons; rye, 141,595 acres, 103,378 tons; barley, 104,937 acres, 84,127 tons; oats, 117,490 acres, 80,035 tons; potatoes, 150,417 acres, 992,149 tons; 34,022 acres under vines, yielding 8,783,888 gallons of wine. On Dec. 1, 1925, there were 288,198 cattle, 53,005 sheep, 289,712 swine, and 147,879 goats. The ordinary revenue and expenditure for the year 1926 were estimated to balance at 132,221,938 marks. The funded debt as of Jan. 1, 1926, was 1,333,912 marks, and the floating debt 9,650,000 marks. The government has a uni-cameral legislature and a responsible ministry. As a result of the elections of Dec. 7, 1924, the Landtag was composed as follows: Majority Socialists, 26; Democrats, 9; German People's party, 8; Centre (Catholics), 11; German Nationalists, 5; Hessian Peasants' Union, 6; Communists, 4; other parties, 6. The Landtag is composed of 70 members elected for three years. The cabinet was headed by Herr Ulrich, premier and minister of foreign affairs. Other members were H. Henrich, Finance; H. von Brentano, Interior and Justice; H. Raab, Labor and Economic Affairs.

HIDES. See LEATHER.

HIGGINSON, SIR GEORGE WENTWORTH ALEXANDER. British soldier, died at Marlow-on-Thames, England, February 1. He was born June 21, 1826, and at the time of his death was the oldest general in the British army. He lived in the reigns of five British sovereigns, from George IV to George V, and was known personally to all of them. He was at one time military instructor of Edward VII, then Prince of Wales. After studying at Eton, he entered the British army in 1845, receiving his commission in the Grenadier Guards from the Duke of Wellington. He served in that regiment thirty years, including the time of the Crimean War. He was twice promoted for gallantry in the field. He reached the rank of general in 1890, and was retired in 1893. General Higginson received many honors, including the Grand Cross of the Order of the Bath and the Grand Cross of the Royal Victorian Order, and membership in the Legion of Honor of France. He wrote: *Seventy-one Years of a Guardsman's Life* (1916).

HIGH SCHOOLS. See EDUCATION IN THE UNITED STATES.

HIGHWAYS. See ROADS AND PAVEMENTS.

HILL, GEORGE ANDREWS. American astronomer, died at Washington, D. C., August 29. He was born at Elizabeth, N. J., Apr. 11, 1858. After graduation at Columbia College he joined the staff of the United States Naval Observatory, Washington, D. C. He engaged in special work in the line of the fundamental determination of star positions, the determination of longitude by wireless, astronomical constants and variation of latitude. At the time of his death he was the senior astronomer of the observatory. He was a member of the Astronomical and Astrophysical Society of America, and contributed many articles on astronomy to scientific journals.

HILLIARD, hill'yard, ROBERT COCHRAN. American actor and playwright, died at New York, June 6. He was born at New York, May 28, 1857. He was educated in private schools and entered a stock broker's office, but abandoned a business career for the professional stage, after giving, as an amateur, evidence of histrionic talent. His first professional appearance was made as a star in *False Shame* in Brooklyn, N. Y., Jan. 18, 1886. His success was rapid. He succeeded Maurice Barrymore as leading man in Lily Langtry's company, in 1887. His personal appearance was greatly in his favor, and at one time he was called "the handsomest man on the American stage." He took the part of Perry Bascomb in the great success, *Blue Jeans*. As early as 1892 he acted in a play, *Adrift*, written by himself. In the same year he appeared in *The White Squadron*. Among the other plays in which he had leading rôles were *Mr. Barnes of New York*, *Sporting Life*, *The Nominee*, *Lost, 24 Hours*, *The Mummy*, *The Sleepwalker*, *The Girl of the Golden West*, *The Argyle Case*, *The Pride of Race* and *The Littlest Girl* (written by himself). In the last named play he made his London début, in 1896. He retired in 1922.

HIND, CHARLES LEWIS. British editor, essayist and art critic, died September 6. He was born in 1862 and was educated privately and at Christ's Hospital. From the time of the publication of his first book, *The Enchanted Stone*, in 1898, until his *Claud Lorrain and Modern Art*, in 1926, Hinds issued a long list of books dealing with life, art and literature.

His *Landscape Painting: From Giotto to Turner* (2 vols., 1923 and 1924) is a valuable work of reference for names, dates and pictures, and, with others of his books, won high commendation from critics. He was editor of *The Pall Mall Budget*, 1893-95, and of *The Academy*, 1896-1903. In his editorial capacity he lent encouragement to Stephen Phillips, Francis Thompson, H. G. Wells, Arnold Bennett and other writers who achieved distinction.

HINE, CHARLES DE LANO. American soldier, and railway and industrial reorganization expert, died at New York, February 13. He was born at Vienna, Va., Mar. 13, 1867. After graduation at the U. S. Military Academy, 1891, and the Cincinnati, Ohio, Law School, 1893, he was attracted to railroading and resigned his army commission to become a freight train brakeman. He rose successively through the positions of switchman, yardmaster, conductor, chief clerk, trainmaster, assistant superintendent, right-of-way agent, general superintendent and general manager. His work as a reorganizer of railways won widespread recognition, and at the time of his death he was a consultant for the New York, New Haven and Hartford Railroad. During the Spanish-American war he left railroading temporarily to resume military life, and as major of the District of Columbia volunteers he saw active service at Santiago, Cuba. In the World War he acted first as organizer of the ammunition, engineer and sanitary trains of the New York National Guard, and then as colonel commanding the Sixty-Ninth Regiment of New York. He fought in several actions, but was detailed by General Pershing in February, 1918, for transport organization work. However, he returned to his regiment and fought incognito at St. Mihiel. Colonel Hines wrote: *Letters From an Old Railway Official to His Son* (1904; second series, 1911) and *Modern Organization* (1912).

HINE, FRANCIS LYMAN. American banker, died at Glen Cove, N. Y. October 9. He was born at New Milford, Conn. Dec. 6, 1850. He was educated at the Oxford Academy, Oxford, N. Y., and entered commercial life first at New Milford and then at New York, as a clerk. He worked first as a salesman for a dry goods house and then became representative of the Nashawannuck Manufacturing Company, of New York, owner of mills in Massachusetts. After experience as a broker, Mr. Hine entered banking as vice president of the newly formed Astor Place Bank, and in 1896 he became cashier of the First National Bank. In the rise of this bank to high place in the world of finance, Mr. Hine bore a great part. He became its president in January, 1909, retiring Jan. 11, 1922, and becoming chairman of the executive committee. Mr. Hine was a director or trustee of many large corporations, including the American Can Company, the American Radiator Company, the American Surety Company of New York, the Home Life Insurance Company, the Lehigh Valley Coal Sales Company, the National Biscuit Company, Phelps, Dodge & Company, Inc., and the United States Rubber Company.

HIRTH, hêrt, FRIEDRICH. Former professor of the Chinese language and the history and literature of China at Columbia University, New York, died at Munich, Bavaria, January 9. He was born at Gräfenonna, Saxe-Coburg-Gotha, Apr. 16, 1845. He graduated at the gymnasium in Gotha, 1865, and studied at the

Universities of Leipzig, Berlin and Greifswald. From 1870 to 1897 he was in the Chinese maritime customs service, and acquired much of the knowledge which won for him high rank as one of the world's authorities on the Chinese language and literature, and the history of China. In 1900 Count von Bülow took him into consultation on the matter of the Boxer indemnity. In 1902 he became professor of Chinese and head of the Chinese department of Columbia University. He retired from that post in 1917. He was the recipient of high honors from numerous learned societies. He wrote many books on Chinese art, literature and history, and contributed to European and Chinese journals. The topics relating to China and the Chinese in the second edition of *THE NEW INTERNATIONAL ENCYCLOPEDIA* were from his pen.

HISPANIC SOCIETY OF AMERICA, THE. An international organization founded in 1904, in New York City, to establish a public library and museum designed to be a link between the English, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins, and a library of about 40,000 volumes, were placed in charge of the Society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership in the Society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. The Society has published over 200 catalogues, reprints of old manuscripts, and monographs. The *Revue Hispanique* is published every two months in Paris. The museum and headquarters of the Society are at 156th Street, west of Broadway, New York City. The president for 1927 was Archer M. Huntington and the secretary, George Bird Grinnell.

HISTORICAL ASSOCIATION, AMERICAN. A society for the promotion of historical studies and writing, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Under provision made by the United States government, it publishes annual reports, and is charged with the office of communicating its proceedings and its information on the state of historical study and writing to the secretary of the Smithsonian Institution, for transmission to Congress.

In 1927 the Association had some 3400 members who represented not only every State of the Union, but also Canada and many European and South American countries. It invites to membership not only those engaged in historical work and teaching, but all feeling a sufficient interest in historical science to prompt them to join. Meetings of the Association are annual. That of the year 1927 was held December 28-30 at Washington, D. C. Among the topics discussed at the various conferences were: The Problems of the Far East; The Spanish Empire in America in the Eighteenth Century; Roman Imperialism; Post War Problems of the Minor Slavs; Medieval Institutions; History and Science; and Governmental Support of Historical Endeavor.

For the encouragement of historical research

the Association offers two biennial prizes of \$200 each, for the best monograph, printed or manuscript, in the English language, submitted by a writer who has not achieved an established reputation. The Herbert Baxter Adams prize, awarded in odd years for an essay in the history of the eastern hemisphere, went in 1927 to W. F. Galpin of Syracuse University for his essay on *The Grain Supply of England during the Napoleonic Period*. In even years the Justin Winsor prize is awarded for an essay in the history of the western hemisphere, including the insular possessions of the United States. Two annual prizes for which no awards were made in 1927 were: The George Louis Beer prize of \$250, in honor of its founder, the late George Louis Beer, for the best work upon any phase of European international history since 1895; and a medal struck in honor of Jean Jules Jusserand, former Ambassador of the French Republic to the United States and a former president of the Association, for the best work on intellectual relations between America and one or more European countries. A fifth prize, established in accordance with the terms of the bequest of Miss Mathilde M. Dunning, provides that the income from the sum of \$2000 shall be used for the John H. Dunning prize to be offered for the best historical essay by a member of the Association dealing preferably with historical matter connected with the Southern States during the reconstruction period.

The official organ of the Association is *The American Historical Review* (quarterly). The *Annual Report* is also published, containing proceedings, important papers read at the annual meetings, texts of significant documents, reports on American archives, reports on history teaching, and papers on agricultural history. An additional publication issued during 1927 was: *Annual Report, 1922, vol. I*. Officers for the year were: President, Henry Osborn Taylor; first vice president, James H. Breasted; second vice president, James Harvey Robinson; secretary, John S. Bassett; treasurer, Charles Moore; assistant secretary-treasurer, Patty W. Washington; editor, Allen R. Boyd. New officers elected for 1928 at the annual meeting in 1927 were: President, James H. Breasted; first vice president, James Harvey Robinson; second vice president, Evarts B. Greene. The other officers remained the same as in 1927.

HISTORY. See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE; SCANDINAVIAN LITERATURE; SPANISH LITERATURE, ETC.

HOCKEY. Hockey added to its American popularity in 1927, the games of the National Hockey League attracting record crowds, while the sport in colleges and preparatory schools also flourished as never before. The race for supremacy in the National League was of the keenest, six United States teams and four from Canada participating in the struggle. The Ottawa Senators finally captured the league title and this same brilliant aggregation of "ice men" also carried off the Stanley Cup, emblematic of the world's championship.

Among the American colleges Dartmouth, Harvard, Princeton and Yale possessed unusually strong teams, with Harvard making the best showing. The Crimson sextette defeated Yale twice and Dartmouth once, the second clash with the Hanoverians resulting in a tie.

The winners in the various professional leagues were: National, Ottawa Senators; Canadian, London Panthers; Canadian-American, Springfield Indians; Prairie, Calgary Tigers; American Association, Duluth Hornets.

The victors in the several amateur organizations were: Ontario (senior), Toronto "Varsity-Grads"; intermediate, London "Battery"; junior, Owen Sound "Greys"; Canadian collegiate, McGill University; American collegiate, Harvard, Dartmouth; U. S. Amateur, University Club, Boston; Metropolitan, Knickerbockers of New York City.

HODDER-WILLIAMS, SIR (JOHN) ERNEST. British publisher, died on April 8. He was born at Bromley, England, Sept. 16, 1876, and was educated at the City of London School, at University College, London, and at Paris and Berlin. His career as a publisher was in the firm founded by his grandfather, Matthew Henry Hodder (now Hodder & Stoughton). Besides being one of the leading book publishing firms of England, the house publishes *The British Weekly*, *The Bookman*, and *The Lancet*. Mr. Hodder-Williams was knighted in 1919 and was made a Companion of the Victorian Order in 1921. He was also the recipient of honors from Continental countries, including Italy and Belgium. He wrote: (with E. C. Vivian) *The Life of Sir George Williams, Founder of the Y. M. C. A.*, and *The Way of the Red Cross*; the late Queen Alexandra contributed a preface to the latter work.

HOGARTH, DAVID GEORGE. British archaeologist, died at Oxford, England, November 5. He was born at Barton-on-Humber, England, May 23, 1862, and was educated at Winchester and at Magdalen College, Oxford. In 1886-93 he was a tutor at the college, and later became a fellow. During the course of his travels in Asia Minor and the neighboring regions (at various times from 1887 to 1894), he directed excavations at Paphos, Dér-el-Bahari, Alexandria, Fayum, Naukratis, Cnosus and the Dictæan Cave, Zakro, the Artemisium in Ephesus, Assiut and Jerablus. Much of his work was done for the British Museum. It established for him a high reputation as an archaeologist, and in 1897 he was chosen to head the British School at Athens. In 1909 he became Keeper of the Ashmolean Museum at Oxford, retaining that position until his death. He became President of the Royal Geographical Society in 1925, after having received the Founder's Gold Medal in 1917. For his work in the World War, Dr. Hogarth, on whom Cambridge University conferred the honorary title of Litt.D., received the distinction of a Companion of the Order of St. Michael and St. George, and also the Order of the Nile, Third Class, and the Order of Nahda, of the Hejaz. During the War he served as a commander in the Royal Naval Volunteer Reserve. He was also director of the Arab Bureau, holding a post for which he was peculiarly well fitted, because of his intimate knowledge of the Arabs and their country. With Sir Ronald Storrs and Colonel Cornwallis, he met the Emir (later King) Feisal in a secret conference on the coast of Hejaz. This led to the famous "revolt in the desert" which changed the course of history in that part of the world. Dr. Hogarth wrote: *Asia Minor* (1890); *A Wandering Scholar in the Levant* (1896); *Philip and Alexander of Macedon* (1897); *The Nearer*

East (1902); *The Penetration of Arabia* (1904); (with others) *Excavations at Ephesus: The Archaic Artemisia* (1908); *Ionian and the East* (1909); *Accidents of an Antiquary's Life* (1910); *The Ancient East* (1914); *Carchemish I* (1914); *The Balkans* (1915); *Hittite Seals* (1920); *Arabia* (1922); *The Wandering Scholar* (1925); *Kings of the Hittites* (Schweich Lectures) (1926).

HOLIDAY, HENRY. British artist, died on April 15. He was born at London, June 17, 1839, and after early education at home went to Leigh's and the school of the Royal Academy. He was a friend of Holman-Hunt and Burne-Jones. He exhibited first at the Royal Academy in 1858. His work comprised mainly decorations, mural paintings, stained glass, mosaics and the like, but he found time for painting in oil and for sculpture. He invented a new form of enameling on metal in relief, to extend the use of the material to large-scale work.

HOLLAND. See NETHERLANDS.

HOLLAND VEHICULAR TUNNEL. See ROADS AND PAVEMENTS; also TUNNELS.

HOLLMAN, JOSEPH. Dutch violoncellist, died at Paris, in January. He was born at Maestricht, Oct. 15, 1852. Having won, in 1870, the first prize at the Brussels Conservatory, where he had been a pupil of Servais, he studied four years more under Jaquard at the Paris Conservatory. From the time of his brilliant début in 1875 until his retirement in 1916, when he took up his residence in Paris, he visited all the principal cities of Europe and made four tours of the United States. Saint-Saëns wrote for him his second cello concerto. Hollmann's outstanding qualities were a tone of rare beauty, and exquisite charm in rendering smaller works. He wrote two concertos for cello and orchestra and several solo pieces.

HOLY CROSS COLLEGE. A Roman Catholic college under the Society of Jesus, at Worcester, Mass.; founded in 1843. The enrollment for the autumn of 1927 totaled 1040 in the regular course, with a distribution as follows: seniors, 216; juniors, 238; sophomores, 272; freshmen, 260. There were 60 in the B. S. course, as follows: seniors, 10; juniors, 13; sophomores, 11; freshmen, 26. The faculty had 80 members. The library contained 100,000 volumes. President, the Rev. John M. Fox, S. J.

HONDURAS, hōn-dōo'-rās. A Central American republic, bounded on the north and northeast by the Caribbean Sea, on the southeast by Nicaragua, on the southwest by Salvador and the Pacific Ocean, and on the west by Guatemala. Capital, Tegucigalpa.

AREA AND POPULATION. The estimated area is 44,375 square miles; population, Jan. 1, 1923, according to official figures, 673,408, mostly Indians with a strain of Spanish blood. The chief towns with their populations according to the latest available statistics are: Tegucigalpa, 38,950; Santa Rosa, 13,000; Santa Barbara, 6000; San Pedro, 8000; and Juticalpa, 8000. The chief

ports are: Amapala on the Pacific, and Porto Cortez and Omoa on the Atlantic.

EDUCATION. Primary instruction is free and compulsory between the ages of seven and 15. In his message read before Congress on Jan. 1, 1927, the President spoke in part as follows: "It is to be desired that our system of education, now too theoretical and pedantic, should be replaced by one more fitted to the necessities and ideals of the time, a system which may better prepare our younger generation for an honorable means of livelihood. Plans for a vocational school for women are now being considered." During 1926, 863 public and 34 private schools were open, making a total of 897, in which 28,048 pupils were enrolled. Agricultural training has been given to boys, while the special instruction given to girls showed good results in an exposition of feminine handiwork. On Nov. 8, 1926, the president signed an order authorizing the institution of vacation classes to be taught by the students of secondary and professional schools and of the upper grades of the elementary schools all over the country. The courses were to be given for the benefit of illiterate persons and the general population, and was expected also to be of no small benefit to the students acting as teachers. At Tegucigalpa there are a national university and military and aviation schools.

PRODUCTION. Agriculture is the principal industry and the chief product, bananas. They are grown mostly along the Atlantic coast, and constitute the main export. For the year ending July 31, 1925, 15,988,631 bunches of bananas were exported, all but 2,000,000 of them going to the United States. Coconuts are grown extensively on the Pacific coast, and fine grades of tobacco and coffee are produced. The cultivation of sugar is of increasing importance; 27,963,700 pounds were exported in 1924. The mineral resources include gold, silver, copper, lead, iron, zinc, and antimony. Straw hats and cigars are manufactured for the local market.

COMMERCE. According to figures published in the press of Tegucigalpa, exports for 1926 amounted to 26,912,012 silver pesos, or 2,945,905 silver pesos more than those of the previous year. The exports subject to duties were valued at 20,379,907 silver pesos and the free exports at 6,532,105 silver pesos. Gold coin to the amount of 3000 pesos, silver coin to the amount of 22,321 pesos and 100,000 pesos in American bank notes were sent out of the country. The chief exports were bananas, silver, and sugar. The following figures are taken from a statistical table on Honduran imports and exports prepared by the General Revenue Bureau:

Year	Imports	Exports
1915-16	\$4,452,109.47	\$5,233,206.10
1916-17	6,298,162.28	6,696,814.57
1917-18	4,784,449.86	5,783,668.55
1918-19	6,981,876.00	5,997,741.00
1919-20	12,860,762.32	8,472,862.56
1920-21	16,732,699.71	5,428,587.12
1921-22	12,804,258.49	5,886,406.78
1922-23	14,843,273.72	10,016,270.82
1923-24	11,187,617.61	7,897,046.61
1924-25	12,752,763.34	11,983,053.31
1925-26	9,899,949.58	12,456,005.70

FINANCE. The *Boletín Legislativo* for June 11, 1927, published the following figures on the budget for 1927-28, which went into effect on August 1, 1927:

Revenues	Pesos
Customs	3,547,000.00
Monopolies	2,418,000.00
Stamp taxes	866,000.00
Services	1,250,000.00
Various revenues	271,747.13
Special revenues	1,815,245.85
Total revenues	9,662,992.98
Expenditures	Pesos
Government, Justice, and Public Health	1,985,128.45
Foreign Relations	293,980.88
Public Instruction	867,920.00
Promotion, Agriculture, and Labor	2,119,359.00
War and Marine	1,894,042.94
Treasury	1,228,620.15
Treasury and Public Credit	1,278,941.56
Total expenditures	9,662,992.98

COMMUNICATIONS. The total length of railway mileage is approximately 934 miles, most of it being used in the cartage of bananas from the interior to the seacoast.

GOVERNMENT. According to the constitution of Oct. 3, 1924, the executive power is vested in a president nominated and elected by popular vote, and holding office for four years; legislative power is in a chamber of deputies consisting of 43 members chosen for four years directly by popular vote. President in 1927, Dr. Miguel Paz Barahona. See GUATEMALA.

HONDURAS, BRITISH. See BRITISH HONDURAS.

HONG KONG. A possession of Great Britain at the mouth of the Canton River, about 90 miles to the south of Canton; comprising an irregularly shaped island, 11 miles long from east to west, varying from 2 to 5 miles in breadth, with an area of 32 square miles; also the opposite peninsula of Kowloon, separated from it by a strait about a half mile wide. Total area, 391 square miles. In 1916 a scheme was begun for the reclamation of 9,500,000 square feet of land from the sea in Kowloon Bay; this project was still in progress in 1927. The population, according to the census of 1921, was 625,166, of whom 612,310 were Chinese; estimated in the middle of 1925 at 874,420. The movement of population in 1925 was: Births, 3654; deaths, 14,991. In the same year the number of Chinese immigrants was 91,622 and the number of emigrants, 140,534. While education is not compulsory, the schools are under government inspection and required to keep certain standards. The total number of pupils in all schools in 1925 was 39,738 and the total expenditure on education, \$1,019,906. For higher education there is the British University of Hong Kong which is attended mostly by Chinese students.

The chief industries are sugar refining, shipbuilding, rope-making, the manufacture of tobacco, cement and knit goods, and tin refining. The latest available statistics for trade are those of 1925 when the imports were valued at \$43,484,410, and the exports, \$40,353,906. The revenue for 1924 was \$2,874,895 and the expenditure, \$3,173,763. In 1925, 41,336 vessels, including 20,947 junks and 5386 steam-launches, representing altogether 32,770,499 tons entered and cleared the port in the foreign trade. Besides these it was estimated that 13,500 fishing boats put into the bays and harbors of Hong Kong in the course of the year. The colony is under a governor aided by executive and legislative

councils. Governor in 1927, Sir Cecil Clementi (appointed in 1925).

HOOKWORM DISEASE. By 1917, owing to the efforts of the Rockefeller Commission, it was estimated that over 200,000 sufferers from this malady in the Southern United States had been restored to health, this comprising by far the greater number. At a later period we find the same body waging war against the same disease in other parts of the world. It is however a mistake to look upon the parasite and its effects as a mere memory. Dr. C. W. Stiles, the well known parasitologist, summed up the present status of the disease in the *Journal of the American Medical Association* for Feb. 12, 1927. Twenty years previously one could stand on the busiest corner of the main street of the average southern city for an afternoon and recognize anywhere up to 10 badly infested hookworm patients; "dirt eaters," in the local vernacular. This state of affairs, it is to be hoped, is gone forever, but there were still plenty of cases of mild infestation and of healthy carriers between which groups it is often impossible to distinguish, for the former may seem outwardly to be well. Moreover, it has been learned that the hookworm count in the stools is not a criterion of health, for a patient with anywhere up to 2000 worms may pass as a well individual, while conversely one with only 100 may show signs of mild infestation. The problem had therefore taken on a new and difficult phase for it was not easy to control officially people in relative good health.

HOPS. The production of hops in 1927 in the five countries—Germany, Belgium, France, Czechoslovakia and the United States—reporting to the International Institute of Agriculture, Rome, was estimated at 81,841,000 pounds as compared with 70,199,000 pounds in 1926 and 62,246,000 pounds, the average yield for the five years 1921-25. The acreage in these countries over 1926 was increased by 8.4 per cent and over the five-year period mentioned by 27.6 per cent, while the corresponding increases in production were 16.6 per cent and 31.5 per cent respectively. According to this report Czechoslovakia produced 21,609,000 pounds, Germany 15,873,000 pounds, France 11,521,000 pounds and Belgium 4,448,000 pounds. In 1926 Germany produced only 5,562,000 pounds and France 8,881,000 pounds, while in Czechoslovakia the yield was about the same as for the preceding year and in Belgium the yield showed a decrease of 564,000 pounds. In Great Britain, where 37,184,000 pounds were produced in 1926, efforts on the part of the English Hop Growers' Association were continued to reduce the acreage. In view of the large supplies in the hands of the organization from the preceding year's harvest, it was recommended that the area be reduced by 20 per cent. In 1926 the hop area was 25,600 acres and early in 1927 it was reported that a reduction of 4805 acres had been promised by members and non-members of the association. A similar request in 1926 for a 10 per cent reduction was reported as carried out by the non-cropping system or by grubbing the plants.

The hop production of the United States in 1927, as estimated by the Department of Agriculture for the three principal producing States—California, Oregon and Washington—was 29,794,000 pounds on 24,600 acres at the rate of 1211.1 pounds per acre. These figures compare

respectively with 31,522,000 pounds, 20,800 acres and 1515.5 pounds for the preceding year. The average farm price on Dec. 1, 1927, in these three States was 22.9 cents per pound while the corresponding price the year before was 23.1 cents per pound. According to the estimates reported for 1927 Oregon produced 15,040,000 pounds on 16,000 acres, California 9,000,000 pounds on 6000 acres, and Washington 4,864,000 pounds on 2600 acres. The average yields per acre for the three States were 940, 1650 and 1867 pounds respectively. Provisional reports placed the exports of hops from the United States for the year ended June 30, 1927, at 13,369,000 pounds as against 14,998,000 pounds for the preceding fiscal period. The corresponding imports were 470,000 and 581,000 pounds respectively.

HOBB, THE REV. DR. GEORGE EDWIN. American clergyman, died at Newton, Mass., January 22. He was born at Boston, Jan. 19, 1856. He graduated at Brown University, in 1876, and studied at the Union Theological Seminary, 1876-77, and at the Newton Theological Institution, 1879. After serving in the ministry of the Baptist Church at Tarrytown, N. Y., and Charlestown, Mass., in 1891 he became editor-in-chief of *The Watchman*. In 1903 he became professor of church history at the Newton Theological Institution, and in 1908 its president. In 1913 he was the Dudgeon lecturer at Harvard and in 1923 the Ingersoll lecturer. Brown conferred on him the degree of D.D. in 1896, Colby College that of LL.D. in 1915, and Harvard University that of S.T.D. Dr. Horr wrote: *His in the Heart* (1903); *The Training of the Chosen People* (1907); *The Great Ministry* (1908); *The Baptist Heritage* (1923); *The Christian Faith and Eternal Life* (1923).

HORTICULTURE. Horticultural interests embrace such a wide diversity of climate and soil in the United States that satisfactory conditions can not be expected to prevail everywhere in any given year; yet, as a whole, 1927 proved to be a good horticultural year. Temperature declines to 19°F. in Florida in January caused great damage to the orange crop, fortunately without severe injury to the trees. However, as a result there was dumped on northern markets a vast quantity of frost injured oranges and grapefruit, greatly to the disgust of consumers. California, on the other hand, marketed to advantage an unusually large crop of high grade oranges, lemons, and other fruits.

The 1927 apple crop in the United States and Canada was much smaller than that of the preceding year but in many localities brought prices sufficiently higher to offset to a considerable degree the reduced yields. The unusual demand for grapes stimulated by the enactment of the liquor prohibition laws failed to justify the greatly expanded plantings, and as a result markets were badly glutted at the height of the season with wine grapes, bringing great loss to the growers and the shippers. Table grapes reacted to the general depression but soon recovered normal values. Vegetable producers enjoyed a satisfactory year, the yields in most cases being larger than those of 1926. White potatoes yielded well and brought satisfactory returns to the growers. Ornamental horticulture continued to interest a large and increasing number of people, as was evidenced by the growing membership in the large national societies

devoted to special plants, such as the rose, dahlia, and gladiolus.

THE SITUATION ABROAD. Despite unfavorable early predictions, the apple crop in England and Continental Europe was large, and materially interfered with the sales of the more attractive and more expensive fruit imported from North America. As late as October 12, United States trade commissioners in Europe reported large local supplies as a cause for relatively low prices and poor demand. The strong recovery of the German market was shown in the fact that Germany bought in the 1926-27 season 250 per cent as many American apples as in the preceding season. The European pear crop was, on the other hand, relatively small. The French prune crop was abundant, while that of Jugo-Slavia, another important producing centre, was reported as 50 per cent of normal. The walnut crop in France was abundant and of very good quality. Grapefruit continued to increase in popularity in European markets, but that Florida and Porto Rico may not always dominate the grapefruit markets of the world was indicated in the shipment of fruit from northern Argentina to London. Oranges were produced in largely increased quantities in Palestine, over 1,000,000 cases being shipped from Joppa during the 1926-27 season. Southern Rhodesia also produced a fine orange crop, the shipment of which began early in May.

Important developments also occurred in vegetable production. Tomato exports from the Bahama Islands totaled over 9,000,000 lbs. during the winter season, the greater part of this crop being shipped to New York City. Spanish onions continued to be an important commodity, some 664,000 bu. being shipped to the United States up to November 30. The Mexican west coast vegetable movement for the 1927-28 season slowed down considerably, the acreage estimate being reduced from 60,000 to 36,000, due to the ravages of insects and also to the economic situation. The Canadian apple crop, according to the fruit branch of the Dominion Department of Agriculture, was much smaller in 1927, being 2,720,800 bbls., as compared with the five-year average of 3,327,590 bbls. All provinces except Nova Scotia showed a notable decline in apple production.

FOREIGN TRADE. Based upon data obtained from the U. S. Bureau of Foreign and Domestic Commerce covering the first 10 months of 1927 there was shown an appreciable gain in the total value of exported horticultural products in 1927 as compared with the corresponding period in 1926. The total value of imported horticultural products for the same period shows a remarkable agreement with the preceding year, the values being \$106,534,487 in 1927 and \$106,332,909 in 1926. The total value of exported horticultural products was \$111,413,425 for the first 10 months of 1927 and \$95,573,583 for the similar 1926 period.

Among individual import items showing considerable increased value in 1927 as compared with 1926 were bananas, olives, fresh cherries, walnuts, dried beans, fresh tomatoes, canned tomatoes, and onions. Import items to show a sharp decline in value in 1927 included grapefruit, preserved cherries, dates, figs, shelled almonds, filberts, chick peas, and white potatoes.

With a few striking exceptions, export values

for horticultural products in 1927 were closely comparable to those of the preceding year; fruits, especially those in the raw state, alone showed any considerable variation in values. Notable increases in value were registered by the grapefruit, orange, apple, pear, and dried apricot.

PRODUCTION IN 1927. Several remarkable departures from 1926 production were revealed in the 1927 data released Dec. 19, 1927, by the Bureau of Agricultural Economics of the U. S. Department of Agriculture. The 1927 apple crop was estimated at 123,455,000 bu., just about one-half of the 246,524,000 bu. crop of 1926. Values were, however, quite similar, \$171,078,000 in 1927 and \$178,233,000 in 1926. The total peach crop for 1927 was 45,493,000 bu. as compared with 60,865,000 bu. in 1926. The pear crop of 1927 totaled 18,072,000 bu. as compared with 25,249,000 bu. in 1926, but sold for about 7 per cent more. Grape yields for the two years were, on the other hand, highly comparable, 2,423,413 tons in 1926 and 2,464,712 tons in 1927. The orange crop of California and Florida dropped off somewhat in 1927, being 32,540,000 boxes as compared with 38,867,000 boxes in 1926. Grapefruit in Florida declined from 7,800,000 boxes in 1926 to 6,300,000 boxes in 1927. The lemon crop of California fell off from 7,712,000 boxes in 1926 to 6,400,000 boxes in 1927. Cranberries showed a sharp decrease, from 743,600 bbls. in 1926 to 496,000 bbls. in 1927. The strawberry crop in 1927 reversed the general fruit situation and showed a sharp increase, from 277,940,000 qts. in 1926 to 342,234,000 qts. in 1927.

Vegetable crops as compared with fruit crops showed a general upward trend in 1927. Tomatoes were estimated at 1,621,500 tons as compared with 1,375,800 tons in 1926. Asparagus yields in 1927 were estimated at 7,874,000 crates as compared with 7,813,000 crates in 1926. Celery was reported at 7,407,000 crates in 1927 and 6,476,000 crates in 1926 and cabbage 1,162,600 tons in 1927 and 1,034,200 tons in 1926.

White potatoes showed a sharp increase in production, from 354,328,000 bu. in 1926 to 402,149,000 bu. in 1927, bringing, however, some \$113,000,000 less to the growers. Sweet potatoes yielded 93,928,000 bu. in 1927 as compared with 82,703,000 bu. in 1926, but also returned less to the grower. Peanuts yielded 866,822,000 lbs. in 1927 as compared with 631,825,000 lbs. in 1926. The onion crop of 1927 was estimated at 22,576,000 bu., an increase from 20,945,000 bu. in the preceding year. Spinach increased from 124,000 tons in 1926 to 141,000 tons in 1927. Among vegetables to show but little change in yield are lettuce, 17,652,000 crates in 1927 and 17,150,000 crates in 1926; cucumbers 8,368,000 bu. in 1927 and 8,855,000 bu. in 1926; peppers 3,502,000 bu. in 1927 and 3,890,000 bu. in 1926; cantaloupes 15,272,000 crates in 1927 and 14,393,000 crates in 1926; green peas 236,800 tons in 1927 as compared with 261,100 tons in 1926. A few items showed sharp declines—sweet corn for canning purposes from 816,000 tons in 1926 to 395,800 tons in 1927; watermelons from 69,698,000 in 1926 to 57,220,000 in 1927.

As contrasted with yield data, figures for total values were generally very similar for the two years, increases or decreases in yields be-

ing largely offset by a rise or decline in unit values.

Tentative estimates on the part of commercial interests indicated a very short 1927-28 citrus crop in Florida, approximately only one-third of that of the preceding season.

HORTICULTURAL QUARANTINES. The effective administration during the year of some 22 foreign plant quarantines restricting and safeguarding the entry of plants and of plant products known to be carriers resulted in the interception and destruction of many dangerous pests and well justified their placement, even if certain interests were temporarily harmfully affected. The embargo on narcissus bulbs resulted in an unprecedented activity in various parts of the country, particularly the Atlantic and Pacific Coast States, in the production of these bulbs, and apparently laid the foundations for a profitable home industry. It is to be confidently expected that in a very few years the United States will produce ample bulbs to supply its own requirements. In an effort to eradicate narcissus pests already established in this country restrictions requiring the treatment of bulbs were placed upon interstate shipments.

The Parlatoria date scale which for a time threatened the new date growing industry of the southwest was kept under control in 1927 by drastic eradication measures, investigations in certain date growing regions of the Old World having shown this pest to be fully capable of completely destroying the date growing industry if allowed to go uncontrolled. The Mexican border along the Rio Grande River continued to be an important point of entry for dangerous pests and was carefully guarded during the year; but for the first time satisfactory co-operation was obtained with the Mexican authorities insuring greater safety in the future.

COÖPERATIVE MOVEMENTS. In the realization that the apple, erstwhile king of fruits, was losing out in competition with the highly advertised orange and dried fruits, prominent growers and dealers in all parts of the United States united to form a national association, Apples for Health, Inc., to stimulate the use and sales of apples. Some progress was made by distributing posters and other advertising material in the apple season, and a systematic campaign was planned for 1928, which it was expected would focus the attention of every family in the country upon the health and food values of the apple.

Meanwhile, California citrus fruit growers continued to reap the benefits of well directed co-operation. According to E. G. Dezell, General Manager, the California Fruit Growers' Exchange handled in the 1926-27 season 38,891 carloads of oranges and grapefruits and 11,577 carloads of lemons, approximately 72 per cent of the total citrus crop of that State. The total f.o.b. value of the California citrus crop was estimated at approximately \$120,000,000, the largest amount in the history of the industry. In an attempt to advertise their fruit, the California Fruit Growers' Exchange stamped over 2,500,000 oranges with the exchange brand "Sunkist." Florida growers, on the other hand, had a difficult year due to the after effects of the hurricane and winter freeze. Much dissatisfaction among certain growers resulted from the efforts of the Florida Citrus Exchange to re-

strain shipment of frozen fruits; yet it was generally conceded the proper course to pursue.

THE SPRAY RESIDUE PROBLEM. The agitation which was started during the 1926 season by the action of the British government in fining certain retailers for dispensing American fruits with arsenic residue above the accepted tolerance resulted in unusual activity in 1927 on the part of American fruit growers and investigators in efforts to remedy the situation. The problem was naturally most acute in the irrigated sections of the Pacific Northwest where the absence of rain during the growing season prevented the natural removal of spray residues. Oregon and Washington Experiment Station workers found that washing apples and pears in dilute hydrochloric acid, followed by thorough rinsing with clear water, effectively reduced the residues to below the legal tolerance of both domestic and foreign regulations. As a result, there were developed various commercial machines operated on the continuous belt principle and capable of handling large quantities of fruit. Under normal conditions Eastern orchardists were not deeply concerned in the arsenic problem. However, in certain areas, notably the Japanese beetle infested sections of New Jersey and eastern Pennsylvania, the large number of poison sprays required in combating the insect left sufficient residues to cause trouble in domestic markets. Here again washing with dilute acids was resorted to. Some progress was made in attempts to develop non-arsenic sprays for the control of codling moth and other insects as a means of solving the serious spray residue problem.

TRENDS IN RESEARCH. Delving deeply into the underlying causes of variations in the response of plants to environment and applied treatments, horticultural investigators made noteworthy progress during 1927. A definite correlation between starch content of grape cuttings and their rooting ability was observed at the California Experiment Station (*Hilgardia* [California Sta.] 2 (1927), No. 8, pp. 329-49). Immersion of cuttings in solutions of various chemicals, especially oxidizing agents such as manganese sulphate, materially increased rooting. Studies in apple pollination at the Ohio Experiment Station (*Amer. Soc. Hort. Sci. Proc.*, 23 (1926), pp. 307-315) showed that in certain varieties, irrespective of the condition of the tree or of the character or amount of pollen applied, certain of the flowers on the clusters are incapable of setting fruit, suggesting the presence of abnormalities in the embryo. The wood of hardy varieties of apples was found at the Minnesota Experiment Station (*Minnesota Sta. Tech. Bul.* 42 (1926)) to contain more carbohydrates and total organic nitrogen than that of tender varieties. The shoots of tender varieties suffered injury in freezing chambers much more quickly than those of hardy varieties, thus suggesting a means of quickly determining relative hardiness of new varieties and seedlings.

Observations at the Wisconsin Experiment Station (*Wisconsin Sta. Research Bul.* 78 (1927)) on the root systems of a large number of apple varieties showed that in almost all cases the scion exerts a well defined influence upon the size and type of growth in the roots. At the California Experiment Station (*Hilgardia* [California Sta.], 2 (1926), No. 5) investigators found that severe pruning of grape vines ma-

terially decreased the viability of the pollen. In some cases the pollen of lightly pruned vines exceeded in viability by over 600 per cent that of severely pruned vines. Interesting results were secured at the Illinois Experiment Station in studies of the effect of oil sprays on the transpiration of fruit tree leaves, the reductions being in some cases as high as 75 per cent. Cultivation, long believed to be essential in vegetable growing, was found at the New York Cornell Station (*New York Cornell Sta. Mem.* 107 (1927)) to be chiefly of importance as a means of weed control rather than of moisture conservation.

Further work at the New Hampshire Experiment Station upon the influence of phosphorus fertilizers on vegetable crops showed phosphorus in acid phosphate to stimulate early growth in the squash and the cabbage, thus corroborating earlier results with the tomato. An ingenious method of determining viability in seed corn was developed at the Illinois Experiment Station (*Jour. Agr. Research* [U. S.], 35 (1927), No. 2, pp. 147-66). Leachings of the seed in distilled water indicated a lack of viability, the membranes of the weakened seeds apparently being more permeable to colloids than those of strong, viable seeds. The use of ethylene as a medium for hastening the maturity of fruits and vegetables received a great deal of attention from practical growers and investigators during the year, as it was found that in proper concentrations this gas was capable of cutting approximately in half the time required for coloring citrous fruits and tomatoes and blanching celery. To avoid misuse of ethylene, California passed a law prohibiting the artificial coloring of citrous fruit which did not test at least 8 parts of soluble solids to 1 part of acids and with at least 25 per cent of yellow color before picking.

MISCELLANEOUS. The eighth International Horticultural Congress was held in Vienna, Austria, from Sept. 20 to 24, 1927. Delegates representing 16 countries were present and considered various international horticultural problems such as the introduction and naming of new varieties, standardizing of colors, training of gardeners, application of investigational results, and the standardizing of root stocks. The next congress was to be held in London in 1930.

The Pennsylvania Railroad opened a new produce terminal in New York City with a capacity of 700 carloads on display at one time. It was expected that this new terminal would greatly relieve the congestion which had frequently occurred at the height of a shipping season and thereby expedite the handling of fresh produce and fruits. The extent of the Japanese citrous growing industry was indicated in the arrival in Vancouver, B. C., in December of several vessels carrying oranges, one ship with 300,000 boxes, a cargo equivalent to 150 carloads. Judging by the number of high grade Japanese contributions, it was evident that the Japanese scientists were making important progress in horticultural knowledge and supporting their fruit industry in an effective manner. Dr. L. H. Bailey, formerly of Cornell University and the recognized dean of American horticultural writers, was honored by selection as president of the American Association for the Advancement of Science for the year 1927.

NECROLOGY. Charles Sprague Sargent (q.v.),

director of the Arnold Arboretum, Jamaica Plain, Mass., died Mar. 22, 1927, at the age of 85 years. Under his guidance there had been assembled the finest collection of hardy trees and shrubs in North America. Special consideration was given to the introduction of Asiatic ornamental species, many of which have proved to have great horticultural value. John Dunbar, Superintendent of Parks, Rochester, N. Y., and well-known originator of lilacs, crabapples, and other ornamental plants died June 13, 1927, after a long and useful career.

BIBLIOGRAPHY. Contributions to the horticultural literature of 1927 were numerous and covered a varied field. Among notable publications appearing during the year are A. C. Beal, *The Gladiolus and Its Culture* (New York and London, 1927); *International Conference on Flower and Fruit Sterility* (Mem. Hort. Soc. New York, 3, 1927); E. H. M. Cox, *The Modern English Garden* (Country Life, [1927]); edited by K. Foerster and C. Schneider, *Das Dahlienbuch* (Berlin, 1927); S. Fraser, *American Fruits: Their Propagation, Cultivation, Harvesting, and Distribution* (New York and London, 1927); V. R. Gardner, F. C. Bradford, and H. D. Hooker, *Orcharding* (New York, 1927); A. C. Hottes, *A Little Book of Perennials* (New York, 1927); L. H. Johnson, *Foundation Planting* (New York, 1927); F. T. McLean, W. E. Clark, and E. N. Fischer, *The Gladiolus Book* (Garden City, N. Y., 1927); J. G. Millais, *Magnolias* (London and New York, 1927); A. I. Perold, *A Treatise on Viticulture* (London, 1927); F. F. Rockwell, *The Book of Bulbs* (New York, 1927); R. Schlechter, rev. by E. Mieth, *Die Orchideen* (Berlin, 1927); E. A. White, *American Orchid Culture* (New York, 1927); E. H. Wilson, *Plant Hunting* (Boston, 1927); J. C. Wister, *The Iris* (New York and London, 1927).

HOUGH, huf, CHARLES MERRILL. American jurist, died at New York, April 22. He was born at Philadelphia, May 18, 1858, and, after graduating at Dartmouth in 1879, studied law at Philadelphia and was admitted to the bar there. He moved to New York in 1888, and eight years later was appointed a United States district judge. In 1916 he became a judge of the United States Circuit Court of Appeals. Judge Hough was noted especially for his knowledge of maritime and bankruptcy law and for his rulings on those subjects. Dartmouth College conferred the degree of LL.D. on him in 1908.

HOWARD UNIVERSITY. A non-sectarian coeducational institution of higher education at Washington, D. C.; incorporated by the Act of Congress, Mar. 2, 1867, "for the education of youth in liberal arts and sciences," open to students without regard to race, but principally for the education of negroes. It includes a medical school, school of law, and schools of liberal arts, education, commerce and finance, applied science, music, and a department of physical education. Since 1879 Congress has made appropriations for the University, expendable under the supervision of the Secretary of the Interior, who is a patron ex officio of the Board of Trustees. The total enrollment for the autumn of 1927 was 2140, and for the summer session, 380. There were 191 members on the faculty as follows: Academic, 73; medical, dental, and pharmaceutical colleges, 83; law, 12; religion, 6; music, 7; applied science, 10. The

productive funds amounted to \$774,116.75, and the income for the year (1926-27), \$31,689.30. The library contained 44,543 volumes. Gifts received during the year 1926-27 were as follows: from the United States government, for maintenance, \$218,000; from the United States government toward gymnasium and medical school buildings, \$229,435.06; medical endowment fund, \$149,914.82; miscellaneous, \$2795.47. The new medical school building, costing, with equipment, \$500,000 was completed and an appropriation of \$150,000 was received from the government for a new dormitory for women. Administrative officers: Mordecai W. Johnson, S.T.M., D.D., president; Emmett J. Scott, A.M., LL.D., secretary-treasurer.

HUMBERT, ün'bér, CHARLES. French politician, died at Paris, November 1. He was born in Lorraine in 1866, and in his youth was very poor, working as a shepherd and a waiter in a restaurant. At 19 he was called to serve in the army, and at the end of his two years' term obtained entrance to a military academy. After rising to the rank of captain, he abandoned the army for a career in journalism and politics. He became a member of the staff of *Le Matin*, of Paris, and in 1906 was elected a deputy from Verdun. In the Chamber of Deputies, and in the Senate, to which he was elected in 1908, he made himself conspicuous by his vigorous militarism and his demands for a larger army and stronger forts. Upon the outbreak of the War, in 1914, he redoubled his activities in that direction. In that year he was sent to America to make purchases of munitions of war. In August, 1915, Humbert became involved with Bolo Pasha in the purchase of *Le Journal*, of Paris, and the senator was placed on trial with Bolo and others on charges of conducting "defeatist" campaigns. Bolo was convicted and shot as a traitor, with Lenoir, another conspirator. Joseph Caillaux, former premier, was sentenced to three years' imprisonment and five years' exile, while Humbert was acquitted. It was said in Humbert's defense that he never consented to the publication of "defeatist" articles in *Le Journal* and became implicated with Bolo Pasha only through his need of money wherewith to purchase the paper. After the war Humbert lived very quietly, but it was reported shortly before his death that he had become reconciled with Raymond Poincaré, who had been a fellow senator from the Department of the Meuse, and that he intended to become a candidate for Parliament.

HUMPHREYS, ALEXANDER CROMBIE. American educator and engineer, died at Morristown, N. J., August 14. He was born at Edinburgh, Scotland, Mar. 30, 1851, and was taken to the United States in 1859. From 1866 to 1872 he was employed by a New York insurance company, and in 1872 he became secretary and superintendent of a gas company at Greenville, N. J. The problems of the company led him to take a course in the Stevens Institute of Technology, although his time was limited so that he was told he would require six years to complete the regular four-year course. He finished it in four years, however, graduating in 1881, at the age of 30. From this beginning he rose to recognition as one of the leading engineers and educators of the United States. The year after his graduation he became chief engineer of the Pintsch Lighting Company, of New York,

and in 1885 he went to Philadelphia as chief engineer and general superintendent of the United Gas Improvement Company. He held that office until 1892, in the meantime having founded the gas engineering firm of Humphreys & Glasgow Company, of London and New York. In 1890 he made the first successful installation of a water gas plant in England, and his firm established similar plants in Australia, New Zealand, China, Belgium and Germany. He was also for a time president of the Buffalo Gas Company. In 1902 he was called to the presidency of Stevens Institute of Technology, Hoboken, N. J., and he remained at Stevens until his retirement in July, 1927. He was also a trustee and member of the executive committee of the Carnegie Foundation for the Advancement of Teaching. Dr. Humphreys' services to the cause of education and to public life were recognized by the bestowal on him of honorary degrees by such universities as Columbia, Pennsylvania, New York, Princeton, Brown and Rutgers, and the Rensselaer Polytechnic Institute. He was a member of the more prominent engineering societies in the United States and Great Britain, and in many of these he held office. His interests were widely diversified, and he was active in a large number of causes looking toward the advancement of life in America.

HUNGARY. A state of Central Europe; formerly a kingdom constituting with Austria the Dual Monarchy of Austria-Hungary. Capital, Budapest.

AREA AND POPULATION. Before the World War Hungary had an area of 125,609 square miles; area at the time of the census of 1920, 33,875 square miles. Population before the War, according to the census of Dec. 21, 1910, 20,886,487; population at the census of Dec. 31, 1920, 7,980,143; estimated Dec. 31, 1925, 8,368,273. After the census of 1920 was taken, an additional area of 36 square miles, with a population of 7000, was awarded to Hungary, Budapest, the capital, had a population at the 1920 census of 928,996. Other cities with a population of more than 100,000 at the same census were: Szeged, 119,109; and Debrecen, 103,186. The movement of population in 1925 was: Births, 235,480; deaths, 142,150; marriages, 74,382. The population of 1920 was distributed according to religion as follows: Roman Catholics, 5,096,729, or 63.9 per cent; Helvetian Evangelicals, 1,670,144, or 21 per cent; Augsburg Evangelicals, 497,012, or 6.2 per cent; and smaller numbers of Greek Catholics, Greek Orientals, and Unitarians. The Jews numbered 473,310, or 5.9 per cent.

EDUCATION. Public education in Hungary comprises the following grades: Infant schools, elementary schools, industrial and commercial apprentice schools, primary (city) schools, training colleges for teachers, middle or secondary schools, special schools, universities and colleges. Elementary education is compulsory between the ages of six and 12. In the school year 1924-25 there were 1002 infants' schools and permanent foster-homes with 1254 female teachers and 107,362 infants, and three training colleges for female teachers of infant schools. In the same year there were 5374 elementary schools with 16,556 teachers and 694,448 pupils; 359 primary schools with 3648 teachers and 90,776 pupils; and six training colleges for

teachers in primary schools. For secondary education there were 27 gymnasia, 71 realgymnasia, 22 modern schools, and 32 secondary schools for girls, with a total number of teachers of 2955 and 60,842 students. For higher education there are four universities as follows: Budapest, with 321 professors and 5908 students; Szeged, 80 professors and 1032 students; Pecs, with 60 professors and 1289 students; and Debreczen, with 55 professors and 801 students. There are also many theological schools and a number of technical institutions for higher learning, such as technical high schools, etc.

PRODUCTION. The principal industry of Hungary is agricultural pursuits and about two-thirds of the people are engaged in or dependent upon them. Even in average years the crops are sufficient for the home supplies and leave surpluses for export. The accompanying table from the *Statesman's Year Book* for 1927 shows the acreage and yield of the principal crops of Hungary for 1924-25:

Crop	Area Acres	Yield Quintals
Wheat	3,585,675	19,506,881
Rye	1,712,281	8,261,662
Barley	1,039,322	5,536,820
Oats	732,026	3,705,931
Maize	2,674,010	22,345,481
Potatoes	652,582	23,095,057
Sugar-beets	164,544	15,274,103
Grapes	546,919	75,705,060*

* Gallons of wine.

The estimated yield for 1926 was: Wheat, 18,833,423 quintals; rye, 7,027,182; barley, 3,473,512; oats, 20,022,889; maize, 18,324,408; sugar beets, 13,671,225 metric tons. In 1926 there were 884,746 horses, 1,847,449 cattle, 1,804,066 sheep, and 2,519,969 pigs. In 1925 the production of coal was 5,742,293 tons. The bauxite industry was assuming importance. The industries of Hungary are mainly based on agriculture and include milling, distilling, the manufacture of sugar, hemp, flax, etc. The number of manufacturing plants is placed at 3043, employing 195,305 workmen, with an output of 1,698,000,000 gold crowns.

COMMERCE. In spite of its continued expansion, Hungarian foreign trade in 1926 resulted in a trade balance that was 47,700,000 gold crowns more unfavorable than in 1925. Imports during 1926 were valued at 835,400,000 gold crowns and exports at 748,100,000 gold crowns, whereas imports for 1925 were valued at 739,700,000 gold crowns and exports at 700,100,000 gold crowns. Factors other than increased imports which affected the trade balance adversely were the great decrease in flour exports as a consequence of the high import duty placed on flour by the adjacent states, particularly Czechoslovakia, and the lessened activity in the finishing and repair industries. The curtailment of sales in the near-by flour markets, however, reacted to increase grain exports.

The value of imports from all the more important countries increased, with the exception of Austria and Czechoslovakia. The percentages of the total exports of Hungary to Germany and Austria showed slight increases, whereas the share of Czechoslovakia had decreased by 5 per cent. In 1926, Czechoslovakia furnished 28 per cent of the imports; Austria, 20 per cent; Germany, 17 per cent; and France, 3 per cent. Of the exports Austria took 37 per cent,

Czechoslovakia 20 per cent, Germany 13 per cent, and Poland 2 per cent. In practically every case imports showed a substantial increase in value; only in cotton and woolen textiles were there decreases. Lumber, the leading import commodity, increased 28 per cent in value, accounted for largely by the renewed building activities of the year and to some extent also by the importation of larger quantities of firewood. Mineral oils, machinery and apparatus, crude metals, and coal increased 54, 39, 12 and 11 per cent, respectively, illustrating the increase and expansion of manufacturing industries in Hungary under the high protective tariff. A large number of new concerns had sprung up in the textile industry, as a result of which the imports of cotton and wool textiles had declined while imports of weaving yarn for further manufacture had increased. With the exception of the electrical equipment industry, the industries of Hungary were generally only of local importance.

Although the yield of crops in 1926 was only fairly satisfactory and did not equal the 1925 production, the total exports during 1926 increased as a result of higher prices for agricultural commodities and of the creation of new export markets. The outstanding feature of Hungary's export trade was the rapid decline of flour exports and a coincident increase of wheat exports; flour exports were 32 per cent less in value than in 1925 and wheat 83 per cent greater. In addition to flour, there were decreases in the exports of cattle, sugar, corn, and wool. Exports of rye, poultry and poultry products, lard and meat products, and feathers made considerable gains over the 1925 figures.

VALUE OF HUNGARY'S FOREIGN TRADE, BY LEADING COMMODITIES
[In thousand gold crowns: 1 = \$0.2026]

Commodity	Imports 1925	1926
Lumber	72,085	92,615
Cotton textiles	89,016	75,728
Coal	46,875	51,869
Wool textiles	48,779	44,480
Machinery and apparatus	29,005	82,549
Cotton yarn and thread	29,191	80,268
Paper and paper goods	25,028	29,849
Crude metals	18,125	25,189
Tobacco	10,012	22,138
Mineral oils	19,139	20,224
Leather, prepared	14,658	18,840
Ironware	15,873	18,858
All others	828,414	892,206
Total	739,700	835,400
Commodity	Exports 1925	1926
Wheat	63,857	116,920
Livestock	83,734	79,644
Flour	102,197	70,166
Rye	81,043	43,788
Poultry	26,418	33,823
Lard and bacon	15,576	28,351
Eggs	19,989	25,820
Sugar	29,025	24,086
Corn	32,535	21,583
Meat, fresh and prepared	18,156	20,954
Wool	17,888	15,712
Electrical equipment	18,982	15,618
Feathers	12,751	14,586
All others	230,899	238,109
Total	700,100	748,100

FINANCE. The budget estimates for 1926-27 provided a revenue of 1,144,177,922 pengos and an expenditure of 1,143,554,386 pengos, leaving a surplus of 623,536 pengos. The budget esti-

mates for 1927-28 provided revenues of 1,192,421,960 pengős and expenditures of 1,192,255,320 pengős, leaving a surplus of 166,640 pengős. (For a discussion of the establishment of the pengő as a unit of currency consult preceding YEAR BOOK.) The public debt of Hungary on Dec. 31, 1925, was given at 1,599,389,000,000 gold crowns, of which 858,322,000,000 gold crowns were pre-war debt.

In the fall the minister of finance reported that the state revenues during the fiscal year 1926-27, which ended June 30, 1927, amounted to 901,100,000 pengős as compared with 814,800,000 pengős in the preceding year (the value of the pengő when these figures were published was \$0.1747). The greatest increase took place in customs receipts, reflecting increased foreign trade. The turnover tax was also a contributing factor. From July, 1924, to May, 1927, it was estimated that a total of 360,000,000 gold crowns' worth of long-term loans (about \$72,000,000) was contracted abroad; the loans included the reconstruction loan, the loans of the cities and counties, and sundry agricultural and industrial loans. The annual interest service of these loans is about 25,000,000 gold crowns (giving an average interest of somewhat below 7 per cent); together with amortization, the total annual burden is believed to be about 35,000,000 gold crowns (\$7,000,000). It was difficult to make a reasonably accurate estimate of foreign short-term loans (3 to 12 months) circulating in Hungary. Their total amount was estimated (May, 1927) at about 300,000,000 gold crowns, with an annual interest burden of 22,000,000 to 23,000,000 gold crowns. The above estimates placed the total indebtedness of Hungary, contracted within two years and a half, at 660,000,000 gold crowns (\$132,000,000), with an annual interest and annuity burden of about 58,000,000 gold crowns (\$11,600,000).

COMMUNICATIONS. There are two railway systems in Hungary, the M. A. V. (Royal Hungarian State Railways), which is owned and operated by the government, and the Danube-Save-Adriatic Railway Co., a private corporation. The former is by far the more important, owning about 92 per cent of the country's total mileage. The aggregate length of the trackage of the two companies is 11,817 kilometers, of which main-line trackage comprises 7882 kilometers (891 standard-gauge double track and 6991 single track) and branch lines and sidings account for 3935 kilometers. The Hungarian railway system in 1926 carried 84,557,549 passengers, and 29,184,760 metric tons of freight. The rolling stock of the two companies at the end of 1926 included 2064 locomotives, 34,439 freight cars, 2991 passenger cars, 1008 baggage and mail cars, seven rail-motor cars, and seven rail-motor trailers. The equipment of both lines was in fair condition. Of the total rolling stock 12½ per cent was under repair at the end of the year. Purchases of rolling stock during the year covered 14 passenger cars, 1349 freight cars, seven rail-motor buses, and seven rail-motor bus trailers. Construction work during the year was limited to the maintenance of the roadbed, to the erection and extension of minor station buildings and warehouses, and to various other minor improvements in the main line and siding trackage.

GOVERNMENT. Technically Hungary is a constitutional monarchy with the throne vacant.

When the present Horthy rule came into power it was decided to keep the old constitution and let the question of who was to be monarch wait until the people were freed from external pressure. In the meantime Admiral Nicholas Horthy acted as regent. As a result of the elections of December, 1926, the following parties were returned to the legislature: Party of National Unity (Bethlen party), 171; Christian Social Union, 35; Socialists, 14; other parties, 25; total, 245. The ministry originally formed on June 17, 1922, was reorganized on Oct. 15, 1926, as follows: Prime Minister, Count Stephen Bethlen; Foreign Affairs, Dr. Louis Walko; Interior, Dr. Béla Szcitovszky; Finance, Dr. John Bud; Agriculture, John Mayer; Commerce, Maximilian Hermann; Education, Count Kuno Klebelsberg; Justice, Dr. Paul Pesthy; National Defense, Count Charles Csáky; Social Welfare, Dr. Joseph Vass.

HISTORY

As noted in the preceding YEAR BOOK, an important change took place in the Hungarian legislature at the end of 1926. The chief point of interest in this change was the passage of a bill to reestablish the upper house which had not been in existence since 1918. (For the method of selection and the election of the new members of the lower house and the members of the upper house consult the article on Hungary appearing in the 1926 YEAR BOOK.) Toward the end of January the new bicameral parliament met with all the pomp and splendor of pre-war court scenes. The master of ceremonies was Admiral Horthy, the regent. He read a speech prepared by Prime Minister Bethlen in which the leaning of Hungary toward Italy rather than toward the Little Entente was expressed by the statement that Hungary preferred an outlet to the sea through the port of Fiume rather than through the Jugo-Slav port of Spalato. This statement led to all sorts of conjectures concerning Hungary's future rôle in Central European affairs. It was a well known fact that she did very little toward reconstructing her former position and seemed to be content to let the other smaller states fight among themselves, possibly with the hopes that out of the ashes of an economically bankrupt Central Europe a new and more powerful Hungary could and would arise. Bethlen, along these lines, stated that the time was not ripe for a discussion of the restoration of the monarchy, and that he and the Regent had decided to let the matter rest for at least five years, inasmuch as the people of the country seemed to be perfectly satisfied with the *status quo*.

The orientation of Hungary toward Rome took a definite form in April when Count Bethlen made a trip to Mussolini's capital and signed a treaty of friendship, conciliation, and arbitration with Italy. Immediate speculation was rife throughout Europe as to the meaning of this move. Many believed that Hungary was desirous of obtaining Mussolini's approval for any move she might make along the lines of restoration of the monarchy, while others thought that this move would leave Hungary in a stronger position between Slavic Balkan states and an Austro-German rapprochement. From the point of view of Italy, of course, it was merely another striking proof of her economic and political penetration of the Balkan peninsula. Jugo-

Slavia, Czechoslovakia, and Rumania, the so-called Little Entente, scarcely looked upon the move with approval, particularly since the Conference of Ambassadors of the League of Nations abolished military control over Hungary on March 29, an act which was almost at once followed by the introduction of a measure in the Hungarian parliament to increase the armed forces of the nation.

Toward the close of the year internal conditions in Hungary were seriously upset by anti-Semitic riots and protest meetings against the attitude of the government in suppressing the street sales of certain newspapers which were critical of its actions. The anti-Jewish riots were very widespread and caused considerable comment in the American press. The occasion was the discussion in parliament of a change in the law covering the number of Jewish students which would be allowed to enter each university in the country. The present law permitted only 5 per cent of the students to be Jewish. The riots were caused because the misguided instigators felt that the government might let down the barriers and permit more than 5 per cent to enter the universities. The government itself was to be severely criticized for the issuance of a statement to the effect that it would not guarantee any protection to Jewish students. The opposition in parliament, mainly Socialistic, bitterly but vainly attacked the government for its medieval stand on the Jewish question, and openly accused it of inviting trouble in the future by failure to take a strong hand in the riots, particularly in Budapest.

HUNT, THOMAS FORSYTH. American agronomist and teacher of agriculture, died on April 5. He was born at Ridott, Ill., Jan. 1, 1862, and graduated at the University of Illinois with the degree of B.Sc. in 1884. He was professor of agriculture at the Pennsylvania State College, 1891-92; professor of agriculture, 1892-1903, at the Ohio State University, and dean of the college of agriculture and domestic science at the same institution, 1896-1903; professor of agronomy at Cornell University, 1903-07; dean of the school of agriculture and director of the Pennsylvania Agricultural Experiment Station of the State College of Pennsylvania, 1907-12; director of the agricultural experiment station of the University of California, 1912-19, and professor of agriculture at the same institution from 1912 until his death. He received the honorary degree of D.Agr. from the university in 1904, and that of D.Sc. from Michigan Agricultural College in 1907. He wrote: (with G. E. Morrow) *Soils and Crops of the Farm* (1895); *History of Agriculture and Rural Economics* (1899); *The Cereals in America* (1904); *How to Choose a Farm* (1906); *The Forage and Fiber Crops in America* (1907); *The Young Farmer* (1913); (with C. W. Burkett) *Soils and Crops* (1913) and (with C. W. Burkett) *Farm Animals* (1914).

HUNTINGTON, GEORGE SUMNER. American anatomist, died at New York, January 5. He was born at Hartford, Conn., Mar. 21, 1861. He received his academic education at Trinity College, Hartford, Conn., and his instruction in medicine at the College of Physicians and Surgeons, Columbia University, New York, receiving his degree of M.D. in 1884. After serving as an interne at Roosevelt Hospital, New York, 1884-86, Dr. Huntington began the teaching

career that won for him a world-wide reputation as a teacher of anatomy; according to some authorities he was the greatest anatomist of modern times. He was, successively, assistant demonstrator of anatomy, 1886-88, demonstrator and lecturer, 1888-89, and professor of anatomy, 1889-1925, at the College of Physicians and Surgeons. He was said to have been the first teacher of anatomy to place the science on an evolutionary basis. In 1904 Columbia conferred on him the honorary degree of Sc.D. Among the students of Dr. Huntington were men known in both America and Europe for their accomplishments as physicians and surgeons. He wrote voluminously, and his writings covered all phases of anatomical research; some of his books, notably *The Anatomy of the Peritoneum*, are standards. From 1899 Dr. Huntington was editor of *Journal of Anatomy and Physiology*.

HUNTINGTON, HENRY EDWARDS. American railroad executive, shipbuilder and art and book collector, died at Philadelphia, Pa., May 23. He was born at Oneonta, N. Y., Feb. 27, 1850, and was educated at public and private schools. He was a member of a family prominent in American history for several generations, and was a nephew of the late Collis P. Huntington, railroad builder, capitalist, and art collector. Henry E. Huntington began his business life as a clerk in a hardware store in Oneonta, but moved soon to New York, where he engaged in the same occupation there. At 21 he was sent by his uncle to St. Albans, W. Va., to look after valuable timber properties. His success there led the elder Huntington to make him superintendent of construction of the Chesapeake, Ohio & Southwestern R. R. He next became general manager, receiver and vice president of the Kentucky Central R. R. and rescued that road from bankruptcy. His first close association with his uncle's roads was as assistant to the president of the Southern Pacific Ry. In 1900 he became first vice-president of the road. He later became president of several subsidiary railroad lines and other corporations and a director or officer of more than a score of important enterprises, including the Newport News Shipbuilding & Drydock Company. When Collis P. Huntington died, in 1900, he left more than \$10,000,000 to his nephew, and this legacy, added to the large fortune which the younger Huntington had amassed by his own efforts, enabled him to gratify the taste for the acquisition of books and objects of art which raised him to the very front rank of the world's collectors. Eventually he became the owner and the donor to the public of books, paintings and other art objects which many judicious authorities called the finest private collection in the world. In 1913, after Mr. Huntington's first marriage had been ended by divorce seven years previously, he married the widow of his uncle, who had received \$22,000,000 from her husband's estate.

Included in the literary and art treasures assembled by Mr. Huntington first in his home in New York City and then at his estate, San Marino, near Pasadena, Cal., are such highly valued objects as the painting, "The Blue Boy," by Gainsborough, the manuscript of Chaucer's *Canterbury Tales*, a Gutenberg Bible, a score of the earliest Caxtons, a number of first editions of Shakespeare, and the manuscript of Benjamin Franklin's autobiography. The Hunt-

ington library is a mine of probably unequaled wealth for historical research. Several times he paid amounts approximating or exceeding \$1,000,000 for single collections of books and manuscripts, in America and England. In 1921 it was estimated that he had expended more than \$10,000,000 on books and manuscripts and more than \$5,000,000 on paintings, and he continued his lavish purchases down to the closing months of his life.

Soon after the purchase of "The Blue Boy," in 1921, it was announced that Mr. Huntington had decided to give his collections of books and pictures to the American public, together with his palace at Pasadena and a maintenance fund of several millions of dollars; they were to come into possession of the public after his own death and that of Mrs. Huntington.

HURD, HENRY MILLS. American psychiatrist, died at Ventnor, N. J., July 19. He was born at Union City, Mich., May 3, 1843, and was educated at the University of Michigan, graduating from the academic department in 1863 and from the medical department in 1866. The greater part of his professional career was devoted to the study of the problems of psychiatry, and he acquired distinction in that field. From 1878 to 1889 he was superintendent of the Eastern Michigan Asylum, and in the latter year became professor of psychiatry at Johns Hopkins University, Baltimore, Md. He held the chair until 1906 when he was made professor emeritus. From 1889 to 1911 he was superintendent of the Johns Hopkins Hospital. He was president of the American Academy of Medicine, 1896, of the American Medico-Psychological Association, 1898-99, and of the American Hospital Association, 1912. The University of Michigan conferred on him the honorary degree of LL.D. in 1895. He edited numerous books on the conduct of hospitals, and wrote many papers and bulletins on the subject, besides *Hints to Hospital Visitors* (1895), written with Dr. John S. Billings. His last work, published in 1917 in four volumes, was *Institutional Care of the Insane in the United States and Canada*.

ICELAND. An island state united with Denmark in the person of the king by the act of union of Nov. 30, 1918. Area, variously estimated at from 39,707 to 40,456 square miles; population according to the census of 1920, 94,690; estimated at the end of 1927, 100,000. The capital, Reykjavik, had a population of 23,000 in 1927. All the other towns had populations of less than 3000. The number of foreign-born inhabitants is very small and consists chiefly of Danes and Norwegians. The movement of population in 1925 was: Births, 2546; deaths, 1189; marriages, 622. Although religious freedom is complete, and to be a non-conformist entails no civil disability, there were only 463 dissenters from the endowed national church, the Evangelical Lutheran, at the census of 1920. Primary instruction is compulsory between the ages of 10 and 14, children up to the age of 10 being privately educated as a rule. According to the latest available statistics there were 209 ele-

mentary schools, with 318 teachers and 6485 pupils; several continuation schools; and a university at Reykjavik. Only about one-fourth of one per cent of the area of the island is under cultivation, producing chiefly hay, potatoes, and turnips. The crops in 1924 were: Hay, 2,570,000 cwt.; potatoes, 50,000 cwt.; and turnips, 17,000 cwt. Livestock figures in the same year were: Horses, 50,800; cattle, 26,000; sheep, 583,000; and goats, 2600. The fisheries were valued at 28,338,000 crowns in 1922, of which the value of codfish was 25,117,000 crowns and herring, 2,443,000 crowns. According to the *Iceland Year Book* for 1927 the total exports in 1924 were valued at 85,866,967 crowns and the imports at 63,781,417 crowns.

The fisheries made possible this favorable balance of trade. The budget estimates for 1927 showed a revenue of 10,834,134 crowns and an expenditure of 11,109,647 crowns. The public debt of Iceland has been incurred partly by the establishment of telegraph lines and other important public works, partly by increasing the means of the national bank, but mainly owing to the extraordinary expenses caused by the World War (buying of ships and providing commodities). The national debt on Jan. 1, 1926, was 11,800,000 crowns as compared with 18,200,000 crowns on Jan. 1, 1924. The mercantile marine in 1924 consisted of 149 vessels of 24,592 gross tons. Although Iceland has no railways it was reported in 1927 that the government had planned to remedy this deficiency. The Norwegian company, Titan, Ltd., had the contract. The line will run from Reykjavik, the capital, to Thorjorsaa, 50 miles, and will cost about \$500,000. Construction was to be begun on the railway before May 1, 1929, and is to be completed not later than July 1, 1933. If the company fails to meet these terms, all the work executed falls to the state, without any compensation to the company.

Executive power is vested in the king who acts through a responsible ministry; and legislative power in the king and Althing or parliament, which consists of 42 members, of whom six are elected for eight years, by proportional representation for the whole country, and 36 for four years by universal suffrage. The Althing is divided into two houses, of which the upper has 14 members and the lower 28. The right to vote is possessed by both men and women over the age of 25. King in 1927, Christian X; President of the Council (ad interim), Jon Thorlaksson; Ministers—Justice and Ecclesiastical Affairs (ad interim), Magnus Gudmundsson; Trade and Communications, Magnus Gudmundsson; Finance, Jon Thorlaksson.

IDAHO. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 431,866. The estimated population on July 1, 1927, was 534,000. The capital is Boise.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Wheat, spring	1927	670,000	20,100,000	\$19,296,000
	1926	598,000	14,852,000	15,070,000
Wheat, winter	1927	501,000	12,274,000	12,274,000
	1926	447,000	10,281,000	11,102,000
Hay	1927	1,115,000	8,812,000	28,488,000
	1926	1,128,000	2,889,000	25,758,000

Crop	Year	Acreage	Prod bu.	Value
Potatoes	1927	115,000	24,380,000	13,409,000
	1926	91,000	16,198,000	17,008,000
Oats	1927	143,000	6,721,000	3,860,000
	1926	119,000	4,760,000	2,142,000
Barley	1927	129,000	5,676,000	3,860,000
	1926	112,000	4,144,000	2,486,000
Corn	1927	76,000	3,116,000	2,555,000
	1926	66,000	2,706,000	2,435,000
Sugar beets	1927	30,000	383,000*	744,000
	1926	18,000	108,000*	744,000
Dry beans	1927	72,000	1,706,000	4,265,000
	1926	54,000	999,000	2,597,000

* tons.

MINERAL PRODUCTION. Lead was again in 1926 the foremost mineral product of the State, and Idaho held third rank among the States as a lead producer. The metal continued to furnish the major part, reckoned by value, of the State's mineral output. Lead production increased to 272,980,212 pounds for 1926, from 253,041,790 pounds for 1925. A lower price, however, approximately 8 cents a pound for 1926 as compared with 8.7 cents for 1925, offset the quantity increase. The total value of lead produced fell consequently, for 1926, slightly below the corresponding total of \$22,014,636 for 1925. In the case of zinc, in which the price was maintained, production was high, being 52,614,691 pounds for 1926 as against 31,237,240 pounds for 1925, at 7.5 cents a pound for 1926 as compared with 7.6 cents for 1925. Silver production was slightly above that for the year preceding: 7,556,444 fine ounces for 1926, and for 1925 7,743,439 fine ounces; the average price, however, being lower, 62.4 cents an ounce in 1926, and in 1925; 69.4 cents. Copper production was less, attaining only 1,337,442 pounds in 1926; in 1925 3,297,443 pounds. Gold was produced in minor and declining quantity, 13,669 fine ounces in 1926, as against 20,837 fine ounces in 1925, when the product was worth \$431,771. The value of gold, silver, copper, lead and zinc made up all but a small part of the entire mineral production of the State in respect of value, and was \$30,960,551 for 1926; for 1925, \$30,662,621. Asbestos was mined (1925) to a value of \$184,007. Mineral products of the State in 1925 had a total value of \$31,611,166.

The value of the gold, silver, copper, lead, and zinc produced from ore mined in Idaho in 1927, according to estimates of the U. S. Bureau of Mines, was about \$28,469,000. Despite the decline in metal prices there was a decided increase in the output of silver and lead and a slight increase in gold and copper. A small decrease in zinc resulted from unusual local market conditions. Large increases in both silver and lead were made from the Hecla, Bunker Hill & Sullivan, Sunshine, Sidney, Page, Galena, Black Hawk, United Idaho, Wilbert, Whitelief, Tamarack & Custer, and Strattons properties. According to published reports mining companies paid dividends amounting to approximately \$5,827,400, compared with \$8,135,587 paid in 1926. The mine output of gold in 1927 was valued at \$289,400 as compared with \$282,569 in 1926.

While the output of silver increased to about 8,616,000 ounces in 1927, and the value to \$4,885,300, there was an increase in silver produced from lead ores, especially from the Bunker Hill & Sullivan, Hecla, Galena, Whitelief, and Strattons properties, but the largest increase was in copper-lead concentrate, chiefly valuable

for its silver, shipped by the Sunshine Mining Co. The output of copper increased to about 1,843,000 pounds in 1927, and the value to \$239,600. The Idaho Metals Co. at Mackay was active the entire year and its output of copper was nearly three times that of 1926. The output of lead increased to 293,600,000 pounds in 1927, but the value decreased from \$21,838,417 to \$19,877,000 as a result of the decline in the average price of the metal. The Bunker Hill & Sullivan, Morning, and Hecla mines were as usual the three largest producers. The zinc recovered from ore and concentrate decreased from 52,614,691 pounds in 1926 to 50,600,000 pounds in 1927, and the value from \$3,946,102 to \$3,178,000. The decrease was due not only to the drop in the price of zinc, but to the fact that shipments to Belgium ceased in May when the contract with the Vieille Montagne Zinc Co. terminated. Most of the output was recovered by roasting and leaching at Great Falls, Mont., and nearly all the remainder was shipped to Belgium for smelting.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Sept. 30, 1926, were \$4,393,983; their rate per capita was \$8.47. They included \$546,576 apportioned for education. Totals not included above, of \$327,758 for interest payments and \$2,784,457 for permanent improvement outlays, brought the aggregate of State expenditure to \$7,506,198. Of this, \$3,393,424 was for highways; \$925,398 being for maintenance and \$2,468,026 for construction.

Revenue receipts were \$7,917,519; or per capita, \$15.26. Of their total, property and special taxes yielded 31.5 per cent, attaining a rate of \$4.80 per capita. Earnings of departments and compensation paid the State for officials' services supplied 5.8 per cent of the revenue; 21.2 per cent was derived from the sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a tax on gasoline sales.

Net State indebtedness on Sept. 30, 1927, was \$4,705,106, or \$9.07 per capita. Property subject to ad valorem taxation had a total valuation of \$477,805,522. State taxes levied were \$2,205,349, or \$4.25 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 2,908.75. There were constructed in 1927, according to the *Railway Age*, 30.14 miles of new first track.

EDUCATION. It was provided by law in 1927 that after 1929 all teachers must have qualified by at least two years of normal school training. The unified system of State educational organization continued in force, and received suitable support from the Legislature. Revision of the school curriculum by the State educational authorities was under consideration. The school population of the State in 1927 was given as 141,232. There were enrolled in 1926 in the public schools 119,173 pupils. Of these, 96,454 were in the elementary schools and 22,719 in high schools. Expenditures on public school education in 1927 were approximately \$8,400,000. The salaries paid to the teachers of the state of Idaho (superintendents and supervisors excluded) averaged \$1,090.15 during the year.

CHARITIES AND CORRECTIONS. The State Department of Public Welfare had general charge of all matters relating to public health, and supervised certain State institutions. These, with their approximate populations at the end of 1927, were: Northern Idaho Sanitarium for the Insane, Orofino, 300; State School and Colony for the Feeble Minded, Nampa, 300; Idaho Soldiers' Home, Boise. The Idaho Mental Hospital, at Blackfoot, not controlled by the Department, had some 200 inmates. The Idaho State Penitentiary, at Boise, was conducted as a separate institution.

LEGISLATION. The State Legislature convened January 3, and adjourned early in March. It provided for an extensive State building programme for educational, penal and charitable institutions. An increase in the State gasoline tax to the rate of 4 cents a gallon was enacted. A measure was passed to establish at Pocatello a southern branch of the State University. The counties of the State were required to adopt budget systems. The Legislature submitted to the people a proposal to amend the State constitution so as to extend the terms of State officers to four years. The Hoover uniform motor vehicle traffic code was adopted in part. Appropriation of \$20,000 was made for a Governor's mansion. An appropriation was made for the Board of Eugenics to enable it to put into fuller effect the State's sterilization act. A law was enacted rendering it criminal trespass to hunt without permission on inhabited property, even though this were not posted. The election law was modified in such manner as to leave the nomination of county and legislative candidates to popular primaries, while placing Congressional, judicial and State officials' nominations in the hands of party conventions. The Governor was empowered to take over and hold in trust the water of Priest, Pend Oreille and Coeur d'Alene Lakes until it might be decided whether the State needed the water, this action being relative to a conference on the Columbia Basin water project.

POLITICAL AND OTHER EVENTS. With regard to the State's rights in waters of lakes sought for Federal development in the Columbia Basin project, the moves made by the Governor and Legislature of Idaho to reserve these waters to itself produced a sharp difference of interests with the State of Washington, somewhat like that between Arizona and California over the Colorado River. Plans for the erection of a monument to Governor Steunenberg, assassinated in 1907, in recognition of his service in suppressing disorders in the Coeur d'Alene district, were formed, and an appropriation of \$15,000 by the Legislature toward such a monument was matched by private contributions.

OFFICERS. Governor, H. C. Baldrige; Lieutenant-Governor, Oscar E. Hailey; Secretary of State, Fred E. Lukens; State Auditor, E. G. Gallet; State Treasurer, Byron Defenbach; Attorney General, Frank L. Stephan; Superintendent of Public Instruction, Mabelle M. Allen; Inspector of Mines, Stewart Campbell.

JUDICIARY. Supreme Court: William E. Lee, Alfred Budge, Raymond Givens, Herman H. Taylor, T. Bailey Lee.

IDAHO, UNIVERSITY OF. A State institution of higher learning at Moscow, Idaho; founded in 1889. The total enrollment for the first

semester of 1927-28 was 2038, of whom 1249 were men and 789 were women, the distribution being as follows: college of letters and science, 688; college of agriculture, 109; college of engineering, 192; college of law, 24; school of mines, 50; school of forestry, 90; school of education, 326; school of business, 299; special courses, 37; non-resident, 223. During the 1927 summer session 287 were enrolled, of whom 100 were men, and 187 were women. The income for 1927 amounted to approximately \$1,250,000. The library contained 90,000 volumes. President, Alfred H. Upham, Ph.D.

ILLINOIS. **POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 6,485,280. The estimated population on July 1, 1927, was 7,296,000. The capital is Springfield.

Chicago's population, late in 1926, was estimated on the basis of birth rates and school assessor's statistics as being 3,151,989, an increase of 16.7 per cent over the 1920 official census. The population of the metropolitan area of the city was estimated at 4,100,000. In 1927 the U. S. Bureau of the Census estimated the population of Chicago as of July 1, at 3,102,900.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	8,469,000	254,070,000	\$180,890,000
	1926	9,205,000	822,175,000	180,418,000
Hay	1927	8,556,000	5,140,000*	58,447,000
	1926	8,115,000	3,662,000*	58,987,000
Wheat, winter	1927	2,293,000	80,956,000	37,147,000
	1926	2,163,000	38,934,000	47,499,000
Wheat, spring	1927	216,000	3,888,000	4,549,000
	1926	120,000	2,100,000	2,562,000
Oats	1927	4,008,000	102,204,000	43,948,000
	1926	4,661,000	128,516,000	43,231,000
Potatoes	1927	64,000	5,376,000	6,182,000
	1926	61,000	4,880,000	8,540,000
Barley	1927	453,000	13,364,000	9,756,000
	1926	302,000	9,362,000	5,430,000
Soy beans	1927	894,000	2,288,000	3,208,000
	1926	346,000	1,675,000	2,764,000

* tons.

MINERAL PRODUCTION. The State maintained in 1925 its rank of seventh in respect of the total value of minerals produced. In point of bituminous coal production, the source of the chief part of the total value of minerals extracted within its borders, it ranked third of the States. It produced in 1926 a total quantity of 69,366,923 net tons of coal; in 1925, of 66,900,359 tons. This product had for 1926 a total value of \$148,004,000; for 1925, of \$146,492,000. Illinois blast furnaces produced in 1926, 3,626,330 long tons of pig iron, as against 3,600,484 tons in 1925. This product was valued, for 1926, at \$73,460,392; for 1925, at \$74,937,781. Coke, another of the products connected with the coal industry, was active in 1926, being produced to the quantity of 3,336,692 short tons, entirely in by-product ovens, as against a quantity of 3,011,497 tons in 1925; and to a value of \$25,050,474 in 1926 and in 1925 of \$22,568,845. In 1927 due to the strike in the coal fields the output decreased. Clay products, the highest in aggregate value of any outside the coal and iron group, were valued at \$36,763,980 for 1925, the

latest year of available statistics; for 1924 at \$33,591,368. Petroleum production was important, 7,766,000 barrels in 1926 and in 1925, 7,863,000 barrels; in value, \$17,300,000 in 1926 and in 1925, \$15,235,000. Of Portland cement there were produced 6,747,241 barrels in 1926 and in 1925, 7,101,024 barrels; in value, \$11,388,800 in 1926 and in 1925, \$11,481,576. The total value of the State's mineral products was \$231,658,604 in 1925; in the year 1924 it was \$235,796,027.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$43,158,325; their rate per capita was \$6.04. They included \$8,777,223 apportioned for education. Totals not included above, of \$40,952 expended in public service enterprises, \$5,667,947 for interest payments and \$27,357,093 for permanent improvement outlays, brought the aggregate of State expenditures to \$76,224,517. Of this, \$26,364,926 was for highways, \$2,041,542 being for maintenance and \$24,323,384 for construction. The interdepartmental payments attained \$319,612.

Revenue receipts were \$75,223,910; or per capita, \$10.52. Of their total, property and special taxes yielded 51.2 per cent, attaining a rate of \$5.39 per capita. Earnings of departments and compensation paid the State for officials' services supplied 4.2 per cent of revenue; 38.5 per cent was derived from the sale of licenses, chiefly on incorporated companies and motor vehicles.

Net State indebtedness on June 30, 1926, was \$138,633,018, or \$19.39 per capita. Property subject to ad valorem taxation had a total valuation of \$4,194,769,417. State taxes levied were \$35,655,540, or \$4.99 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 11,997.46. New construction in 1927, as reported by the *Railway Age* was 36.09 miles of second track.

EDUCATION. Measures enacted by the Legislature in 1927 promoted the distribution of State aid to schools for the purpose of equalizing schooling rather than of aiding districts able to care for themselves; amended the teachers' tenure law; raised salaries of county superintendents. According to comment in the *Journal* of the National Education Association, State school aid in Illinois under the new system of distribution would assist the weaker districts in much larger measure than they had previously been aided.

CHARITIES AND CORRECTIONS. The State Department of Public Welfare, under an act of 1917, has charge and supervision of the charitable and penal institutions of the State. The current report of this Department, covering the year ended June 30, 1926, gave the following as the average populations of the several State institutions in that year: Elgin State hospital, 2719; Kankakee State Hospital, 3878; Jacksonville State Hospital, 2832; Anna State Hospital, 1830; Watertown State Hospital, 1793; Peoria State Hospital, 2501; Chester State Hospital, 251; Chicago State Hospital, 3136; Alton State Hospital, 1287; Lincoln State School and Colony, 2275; Dixon State Hospital, 1755; Illinois School for the Deaf, 423; Illinois School for the

Blind, 211; Illinois Industrial Home for the Blind, 88; Illinois Soldiers' and Sailors' Home, 725; Soldiers' Widows' Home, of Illinois, 101; Illinois Soldiers' Orphans' Home, 508; State Training School for Girls, 433; St. Charles School for Boys, 769; Illinois State Penitentiary, 2430; Southern Illinois Penitentiary, 1540; Illinois State Reformatory, 1321; Woman's Prison, 59; Illinois State Farm, 197. As reported by the Department of Commerce, patients in the State hospitals for mental disease on Jan. 1, 1927, numbered 20,317; the number of prisoners received at the four State institutions in 1926 was 1726.

LEGISLATION. The General Assembly convened in regular biennial session January 5, and adjourned June 30. It enacted a law designed to double the borrowing capacity of the city of Chicago; to this end the law raised the rate of assessed valuation for the city, from 50 per cent, to 100 per cent of the actual value of property assessed. Tax rates were coincidentally cut in half, with the exception that the Chicago corporate tax rate as thus altered was then increased by 20 cents. Another act increased the debt limit of the Chicago Sanitary District from 4 per cent of the valuation of property to 5 per cent. A bill placing the State gasoline tax rate at two cents a gallon was enacted. It provided that half of the proceeds should be credited to the hard road fund and half to the counties of the State. The State Senate on its original vote failed to pass this measure, but one of the opposing Senators later demanded reconsideration and on the ensuing ballot that was taken it was passed.

An appropriation bill carrying about \$85,000,000 in appropriations for the expenditure of the State departments over a two-year period was enacted. Wagers on horse races within the State under the pari-mutuel system were rendered legal, from July 1. The Director of Agriculture was charged with the administration of the State control over the pari-mutuel system, and fees for application to employ it, and surety bonds to cover the applicants were required. The proceeds were assigned to a State fund for agricultural prizes.

Legislation providing authorization for large outlays by the North Side and the South Side park systems of Chicago was passed; likewise an amendment of the Calumet Harbor act of 1921, incorporating features of that act, of which the constitutionality in its entirety had been impugned, in a previous act of 1913. This measure was designed to promote the Chicago harbor development plan. There was enacted a measure providing immunity, from ousting by *quo warranto* proceedings, for the Governor, who had been threatened with such proceedings on account of the court decision that he owed the State money as a result of acts while he held the office of State Treasurer. An amended primary law greatly increased the number of party committeemen to be elected. Among other statutes enacted, one rendered slander by radio punishable with a fine of \$100; another rendered it possible for localities to form mosquito abatement districts. Among important measures that failed of enactment were those for a State reapportionment, for Chicago traction franchises, and for the creation of a State income tax. (See also *Education*, above.)

POLITICAL AND OTHER EVENTS. After the State Legislature, like its recent predecessors, had failed to reapportion State representation, Judge Feinberg of the Cook County Circuit Court declared the existing reapportionment act unconstitutional. He rendered November 1 a decision favorable to a taxpayer suit brought by John B. Feigus of Chicago. This decision invalidated both the reapportionment of 1901, then in force, and its predecessor, that of 1893, on the ground that population had shifted since their passage. A mandamus writ was issued to require the county clerk to call elections under the act of 1882. In another suit, brought by Julius Kreeger, a Chicago ward leader, Judge Fisher of the Superior Court on November 10 declared unconstitutional the State primary law of 1927, on the ground that while penalizing nonregistration with disfranchisement, it made insufficient provision for registering voters.

Capital punishment by the electric chair came into practice in Cook County July 1. The State Forester during the year made preliminary surveys looking to State purchase of divers uplands and overflowed bottoms for State forests. In Williamson County, C. Birger, a gang leader, was convicted July 24 of the murder of Mayor Adams, Mayor of West City and alleged protector of a rival gang, and was sentenced to death, two companions receiving life sentences. The headquarters of the Birger gang were bombed by a rival gang January 9, and four were killed. It was then reported that gang hostilities had caused more than 60 deaths in southern Illinois in the course of five years. Union soft coal miners in the State joined the general strike in that industry April 1. They resumed work October 1 under a State-wide agreement continuing the old Jacksonville wage scale until the negotiation of a new scale in February 1929. The Chicago Board of Trade, threatened with hostile legislation, limited trading in future contracts temporarily May 8. The city of Peoria, through its city council, considered plans for the construction of a great river terminal to form part of the proposed Lakes-to-Gulf waterway project.

Chicago elected William Hale Thompson, Republican, mayor in the city election of April 5, Mayor Dever being defeated for reelection. Thompson obtained a plurality of about 83,000, out of 993,617 votes cast. A home rule proposal, to give the city control of its utilities, failed of ratification by the voters. Soon after Mayor Thompson's inauguration, charges were brought against the city superintendent of schools. William McAndrew, relating to pro-British leanings alleged against him by the Thompson party. He was put on trial September 29, with the object of his removal, but the trial was allowed to drag. It was announced in October that the Mayor had directed one of the trustees of the Chicago Public Library to hunt out all books on its shelves containing pro-British propaganda, and to have them burned. Citizens sought injunctions against such a proceeding, and the Mayor, responding, asserted that while books might be removed from the public shelves, none would be burned.

In the litigation as to the alleged excessive drawing of water from the Great Lakes by the Chicago Sanitary District for the flushing of the Drainage Canal and other city uses, hear-

ings before Charles E. Hughes, special master at the appointment of the United States Supreme Court, continued through March. The Court later denied the State of New York its request to include in its complaint allegations of the harmful effect of the Chicago diversion on New York's power rights in the Niagara and St. Lawrence Rivers. Mayor Thompson announced in Chicago that he would not order the use of water meters as sought by the War Department under the terms of the Federal permit to the city to draw water from the Great Lakes.

In the suit against the Chicago Sanitary District and the State of Illinois, to prevent diversion of an excessive quantity of water through the Chicago Drainage Canal, mentioned above, Charles Evans Hughes, acting as Special Master, filed his report November 23 with the United States Supreme Court. The report found the complaining States to be largely correct in their allegations as to the lowering of the Lake levels, but represented the diversion permit held from the War Department as valid, and recommended dismissal of suit for an injunction against diversion under the terms of the permit, without prejudice to right of suit against diversion if it were made without authority of law.

Dispute among the parties in the Chicago transit situation contributed to the failure of the Legislature to pass city traction legislation. Work done in the year along the lines recommended by the Chicago Plan commission included the widening of La Salle Street, from Washington Street to Ohio Street, at an expected cost of about \$7,500,000. At an election on June 6, bond issues for \$15,000,000 for the construction of a Town Hall, \$10,000,000 for the West Park District, \$6,500,000 for the South Park District and \$2,000,000 for the Lincoln Park District were approved. The Clarence Buckingham memorial fountain, at the Lake front near the Loop district, modeled on one of the fountains of Versailles, was dedicated August 29. See CITY PLANNING.

OFFICERS. Governor, Len Small; Lieutenant-Governor, Fred E. Sterling; Secretary of State, Louis L. Emmerson; Treasurer, G. D. Kinney; Auditor, Oscar Nelson; Superintendent of Public Instruction, Francis G. Blair; Attorney General, O. E. Carlstrom.

JUDICIARY. Supreme Court: Chief Justice, Oscar E. Heard; Associate Justices: Floyd E. Thompson, Warren W. Duncan, Frank K. Dunn, William M. Farmer, Frederic R. DeYoung, and Clyde E. Stone.

ILLINOIS, UNIVERSITY OF. A coeducational State institution of higher education at Urbana-Champaign, Ill.; founded in 1867. The enrollment in the autumn of 1927 was 12,033, of whom 8870 were men and 3163 were women, distributed among the several colleges as follows: liberal arts and sciences, 4216; commerce and business administration, 1868; education, 887; engineering, 1695; agriculture, 625; music, 135; law, 386; library, 49; graduate school, 769; medicine, 483; dentistry, 193; pharmacy, 620. 2254 students enrolled for the summer session of 1927, of whom 1336 were men and 918 were women. The number of those on the teaching staff above the rank of assistant was 674. In that grade or lower there were 461. The

administrative officers totaled 26. The library contained 708,850 volumes and 99,850 pamphlets. The productive funds from Federal endowment were \$649,013, and from private gifts \$110,000. The income for the year 1926-27 was \$7,825,790, of which \$5,947,125 was from the State. During 1927-28 a building for architecture was constructed and additions were made to Lincoln Hall and to the library. President, David Kinley, Ph.D., LL.D.

IMMIGRATION. The U. S. Commissioner General of Immigration, in his survey of the year July 1, 1926-June 30, 1927, discussed the following questions:

IMMIGRANTS. During the year, 538,001 aliens were admitted and 253,508 departed, making an alien increase of 284,493 as compared with 268,351 in the preceding fiscal year. Nearly one-half of the immigrants came from the Western Hemisphere and most of these were from Mexico (67,721) and Canada (81,506). Of the European immigrants (168,308), Germany came first (48,513), then Irish Free State (28,054) and Great Britain (23,669). From Italy came 17,197 and from the Scandinavian countries 16,860. From the rest of Europe came 33,975 immigrants. Racially, the following was the distribution of the new arrivals: Mexican, 66,766; German, 56,587; Irish, 44,726; English, 40,165; Scotch, 25,544; French, 19,313; Scandinavian, 19,235; Italian, 18,529; Hebrew 11,483. The newcomers appeared to be spreading over the country and there was a perceptible movement to the Central West and the Pacific Slope States. New York State's net gain of population was 55,501, Massachusetts 20,007, Michigan 24,976, Texas 41,672, California 21,075. Over the Canadian border 95,420 were admitted, 75 per cent of whom were Canadian-born; over the Mexican border 81,539 were admitted, 96 per cent of whom were Mexican-born. During the year only 19,755 aliens were denied admission. In New York, for instance, only five out of every 1000 applicants were barred. Before the War the ratio was 16 out of 1000. See JEWS.

MEXICAN IMMIGRATION. The net addition of Mexican immigrants to the country for the fiscal year was 69,685. This was 20,882 below the high year of 1924. The Mexican immigration population is an adult group, 62.1 per cent being over 21 years and three-fourths being male. The unskilled labor group predominated. It was estimated that the Mexican population in the United States had doubled since 1920. There must be fully 1,000,000 Mexicans in the United States, said the Commissioner General of Immigration.

FOREIGN SERVICE. There were in 1927 technical advisers attached to the consulates in the following European cities: Antwerp, Belgium; Belfast, Ireland; Bergen, Norway; Berlin, Germany; Bremen, Germany; Cobh, Ireland; Copenhagen, Denmark; Cologne, Germany; Dublin, Ireland; Genoa, Italy; Glasgow, Scotland; Gothenberg, Sweden; Hamburg, Germany; Liverpool, England; London, England (2); Naples, Italy; Oslo, Norway; Palermo, Italy; Prague, Czechoslovakia; Rotterdam, Holland; Southampton, England; Stockholm, Sweden; Stuttgart, Germany; Warsaw, Poland. These men were in charge of the pre-inspection work abroad, and so successfully performed was this

duty that in the two years' operation of the plan the ratio of the barred individuals to admissions, at New York had been 6 in 1000 (1926) and 4 in 1000 (1927).

DEPORTATIONS. The Bureau deported during the fiscal year 12,055 undesirable aliens, or 1511 more than were deported in the previous fiscal period.

ALIEN INMATES OF PRISONS, ETC. The Bureau, in January, made a survey of the number of alien inmates in penal institutions, insane asylums, and hospitals and poorhouses and found a total of 113,105 such.

VISA PETITIONS. For the year 34,169 petitions were filed by American citizens for the issuance of non-quota visas for wives and unmarried children under 18 years, and for preferential status for children between 18 and 21 years, parents and husbands. A total of 27,023 of the 34,169 was approved.

"BOOTLEGGING" IN ALIENS. The Commissioner General was of the opinion that "bootlegging" in aliens was one of the most important of the country's unofficial industries. He declared that Cuba and the Bahama Islands serve as the relay stations in this trade, with Florida as the objective. Even the air is being resorted to. Says the Bureau report of this type of alien: "The 'bootlegger' alien is by all odds the least desirable.

Whatever else may be said of him, whether he be diseased or not, or whether he holds views inimical to our institutions, he at best is a law violator from the outset and one whose entrance should be prevented if possible rather than merely penalized by deportation." Unofficial advices had it that as many as 170,000 aliens were smuggled into the country during the fiscal year. There were charges of a system operating across the Canadian border particularly. Cuba was considered another focal point of the smugglers, who, it was said, charged \$750 a head for running Japanese, Chinese and Hindus into the United States, and \$300 for Greeks and Italians.

BORDER PATROL. "Bootlegging" was being fought by this arm of the service which was inaugurated in 1924. In 1927 there was a personnel of 781 and the service was equipped with motor cars. The patrol was divided into 11 districts with headquarters at Seattle, Spokane, Grand Forks, Detroit, Buffalo, Montreal, Jacksonville, New Orleans, San Antonio, El Paso, and Los Angeles. During the year the service patrolled 4,559,838 miles (mostly by motor), examined 1,452,721 persons at frontiers, apprehended 19,382 persons seeking unlawful entry of whom 12,098 were smuggled aliens. The service also captured 832 smugglers of aliens.

STATISTICS. The tables accompanying this article show: (1) Aliens admitted, departed, debarred and deported for the fiscal year ended June 30, 1927, by ports. (2) The net increase or decrease of population, by admission and departure of aliens, by countries, for the same fiscal period. (3) The net increase or decrease of population, by admission and departure of aliens, by race or people, for the same fiscal period. They are taken from the report of the Commissioner General of Immigration for 1927. Tables IV and V are taken from the 1927 report of the Secretary of Labor.

TABLE IV
ALIENS ADMITTED TO THE UNITED STATES
UNDER THE IMMIGRATION ACT OF 1924,
DURING THE FISCAL YEAR ENDED JUNE
30, 1927, BY CLASSES, AS SPECIFIED

Classes	Fiscal year 1927
Grand total admitted	588,001
Nonimmigrants, total	95,704
Government officials, their families, attendants, servants, and employees	5,683
Temporary visitors for:	
Business	22,515
Pleasure	87,993
In continuous transit through the United States	28,312
To carry on trade under existing treaty	1,201
Nonquota immigrants, total	284,227
Wives of United States citizens	10,084
Children of United States citizens	8,421
Residents of the United States returning from a visit abroad	95,910
Natives of Canada, Newfoundland, Mexico, Cuba, Haiti, Dominican Republic, Canal Zone, or an independent country of Cen- tral or South America	158,657
Their wives	889
Their children	189
Ministers of religious denominations	595
Wives of ministers	338
Children of ministers	721
Professors of colleges, academies, seminaries, or universities	188
Wives of professors	40
Children of professors	21
Students	1,883
Veterans of the World War	4,514
Wives of veterans	887
Children of veterans	980
Spanish subjects admitted to Porto Rico	10
Quota immigrants (charged to quota), total	158,070

TABLE V
ALIENS DEPORTED AFTER LANDING IN THE
UNITED STATES DURING THE FISCAL YEAR
ENDED JUNE 30, 1927, BY CAUSES

	Fiscal year 1927
Insanity, epilepsy	594
Other mental conditions	243
Loathsome or dangerous contagious disease	159
Other physical conditions	46
Likely to become a public charge	569
Professional beggars, vagrants, or paupers	2
Assisted aliens	85
Accompanying aliens	1
Under 16 years of age (unaccompanied by par- ent)	53
Unable to read (over 16 years of age)	708
Contract laborers	88
Criminals	953
Under narcotic act	54
Immoral classes	572
Had been deported within one year	182
Entered without inspection	524
Under Chinese exclusion act	141
Under percentum limit act of 1921 (excess quota)	833
Under section 17 of immigration act of 1924 Remained longer than permitted	77
Failure to maintain student status	192
Without proper visa under immigration act of 1924:	17
At land border ports	5,464
At seaports	
All other causes	155
Total	11,662

DISPOSAL.

INCOME TAX. See TAXATION.

INDEPENDENT METHODIST CHURCH.

See METHODISTS, WESLEYAN.

INDIA. A dominion of Great Britain, consisting of the peninsula of Hindustan and the region to the north, and including, in addition to the territory directly governed by British officials, Indian states indirectly governed, that is to say, subject to British law. Capital, Delhi.

AREA AND POPULATION. The total area, including the Indian states and agencies which are in political relations with the government, according to the census of 1921, was 1,805,332 square miles, of which 1,094,300 square miles were in the British provinces. The total population in 1921 was 318,942,480 as compared with 315,156,396 in 1911. The population of the British provinces in 1921 was 247,003,293 as compared with 243,933,178 in 1911. In 1923 the census commissioner for India estimated the population at about 319,000,000 or a gain of 1.2 per cent over 1911; average density, 177 to the square mile; maximum provincial density, 608 to the square mile in the province of Bengal. Over 90 per cent of the population were classed as rural, only 9½ per cent living in towns of 5000 or more.

The following table from the *Statesman's Year Book* for 1927 gives the area and population of all the divisions of India according to the census of 1921:

British Provinces	Area in square miles 1921	Population in 1921
Ajmer-Merwara	2,711	495,271
Andamans and Nicobars	8,143	27,086
Assam	53,015	7,606,280
Baluchistan	54,228	420,648
Bengal	76,843	46,695,586
Bihar and Orissa	89,161	34,002,189
Bihar	42,360	23,380,283
Orissa	13,736	4,968,873
Chota Nagpur	27,065	5,653,028
Bombay (Presidency)	123,621	19,848,219
Bombay	77,035	16,012,342
Sind	46,506	3,279,377
Aden	80	56,500
Burma	233,707	13,212,192
Central Provinces and Berar	99,876	13,912,760
Central Provinces	82,109	10,837,444
Berar	17,767	3,075,316
Coorg	1,532	168,338
Delhi	593	488,188
Madras	142,260	42,318,985
North-West Frontier Province	13,419	2,251,340
Punjab	99,846	20,685,024
United Provinces	106,295	45,375,787
Agra	82,137	33,209,145
Oudh	24,158	12,166,642
Total provinces	1,094,300	247,003,293

The following Indian States and agencies were in political relations with the Indian government at the time of the 1921 census:

State or Agency	Area in square miles in 1921	Population in 1921
Assam (Manipur) State	8,456	384,016
Baluchistan States	80,410	878,977
Baroda State	8,127	2,126,522
Bengal States	5,434	896,928
Bihar and Orissa States	28,648	8,959,689
Bombay States (including States in Western India Agency)	63,438	7,409,429
Central India Agency	51,581	5,997,023
Central Provinces States	81,176	2,066,900
Gwalior State	26,357	3,186,075
Hyderabad State	82,698	12,471,770
Kashmir State	84,258	3,320,518
Madras States Agency	10,696	5,460,312
Mysore State	29,475	5,978,892

State or Agency	Area in square miles in 1921	Population in 1921
North-West Frontier Province (Agencies and Tribal areas)	25,500	2,825,136
Punjab States Agency	37,059	4,416,036
Rajputana Agency	128,987	9,844,384
Sikkim State	2,818	81,721
United Provinces States	5,949	1,134,881
Total States	711,032	71,939,187
Total India	1,805,332	318,942,480

RELIGION, ETC. The enumeration of the population in 1921 was: Hindus, 216,734,586; Moslems, 68,735,233; Buddhists, 11,571,268; Animistic, 9,774,611; Christians, 4,754,064; Sikhs, 3,238,803; Jains, 1,178,696; Parsis, 101,778; Jews, 21,778. The preponderating languages are Hindu, Bengali, and Telugu. Cities of over 250,000, with their populations in 1921, are: Calcutta (with suburbs), 1,327,547; Bombay, 1,175,914; Madras, 526,911; Hyderabad, 404,187; Rangoon, 341,962; Delhi, 304,420; Lahore, 281,781; and Ahmedabad, 274,007.

EDUCATION. According to the latest available statistics there were in British India in 1924-25, 228,229 institutions of learning with 9,797,344 scholars. The Indian government's expenditures for education in 1924-25 amounted to \$31,036,610, a sum representing less than \$0.10 for each person of the population. In the United States the annual expenditure is \$10.25 per capita for public education. Notwithstanding sincere and earnest effort, little real advancement has been made in the education of the masses, according to statistics of the Bureau of Education. Of the country's vast population it is stated that more than 90 per cent are illiterate.

AGRICULTURE, ETC. According to the U. S. Bureau of Foreign and Domestic Commerce, current prosperity in India depends almost entirely upon crop conditions and world price levels for such agricultural commodities as the country produces. India had been extremely fortunate during several years in enjoying an uninterrupted series of good crop years, but world price levels had not been so satisfactory. The principal difficulties had been the low consumption of raw materials in Great Britain, one of India's chief markets, and world overproduction of certain agricultural commodities, especially cotton. These factors resulted in low prices for many of India's export commodities, and despite a larger volume of export business, the financial returns were smaller than in former years.

Between two-thirds and nine-tenths of India's population is either directly or indirectly supported by agriculture. During 1925-26, of a total area of 687,610,000 acres, 225,846,000 were devoted to food and nonfood crops and 256,644,000 were harvested—two crops being obtained from part of the land—according to the *Indian Trade Journal*. Food crops consisted largely of rice, which accounted for 80,172,000 acres; wheat covered 23,979,000 acres; jowar, 20,617,000; bajra, 12,269,000; gram, 14,325,000; and barley, 6,610,000. The remainder of the food-crop acreage was made up of sugar and miscellaneous grains and pulses; such as maize and ragi.

Nonfood crops in 1925-26 accounted for 50,019,000 acres, of which 15,156,000 were planted to various seed oils. Among the crops classified as nonfood, cotton, with 18,186,000 acres, was the largest; followed by fodder crops with 8,932-

000; ground nuts, 3,768,000; sesamum, 3,409,000; rape and mustard, 3,089,000; and jute, 2,924,000. The remaining nonfood acreage was devoted principally to indigo, opium, tea, coffee, linseed, coconut, castor seed, and tobacco.

In India, as in all eastern countries, the desire for land ownership is very strong. As the number of acres suitable for agriculture is smaller than the total population, the area of individual holdings is necessarily small, ranging from two to 100 acres in extent, depending upon the density of the population and fertility of the soil. Few large estates are found, and a large proportion of the smaller holdings are split up into several parcels through the native system of dividing property among children upon the death of parents. An individual holding of one acre is often divided into several parcels in widely separated locations, making it impracticable, if not impossible, to cultivate them to advantage or to make use of modern farm machinery.

The coöperative movement continued to advance in a highly satisfactory manner. The number of societies for all India in 1925-26 totaled 80,182, as compared with an average of 57,707 during the five years from 1920-21 to 1924-25 inclusive. In 1925-26 there were 60,787 agricultural societies in British India, with a membership of 2,023,318 as compared with 55,985, with a membership of 1,848,890, in the previous year. Agricultural societies in the Native States bring the total for the whole of India up to 70,733, with a membership of 2,321,959, as against 63,873, with a membership of 2,025,058, in the preceding year.

The 1926-27 yield of jute, one of India's principal money crops, was expected to reach the record figure of about 11,850,000 bales. More than half the crop is exported from India in the form of bags and cloth and the remainder is shipped in the raw. While the commodity enjoys a very wide market, with large shipments to the Orient, South America, and the United States, the bulk is consumed in Europe. The 1926-27 cotton yield was estimated at only about 80 per cent of normal, with an outturn of about 4,973,000 Indian bales as compared with a final figure of 6,250,000 bales for 1925-26. While quotations have been low for Indian cotton, in sympathy with the world market, the price has ruled higher than for American cotton. Indian cotton, furthermore, has been undersold even in its own domestic market, considerable American cotton having been purchased by Indian mills. A little more than half of the crop is consumed locally, while the remainder is exported in the raw to Europe and the Orient.

India is one of the world's leading wheat producers, with an average area during the last two years of about 30,000,000 acres sown to the crop. Exports of wheat from India have never been large, and during some years when the crop is short wheat must be imported. The 1926-27 yield was estimated at about 8,709,000 tons, or slightly more than during the preceding year. The bulk of the export goes to the United Kingdom, with smaller quantities to continental countries and near-by regions in Asia. Rice is one of the principal food crops of India and is therefore of great economic importance to the country. The crop during recent years has averaged between 22,000,000 and 30,000,000

tons, all except 2,500,000 tons of which is consumed locally. Practically all the export surplus originates in Burma, where farmers specialize in export grades. The 1926-27 crop was expected to reach 29,479,000 tons, or about 96 per cent of the 1925-26 crop. The estimates for all other principal crops, with the exception of indigo—expected to yield in 1926-27 only about 71 per cent of the 1925-26 outturn—were well up to the figures for the preceding year. The 1926 crop of tea was larger than the preceding year's and the price yield was satisfactory.

Notwithstanding the progress of modern irrigation in India during recent years, the well-being of the population directly supported by agriculture, which makes up about three-quarters of the total millions, still depends upon the success of the annual monsoon. There is probably no country in the world where the land is required to do so much for the support of its cultivators. Reports in the fall indicated that the 1927 monsoon would be a successful one.

Mineral resources are rich and varied and include gold, coal, petroleum, lead, mica, manganese, saltpetre, salt, tungsten ore, silver ore, and precious stones. The principal petroleum fields are in Burma and Assam.

The raising of livestock is of some importance, the animals raised including sheep, goats, donkeys, horses, mules, oxen, camels, and buffaloes. There is a large trade in skins and hides. The forests of India cover 249,504 square miles of which 103,789 are under the direct control of the State Forest Department. The chief industries are the tea industry, and the weaving of cotton cloth. India is finding it hard, however, to compete with Japan in the latter industry. Others are silk weaving, carpet weaving, metal working, and wood carving. About 12 per cent of the population are engaged in industry.

COMMERCE. Since 1918 India's import trade has been increasing steadily. It attained in 1926 the value of 2,340,000,000 rupees, the highest figure ever recorded for it and a gain of 730,000,000 rupees over 1913, the last pre-war year. The exports in 1926 were 3,868,121,842 rupees, as compared with 4,002,427,531 in 1925. The United Kingdom, the United States, Japan, Germany, Belgium, and Italy contributed most largely to India's increased imports, although gains were shown in receipts from practically every other country of origin. The following table affords a comparison of the shares of the principal competing countries in the value of imports into India, expressed in dollars, for the years 1925 and 1926:

IMPORTS INTO INDIA BY COUNTRIES OF ORIGIN*

Countries of origin	1925	1926
United Kingdom	\$425,984,720	\$415,992,463
United States	49,893,272	61,860,425
Japan	64,019,729	60,643,263
Germany	48,175,870	59,168,414
Belgium	21,581,248	28,848,000
Italy	14,690,491	20,427,661

* The figures were converted from rupees at the following rates of exchange: 1925, \$0.36; 1926, \$0.36.

In 1926, for the first time since 1922, the imports into India from the United States exceeded in value those of any other country with the single exception of the United Kingdom. The increase over the preceding year amounted to almost \$12,000,000. The following table shows

INDIA

FINANCE. The budget estimates for India for 1927-28 called for an estimated revenue of 1,239,600,000 rupees and expenditure of 1,252,600,000 rupees. The revised estimates for 1926-27, according to the report of the finance member, would yield 1,298,000,000 rupees, instead of 1,304,000,000, a decrease of 5,48,000 rupees. Accordingly, the surplus of 531,000 rupees, which was anticipated in the original budget estimates, would be wiped out completely. The revised receipts from railways for 1926-27 showed a decrease of 26,253,000 rupees. The public debt of India on Mar. 31, 1927, stood at 9,755,400,000 rupees as compared with 9,690,400,000 rupees on Mar. 31, 1926. Of the total debt 5,231,400,000 rupees were contracted in India; the remainder was borrowed in England.

COMMUNICATIONS. The total number of vessels which entered and cleared in the foreign trade of India in 1925-26 was 7623 of 17,135,584 tons. Operating results for the Indian railways for the fiscal year ended Mar. 31, 1927, indicated that the investment ("capital at charge") in lines operated by the state amounted to approximately \$1,497,620,160, and in state lines operated by companies or by Indian states amounted to approximately \$1,014,103,160, and there was a grand total of investment in state-owned Indian railways of approximately \$2,523,849,480, as compared with \$2,430,831,960 in 1925-26. Net revenue of state-owned lines in 1926-27 amounted to \$125,043,480 as against \$127,036,440 in the preceding fiscal year. The per cent of net revenue to "capital at charge" in 1926-27 was 4.95 as compared with 5.23 in 1925-26. There was a total of \$99,088,920 in capital charges against the net revenue in 1926-27 which gave the government a clear profit of 1.02 per cent as compared with 1.29 per cent in 1925-26.

Gross earnings from all railways, state and private, in 1926-27 amounted to \$404,483,760 and operating expenses amounted to \$260,922,880, resulting in an operating ratio of 62.04 per cent. There was a grand total of route mileage of 39,048.88, which was divided between the

lines of different gauges as follows: 4 ft. 6 in., 19,367.44; 3 ft. 3½ in. (meter), 15,931.81; and 2 ft., 3749.63. There was at the end of the year under construction 2255.97 miles of line. There was a total of 604,371,800 passengers carried by all railways during 1926-27 as against 599,144,800 in the preceding year. Total passenger miles amounted to 20,366,250,000. The average passenger trip, including all classes, was 33.7 miles. The average rate per mile, varying from first class through second and intermediate to third class, was seven mills. There were 94,336,000 tons of freight carried. The average earning per ton mile was 1.37 cents. Total earnings from passenger traffic amounted to \$137,124,280; from freight traffic \$233,975,880. Passenger train miles in 1926-27 amounted to 74,967,000 as against 69,541,000 in the previous year. Total freight train miles amounted to 57,328,000 as against 57,411,000 in the previous year. Total train mileage including mixed and work trains amounted to 170,720,000 as against 162,258,000 in 1925-26.

The railway construction programme of India for the fiscal year 1927-28 was to involve a total expenditure of 146,660,000 rupees for commercial lines. The programme included 48 lines covering 1813 miles which were already in the process of construction and 51 new lines extending 2827 miles. It was hoped that 900 miles of new construction might be opened in 1927-28.

GOVERNMENT. Executive and legislative power rests with the governor-general in council. The council consists of no fixed number of members, but at least three of them must have had ten years' service in India and one must be a lawyer of at least ten years' standing. The administration of India in England is under a Secretary of State for India, aided by a council appointed by him, of which at least half the members must have been residents of India for 10 years and must not have left India more than five years previous to their appointment. A high commissioner for India in the United Kingdom acts as agent of the governor-general-in-council, and conducts business assigned by the Secretary of State. There is also in India a legislature consisting of the governor-general and two chambers, namely the council of state and the legislative assembly, both constituted under the Montagu-Chelmsford programme. (See preceding YEAR BOOKS.) The viceroy and governor-general during 1927 was Baron Irwin of Kirby Underdale (appointed in April, 1926). The Secretary of State for India was the Earl of Birkenhead (appointed November, 1924). The High Commissioner for India in the United Kingdom was Sir A. C. Chatterjee.

HISTORY. For the second year in succession India passed a comparatively quiet period during 1927, although the usual dissensions between the Hindus and Moslems kept coming to the fore. The Swarajist movement was scarcely noticed in the press, and in most quarters it was felt that, with the voluntary retirement of Ghandi, the movement was doomed to death from lack of leadership. By the end of the year the Indians seemed to feel that whatever measure of self-government they obtained, it must be handed down to them by the British government. The British government continued to express its sympathy for Indian constitutional aspirations, both officially and unofficially. Lord Irwin, the Viceroy, in his address to the Legislative As-

sembly shortly after the beginning of the year, made this general theme the keynote of his talk. In a later talk to the same body (August 29) the Viceroy stressed the importance of the Hindus and Mohammedans living in harmony, particularly if they wished to see India get a greater measure of home rule. He stated at that time that almost 300 people had been killed and 2500 wounded as a result of the riots and clashes in the various towns and villages because of the religious differences. This question arose time and again in the course of the debates during the autumn session but nothing definite was done, and the government virtually admitted that nothing could be done to cure the ever increasing evil.

Early in November the British government announced that it had determined to appoint a commission to investigate the workings of the Montagu-Chelmsford plan of local self-government in India for the express purpose of finding out whether that plan had met with sufficient success to increase the amount of autonomy that the possession enjoyed. The appointment of this commission came about two years earlier than the original act of Parliament provided (see YEAR BOOK for 1920) and it was stated in the press that the reason for this earlier date was the fact that the strained relations between the Hindus and the Mohammedans was the chief reason for the present investigation rather than one in 1930.

The chairman of the commission was Sir John Simon, who gave up a very lucrative legal practice in London to serve on the commission. Other members of the group were Lord Burnham, proprietor of the *London Daily Telegraph*, Stephen Walsh, Minister of War in the Macdonald Labor Cabinet, and the following members of the Conservative party: Col. G. R. Lane-Fox, Minister of Mines in the Baldwin government, Lord Strathcona, Major Cadogan, and Maj. C. R. Atlee. Severe criticism was voiced throughout Nationalist India because no Indian of any shade of political opinion was placed upon the commission. The British government explained this with a clever statement to the effect that Indians, naturally desirous of independence for their country, could not make an impartial survey of the conditions in India. Provisions were made for the hearing of Indian committees before both houses of Parliament before any action was taken on the report of the Simon Commission.

Near the very end of the year a meeting of the Indian National Congress was held in Madras. This organization, although unofficial, represented every part of Indian life and in late years had come to be looked upon as the representative of real feelings throughout the country. It bitterly attacked the Simon Commission and urged upon the 5000 delegates present that its work be hampered by means of the boycott, a familiar weapon of the Indian Nationalists. It also stated emphatically that the one aim of the Indian people was complete independence. Considerable importance was placed upon the question of Hindu and Mohammedan solidarity, speaker after speaker stating that the independence idea could only be consummated by presenting a united front to the British government.

INDIANA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,930,390. The estimated

population on July 1, 1927, was 3,150,000. The capital is Indianapolis.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu	Value
Corn	1927	4,205,000	132,453,000	\$90,071,000
	1926	4,672,000	177,536,000	88,768,000
Wheat, winter	1927	1,782,000	27,621,000	34,250,000
	1926	1,697,000	33,940,000	42,086,000
Wheat, spring	1927	8,000	128,000	156,000
	1926	6,000	108,000	180,000
Hay	1927	2,078,000	3,066,000*	\$1,845,000
	1926	1,962,000	2,501,000*	\$4,906,000
Oats	1927	1,948,000	48,700,000	20,941,000
	1926	2,050,000	61,500,000	21,525,000
Potatoes	1927	53,000	5,035,000	5,538,000
	1926	48,000	3,840,000	6,386,000
Tobacco	1927	8,400	6,384,000*	1,085,000
	1926	14,700	12,995,000*	1,261,000
Rye	1927	119,000	1,618,000	1,424,000
	1926	145,000	2,102,000	1,787,000

* tons, † pounds.

MINERAL PRODUCTION. The total value of the mineral production of the State in 1925 was \$111,833,732, with duplications eliminated; in 1924, \$112,290,075. The chief products were pig iron, coal, coke, clay products and stone. Coal produced in 1926 totaled, in quantity, 23,186,000 net tons and in 1925 21,224,966 tons; in value, \$45,880,000 in 1926 and in 1925 \$42,834,000. Coke production was 5,990,344 short tons in 1926, from by-product ovens entirely, as against 5,141,940 tons in 1925; in value, \$44,133,059 for 1926 and for 1925, \$36,635,104. Production of pig iron rose to 3,670,478 long tons for 1926, from 3,350,747 tons for 1925; valued at \$69,292,329 for 1926 and \$64,807,525 for 1925. Stone production for 1925, the latest year of available statistics, was in value \$18,140,974; for 1924 it was \$17,269,407. Quantities produced were 4,455,310 short tons in 1925 and 3,824,440 tons in 1924. Clay products attained for 1925 a total value of \$18,037,932 and for 1924 \$16,368,139. There were produced in 1926 793,000 barrels of petroleum, and in 1925, 829,000 barrels; having a value of \$1,700,000 for 1926 and for 1925 of \$1,615,000.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State government in the fiscal year ending Sept. 30, 1926, were \$24,747,324; their rate per capita was \$7.94. They included \$5,686,314 apportioned for education. Totals not included above, of \$145,431 for interest payments and of \$11,188,968 for permanent improvement outlays, brought the aggregate of State expenditures to \$36,081,663. Of this, \$14,467,837 was for highways; \$5,768,179 being for maintenance and \$8,699,658 for construction. Interdepartmental payments formed \$154,651 of State expenditure.

Revenue receipts were \$42,294,392; or per capita, \$13.57. Of their total, property and special taxes yielded 38 per cent, attaining a rate of \$5.16 per capita. Earnings of departments and compensation paid the State for officials' services supplied 9.1 per cent of revenue; 36.9 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles and from a tax on gasoline sales.

Net State indebtedness on Sept. 30, 1926, was \$1,639,000, or \$0.54 per capita. Property subject to ad valorem taxation had a total value-

tion of \$5,310,571,395. State taxes levied were \$12,214,314, or \$3.92 per capita.

TRANSPORTATION. The number of miles of railroad line in the State on Jan. 1, 1927, was 7,187.15. There were constructed in 1927 according to the *Railway Age* 0.18 mile of first and 5.80 miles of second track.

EDUCATION. The Legislature enacted in 1927 a State-wide teachers' tenure measure, affecting not only rural and urban teachers but also superintendents, supervisors and principals. The school population of the State in the scholastic year 1926-1927 was given as 843,713. There were enrolled in the public schools 701,222 pupils, of whom 522,831 were in common schools and 124,449 in high schools. The total expended on education was \$73,272,468; of this \$51,995,330 formed the aggregate of current expenditures. The salaries of teachers averaged, for kindergarten, \$1409 (city) and \$1016 (town); elementary grades, \$1418 (city), \$1085 (town); and \$957 (township); junior high school, \$1527 (city), \$1391 (town) and \$1278 (township); high school, \$1828 (city), \$1440 (town) and \$1375 (township).

CHARITIES AND CORRECTIONS. The Board of State Charities, consisting of six appointed unpaid members, with the Governor as ex-officio member and president, exercised supervisory duties over the State charitable and penal institutions. It reported the inmates as follows: In the Central State Hospital, Indianapolis, on June 30, 1926, 1699; in the Logansport State Hospital, 1268; Richmond State Hospital, 1091; Evansville State Hospital, 820; Madison State Hospital, 1393; School for Feeble Minded Youth, Fort Wayne, 1551; Farm Colony for Feeble Minded, Butlerville, 278; Village for Epileptics, Newcastle, 648; Soldiers' Home, Lafayette, 356; Soldiers' and Sailors' Orphans' Home, Knightstown, 255; State Sanatorium (tuberculosis) Rockville, 164; Indiana University Hospitals, Indianapolis, 244; State School for Deaf, Indianapolis, 371; School for the Blind, Indianapolis, 120; State Prison, Michigan City, 1847; Reformatory, Pendleton, 1963; State Farm (misdemeanants), Putnamville, 1314; Women's Prison, Indianapolis, 190; Girls' School, Clermont, 317; Boys' School, Plainfield, 469.

LEGISLATION. The General Assembly convened in January and adjourned March 7. It provided appropriations of a total of \$49,421,350 for the State departments' expenditures in the ensuing two years. The State election law was altered by the passage of two measures, one repealing the requirement calling for the registration of citizens as a prerequisite to voting in primary or in general elections. The provision enabling absentees from the State to vote was repealed. A so-called farmers' relief amendment to the State tax law, which was enacted, directed a reassessment of real estate in 1928 and every fourth year thereafter; required assessment of property at "true cash value"; gave assessed property owners right of appeal from assessing boards to the courts, without intervention of a jury. The crime of voluntary manslaughter was redefined by statute, it being no longer required that killing in order to come under this category must be committed in a sudden heat of passion; and the penalty for this crime, as for involuntary manslaughter, assault and battery and certain other offenses, was reduced, as to minimum, to a period of one year of prison. It was re-

quired necessary that a person confined as criminally insane, on the other hand, must serve for two years before applying for discharge as having recovered sanity. The same statute gave judges the power, in cases where a defendant was asserted to have been insane at the time of his criminal act, to appoint disinterested physicians to testify on the point of sanity, their testimony being subject to cross examination but not giving warrant for the introduction of testimony in rebuttal.

The State Board of Pardons was abolished by another act, and in its place was created another board of ex officio members, these being the trustees of State penal institutions. It was made a felony to have a machine gun or bomb. The superintendent of any State or county institution was empowered to perform on any insane, feeble minded or epileptic person in his care an operation for the sexual sterilization of such person, provided that the patient had due opportunity of prior appeal. A resolution for submission to the voters was passed, to amend the constitution so as to permit the General Assembly to levy an income tax. Another proposed amendment, to empower the Legislature to fix the qualifications of lawyers, was sent before the voters. A change in the motor traffic law rendered it unlawful to drive at a speed "less than reasonable." It was enacted that in communities adopting government by a city manager, the change to this form should take place at the expiration of the terms of the elected officers then holding office. An aeronautic law was passed limiting the rights of flight and of landing in various respects. A teachers' tenure act prohibited the removal of teachers save after hearing on charges. A bill for the regulation of public utilities failed of passage.

Disregarding the self-denying principle applying to salary legislation, the Legislature passed a measure increasing its pay from \$6 a day, for the current session, to \$10. Vetoes by the Governor, this measure was repassed. The increase was contested as unconstitutional, but was sustained, April 19, by a bare majority of the State Supreme Court, three members upholding it and two dissenting. Judge Clarence W. Dearth of the Delaware County Circuit Court was tried by the State Senate on impeachment charges, and was acquitted, the heaviest vote on a count against him being 32 to 17, and lacking of a two-thirds adverse majority. Judge Dearth was accused of arbitrary acts against George R. Dale, editor of the *Muncie Post-Democrat*, whose columns had frequently attacked him.

POLITICAL AND OTHER EVENTS. Criminal proceedings were undertaken against both the Governor of the State and the Mayor of Indianapolis, in the crusade against political corruption continued from the year preceding. Mayor John L. Duvall of Indianapolis came first under indictment. After the winter term of the Marion County grand jury had considered his case for some time, it was alleged that effort had been made to bribe a member of that body. County Prosecuting Attorney Remy moved the discharge of the grand jury, and Judge Collins, after first declining this motion, later, May 6, granted it and directed the county attorney to bring criminal complaints by affidavit. Under this exceptional procedure, Mayor Duvall was charged, among other matters, with making a corrupt

bargain with a local politician in the 1925 campaign, and with him was accused City Controller Buser, his brother-in-law. Duvall was found guilty by a jury in criminal court September 22, and was sentenced to a fine of \$1000 and 30 days of prison. He retained his office for a month, finally resigning October 27, after appointing his wife controller, with the apparent intention of thus insuring the selection of his successor. As Controller Mrs. Duvall was contended to have succeeded to the Mayor's chair. She in turn named a Controller and resigned, in order that her appointee might become Mayor, and, the City Council refusing to concede her appointee's accession, appointed an acting Mayor, Claude E. Negley. Myers, the defeated Democratic candidate of 1925, likewise claimed the office. Judge Milner in the Superior Court decided in favor of Negley, to serve until November 8, when the City Council should select a successor to serve out the full unexpired term. L. Ert Slack, a Democrat and former United States district attorney, was then accordingly chosen.

Governor Jackson, who had declared in his January message to the State Legislature that there was "not a scintilla of evidence" in charges made by Thomas H. Adams of the Vincennes *Commercial* and other accusers of State officials, was indicted September 30. A Marion County grand jury, subsequent to that action, which was discharged in the Duvall proceedings, found the indictment on a charge that he had violated the corrupt practices act by offering his predecessor, Governor McCray, in 1925, \$10,000 to nominate one J. E. MacDonald prosecutor in Marion County. Jackson was Secretary of State at the time. With him were indicted his law partner, Robert I. Marsh, and George V. Coffin, the Republican county chairman of Marion County. Oscar F. Montgomery was appointed a special judge to try the case.

Efforts to obtain information of former political irregularities in the State from the imprisoned politician D. C. Stephenson were made by a Marion County grand jury. It reported on December 31 that certain of the former associates of Stephenson had caused witnesses to leave the State. The jurors recommended the cessation of grand jury investigation because criminal liability for acts of corruption had ceased by limitation.

Plans for a bridge over the Ohio River at Evansville, prepared by the State Highway Commission, were approved by the Federal War Department in October. The proposed bridge was to form part of State Highway 41, running south through the State from the direction of Chicago. At Gary in September occurred a strike of white high school pupils, which ended in the taking of steps to segregate negro pupils in a small temporary building, a proceeding against which negroes, as forming some 15 per cent of the population, threatened legal measures. The State bought, May 1, 2000 acres of dune land on the Lake Michigan shore, in Porter County, for park purposes. Indianapolis at a special election June 21 voted to adopt government by commission and manager, the change to take effect Jan. 1, 1930. There was formed in October under the Indianapolis administration a division of smoke abatement, under a combustion engineer charged with watching and abating smoke production in furnaces. Judge

Deahl of the circuit court rendered a decision at the end of December denying the power of the State Tax Board to review and revise city tax levies.

OFFICERS. Governor, Ed Jackson; Lieutenant-Governor, F. H. Van Orman; Secretary of State, F. E. Schortemeier; Treasurer, Mrs. Grace B. Urbahns; Auditor, L. S. Bowman; Attorney-General, A. L. Gilliom; Superintendent of Public Instruction, Roy P. Wisehart.

JUDICIARY. Supreme Court: Julius C. Travis, David A. Meyers, Clarence R. Martin, B. M. Willoughby, and Willard B. Gemmill.

INDIANA, UNIVERSITY OF. A coeducational institution of higher education at Bloomington, Ind.; founded in 1820. For the first semester of the academic year 1927-28 the registration aggregated 4100 students, of whom 2501 were men and 1605 were women. These were distributed as follows: graduate school, 204; arts and sciences, 2468; law, 96; commerce and finance, 171; music, 87; education, 26; medicine, 419; dentistry, 307; nurses' training, 173; social service, 46. The faculty had 293 members. The endowment funds amounted to \$774,778.67, and the total income for the year, from State and private sources, was \$2,600,000. An additional appropriation of \$100,000 was made by the legislature for equipping the new wing of the library which had been completed at a cost of \$225,000 in 1926. The library contained 187,000 volumes. In 1927 the legislature appropriated a mill tax that was expected to yield at least \$350,000 per year, for ten years, to be used exclusively for the construction of new buildings and the purchase of land. President, William Lowe Bryan, Ph.D.

INDIANS. The total Indian population of the United States, exclusive of Alaska, as of June 30, 1927, was 354,940, according to the annual report of the Secretary of the Interior. This number was distributed among 193 tribes, speaking 58 languages; there were 200 reservations in 26 different states, occupying a territory as large as New England and New York combined, under the supervision of 106 superintendents; there were 202 Indian schools with 700 teachers; and 96 hospitals with 178 physicians and 146 nurses.

The Secretary's report emphasized the fact that the Indian Service had not kept pace with progress elsewhere along health, educational, industrial and social lines, due to financial neglect of the Service in past years and despite the fact that the appropriations, particularly for medical and health activities, had been increased since 1923. One of the principal difficulties encountered was in the very high turnover in the field force of physicians, nurses and teachers, which must be considered as an indication of unsatisfactory working conditions for the personnel, the principal cause being the failure to provide adequate salaries, modern living quarters for the workers, and a sufficiently large staff of workers.

HEALTH. Under the direction of the Bureau of Indian Affairs, district medical directors were able to establish closer relations with State and local health authorities. At the same time some increase was made in salaries of the physicians of the two lower grades and new recruits were obtained to fill vacancies, although vacancies still existed due to inadequate salaries. Progress was made in controlling tra-

choma and tuberculosis, the two diseases against which the greatest efforts had been directed. A number of schools, notably that at Fort Defiance, Ariz., and the Tohatchi School in New Mexico, were set aside for the reception of children suffering from trachoma; and the boarding school at Zuni, New Mexico, was converted into a sanatorium school for children with incipient tuberculosis. The hospitals at Fort Peck and Blackfeet Agencies in Montana and at Klamath Agency in Oregon were devoted to the treatment of tubercular Indians. Several of the tubercular sanatoria of the Indian service during the year were full to capacity, due to the efforts of health education among the children and adults on the reservations. Changes were made in the nursing personnel to improve conditions and attract a high type of nurse to the Indian Service, and the organization and quality of the public health nursing work showed improvement.

EDUCATION. The platoon system of school organization, providing a three-quarter's day of class instruction and one-quarter day of institutional detail (work) was introduced into eight schools only during the year, due to lack of funds; the Service continued to extend its policy of having all-day classes for all pupils of the three lower grades and eventually for all six elementary grades, but many schools still lacked enough teachers to carry out this programme even in the first three grades. The annual report shows that of a total of 75,843 eligible Indian school population, 25,622 were enrolled in government schools, and 34,124 in public schools, and 7321 in boarding and day schools, leaving a total of 8776 eligibles not in school.

The Indian Service continued to extend its programme of organized home making by giving such instruction in all schools having junior and senior high grades, in a large number of elementary boarding schools and in two day schools, for the purpose of improving living standards in the Indian homes; teachers were encouraged to devote part of their vacation time to visiting Indian homes in order better to correlate their instruction with the needs of local groups of Indians; and Indian girls were given experience in good homes where they could secure training to enable them to become better home makers. The annual appropriation of \$225 per student, for the maintenance and operation of Indian schools, including lodging, clothing, subsistence, academic and vocational training, and administration expenses, continued to be so inadequate that instruction, and especially vocational training, was neglected, and Indian children had to devote much of their time to other details which interfered with the pursuit of their studies.

INDUSTRIAL PROGRAMME. The policy of the Bureau of Indian Affairs was to encourage self-support instead of mendicancy, and to this end practically all of the Indians had been given individual allotments of land and urged to establish homes thereon. In carrying out this programme it was the policy of the government to make appropriations to assist the Indians in purchasing farm machinery, livestock and seeds, building material, etc., on a five-year payment plan, the appropriation for 1927 being \$175,000, practically all of which was authorized for expenditure. The Indians in North and South Dakota, Montana, and Wyoming were

encouraged to go into sheep raising under the reimbursable plan and superintendents of various agencies arranged their five-year programme to that end. It was found that the agricultural implements purchased by the Indians of the Salt River Agency, in Arizona, had been of great assistance to them, for otherwise they would have been unable to provide themselves with machinery; the Mission Agency, California, reported that Indians of the Morongo Reservation had received large incomes from their apricots; and the Indians at the Northern Pueblos Agency, New Mexico, reported a large yield of alfalfa seed and hay, from seed purchased in 1924 under the reimbursable plan.

Due to improved conditions in the livestock market during the year, Indians who were engaged in the industry received good returns and showed a greater interest than formerly. Another phase of the Bureau's industrial programme was the work carried on among Indian boys and girls in the Standard 4-H Club programmes, with a total registration on all reservations of 5500 and an estimated value of \$43,752 for products during the year, 153 Indian children winning county prizes, 42 State prizes, and three free trips to the national congress in Chicago. It was estimated that this work among the children, in addition to directly benefiting them, had brought about greater industrial activity among adults. About 375 boys and girls graduated from government schools for Indians during 1927, the government to some extent acting as an employment agency for its students.

LAW AND ORDER. Since the Federal courts have jurisdiction on Indian reservations of only eight of the major Indian crimes enumerated in the United States Criminal Code, and since the State courts have no jurisdiction, many misdemeanors and felonies are left to the reservation courts of Indian offenses, which are not able to deal with conditions adequately. This situation reveals the necessity of extending the laws so as to bring the violation of laws within the jurisdiction of Federal and State courts. The problem of suppressing traffic in intoxicating liquors among the Indians has been a serious one and progress of government plans has been seriously retarded in all phases of Indian civilization by lack of funds for protecting the Indians from intoxicants. Further legislation is needed to require observance of State marriage and divorce laws among the Indians, in order to do away completely with adherence to "Indian custom" in marriage and divorce.

INDIAN ALLOTMENTS. Tribal Indian allotments totaling 2739 were received and disposed of during the year; while 5008 trust patents were issued with an aggregate acreage of 384,310.40 acres; 1121 patents for portions of allotments designated as homesteads of allottees, containing 217,248.20 acres were issued, and 1400 patents conveying title to Indians or their heirs to 174,048.79 acres. These lands had previously been held in trust by the government. See **ANTHROPOLOGY.**

INDO-CHINA, also known as **FARTHER INDIA.** The southeastern peninsula of Asia including the following divisions: Burma, politically attached to British India; Siam, a self-governing monarchy; French Indo-China, comprising Cambodia, Annam, Cochin-China, Laos, and Tongking; the Federated Malay States, a

British protectorate; the Straits Settlements, a British colony; and the Malay States of Johore, Kedah, Kelantan, Perlis, and Trengganu. See the articles on BURMA, FRENCH INDO-CHINA, SIAM, and the other principal states mentioned.

INFANTILE PARALYSIS. According to the daily press (*New York World*, Sept. 26, 1927) Dr. W. L. Aycock, authority on infantile paralysis and head of the Harvard Infantile Paralysis Commission, denied that the incidence of the disease during the late summer and early autumn amounted to an epidemic, as shown by the fact that the number of cases thus far recorded for Massachusetts was but one-fourth that attained in 1916, which fixed a standard for epidemic incidence. Although the causal microorganism has not yet been isolated it would still be possible to prepare an anti-serum were it not for the fact that, with the exception of the monkey tribe, all animals are apparently immune to the disease. The ape is not a suitable animal to furnish a serum, and even if he were his death rate from the disease is so high that such a serum would be quite out of the question. The chances for crippling and death from motor vehicles are far greater than from infantile paralysis, he states in concluding.

From the London letter to the *Journal of the American Medical Association* for Jan. 8, 1927, it appeared that nearly a thousand cases of infantile paralysis were recorded in England during the summer and autumn of 1926 and that quarantine, closure of schools, boiling the milk supply and special ventilation in barracks and other dormitories were all practiced or recommended by the health authorities.

INGERSOLL, GEORGE PRATT. American lawyer and diplomat, died at Stamford, Conn., February 23. He was born at New Haven, Conn., Apr. 24, 1861, and graduated at Trinity College, Hartford, Conn., in 1883. He received his law degree from Yale in 1885. He practiced at Stamford, Conn., and New York City from 1885 to 1915, in the latter year going to Siam as United States minister. He had been United States Commissioner for Connecticut, member of the Connecticut State Board of Health and a Democratic nominee for Congress. He was a delegate to the International Peace Conference held in Washington, D. C., in 1910. He wrote: *The Measure of Success; Our Connecticut Heritage, and Diplomatic Life in Siam.*

INSULIN. This active principle of the pancreas, which had been isolated in pure form by

Professor Abel of Johns Hopkins, had proved itself, through its ability to make good certain deficiencies in the body, of much wider sphere of therapeutic activity than was at first believed, when it was accepted as a relative curative agent of diabetes—to the extent of causing disappearance of all symptoms and holding the disease indefinitely in check. In theory it should have great activity in extensive affections of the liver accompanied by insufficiency of this organ, and tests in a variety of common and rare diseases of the latter are giving results often striking. Equally important is the drug in constitutional leanness and leanness due to underfeeding, in which conditions there is an insufficient action of the islets of the pancreas. In patients of this type an injection of insulin into a vein causes extreme hunger with craving for carbohydrate foods and rapid taking on of weight. (See Schellong and Hufschmid in *Klinische Wochenschrift* for Oct. 1, 1927.) The same drug was being tested in various other affections with promise, and one of the paradoxical results of the external application was seen in the healing of obstinate ulcers, such as varicose ulcers of the leg.

INSURANCE. The insurance business generally prospered in 1927. Not in every branch were the results of the year's operations satisfactory, but in most branches they were fairly so and in a few they left little to be asked. A few classes were still suffering from inadequate rates, and there were signs of still more trouble in this direction. A number of companies were organized during the year, and it was notable that the stock of several of these sold at a much higher premium than had been customary in the past. Many old companies increased their capital, in some instances adding materially to their surplus, while several important additions to capital were made by stock dividends. The advance in market price of securities owned by insurance companies resulted in a large increase in their assets, but, as this was largely due to stock market conditions, a number of companies at the end of the year set up special reserves to cover depreciation in security values, as this is likely to come.

One unusual development of the year was the remarkable rise in the prices of insurance company stocks. A few years ago insurance stocks were traded in only to a very limited degree and but few brokers handled them. During the past few years, however, they have become much more popular with investors and in the last few months of 1927 the demand for them raised the prices to levels which had never been reached before. In vain did presidents of companies warn the public that the prices were too high; they continued to advance almost to the end of the year, when there was a slight reaction. No satisfactory explanation of this great advance was offered. It was said that insurance stocks were advancing with the other classes of securities, that the public was now valuing them upon the earnings rather than upon book values, and that the very valuable good will which companies have built up was being reflected in the prices of their stocks. There was probably some merit in each of these explanations. Officers of insurance companies generally did not believe that the excessive prices would continue.

FIRE INSURANCE. The fire insurance companies

as a class were believed to have had a slightly smaller premium income than in 1926. Many were known to have suffered a reduction of several per cent, while some others made a slight gain. Any reduction in premium income tends to increase the expense ratio, and, in the absence of exact figures, which would be available only later in the year, a slight advance in the general expense ratio was expected. The fire losses, however, showed a remarkable reduction—at least \$70,000,000 for the United States and Canada. This enabled the companies as a class to make an underwriting profit, the first in several years.

The reduction in fire losses was due to a number of causes. Moral hazard was less in evidence than in previous years. The more cautious underwriting policy which many companies had adopted made it difficult for certain classes of risks to get enough insurance and made necessary greater care to avoid fire. The great building activity since 1920 has resulted in the demolition of many old buildings of poor construction in the congested districts of large cities and the erection of fire-resistive structures on their sites. Laws for the punishment of arson had been made more severe in a number of states. The police departments of many cities were showing greater interest in running down "fire bugs" than ever before. Great impetus was given to the fire prevention movement by the Chamber of Commerce of the United States, under whose auspices the National Fire Waste Council had secured the active coöperation of local chambers of commerce throughout the country in attacking the fire waste. There are good grounds for hope that these various agencies will continue to be effective.

The Eastern Underwriters' Association, organized, in 1926 by most of the fire insurance companies operating in the Eastern States, brought about a number of improvements in the conduct of the business in this territory during its first year, although its accomplishments fell short of what had been hoped for.

The fire insurance companies met with serious trouble growing out of State laws regulating rates. Late in 1926 the Supreme Court of Missouri sustained the order of the Superintendent of Insurance of that State, issued in 1922, that rates be reduced 10 per cent. In 1927 the Supreme Court of Kansas sustained a rate reduction order in that State. The Missouri decision was taken before the Supreme Court of the United States in 1927, and a decision was expected on an early date in the coming year. By a temporary Federal injunction secured in 1927 the companies restrained the state authorities of Kentucky from interfering with a 12½ per cent rate advance in that state. As some of the same questions were involved as in the Missouri rate case, it was by no means certain that the injunction would be made permanent. Unless means are yet discovered of securing important modifications of the Missouri decision, it appears likely to cause the insurance companies a vast amount of trouble in other States, as it holds in effect that they are entitled only to a very small profit from their underwriting operations but must look mainly to their interest earnings for profit.

A commission which investigated fire insurance rates in Virginia during 1927 made a report recommending large reductions and much

more control of rates by the State, some of the reasons advanced being similar to those brought out in the Missouri decision.

Classes of insurance other than fire transacted by fire insurance companies did not in all instances turn out satisfactorily. The most important of these was automobile, fire, and theft insurance. Many companies wrote a somewhat smaller volume of this business in 1927 than in 1926. This falling off was attributed to several causes, chief among which was the suspension of sales during part of the year by the Ford Motor Company pending the bringing out of its new model. Not only did this prevent the buying of thousands of Fords, but it retarded the sales of other low priced cars as many prospective purchasers postponed buying until they could see the new model Fords. Another cause which affected the volume of automobile insurance was the low price of used cars, especially those of the lower priced makes. Many owners did not consider it worth their while to insure such small values.

Tornado insurance, which is an important class with many fire insurance companies, had a bad year. A tornado which struck St. Louis on September 29, in about five minutes caused a loss to insurance companies variously estimated at from \$6,000,000 to twice that sum, and there were other tornadoes which caused heavy losses. These fell unevenly upon the insurance companies, and, while some probably made a profit on their tornado business, others sustained a heavy loss.

Another class of business written in considerable volume by a limited number of fire insurance companies is insurance against damage to growing crops by hail. The season generally was a bad one, the losses being very heavy in many of the Western States and also in the wheat growing Provinces of Saskatchewan and Alberta, where many American companies operate.

The casualty insurance and surety business, the annual premium income from which was rapidly approaching a billion dollars, had a year's experience which could not be regarded as satisfactory. The surety business and some of the smaller casualty branches were profitable, but the two great income producers, workmen's compensation and automobile liability insurance, were not.

Workmen's compensation had not been profitable for several years. The tendency in legislation was strongly towards liberalizing workmen's compensation laws and increasing the benefits under them. This should be reflected in higher insurance rates, but it was not always possible to induce State authorities having supervision to sanction such advances as would be necessary to keep the business on a profitable basis. The tendency in loss ratios was upward, even where laws had not been changed, as workmen became more insistent upon being paid claims even where it was doubtful whether they were due.

An analysis of the claims paid on a very large volume of business indicated that the loss ratios were generally higher on risks paying small premiums. The small employer cannot employ safety engineers and develop safety organizations among his employees to the extent that is possible to the large employer. Most of the small risks are carried by the stock companies as the mutuals usually solicit only the larger

ones. The stock companies have been demanding that rates on small risks be made higher in proportion to pay roll than those on large ones engaged in the same industries. As the central rate-making organization was not controlled by the stock companies they had been unable as yet to secure the changes desired.

Until recent years automobile liability insurance had been almost continuously profitable to the companies. In 1925, however, the experience began to change and grew worse in 1926 and 1927. Finally in November, 1927, the stock casualty companies increased the rates on private cars to an extent which averaged about 16 per cent for the entire country. The advances were not uniform but were based on experience in localities and on classes of cars.

Undoubtedly one cause which contributed to the increase in liability losses was the greater activity of those damage case lawyers who present claims without merit but get compromise settlements to avoid suit. So serious had this practice become that in 1927 the National Bureau of Casualty & Surety Underwriters organized a special department to combat the evil.

Probably the most serious danger confronting the automobile liability insurance business was the increased demand for laws making such insurance compulsory so that victims of accidents could collect judgments for damages even though the owner of the automobile by which they were injured be judgment-proof. Massachusetts had such a law in effect during 1927, and other States which postponed legislating until the results of the Massachusetts experiment could be seen were likely to follow the example of that State. Its law made it possible for those who secured judgments to collect them, up to the limit of insurance, and to that extent, at least, it had been a success. It was a question whether it resulted in more careful driving and in any reduction in the large number of highway accidents.

From the standpoint of the casualty underwriters the results in Massachusetts were unsatisfactory. The insurance rates were found to be inadequate, but under the law they could not be changed until 1929. Claims for injuries and suits for damages increased. One casualty company withdrew from the State because of its losses on this class of business, and another arranged to write only other classes of business there, while still others requested their agents to write no more automobile liability business than possible. There was no opportunity to select risks as the law required a company writing this class of business in the State to accept any risk which applied for insurance, unless excused from so doing by a State board.

There appeared little doubt that a number of other States would enact laws somewhat similar to that of Massachusetts or laws modeled after workmen's compensation laws, under which those injured by automobiles would be compensated, regardless of negligence, according to an established scale. The enactment of laws of either of these classes would probably injure the business of the casualty companies as there usually is little profit in insurance required by law.

Personal accident underwriters were forced to adopt a more conservative policy because of the increased losses resulting from the granting of greater benefits for the same premium and the

continually growing accident frequency due to the automobile.

Health insurance generally was not satisfactory to the underwriters. Some companies had largely given it up. The granting of non-cancelable accident and health policies, which was very popular with a number of companies a few years ago, resulted in such heavy losses that only a few companies now write such policies and they have been obliged to restrict them.

Burglary insurance continued to grow in volume and the experience of 1927 was more satisfactory than in the years just preceding. In New York State the improvement was attributed in no small measure to the enactment of the Baumes laws. In some of the Western States, "vigilantes," organized by bankers' associations, reduced the number of bank burglaries.

Plate glass insurance was so profitable for several years that in 1927 the companies voluntarily reduced the rates and liberalized their policies.

The fidelity and surety business generally enjoyed a good year in 1927. The volume of this business was growing constantly and the annual premium income was now approximately \$100,000,000. The writing of fidelity bonds, those guaranteeing the honesty of persons in positions of trust, has not been profitable for several years. While companies formerly made a careful investigation of every applicant for such a bond before accepting him as a risk, this practice was largely abandoned because of the expense, and the practice of bonding the occupants of certain positions in an organization, regardless of who they might be, grew up. Since the War many employers apparently have been less careful than formerly about informing themselves as to the character and record of persons employed by them, and losses under fidelity bonds have increased. Some underwriters believe that in order to restore that class of business to a profitable basis it will be necessary to charge higher rates and revive the practice of investigating applicants for fidelity bonds.

The depository branch of the surety business, which for several years suffered heavy losses due to the failure of banks in which bonded funds were deposited, was now coming back to normal, partly because of the fewer bank failures and partly because of more careful selection of banks to which bonds are granted.

Contract bonding, the most important branch as regards volume, was generally profitable, as money was plentiful and contractors were able to finance their operations.

The surety companies were constantly watching for new sources of business and new ways of serving the public. In quite recent years several companies had engaged rather extensively in guaranteeing notes given in payment for automobiles and other articles purchased on the deferred payment plan and also in guaranteeing payment of principal and interest on mortgage bonds. Several very heavy losses on such bonds were sustained in 1927. Another comparatively new class of bonds, for which there was considerable demand, was known as completion bonds. They guarantee the completion of improvements on real estate, the value of which, together with that of the land, constitutes the security for the mortgage.

Life insurance again enjoyed the greatest year in its history. The amount of new insurance

written and paid for was approximately \$16,900,000,000, an increase of about half a billion dollars over that of 1926, and the amount of insurance in force in legal reserve life insurance companies was approximately \$87,000,000,000. The assets of these companies amount to \$14,500,000,000, a tremendous sum which has to be kept busy earning interest in order to enable the companies to meet their obligations as they become due.

Health conditions during the year were unusually favorable and the mortality rate was low. This saving would enable companies which issue policies on the participating plan to continue the existing liberal scales of dividends to policyholders or even increase them for a time. Actuaries were by no means certain that present dividend scales could be continued indefinitely, as the rate of interest was falling and the time might come within a few years when companies would be earning only a little in excess of the 3 or 3½ per cent on which their rates are based.

So fully does the public recognize the value of life insurance that those engaged in selling it now devote more thought to ways of making it of the greatest service and less to arguments to prove the need of it. Only a few years ago most of the life insurance policies sold provided for payment in a lump sum when they became claims. A considerable amount of the proceeds paid in this way was lost through unwise investments and otherwise. Then the payment of claims in monthly installments over a long period was advocated, and a vast amount of insurance was being sold on that plan.

During 1927 the subject of life insurance trusts attracted a great deal of attention. It was not new, but its importance became more generally recognized and a number of trust companies organized special departments to handle trusts of this class and to seek the cooperation of life insurance agents in inducing their clients to make all of their life insurance policies payable to a trust company so that the proceeds of all could be administered as one fund under the terms of the deed of trust.

Not so much group life insurance was sold in 1927 as in some previous years, probably because general business was not so active and also because fewer large group policies, such as those covering the employees of great railroad systems, were issued. Group insurance was being constantly extended to smaller employers, and more of it was being written upon the contributory or coöperative plan, under which both employers and the insured employees contribute to the cost. In order to secure more uniformity in practices in writing group insurance the companies which issued that class of policies late in 1927 organized an association.

INTERCOLLEGIATE ASSOCIATION OF AMATEUR ATHLETES OF AMERICA. See **ATHLETICS, TRACK AND FIELD.**

INTERNAL COMBUSTION ENGINES. The major activity in the line of large oil engines continued to lie in the marine field. Over a million horse power in large marine Diesels was under construction at the end of 1927—more than that of steam, reciprocating engines and turbines combined. By far the greater part of this construction was in Europe and included a considerable number of ships for American firms, notably oil tankers. The reason for this

lay in the lower cost of construction in foreign yards. In the United States the Dieselization programme of the Shipping Board was being extended and contracts for eight more engines of approximately 4000 horse power each were let during the year to American firms, making a total to the end of 1927 of 17. These engines include both the two- and the four-cycle double- and single-acting types. Three of the ships to be converted were to be of 11,800 tons and the drives will be Diesel-electric. Three others with this type of drive each would have four 1000-horse power, four-cycle single-acting engines, driving direct-current generators. Also, two large American tankers, belonging to the Standard Oil Company of New Jersey, had been converted from steam to American built Diesel drive; and a third, for the Standard Oil Company of California, having Diesel-electric drive of 3200 horse power, was soon to be completed.

While most of the Diesel-engined ships had been cargo vessels, a few passenger liners also were thus equipped. Among these was the *Bermuda*, recently put in service between New York and Bermuda.

Outstanding installations as to size included two 40,000-ton vessels under construction at Harlan & Wolff's shipyard at Belfast, which were to be driven by four 8000-horse power Diesels. The *Augustus*, of 33,000 tons, the largest motorship afloat in 1927, had four 7000-horse power Diesels. Burmeister & Wain of Copenhagen had built six 9000-horse power eight-cylinder double-acting engines for three twin-screw vessels. See **SHIPBUILDING.**

Diesel-electric drive for ferry-boats was extending in the United States, several more installations of this type having been constructed during the last year. Diesel-electric drive provides a very flexible combination especially adapted to the requirements of ferry service.

In the railway field there were now in service on American railways 15 Diesel-electric locomotives and four more on order, according to the annual report of the International Railway Fuel Association. This covers both switching and main line service. Also, the Canadian National Railways had a number of such locomotives in service and in Europe the type had become well established.

As concerns the stationary field, Diesel engines up to 15,000 horse power were in service in Europe, although to the end of 1927 the largest engines in service in the United States were about 4000 horse power. Engines of the solid injection type up to 300 horse power per cylinder had been built.

While a number of medium size and large oil engines were installed in America during the year, by far the bulk of the sales were in sizes under 500 horse power. A number of American builders had developed oil engines of the high-speed type, 600 to 800 r.p.m., in sizes up to 80 horse power per cylinder. These were being used for both stationary and semi-portable service; in the latter largely in the construction field for shovels, compressor drive and for industrial locomotives.

Due to the construction of gas pipe lines from Amarillo, Texas, to Denver, Colo., twenty 1000-horse power gas engines were purchased for the pumps. A considerable number of 300- and 500-horse power gas engines driving gasoline recovery compressors were installed in Oklahoma.

INTERNATIONAL ARBITRATION. See ARBITRATION, INTERNATIONAL.

INTERNATIONAL ASSOCIATION FOR SOCIAL PROGRESS. See SOCIAL PROGRESS, INTERNATIONAL. ASSOCIATION FOR

INTERNATIONAL COÖPERATIVE CONGRESS. See COÖPERATION

INTERNATIONAL FEDERATION OF TRADE-UNIONS. See TRADE-UNIONS.

INTERNATIONALISM. For the past four years there has been in Geneva an organization for the purpose of looking after the special interests of American visitors. Previously, Americans going to Geneva, and seeking information about the League of Nations or the great number of international activities centred there, found it difficult to obtain. The few Americans connected with the League of Nations were busily engaged in duties which were particularly severe in the formative years, and there was no time to be given to the problems of individual Americans or the organizations which they represented. To meet this situation the American Committee was formed by a small group of devoted friends of the League who decided to establish headquarters in Geneva. The first year's work was entirely experimental and showed the great need for this body; its work has since grown in importance each year.

It was decided to adopt a name that would be simple and at the same time comprehensive. Accordingly "The American Committee" was selected. It was the purpose of the Committee to be not merely a centre for Americans in Geneva, but the only centre for all American activities there. It was felt that if each American organization having an international interest were to open offices, not only would confusion result, but it would make the country look ridiculous because of its position toward the League and its refusal to become a member.

One of the first things the Committee did was to establish the Geneva Institute of International Relations and under that title it gave a series of lectures on international topics which drew immediate attention. The Committee at once joined forces with the League of Nations Union of Great Britain and the League of Nations Non-Partisan Association of the United States, and with their coöperation it has been successful.

The record of the American Committee shows real growth, and appreciation by American visitors. The office of the Company is at the International Club, organized by the leaders of various movements in Geneva. It occupies a splendid building owned by the City of Geneva adjoining the Casino. In 1926 more than 6000 Americans registered in the Committee's office and received information or assistance in some form.

To accommodate Americans visiting Geneva, a staff is available to escort visitors through the various departments of the secretariat and give them a visual indication of actual work being done. This privilege of taking persons through in groups is reserved to the American Committee.

To maintain relationship between Americans who are doing special international work and those who are visiting Geneva for serious study and observation, the committee arranges for a series of luncheons during the meetings of the Assembly in September and for a few weeks

previous thereto. These luncheons are held daily at the International Club. The guest of honor on each occasion is either one of the leading officials of the League or one of the chief representatives of delegations to the Assembly. The committee has made certain rigid rules in the matter of policy. It does not permit discussion of American policies, domestic or foreign, to take place at its luncheons or other functions; its principle is to sustain the Government in Washington and although individual members may not approve certain legislation or governmental actions, they are never permitted to express these views publicly at the functions.

AN INTERNATIONAL FACT-FINDING BODY. Fact finding is one of the recent instrumentalities devised to aid citizens to form sound opinions concerning public questions. It was suggested by Theodore Stanfield that an international, judicial, impartial, fact-finding body was a necessary institution in international life. Such a body need not be a court that proceeds to a verdict; rather a body clothed only with those powers it may require to get the facts, the evidence, the testimony, the documents needed to establish the truth. The problem of creating such a body was no doubt as Mr. Stanfield pointed out a novel and difficult one. And yet he believed such an organization might well prove of value in establishing not only pertinent facts relating to the causes of a given war, but also the facts threatening international difficulties and controversies at the time they occur and before they have led to war. The mere fact that the truth was likely to come out with reasonable promptitude, through an appeal to such a fact-finding body, would in itself tend to reduce the number of such occurrences and controversies. Not only documents, but also individuals might be summoned before such a body.

In arguing for his idea, Mr. Stanfield said: "As long as international facts remain hidden in the archives of foreign offices and in the breasts of living statesmen or other men still living, progress along the road to peace must remain slow and halting. If the facts were promptly and reliably made apparent to the people, men and women would learn to face them and to adjust their international relations accordingly."

WALTER H. PAGE TRAVELING SCHOLARSHIPS. The Common Interest Committee of the English-Speaking Union decided to place these Scholarships for Teachers on a permanent footing by the raising of an endowment fund of £2000 to send two scholars to the United States every year. They were founded in memory of the former American Ambassador to Great Britain to enable British teachers to visit the United States during their summer holidays and the aim is to arouse and stimulate an interest in the United States and the American people in the secondary and elementary schools of Great Britain. Each scholarship is of the value of £50. Complete hospitality in America is offered by the English-Speaking Union of the United States. The Scholarships have a very real value in the promotion of understanding between the British and American peoples, and are an essential part of the work of the English-Speaking Union.

A commission of four distinguished professors from Spanish universities reached New York in October to study American university organization. They intended to formulate details of a

plan of organization to be recommended to the new University of Spain. Under the guidance of members of the Rockefeller Foundation, the Commission visited important colleges in the United States.

THE INSTITUTE OF INTERNATIONAL EDUCATION (Director, Prof. S. P. Duggan, 2 West 45th Street, New York) has for its general aim the "developing of international education and good will through such activities as the exchange of professors; the establishment of international fellowships; the holding of conferences on the problems of international education, and the publication of books and pamphlets on the systems of education of the different countries." The Institute, which also serves as the New York office of the American University Union, has as its specific purpose serving as a clearing house of information and advice for Americans concerning things educational in foreign countries, and for foreigners concerning things educational in the United States. In addition it administers and maintains the offices of the American University Union in London, Paris, and Rome and has contact offices and correspondents in the other European countries. It publishes a number of bulletins of interest to students, particularly *Guide Book for Foreign Students in the United States*, *Bibliography on the United States, Fellowships and Scholarships Open to Foreign Students for Study in the United States*, *Fellowships and Scholarships Open to American Students for Study in Foreign Countries*, as well as the *Handbook for American Students in France*.

One of the most important functions of the Institute is to secure and administer fellowships for foreign students who are anxious to study in their special fields in American universities and for American students who are anxious to study in foreign universities. Among the fellowships administered by the Institute are: The American Field Service Fellowships for French Universities, American German Student Exchange Fellowships, American Czechoslovak Exchange Fellowships, Franco-American Exchange Scholarships, American Hungarian Exchange Fellowships, Swiss American Exchange Fellowships, Scholarships of the Committee on Foreign Travel and Study for the Junior Year Abroad and Willard Straight Research Fellowship for study in China. In addition the Institute arranges for the placement of a number of young men as "assistants" in French lycées and écoles normales.

JAPANESE DOLLS. The success of the 12,641 "Doll Messengers of Friendship" in arousing the friendly thought for America of the entire Japanese people exceeded expectations. At the official welcome in Tokyo on Doll Festival Day (March 3) Ambassador MacVeagh made the presentation speech and many Princes and Princesses, scores of other distinguished men and women and 2000 children attended. In every prefectural capital welcome receptions were addressed by mayors and governors. "Miss America" and her forty eight state sisters were received in audience by Their Majesties in the Imperial Palace. On departing, each Doll Messenger was given a present by the Empress, who also donated a Doll Palace in which to house them permanently. As a return gesture of friendship, 5,000,000 Japanese school girls gave one sen each (about \$25,000) to send 60 Doll Am-

bassadors of Good Will with wonderful kimonos and lacquer furniture to America. They were received with equally elaborate ceremonies in America at Christmas.

UNITED STATES AND MEXICO. A project of international friendship between the young people of the United States and of Mexico was announced in October by the Federal Council of the Churches. This undertaking was prompted by the success which attended last year's project of sending the doll messengers of friendship to Japan. It was proposed that "Friendship School Bags" be sent to the children of Mexico, each bag to contain articles of interest and help in the life of school children. The Mexican Vice Minister of Education approved the project and will distribute the bags in the schools of Mexico, of which there were said to be about 15,000 with 1,250,000 pupils. These "friendship bags" were sent by day schools and Sunday schools, by special groups of all kinds in the various religious organizations, and also by individual children and adults. The bags, which will be made of durable fabrikoid, decorated with the Mexican and American flags, are to be especially manufactured for the Committee. The school or group participating in the project will add certain articles to be bought or made, and will send the bag by parcel post direct to Mexico City. The bags were to be officially distributed in the schools on Mexico's Independence Day, Sept. 16, 1928, which day is universally observed.

The Committee declared that this project would give opportunity for interesting and educating the young people of the United States in the history of Mexico and its people, and for promoting a better understanding and feeling of good will between the two countries at a time when such good understanding and feeling might be especially needed.

Viscount Cecil had been an outstanding advocate of a better international order since the great war, representing Great Britain at many international conferences and in the League of Nations. Because of the deep-seated differences with his Cabinet colleagues over disarmament and other international problems he resigned from it. The London *Spectator* (non-partisan) expressed the opinion that if Lord Cecil had been able to stay in the Cabinet he "would have had a better chance than in any other circumstances of keeping the government up to the mark." While this newspaper noted the common French comment that Lord Cecil's resignation was "a great blow to the League" it thinks his blow was rather aimed at those who did not honor the League sufficiently, but it questioned whether it was not just possible that the effects of his resignation might be different and less happy than he expected. That is what the French think, people were assured, and perhaps a good many of them hoped. Lord Cecil deplored in particular: (1) The unconditional rejection of the Protocol (i.e. the Protocol of 1924 aimed at the prevention of war) by the government; (2) the government's refusal of compulsory arbitration by the Hague Court; (3) the breakdown of the work of the Preparatory Commission on Disarmament; and (4) the breakdown of the Three Power Naval Conference. When the Protocol temporarily held the field, he found a good deal that was admirable in it. In a perfect world—a world much more convinced of the virtues of the League than the world in which we live is

convinced—the Protocol would be a perfect plan. Unfortunately, it went far beyond popular feeling. It gave to the members of the League a power over one another which filled many countries with alarm.

In the death of the former editor of *The Spectator*, J. St. Loe Strachey, internationalism lost one of its staunchest defenders. He desired an unfettered British-American friendship with no written bond and he believed that war has been outlawed in the English-speaking world and that a war between the United States and the British Empire was unthinkable.

FOREIGN POLICY ASSOCIATION. During the year, the chief developments in the work of this association were; 1. The enlargement of its research department until it included 13 full or part time research workers, headed by Dr. Raymond Leslie Buell, of Harvard, who joined the staff in the autumn. Dr. Buell was giving full time. 2. The establishment of an F. P. A. Washington Bureau, with William T. Stone, editor of the *Information Service*, in charge. Begun very modestly, it is hoped that this bureau will be a valuable source of contact with the government officials and with Congress, and that gradually it may so gain their confidence that they will utilize more and more the technical services of the research department.

INTERNATIONAL LABOR OFFICE. See CHILD LABOR.

INTERNATIONAL LAW. The Committee for the Progressive Codification of International Law appointed by the Council of the League of Nations in December, 1924, held its third meeting at Geneva in March, 1927. The Committee had before it the replies of some thirty governments to a communication embodying a provisional list of the subjects of international law, the regulation of which by international agreement seemed to be presently feasible. It was encouraging that these replies evidenced the fact that the foreign offices of many of the leading countries of the world had given careful consideration to the communications, and, on the whole, expressed a favorable attitude towards the possibility of agreement upon many of the questions.

The Department of State of the United States in its communication referred to the subjects of (1) nationality, (2) territorial waters, (3) diplomatic privileges and immunities, and (4) the responsibility of states in respect of injury caused in their territory to the person or property of foreigners, as subjects upon which international arrangements would serve a useful purpose, and would be desirable, and that there would be no insuperable obstacles to the conclusion of agreements with respect to such subjects.

The replies from a majority of the governments were sufficiently encouraging to lead the Committee to conclude that it was desirable and presently feasible that international agreement should be reached on the following subjects, viz: (1) nationality, (2) territorial waters, (3) diplomatic privileges and immunities, (4) responsibility of states in respect of injuries caused within their territory to the person or the property of foreigners, (5) procedure at international conferences, including the conclusion and drafting of treaties, (6) piracy, and (7) exploitation of the products of the sea.

At the same session, the codification committee considered reports by the various sub-committees appointed at its January, 1926, session, and determined to recommend to the governments the following additional subjects as ripe for international agreement, viz: (1) communication of judicial and extra-judicial acts and letters rogatory in penal matters; (2) legal position and functions of consuls; (3) revision of the classification of diplomatic agents; (4) jurisdiction of courts over foreign states. The committee also in carrying out the last of the mandates laid upon it by the resolutions of the Assembly of the League, namely, "to report to the Council on the procedure which might be followed with a view to preparing eventually for conference for the solution of these questions," united in a recommendation that one or more conferences of official representatives of the various governments, whether or not members of the League, be called by the Council in the near future, to consider and take action with respect to the formulation and submission to their various governments of general treaties embodying provisions relating to such subjects as might be agreed upon by such official conferences, and that the preparatory work of collecting and classifying all the historical, legislative and scientific data, which might be useful for such a conference, be entrusted to a small body of experts selected for such purpose, the various reports of the sub-committees of the codification committee, and the record of its deliberations also to be utilized in this connection.

It appeared to the committee that the work done by it in conformity with the resolution of the Assembly had progressed far enough to justify the conclusion that it was reasonable to expect that a conference of representatives of governments might conclude general agreements as to some portion at least of the law of the various subjects mentioned, and perhaps of others also, which the governments of the world might reasonably accept as embodying recognized principles of the law of nations. It was expected that the reports of the Committee would be submitted to the Council of the League at its meeting in June, 1928, and it was hoped that favorable action would be taken upon the recommendations made by it.

The International Commission of Jurists at Rio de Janeiro composed of representatives of seventeen of the twenty-two American Republics, in session approximately a month, opened on Apr. 18, 1927. It had to its credit twelve projects of public international law, or, if extradition is to be included in public law—which was, however, treated under the conflict of laws—the number was thirteen. In addition, it adopted a code of private international law, or the conflict of laws, of 439 articles. The twelve projects of international law dealt with the following subjects: "Fundamental Bases of International Law"; "States, their Existence, Equality and Recognition"; "Status of Aliens"; "Treaties"; "Exchange of Publications"; "Interchange of Professors and Students"; "Diplomatic Agents"; "Consuls"; "Maritime Neutrality"; "Asylum"; "Duties of States in Case of Civil War"; and "Pacific Settlement of International Conflicts."

The code of private international law contained the following topics:

Preliminary Title. General rules

Book I. International Civil Law

- Title I. Persons
- Title II. Property
- Title III. The various modes of acquisition
- Title IV. Obligations and contracts

Book II. Commercial International Law

- Title I. Merchants and commerce in general
- Title II. Special commercial contracts
- Title III. Maritime and aerial commerce
- Title IV. Prescription

Book III. Penal International Law

Book IV. International Law of Procedure

- Title I. General rules
- Title II. Competence
- Title III. Extradition
- Title IV. The right to appear in court and its modalities
- Title V. Letters requisitoria and letters rogatory
- Title VI. Exceptions having an international character
- Title VII. Evidence
- Title VIII. Appeal for annulment
- Title IX. Bankruptcy and Insolvency
- Title X. Execution of judgments rendered by foreign courts

Of the twelve projects, ten had been prepared by the American Institute of International Law at the request of the Pan American Union, to serve as a basis of discussion. Two—"Asylum" and "Duties of States in Case of Civil War"—were original with the Commission. The project of the code of private international law was prepared by Dr. Antonio Sanchez de Bustamante y Sirven, the distinguished Cuban jurist and statesman and Judge of the Permanent Court of International Justice at The Hague, in behalf of the American Institute of International Law which had been requested by the Pan American Union to prepare a project, or projects dealing with the subject matter of private international law.

By resolution of the Fifth Pan American Conference, held at Santiago de Chile in 1922, creating the International Commission of Jurists, the projects which it has adopted are to pass directly to the Sixth Pan American Conference, which was to meet in Havana on Jan. 16, 1928, for such action as the representatives of the twenty-one American Republics shall be pleased to take, in accordance with the instructions of their respective governments. To the extent to which they are approved, they will be given the form of conventions, and transmitted to the governments of the Americas for ratification.

INTERNATIONAL LAW ORGANIZATIONS. The Institute of International Law held its thirty-fourth conference at Lausanne in August under the presidency of Dr. James Brown Scott. It adopted resolutions, with projects, regarding public international law, on responsibility of states for injury to the person and damage to the property of foreigners; international aerial navigation; radio-telegraphic communications; navigation on the high seas; submarine cables; arbitral procedure; and international commissions of conciliation. The resolutions on private international law related to *locus regit actum*, and the law of checks.

The American Institute of International Law held a meeting at Montevideo in March attended by delegates from the United States and Latin American countries. The projects of Conventions on Public International Law which had been prepared at a previous session of the Institute were approved and referred to the commission of jurists to meet at Rio de Janeiro, and a draft

code of private international law was referred to societies of international law in the American republics for subsequent consideration and recommendation to the Institute. The projects were recently published by the Pan American Union.

The Hague Academy of International Law held its 1927 session from July 4 to August 27.

The American Society of International Law held its twenty-first annual meeting in Washington, April 28-30. A notable feature of this meeting was the presidential address of the Hon. Charles E. Hughes on "Possible Gains" in which he discussed among other topics what he called "provocative armaments."

INTERPARLIAMENTARY UNION. The 24th Conference was held in Paris, August 24-30, and was generally considered by its members as a great success. This was due in large part to the magnificent reception given by the French group, by the Government of the French Republic, by the press and by public opinion in France to the representatives of the thirty-two parliaments assembled in the halls of the Senate. The good work was due in a very large measure to the stimulating atmosphere of sympathy and interest which surrounded it. The invitation of the French group received affirmative answers from all the European groups, with two exceptions: the Lithuanian and Jugo-Slav, whose members were detained at home by approaching elections. The Belgian delegation was a noteworthy one, since for the first time since the War it comprised members of all the parties, and it took an active and brilliant part in the debates. All the old-established groups from other continents, such as the American, Canadian, Japanese and Dutch Indies groups, were represented, in addition to several of the groups formed within the last three years; the Mexican, Dominican, Egyptian and Philippine groups. Further, the parliaments of Salvador, Peru and Nicaragua had sent delegates, although those countries were not at the time affiliated with the Union. Chile, Uruguay and Venezuela had also announced their participation, but their representatives did not present themselves at the Conference. The Brazilian, Costa Rican, Cuban and Panama groups which had been formed during and after the Washington-Ottawa Conference, were not represented.

The countries represented were United States of America, Austria, Belgium, Bulgaria, Canada, Czechoslovakia, Denmark, Dominican Republic, Dutch East Indies, Egypt, Estonia, Finland, France, Germany, Great Britain, Greece, Hungary, Ireland, Italy, Japan, Latvia, Mexico, the Netherlands, Nicaragua, Norway, Peru, the Philippines, Poland, Rumania, Salvador, Sweden and Switzerland. There were between 350 and 400 delegates present.

The conference was opened on Thursday morning, August 25th, by the election of M. Paul Doumer, President of the Senate, as presiding officer. In a speech of great distinction he gave a broad picture of the work of the Union during the forty years of its existence. M. Raymond Poincaré, Prime Minister, gave a brilliant exposition of the modern aspect of international relations, defining in that connection the rôle which the Union is called upon to play. M. Poincaré's speech expressed the philosophy of the Inter-Parliamentary Union.

After these addresses, which aroused great enthusiasm, the general debate on the report of

the Secretary General awoke no less interest. This debate gives delegates the opportunity of raising questions which they consider to be important for the future of peace. Taking place as it did in Paris, in the presence of large French, German and Belgian delegations, it could not fail to turn principally on Franco-German and Germano-Belgian relations. M. Magnette even asked the assembly to pass a resolution affirming the attachment of all the members of the Union to the cause of international pacification and declaring—in order to give moral satisfaction to Belgium—that the violation of Belgian neutrality was “a highly regrettable and reprehensible act.”

The motion was referred to the Council, which requested its president and a member from each of the groups concerned—German and Belgian—to endeavor to come to an agreement on a common text. That agreement was obtained and at the last sitting of the conference Baron Adelsward read a declaration which completely satisfied the parties concerned. The conclusion to be drawn from this passage of words was that the Union was now strong enough and its members sufficiently imbued with its spirit to make it possible for even the most delicate questions of international politics to be brought before it with impunity, for they are dealt with in an atmosphere of frankness and good will that cannot fail to contribute to their peaceful solution.

Other questions were raised in the general debate: the evolution of the parliamentary system, the problem of national minorities and the failure of the Geneva Naval Conference. The debate on the fight against drugs of addiction was introduced by an efficient report from Dr. Brabec (Czechoslovakia) which drew attention to the main points of the draft resolution submitted to the Conference by the committee for social and humanitarian questions. This draft had the merit of seeking to steer a middle course between the two principal methods advocated in the fight against the drug evil, one of which may be termed the British method and the other the American, and in so doing to unite all forces. In the field of practical experience a Japanese speaker gave precise information on the methods employed by his country for the progressive prohibition of opium in Formosa, and an Egyptian delegate pointed out the difficulties which the system of capitulations causes in his country in the struggle against the abuse of narcotics. The resolution was finally passed unanimously by those present, with one exception, and it is hoped that it will serve to stimulate the zeal of the governments and of the League of Nations in what is undoubtedly a long and difficult task.

Saturday, August 27, the third day of the Conference, was entirely devoted to the consideration of the draft resolution figuring on the agenda under the heading of “A European Customs Understanding.” This draft had been amended at Paris by the committee for economic and financial questions, which added to the text prepared by a sub-committee a resolution in favor of the abolition of passports and an appeal to the League of Nations calling upon that body to pursue the work begun by the Geneva Economic Conference. The discussion, which was opened by Mr. Treub (Holland) showed that there was general agreement as to the necessity of making an end of the system of “super-

protection” in force in Europe since the War and which is driving that Continent to ruin. The resolution did not therefore give rise to a real debate, but instead to a series of statements of a technical rather than a political character. What objections were raised during these two highly instructive sittings only served to stress the unanimous feeling of the meeting in favor of the principle itself on which the resolution was based. The text was completed by an amendment moved by M. Emile Borel (France) the object of which was the gradual and progressive lowering of customs duties. At the close of the debate, Mr. Treub urged his colleagues not to let their efforts in this domain end with the conclusion of that conference, but to carry home with them the resolutions voted and seek the best methods of acting upon them within their respective parliaments.

Reduction of armaments occupied the attention of the conference during the two sittings held on August 29, and gave rise to animated discussions. The delegates were asked to vote on two distinct drafts. The first of these was a very complete technical plan for the reduction of armaments, consisting of an explanatory preamble, a general statement of principles, special rules relating to land, sea and air forces and the establishment of a system of supervision; the second draft contained a general declaration pointing out the very slight results which had been obtained by the governments and the League of Nations with regard to disarmament, and asking for vigorous action on the part of the groups of the Union. The technical plan was favorably received, although several delegates criticized some of its details; but the general declaration gave rise to considerable opposition. Some objected to it on the ground that it passed over the question of security, whilst others considered that it criticized the League too sharply.

At the end of the debate, the general rapporteur, Mr. Munch of Denmark, was obliged to refer the declaration back to the Disarmament Committee for reconsideration. The Committee met on the following day, and after a two hours' sitting agreed upon a new draft in which a reduction of armaments was asked for as energetically as in the first text, but the criticisms of the League were omitted, and the necessity of developing arbitration and the feeling of security as well as studying the technical aspect of reduction of armaments was emphasized. In this form, the drafts were adopted unanimously. The debate had shown that the Union could not escape the same difficulties with which other international institutions are confronted when studying the problem of the practical application of the principle of reduction of armaments, and that it was its urgent duty to take action with the parliaments with a view to creating a will in favor of reduction armaments sufficiently strong to overcome those difficulties.

Codification of international law was the topic for the last day. The rapporteurs, Signor di Stefano-Napolitani (Italy) and Professor Schücking (Germany) briefly commented upon the draft resolutions before the Conference. The conclusions of those resolutions may be summarized as follows: 1. The calling of a first conference on Public International Law to study the work of the Committee of Experts of the League of Nations, and the transformation of

that committee into a permanent body in order that it may efficiently carry on the work. 2. The drafting by the Inter-Parliamentary Committee for Judicial Questions of a general synthetic plan for the codification of international law. These proposals gave rise to a debate of a scientific rather than a political nature which showed the general desire that the rules for international law already existing or now in formation should be brought up to date.

All the speakers were not, however, agreed as to the methods to be employed: delegates from European countries were in favor of progressive codification under the auspices of the League, while the delegates from the United States of America moved an amendment providing for the calling of periodical conferences whose aim should be to "give definite form and statement to the principles of law already generally accepted and to formulate such amendments and additions as may be useful or necessary." The proposal was therefore more ambitious than the resolution, which latter draft it would logically have replaced had it been voted. The amendment did not however obtain the approval of the meeting, which adopted the draft resolution with three corrections, aiming in particular at introducing into international law the new conception of international penal repressive measures.

M. Fernand Bouisson, the President of the Chamber of Deputies, who had presided over the last sitting, delivered the closing address to the conference. After having drawn attention to the interesting nature of the discussions which had just come to an end and thanking all those who had contributed to the organization of the meeting, he touched upon the present state of evolution of the parliamentary régime as "the supplest and most simple, the best adapted to the needs of modern government, the only one which places control in the hands of the sovereign people." Turning to the delegates M. Bouisson added: "By endeavoring to raise these methods of free discussion and persuasion to an international level, by contributing to the development of an international parliamentary life, you know that you are working for the future."

The publicity given to the conference both in France and abroad will contribute to the firm establishment of the institution. It should however be noted that the defect seen at nearly all the conferences recurred at Paris: while certain delegations are chosen with the greatest care and are really representative of the different parties within the respective parliaments, others appear to be composed in a haphazard way of any who may enter their names, and without any fixed method. The consequence is that certain parliaments whose prestige stands high in the world do not occupy the position to which they are entitled at the conferences nor exercise the influence which should naturally be theirs.

At the final banquet M. Briand made an important speech in which he outlined the peace policy followed by the French government. The press in France and abroad also devoted an unusual amount of notice to the debates of the Union, a fact which contributed to the success of the conference. In this way the echoing platform of Paris has made the Union better known in the whole world and has attracted public

interest to its work. This institution has thus found great encouragement which will enable it to continue its work with yet greater assurance and confidence.

The Inter-Parliamentary Council held its Spring session in Geneva on April 23 at the Palais Eynard. It was preceded and followed by sittings of the Committee for Judicial Questions, the Sub-Committee for the Study of a Technical Plan for Reduction of Armaments, and the Sub-Committee for Migration Questions. As usual on such occasions, the Executive Committee also held a sitting. Dr. Christian L. Lange is Secretary General of the Interparliamentary Union with headquarters at 5, Place Claparède, Geneva.

INTERSTATE COMMERCE COMMISSION. See RAILWAYS.

INVESTMENT TRUSTS. The term investment trust has been well known in Great Britain for a good deal more than half a century. In that country active development of investment trusts as a means of applying and collecting comparatively small sums under conditions of relative safety proceeded vigorously after the year 1860 and has finally reached the highly developed stage in which the resources of British investment trusts of all classes (land and finance) were estimated at £400,000,000. In the United States, the term investment trust was hardly known prior to the close of the World War (the first recorded instance of such a trust dating only from 1907). Since the year 1920, a substantial growth of investment trusts has taken place, partly as the result of foreign investment in the United States, and partly because of the constantly widening interest of American investors in stocks and bonds as a means of applying savings. An investigation made by the Attorney General of New York in the early autumn of 1927 showed a total of 135 investment trusts operating in that state alone with \$400,000,000 capital. To-day, there are 150 (close of 1927) with \$500,000,000 of capital. Probably most of those that have been established in the United States, however, have headquarters, or at all events, an office, in New York City.

The investment trust is what its name implies—a trust fund established by contributions from individual investors who want to turn over the business of managing their funds to others. The management of an investment trust may thus be individual or corporate. In the latter case, a management corporation is formed whose purpose it is to receive, invest, and manage and eventually to distribute the earnings of, moneys placed in its hands by investors. There are still various cases in which persons have merely acted in their individual capacity as trustees for funds deposited with them by others which they have pooled as received, and have used for the purchase of securities which, in their opinion, were sound.

In order to establish confidence, it is customary that the individual or management corporation engaged in operating an investment trust shall place the securities growing out of successive operations with a recognized trustee institution—usually, under American law, a trust company. An indenture specifying the conditions under which funds will be received, investments made and the resulting securities set aside and from time to time withdrawn and sold, is drawn up, and, upon the basis of this indenture, the trust company which has been selected as holder

of the securities "accepts" the trust, agreeing to carry out the provisions of the indenture in so far as the holding and disposing of securities are concerned. This leaves the management company, with its board of directors, responsible for altering the securities of the trust, taking in the resultant proceeds, determining what securities to buy, making the purchases, placing stocks and bonds thus acquired with the trust company, and from time to time determining upon a withdrawal and sale (if so permitted by the indenture).

In its simplest form, the investment trust assumes the shape of a so-called "fixed fund" which is invested in a specified list of securities. Titles to ownership are represented by shares or "certificates." Thus, for example, the investment trust may undertake to purchase 100 shares of each of 10 named companies and to deposit the whole 1000 shares with a trust company, thereafter selling, let us say, 1000 shares or certificates each of which entitles its holder to a proportionate share or ownership in the entire body of securities so deposited. In this case, management is reduced to a minimum, since the purchases are made in a specified way, and it is usual to provide that, in the event a given issue of stock is retired or must otherwise be disposed of, the resulting funds shall be reinvested in the remaining securities of the original list. The holder of the investment trust shares or certificates thus becomes entitled merely to his pro rata share of the entire receipts, and to a corresponding pro rata distribution of the proceeds at the time when the trust matures or ends, or is dissolved.

A more complex form of undertaking is afforded by a so-called "managed" list of investments. In such a trust the management company merely undertakes to buy any securities it pleases and to sell them when it thinks fit. This form of management may be accompanied by published statements of holdings from time to time, as a matter of good faith, or may be of the "blind pool" type, in which the managers are obviously stock market operators, buying and selling when and as they deem best. Of course, in such a case the investment trust usually announces, or at all events guides itself, by an "investment policy" which may involve merely more or less mechanical diversification, such as (in one actual case), the keeping of the funds in not less than 100 different securities distributed in specified proportions between industrials, rails, government issues and other types of obligations. Most of the recent discussion of investment trusts has centred around this question of investment policy and method of using and accounting for the funds received.

It should be added that in some investment trusts, particularly of the English type, the practice of depositing with a trust company is omitted. In this case the management corporation either increases its stock from time to time, so that the investor becomes a stockholder of the management corporation (and buys no certificates or debentures), or else it issues debentures which bear a fixed rate of interest and in some cases are accompanied by warrants entitling the holder to receive shares in the corporation, junior to those of the organizers, and contributors of capital. In this case the debenture holder gets a fixed rate of interest first of all and

then a division of profits is made between him and the managers of the corporation who presumably hold its senior stock, or a substantial share of the junior stock, or both.

It is evident that whether the latter type or one of the other forms be employed, the profit to the managers of the investment trust comes from the fact that they sell participating rights (in income or capital) to investors at a figure higher than is necessary to acquire the securities which are bought for the trust. In the best managed and most straightforward investment trusts, the actual cost to the investor is usually made plain and may run from 6 to 7 per cent of income, up to any amount that managers can induce investors to be content with. The remainder of earnings from appreciation may, in some cases, be continuously reinvested in securities, thereby enhancing the worth of the main body of the trust, or may be periodically declared as dividends to stockholders. In many investment trusts the remuneration to the investor, especially when the market value of securities in general continues to appreciate, is greater than he might obtain in other conservative fields, especially as he obtains the advantage of a diversification of investment and a more or less fixed investment policy.

Investment policy is a vague phrase which has no well defined meaning. In general its objects are to obtain the maximum return which is consistent with safety. The object of the investment trust, however, is not primarily safety in the ordinary sense of the term, but is that of enabling the owner of small resources or the man who is too much occupied with his own affairs to give thought to the question of investment to obtain access to the earnings which come from business profits, rather than to be obliged to content himself with mere interest on his "money." The protection of the investor is thus found in wise investment, or wise use of funds, and there is danger that success will be taken as the only test of wisdom, so that investment trust managers who speculate successfully will be regarded as the soundest elements in the profession. Recognizing this danger, most investment trust managers deem it wise to make a plain statement at the outset as to the general direction in which they propose to apply their funds, as well as to the markets in which they intend to operate.

In some cases, they also commit themselves as to policy with respect to the purchase of dividend paying securities and as to the course they intend to follow in using earnings derived from appreciation of capital—whether in distribution or in improving and enlarging the value of the main body of the trust. Diversification in some one of its many forms is thus at the bottom of investment policy of most of the trusts, while other questions bearing upon the methods of selection are dealt with in varying ways. American trusts on the whole have emphasized turnover and rapid profit from sales and purchases, while British trusts have in the main laid emphasis upon making good individual choices, relying on the directors' information and purchasing for a "long pull."

The so-called "Edge Act," adopted in 1919 as an amendment to the Federal Reserve Act, provides for the organization of federal investment trusts, but only one such trust existed in 1927. State laws for the most part, have reference

only to conditions of trusteeship and provide little regulation of the operations of the management companies. The Attorney General of the State of New York, after a lengthy investigation which he made in 1927, published a report containing a variety of suggestions for investment trust control.

IONA SOCIETY, AMERICAN. An association chartered May 23, 1925, by the Regents of the University of the State of New York to "preserve, encourage and promote Celtic culture," and for the establishment in Scotland of a centre of Gaelic culture. Progress was made during 1927 in the plans for the establishment of a university, offering courses in the Celtic language, literature, music, arts and crafts, to be located in Scotland with its principal office in New York. The officers in 1927 were: President, Richard M. Montgomery; vice presidents, Dr. John H. Finley and James Stewart Cushman; secretary, Dr. Alastair S. MacKenzie; treasurer, Nelson Macy; counsel, Col. Alexander R. Forde. The headquarters of the Society is at 300 Madison Avenue, New York.

IOWA. POPULATION. According to the fourteenth census of the United States, the population of the State on Jan. 1, 1920, was 2,404,021. According to the State census taken in 1925, the population was 2,419,927. The estimated population on July 1, 1927, was 2,425,000. The capital is Des Moines.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	19,947,000	899,566,000	\$275,701,000
	1926	11,170,000	435,690,000	243,953,000
Oats	1927	5,972,000	197,076,000	52,772,000
	1926	6,218,000	195,867,000	63,553,000
Hay	1927	3,458,000	5,681,000*	70,202,000
	1926	3,412,000	4,057,000*	62,128,000
Wheat, winter	1927	425,000	8,075,000	9,448,000
	1926	842,000	7,524,000	9,029,000
Wheat, spring	1927	41,000	686,000	781,000
	1926	36,000	554,000	659,000
Potatoes	1927	75,000	6,896,000	6,396,000
	1926	74,000	5,846,000	9,938,000
Barley	1927	456,000	14,318,000	2,450,000
	1926	268,000	8,174,000	4,577,000

* tons.

MINERAL PRODUCTION. Coal production continued in 1926 at about the same rate, being in quantity 4,925,487 net tons in 1926 and in 1925 4,714,843 tons; in value, \$14,214,000 in 1926 and in 1925, \$14,807,000. There were produced 4,925,811 barrels of Portland cement in 1926; in 1925, 4,648,135 barrels. Cement shipments had a value, for 1926, of \$8,167,431; for 1925, of \$8,674,563. Of gypsum, in the production of which the State ranked second, there were produced in the year of latest available statistics, 1925, 800,167 short tons; in 1924, 727,385 tons. The product had a value for 1925 of \$6,734,271; in 1924, of \$5,657,339. Stone, sand and gravel production reached totals of some importance. The entire mineral production of the State, with allowance for duplications, was \$38,420,203 for 1925; for 1924, \$40,459,869.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the

State government in the fiscal year ending June 30, 1926, were \$21,859,326; their rate per capita was \$9.03. They included \$748,304 apportioned for education. Totals not included above, of \$850,907 for interest payments and of \$11,134,842 for permanent improvement outlays, brought the aggregate of State expenditure to \$33,845,075. Of this, \$12,806,554 was for highways; \$4,248,881 being for maintenance and \$8,557,673 for construction. Interdepartmental payments accounted for \$118,491 of the expenditures of the State.

Revenue receipts were \$34,774,206; or per capita, \$14.36. Of their total, property and special taxes yielded 36.8 per cent, attaining a rate of \$5.28 per capita. Earnings of departments and compensation paid the State for officials' services supplied 15.6 per cent of revenue; 40.8 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a tax on gasoline sales.

Net State indebtedness on June 30, 1927, was \$18,213,896, or \$7.52 per capita. Property subject to ad valorem taxation had a total valuation of \$1,574,776,233. State taxes levied were \$10,853,170, or \$4.48 per capita.

TRANSPORTATION. The number of miles of railroad line in the State on Jan. 1, 1927, was 9,810.88. No new construction in 1927 was reported.

EDUCATION. The Legislature enacted a measure for the establishment and maintenance of junior colleges in the public education system. It made mandatory the payment of school bonds during the term of issue. By law it was required that when 25 parents or guardians should so petition a school board must establish a kindergarten. A library expenditure on books at the yearly rate of 15 cents to each pupil was required of all school districts.

CHARITIES AND CORRECTIONS. The Board of Control of State Institutions had under its charge in the year ending June 30, 1926, 15 State charitable and penal institutions. These, with the numbers of their respective inmates, were: Soldiers' Home, 444; Soldiers' Orphans' Home, 521; Juvenile Home, 255; Institution for Feeble-minded Children, 1617; State Sanatorium, Oakdale, 266; Training School for Boys, Eldora, 481; Mount Pleasant State Hospital (insane), 1308; Independence State Hospital (insane), 1384; hospitals at Mount Pleasant and Independence for the inebriate, 42; Clarinda State Hospital (insane), 1307; Cherokee State Hospital (inebriate), 1249; Hospital for Epileptics and School, Woodward, 353; Hospital for Epileptics and School for Feeble-minded, 306; State Penitentiary, Fort Madison, 1048; Men's Reformatory, Anamosa, 994; Women's Reformatory, Rockwell City, 81. An important chair and furniture industry was carried on at the State Penitentiary, with net sales in the two-year period of \$749,134. Shirts, shoes, clothing, brushes and brooms were also made. At the Men's Reformatory an apron factory showed net sales of \$274,700 for the two years, and paid prisoners wages of \$35,105. At this institution were made also the State's automobile license plates for 1926 and 1927, and a printing and binding industry was conducted. Prisoners admitted in 1926 to Iowa institutions, according to the Department of Commerce, numbered 677; patients in the State insane hospitals, Jan. 1, 1927, numbered 5346.

LEGISLATION. The State Legislature convened in regular biennial session in January. It passed a resolution rescinding the action of certain of the earlier General Assemblies of the State in petitioning the United States Congress to call a Constitutional convention. The purpose of the rescinding resolution was to prevent the anti-prohibition movement from making use of the Iowa petition, based on a former desire for other Constitutional change than the repeal of the Prohibition Amendment, but still counted in the total of States' petitions for a convention. A measure was enacted to place the system of primary roads in the State entirely in the control of the State highway commission. It provided that where a county had issued bonds for the building of roads of this character, the State should assume such indebtedness. A law providing a quarantine against the corn borer and appropriating \$200,000 for preventive and eradicating operations against this pest was passed. There was enacted a bill to require counties of the State to issue bonds, when contracting indebtedness, on the serial system. (For educational enactments, see *Education*, above.)

POLITICAL AND OTHER EVENTS. The State Railroad Commission voted October 4 to protest before the Interstate Commerce Commission against the proposal to merge the Great Northern and Northern Pacific railroads. Drake and Des Moines Universities at Des Moines announced May 10 their intention to consolidate after the close of the current academic year. Bituminous coal miners dropped out of the nation-wide strike in that industry October 4, making a settlement with the operators on State-wide lines similar to that made in Illinois. About 9000 miners were involved. It was reported in May that work done by Federal, county and State authorities in coöperation to eradicate cattle tuberculosis had resulted in the testing of 1,138,412 cattle.

OFFICERS. Governor, John Hammill; Lieutenant Governor, Clem F. Kimball; Secretary of State, W. C. Ramsay; Treasurer, R. E. Johnson; Auditor, J. W. Long; Attorney General, John Fletcher; Superintendent of Public Instruction, Agnes Samuelson; Secretary of Agriculture, Mark G. Thornburg.

JUDICIARY. Supreme Court Justices: Truman S. Stevens, Charles W. Vermillion, Frederick F. Faville, Lawrence DeGraff, William D. Evans, E. G. Albert, E. W. Morling.

IOWA, STATE UNIVERSITY OF. A coeducational State institution of higher education at Iowa City, Iowa; founded in 1847. The enrollment for 1926-27 was 8676, of whom 4651 were men and 4025 women, and for the autumn of 1927, the enrollment was 6442. The summer school registration totaled 4095. There were 442 members on the faculty in the autumn of 1927. The general library contained 269,000 volumes, and the law library 46,500. The income for 1926-27, including revolving funds, was \$6,440,898.39. Gifts to the University during the same period aggregated \$587,313.60, including: \$450,000 from the General Education Board and Rockefeller Foundation for a new medical building; \$7500 from Institute of Social and Religious Research in Character Education; \$58,000, General Education Board for Gynecology and Obstetrics (\$11,000 annually for five years); \$10,000 from John P. Laffey for a law loan fund; and \$26,213 from the Federal gov-

ernment for maternity and infant hygiene. A new school of religion was inaugurated during 1927, offering courses counting towards the bachelor's degree and advanced courses counting toward higher degrees. A large new general hospital and two wings of a nurses' home were under construction; while a new field house, medical laboratories, the second unit of the Iowa Memorial Unit, the second unit of the chemistry building, and a central heating plant were completed for use in 1927-28. President, Walter A. Jessup, Ph.D., LL.D.

IRAK or IRAQ. See *MESOPOTAMIA*.

IRELAND. The smaller of the two main British Isles, with an area of 32,586 square miles; politically divided into northern and southern Ireland, the former consisting of the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the parliamentary boroughs of Londonderry and Belfast; and the latter of the remaining 26 counties. The northern counties are known as Northern Ireland and are under a separate parliament and executive by the Government of Ireland Act of 1920 (See *IRELAND, NORTHERN*). The southern counties constitute a self-governing dominion, known as the Irish Free State, under the treaty of Dec. 6, 1921. (See article, *IRISH FREE STATE*.) The total population of the island June 13, 1921, was estimated at 4,485,000 as compared with 4,390,219 at the census of 1911. No census for all Ireland was taken in 1921. Statistics for Ireland as a whole are no longer available, but for the two divisions they will be found under their respective titles, *IRELAND, NORTHERN*, and *IRISH FREE STATE*.

IRELAND, NORTHERN. The northeastern part of Ireland, comprising six of the nine counties of Ulster: Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the two parliamentary boroughs of Belfast and Londonderry. Capital, Belfast.

AREA, POPULATION, ETC. The area of Northern Ireland, exclusive of water, is 3,351,446 statute acres (also given as 5238 square miles). According to the census taken in 1926, the population was 1,256,322, as compared with 1,250,531 in 1911, the date of the previous census. The population of the capital, Belfast, was estimated at 434,000 in 1924. The following are the latest statistics with respect to education: Elementary education, 2006 public elementary schools with 200,287 pupils on roll; secondary education, 72 schools with 9357 pupils; technical education, 41 technical schools and 56 other centres with over 20,000 pupils; higher education, Queen's University at Belfast, with 110 professors and lecturers, 1209 students, in 1927.

PRODUCTION, ETC. The most important industry in Northern Ireland from the point of view of numbers employed and value of products is agriculture. Approximately as many persons are regularly employed in that as in all other pursuits combined. The principal products are potatoes, cattle, bacon and hams, eggs and butter, the exportable surplus being shipped to Great Britain. The two principal industrial enterprises are linen manufacturing and shipbuilding, both centred at Belfast. The former provides employment for approximately 110,000 persons, excluding those engaged in growing the fibre. There are about 1,000,000 spindles and 40,000 looms. The value of linens exported from the United Kingdom in 1925 was £11,207,267, practically

the whole of which came from Northern Ireland. The Belfast shipyards employ approximately 20,000 persons, and possess an output capacity exceeding 250,000 tons a year. Other important manufactures are ropes and twines, tobacco, soaps, aerated waters, biscuits, spirits, hosiery and underwear. No separate figures for commerce of Northern Ireland are available, because they are included in the general figures for the United Kingdom.

FINANCE. The bulk of the taxation is imposed and gathered by the Imperial government. After the deduction of certain specified sums the balance is remitted to the Northern Ireland Exchequer. The amounts deducted by the Imperial Treasury represent: The net cost to the Imperial Treasury of those Northern Irish services which have been "reserved" to the Imperial Parliament; and a contribution (fixed at £7,920,000 annually, but subject to revision) towards Imperial liabilities and expenditures. The share of Northern Ireland in the taxation controlled by the Imperial authorities is determined by the joint exchequer board, comprising a representative of the Imperial Treasury, a representative of the Northern Irish Treasury, and a chairman appointed by the King. The revenue accruing to the Northern Irish Exchequer in 1925-26 amounted to £12,726,000 and the expenditure amounted to £12,676,000. For the year 1926-27 the revenue was estimated at £11,659,000 and the expenditure to an approximately equal sum.

COMMUNICATIONS. In addition to the railway mileage of 765 miles, the country is served by various inland waterways, supplemented by 180 miles of canals.

GOVERNMENT. Northern Ireland has a local parliament with restricted jurisdiction; forms an integral part of Great Britain; is represented in the British Parliament by 13 members; and is subject to the same taxation as that of Great Britain. The Governor in 1927 was the Duke of Abercorn. The ministry was as follows: Prime Minister, Viscount Craigavon; Finance, H. M. Pollock; Home Affairs, Sir R. Dawson Bates; Labor, J. M. Andrews; Education, Viscount Charlemont; Agriculture, E. M. Archdale; Commerce, J. M. Barbour.

IRISH FREE STATE. A self-governing dominion of Great Britain, constituted under the Irish Free State government act of December, 1922, which embodied the terms of the treaty of Dec. 6, 1921. Capital, Dublin.

AREA AND POPULATION. The Irish Free State comprises about five-sixths of the total area of all Ireland. According to the census of 1926 the total area was 17,019,155 statute acres or 26,592 square miles. The population, according to this same census, was 2,972,802, as compared with 3,139,688 in 1911. The loss in population is almost entirely due to emigration caused by unsatisfactory economic conditions in the dominion. The movement of population in 1925 was: Births, 62,069; deaths, 43,650; marriages, 13,820; immigrants (1926), 10,638; emigrants (1926), 29,412. Dublin, the capital, had a population (with its registration area) in 1911 of 397,957. At the census of 1926, the population was 419,156.

EDUCATION. The latest statistics available for elementary instruction showed 5836 schools in operation with accommodations for 550,000 pupils. The number of pupils enrolled in the schools

was 493,382; the percentage average daily attendance was 73.5; the number of teachers of all classes was approximately 13,000. The number of recognized secondary schools during the school year 1925-26 was 284 with 25,510 students between the ages of 12 and 20 years. Technical schools are established in all the cities and principal towns. Higher education is supplied by the University of Dublin and the National University of Ireland, the latter having three constituent colleges at Cork, Galway, and Dublin. The statistics for the teaching staff and attendance at the universities in 1926-27 were: Professors and lecturers, 284; students, 3050. Since the establishment of the Free State, the Irish language has been made an essential part of the school curriculum and it is rapidly spreading as a medium of instruction.

PRODUCTION. About one-fourth of the total land area of the Free State is under crops. More than three-fourths of this area is under hay and oats, while one-tenth is sown in potatoes. Historical causes, including free trade in Great Britain and the opening up of large wheat areas in America, drove the Irish farmer into the livestock business which is now the most important in the value of agricultural exports from the country. This development, combined with the failure of Great Britain to encourage industries in Ireland, is responsible in large part for the heavy emigration from Ireland and the reduction in its population. The accompanying tables from the *Statesman's Year Book* for 1927 show the area under the various crops and the yield in 1924 and 1925:

<i>Crops</i>	<i>Extent in statute acres</i>	
	<i>1924</i>	<i>1925</i>
Wheat	32,612	22,252
Oats	688,670	671,870
Barley and bere	156,239	145,626
Rye	8,134	7,616
Potatoes	392,650	380,140
Turnips	201,571	199,024
Mangels	84,087	78,588
Cabbage	80,994	80,162
Flax	10,859	10,688
Hay	2,288,097	2,265,178

<i>Crops</i>	<i>Total produce</i>	
	<i>1924</i>	<i>1925</i>
Wheat	27,720	20,119
Oats	482,069	585,668
Barley and bere	128,429	132,255
Potatoes	1,492,070	2,138,374
Turnips	2,671,580	3,299,373
Mangels	1,000,040	1,318,878
Flax	1,847	1,526
Hay	4,576,194	4,279,828

The number of livestock in 1925 was: Cattle, 3,991,358; sheep, 2,813,062; pigs, 731,500; goats and kids, 183,589; horses in agriculture, 335,078; unbroken horses, 52,683; mules and jennets, 21,854; asses, 196,917.

The mineral resources include: Coal, clay, copper ore, gravel and sand, igneous rocks, limestone, ochre, amber, sandstone and slate. The mineral resources have not been developed to any great extent. The Government of the Free State was expending \$30,000,000 on the development of hydro-electric power on the Shannon River. This development will provide 96,000 horsepower by the year 1928, and will be one of the largest undertakings of its kind in Europe. When completed, it will aid considerably in adjusting the economic balance of the country, now preponderantly agricultural. It was

reported at the end of 1927 that the project was being completed in accordance with schedule.

COMMERCE. The statistics on the foreign trade of the Free State were very meagre during the year. According to the U. S. Bureau of Foreign and Domestic Commerce (November, 1927), economic and commercial conditions, though still unsatisfactory, improved in recent months, principally because of more active trading in Great Britain. The Free State was exporting more farm products, although at lower prices, and there was an increase in the number of livestock on the farms. Railway traffic had increased some 11 per cent over the preceding year in spite of the considerable increase in motor bus transportation services. Unemployment data suggested a decrease of some 10 per cent and emigration to non-European countries had declined about 9 per cent. Among the unfavorable features was the continued depression in brewing and malting, which contrasted with increased activity in some of the newly protected industries.

Oversea trade returns, as compared with 1925, were generally favorable. Imports for the first nine months of 1927 were valued at £44,514,000, as compared with £45,514,489 in 1925; exports, on the other hand, increased, the January-September total of £30,519,000 (comparing with £29,623,000 in 1925) definitely improving the trade balance. Live pork, butter, and eggs continued to be the principal factors in the increase. Direct imports from the United States in this period were valued at £3,387,000, an increase over the 1926 level even with the disappearing coal trade. Cereals (wheat and corn), oilcake, petroleum, and tobacco were leading factors in the higher totals. Exports to the United States also increased.

FINANCE. The budget for the fiscal year ending Mar. 31, 1928, as presented to the Irish Free State Parliament, called for revenues of £23,800,000 and expenditures of £27,000,000. Of the latter item £3,400,000 was for non-recurrent items which were to be covered by borrowing. The income tax would be reduced from 4s. to 3s. in the pound, a total reduction of £500,000. No new duties were proposed but a drawback would be established on imported parts of shoes manufactured for export and on oatmeal manufactured into oat cakes for export. Exchequer returns for the fiscal year ended Mar. 31, 1927, placed the revenues at £25,080,378 and expenditures at £27,075,137. Towards the close of the year it was stated that government financial returns indicated that revenue and expenditure were proceeding in accordance with the budget estimates and that the amount of the proposed government loan would be reduced to £6,000,000, and its flotation in 1927 on the domestic market was anticipated.

COMMUNICATIONS. The principal ports are Cork and Dublin. In 1925, 13,390 vessels of 8,812,270 tons entered the ports of the Irish Free State and 13,334 of 8,846,246 tons cleared. Post-war conditions found the Irish railway system in a somewhat precarious position, so much so that government intervention was considered advisable. Wages were high and rates had reached abnormal levels, while receipts were light, primarily as a result of internal political disturbances. A commission appointed by the Free State government to investigate the railway situation advocated unification as a neces-

sary reform, and later, the act of 1924, which came into operation in January, 1925, united into the system all the railways operating in the Irish Free State, exclusive of those lines whose tracks crossed the border into Northern Ireland. The principal railway system of the Irish Free State is known as the Great Southern Railways. In addition to this railroad, the government has constructed and owns three lines of colliery railways which have a combined length of 24 miles. The Great Northern system which operates mainly between Dublin and the six counties comprising Northern Ireland, as well as two or three small lines which cross the border do not come within the purview of the railways amalgamation act.

At the close of 1925 the length of all railways in the Irish Free State totaled 4098 miles. Operating revenues during the year amounted to £4,294,382, and other revenues to £136,137. Operating expenses were £3,925,528, and other expenses £147,601. The rolling stock in operation on all railways in the Irish Free State at the close of the year consisted of 827 locomotives, 1553 passenger cars, and 1579 freight cars. The general condition of the rolling stock was considered good.

GOVERNMENT. The Irish Free State has a written constitution which provides that her status shall be similar to that of the Dominion of Canada. It has a co-equal status with the other dominions of the United Kingdom, has complete control of its economic life, with a customs boundary against all countries, including Northern Ireland and Great Britain. The Governor-General in 1927 was Timothy Michael Healy (appointed in December, 1922). The Executive Council as organized in June, 1925, was as follows: President, William T. Cosgrave; Vice President and Minister for Justice, Kevin O'Higgins; Finance, Ernest Blythe; Defense, Peter Hughes; Industry and Commerce, Patrick MacGilligan; External Affairs, Desmond Fitzgerald; Education, J. Marcus O'Sullivan. Other ministers not members of the council were: Lands and Agriculture, Patrick Hogan; Local Government and Health, James Burke; Fisheries, Finian Lynch; Posts and Telegraphs, James J. Walsh.

HISTORY. The chief interest in Irish affairs during the course of the year was the election to the Dail Eireann, as the Irish Parliament is called. On May 23 the legislative body was dissolved by the Governor General and a new election was set for June 9. Almost 400 hundred candidates were nominated for the 152 seats available and pre-election talk centered around the struggle that was bound to come between the Cosgrave group and the De Valera party, although the Labor Party and the National League placed strong candidates in those fields where they thought they had chances of election.

The results of the election were rather disappointing to the government. Its majority was reduced from seventeen to seven. W. T. Cosgrave was reelected head of the Executive Council. The followers of Eamon de Valera elected forty-four members on the extreme Republican ticket, who were ejected from the Parliament building when they refused to take the oath of allegiance to the British King as called for in the Treaty of 1921. This left the government's 47 members in charge of the situation, the next largest group being the Labor party with 22 representatives,

Quite obviously if De Valera consented to take the oath of allegiance and made a coalition with the Labor group he could take control of the government. Many of his more conservative followers urged him to take this course but for the time being he held aloof. President Cosgrave stated that he and his friends would continue to guide the ship of state only as long as enough of the minority group supported him to give real strength to his attempts to carry out his programme of social and economic reform.

The new Dail was organized without any untoward incident on June 23. The political situation was muddled for a short time, however, when on July 10 Kevin O'Higgins (q.v.), Vice President of the Free State, Minister of Justice and of Foreign Affairs, was assassinated as he was walking unguarded along the streets on his way to church. O'Higgins was known as a bitter enemy of the De Valera Republicans and his death was laid at their door. Although he had no love for Great Britain, he was a staunch supporter of the Treaty of 1921 and believed that the oath of allegiance to the British Crown, the stumbling block in the way of the Republicans' participating in the Irish government, should be lived up to in word and deed for fear lest those things gained by the Treaty should be taken away by the very power that granted them. As a direct result of his assassination, the government introduced and had passed a bill greatly increasing its power to deal with such acts of lawlessness. It also passed a measure to compel every candidate to accept the oath of allegiance to the crown in the event of his election.

Obviously the purpose of this was to strike at the De Valera Republicans and to prevent them from being elected again by their constituents. The effect of this measure was nullified almost entirely when the Republican group, consisting of 45 members, made a complete right-about-face and took the oath of allegiance, thereby becoming full-fledged members of the legislative body, and, as intimated above, placing the Cosgrave party in the minority.

Concomitant with this act the Labor party served notice that a vote of confidence would be taken on August 16, with the possibility of throwing the followers of Cosgrave out of office. The purpose of the Republicans and Laborites was defeated, however, when Cosgrave was able to win the vote of confidence by the narrow majority of one, the speaker of the body casting the deciding vote. The actual vote was 71 for Cosgrave and 70 for the coalition of Republicans, Laborites, and National League parties. Thus for the time being was settled the question of whether De Valera could accomplish through parliamentary channels the break with Great Britain which he was so desirous of seeing brought about. President Cosgrave used his slim majority to obtain an adjournment of Parliament until October 11.

In the meantime it was necessary to hold two by-elections to fill the seats of Kevin O'Higgins and the Countess Markievicz (q.v.), who died. A bitter campaign was carried on by the proponents of both the Republican and Government parties. The results were overwhelming in favor of the government. Shortly after these elections, the country was startled by the announcement that a new election would be held for the Dail on September 15. President Cosgrave in explain-

ing his unexpected stroke said: "The Executive Council has advised the Governor General that it is expedient that the Dail Eireann be dissolved. The entrance of the Fianna Fail (Republican party) to the Dail and their alliance with Labor and Independents have created an entirely different situation for the government than that envisaged by the general electorate after the last election. It is evident that the government cannot carry on its programme, as there is no margin of safety against the parties in opposition. On the other hand, it is obvious that the coalition government's foes afford no basis for a stable, progressive administration, since they are united only in a desire to defeat Ireland's present leaders. In this situation the only recourse is to place entire responsibility before the Irish people."

President Cosgrave's action was looked upon as a very shrewd political stroke. Naturally it was opposed by De Valera and the Laborites because they had practically no funds to conduct another strenuous campaign such as the country witnessed in June, while it was freely predicted that Cosgrave would have the moral and financial backing of the entire conservative element of the country. The spectre of political turmoil and possible bloodshed which was sure to follow in the wake of a Republican or Labor victory was a tremendous psychological aid for Cosgrave and his party.

The results of the election on September 15 can hardly be called a victory for Cosgrave. While it is true that he gained a few more seats in the Dail, it is also true that his government had to depend upon the continued support of several minor groups of parties among the Independent and Farmer elements. The most pronounced advance was made by the Republican group, which polled 25 per cent more votes than it did in the June elections and increased its representation from 44 to 57. The chief party to suffer losses in the election was the Labor group, doubtlessly many of its supporters swinging over to the Republican party.

Shortly after the election President Cosgrave stated that his government would remain in office as long as it was able to maintain a majority. Right at its heels, however, was the figure of De Valera, waiting expectantly to take its place at the first signs of a false step. On October 12, President Cosgrave was reelected President of the Executive Council of the Irish Free State by a vote of 76 to 70. The new ministry as announced at that time and approved by the Dail was as follows: Vice President, Minister of Finance and Minister of Posts and Telegraphs, Ernest Blythe; Defense, Desmond Fitzgerald; Education, John O'Sullivan; Industry and Commerce and External Affairs, Patrick McGilligan; Lands and Agriculture, Patrick Hogan; Fisheries, Finian Lynch; Local Government and Public Health, Richard Mulcahy; Justice, James F. Kenny. Despite several narrow escapes in the remaining days of the session of the Dail, the Cosgrave party was still in control of the government as the year ended.

IRISH LANGUAGE AND LITERATURE.
See PHILLOGY, MODERN.

IRIZAR, DR. MARIO DIAZ. Cuban jurist, died in Havana, September 25. He was born in Cienfuegos in 1890, and was educated at Villanova College, Pennsylvania, at the Institute of Matanzas and at the University of Havana. Pre-

vious to his taking up the practice of law he engaged in teaching, and later he studied Cuban legislation with respect to trade-marks and patents. On Dec. 6, 1917, he was appointed by President Menocal the first director of the International Trade-mark Registration Bureau in Havana, one of two such bureaus provided for by the Fourth International Conference of American States held in Buenos Aires in 1910. On payment of a fee of \$50, in addition to the national fee, international registration was secured. A second bureau was established in Rio de Janeiro after 1923, when a new convention was signed at the Fifth International Conference of American States. Dr. Irizar enjoyed an international reputation in the field of trade-mark practice, and was in addition an attorney of considerable prominence.

IRON AND STEEL. The iron ore mined in the United States in 1927, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines, at 61,778,000 gross tons, a decrease of 9 per cent as compared with that mined in 1926. The ore shipped from the mines in 1927 was estimated at 61,325,000 gross tons, valued at \$153,641,000, a decrease of 11 per cent in quantity and of 12 per cent in total value as compared with the figures for 1926. The average value of the ore per gross ton at the mines in 1927 was estimated at \$2.51; in 1926 it was also \$2.51. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently increased from 9,565,880 gross tons in 1926 to 10,044,000 tons in 1927, or 5 per cent.

The Bureau of Mines estimates were based on preliminary figures furnished by producers who in 1926 mined about 99 per cent of the total iron ore. They show the totals for the principal iron-ore producing States, and, by grouping together certain States, the totals for the Lake Superior district and for groups of Southeastern, Northeastern, and Western States. About 83 per cent of the iron ore shipped in 1927 came from the Lake Superior district, in which approximately 51,691,000 gross tons was mined and 51,183,000 tons was shipped, decreases of 10 and 13 per cent, respectively, as compared with the quantities mined and shipped in 1926. The ore shipped in 1927 was valued at \$130,453,000, a decrease of 14 per cent. These totals include the ore from mines in southern Wisconsin and ore shipped by rail as well as by water from all mines, but exclude manganese ores amounting to approximately 1,302,000 gross tons in 1927 and 1,065,419 tons in 1926 that contained 5 per cent or more of manganese in the natural state. The ore is chiefly hematite. The stocks of iron ore in this district apparently increased from 8,208,713 gross tons in 1926 to 8,750,000 tons in 1927, or 7 per cent. The stocks at the end of 1927 were about 655,000 tons less than was the average for the preceding five years.

The shipments of iron ore by water from the Lake Superior district in 1927 (including manganese iron ores), according to the Lake Superior Iron Ore Association, amounted to 51,107,136 gross tons, a decrease of 13 per cent as compared with these shipments in 1926. The average value of the ore at the mines in the Lake Superior district in 1927 was \$2.55 a ton; in 1926 it was \$2.56.

The Southeastern States, which constitute the second largest iron ore producing area, including the Birmingham and Chattanooga districts, mined approximately 6,832,000 gross tons of iron ore in 1927, a decrease of 5 per cent as compared with 1926. The shipments of iron ore from mines in these States in 1927 amounted to 6,866,000 gross tons, valued at \$14,016,000, decreases of 5 and 7 per cent, respectively, in quantity and value as compared with 1926. The ore is mainly hematite; brown ore and magnetite come next in order. The average value of the ore produced in these States in 1927 per gross ton was \$2.04; in 1926 it was \$2.07. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, decreased from 941,260 gross tons in 1926 to 907,000 gross tons in 1927. These stocks are about 209,000 tons more than the average for the preceding five years.

The Northeastern States, which include the Adirondack district, New York, and the Cornwall district, Pennsylvania, in 1927 mined 2,248,000 gross tons of iron ore and shipped 2,269,000 tons, valued at \$7,649,000, increases of 16 per cent in quantity mined, 16 per cent in quantity shipped, and 19 per cent in value of shipments as compared with 1926. The stocks of iron ore in this group of States decreased from 403,742 gross tons in 1926 to 366,000 tons in 1927. These stocks are considerably less than usually carried over at these mines, being about 201,000 tons below the average for the preceding five years. The average value of the ore in these States in 1927 per gross ton was \$3.37; in 1926 it was \$3.28. Most of this ore is magnetite.

The Western States that ordinarily produce iron ore, named in order of their importance, are Wyoming, Utah, New Mexico, Colorado, Montana, and California. Occasionally Idaho, Nevada, and Washington contribute small quantities. All the ore from Wyoming, New Mexico, and Colorado and most of that from Utah is used for the manufacture of pig iron. Much of the remainder is used as a flux in smelting copper and the precious metals. It is estimated that the Western States mined and shipped in 1927 approximately 1,007,000 gross tons of iron ore, valued at \$1,523,000, decreases of 15 per cent in the quantity mined and shipped and 12 per cent in value of shipments as compared with 1926. The ore comprises hematite, magnetite, and brown ore.

IMPORTS AND EXPORTS. The imports of iron ore reported for the year ended Dec. 31, 1927, amounted to 2,620,717 gross tons, valued at \$6,068,283, or \$2.31 a ton. The imports for the year 1926 were 2,555,441 gross tons, valued at \$5,876,316, or \$2.30 a ton. The reported exports of iron ore for the year ended Dec. 31, 1927, amounted to 898,793 tons, valued at \$3,425,435, or \$3.81 a ton, as compared with exports for the year 1926 of 868,710 tons, valued at \$3,380,701, or \$3.89 a ton. These statistics of imports and exports were compiled from the records of the Bureau of Foreign and Domestic Commerce, of the Department of Commerce.

The accompanying table shows the quantity and value of the iron ore mined and shipped in the United States by the principal producing states. The figures for 1926 are final, but those for 1927 are subject to revision.

ESTIMATES OF IRON ORE MINED AND SHIPPED IN THE UNITED STATES IN 1927 AND ACTUAL OUTPUT IN 1926

District	Ore mined		Ore shipped			
	1926 Gross tons	1927 Gross tons	1926 Gross tons	Value	1927 Gross tons	Value

The production of pig iron in the United States during 1927 was 36,270,567 tons, compared with 39,100,941 tons the previous year, according to the *Iron Trade Review*, which stated that the 1927 output was 8½ per cent below the record production of 40,025,850 tons in 1923.

In the United States the total steel-making pig iron produced in 1927 was 27,345,888 tons, which was 272,256 tons or 9 per cent less than the 30,071,144 tons made in 1926. In 1927 attention was called to the prevalent tendency of using fewer furnaces and increased capacity. The average annual production per furnace increased from 29,570 tons in 1891 to 176,700 tons in 1927. The average output first reached 100,000 tons per furnace in 1909 and never since fell below that figure. It reached 150,000 tons in 1921 and only in 1923 did it drop below that amount. In the American industry the average size of stack was 506.2 tons as compared with 307.2 tons in Germany, 184.7 tons in Belgium, 172.9 tons in France, and 118.2 tons in Great Britain.

Imports of pig iron in 1927 were but 132,568 tons valued at \$2,254,355 as compared with 445,773 tons valued at \$7,708,982 in 1926 or over 300,000 tons less than during the preceding year. The chief imports were from Great Britain, India and Holland. German and French iron, which had been going to the United States freely in 1926, amounting to 445,773 tons, was largely absent in 1927.

The year 1927 in the American iron and steel industry did not come up to the record of the previous year. There was little new capacity constructed or planned and the plants, a number of which had been extended and improved in the years immediately preceding, were in a position to handle all orders. There was a lack of railroad equipment buying, a slump in automobile production, and a depression in the oil fields, all of which seriously interfered with production; while the bituminous coal strike and the Mississippi flood were other disturbing factors. The orders for new cars by the rail-

roads were the smallest since 1921, and building steel for the first time surpassed the tonnage required by the American railroads. As regards prices, pig iron prices showed the lowest year's average since 1916, the *Iron Age* composite price for 1927 averaging \$18.55 per gross ton against \$20.42 in 1926, \$20.58 in 1925, and \$20.90 in 1924. Several months in 1916 it had averaged below \$18.00, but it had not fallen to that point since. Likewise the *Iron Age* composite price on finished steel was lower than for any year since 1915, averaging 2.357 cents per pound as against 2.439 cents in 1926, 2.465 cents in 1925, 2.671 cents in 1916, and 1.534 cents in 1915.

In 1927 according to figures of the American Iron and Steel Institute the production of steel ingots, as reported by companies which in 1926 made 95.40 per cent of the steel ingots produced, was: Open-hearth steel, 34,910,650 tons; and Bessemer steel, 6,150,383 tons. The calculated production of all companies, excluding the crucible and electric steel tonnage, for 1927 was 43,040,916 tons, and the approximate daily production of all companies, excluding crucible and electric steel tonnage, was 138,395 tons. In 1926 the production of steel ingots for open-hearth steel was 37,535,584 tons; Bessemer steel, 6,872,169 tons; with a calculated total production for all steel companies of 46,936,205 tons; and an approximate daily production of all companies of 150,920 tons.

The iron and steel exports in 1927 from the United States were the highest since 1921 and totaled 2,180,969 gross tons as compared with 2,167,213 gross tons in 1926. Canada was the largest consumer, taking, in 1927, 832,984 gross tons as compared with 834,858 gross tons in 1926; while Japan and Chosen in 1927 took 278,207 gross tons as compared with 260,361 gross tons in 1926. The imports of iron and steel into the United States in 1927 totaled 750,467 gross tons as compared with 1,110,049 gross tons in 1926.

EUROPEAN PRODUCTION. The year 1927 marked the recovery of the European iron and steel in-

dustry from the effects of the War, and pig iron and steel production of 21 countries made new records. In fact, the pig iron output of the world as estimated by the *Iron Age* (New York) was given at about 84,280,000 gross tons and exceeded the previous and pre-war record of 77,720,000 tons made in 1913. It was also greater than the 77,870,000 tons that were produced in 1926.

In the production of steel a new world's record was established in 1927, namely of 98,200,000 tons or about 7 per cent larger than 91,790,000 tons in 1926, and 31 per cent greater than the pre-war or 1913 output of 74,830,000 tons. In considering these figures the decline of the American output of both iron and steel which fell below that of 1925 and 1926, as discussed elsewhere, must be considered. The four leading European producing countries, Great Britain, Germany, France, and Luxemburg, increased their pig iron production in the aggregate with 35,870,000 tons as against 27,110,000 tons in 1926, and in steel the same countries made 38,-

410,000 tons in the year 1927 as compared with 29,580,000 tons in 1926. In other words, in 1927 European countries supplied 52 per cent of the world's pig iron and 31 per cent of the world's total output of steel. Notable in this expansion was the record of Germany where the output of both pig iron and steel was 30 to 35 per cent greater than in 1926. In Great Britain the iron and steel industry showed recovery from the coal strike of the previous year, but had not attained to the pre-war figures or even to those of 1923. A significant event of the year was the increased production of iron and steel in Russia which by 1927 had reached about 75 per cent of the 1913 volume. The world's production for the year before the War and later years is indicated in the accompanying tables from *Iron Age*.

The production of pig iron in Canada in 1927 was estimated at 606,750 gross tons as compared with 737,503 gross tons in 1926. The steel production consisted of ingots 854,375 tons and castings 39,766 tons in 1927 as compared with 743,550 tons of ingots and 33,338 tons of castings in 1926.

The British iron and steel production in 1927 was considerably greater than for several years. The production of pig iron amounted to 7,293,600 tons as compared with 2,458,200 tons in 1926 (the year of the great steel strike), 6,261,700 in 1925 and 7,807,400 in 1924. The production of steel ingots and castings in 1927 amounted to 9,097,900 tons as compared with 3,596,100 tons in 1926, 7,385,400 tons in 1925 and 8,201,200 tons in 1924. This made the 1927 output the highest attained since the war, slightly exceeding the output of 1920 which was 9,067,300 tons.

In France the production of steel and pig iron in 1927 declined slightly from 1926. The total steel production in 1927 was 8,275,000 metric tons as compared with 8,386,000 metric tons in the preceding year. The 1927 steel production was divided as follows: basic bessemer steel, 5,858,000 tons; open-hearth steel, 2,251,000 tons; electric furnace steel, 91,900 tons; acid bessemer steel, 59,900 tons; and crucible steel, 11,200 tons. The 1927 production of pig iron amounted to 9,293,000 metric tons as compared with 9,393,000 metric tons in the preceding year, and was divided as follows: basic, 7,162,000 metric tons; foundry, 1,200,000 metric tons; phosphoric forge, 38,000 metric tons; foundry-grade hematite, 373,000 metric tons; and hematite, foundry, and bessemer iron, 304,000 metric tons. The French iron and steel imports in 1927 were 97,194 metric tons as compared with 129,640 in 1926, and the exports were 4,715,142 metric tons in 1927 as compared with 3,471,258 metric tons in 1926.

Later statistics for Germany placed its pig iron output at 13,102,528 tons, which compares with 9,643,519 in the whole of 1926. The 1927 figure was more than double the output of 1919, which was 6,283,873 and it also exceeded by more than 2,000,000 tons the pre-war output in the same area.

The exports of iron and steel from the six principal exporting nations for the second time were greater in 1927 than in 1913, totaling 20,590,000 gross tons as compared with 16,190,000 gross tons in 1913. The imports also increased and were the largest ever recorded, amounting to 8,060,000 tons as against 3,820,000 in 1913. The export position of France in

*Partly estimated. Lorraine's output is included in Germany's in 1913, but in that of France since 1918.

1927 when 5,670,000 tons were exported may be compared with the pre-war year 1913 when some 580,000 tons were exported. Belgium showed a notable increase in 1927 as did Great Britain, the figures indicating recovery from the 1926 coal strike. On the other hand the United States exported less than its competitors, the 2,181,000 tons of 1927 comparing with 2,890,000 tons of 1913. See CHEMISTRY, INDUSTRIAL.

ISOSTASY. See GEOLOGY.

ISTRIA. A former crownland of Austria, but since the war a part of Italy. This region includes the peninsula extending from Trieste to Carniola into the Adriatic together with a few islands. Area, 2035 square miles; population, according to the census of 1921, 342,979. Capital, Capodistria, with a population of about 9000.

ITALIAN ARCHAEOLOGY. See ARCHAEOLOGY.

ITALIAN LANGUAGE. See PHILOLOGY, MODERN.

ITALIAN SOMALILAND, sū-mā'lēland. A colony and three protectorates of Italy, making up the territory that extends along the east coast of Africa from British Somaliland and Kenya Colony to the Juba River. Area, approximately 405,000 square miles; population, about 1,000,000 (about 1000 Italians). The colony was formerly known as Benadir, but the official title is now Italian Somaliland. It extends from 4°40'N. latitude to the mouth of the Juba River and is divided into three administrative districts. Mogadiscio is the capital with a population of about 20,700. The three protectorates are: The Sultanate of the Mijertins, under an Italian commissioner who resides at Alula; the territory of the Nogal between Cape Gabbee and Cape Garad; the Sultanate of Obbia, extending from the northern boundary of the colony of Benadir to Cape Garad, under an Italian commissioner, resident at the capital, Obbia. The chief occupations are agriculture and stock raising, the latter engaging about half the population. The principal exports are cotton, amber, iron, myrrh, copper, tobacco, and grains. The principal imports are cotton and cotton yarn, textiles, coffee, petroleum, rice, tobacco, sugar, fats, soap, cereals, flour, and preserved products. The total exports in 1925 amounted to 28,519,338 lire; the total imports, 75,712,191. The budget of Italian Somaliland for the year 1926-27 was as follows: Revenue proper of the colony, 16,240,000 lire; State contribution, 42,330,000 lire; extraordinary revenue, 8,629,132 lire; total, 67,199,132 lire. Civil expenditure, 8,629,132 lire; military, 23,030,000 lire; extraordinary expenditure, 8,629,132 lire; total, 67,199,132 lire. The governor in 1927 was Count Cesare de Vecchi (appointed in 1923).

ITALY. A constitutional monarchy of southern Europe, comprising, besides Italy proper, the islands of Sardinia, Sicily, Elba, and some 70 other small islands, together with the territory on the eastern shore of the Adriatic acquired as a result of the Treaty of St. Germain, and arrangement with Jugo-Slavia in 1920. Capital, Rome.

AREA AND POPULATION. The area of Italy before the war was 110,632 square miles, with a total population on Jan. 1, 1915, of 36,120,118. The area, as a result of the survey made at the time of the census of 1921, is 119,624 square miles and the population, according to that census, 38,755,576; estimated in 1926 at 40,548,-

683. The movement of population in 1925 was: Births, 1,107,736; deaths, 668,972; marriages, 294,720. The total number of emigrants in 1925 was 280,081, of whom 178,208 went to other European countries or those bordering on the Mediterranean, and 101,873 to countries overseas. The emigrants in 1926 totaled 279,357. In 1925, 189,071 Italians returned to Italy, 39,367 coming from the United States and Canada. The cities with a population of more than 175,000 as estimated on Jan. 1, 1926, were as follows: Bologna, 227,447; Catania, 263,030; Florence, 265,799; Genoa, 333,320; Messina, 187,996; Milan, 879,424; Naples, 852,362; Palermo, 419,153; Rome, 758,569; Turin, 520,164; Trieste, 242,059; and Venice, 203,665.

EDUCATION. According to the law of 1923, elementary instruction is given in three grades, namely preparatory (three years), secondary (three years), and higher (two years). In the elementary grade, all classes above the fifth are regarded as special classes of professional training. The secondary schools are divided into two grades, a lower and an upper. No recent figures are available for elementary and secondary schools, particularly under the new system. In 1927 there were 25 universities, including five that were free, besides university courses given in certain lyceums. There were in addition several institutions of university rank, namely, the Institute of Higher Education at Florence, the Royal Scientific and Literary Academy at Milan, and the Higher Technical Institute of Milan. There are higher institutions for commercial education at Rome and other cities; also higher schools for agriculture and engineering, and various schools for technical education.

PRODUCTION. Italy is a densely populated country and has scanty natural resources. Comparatively few staple foodstuffs needed for popular consumption and an exceptionally small proportion of raw or semi-finished materials required by the country's developing industries are produced within its borders. Consequently there is a dependence on imports from abroad to keep the people fed and the industrial plants supplied with needed materials. The accompanying table from the *Statesman's Year Book* for 1927 gives the acreage and yield of the principal crops for 1925 and 1926:

	Acreage	
	1925	1926
Wheat	11,872,000	12,145,000
Barley	552,300	592,800
Oats	1,214,300	1,243,500
Rye	314,600	801,600
Maize	8,880,400	8,576,600
Rice	359,800	363,800
Beans	1,206,800	123,500
Potatoes	868,500	879,800
Sugar beet-root	142,300
Vines *
Olives *
	Produce in quintals	
	1925	1926
Wheat	65,548,000	60,050,000
Barley	2,800,000	2,400,000
Oats	6,891,000	5,900,000
Rye	1,703,000	1,650,000
Maize	27,988,000	27,951,000
Rice	6,294,000	6,540,000
Beans	5,025,000	3,750,000
Potatoes	21,577,000	23,110,000
Sugar beet-root	15,744,000
Vines *	998,074
Olives *	82,780

* Produce in thousand gallons.

In 1925 there were 682 productive mines, employing 47,289 workers and producing products valued at 734,273,046 lire. The more important minerals according to their value were zinc, sulphur ore, mineral fuel, lead, iron and cuprous pyrites, and mercury.

COMMERCE. Italy's imports in 1926 totaled £1,034,845,840 and her exports £746,820,785, as compared with imports in 1925 of £1,048,015,331 and exports of £730,970,450, thus showing a slight reduction in the unfavorable trade balance. The following table shows the nine countries with which the principal commercial relations were maintained by Italy in 1925:

Countries	Imports into Italy Lire	Exports from Italy Lire
Austria	658,952,956	666,108,753
Czecho-Slovakia	465,946,965	171,533,876
France	2,349,353,400	2,019,473,889
Germany	2,251,324,488	2,027,028,028
Great Britain	2,722,680,811	1,854,988,608
Kingdom of Serbs, Croats, and Slovenes	730,964,096	496,461,981
Switzerland	521,714,815	1,634,412,365
United States	6,174,816,596	1,887,825,934
Argentine Republic ..	1,869,995,931	1,145,440,597

A study of the present Italian agricultural situation as compared with the pre-war, pub-

parison of the figures of production and of increase in population, and is further borne out by Italian statistics.

It will be noted that agricultural production in Italy suffered greatly during the war years, but its lowest point of depression occurred in the post-war period, especially in the years 1918, 1920, and 1922. The figures for the years 1920 and 1921 do not include the agricultural production of the provinces acquired as a result of the war settlements. In 1926, the index figure shows that agricultural production amounted to only 108 per cent of the pre-war average, whereas the population had increased to 115 per cent.

The foreign trade of Italy in agricultural products also indicates that agricultural production was not increasing in proportion to demand. The accompanying table shows imports and exports of agricultural products in the last entire pre-war year, 1913, in comparison with the corresponding statistics for the year 1926.

The deficit in trade on the score of these products had, as shown by the table, grown from 52,900,000 lire in 1913 to 3,207,800,000 lire in 1926. In 1913, the exports of agricultural products amounted to practically 95 per cent of the imports of similar products, whereas dur-

ITALY'S COMMERCIAL BALANCE OF AGRICULTURAL PRODUCTS

lished in the U. S. Commerce Reports on Dec. 26, 1927, indicates that, notwithstanding the territorial acquisitions of Italy and the emphasis placed by the government on the development of the agricultural possibilities of the country, agricultural production in Italy was not keeping up with the growing demands of the country.

This conclusion was reached from a com-

AGRICULTURAL PRODUCTION AND GROWTH OF
POPULATION IN ITALY

Year	Value according to 1913 prices	Index (base, 1911-1914)	Population as of Jan. 1	Index (base, 1911-1914)
Million lire				
1911..	7,570	100	34,547,424	100
1912..	7,068		34,313,975	
1913..	8,006		35,238,997	
1914..	7,166		35,597,735

1917..	6,391	92	36,758,161	105
1918..	6,688	89	36,568,090	104
1919..	6,244	84	35,993,923	102
1920..	6,451	86	36,147,422	103
1921..	6,522	87	36,584,974	104
1922..	6,416	86	36,789,327	111
1923..	7,869	105	39,246,323	112
1924..	7,699	103	39,702,787	113
1925..	8,801	111	40,190,724	114
1926..	8,054	108	40,548,683	115

ing 1926 the exports amounted to only 65 per cent.

This comparison gives point to the various measures adopted by the Italian government, both to increase production and to lessen imports of foodstuffs.

FINANCE. According to the U. S. Bureau of Foreign and Domestic Commerce, the sharp rise of the lire during the last five months in 1926, resulting from the policy of deflation and currency appreciation adopted by the Italian government, constituted one of the country's most important economic developments during recent years. The appreciation of the Italian medium has not only exercised far-reaching effects on the internal conditions of the country but has tion in the fields of international trade and finance.

Between the years 1922 and 1925 Italian industry and commerce made steady and marked progress. The budget deficits had been reduced and in their stead surpluses appeared. The internal debt was gradually declining. Savings accounts were again accumulating, and new capital investments were being placed on a large scale.

Industrial activity, in Italy had increased to such an extent that, in the place of the unemployment previously obtaining, there was a shortage of labor in many lines. Transportation facilities were reorganized, and agriculture proceed-

ed along normal lines. Notwithstanding these encouraging tokens of economic progress, there was ever present an element of weakness and uncertainty represented by the instability of the currency.

Along with these favorable developments the exchange value of the lira remained at relatively stable levels throughout 1924 and during the first months in 1925, but in June of the latter year a sharp decline took place which could not be accounted for by changed local conditions. This currency development indicated clearly the vulnerability of the lira to any concerted speculative attack, and appreciation of this fact is largely responsible for the government's deflation programme. The necessary preliminaries to this programme had previously been established in the settlement of the war debts owed by Italy to the United States and Great Britain.

The first step taken to remedy the situation was the limitation of all transactions in foreign exchange, with a view to reducing speculation and making impossible the accumulation abroad of lira in sufficient amounts to influence exchange rates. Realizing, however, that the regulation of exchange could serve only as a palliative and that it would be necessary to strike deeper in order to eradicate the basic causes of the weakness of the lira, the government, to this end, then undertook to reduce the adverse foreign trade balance. The most important steps in this direction were the extension of the normal working day from eight to nine hours and the return to what amounted to war bread. At the same time a systematic campaign was inaugurated to promote the use of domestic instead of imported raw materials wherever possible and to create a preference in the local market for local products.

Following upon these regulations, the government undertook to solve the country's financial difficulties. The measures adopted included, first, the transfer by the treasury to the Bank of Italy of the sum of \$80,000,000, which reduced its indebtedness by the sum of 2,500,000,000 paper lire. Second, an appropriation of 500,000,000 lire was made in the budget for 1927, to be applied to the further reduction of the treasury's debt to the Bank of Italy, and an obligation was assumed to continue similar annual appropriations until the entire balance had been paid off. Third, a legal limit of 7,000,000,000 lire was placed on the circulation of the Bank of Italy for trade account. Fourth, instructions were given to the bank to restrict credit to the legitimate needs of business.

On July 1, 1927, the Bank of Italy had been established as the sole bank of issue, a step which greatly facilitated the carrying out of the financial programme. Italy was already suffering from a credit stringency and high interest rates, the official discount rate having been maintained at 7 per cent since July 18, 1925. Relying on its special position of prestige and independence, early in November, 1926, the government decided to dispose once and for all of the whole problem of the floating debt, amounting to over 20,000,000,000 lire, by making obligatory the conversion of all outstanding short-term treasury bills and all five- and seven-year bonds into new permanent 5 per cent consolidated bonds. At the same time the new bonds were offered for public subscription at 87.50 in

order to replenish the depleted funds of the treasury. Although this was a form of repudiation of a specific obligation assumed by the State, the forced conversion was accepted with good grace, and, as a result of a nation-wide campaign conducted with great vigor, the public subscriptions to the new loan, which closed on Jan. 18, 1927, exceeded 3,000,000,000 lire.

The end toward which the government was striving was reached on the night of Dec. 21, 1927, when Italy returned to the gold standard. The abolition of the forced currency and the return of the lira to a gold basis was decided at a cabinet meeting on that date and came into force at once. The government's action came unexpectedly and caused much surprise in financial circles. The return to a gold basis was universally applauded as contributing to a settled state of finances and paving the way for greater prosperity in 1928. The value of the paper lira was fixed at 19 to the dollar, 92.46 to the pound sterling and 3.66 to the gold lira. During the cabinet meeting it was revealed that the stability of the Italian currency was guaranteed by a credit of \$125,000,000 granted by 14 nations, among which the United States figured prominently.

The estimated revenues for 1927-28 were 21,200,000,000 lire and the estimated expenditures 21,130,000,000 lire, leaving an estimated surplus of 70,000,000 lire. Between July 1, 1926, and June 30, 1927, Italy's internal debt was reduced by the amount of 7,634,000,000 lire, as shown in the following table:

ITALY'S OUTSTANDING INTERNAL PUBLIC DEBTS, ON SPECIFIED DATES
[In million lire *]

Item	June 30, 1926	May 31, 1927	June 30, 1927	Year's reduction
Pre-war debts	12,448	12,419	12,398	45

4.75 per cent bonds of 25 years	1,420	572	572	848
Total *	91,309	88,971	88,675	7,634

* The exchange rate of the lire on June 30, 1926, was \$0.0861; on May 31, 1927, \$0.0547; and on June 30, 1927, \$0.0556.

† Official statements do not include results of Lictor loan operations.

COMMUNICATIONS. In 1925, 226,275 vessels of 60,168,624 tons entered at Italian ports and 226,167 of 60,057,276 tons cleared. The outstanding event in Italian transportation development of the past few years took place on Oct. 30, 1927, when the direct Rome-to-Naples railroad

was opened to the public. This line, connecting the capital with the large southern seaport, is 215.8 kilometers in length, of which 34 kilometers are subterranean. The double track facilitates the movement of merchandise more cheaply, as the maximum elevation at any point of the line is 126 meters and the maximum ascent is ten meters per thousand. There are two tunnels more than 7000 meters in length and two more than 5000 meters long. The advantage of the new line is derived from the fact that it is 33 kilometers shorter than the Cassino-Caserta line, of which it is completely independent. The grades are very gentle, and the radii of the various curves are sufficiently great to enable a train to travel at its greatest velocity with safety. All grade-level crossings have been eliminated.

In compensation for the outlay of public funds for the railroad, a ministerial decree published Oct. 21, 1927, authorizes the following supplementary fare, called surtax, to be collected by way of experiment from passengers traveling on express trains on the Rome-Naples Mergellina line: (a) For first-class passengers and second-class passengers having tickets at the full fare, 25 lire and 15 lire; (b) for first-class passengers and second-class passengers having tickets at a reduced fare, 12 lire and 8 lire. The total length of state railways on June 30, 1926, was 10,299 miles.

ARMY AND NAVY. Liability to military service beginning at the age of 20 and lasting for 19 years is compulsory and universal. The strength of the active army in 1926 was 18,000 officers and 290,000 men. See **MILITARY PROGRESS.**

The accompanying table taken from one of the above mentioned sources shows the classification of the navy in 1925 and 1926:

	Completed at end of		
	1924	1925	1926
Battleships	5	5	5
Battleships for Coast Defense	2	2	2
Armored cruisers	3	3	3
Light cruisers	10	10	10
Flotilla leaders and destroyers ...	61	61	65
Torpedo boats	65	64	58
Submarines	41	42	44

See **NAVAL PROGRESS.**

GOVERNMENT. Executive power is vested in the king, who acts through a responsible ministry, and legislative power in the king and parliament, the latter consisting of two chambers: a senate, which on Jan. 1, 1924, had 387 senators and nine members of the royal family; and a chamber of deputies, with 535 members, elected on the basis of universal suffrage, male and female, and proportional representation. By the electoral law of Feb. 15, 1925, Italy reverted to the single member constituency system, which it was intended to put in force at the next election. The Chamber of Deputies elected in April, 1924, was divided among the political groups as follows: Fascisti, 375; Catholics, 39; other Constitutionalists, 45; Socialists, 46; Communists, 19; Republicans, 7; Slavs and Germans, 4. The King in 1927 was Victor Emmanuel III, born Nov. 11, 1869, who succeeded his father, King Humbert I, July 29, 1900. The cabinet as reorganized on Aug. 30, 1925, was as follows: Head of the government, Prime Minister, Secretary of State and Minister of Foreign Affairs, Minister of the Interior, Minister of War, Min-

ister of Marine, Minister of Aeronautics, and Minister of Corporations, Benito Mussolini; Colonies, Luigi Federzoni; Justice, Alfredo Rocco; Finance, Count Volpi; Public Instruction, Pietro Fedele; Public Works, Giovanni Giuriati; National Economy, Giuseppe Belluzzo; Communications, Costanzo Ciano.

HISTORY

SITUATION AT THE BEGINNING OF THE YEAR. The Fascist hold on Italy was more than ever apparent throughout the latter part of 1926 and throughout the entire year 1927. By various decrees Mussolini strengthened his grip and forced his opponents either to flee the country or maintain a discreet silence. With regard to his future plans, a statement made in the Chamber of Deputies in the spring is of tremendous significance: "I must take upon myself the task of governing the Italian nation from ten to fifteen years longer. It is necessary. Instead of its 40,000,000 of to-day, Italy by that time should have 60,000,000. In this greater Italy legislative bodies will be elected through the corporative organizations of the State, there will be no room for a moribund democracy, and anti-Fascists, soon reduced to their last gasp, will cease to exist. The Fascist State neither needs nor brooks opposition."

Apparently one of the ways Mussolini expected to increase the population was by compelling all bachelors either to marry or pay a tax. As approved by the Cabinet early in February a very elaborate scheme was drawn up for the taxing of bachelors. It provided for a basic scale which all bachelors had to pay and also provided for a sliding scale of taxation in accordance with the income of the person taxed. According to the provisions of the basic tax, bachelors between 25 and 35 are compelled to pay a tax of 25 lire annually; between 35 and 50, 35 lire; and between 50 and 65, 25 lire. The extra tax would amount to about 5 per cent of the income tax already paid by the bachelor. Certain classes, such as priests, who had taken the vow of chastity, were exempt from paying the tax. Unofficial figures placed the number affected by the new measure at 1,700,000 and the expected annual income from this tax at approximately 100,000,000 lire annually.

Mussolini further strengthened his position by the enactment of several measures which sought to place the educational institutions of the country more completely under his control. As far as elementary education was concerned his chief move was the abolition of the Catholic Pioneers, an organization comparable to the Boy Scouts in the United States, in all towns under 20,000 population and the combining of the society with the Fascist Balilla, which might generally be called the Fascist Boy Scouts. The Pope protested the move although he accepted it as a fact, on the grounds that the Fascist Balilla was a political organization, while the Catholic Pioneers were not mixed up in politics at all. His suggestion that the education of the boys taken over by the Fascist organization should be continued by the priests was adopted by Mussolini.

Professors at all universities were required to take an oath supporting the present régime as well as to refrain from membership in any political party not in harmony with the aims of the State. Political manifestations against the gov-

ernment in any form were to be followed by dismissal. Another part of the same decree concerning professors declared that schools, colleges, and universities may be abolished if their teachings in any way were considered inimical to the welfare of the State.

FOREIGN RELATIONS. In the historical sections of ALBANIA, FRANCE, BULGARIA, etc., will be found a discussion of the far-reaching effects and results of Italian diplomacy throughout the year. Mussolini played a strong hand in the Balkans and in the Mediterranean Sea and caused new alignments of great importance throughout Europe, apparently without much thought for the League of Nations or for the spirit of the Locarno Pacts. Although made in the name of a treaty of friendship, the Treaty of Tirano (see preceding YEAR BOOK) was the signal for a mad scramble on the part of Jugo-Slavia to find a foil for Italy's ambitions in the Balkans. A discussion of this phase of Italy's foreign relations will be found in ALBANIA, *History*. Mussolini's desires for Northern Africa are treated under FRANCE, *History*.

RELATIONS WITH LABOR. On April 21 the relations of Labor to Fascism were definitely outlined in a so-called Charter of Labor. As summarized in *Current History* (New York), for June (where the complete text of the charter is available) the following are outstanding features of the new charter. It consists of thirty articles and a preamble. The latter declares that labor, "which is a social duty, and property, which accomplishes a social function, are both under the guardianship of the State, since the State must control the whole body of production for the well-being of its citizens and the development of national strength." In order to accomplish this end all relations between capital and labor are carried out through collective contracts between the State-recognized groups of employers and employees. Each contract must definitely specify salaries, hours, and disciplinary rules. Other organizations, called corporations and acting as direct agents of the State, will make rules binding on both parties and attempt to settle disputes. In case of failure to do so, recourse may be had to specially created Labor Courts, whose decision is final. "The corporations, with the cooperation of both employers and employees, will control all social, educational, recreational and similar activities in industry, will guarantee health and morality conditions, and will handle accidents and maternal benefits as well as endowments and unemployment insurance." All employment agencies will be operated by the State, which will select men on the basis of ability.

The charter is opposed to a minimum wage or to absolute equality of wages in any single industry. Strikes, lockouts, boycotts, obstructionism and sabotage are absolutely forbidden, and where carried on for political motives are to be regarded as rebellion against the State. On the other hand, the workers' guarantees are "a six-day week, the number of hours not being defined, extra pay for night work and an annual paid holiday, civil and religious holidays when deemed possible, indemnity in proportion to the time of service in case of discharge and similarly to the worker's family in case of death, and the assurance of a position in case of short illness."

As regard to capital the charter declared: "The

Fascist régime upholds the doctrine of private property and favors private initiative in the field of production, considering both functions in the national interest. The owner of a business or industry is responsible to the State for its production, but its employees also are responsible to the State in helping toward an increase in the value of the products and a reduction in their costs. When private initiative is insufficient or lacking, or when political interests dictate, the State may encourage, control or take over the management of the company, operating it through a corporation. Capital must share equally with labor the effects of crises and hard times, official statistics being used in judgment." All these provisions refer only to the organizations recognized by the State. Non-Fascist associations will be permitted to exist, but without power.

PARLIAMENTARY REFORM. On November 11 the Fascist Grand Council proposed revolutionary changes in the parliamentary system of Italy. The preamble to the resolution reads as follows:

Any system of national representation must be based on the de facto situation existing in Italy, namely, the abolition of all political parties contrary to Fascism, the existence of only one political party which acts as the organ of the Fascista régime, and the juridical recognition of the nation's great productive economic organizations which are the basis of the Fascista syndicalist corporative State.

The Fascistization of these syndicalist organizations, owing to the short period of time elapsed since their formation, is not sufficient, however, to permit them to assume the political functions of the Fascista Party by taking over the task of representing the nation in Parliament. It is possible for the present to permit them to proceed only one step along this road.

The text of the resolutions was as follows:

The thirteen great economic organizations which include the whole mass of the Italian producers and workers will propose to the Grand Council a certain quota of candidates which will be later fixed.

The Grand Council revises these candidates, possibly eliminating some in order to make certain that all possess a sure Fascista faith, and represent not only the specific interests' categories which designated them, but the superior interests of the national régime, which are not only economic.

The Grand Council will complete with another quota of candidates the list proposed by the Government economic syndicalist organizations. At this point the list loses the fragmentary character it originally possessed, receives a national character and becomes the list which the Fascista régime presents to the voters.

The list, which is above any single category, levelling them all in the single denominator of the Fascista Party, and which disregards all territorial divisions, can only be national. Therefore the whole territory of the nation is regarded as one single electoral constituency.

The right to vote is not conferred on all citizens according to the old democratic system of universal suffrage, but only on those who, by paying their syndicalist dues, show they are active elements in the life of the nation, in addition to other categories, not specifically mentioned in the law on collective labor contracts, but which nevertheless are useful to the national collectivity.

A system will be devised for giving representation to those organizations which, possessing de facto recognition, move within the orbit of the Fascista régime.

The number of Deputies will be reduced from 560 to 400.

The specific duties of the Chamber will be fixed later. The Senate remains as now composed, except for some reforms relating to its internal regulations.

As will be noted from the above resolution, an enormous political power will be wielded under the new system by the Fascist Grand Council, as not only will it select those candidates who must be designated by the political organizations, but it may also veto any candidate designated by the trade-unions. It is evident, therefore, that the Grand Council has a preponderant voice in the designation of all cap-

didates. Inasmuch as Mussolini himself appoints the members of the Grand Council, it will be seen that he personally controls the entire parliamentary régime. This concentration of power in the hands of one man leads one to ask the question that has been on the lips of students of political science for some time, namely, "After Mussolini, what?" The death of "Il Duce" would most certainly cause this entire elaborate system to fall of its own weight, unless another strong man appeared on the scene.

Mussolini has stated on several occasions that he wished Fascism to be strong enough to continue after him, but one must take these statements with a grain of salt, when one considers that every move of the Fascist régime seems to place more and more power in the hands of Mussolini himself. Another angle of this concentration of power is the driving out of Italy of many men of brilliant minds, who have come into conflict with Fascism, or who are constitutionally opposed to its beliefs and methods. France, in particular, had become the home of hundreds of men of all shades of political and intellectual opinion, who are persona non grata to the present powers that be in Italy. Of course these voluntary exiles have been tried in Fascist courts for anything from treason to ingratitude and have been fined or sentenced to imprisonment, the punishment not being carried out by reason of their absence.

For Italy's return to the gold standard, see the section on *Finance* above. For other phases of Italian activities during the year consult the articles on AERONAUTICS; ARBITRATION; PEACE AND PEACE MOVEMENTS; LEAGUE OF NATIONS; etc.

IVEAGH, EDWARD CECIL GUINNESS. FIRST EARL OF. Irish manufacturer and philanthropist, died at London, England, October 7. He was born Nov. 10, 1847. He took his degree at Trinity College, Dublin, in 1870. His father, Sir Benjamin Lee Guinness, had died in 1868, and Mr. Guinness, with his elder brother, Sir Arthur Guinness (afterwards Lord Ardilaun) inherited the world-famed brewery which had been bought by their great-grandfather in 1759. Throughout his life Mr. Guinness (who became, in succession, a baronet, in 1885, Baron Iveagh, in 1891, Viscount Iveagh, in 1905, and Viscount Elveden and Earl of Iveagh, in 1919) took an active part in the conduct of the great brewing and other business interests to which he had fallen heir. He also devoted a large share of his time to his philanthropies, which were varied and very extensive. Especially notable were his efforts to improve the housing conditions of the poor in Dublin and London. He gave £250,000 to the Lister Institute of Preventive Medicine, in London, for the endowment of bacteriological research, and large sums to the hospitals of Dublin. From his youth he took a keen interest in the affairs of the Irish capital, and served as high sheriff of the city in 1876 and of the county in 1885. He was a generous benefactor of the University of Dublin, of which he was chancellor in 1908. Trinity College, Dublin, conferred on him the degree of LL.D. in 1891.

IVOY COAST. A French colony, forming a constituent part of the government-general of French West Africa, situated between Liberia and the British Gold Coast. Area, about 121,976 square miles; population, estimated in 1926 at 1,724,545, of whom 1614 were Europeans. Binger-

ville is the capital and has an European population of about 94. The principal commercial products are mahogany, palm oil and kernels, cacao, dried and smoked fish, cotton, and rubber. Some gold has been found. In 1925 the imports amounted to 106,211,528 francs and the exports to 117,050,360 francs. The budget of the colony for 1926 was fixed at 29,500,200 francs. The ports of the colony are visited by several British, French, and Belgian steamship companies.

JACKSON, HOLMES CONDIOT. American physiologist and educator, died at New York, October 25. He was born at New York, Feb. 18, 1875. After graduation at the Sheffield Scientific School, Yale University, in 1896, and post-graduate work in the same institution, he studied in Germany, 1899-1900. In 1901 he became an instructor at New York University and Bellevue Hospital Medical College, and in 1902-05 was assistant professor of physiological chemistry there. In the latter year he went to the Albany, N. Y., Medical College as director of laboratories and experimental physiology, but he returned to the New York University and Bellevue Medical College in 1909 as professor of physiology. In 1925, when the New York Dental College was incorporated with New York University, Dr. Jackson was selected as dean. He was president of the Society for Experimental Biology and Medicine, and a member of other scientific associations. He wrote: *Manual of Physiological Chemistry* (1902); *Laboratory Exercises in Physiology* (1917).

JAMAICA. A colony of Great Britain, consisting of the island of Jamaica, which is the largest in the British West Indies, and the following dependencies: Turks and Caicos Islands; Cayman Islands; Morant Cays; and Pedro Cays. Area of Jamaica, 4450 square miles; of the dependencies, 224 square miles. Population of Jamaica, according to the census of 1921, 858,138, including 660,420 blacks, 157,223 colored; 14,476 whites; 18,610 East Indians; and 3696 Chinese; estimated population at the end of 1925, 916,620. The movement of population in 1925 was: Births, 31,567; deaths, 19,562; marriages, 3738. Kingston, the capital, had a population of 62,707 at the census of 1921. In 1925 there were 679 public elementary schools, with 117,874 pupils enrolled and an average attendance of 73,508. In 1925-26 the acreage under cultivation was 1,108,244 acres, apportioned as follows: under tillage 274,418; pasture, 833,826; sugar-cane, 44,086; coffee, 20,397; bananas, 71,380; coconuts, 42,039; cocoa, 5378; ground provisions, 57,780; mixed cultivation, 28,980; guinea grass, 99,733; commons, 683,062. The livestock included 136,523 cattle and 4699 sheep. In 1925-26 the imports were valued at £5,636,188 and the exports at £3,935,059. Chief among the exports were bananas, sugar, rum, coconuts, coffee, logwood extracts, cocoa, and logwood; among the imports, flour, cotton goods, and fish. Aside from an electric railway in Kingston, the only rail transportation on the island is the Jamaica government railway, with a length of 210 miles. Revenue in 1925-26, £2,021,046; expenditure, £2,009,593; public debt, £4,581,175. Governor in 1927, Sir R. E. Stubbs (appointed in 1925 and assumed office April 27, 1926).

JAMES, WALTER BELKNAP. American physician, died at New York, April 6. He was born at Baltimore, Md., May 11, 1858. He graduated

at Yale, 1870, and received his medical degree at the College of Physicians and Surgeons, Columbia University, New York, in 1883. He practiced medicine in New York for 44 years, and in addition was a member of the teaching staff of the College of Physicians and Surgeons from 1889 until his death—successively as clinical lecturer on medicine, instructor in general diagnosis, instructor in medical diagnosis, lecturer on the practice of medicine, professor of the practice of medicine. Bard professor, and professor of clinical medicine. He was visiting and consulting physician at several large hospitals in New York, and was also active in public affairs. Columbia conferred on him the honorary degree of LL.D. in 1904, and Yale in 1906.

JAMES, WILLIAM KNOWLES. American lawyer, president of the American Farm Congress and former president of the International Farm Congress, died at St. Joseph, Mo., November 11. He was born near Georgetown, Del., Aug. 20, 1852, and was graduated at Central College, Fayette, Mo., and at Yale, 1878. He was admitted to the Missouri bar in 1880, and practiced at St. Joseph. He was judge of the circuit court, 1898–1902, and was a member of the Missouri house of representatives, 1917–18. Among the causes in which Mr. James was active were the education of negroes, prison reform and the formation of farm bureaus in county, state and nation. He was president of the International Farm Congress, 1921–25, and was also president of the American Farm Congress.

JAN MAYEN. The isolated island of Jan Mayen, 70°N., 8°30'W., in the Greenland Sea has become a scientific outpost. Since 1920 it has been occupied by the Norwegian Geophysical Institute as a weather station, important in forecasting the violent storms which devastate the coast of Norway. Its force of three men, relieved annually, send daily to Norway by radio a detailed weather report, supplemented during the fishing season by a similar report from the Norwegian station of Mygbutken, on the east coast of Greenland.

JAPAN. A far eastern empire, consisting of the five main islands of Honshiu (mainland), Shikoko, Hokkaido (Yezo), and Formosa or Taiwan; also a number of smaller islands and island groups (approximately 4000 islands), and the peninsula of Korea or Chosen, and Karafuto, i.e. the southern half of the island of Sakhalin. Capital, Tokyo.

AREA AND POPULATION. The total area of the Japanese Empire is given at 260,707 square miles, made up chiefly as follows: Honshiu, 86,775; Korea, 85,228; Hokkaido, 30,275; Kiushiu, 15,588; Formosa, 13,840; Karafuto, 13,934; Shikoko, 7081; Kurile or Chishima Islands, 6024. In 1920 the total population of the Japanese Empire according to the census of that year was 76,988,379, distributed chiefly as follows: Honshiu (Japan proper), 55,963,053; Korea, 17,264,119; Formosa, 3,655,308; Karafuto, 105,899. The population of Japan proper, according to the census of 1925 was placed at 59,736,704. The movement of population in 1925 was: Births, 2,086,091; deaths, 1,210,706; marriages, 521,438; divorces, 51,687. The population of the principal cities at the census of 1925 was: Tokyo, 1,995,303; Osaka, 2,114,809; Kobe, 644,212; Kyoto, 679,976; Nagoya, 768,660; Yokohama, the port of Tokyo, 405,888; Nagasaki, 189,071; Hiroshima, 195,731. On Apr. 1, 1927, nine towns

and villages adjacent to Yokohama, containing a total population of 112,204, were incorporated in the city of Yokohama, thus making the population of that city 518,092. Among the towns included were two of considerable importance—Tsurumi, with a population of 53,135, and Hodogaya, with 28,570.

EDUCATION. Statistics on education given in the *Japan Year Book* cover the school year 1921–22, when there were 44,302 schools of all types, with 237,189 instructors, 10,737,957 pupils, and 2,040,300 graduates. There are five imperial universities, four public universities, and 16 private universities.

PRODUCTION. About three-fifths of the arable land is worked by peasant proprietors, the remainder by tenants. Although in general no later statistics for agriculture were available than those given in the preceding *YEAR BOOK*, some facts have been gleaned from *The Financial and Economic Annual of Japan* for 1926. The area under rice (1925) was 3,127,773 hectares and the production 107,698,282 hectoliters; barley 452,910 hectares, 15,922,634 hectoliters; rye, 545,248 hectares, 14,031,994 hectoliters; wheat, 465,045 hectares, 11,050,082 hectoliters; sweet potatoes, 286,455 hectares, 3,584,762 metric tons; sugar cane, 25,799 hectares, 958,894 metric tons; tea, 43,215 hectares, 35,776,759 kilograms. In the financial year 1925–26 the area under tobacco was 37,006 hectares and the production 64,663 metric tons. The number of domestic animals at the beginning of 1925 were: Cattle, 1,456,243; horses, 1,568,685; sheep, 15,710; goats, 157,852; and swine, 743,283.

Japan, as compared with the United States or the leading industrial nations of western Europe, is poor in minerals. While deposits of gold and silver have been known to the Japanese and worked by them for centuries, the only mineral substances of material importance at the present time are coal and copper. Lately some petroleum has been found in the northern portion of the main island but the supply is limited and does not meet the requirements of the country. The principal nonmetallic minerals produced in Japan, other than coal and petroleum, are sulphur, phosphate rock, arsenic, and graphite. The following table gives the latest figures for mineral production:

Mineral product	Quantity	Value Yen
Gold	grams..	8,465,405
Silver	do..	126,194,756
Copper	kilos..	66,486,999
Lead	do..	8,386,686
Pig iron	metric tons	518,968
Steel	do..	682,461
Iron pyrites	do..	812,627
Coal	do..	81,459,415
Sulphur	do..	47,716
Petroleum	hectoliters	2,955,691
Others	18,114,828
Total value	450,926,893

COMMERCE. According to the United States Bureau of Foreign and Domestic Commerce, the steady upward trend in Japan's foreign trade since the earthquake in 1923 was somewhat checked in 1926 by the general business depression during the latter part of the year and unsatisfactory conditions important foreign markets. The value of exports dropped to 2,044,721,000 yen from 2,305,589,000 in 1925, a decrease of 260,868,000 yen. Imports amounted

to 2,377,476,000 yen, or 195,181,000 less than in the previous year. The unfavorable balance of trade, consequently, was larger than in 1925, the import excess actually totaling 332,755,000 yen, or an increase of 65,637,000 yen.

During the first part of the year export trade was more active than in the corresponding period of 1925, but the trade from July through December, the export season of Japan, was a decided disappointment. Exporters had been optimistic earlier in the year and anticipated large returns of trade, but as the year waned adverse conditions set in, principal industries became stagnant, demand in foreign countries declined, and the continued advance in the value of the yen was not conducive to increased exports. The following table shows imports and exports during 1925 and 1926 by principal commodities:

JAPAN'S TRADE, BY COMMODITIES, IN 1925
AND 1926
[In thousands of yen]

Item	1925	1926
EXPORTS		
Rice and paddy	9,218	1,799
Sugar, refined	32,265	84,027
Waste silk	31,036	18,304
Raw silk	880,740	735,152
Cotton yarns	128,118	70,717
Silk textiles	116,984	133,060
Cotton textiles	432,864	410,270
Knit goods	80,949	26,004

Egypt	32,631	31,959
Australia	149,969	128,396
All other	43,291	62,263
Total	2,572,657	2,377,476

Recessions are noted in exports to all important countries, with the exception of Canada and Australia. Few changes occurred in the relative positions of the various countries in the export trade. The United States continued to hold first place, accounting for 860,881,000 yen, or 42 per cent, of the total exports. China maintained the leading position in Japan's exports to Asiatic countries, and, considering the many factors affecting this trade, the decline of 46,678,000 yen is slight. Exports to all European countries were lower, the value of shipments to France being reduced principally by the low price of raw silk.

Effects of the general business depression in Japan that marked the close of 1926 and continued in the early part of 1927, followed by the financial crisis in April, were clearly evidenced in Japan's returns of foreign trade for

the first six months of 1927. Both imports and exports declined, so that the total foreign trade of 2,195,371,000 yen was the lowest since pre-earthquake years. Details of Japan's foreign trade by principal commodities are given in the accompanying table, on page 426.

FINANCE. Japan went through the throes of a severe financial panic in the spring of 1927. Although the financial situation was attributed largely to the consequences of the earthquake of 1923, the actual causes can be traced to the post-war economic depression, the effects of which are still felt by the industries and commercial concerns of Japan. It came in the wake of the industrial expansion stimulated by the World War, and caused a serious setback to the then increasing trade and commerce of the country. Japan's balance of trade, which during the War registered an average of more than 300,000,000 yen a year, turned into a heavy "unfavorable" balance. The gains made by industrial and commercial concerns were lost during the depression and numerous banks were left with huge amounts of frozen credits. Japan's gold reserve began to dwindle; its currency—which appreciated during the War as a result of the extraordinary balance of trade—began to decline. After the great earthquake the yen reached its low point of \$0.38 (par \$0.4985). It has been estimated that the earthquake destroyed one-eighth of Japan's national wealth. Japan's industries suffered material losses approximating 2,000,000,000 yen, which increased the amount of frozen credits held by banks as a result of the economic depression. Since the earthquake of 1923 the industries have been affected by losses in the China market owing to military activities there, as well as the boycott of Japanese goods in 1925. More recently there has been a rather serious decline in the prices for raw silk, due somewhat to the competition of rayon, but perhaps more to conditions in the industry itself.

It was originally provided that the earthquake bills should be liquidated by Sept. 30, 1925. On the approach of that date, it became evident that such liquidation was impossible so an extension was authorized for two years. Doubt as to whether the bills could be paid up or written off before that date was voiced by the Finance Minister in the Imperial Diet in January, 1927.

His measure was passed providing for an issue of 5 per cent government bonds for the estimated full amount of the bills, 207,000,000 yen. Of this amount 100,000,000 yen go to the Bank of Japan as a guaranty against losses on earthquake bills. The necessary relief was thus provided, but the parliamentary debates alluded to the difficulties of various banks and caused a run on them. Early in April, Suzuki & Co. (Ltd.) failed. This company was one of the foremost importers and exporters of Japan and was interested in numerous Japanese industries. Its heaviest creditor was the Bank of Taiwan, which suspended. As the Bank of Taiwan is a semi-government institution, it was at first felt that the government might be inclined to come to its rescue, as it had in the past.

The Privy Council, which controls the reins of government while the Diet is not in session, objected to the Cabinet's proposal to advance funds for the Bank of Taiwan, and accordingly

the Wakatsuki Ministry resigned. This brought to power the Seiyukai party, previously the opposition party with Baron Tanaka at its head. It promptly declared a three-day "bank holiday" and a three-week moratorium, beginning April 22.

However, before the moratorium was declared the financial crisis was relieved by an enormous issue of paper money by the Bank of Japan. The note issue, which before the financial troubles became acute amounted to 1,228,000,000 yen as against a gold reserve of 1,074,000,000, was increased on April 20 to 1,626,000,000 yen, and on April 25 it had grown to 2,651,000,000 yen. The reserve ratio of the Bank of Japan, which had been rather high, was considerably lowered.

The following table gives a summary of the budget estimates for the year ending Mar. 31, 1927:

<i>Revenue 1926-27</i>	<i>Yen</i>
ORDINARY	
Land tax	57,582,545
Income tax	207,075,861
Business tax	59,477,601
Liquor tax	207,261,621
Sugar excise	74,385,127
Tax on textile fabrics	35,294,916
Customs duties	105,381,254
Total taxes*	805,080,963
Stamps	83,685,759
Public undertakings and State property	446,938,264
Total ordinary (including other receipts)	1,365,490,995
Extraordinary revenue	232,800,790
Total revenue	1,598,291,785
Expenditure 1926-27	
ORDINARY	
Civil list	4,500,000
Foreign Affairs	15,911,515
Home Affairs	41,505,462
Finance	296,684,177
Army	168,485,980
Navy	128,672,005
Justice	29,045,000
Instruction	103,752,440
Agriculture and Forests	25,256,191
Commerce and Industry	8,887,108
Communications	260,820,508
Total ordinary	1,075,470,876
Extraordinary revenue	232,800,790
Total revenue	1,598,291,785

* Including all items.

The 1927-28 estimates called for revenues of 1,569,736,000 yen and expenditures of 1,730,373,000 yen. The total public debt on Mar. 31, 1926, was 4,999,176,360 yen.

COMMUNICATIONS. The number of vessels entering the ports of Japan during 1925 was 14,755 of 43,030,927 tons; cleared, 14,838, of 43,067,456 tons.

The financial results of operation of the government railways of Japan for the year ending Mar. 31, 1926, showed a surplus of \$110,691,495, an increase over the previous year, when the surplus amounted to \$102,349,294. The net in 1926, after deducting from the surplus of revenue over operating expenses, the subsidies to private railways, interest charges and additional operating expenses, was \$71,629,343. In 1926 the

total mileage operated by the government railways showed an increase of 276.8 miles over the preceding year, an increase in the average mileage operated of 257.7 miles. The number of passengers carried increased 6.5 per cent in 1926 over 1925, and freight tonnage carried increased 2.7 per cent. A number of improvements in service were made in 1926, among which were the addition of new sleeping cars, special express service, and reductions in rates for teachers and students. Because at the beginning of the fiscal year there was a slump in passenger traffic, believed to be due to a general decline in business, several measures were adopted to increase passenger traffic. Special train service was arranged to points of interest, such as noted shrines, temples and sport centres, which large throngs of people were expected to visit, and special low rates for parties of passengers were given to these points.

To facilitate and increase movement of freight, rates in effect were revised during the year. Rates for shipment of freight between the main island and Hokkaido were reduced due to the establishment of a through service on this freight, thereby eliminating extra charges for reloading. New equipment added during 1926 included 157 new locomotives, consisting of 49 6-wheel type for passenger service, 95 8-wheel type for freight service, five 8- to 12-wheel type, and eight 8-wheel electric locomotives for use in freight service. A number of freight cars, or goods wagons, were added to the service to handle increases in shipments of several classes of freight, particularly livestock and coal.

ARMY AND NAVY. Military service is universal and compulsory. Liability commences at 17, but actual service begins at 20 years and lasts for 20 more. The peace strength of the active army in 1926 was 235,056. The military budget for 1925-26 amounted to 1,615,406,000 yen. See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

The following table from the *Statesman's Year Book* for 1927 shows the classification of the Japanese fleet for the three years ending with 1926:

	Completed at end of		
	1924	1925	1926
Battleships and battle cruisers	10	10	10
Armored cruisers	7	7	7
Aircraft carriers	1	1	1
Cruisers	18	22	24
First-class gunboats	4	4	4
Destroyers*	81	86	100
Submarines	54	60	68

* The destroyers are 49 first-class, 51 second-class.

GOVERNMENT. Executive power is in the emperor who acts with the advice and aid of a ministry appointed by and responsible to himself; legislative power is in the emperor and an Imperial Diet of two chambers, namely the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering at the beginning of the year 399; and the Lower House or House of Representatives, elected for four years and numbering at the beginning of the year, 464. Emperor in 1927, Hirohito, born Apr. 29, 1901; succeeded his father, Yoshihito, Dec. 25, 1926. The cabinet at the beginning of the year was composed as follows: Prime Minister, Reijiro Wakatsuki; Home Affairs, Kenzo Adachi; Foreign Affairs, Baron Shidehara; Finance, Cho-

kuon Kataoka; War, General Ugaki; Marine, Admiral Takarabe; Justice, Yoku Egi; Education, R. Okada; Agriculture, C. Machida; Commerce, I. Fujisawa; Communications, K. Adachi; Railways, Viscount Inoue.

HISTORY

SITUATION AT THE BEGINNING OF THE YEAR. At the beginning of the year the situation in Japan was serious from the economic point of view. Money was scarce and the trade balance was extremely unfavorable, attributable in part to the earthquake of 1923 and the appreciation of Japanese exchange. The situation in China seriously affected Japan, and the success of the Nationalists under Chiang Kai-shek caused Foreign Minister Shidehara to contemplate the possibility of giving up Japan's friendship for the Peking overlord, Chang Tso-lin, and casting her lot with the southern government. Affairs in China naturally focused attention on Russo-Japanese relations which were exceptionally cordial, a cordiality which was concretely expressed in terms of valuable oil, timber, and fisheries concessions in Northern Sakhalin and elsewhere. On March 7, Japan suffered from another severe earthquake shock in the prefecture of Kyoto, in which almost 3000 were killed and a greater number wounded. Several small towns and villages were destroyed and the cities of Osaka, Kobe, and Kyoto, while practically undamaged, were severely shocked.

THE FINANCIAL CRISIS. As noted above under *Finance*, Japan suffered a severe financial crisis in the spring of the year. Signs that it was surely coming had been prevalent from the very beginning of the year. Several banks and business houses had failed. The panic was brought to a head with the failure of the Suzuki Company, Ltd., which probably conducted one-fourth of the entire foreign trade of Japan. The failure occurred on April 5, and was followed by a rapid disintegration of the entire business of the concern which was scattered throughout the entire empire. According to many financial experts the cause of the crisis can be laid directly at the doors of the earthquake of 1923. The liabilities were placed at \$250,000,000. One of the principal creditors of the concern was the Bank of Taiwan, a semi-official organization, which failed to get an advance of 200,000,000 yen from the government to tide it over its difficulties. As a direct result of the panic the Wakatsuki cabinet resigned.

On April 18, a new cabinet was formed under the leadership of Baron Tanaka, the head of the Seiyukai party. He had formerly held the post of Minister of War, and at the time of the crisis was the leader of the Opposition. He was placed in the rather anomalous position of heading a cabinet which did not control a parliamentary majority. His government was made up as follows: Prime Minister and Minister of Foreign Affairs, Baron Tanaka; Home Minister, K. Suzuki; Naval Affairs, Admiral Okada; Army, General Tsuno; Justice, Y. Hara; Finance, K. Takahashi; Education, S. Mitsuishi; Railways, H. Ogawa; Agriculture, T. Yamamoto; Communications, N. Mochizuki; Commerce and Industry, T. Nakahashi.

The new government announced that it would take a much stronger position in relation to finance and the protection of its citizens in China than its predecessors had done. A three weeks'

bank moratorium was declared and efforts were made to strengthen the Bank of Japan. In a speech on April 22, Baron Tanaka stated that his aim was to ameliorate the economic unrest, and, on the basis of the fundamental policy of the industrialization of Japan, to renovate administrative methods, improve education, decentralize administration, develop agrarian districts, enforce social policies and maintain the sanctity of the Imperial power. He urged Japan to adopt improved policies for the protection of her interests and prestige which were seriously threatened by the Nationalist advances made in China, during the course of which Japanese interests were attacked, her nationals killed, and her flag sullied. Viscount Korekiyo Takahashi resigned on June 2 as Finance Minister and was succeeded by Chuzo Mitauchi, former Minister of Education. The reason ascribed was the advanced age of Takahashi and the fact that he expected to remain in office only during the time of severe crisis.

SITUATION AT THE END OF THE YEAR. The Diet was opened by Emperor Hirohito on December 26 with a formal speech. The next day it passed unanimously a bill to cover the coronation expenses of the Emperor and then adjourned until Jan. 18, 1928. This recess was expected to be filled with all kinds of political maneuvers on the part of the government and opposition parties. Neither party held an absolute majority in the Diet and each one was expected to attempt to break up the smaller parties and attach the members of these minor groups to one of the major parties. As noted above the Opposition party was in a majority, and if it could hold its members it could overthrow the majority when the Diet reassembled. On the other hand if the Government party could succeed in gaining twelve more votes it could defeat a no-confidence vote and doubtlessly control the entire session of the Diet. If the Government party were to be defeated in January another election must be held immediately, but if a defeat were averted, an election need not come until the Summer and the party could remain in power until the end of 1928.

As reported in the *New York Times*, the hazardous position in which the Japanese government and Diet would be placed when the latter came together for business in January, 1928, might be gathered from the fact that ever since the financial crisis of the Spring of 1927 the Seiyu Honto whose adhesion to the government for the last two years had made possible a Kensei Kai Administration, had shown signs of drifting toward the Opposition. Until the crisis, these two parties gave the government together a vote of 261 (Kensei Kai 163 and Seiyu Honto 98) out of a total representation of 464 deputies. The Opposition, then made up of the Seiyu Kai with 136 deputies and the Dooko Kai with 26, had a total of 162, with scattering votes from the Sin Sei Kai's 26, the Business Men's Party of nine and the Independents with six.

Even with smaller parties uniting with the Opposition, the government in 1926 could usually show a majority of 58 votes. But at the end of 1927 it was admitted that the 98 of the Seiyu Honto had been cut in half, with possibly 49 deputies voting with the Opposition (which, as noted above, formed the cabinet after the financial crisis). On this division the vote would stand, presuming that the Opposition

could hold the smaller parties, Government 212, Opposition 252. Advice from Tokio, however, showed that the Seiyu Honto was not sufficiently against the government to wish to overthrow it, particularly if an overwhelming defeat should make necessary a new election; also that the government could probably count on the Sin Sei Kai and the Business Men's party in the emergency. This was the probable explanation of how 12 votes added to the government's support would turn the tide in its favor.

JEBEL SHAMMAR. See ARABIA.

JEFFERY, EDWARD TURNER. American railway official, died at New York, September 24. He was born at Liverpool, England, Apr. 6, 1844, and was taken to the United States in 1850. He entered the employ of the Illinois Central R. R. as an office boy, and studied drafting and engineering at night. In 1877, after several promotions, he became general superintendent of the Illinois Central system, and in 1885 general manager. In the same year he represented the road at the International Railway Congress in Brussels, and was the only American delegate. In 1889 he visited the Paris Exposition in quest of information for use in connection with the projected World's Columbian Exposition (held in 1893), and for a time he was chairman of the committee on buildings and grounds of the latter exposition. From 1891 to January, 1912, when he retired, he was president of the Denver & Rio Grande R. R., and he retained his connection with the company, as chairman of the board of directors, until January, 1917, when he retired from all official activities save directorships in various corporations. Concurrently with his presidency of the Denver & Rio Grande R. R. he was an official of several other railroad corporations.

JEROME, jér'um, JEROME Klapka. British novelist and playwright, died at Northampton, England, June 14. He was born at Walsall, England, May 2, 1859. He studied at the Philological School, Marylebone, London, but the death of his father required him to become a wage earner when he was 14. He was for a time a clerk in a railroad office, and later an actor in London and a member of traveling theatrical companies. At the end of three years he returned to London and engaged in journalism as a reporter. Next he tried teaching, but in that profession and in various business occupations he achieved little success. In the meantime he was putting out stories and plays that brought him little fame or money. However, in 1889, he won the public attention with *Idle Thoughts of an Idle Fellow* (2nd ser., 1898), and in the same year with *Three Men in a Boat*. In the latter the humorous element predominated, although it contained also considerable philosophizing and description of Thames scenery. It fixed Jerome's place among the most popular authors of the time. A sequel to the book, *Three Men on the Bummel*, with the scenes laid in Germany, was also popular in England and in Germany.

From 1892 to 1897 Jerome edited, with Robert Barr, *The Idler*, and from 1893 to 1897 *To-Day*. A libel suit involving him in heavy costs ended his career in journalism; while he was engaged in the profession he helped to bring out several prominent authors, among them Robert

Louis Stevenson, Barry Pain, W. W. Jacobs, Anthony Hope, Richard Le Gallienne, Israel Zangwill and Eden Philpotts, as well as Phil May and Aubrey Beardsley, illustrators.

Jerome wrote good comedies and farces, *Barbara* (1886); *Sunset* (1888); *Wood Barrow Farm* (1891); *New Lamps for Old* (1890); *MacHaggis* (1897); *Miss Hobbs* (1900); *Susan in Search of a Husband* (1906) and others. His greatest stage success was *The Passing of the*

JEWS. STATISTICS. The accompanying table, showing the Jewish population of the world, is taken from the *American Jewish Year* for 1927-28. Of the 14,780,000 Jews found in the world, more than two-thirds live in Europe, and over 26 per cent live in North and South America. Asia, Africa, and Australasia together have but 8.9 per cent, as follows: Asia, 3.8; Africa, 3.9; Australasia, 1.1 per cent.

A LIST OF THE COUNTRIES OF THE WORLD AND THEIR JEWISH POPULATION

Name of country	Number of Jews	Name of country	Number of Jews
Abyssinia	50,000	Luxemburg	1,858
Aden and Perim	3,747	Malta	85
Afghanistan	18,185	Mexico	16,000
Alaska	500	Morocco (French)	117,512
Algeria	100,000	Morocco (Spanish)	18,000
Arabia	25,000	Netherlands	150,000
Argentina	200,000	New Zealand	2,880
Australia	21,615	Norway	1,457
Austria	850,000	Palestine	157,800
Belgium	44,000	Paraguay	400
Brazil	21,000	Persia	40,000
British Empire	514,442	Philippine Islands	500
British Malaya	708	Poland	2,854,000
Bulgaria	48,282	Porto Rico	200
Canada	126,198	Portugal	1,000
Chile	2,000	Portuguese East Africa	100
China	12,000	Portuguese East Africa (Mozambique)	100
Congo (Belgian)	177	Rhodesia (Northern)	110

Libya	20,000	White Russia	895,184
Lithuania	155,125		

Third Floor Back, in which Sir Johnstone Forbes-Robertson starred for several seasons, in England and America. Its simple humor and religious sentiment appealed to the theatregoing public, although some cynical critics found it somewhat too naïve for their tastes.

Jerome's *Paul Klover*, an autobiographical novel published in 1902, is considered one of his most artistic books. Shortly before his death he published *My Life and Times*, an autobiography. During the War he was active, despite his years, as an ambulance driver on the Verdun front. The labors broke down his health, and he returned to England to become an advocate of a negotiated peace. After the War he engaged in a controversy with Sir Arthur Conan Doyle over the belief of the latter writer in spiritualistic manifestations. Jerome paid three visits to the United States.

IMMIGRATION. Jewish immigrants during the past years went chiefly to Palestine, the United States, Canada, Argentina, and Brazil. The most important fact during the past year was the falling off of the number of Jewish immigrants to Palestine, from 35,000 in 1925 to 13,080. The following figures are taken from the *American Jewish Year Book*:

CHIEF COUNTRIES OF JEWISH IMMIGRATION

Palestine (1926)	13,080
United States (1926)	10,267
Argentina	6,920
Brazil	3,500
Canada	8,587

During the period 1908-26, 1,029,145 Jews had been admitted to the United States, or 9 per cent of the total immigration. Departures in the same period totaled 53,000.

ZIONISM. The history of Zionism was marked by considerable uncertainty during the year. In the Atlantic City meetings (June 26-28) of the Zionist Organization of America marked criticism was expressed of the administration of President Louis Lipsky. A determined minority, headed by Mr. Israel Goldberg, centred its attacks on the financial administration, charging extravagance and losses in several ambitious projects, notably that of the American Zion Commonwealth. The machine was too well disciplined, however: while the charges were admitted in effect no blame was attached to President Lipsky's administration and he and Miss Henrietta Szold, vice president, were re-elected unanimously.

The Fifteenth Zionist Congress, held at Basle, Switzerland (August 30-September 11), fared no better. The scene should have been propitious; here it was, 30 years previously, that the Zionist movement was born; Palestine had become a fact. But in the wrangling that took place among the Rights (Mizrachi), Lefts (Revisionists) and Centrists, and in the dissatisfaction expressed against the mandatory power (England), it was obvious that all was not peace in Zion. Nahum Sokolow was elected President of the Congress. Dr. Weizmann, head of the Zionist Executive, found himself severely censured for the present economic depression in Palestine. Dr. Stephen S. Wise, American Zionist leader, led a concentrated attack on the character of the Palestinian government as administered by the mandate power, England. The Revisionists expressed their dissatisfaction with the proposed Jewish Agency which was to be established as a result of an agreement made between the Zionists and the non-Zionists earlier in the year. The first real break came when Dr. Stephen S. Wise, made chairman of the important Political Committee, resigned and left the Conference when it appeared that a resolution, calling for a conference with Great Britain on a redefinition of the "Jewish Homeland" idea, and supported by Wise, Philip Guedalla and others, was being frowned on by Lipsky, head of the American delegation, because Weizmann was regarding it as a personal affront. Dr. Weizmann defended the conduct of his administration on September 4. He declared his confidence in Great Britain, pressed for the acceptance of the Agency plan though it meant the inclusion of non-Zionists, and expressed himself as ready to go if the Congress did not see fit to follow his programme of a slow but steady development for Palestine. Weizmann was supported. The Jewish Agency, whose purpose was to act as a public body with advisory capacities to aid the Palestine government in the upbuilding of the Jewish national home, was approved. The following persons were elected to the Executive of the Agency: Miss Henrietta Szold, Mr. Harry Sacher, and Col. Frederick Kisch.

This action was considered a triumph for the centre bloc, of which the American delegation constituted the main strength. It appears that a deal was made with the Labor delegates with the result that they refrained from voting. Dr. Chaim Weizmann was re-elected President for the next two years, and a budget of £632,000 for the World Zionist Organization was voted. The Political Committee's resolution on the Palestine government, as finally presented, expressed

its trust in the good faith of the mandatory power but enumerated specific economic grievances to indicate that Great Britain was not exerting its full effort to facilitate the upbuilding of the Jewish homeland.

Dr. Wise's attack on the mandatory power came to the fore at the Cleveland Conference of the United Palestine Appeal (October 29). A resolution, similar in tenure to that of the Political Committee, was passed after Dr. Wise had delivered an outspoken attack on Great Britain, criticizing particularly its economic policies. Four English statesmen, in messages to the Conference, reaffirmed the terms of the Balfour Declaration. These were Balfour, Viscount Cecil, Lloyd George, and Smuts. The United Palestine Appeal voted to raise \$7,500,000 for 1928 for its Palestinian programme.

HENRY FORD'S RECANTATION. One of the most significant events in the year's history of Jewry was Henry Ford's public apology for the seven-years' persecution his paper, the *Dearborn Independent*, had been waging against the Jews. The announcement was made July 8 in the publication of an interchange of letters between Henry Ford and Louis Marshall. The step on Mr. Ford's part had not been entirely unexpected. In the spring of the year Aaron Sapiro's one-million dollar suit for libel against the Detroit manufacturer had come to trial. Ford's paper, in attacking Mr. Sapiro's work among the agricultural coöperatives, had charged him with being a tool of that group of "international Jews" whose purpose was the financial domination of the world. Mr. Sapiro was waging a very successive battle when a mistrial of the suit was declared.

It was the publicity attending on these events that led, probably, to Mr. Ford's apology. It soon became known that the statement was prepared for him by Louis Marshall or somebody close to him, and that Henry Ford signed it unhesitatingly. Mr. Ford's statement declared: That his trust had been violated by reliable employees who were responsible for the articles written over his name; that he was convinced that the so-called "Protocols of the Wise Men of Zion" were "gross forgeries" in indicating that the "Jews have been engaged in a conspiracy to control the capital and the industries of the world"; that he sought the forgiveness of the Jews for the wrong done them, assuring them that henceforth they might regard him as a friend. There was considerable speculation as to the rôle Ford really played in the world-wide dissemination of the spurious "Protocols" after the *Dearborn Independent* had printed them. A former editor of his paper charged that Ford had been aware of the campaign of vilification all along, encouraging it in order to take advantage of rural anti-Semitic sentiment when he was a candidate for the presidency in 1920. Another report had it that the apology was made on the urging of Edsel Ford who had sought to invest a large sum of money in Palestinian mortgages, but who had been spurned because of his father's anti-Semitism. It was generally charged that Ford's recantation was prompted by a desire to elicit Jewish good will for his new motor car. The probable reason is perhaps the simplest; that Henry Ford was duped by retainers whom he had to trust implicitly because his own knowledge of the world was a surprisingly sketchy one.

The Jews were generous in their response. Though they pointed out the damage done had been incalculable by reawakening anti-Semitism in Central Europe, they assured Ford that his apology was accepted in the spirit in which it had been made, as an "amende honorable." Mr. Ford followed this first step by several others: He made a financial settlement with Aaron Sapiro and also promised to support his agricultural coöperative marketing projects; and he settled with Herman Bernstein, who too had been suing Ford for libel. To Mr. Bernstein he promised he would do everything in his power to check the circulation of the pamphlet called the *International Jew* which was made up of the *Dearborn Independent* articles.

TRIAL OF PETLURA'S SLAYER. Another event in the history of Jewry to attract universal attention was the acquittal, by a Paris jury, October 26, of Samuel Schwartzbard, the slayer of Petlura, ex-president of Ukraina in 1918-20. Schwartzbard, a French war veteran, had long brooded on the wrongs done his people by Petlura in the terrible Ukrainian massacres of 1918-20 when fully 50,000 Jews had been slain, and had finally sought vengeance in the killing of Petlura. This he had done in Paris early in the year. Schwartzbard's trial turned into an examination of Petlura's responsibility. At first the defense announced it would summon the most prominent leaders of the thought of continental Europe who would indicate the abhorrence with which they had received the story of the Ukrainian pogroms; but later it contented itself with the summoning of eye-witnesses. These told the story of the murders: that they had been committed by Ukrainian soldiery and not bandits; that Petlura's officers witnessed, if they did not direct the outrages, that Petlura's attention had been repeatedly called to what was taking place, and that because no word was given to check the killings, they must have been performed with Petlura's connivance. The prosecution tried to prove that Schwartzbard was an agent of Soviet Russia and that Petlura's death was due to a fear that he was to embark on an offensive against the Soviet State. The acquittal of Schwartzbard by the jury after 35 minutes' deliberation indicated that the French were amply convinced of Petlura's responsibility for the pogroms, and Jewry interpreted the verdict as a belated but welcome expression of non-Jewish sympathy.

CENTRAL EUROPEAN RELIEF. During the year there was heard repeatedly dissatisfaction with the manner in which the Joint Distribution Committee was carrying out its program of rehabilitating the Jews of central Europe. It will be recalled that this American organization had, in 1926, begun the collection of a fund of \$25,000,000 for the economic restoration of the Jewish war victims of Poland, Russia, etc. Louis Fischer in a series of notable articles in the *Menorah Journal* charged the Joint Distribution Committee with a short-sighted policy in Poland. They were spending money on doles instead of on fundamental industrial projects; their agricultural and immigration policies were unsuccessful; their administration both in Europe and America was high-handed. It must be confessed that the Joint Distribution Committee's replies were not entirely successful in allaying uneasiness. In September, an attack was launched from a more authoritative source. Max Steuer,

a prominent New York attorney, returned from Europe with charges of great losses in relief funds, before 1925, as a result of uneconomical handling. It was his contention that fully 40 per cent of the funds collected had been squandered by exchange manipulations. The remainder had been used, as Mr. Fischer had said, for temporary relief measures and not toward the solution of the Polish Jewish economic problem. The policy of doles was in fact, still in continuance.

These charges had the merit of opening a general discussion and for the first time the Joint Distribution Committee issued a statement of particulars. It did not, however, make public a financial report. The Joint Distribution Committee's report (signed by Felix M. Warburg, Herbert H. Lehman, and Paul Baerwald) contained the following: During the period October, 1924—December, 1926, a total of \$63,362,685 had been spent in Europe, of which \$23,000,000 had gone to Poland. During the period 1919-21, the work was frankly of a relief nature. Over this period, and in fact up to 1925, the zloty continually declined, going from 800 to 250,000 to the dollar. The Joint Distribution Committee knew of this situation. It was confronted by the dilemma: Should it cease its work because the zloty was declining and so much money would be lost, or should it go ahead with its rehabilitative programme regardless? The latter move was decided on in 1922, and the programme continued along relief lines, though a reconstruction programme began to emerge after the summer of 1921. This was on five lines, viz., refugee, child care, medical, reconstruction, and cultural activities. For this work, \$6,350,000 had been spent to Dec. 31, 1926.

There were other statements forthcoming at the meeting of the Joint Distribution Committee called in October at Chicago. Dr. Joseph A. Rosen, head of the Jewish agricultural settlement work in the Ukraine, White Russia, and the Crimea, reported on the success of the activities to that date. He declared that there were 35,519 Jewish families established as pioneer farmers in 160 new colonies. These were occupying 250,993 acres in the Ukraine, 52,027 acres in White Russia, and 110,783 acres in the Crimea, all a free gift of the Russian government. While the experiments were only three years old some of the new farmers were already beginning to repay the loans made to them. Others pointed out, with reference to Poland, that the population was an urban rather than a rural one, and that land settlements must of necessity be attended with great difficulty. In fact, one of the reasons for the financial situation reported by Mr. Steuer was the financing of co-operative banks and credit unions for the aid of Jewish artisans and small business men and these necessarily suffered with the decline of the zloty. The fact was stressed that, while the Russian agricultural experiment was a success, it could not be repeated as readily in Poland when reconstruction would have to follow on mercantile and industrial lines. The upshot of the Chicago conference was a vote of confidence in the management of the Joint Distribution Committee. It was reported that \$21,000,000 had been pledged out of the \$25,000,000 sought.

COUNCIL ON MINORITY RIGHTS. As a result of the meeting of Jewish delegates from Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Bul-

garia, and Austria at Zurich, August 17-19, a Jewish Council on Minority Rights was created for the purpose of securing political, economic and religious freedom for Jews in those countries where minority rights had been guaranteed by the Peace Treaties. Nahum Sokolow was elected president and quarters were opened at Geneva.

EXCESSES. There were no marked outrages committed against the Jews of eastern Europe, though anti-Semitism was still prevalent. It was generally accepted that organized anti-Semitism had weakened in Poland since the advent of the Pilsudski regime. Anti-Semitic propaganda continued to be noisy in Rumania and Hungary and there were evidences of ill-feeling in the colleges, particularly of those two countries and in Lithuania. The *numerus clausus* still prevailed in Hungary; in Poland the decree of 1923 was declared officially to be rescinded. At Budapest, in October, there were riots because the National Theatre was housing a play by the Jewish dramatist, Szomory. The play was withdrawn.

Sporadic disturbances occurred during the year in Budapest, Jewish students being the targets. This evidence of ill-feeling was awakened by the government's announcement that in 1928 the *numerus clausus* would be weakened to allow of the admittance of more Jewish students, in accordance with a promise made to the League of Nations. The government, in November, soon beat a hasty retreat at the animus of the Nationalists and withdrew the earlier pronouncement. *Numerus clausus* evidently was to prevail in Hungary. See also **WELFARE WORK.**

In Rumania student outrages continued to exist and reached such a pitch, particularly at the close of the year, that the Committee on the Right of Religious Minorities (on which were prominent non-Jews as well as Jews) in the United States was moved to protest to Secretary of State Kellogg, in December. This action had resulted from a study made by the Committee of outrages committed in Oradia Mare and Cluj. See also **WELFARE WORK.**

JOFFE, ADOLPH ABRAMOWICZ. Russian leader of the Bolsheviks, died by his own hand at Moscow, November 17, after a long illness. He was born at Simferopol, Russia, in 1883. In his youth his outspoken adherence to Socialism made impossible his attendance at a Russian university, and he went to Berlin, where he studied medicine from 1903 to 1906; then to Zurich, where he took a course in law, and finally to Vienna, where he studied both law and medicine. In the meantime, he kept in close touch with the Socialistic movement in Russia, and visited that country in furtherance of that cause. In 1906 his political activities led to his expulsion from Germany as an undesirable alien. At Vienna, in 1908, he became acquainted with Leon Trotsky, and was associated with the latter in founding the newspaper *Pravda*, later the official organ of the Bolsheviks in Russia. He visited Russia several times under assumed names, and in 1912 was detected and sent to Siberia under a life sentence.

The March revolution of 1917 freed Joffe from Siberia, and he went to Petrograd to work against the continued participation of Russia in the war. With Trotsky, he issued the newspaper *Vpered*. As a member of the Petrograd Workmen's and Soldiers' Council, and as a mem-

ber of the central executive of the Soviets, he made his influence felt to so great a degree that he was chosen to head the Soviets' delegation to meet the Germans at Brest-Litovsk, being joined later by Trotsky. Joffe signed the armistice agreement but refused to sign the peace treaty, denouncing it strongly.

When he became ambassador to Germany, before the downfall of the imperial government there, he took part in the preparations for the revolution, despite his status as a diplomat. This led to his expulsion and the breaking off of relations between Russia and Germany. Joffe subsequently held high posts in the Soviet government, being in turn commissar for foreign affairs, commissar for social insurance, commissar for Soviet inspection in the Ukraine, in Petrograd, and in Turkestan, delegate to the Genoa conference, ambassador to China and Japan, delegate to Great Britain to negotiate a treaty with that country, and ambassador to Vienna. At his funeral, in Moscow, leaders of the Soviet administration and their foes—notably, among the latter, Trotsky, Zinovieff, Rakovsky, Kameneff and Radek—joined in paying the highest honors to his remains.

JOHNS HOPKINS UNIVERSITY. A non-sectarian institution of higher education for men (women are admitted to certain courses) at Baltimore, Md.; founded in 1876. The enrollment for the autumn of 1927 was 4539, distributed as follows; graduate school of arts and sciences, 477; school of medicine, 281; school of hygiene and public health, 103; college of arts and sciences, 419; institute for biological research, established in 1925, 1; school of engineering, 320; school of business economics, 70; college for teachers, 1469; night courses for technical workers, 472; evening courses in business economics, 902; courses in social economics, 1. The registration for the 1927 summer session was 1165. The faculty numbered 550. The productive funds amounted to \$24,132,941.81, and the income for 1926-27, from all sources, to \$2,002,353.45. The library contained 300,000 bound volumes. President, Frank Johnson Goodnow. LL.D.

JOHNSON, BURT W. American sculptor, died at Claremont, Cal., March 27. He was born at Flint, Ohio, Apr. 25, 1890, and was educated at Pomona Preparatory School and College, Claremont, Cal., later studying at the school of the Art Students' League, New York. He exhibited at the American Academy of Design, and Architectural League, New York; the Pennsylvania Academy of Fine Arts; the Albright Galleries, Buffalo, N. Y., and elsewhere. He lectured on civic sculpture and the history of American sculpture. Among his works were: The Pomona Valley war memorial statue and Spanish music fountain, Pomona College; the Woodside Memorial statue, New York City, and the Children's World War memorial fountain, Huntington Park, California.

JOHNSON, WILLIAM WOOLSEY. American mathematician and educator, died at Baltimore, Md., May 14. He was born at Owego, N. Y., 1841, and graduated at Yale in 1862. He served in the office of the United States Nautical Almanac, 1862-64; taught mathematics at the U. S. Naval Academy, 1864-70, at Kenyon College, Ohio, 1870-72, and at St. John's College, Annapolis, Md., 1872-81. In 1881 he returned to the Naval Academy as professor of mathematics,

holding the chair until his retirement in 1921. He was connected with the Naval Academy more than fifty years and by special act of Congress received a commissioned rank in the navy in 1913. He was retired as a commodore. St. John's College conferred on him the degree of LL.D. in 1915. Professor Johnson was a corresponding member of the British Association for the Advancement of Science, a member of the American Mathematical Society, and of the London Mathematical Society. He wrote: *An Elementary Treatise on the Integral Calculus* (1881); *Curve Tracing on Cartesian Coordinates* (1884); *The Theory of Errors and Methods of Least Squares* (1890); *A Treatise on Ordinary and Partial Differential Equations* (1899); *An Elementary Treatise on Theoretical Mechanics* (1901); *Treatise on Differential Calculus* (1904); *Differential Equations* (1906); *Treatise on Integral Calculus* (1907); *An Elementary Treatise on the Differential Calculus* (1908).

JOHNSTON, SIR HARRY HAMILTON, British explorer and administrator in Africa, and writer, died at London, July 31. He was born at London, June 12, 1858, and was educated at King's College, London, and at the Royal Academy of Arts, 1876-80. He studied art also in France. He was in early life as in later years a skillful linguist, and with a command of French, Italian, Spanish, and Portuguese, at twenty-one he began his career of travel in northern Africa. In 1882 he joined the Earl of Mayo's expedition which explored Portuguese West Africa and the Congo region. In 1884 he headed a scientific expedition to Lake Kilimanjaro, in 1889 he explored Lakes Nyassa and Tanganyika, and in 1900 he climbed Mount Ruwenzori. At various times he held positions in the British consular service in Africa, and from 1899 to 1901 he was special commissioner, commander-in-chief and consul general for the Uganda Protectorate. He is credited with being the coiner of the phrase, "Cape to Cairo," to describe the all-British line of influence or control in Africa. His services won recognition from Queen Victoria and King George V in his creation successively as a Knight Commander of the Order of the Bath, 1896, and a holder of the Grand Cross of the Order of St. Michael and St. George, 1901. Besides he was the recipient of gold medals from the Zoological, the Royal Geographical and the Royal Scottish Geographical Societies, and of the honorary degree of D.Sc. from Cambridge University. Various foreign nations also conferred honors on him for his explorations in Africa.

He retired from the British consular service in 1902, as he was suffering from tropic fever, but in 1904 he returned to Africa to aid in adjusting the affairs of the Republic of Liberia. He wrote voluminously, and his writings were not restricted to descriptions of Africa, although the greater part of his work referred to that continent. Among his books may be mentioned: *Essays on the Tunisian Question* (1880-81); *The River Congo* (1884); *Kilimanjaro* (1885); *The History of a Slave* (1889); *Life of Livingstone* (1891); *British Central Africa* (1897); *A History of the Colonization of Africa by Alien Races* (1899); *The Uganda Protectorate* (1902); *British Mammals* (1903); *The Nile Quest* (1903); *Liberia* (1906); *George Grenfell and the Congo* (1908); *A History of the British Empire in Africa* (1910); *The Negro in the*

New World (1910); *The Opening-up of Africa* (1911); *Views and Reviews* (1912); *Common Sense in Foreign Policy* (1913); *Phonetic Spelling* (1913); *The Truth About the War* (1916); *The Black Man's Part in the War* (1917); *The Gay Dombey* (a novel) (1919); *Mrs. Warren's Daughter* (a novel) (1920); *The Story of My Life* (1923).

JONES, ANDRIEUS ARISTIEUS, Senator from New Mexico, died at Washington, D. C., December 20. He was born near Union City, Tenn., May 16, 1862, and was educated at Bethel College, McKenzie, Tenn., and at Valparaiso, Indiana, University. He completed the course of study in law at the latter institution, and, after teaching for two years in Tennessee, went to New Mexico and was admitted to the bar there. He served as mayor of Las Vegas, N. M., as United States District Attorney and as first assistant Secretary of the Interior, at Washington, D. C. (1913-1916), before being elected to the United States Senate, as a Democrat, in 1916; he was re-elected in 1922.

JONES, HUGH BOLTON, American painter of landscapes, died at New York, September 24. He was born at Baltimore, Md., Oct. 20, 1848. He studied art in his native city, and then went abroad, painting and sketching in Spain and France. He was elected to membership in the National Academy of Design in 1883. He won medals at several expositions; at Paris, 1889, Chicago, 1893, Paris, 1900, St. Louis, 1904, and San Francisco, 1915, besides receiving the Webb Prize of the Society of American Artists in 1902. Typical examples of his work are "Spring" and "Autumn," in the Metropolitan Museum of Art, New York; "Springtime," in the Corcoran Gallery of Art, Washington, D. C.; "Sheep Pasture," in the Pennsylvania Academy of Fine Arts, Philadelphia; and "Landscape," in the Museum, Brooklyn, N. Y. His work was called correct in line and delicate in color, but overdetailed in finish and lacking in inspiration.

JONNART, zhōn-ār, CÉLESTIN AUGUSTIN CHARLES, French diplomat, died at Paris, September 30. He was born at Fléchin, France, Dec. 27, 1857, and was educated at the Lycée de Saint Omer, becoming a member of the bar. M. Jonnart's first governmental post was that of chief of the cabinet of the Governor General of Algeria, 1882-85; later he became, in succession, director of Algerian affairs in the French Ministry of the Interior, deputy from the Pas-de-Calais, president of the General Council, Governor of Algeria, and Senator from the Pas-de-Calais. In 1913 he was minister of foreign affairs and in 1917 he distinguished himself by bringing Greece into the War on the side of the Allies. After that he was again Governor of Algeria, and then president of the reparations commission. He was the first French ambassador to the Vatican after the resumption of relations between France and the Holy See. In 1918 he was elected to membership in the Academy of Political and Moral Sciences, and in 1923 to membership in the French Academy in succession to Paul Deschanel.

JUDSON, HARRY PRATT, American educator, died at Chicago, March 4. He was born at Jamestown, N. Y., Dec. 20, 1849. After graduating at Williams College, in 1870, he entered the profession of teaching as an instructor in and principal of the high school, Troy, N. Y., where he remained for fifteen years, 1870-85. Then he

was professor of history and lecturer on pedagogics at the University of Minnesota, 1885-92. In the latter year he went to the University of Chicago (with which the rest of his professional life was identified) as professor of political sciences and dean of the colleges. He held those offices from 1892 to 1894. From 1894 to 1907 he was professor and head of the department of political science, and dean of the faculties of arts, literature, and science. He acted as president of the university, 1906-07, and in the latter year became president. In 1923 he retired from the presidency, receiving the title of president emeritus. After his retirement he was called upon frequently by the trustees for advice on the conduct of the university.

Dr. Judson was the recipient of honorary degrees from several American and Canadian universities, and was a Knight of the Prussian Order of the Crown and an Officer of the Legion of Honor of France, as well as holder of the First Class, Order of the Lion (with brilliants) of Persia and of the rank of Commander of the Order of Saint Sava of Serbia. He became a member of the General Education Board in 1906 and was a member of the Rockefeller Foundation, 1913-24. During the War he served on several commissions for the United States government.

Among his literary activities Dr. Judson was co-editor of *The American Historical Review*, 1895-1902, and of a series of readers, and wrote: *History of the Troy Citizens' Corps* (1884); *Cæsar's Army* (1888); *Europe in the Nineteenth Century* (1894; 3d ed., rev., 1901); *The Growth of the American Nation* (1895; 2d ed., 1900); *The Higher Education as a Training for Business* (1896); *The Mississippi Valley* (in *Shaler's United States of America*) (1894); *The Young American* (1895); *The Government of Illinois* (1900); *The Essentials of a Written Constitution* (Decennial Publications, University of Chicago, vol. iv); *Our Federal Republic* (1925).

JUGO-SLAVIA. A Balkan state, formed after the war, comprising under a federal form of government the following territories: The formerly independent kingdoms of Serbia and Montenegro; Bosnia and Herzegovina; Croatia and Slavonia, former autonomous States of Hungary, portions of the Banat, Backa, and Baranja, integral parts of Hungary proper; Dalmatia, a former province of the Austrian Empire; and Slovenia, composed of portions of former Austrian provinces. Capital, Belgrade.

AREA AND POPULATION. According to the census of Jan. 31, 1921, the area of Jugo-Slavia was 96,134 square miles and the population 12,017,323, representing a density of 125 to the square mile. The majority of the inhabitants speak Serbian and Croatian. Other important linguistic groups are the Slovene and other Slavic languages, German, Rumanian, Hungarian, and Albanian. The principal cities, according to the 1921 census, are: Belgrade, 111,740; Zagreb (Agram), 108,338; Subotica, 101,857; and Serrajevo, 66,317.

EDUCATION. Education is compulsory, and, in all the primary schools under the Ministry of Education, it is free. In 1925-26 there were 7208 elementary schools with 17,576 teachers and 786,324 pupils; The number of secondary schools was 173 with 8595 teachers and 88,399 pupils. There were also 44 training colleges for elementary school teachers with 454 instructors

and 7549 students. Of civil schools there were 155, with 1423 teachers and 26,635 pupils. There were also 19 commercial schools with 185 teachers and 2698 pupils. There are three universities in the kingdom: Belgrade, with 143 professors and 6114 students; Zagreb, with 145 professors and 3175 students; and Ljubljana, with 72 professors and 1031 students.

PRODUCTION. Provisional results of the 1926 harvest of the chief crops compared favorably with those of 1925, though a series of adverse developments during the year combined to reduce the earlier estimates of an export surplus commensurate with the sown area. Of the 6,017,180 hectares sown, it is estimated that 240,000 hectares, or 2.5 per cent of the total, were ruined by floods, while heavy rains and cool weather affected the quality of the crops in certain regions. The floods in the great grain-growing region of the Voivodina were largely responsible for the smaller wheat crop, which was estimated at 2,020,000 metric tons as compared with 2,140,400 in 1925. Preliminary figures for the corn crop placed it at 3,400,000 metric tons, as against 3,791,000 in 1925. Estimates for the other crops for 1926 were as follows: Barley, 402,139 tons; rye, 210,044; oats, 373,932; maslin, 46,882; and spelt, 14,416 metric tons. With the exception of spelt, all show a slightly increased production over 1925. The demand for these cereals, however, was small. The extent of the drop in agricultural prices during the year was indicated in the exports of the two leading crops. Corn exports totaled 894,716 metric tons valued at 1,338,600,000 dinars, as compared with 1,011,273 tons valued at 2,055,700,000 dinars in 1925. Exports of wheat totaled 297,285 metric tons valued at 841,100,000 dinars, as against 189,958 tons and 501,500,000 dinars in 1925. The fall of prices was especially noticeable in the case of hogs, cattle, and horses.

The lumber industry, which ranks next to agriculture and livestock in importance, was dull during the greater part of 1926 following the depression of 1925. About one-third of the whole capital invested in the country's industries is estimated to be devoted to the manufacture of forest products, and approximately 100,000 workers are employed in the lumber and wood-working mills. Mineral resources are of some importance and include: Coal and lignite, copper ore, iron, lead, gold, chrome, antimony, and cement. A dispute over prices of coal supplied to the government by private firms, during which no deliveries were made, interfered with coal production in 1926. Following the adjustment of the dispute later in the year, however, production was speeded up so that the output was expected to fall only slightly below the 4,100,000 tons of 1925.

COMMERCE. For the third consecutive year a favorable balance of trade was achieved, exports in 1926 exceeding imports by 186,400,700 dinars as against 151,621,300 in 1925. While imports were slightly less in both value and volume as compared with the preceding year, exports had a lower value, 7,818,100,000 dinars as against 8,904,500,000 dinars and a greater volume. The reduction in export values was accounted for by the fall in agricultural prices; the reduced imports reflected the lower purchasing capacity of the population. (See table, page 436.)

FOREIGN TRADE OF JUGO-SLAVIA FOR 1926

Commodity	Quantity	Value*
IMPORTS		
	<i>Metric tons</i>	<i>Million dinars</i>
Cotton	21,384	1,508.0
Wool products	4,331	660.6
Iron and iron articles	132,106	660.0
Machinery and apparatus	22,926	384.7
Wool, hair, skins, cocoons, and feathers	18,639	321.4

Total value		7,818.1

*The dinar had an average exchange value of \$0.0171 in 1925 and \$0.0176 in 1926.

^b Pieces.

^c Head.

Austria displaced Italy as the principal country of origin, furnishing 20.08 per cent of the imports; Czechoslovakia supplied 18.7 per cent, and Italy 13.82 per cent. Italy ranked first as a buyer of Jugo-Slav exports, taking 25.07 per cent; Austria accounted for 20.59 per cent and Czechoslovakia for 12.01 per cent. In spite of the reduction in total imports, American goods continued to show satisfactory increase, their imports totaling 309,217,000 dinars (about \$5,456,700), or 4.05 per cent of the total, as against 341,513,000 dinars (\$5,824,200), or 3.9 per cent, in 1925. Exports to the United States aggregated 49,696,756 dinars (\$876,999), as against 76,637,535 (\$1,306,977) for 1925, or 0.64 per cent and 0.86 per cent, respectively, of total exports.

FINANCE. The lower value of export products, with the consequent reduced profits to the producer, was sharply reflected in the decreased state revenues. The government policy of financial retrenchment, however, has kept expenditures within the revenue limits. Expenditures for the first six months of the 1926-27 financial

year (April-September) totaled 4,721,261,604 dinars, or 1,530,738,395 dinars less than the budget estimates for that period. Actual receipts for the same period amounted to 5,177,305,946 dinars, or 1,074,694,053 dinars less than the estimates. Receipts therefore exceeded expenditures by 456,044,341 dinars. In framing the proposed 1927-28 budget the lower taxpaying capacity of the population was taken into consideration, and both receipts and expenditures were reduced from those voted for the 1926-27 fiscal year. The proposed budget was balanced at 11,690,000,000 dinars, as against 12,504,000,000 dinars actually voted for the previous year. The only increases were for pensions (105,942,449 dinars above 1926-27), ministry of education (81,536,115), ministry of agriculture, 55,596,862), public debt (31,046,418), and ministry of religion (7,882,885 dinars).

COMMUNICATIONS. Vessels entering Jugo-Slav ports during 1926, as stated by the port administration of Spalato, numbered 69,810, with a total tonnage of 10,220,821. Of these, 6207 were sailboats and 63,603 steamships. During the same period there left the ports of the kingdom 6183 sailboats and 63,589 steamships—altogether 69,772, with a total tonnage of 10,219,727. These figures represent a steady increase in port traffic since 1923, both in number of vessels and in their aggregate tonnage.

The Jugo-Slav railway system is not very extensive, ranking twenty-third in length in the world and twelfth in Europe. At the close of 1926 the length of the railways in the country totaled 8955 kilometers (about 5564 miles), of which 7995 kilometers were State owned and 960 kilometers privately owned. Operating revenues during the year amounted to 2,530,817,107 dinars (operating expenses were not available). The rolling stock in operation comprised 2759 locomotives, 59,568 freight cars, and 4245 passenger cars. After the loss of Fiume the Jugo-Slav government had to take steps to provide for the seaborne commerce of the kingdom. For this four ports could be taken into consideration, Šibenik, Gruz, Split, and Kotor. Of the four, the finest natural harbor is undoubtedly Kotor, but it is, so far, without railway communication with the hinterland and the mountainous nature of the country to be traversed would make the construction of a trunk line into the interior a long and costly undertaking. There was no doubt that sooner or later this line would be built, as it would tap a country with immense economic possibilities, but for the time being it was necessary to concentrate on a project which would give more immediate results, take less time to construct and cost less money.

It was for this reason that the port of Split was selected and steps were being taken for the immediate construction of a double-track, standard gauge line, running from Belgrade to the Adriatic. This line will, therefore, connect the capital, via Sarajevo, with Split. In addition it will connect the confluence of the Save and Danube rivers with the Adriatic. It will thus connect one of the most fertile regions in Europe with the mountainous Dalmatia, rich in minerals. From the capital a line running across the Danube at Pančevo will continue the Belgrade-Split railway into the Banat of Temesvar, the richest and most fertile province of Jugo-Slavia, while the great plum growing centre of Valjevo will be put in direct connection with the sea.

GOVERNMENT. Under the constitution adopted June 28, 1921, executive power is vested in a king and legislative power in a single chamber or National Assembly, which consists of 313 members. As a result of the election of Feb. 8, 1925, the party grouping in the national assembly was as follows: Radicals, 140; Independent Democrats, 22; Democrats, 37; Croatian Agrarians, 67; Serb Agrarians, 5; Mohammedans, 15; Catholic People's party, 20; others 4. The King in 1927 was Alexander I, born Dec. 17, 1888, who succeeded to the throne with full royal rights on Nov. 6, 1921. The cabinet as formed on Feb. 1, 1927, was as follows: Prime Minister, N. Uzunovitch; Finance, B. Narovitch; Foreign Affairs, N. Peritch; Interior, B. Maximovitch; Justice, M. Srchkitch; Public Worship, M. Trifounovitch; Posts and Telegraphs, M. Vouitchitch; Education, M. Vouitchitch; Public Health, S. Miletitch; Forests and Mines, K. Miletitch; Unification of Laws, V. Yovanovitch; Agriculture, M. Coulovets; Public Works, M. Cernets; Social Affairs, M. Hodjar; War, General Hadjitch; Communications, General Milosavlievitch.

HISTORY. As noted in the previous YEAR BOOK, the year 1926 closed with the Jugo-Slavian political situation in a turmoil, one considerably heightened by the death of Nicola Pashitch, "the grand old man of Serbia." At the very beginning of the year, Nikola Uzunovitch formed another cabinet, which at first seemed to be on a very firm footing as a result of elections. On January 28, however, Premier Uzunovitch was again compelled to resign (the sixth time within a year) because of dissatisfaction on the part of the Croats with the way the government handled the elections, claiming that undue influence was used to get a government majority. The King immediately asked Uzunovitch to form another cabinet. He succeeded in doing so on February 1, by eliminating the Croat members and substituting for them Slovenians and Serbian radicals.

Uzunovitch's rule was short-lived, however. He soon was embroiled in the chief political event of the year to such an extent that he was compelled to resign again in April. The event referred to, of course, was the Italian-Albanian Treaty. This document threw the entire Balkans into a ferment throughout the year and if one could believe the press, from time to time almost brought Italy and Jugo-Slavia to the brink of war. The new cabinet as constructed on April 10 was as follows: Prime Minister, Minister of Interior and Education, V. Vukitchevitch; Foreign Affairs, Dr. V. Marinkovitch; Public Works, I. Shumenkovitch; Mines and Forests, K. Koumanoudi; Social Affairs, A. Miyevitch; Commerce, Mehmed Effendi Spaho; Agrarian Reform and Public Health, V. Andritch; Agriculture, S. Stankovitch; without portfolio, N. Peritch; Public Worship, Dr. M. Srshkitch; Finance, B. Markovitch; War, General Hajitch; Communications, General Milosavlievitch.

The machinations of the new government, how it turned to Moscow, to Berlin, and finally to Paris to secure a treaty of friendship and alliance to offset the penetration of the Balkans by Italy, are discussed under the article ALBANIA, *History*. As noted under the historical section of BULGARIA, the relations between that country and Jugo-Slavia were strained throughout the year by the depredations of the *comitadji* along the frontier. *Comitadji*, contrary to

general belief, does not mean "bandits" in any sense of the term, but is probably best translated by the term "comrades." The *comitadji* were Macedonian nationalists who desired an independent Macedonia and who possibly thought that by stirring up trouble in the Balkans they might be able to carve their desired state out of the results of a Balkan war. Whatever their thoughts, they caused no end of difficulty between the two countries, who, on the surface at least, were attempting to formulate a strong friendship and maybe a military alliance.

Jugo-Slavia was very patient with the outrages committed and frankly admitted to Bulgaria that she did not hold that government responsible for the depredations. Serious trouble was narrowly averted early in October when the Jugo-Slav General Kovachevitch was assassinated at Istip, Jugo-Slavia, on the sixth of that month. Martial law was declared by Jugo-Slavia in the territory bordering on Bulgaria, but even that stern measure did not prevent the *comitadji* from committing further offenses against Jugo-Slavian sovereignty. See BULGARIA, *History*.

KAGWA, SIR APOLO. Former prime minister of Buganda, died at Nairobi, Uganda Protectorate, February 21. A native of Buganda, the central and most important province of the Uganda Protectorate, he was an early convert to Christianity, and aided the British at the time of the establishment of the protectorate in 1894. In 1897, when King Mwanga of Buganda was deported, leaving an infant son, Kagwa was one of the three regents chosen to govern the kingdom until the son attained his majority in 1914. In 1902 he visited England to attend the coronation of Edward VII, as official representative of the protectorate. From 1914 to 1926 he served as prime minister of Buganda. In 1925 he was created a Knight Commander of the Order of St. Michael and St. George.

KAISER WILHELMSLAND. Ki'zer-vil'hélm'slant'. A mandated territory under the control of Australia. It was a colony of Germany at the outbreak of the war in 1914, but was shortly captured by Australian forces. It occupies the northern part of S. E. New Guinea. On Dec. 17, 1920, the League of Nations assigned it to Australia under a mandate. See GERMAN NEW GUINEA.

KAMERUN, ká-me-róon', CAMEROON or CAMEROONS. The name applied to the territory between British Nigeria and French Equatorial Africa, extending from the Gulf of Guinea to the south shore of Lake Chad; formerly a German protectorate, but occupied by the British and French during the War and divided in 1919 between France and Great Britain, the former getting far the greater part. Area (exclusive of the tract transferred to Germany from the French Congo in 1911), 191,130 square miles; population, 2,540,000.

FRENCH KAMERUN. At the time of the division of the former German protectorate in 1919, France received an area of 166,489 square miles (also exclusive of the area ceded to Germany in 1911, which, after the war, was annexed to French Equatorial Africa); population, about 1,500,000. The seat of the government is at Yaoundé, and the chief port is Donala. In 1925 there were 73 government schools with a total attendance of 10,649. The principal products are cacao, coffee, ivory, tobacco, palm oil, and palm

nuts. In 1925 the imports amounted to 126,086,353 francs, and the exports to 113,085,014 francs. In the same year 217 vessels entered at the port of Donala. The general budget for 1926 balanced at 26,220,500 francs and there was a special railway budget of 10,527,000 francs. There are 369 miles of railway. The colony was created an autonomous territory by decree of Mar. 28, 1921, and is under the administration of a French Commissioner. Commissioner in 1927, M. Marchand.

BRITISH CAMEROONS. Great Britain received about 31,000 square miles of Kamerun in the division of 1919. The population is estimated at about 660,000. Cacao, palm kernels, rubber hard-wood, and ivory are the principal products. In 1925 the imports were £238,635 and the exports £120,668. In the same year 91 vessels of 206,508 tons entered the port of Victoria. The revenue and expenditure for the British Cameroons are now incorporated with those of Nigeria (q.v.). The governor of Nigeria is the administrator of the British Cameroons.

KANSAS. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,769,257. According to the State census taken in 1925 the population was 1,812,986. The estimated population on July 1, 1927, was 1,828,000. The capital is Topeka.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Wheat,	1927	9,936,000	111,283,000	\$130,201,000
winter	1926	10,139,000	150,057,000	178,568,000
Wheat,	1927	10,000	44,000	51,000
spring	1926	8,000	27,000	31,000
Corn	1927	5,897,000	176,910,000	107,915,000
	1926	5,563,000	61,193,000	42,835,000
Hay	1927	2,625,000	5,476,000 ^a	43,524,000
	1926	2,467,000	3,247,000	41,591,000
Oats	1927	1,463,000	34,880,000	15,471,000
	1926	1,626,000	35,122,000	15,454,000
Potatoes	1927	49,000	5,890,000	5,890,000
	1926	43,000	3,913,000	6,652,000
Barley	1927	452,000	5,695,000	3,132,000
	1926	266,000	3,032,000	1,850,000
Sorghum,	1927	1,547,000	32,487,000	19,492,000
grain	1926	1,345,000	20,175,000	12,105,000

^a tons.

MINERAL PRODUCTION. The State produced minerals in 1925 to a total value of \$142,944,214, duplications eliminated; in 1924, to a value of \$105,005,476. While petroleum yields the greater part of the yearly total, as to value, zinc, coal, natural gas, cement, clay products, lead and salt all furnish important contributions to the total. There were produced in 1926, 126,307 short tons of zinc and in 1925, 118,778 tons, having a value of \$18,946,050 for 1926 and for 1925 of \$18,054,256. Of lead were produced 28,463 short tons in 1926 and 22,775 short tons in 1925; in value, \$4,554,080 in 1926 and in 1925, \$3,962,850. Of coal were produced 4,531,000 short tons in 1926; in 1925, 4,524,251 tons. Coal produced had a value for 1925, the latest year of available reports, of \$13,013,000. The State increased its year's output of petroleum in 1926, producing 41,427,000 barrels, to 38,357,000 barrels in 1925; in value, the product was \$93,100,000 for 1926 and for 1925, \$74,410,000. Natural gas was produced to the quantity of 26,917,900 M cubic feet in 1925 (latest year reported), and of 25,580,000 M cubic feet in 1924; to the value of \$9,981,000 in 1925 and of \$10,097,000 in 1924. Gasoline was extracted

from natural gas to a quantity of 24,600,000 gallons in 1926 and in 1925 of 19,592,000 gallons; in value, \$2,000,000 in 1926 and in 1925, \$2,223,000. Clay products had in 1925 a value of \$4,345,971; in 1924, of \$4,024,535. Cement production, 6,357,581 barrels for 1926 as against 6,511,393 barrels for 1925, had for 1926, as based on shipments, a total value of \$9,757,699; for 1925 of \$10,861,506. Salt production, as to quantity, was 729,880 short tons in 1926; in 1925, 812,540 tons. In value, it was \$2,741,534 in 1922 and in 1925 \$2,404,423.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$12,403,468; their rate per capita was \$6.83. They included \$548,718 apportioned for education. Totals not included above, of \$475,028 expended in public service enterprises, \$1,255,922 in interest payments and \$3,790,113 in permanent improvement outlays, brought the aggregate of State expenditure to \$17,924,531. Of this, \$3,440,638 was for highways; \$977,377 being for maintenance and \$2,463,261 for construction. Interdepartmental payments formed \$99,313 of State expenditure.

Revenue receipts were \$22,288,077; or per capita, \$12.27. Of their total, property and special taxes yielded 41.7 per cent, attaining a rate of \$5.11 per capita. Earnings of departments and compensation paid the State for officials' services supplied 13.5 per cent of revenue; 37.9 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sale tax.

Net State indebtedness on June 30, 1926, was \$25,788,898, or \$14.19 per capita. Property subject to ad valorem taxation bore a total valuation of \$3,637,554,472. State taxes levied were \$9,544,148, or \$5.25 per capita.

TRANSPORTATION. The number of miles of railroad line in the State on Jan. 1, 1927, was 9,378.59. New construction in 1927 was 8.56 miles of first, 22.76 of second and 4.05 of third track.

EDUCATION. Revision of the school laws of the State was placed by the Legislature in the hands of a school code commission, with the recommendation that this commission should advise such alterations as would improve the entire school system. The commission was directed to report to the 1929 session of the Legislature. The school population of the State in 1926 was reckoned at 543,746. There were enrolled in the public schools 420,472 pupils, of whom 324,666 were in the common schools and 95,806 in high schools. Expenditure on the elementary and secondary public schools in 1926 attained \$35,303,036. The average salary of teachers was, in rural one-teacher schools, \$92.50 a month; for village elementary school teachers, \$112.55 a month; for village high school teachers, \$175.26 a month. For city elementary school teachers, salaries ranged from \$125 to \$135 a month; for city high school teachers, from \$177 to \$198 a month.

CHARITIES AND CORRECTIONS. The State Board of Administration, established in 1907, has under its control the State charitable and penal institutions. These, with their approximate populations, as given in 1927, were: Topeka State Hospital, 1700; Ossawatimie State Hospital, 1300; Lamed State Hospital, 600; State Hos-

pital for Epileptics, Parsons, 700; State Training School, Winfield, 800; State Sanatorium for Tuberculosis, Norton, 150; State Orphans' Home, Atchison, 150; Kansas State Penitentiary, Lansing, 1600; Kansas State Industrial Reformatory, Hutchinson, 800; Women's Industrial Farm, Lansing, 200; Boys' Industrial School, Topeka, 350; Girls' Industrial School, Beloit, 200. The number of prisoners admitted to State institutions in 1926, according to the Department of Commerce, was 1256; patients in the State insane hospitals numbered, Jan. 1, 1927, 3697.

LEGISLATION. The State Legislature convened in regular biennial session in January. Facing the prospect that the Federal Government would otherwise discontinue its subvention to road building within the State, the legislators framed and passed what was designated as a makeshift bill to preserve the Federal subvention. This bill created a highway commission of six members and provided that from the gasoline tax there should be credited \$2,000,000 a year to the State aid road fund. An insurance code drafted by a commission created by the previous Legislature was enacted. It provided that foreign and domestic companies should pay taxes at the same rate, that promotion expenses should not exceed 5 per cent of the par value of the stock, and that agents should be licensed after passing a State test. The Legislature repealed the State law of 1909 prohibiting cigarettes, and rendered their sale legal subject to a license fee. The penalty of life imprisonment for every person convicted in Kansas of a third felony was prescribed by law. The Legislature passed a bill accepting the aid offered by the Federal maternity and infancy act.

POLITICAL AND OTHER EVENTS. Governor Paulen took office January 10, taking the oath not at the capital, but at Fredonia, where his father had just died. The United States Supreme Court sustained February 24 the action of the State in its exclusion of the Ku Klux Klan organization of Georgia which had sought to act in Kansas and had been excluded as an unauthorized foreign corporation. The closing of seven small banks in southeastern Kansas February 24 brought a sudden increase of liabilities of the State bank depositors' guaranty fund. According to information of that date the funds, the essential feature of the State bank guaranty law, had resources insufficient by some \$5,000,000 to meet liabilities. There arose a demand that the State should repeal the law and should issue bonds to cover excess liability of the guaranty fund. At Lansing, Kansas, 328 convicts employed in coal mining mutinied, June 21, demanding various advantages, particularly cigarettes, which had been legalized by the Legislature. They barricaded themselves in a mine 720 feet underground, where they remained 72 hours unmolested, and finally came up of their own accord. The resignation of Lew T. Hussey, chairman of the State Public Service Commission, was demanded, after an investigation of his acts by a Legislative committee; Governor Paulen replied to the committee May 24 that he had no power to remove Hussey under the circumstances, and declined to act. The City Council of Kansas City enacted a local tax on cigarettes.

OFFICERS. Governor, Ben S. Paulen; Lieutenant Governor, D. A. N. Chase; Secretary of

State, F. J. Ryan; Treasurer, Carl White; Auditor, Will J. French; Attorney-General, W. A. Smith.

JUDICIARY. Chief Justice, William A. Johnston; Justices: Rousseau A. Burch, Henry F. Mason, John Marshall, John S. Dawson, W. W. Harvey, and Richard J. Hopkins.

KANSAS, UNIVERSITY OF. A State institution of higher education at Lawrence, Kan.; founded in 1864. The 1927 autumn registration was 4220, of whom 138 were registered in more than one school, leaving a total enrollment of 4091. Of this number 1516 were women and 2575 men, distributed as follows: graduate school, 222; college of liberal arts and sciences, 2339; engineering, 542; fine arts, 357; law, 136; pharmacy, 80; medicine, 276; education, 105; and business, 122. The 1927 summer session had an enrollment of 1680, of whom 936 were women and 744 were men. The faculty numbered 365. The endowment fund amounted to \$230,000, and the income for the year, including the balance carried over from 1926, was \$2,349,392. There were 192,000 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D.

KARAFUTO. The name applied to the Japanese half of the island of Sakhalin (q.v.), which comprises that portion south of the 50th parallel of N. latitude. Area, approximately 13,934 square miles; population, according to the census of 1925, 203,504. The chief industry is the herring fisheries, although the colony is suitable for agriculture and pasturage. The Japanese government supplies Japanese settlers with seed and domestic animals. There are also valuable forest lands and mines, the chief minerals being coal and alluvial gold. The budget for the year ending Mar. 31, 1925, balanced at 17,124,303 yen.

KASTALSKY, ALEXANDER DMITRIEVITCH. Russian composer, died at Moscow in January. He was born at Moscow, Nov. 28, 1856, and received his musical education at the conservatory there under Tchaikovsky, Tanieiev and Hubert. In 1901 he became conductor of the Synodal Choir, with which he made very successful tours of Europe. From 1912 to 1922 he was also professor of composition at the Philharmonic School in Moscow, and during the last three years was in charge of the choral classes at the conservatory. His eminence as a composer of sacred music is due to his fine taste and feeling for style, which enabled him to achieve an individual style through blending old and new elements. He wrote about a hundred sacred choruses, a cappella, an oratorio, *The Furnace of Nabucho*, and an opera, *Klara Militche* (Moscow, 1916).

KATO, KATO, TEIKICHI, BARON. Admiral in the Japanese navy, died September 5. He was born at Tokyo-fu, in 1861. Entering the navy, he became a sub-lieutenant in 1886 and rose through successive grades to that of rear-admiral in 1907. He served as commander-in-chief of the Second Fleet, which blockaded Tsingtao, China, in 1914. In 1915 he became chief of the Naval Education Board. He was created a baron in 1916, and in the same year succeeded to the command of the Kure Naval Station.

KAUFFMANN, RUDOLPH. American editor and publisher, died at Dunkirk, N. Y., September 19. He was born at Zanesville, Ohio, Oct. 5, 1853. He graduated at Amherst College in 1876, and in the same year became a reporter

on *The Washington Star*, Washington, D. C. In 1878, he was officially connected with the United States exhibit at the International Exposition in Paris. He became managing editor of *The Star* in 1893, and held the position until his death. He was also president of the Columbia Planograph Company of Washington, a director of the National Metropolitan Bank, a member of the board of managers of the National Geographic Society, and a director of the Corcoran Gallery of Art and also of the Children's Hospital.

KEABLE, ROBERT. British novelist, died in Tahiti, in December. He was born Mar. 6, 1887, and was educated at Magdalene College, Cambridge, winning honors in history. He was ordained in the Church of England in 1911, and was curate of Bradford Parish, Yorkshire, before going to Africa as a representative of the Universities Mission to Central Africa. His first important book, *A City of the Dawn*, published in 1915, was based on his experiences in Zanzibar, and revealed a romantic spirit as well as fine descriptive powers. He was chaplain to the South African forces in France, 1917-18, but resigned his orders to devote his entire time to writing. It was said that the War had unsettled his faith. His novel, *Simon Called Peter*, published in 1921, attracted wide attention. It was the story of an army chaplain's lapse from Christian faith and Christian morals. It was followed by *The Mother of All Living* (1921); *Peradventure* (1922); *Recompense* (1924); *Numerous Treasure* (1925); *Tahiti, Isle of Dreams* (1925); and *Recognition* (1926). He also wrote several religious books besides *A City of the Dawn*.

KELLY, WILLIAM JOSEPH. American jurist, died at Brooklyn, N. Y., October 11. He was born in Brooklyn, Apr. 13, 1860, and was admitted to the bar in 1881. He engaged in general practice in New York and Brooklyn and became counsel for the Long Island R. R. He early gained a wide reputation as a trial lawyer and was retained by the Philadelphia & Reading and the New York & New England Railroads. In 1903 he was a successful candidate for justice of the Supreme Court in the Second Judicial District, New York. In 1917 he was appointed by Governor Whitman to the appellate division. In 1921 he was reappointed by Governor Miller, and in 1923 was named presiding justice of the appellate division by Governor Smith, serving until his death.

KELSEY, FRANCIS WILLEY. American archaeologist and educator, died at Ann Arbor, Mich., May 14. He was born at Ogden, N. Y., May 23, 1858, and graduated at the University of Rochester in 1880. He studied abroad, 1883-85. He went to Lake Forest University in 1880 as instructor in Latin and became professor in 1882, remaining there until 1889, when he accepted the chair of Latin Language and Literature at the University of Michigan; he occupied the chair at the time of his death. In 1919, 1924, 1925, and 1926 he directed the University of Michigan Archaeological expeditions to the Near East, returning in the spring of 1927 from Egypt, where he had been in charge of archaeological research. The University of Rochester conferred on him the degree of LL.D. in 1910. He was the editor of editions of *Cæsar's Gallic Wars*, *Orations and Letters of Cicero* and other classics, including Ovid, Lucretius, and Xeno-

phon. With Professor Percy Gardiner he edited *Handbooks of Archaeology and Antiquities* since 1896, and with Professor H. A. Sanders, *University of Michigan Studies, Humanistic Series*, since 1904.

KELTIE, SIR JOHN SCOTT. Scotch geographer, died at London, January 12. He was born at Dundee, Mar. 29, 1840, and was educated at Perth and the Universities of St. Andrews and Edinburgh. He joined the editorial staff of W. & R. Chambers in 1861 and was with Macmillan & Co., as sub-editor of *Nature*, from 1871 to 1884, when he became inspector of geographical education for the Royal Geographical Society. From 1885 to 1892 he was librarian of the society and served from 1892 to 1915 as its secretary. He was president of the Geographical Section of the British Association in 1897. He received the Cullum Gold Medal from the American Geographical Society in 1915, gold medals from the Paris and Royal Scottish Geographical Societies in 1915, and the Victoria Medal of the Royal Geographical Society in 1917. In recognition of his contributions to geographical science he was made a Commander of the Swedish Order of the North Star, 1898; the Norwegian Order of St. Olaf, 1907; the Finnish Order of the White Rose, 1921; and was elected to honorary membership in the geographical societies of Edinburgh, Paris, Petrograd, Rome, Brussels, Amsterdam, Geneva, Marseilles, Lisbon and Philadelphia. He was knighted in 1918. In addition to contributions to newspapers and magazines, he wrote a *History of Scottish Highlands and Glens* (1874); *Report on Geographical Education* (1886); *Applied Geography* (new ed., 1908); *The Partition of Africa* (1894); and (with O. J. R. Howarth) *The History of Geography* (1914), and served as editor of *The Statesman's Year Book* from 1880 until his death.

KEMPNER, MAXIMILIAN. German lawyer and industrialist, died at Amsterdam, Holland, May 11. He was born in 1855. He was one of the foremost experts on the international potash industry, being co-author of the potash law passed by the German Reich. He served for many years as chairman of the potash syndicate and was a member of the potash council of the Reich. He visited America early in 1927 to renew negotiations for the loan which the German potash syndicate had attempted to raise in 1925, but was obliged to defend his company in an action brought by the United States government under the anti-trust law. He was one of the leading authorities in Germany on financial and economic legislation and on the organization of stock companies. He was chosen as the special representative of Chancellor Luther to communicate the terms of the Locarno treaty to the German cabinet, and made a report which led to favorable action by the cabinet. He was a member of the Federal Economic Council and served as chairman of boards of directors of 22 industrial corporations.

KENTUCKY. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,416,630. The estimated population on July 1, 1927, was 2,538,000. The capital is Frankfort.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acresage	Prod. bu.	Value
Corn	1927	2,885,000	75,010,000	\$66,009,000
	1926	3,069,000	101,277,000	65,830,000
Tobacco	1927	319,000	242,820,000*	40,065,000
	1926	426,000	858,000,000*	38,008,000
Hay	1927	1,350,000	1,916,000*	27,620,000
	1926	1,179,000	1,554,000*	25,807,000
Potatoes	1927	52,000	4,732,000	6,152,000
	1926	47,000	4,512,000	6,994,000
Sweet potatoes	1927	16,000	1,488,000	1,786,000
	1926	17,000	2,040,000	2,203,000
Wheat, winter	1927	322,000	3,059,000	4,130,000
	1926	258,000	4,773,000	6,348,000
Oats	1927	215,000	4,085,000	2,451,000
	1926	259,000	6,846,000*	3,868,000
Sorghum	1927	38,000	3,078,000*	2,616,000
	1926	51,000	4,845,000*	3,876,000

* pounds, † tons, ‡ gallons.

MINERAL PRODUCTION. The State continued important in the mineral field, preeminently in the production of coal. Fourth in rank among the States in 1925 as to the magnitude of bituminous coal output, Kentucky continued in this relative position in 1926. There were mined in 1926, 47,460,439 net tons of coal; in 1925, 55,068,670 tons. Coal produced attained a value of \$88,736,000 for 1926; for 1925, \$94,825,000. Petroleum was produced to the quantity of 6,280,000 barrels in 1926, in 1925 of 6,759,000 barrels; and to the value of \$15,300,000 in 1926 and in 1925 of \$15,682,000. Natural gas yielded in 1925, the year of latest available report, 10,770,000 M cubic feet; in 1924, 12,875,000 M cubic feet. This product was valued at \$3,213,000 for 1925 and for 1924 at \$3,432,000. Asphalt production was 286,850 short tons in 1925 and 274,743 tons in 1924; in value, \$2,493,360 in 1925 and 1924, \$2,386,557. Clay products in 1925 attained a value of \$7,853,355; in 1924 of \$7,519,239. Sand and gravel and stone were each produced in important quantities. The entire mineral production of the State, duplications excluded, attained \$131,370,840 for 1925; for 1924, \$120,510,775.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$16,886,279; their rate per capita was \$0.71. They included \$4,891,536 apportioned for education. Totals not included above, of \$836,907 in interest payments and \$10,004,319 in permanent improvement outlays, brought the aggregate of State expenditure to \$27,727,505. Of this, \$11,709,808 was for highways; \$2,533,674 being for maintenance and \$9,176,134 for construction.

Revenue receipts were \$28,267,688; or per capita, \$11.24. Of their total, property and special taxes yielded 39.2 per cent, attaining a rate of \$4.41 per capita. Earnings of departments and compensation paid the State for officials' services supplied 7.8 per cent of revenue; 34.3 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sale tax.

Net State indebtedness on June 30, 1926, was \$2,305,408, or \$0.92 per capita. Property subject to ad valorem taxation bore a total valuation of \$2,933,133,366. State taxes levied were \$10,325,391, or \$4.10 per capita.

TRANSPORTATION. The number of miles of railroad line in the State on Jan. 1, 1927, was 4,009.94. New construction in 1927 as reported by the *Railway Age* was 44.04 miles of first track and 26.78 miles of second track.

EDUCATION. Efforts in the public educational system of the State during the year, according to Superintendent of Instruction McHenry Rhoads writing in the *Journal* of the National Education Association, were largely centred on the standardization of teaching and administrative forces. The issue of State purchase of school text books played a part in the campaign for election of a governor. Under the existing system the State furnished free text books only to children whose families were unable to pay for them. Flem D. Sampson, Republican candidate for Governor, advocated the issue of free text books to all children, as far and as soon as the State could meet the cost, which he placed at some \$4,000,000 a year. He was elected over his opponent, who opposed this plan. The school population was given in 1927 as 658,608. There were enrolled in the public schools of the State 562,477 pupils; of these, 516,466 were in the common schools and 46,001 in the high schools. Expenditure for public education was stated in 1927 to total \$23,871,575.

CHARITIES AND CORRECTIONS. The State Board of Charities and Corrections, a non-salaried and non-partisan body, had under its charge seven State institutions. Its chief executive officer was the Commissioner of Public Institutions, appointed by the Board. Institutions controlled, with their inmate population in October, 1927, were: The Eastern State Hospital, Lexington, 1379; The Central State Hospital, Lakeland, 1882; Western State Hospital, Hopkinsville, 1708; Feeble-minded Institute, Frankfort, 454; State Reformatory, Frankfort, 1615; State Penitentiary, Eddyville, 689; State House of Reform, Greendale, 513. As reported by the Department of Commerce, there were admitted to the State penal institutions in 1926 1365 prisoners; patients in State hospitals for mental disease numbered 4831.

POLITICAL AND OTHER EVENTS. Flem D. Sampson, Republican candidate, was elected Governor, November 8, defeating J. C. W. Beckham by a majority of 52,133 votes. The Democratic candidate for Lieutenant Governor, James Breathitt, Jr., however, won by the narrow margin of 159 votes. Beckham campaigned against the system of legalized race track betting under the pari-mutuel plan, and against the State purchase of free school books for pupils, and ran heavily behind his ticket. Democratic majorities were elected to both houses of the Legislature. In the city of Louisville William B. Harrison, Republican, was elected Mayor at a special election. This election resulted from a contest over that held in 1925, when a Republican city and county ticket was put in office. The contest was first decided against the defeated Democrats in the Circuit Court at Louisville, February 15. On appeal the State Court of Appeals, June 14, reversed this decision, directed that the Republicans then serving, to the number of some 58, should cease to hold office, that the Governor should nominate officers to replace them temporarily, and that the places should be refilled by election in November. Governor Fields named to office the defeated Democratic candidates of 1925, Joseph T. O'Neal thus becoming Mayor. The new administration conducted an examination of the acts of the ousted officials, and attempted to purge the lists of permanently registered voters, of improper registration. Demand was made that 41,644 names be stricken from

the State lists, on the Democrats' part, and their opponents countered by an even heavier number of challenges.

For purchase of the 72,000 acres of land overlying the Mammoth Cave, and adjoining scenic features, to be made into a National park, an association was formed, and opened in September a campaign to raise by private subscription \$2,500,000. The movement for the purchase of the Cumberland Falls area, to be made into a State park, was advanced by the announcement October 2 that Senator T. Coleman du Pont of Delaware had offered to purchase the land and donate it to Kentucky. The Kentucky Utilities Company maintained that it held an option on the Falls site, but failed, up to the latter part of October, to obtain a power development permit from the Federal government. The United States Supreme Court sustained the State law allowing the State Tax Commission to alter the assessments of property made by the County Board of Supervisors, this law having been attacked by the Fordson Coal Co. The beginning of construction on a \$1,000,000 State Hospital for the Criminal Insane at Lakeland was announced June 20.

Flem D. Sampson was inaugurated governor December 13. The State Supreme Court rendered a decision December 12 adverse to dog racing interests that had sought an order to compel the State authorities to permit betting on dog races, as on horse races.

OFFICERS. The following State administration was inaugurated December 13. Governor, Flem D. Sampson; Lieutenant Governor, James Breathitt, Jr.; Secretary of State, Ella Lewis; Attorney-General, J. W. Camack; Auditor, Clell Coleman; State Treasurer, Emma Guy Cromwell; Commissioner of Agriculture, Labor and Statistics, Newton Bright; Superintendent of Public Instruction, W. C. Bell.

JUDICIARY. Court of Appeals Judges: William Rogers Clay (Chief Justice), Gus Thomas, D. A. McCandless, R. P. Deitzman, M. M. Logan, William H. Reese. A vacancy caused by the resignation of Flem D. Sampson to become Governor was filled December 31 by the appointment of S. S. Willis.

KENTUCKY, UNIVERSITY OF. A State institution of higher education at Lexington, Ky.; founded in 1868. The enrollment in the autumn of 1927 was 2439, distributed as follows: seniors, 371; juniors, 473; sophomores, 576; freshmen, 789; special students, 81; graduates, 144. There were 1322 students registered in the 1927 summer session. The faculty numbered 212. The University consists of seven colleges: arts and sciences, agriculture, engineering, law, education, commerce, and the graduate school. The productive funds amounted to \$184,075, and the income for the year was \$1,209,300.96. The library contained 75,000 volumes. President, Frank LeRond McVey, Ph.D., LL.D.

KENYA COLONY AND PROTECTORATE (formerly the EAST AFRICA PROTECTORATE). A British colony and protectorate in East Africa lying on the Indian Ocean between the Umba and Juba rivers and extending inland as far as Uganda; a crown colony and protectorate since 1920. Area, 206,320 square miles, excluding Jubaland (35,812 square miles); population in 1926 estimated at 2,602,969, including 12,529 Europeans, 24,583 Asiatics, and 10,557 Arabs; Jubaland has about 10,000 inhabitants. Jubaland

was acquired from Italy by the treaty signed between Italy and Great Britain July 15, 1924, and cession took place on June 29, 1925. Nairobi is the capital and has a population of 25,901 inhabitants, of whom 3612 are European. The largest town is Mombasa, with a population of about 39,727 of whom 822 are Europeans. In 1925 there were 16 government schools in operation including 6 European, and over 900 mission and native schools. The agricultural products include rice, coconuts, cotton, simsim, groundnuts, cassava, and sugar cane in the low lying areas. In the highlands where the temperature is moderate and the rainfall good, maize, wheat, sisal, and other crops of lesser importance are grown.

Evidence of the marked advance which the colony was making as an agricultural territory was convincingly brought out in the census figures for the year 1926, which were published in 1927. According to these returns, the area under occupation in the colony, as of July 31, 1926, was 4,587,817 acres—an increase over the previous year of 107,244 acres, or nearly 4 per cent. The number of land settlers advanced from 1695 in 1925 to 1809 in 1926, and the area under cultivation increased by 71,226 acres, or 18.4 per cent. The total area under cultivation in the latter year was 463,854 acres, of which 41.7 per cent was devoted to maize, 14.9 per cent to coffee, 13.7 per cent to sisal, 9.4 per cent to wheat, 1.9 per cent to coconuts, and 4.9 per cent to other crops, thus leaving 13.5 per cent fallow. The sudden expansion in cultivation of tea, which until quite recently had hardly gone beyond experimental planting, is an interesting feature revealed by the census. The area given over to tea growing is stated to be 1689 acres, and it is estimated that an additional 2000 acres would be planted during 1927. Practically all the tea output comes from one high-lying district, the Kericho, which has an exceptional rainfall well spread out over the year.

The merchantable forest covers an area of more than 3600 square miles, of which 316 miles are tropical. The mineral resources are considered rich but are not fully explored as yet. Kenya and Uganda (q.v.) are united under one customs tariff and hence the exports and imports of both are not separated. The chief imports are rice, other grain and pulse, liquors, salt, tobacco, coal, timber, building materials, cotton and woolen goods; the chief exports are cotton, coffee, maize, chillies, fibres, hides and skins, carbonate of soda, seeds, ivory, ground nuts, copra, and rubber. In 1925 the imports were valued at £8,061,448 and the exports £9,576,153. The budget estimates for 1927 were: Revenue, £2,580,955; expenditures, £2,534,937. The main railway line is the Mombasa-Victoria railway, owned by the state, with a length of 618 miles. In the latter part of 1927 the Kenya Legislature Council agreed to the building of two important branch lines, one from Kisumu to Yala in north Kavirondo traversing the native reserve for 30 miles; the second, from Gilgil, a station on the main line, to Thomson's Falls, 47 miles in length. The first of these was to cost £175,000, which would come out of the 1923 transport loan of £3,500,000, while the Thomson's Falls branch would cost £265,000. The colony is governed under the constitution of December, 1925, which provides for an executive

and legislative council. Governor and Commander-in-Chief in 1927, Lieut.-Col. Sir Edward W. M. Grigg.

KENYON COLLEGE. A college of arts and sciences for young men at Gambier, Ohio; established in 1824 by the Protestant Episcopal Church, and connected with it. The enrollment is limited to 250 young men. The number registered for the autumn of 1927 was 260. The faculty numbered 21 members, including the following appointments made during the year: Frank J. Walrath, Ph.D., assistant professor of economics; C. M. Coffin, assistant professor of English; the Rev. Lewis J. Bailey, college chaplain. The endowment funds amounted to \$1,617,000, and the income for the year to \$203,000. The library contained 45,000 volumes. President, William F. Pierce, L.H.D., D.D., LL.D.

KERNITE. See MINERALOGY.

KERR, LORD WALTER TALBOT. British admiral, died at Melbourne Hall, Derby, England, May 12. He was born at Newbattle Abbey, Scotland, Sept. 28, 1839. After studying at Radley College, he entered the British navy in 1853. He was one of the last survivors of the Crimean War and the Indian Mutiny. After advancing through several navy grades, in 1885 he went to the Admiralty in London as private secretary to the first lord of the Admiralty. He was second in command of the British fleet in the Mediterranean, 1890-92, junior lord of the admiralty, 1892, second lord, 1894-95, commander of the Channel squadron, 1895-97, and senior naval lord of the admiralty, 1899-1904. He became an admiral of the fleet in 1904, and retired in the same year. He was made a Knight Commander of the Order of the Bath in 1896 and received the grand cross of the same order in 1902.

KERSHAW, JOHN FELIX. Anglo-Egyptian jurist, died at London, June 17. He was born Nov. 20, 1873, and was educated at the Shrewsbury, England, School, and Balliol College, Oxford University, winning honors in history and law. He was called to the bar in 1897, and after practicing in the northeastern circuit of England became a judge of the court at Khartoum, Egypt, in 1902. Three years later he became a judge of the court of first instance at Cairo, Egypt, and in 1913 he was appointed to the bench of the native appeal court. He resigned from the Egyptian bench in June, 1926, after six men, accused of complicity in the murder of Sirdar Sir Lee Stack, had been acquitted by Kershaw's two native colleagues. For a short time before his death he was judge of the Southwark, Greenwich and Woolwich county courts, England. Judge Kershaw wrote: *Hints on Criminal Investigation* (1907); *Reply to Charges of Atrocities Alleged Against British Soldiers* (blue book) (1909); *Causes of Alexandria Riots* (blue book) (1921).

KIAOCHOW, kyā'chū'. A former German possession now in the hands of China. It comprises a city, harbor, and district on the eastern coast of the province of Shantung; seized by Germany in November, 1897; captured by Japan in November, 1914; administered by Japan, under a mandate in accordance with the Treaty of Versailles, but returned to China by Japan, Dec. 1, 1922, in accordance with the Washington agreement, Japanese troops evacuating two weeks later. The land area is about 200 square miles; population about 227,000, but including

a neutral zone around the bay with an area of some 2500 square miles, the population is estimated at 1,427,000. The chief city and port is Tsingtao.

KIPUSHITE. See MINERALOGY.

KIRKWOOD, IRWIN. American newspaper owner and editor, died at Saratoga Springs, N. Y., August 29. He was born at Baltimore, Md., Dec. 30, 1878. After education at public and private schools, he went to Kansas City, Mo., in 1905 as a real estate salesman, and there met and married Laura Nelson, daughter of the late Col. William R. Nelson, founder of the *Kansas City Star*. Colonel Nelson died in 1915, and Mr. Kirkwood became connected with the direction of the newspaper as representative of the trustees of the Nelson estate. Mrs. Nelson died in 1921 and Mrs. Kirkwood in 1926, and their deaths released an estate of more than \$10,000,000 for an art museum in Kansas City. The *Star* was to be sold to the highest bidder, and a stock company headed by Mr. Kirkwood bought the property. As editor, he was a leader in public affairs in Kansas City. Associates of Mr. Kirkwood in the management of the *Star* arranged after his death to buy his stock in the newspaper.

KIRLIN, J (JOSEPH) PARKER. American lawyer and authority on admiralty law, died at New York, December 22. He was born at Scranton, Pa., Dec. 5, 1861, and studied at the University of Virginia, Columbia College, 1883, and the law school of Columbia University, 1884. In 1889 he became a member of the firm of Convers & Kirlin, which specialized in commercial and maritime law, and represented extensive English interests. He was engaged in many important admiralty cases developing out of the World War, such as those connected with the *Lusitania* and the *Kronprinzessin Océlie* when the latter returned to the United States with a cargo of gold bars, instead of delivering it to ports of the Allies. During the period of the participation of the United States in the War he was general counsel to the Shipping Control Committee.

KIWANIS CLUBS. Clubs made up of two of the leaders in each business and profession in the community, united for the rendering of civic and social service to the community. Each club enjoys autonomy but at the same time functions in direct connection with district and international administration. There are twenty-nine geographical districts, each with a governor, on the North American continent. The first club was organized at Detroit, Michigan, in January, 1915. The first national president was George F. Hixson, elected in May, 1916, and elected international president in 1917, the organization having spread into Canada. The name "Kiwanis" is a word coined to express the constructive, unselfish work of Kiwanians. The motto of the organization, "We Build," is also an expression of its spirit. Its aims are to crystallize community sentiment for municipal improvements, to cultivate public opinion for purer politics, and to promote community cooperation in all good things. The international organization at the close of the year 1927 was made up of 1673 clubs, with an approximate membership of 100,000. Henry C. Hainz, Atlanta, Ga., was the international president for 1927-28; Ralph A. Amerman, Scranton, Pa., was the immediate past president; Fred C. W. Parker, secretary; Raymond M. Crossman, treasurer. The headquarters

office is in the Federal Reserve Bank Building, 164 West Jackson Boulevard, Chicago, Illinois.

KNIGHT, AUSTIN MELVIN. American naval officer, died at Washington D. C., February 26. He was born at Ware, Mass., Dec. 16, 1854, and graduated at the U. S. Naval Academy, 1873. He took part in the Cuban blockade and the Porto Rican campaign, 1898, and was head of the department of seamanship at the Naval Academy from 1898 to 1901. He served as president of the special board on naval ordnance and was president of the joint army and navy board on smokeless powders in 1904-07 and in 1909. Later he became commandant of the Narragansett Bay, R. I., naval station and in 1913 president of the Naval War College, having become a rear admiral in 1911. He had a famous controversy in 1911 with Secretary of the Navy Daniels over the "gag rule," and he told the House of Representatives committee on naval affairs that the United States navy was only 50 per cent efficient. In 1917 he became commander of the Asiatic fleet, with the temporary rank of admiral. He retired in 1918. He wrote: *Modern Steamships* (1901).

KNIGHTS OF COLUMBUS. A fraternal society for Roman Catholic men, organized under a special charter granted by the General Assembly of the State of Connecticut, Mar. 29, 1882. The Order is composed of a Supreme Council, a Board of Directors, and State and subordinate councils. On June 30, 1927, there were 61 State councils and two territorial jurisdictions. The 2498 subordinate councils had a membership of 690,732. Of these, 238,889 were insurance members and 451,843 associate members. These two classes developed through deviation from one of the chief purposes of the organization, to urge Roman Catholic men to insure provision after death for those dependent upon them, but expansion in membership permitted others to join the associate class with certain restrictions as to their rights. By the step-rate plan of insurance adopted in 1902, every insured member pays the cost of his own insurance at his own age. The four principles of the order are charity, unity, fraternity, and patriotism, emphasizing to members the necessity of rendering service in time of illness, death, or distress, the gathering together of men for better citizenship, the value of mutual assistance, and loyalty to duly authorized civil government.

The society offered to ex-service men evening courses in academic, commercial, and trade or technical subjects free of charge; and correspondence courses for ex-service men and other members of the order. Since 1922 the Knights of Columbus organization had devoted itself to supporting a programme of Boy Work. As a result of a year's study and consultation with authorities in this field, a two years' course in Boy Guidance work was introduced at Notre Dame University, which is open to all college graduates and leads to a degree of Master of Arts, under the supervision of a Chair in Boy Guidance, established at the University by the order. Later developments of this programme have led to the establishment of a number of Circles of Columbian Squires, as the Junior Order is called. Another activity of the organization was the furtherance of a campaign of education inaugurated in 1926 to eliminate the influence of Soviet Russia upon the philosophy of American life, in which 4,000,000 pamphlets, containing infor-

mation upon Mexico, were distributed; in addition, lectures, concerning activities in Mexico, were given throughout the United States.

The Order publishes monthly *Columbia*, a magazine devoted to up-to-date fiction, verse, editorials, articles on business, sport, arts, literature, sociology, religion, and the ordinary interests of the ordinary man, which had a circulation in 1927 of almost 800,000. The headquarters of the Supreme Council are located at New Haven, Conn., and the officers in 1927 were: Martin H. Carmody, supreme knight; John F. Martin, deputy supreme knight; William J. McGinley, secretary; D. J. Callahan, treasurer; Edward W. Fahey, M.D., physician; Luke E. Hart, advocate; the Rt. Rev. Mgr. P. J. McGivney, chaplain; David F. Supple, warden.

KOEHLER, HERMAN J. American army officer and master of the sword at the U. S. Military Academy, died at New York, July 1. He was born in Wisconsin, Dec. 14, 1859. He served at the Military Academy thirty-nine years, and was credited with doing much to elevate and maintain the physical condition of the cadets. He was an accomplished master of every form of swordsmanship, and developed efficient systems of physical training. For his services at the Military Academy he received the rank of lieutenant colonel in the United States army, in 1918, and he held that rank when he retired from active service in 1923. He received the Distinguished Service Medal.

KONGO, BELGIAN FREE STATE, and FRENCH. See CONGO.

KOREA or CHOSEN. A peninsula of eastern Asia, belonging to the Japanese Empire since the treaty between Japan and Korea, Aug. 22, 1910. Capital, Seoul.

AREA AND POPULATION. The area is given at 85,223 square miles; population, according to the census figures of Jan. 1, 1925, 19,519,927, as compared with 17,288,989 in 1920. The foreigners number slightly more than 35,000, the vast majority of whom are Chinese. At the end of 1924 the largest cities with their populations were: Seoul, 297,465 (77,587 Japanese); Pusan, 82,393 (35,926 Japanese); and Pyong-Yang, 102,674 (21,672 Japanese).

EDUCATION. In 1924 there were for the education of Japanese 447 elementary schools with 53,397 pupils, 10 middle schools with 3957 pupils, 1 medical school, 1 technical high school, 21 girls' high schools, 1 commercial high school, 1 law school, and various kindergarten and private schools. For the education of the Koreans there were 1155 common schools with 334,415 pupils, 63 private common schools with 11,634 pupils, 14 higher common schools, 8 private and 2 higher common schools for girls, besides various industrial schools, a medical and technical college at Keijo. On Mar. 31, 1924, there were 1815 schools of all kinds with 430,163 pupils. In September, 1926, a University was opened at Seoul with 142 students.

PRODUCTION. Korea is a wholly agricultural country according to the *Financial and Economic Annual* of Japan, and farming is its most important industry. The fields are almost always cultivated on a small scale and are owned by the richer classes. Rice is the staple agricultural product, followed by barley, Italian millet, soy beans, wheat, and red beans. There are also special products such as cotton, tobacco, hemp, and ginseng. The cultivation of fruit trees has

of late produced very good results. Silk culture was being carried on on a large scale under government encouragement. Livestock is raised as a by-product of agriculture, and cattle, horses, goats, and pigs are found everywhere in the country; but stock farming is not pursued as an independent enterprise. The production was, in 1925, 73,317,426 bushels of rice; 37,789,482 bushels of barley; and 133,890,367 bushels of soya beans. The estimated rice crop in 1926 was 77,409,393 bushels. The principal native industrial products of Korea are textile fabrics, paper, pottery, metal ware, manufactured tobacco, brewed drinks, and leather. These industries are mostly carried on as subsidiary house industries. The principal mineral products are gold, silver, zinc, copper, lead, iron, tungsten ore, graphite, coal, quartz sand, and kaolin. Gold mining on a large scale has hitherto been carried on mainly by Europeans and Americans; but large mine-owners in Japan have of late commenced mining various metals and nonmetals in the peninsula. The total yield of all the mines of Korea in 1925 was valued at the sum of 20,876,964 yen.

COMMERCE. The foreign trade of Korea in 1925 amounted to 681,642,314 yen of which 341,630,533 was the value of exports and 340,011,781 that of imports; these figures show, when compared with those of the preceding year, an increase of 12,591,439 yen or 3 per cent in exports, and an increase of 30,418,445 or 10 per cent in imports, and an increase of 43,009,884 or 7 per cent in total trade. The principal exports were grains, flours, starches, seeds, yarns, threads, twines, tissues, clothing and clothing accessories; the principal imports, cotton tissues and manufactured articles.

FINANCE. In compiling the budget for the year 1926-27 an effort was made to economize in expenditures because of the serious condition of the Japanese treasury (See JAPAN). But some unavoidable increased expenditures were necessary for the encouragement of industry, especially the establishment of facilities to increase the production of rice which is urgently needed; for reforestation and river improvement as a fundamental preventive of floods, the necessity for which has been more than apparent since the severe damage done by the floods of the summer of 1925; and for the opening of the Imperial University at Keijo (Seoul). The revenue and expenditure for 1926-27 balanced at 192,825,154 yen, as compared with 178,082,383 yen in 1925-26.

COMMUNICATIONS. The shipping that entered at the open ports in 1925 had a tonnage of 6,555,809, and those that cleared a tonnage of 6,151,076. In 1925-26, 1309.10 miles of railway were open to traffic. The rolling stock consisted of 242 locomotives, 595 passenger cars, and 2766 freight cars. The number of passengers carried was 18,241,062 and the weight of the freight was 4,297,266 tons.

GOVERNMENT. Korea is considered an integral part of Japanese territory. The governor at the beginning of the year was Viscount Minoru Saito (appointed September, 1919). On Dec. 9, 1927, it was announced that the Japanese government had decided to appoint Hanzo Yamanashi, former Minister of War, Governor-General of Korea to succeed Viscount Saito, who resigned.

KOWEIT, SULZANATH of. See ARABIA.

KROUT, MARY HANNAH. American journalist and author, died at Crawfordsville, Ind., June 1. She was born at Crawfordsville, Ind. 3, 1857. She was educated at home, and taught school, 1872-87. Her first journalistic position was that of associate editor of the *Crawfordsville Journal*, 1881, and from that paper she went first to the *Terre Haute Express*, Terre Haute, Ind., and then to the *Inter-Ocean* of Chicago. She remained with the latter paper ten years, and served as its staff correspondent in Hawaii, New Zealand and Australia, and at London. She wrote also for the *New York Tribune* and the *Denver Times*. Her books include: *Hawaii and a Revolution* (1899); *A Looker-on in London* (1900); *The Coign of Vantage* (1909); *The Eleventh Hour* (1921). She compiled also several historical works and biographies, and completed the memoirs of General Lew Wallace.

KU KLUX KLAN. There were evidences during the year that this movement was disintegrating. Major scandals involved the organization in three States. In Alabama, the State Attorney General, a Klansman, resigned and took issue with the Governor, another Klansman, declaring that loyalty to the State came first. In Pennsylvania two factions of the order fought each other.

Observers reported a general falling off of interest. Senator Carter Glass, for example, declared that the Klan was stronger in the North than in the South. In Georgia, Mississippi, and Louisiana the Klan was giving way. In New Jersey, where the organization still had political influence, there were few signs during the year of an attempt to influence public opinion. With the recession of the war period, prejudice appeared to be relaxing.

In the January, 1928, *World's Work* (published in December), Imperial Wizard Hiram Wesley Evans' article on the Klan appeared to be on the defensive. He sought to explain away the Klan's sordid history in Indiana; sensing the Klan's loss of power in several States, he spoke of new gains in least expected quarters. The old shibboleths were raised: "individual liberty"; "freedom of conscience (that is, in effect, Protestantism)"; "our forefathers came here to escape European civilization"; the Democratic party must be rescued from "alienism, Roman Catholicism, wet nullification and the bosses." In short, Mr. Evans found in the Democratic party "an absolute division between the native, American-minded, Protestant, dry, and conscientious Democracy of the South and the West, and the alien, Catholic, boss-ruled, wet, nullificationist Eastern Democracy, with priests instead of consciences." The intimation was that Governor Smith would be fought in the Democratic Party convention.

To this Governor Smith's reply was quick and honest. In a letter written on December 29 to a Klansman of Queens, New York, he said: "I regard the purposes of your organization with abhorrence and I consider them subversive of the fundamentals of American democracy. Nevertheless, in so far as it lies within my power under the law I would accord to you exactly the same even-handed justice that I would give to anybody else."

NEW YORK. Governor Smith's letter had been occasioned by a complaint lodged with him by Queens Klansmen. In a Memorial Day parade in that borough, it had been charged, Klansmen,

marching in regalia but unhooded, had been clubbed and dispersed by New York City policemen. Mayor Walker defended the police on the ground that the Klansmen had no permit to march. But it was agreed that they had, and that the offensive had been taken by the policemen. Governor Smith's point that remedy lay in the courts appeared well taken, however.

ALABAMA. The break in the Klan ranks in this State came as a result of a series of unprecedented floggings that had taken place over the year. The demand of a few newspapers compelled the Crenshaw County grand jury to return 110 indictments. The presentment of the jury found that the floggings had been committed by Klansmen and the State's Attorney General, himself a Klansman, courageously set out to prosecute. On October 19 it was reported that Attorney-General C. C. McCall, preliminary to handling the trials, had resigned from the order. But the trials ended abruptly November 30, when the Attorney General withdrew after two men had been acquitted. Mr. McCall charged that "the State law enforcement officers had shown a frenzied desire to assist the defense instead of assisting prosecuting officials," that the Klan had been making efforts to intimidate him, and that the Governor was too busy to interest himself. An interesting sidelight on the trials was thrown by one witness who refused to testify because he held the law of the Klan superior to that of the State.

PENNSYLVANIA. Evidences of a feud between Klan factions were revealed in this State, in October, when a suit was filed for \$100,000 damages against a group of ousted members for still operating under the Klan name. The defendants, in return, charged the Klan with the misuse of \$15,000,000, of fomenting disorders to encourage membership, and of collecting money "for other than corporate, benevolent, religious, and charitable purposes." It was charged that part of the money went toward "building a \$20,000,000 palace for the Imperial Wizard at Atlanta, Georgia" and "for the purchase of a diamond tiara valued from \$30,000 to \$100,000 for the Imperial Commander or chief officer of women, of the Klan." The ousted action asked for an injunction to prevent the Klan from operating in the State, as well as a receivership.

KURDISTAN, *kūr'dē-stān'.* A more or less vague term applied to a region in eastern Asia Minor, comprising a portion of Turkey and the northern section of the vilayet of Mosul in the new independent state of Irak (See **MESOPOTAMIA**). The inhabitants are Kurds, a seminomadic people related to the Persians in race and language. The population is estimated at 2,500,000. Shortly after the World War there was an attempt to create an independent Kurdistan. The movement was completely crushed by the failure of the Treaty of Sévres, after which the remaining Kurds divided in political allegiance to the Turkish, Persian, and Mesopotamian governments.

KWANGCHOW-WAN, *kwāng'chō'wān.* A small territory on the coast of the Chinese province of Kwangtung, leased to France in 1898, and two small islands commanding the bay leased to her in the following year. Area, about 190 square miles; population estimated at 208,044. In 1925 the imports were valued at 6,735,239 piastres and the exports at 5,844,992 piastres. The chief imports are cotton yarns, opium,

and petroleum; the chief exports, straw sacks, swine, and mats. The port is free and is regularly visited by two French steamship companies. In 1925, 296 vessels of 130,000 tons entered. The local budget for 1926 balanced at 558,000 piastres. The administration is under the governor-general of French Indo-China.

KWANGTUNG, *kwān'tung',* or **KWANGTAO.** A territory at the southern part of the Liaotung peninsula, leased to Japan by China, as a successor to Russia after the Russo-Japanese War. Area, about 538 square miles; population, Oct. 1, 1924, 1,056,076, of whom 856,385 were Chinese, 186,045 Japanese, 10,850 Koreans, and 2796 Americans and Europeans. The latest statistics on education showed 49 elementary schools with 20,521 pupils for the instruction of Japanese, and 128 schools with 22,709 pupils for the instruction of natives. The agricultural products include rice, tobacco, hemp, and various grains and vegetables. The fishing industry is of importance. There is an abundance of salt which is the chief manufactured product. Trade is mainly with Japan and China. Imports in 1923 were valued at 96,088,053 haikwan taels and exports at 133,438,067 haikwan taels. The seat of the administration and the chief port is Dairen, formerly Dalny. The territory is under a Japanese governor general.

LABOR. Discussion of various aspects of the economics of labor will be found under the following heads: **CHILD LABOR**; **COOPERATION**; **LABOR ARBITRATION AND CONCILIATION**; **LABOR LEGISLATION**; **MINIMUM WAGE**; **OLD-AGE PENSIONS**; **STRIKES AND LOCKOUTS**; **UNEMPLOYMENT**; **WOMEN IN INDUSTRY**; **WORKMEN'S COMPENSATION**; and in articles on the respective countries.

The year saw no outstanding changes in the status of the working populations. Among the significant events of the year may be chronicled the following: The passage of the trade disputes and trade-unions act in England whose purpose was to hamper seriously the effectiveness of the British trade-unions. (See **TRADE-UNIONS AND GREAT BRITAIN**.) The long continued strike in the bituminous coal fields. (See **STRIKES AND LOCKOUTS**.) The attitude taken by the American Federation of Labor toward wage disputes and its decision to make hereafter full scientific inquiry into productivity as a basis for wage agreements. (See **LABOR, AMERICAN FEDERATION OF**.) The attitude of the manufacturers toward child labor. (See **CHILD LABOR**.) The rising sentiment for old-age pension legislation. (See **OLD AGE PENSIONS**.)

INJUNCTIONS. The year saw, too, American labor taking a firm stand against the overzealous exercise of the injunction power by the courts. (See the resolution passed at the A. F. of L. convention in article, **LABOR, AMERICAN FEDERATION OF**.) One of the most sweeping injunctions handed down against American labor was that directed against the United Mine Workers of America by Federal Judge F. P. Schoonmaker in the suit brought by the Pittsburgh Terminal Coal Corporation, September 30. The court upheld the company's contention that the United Mine Workers were acting in violation of the Sherman and Clayton Acts, and that the workers were illegally possessing the company-owned houses. The court decree forbade union pickets from entering company grounds and from using "abusive language." The character of the injunction may be evinced from this clause:

"Any act which might interfere with the production, mining, transportation or shipment of coal is restrained. Trespassing on company property, loitering near such property or parading in the vicinity of the mines is forbidden, except picket posts on roads leading to the workings. Such posts must be 100 feet from the nearest company building, and must be marked to show it is a union picket point."

At Pittsburgh, on November 14, a conference of labor leaders met to consider labor's stand on the question. The meeting was called by the American Federation of Labor and turned into an open attack on the Pennsylvania political administration, the railroads and the public utilities. It was charged that Governor Fisher was friendly to the coal operators and had authorized the commissioning of "coal and iron police" whose wages were being met by the operators. In describing the conditions of the striking miners, many of whom had been out since April in western Pennsylvania, one speaker told of 8000 evictions, the importation of 175,000 colored strikebreakers, and general terrorization by gunmen. President Green of the American Federation of Labor intimated that organized labor would go into the Pennsylvania primaries to defeat the Fisher administration.

Another important injunction dispute loomed, at the end of the year, when the New York Interborough Rapid Transit Co. announced it would seek a sweeping injunction against the American Federation of Labor to restrain organized labor from unionizing New York's subway workers. The American Federation of Labor in filing its answer to the company's injunction action, particularly attacked the "yellow-dog" contract which subway employees were compelled to sign. This binds them to the company union and to no other and prohibits them "from speaking, writing, or printing their opinion on trade-unions and from assembling in groups to discuss the subject." By the end of the year the Supreme Court had not yet announced its decision.

But trade-unionism in New York won a victory for peaceful picketing in the Exchange Bakery case. In 1925 the proprietors of the bakery obtained an injunction to enjoin union leaders from "patrolling the sidewalks and street in front of the restaurant and from approaching, accosting, threatening, assaulting, or intimidating other persons desiring to enter the premises." The lower courts vacated the injunction, while the Appellate Division reaffirmed it. In the spring of the year the Court of Appeals handed down an opinion holding that "it is lawful for a union to initiate strikes and to picket shops where other workers not their members work." The opinion went on to say:

The purpose of a labor union to improve the conditions under which its members do their work, to increase their wages, to assist them in other ways, may justify what would otherwise be a wrong. So would an effort to increase its numbers and to unionize an entire trade or business. It may be as interested in the wages of those not members or in the conditions under which they work as in its own members, because of the influence of one upon the other. . . . Economic organization today is not based on the single shop.

WAGES AND HOURS. The Bureau of Labor Statistics indicated that urban wage rates continued, during 1927, their uninterrupted rise of the last 20 years. A survey made of the 73 time-work trades in 66 cities, said, including over

three-fourths of a million organized workers, showed an average hourly rate of \$1.19 as compared with \$1.115 in 1926. In the 73 time-work trades surveyed, 64 showed wage increases (see Table I) for 1927, while only 9 reported losses. Hours of labor were reduced, too, the average for 1927 being 45.2 per week. If 1927 conditions are compared with 1913, union wage rates show an increase of 159.5 per cent and full-time hours a decrease of 7.8 per cent. (See Table II.) On the other hand, there was a large class of unskilled labor whose wages were wretchedly low. Secretary of Labor Davis estimated that the group, including families and dependents, made up from ten to fifteen millions of people. No complete data were in existence for this class of the laboring population. The Bureau of Labor Statistics had compiled some material in a group of industries and these data are presented in Table III.

TABLE I.—AVERAGE HOURLY WAGE RATES IN SPECIFIED TRADES IN 1926 AND 1927 AND INCREASE, 1927 OVER 1926

Trade groups	Average hourly wage rate		Increase, 1927 over 1926
	1926	1927	
Bakers	\$0.925	\$0.957	\$0.032
Building trade workers	1.278	1.323	.045
Chauffeurs, teamsters, and drivers663	.704	.041
Granite and stone cutters ..	1.330	1.321	-.009
Laundry workers441	.432	-.009
Linemen993	.991	-.002
Longshoremen835	.817	-.018
Printing and publishing.			
Book and job997	1.021	.024
Newspaper	1.155	1.190	.035
Motormen and conductors ..	.662	.682	.020
Average for all trades *	1.148	1.190	.042

* Decrease.

† Not including piece-workers or street-railway motormen and conductors.

TABLE II.—INDEX OF UNION WAGE RATES AND HOURS OF LABOR IN THE UNITED STATES AS OF MAY EACH YEAR, 1907 TO 1927

[1913 = 100]

Year	Index numbers of—		
	Rate of wages per hour	Full-time hours per week	Rate of wages per week, full time
1907.....	89.7	102.6	91.5
1908.....	91.0	102.1	92.5
1909.....	91.9	101.9	93.8
1910.....	94.4	101.1	95.2
1911.....	96.0	100.7	96.5
1912.....	97.6	100.3	97.7
1913.....	100.0	100.0	100.0
1914.....	101.9	99.6	101.6
1915.....	102.8	99.4	102.3
1916.....	107.2	98.8	106.2
1917.....	114.2	98.4	112.4
1918.....	122.7	97.0	129.6
1919.....	154.5	94.7	147.8
1920.....	199.0	93.8	188.5
1921.....	205.3	93.9	193.8
1922.....	193.1	94.4	183.0
1923.....	210.6	94.3	198.6
1924.....	228.1	93.9	214.8
1925.....	237.9	93.0	222.3
1926.....	250.3	92.8	233.4
1927.....	259.5	92.4	240.8

PRODUCTIVITY. Interesting light was thrown on the character of the new industrial revolution in America by the 1925 survey of manufacturing figures published by the Bureau of Census. It was shown that the number of wage earners had diminished over the period 1919-25,

TABLE III
AVERAGE WEEKLY EARNINGS OF MALE COMMON LABORERS IN VARIOUS INDUSTRIES AND DISTRICTS

Industry	Average full-time hours per week ^a	Average lowest district	Average full-time earnings per week ^a Highest district	All districts
Lumber (1925)	57.5	\$10.48	\$25.27	\$17.77
Slaughtering and meat packing: All departments (1925)	50.2	17.04	25.34	21.35
Woolen and worsted goods manufacturing (1926)	49.4	20.77	27.82	21.98
Machine shops (1925)	50.8	11.78	25.32	23.07
Paper box-board manufacturing (1925)	56.7	13.37	28.05	23.99
Blast furnaces (1926)	62.4	16.14	27.72	24.34
Foundries (1925)	52.5	14.37	28.67	25.25
Motor vehicle manufacturing (1925)	50.4	24.02	30.26	28.73
Bituminous coal mining (1926): ^b				
Inside laborers	10.34	33.90	22.78
Outside laborers	11.03	37.69	23.58
Anthracite coal mining (1924): ^b				
Inside laborers	29.42
Outside laborers	29.45
Metalliferous mines, underground (1924)	52.1	19.80	27.78	22.04
Railroads: Track laborers (1926) ^c	47.5	17.00

^a Except in the case of coal mining and railroads, where the only available data are for actual earnings and actual hours.

^b The weekly earnings are computed as equal to seven-fifteenths of the half-month earnings reported.

^c Weekly earnings are computed as equal to one fifty-second of the annual earnings reported by the Interstate Commerce Commission.

while the value of the product produced had been greater (in dollars). Note these figures:

	1919	1923	1925
Wage earners thousands			
Wages earned millions	\$10,453	\$10,999	\$10,719
Average wage	\$ 1.163	\$ 1.254	\$ 1.180
Value added millions	\$24,748	\$25,778	\$26,775
Added per worker	\$ 2,853	\$ 2,940	\$ 3,194
Horse power thousands	29,298	38,057	35,735

The Bureau of Labor statistics, as well, was doing pioneer work in the study of productivity. The following table presents the rapid strides made, using the 1919 figures as the base of 100.0.

INDEX NUMBERS OF WAGE EARNERS IN MANUFACTURING INDUSTRIES, OF POPULATION, OF WAGE EARNERS PER 1,000 POPULATION, AND OF QUANTITY OF MANUFACTURED GOODS PRODUCED

Year	Wage earners in manufactures	Population	Wage earners per 1,000 population	Quantity manufactured	Quantity manufactured per wage earner
1919.....	100.0	100.0	100.0	100.0	100.0
1921.....	77.2	103.3	73.9	78.6	101.8
1923.....	97.5	106.4	90.7	120.2	123.3
1925.....	98.3	109.9	88.9	125.0	134.0

In short, the index numbers reveal that the number of wage earners in manufacturing industries fell off one-fourth between 1919-21. The year 1925 was still below 1919. In fact between 1919-25, wage earners decreased 6.7 per cent while population increased 9.9 per cent, while the quantity per wage earner increased 34 per cent. It is believed by the Bureau that the figures are representative in view of the fact that the following industries have been included: iron and steel, textiles, food products, paper and printing, lumber, automobiles, leather and shoes, cement, brick, glass, nonferrous metals, petroleum refining, rubber tires, and tobacco. For further details, the reader may consult the *Monthly Labor Review* files for 1927 and Rexford G. Tugwell's *Industry's Coming of Age* (New York, 1927). See CHILD-LABOR; TRADE-UNIONS.

LABOR, AMERICAN FEDERATION OF. The American Federation of Labor held its forty-seventh annual convention at Los Angeles, October 3-14. The report of the executive council indicated that for the year there was a paid-up membership of 2,812,407, a gain of 8441, over

1926. The executive council recited the following as the achievements of the organization over the year: The general acceptance by the labor movement of the desirability of the 5-day week. Amicable arrangements between employers and employees for the creation of more constructive status for employees. Examples cited were joint determination of production standards, rewards for craftsmanship, etc., and the maintenance of union wage standards.

Labor announced it as its intention to make intensive studies of government statistics to see not merely if wages were commensurate with the cost of living but with productivity as well. The

report said: "For the first time labor is exploring the field of government statistics to ascertain whether its share in national income is equitable and whether wages paid to wage earners will enable them to share in advances in material civilization." Labor education was again urged and the favorable work of the Workers' Education Bureau commented on. Trade-unionists were told that "there can be no compromise with Communists."

The report urged labor to take action on the following: Formulation of old-age schemes by unions. Investments of trade-union funds in view of the over-expansion of the labor banking field. The report said, "the time has come to stop expansion in the field of labor banking until experience with those labor banks already organized shall have been critically studied and evaluated."

The executive council finally pointed out that the following problems were of major importance to labor to-day: 1. A clarification of the legal status of unionism, particularly in equity courts. Toward this end there are necessary

amendments of anti-trust and anti-combination legislation that the right of association may not be questioned. The use of the "yellow-dog contracts" is objectionable and legislative efforts to declare these illegal are commended. 2. The unionization of highly mechanized industries is declared a necessity. "There is need for study of the mass production industries in order that we may know the probability of industrial development in this direction." 3. Necessity for continuous stimulation of unionists' interest and loyalty in trade-union activities via publicity, education and additional benefits and services such as "investment advice and opportunities, insurance, employment service, unemployment aids and old-age pensions." 4. The unsound position of the company unions is pointed out. They are essentially paternalistic and their intention is to keep the worker bound to the job. The trade-unionist should look forward to "union management coöperation—the joint activity of two equal groups, which is much more fundamental and effective than employee representation plans for coöperating with management."

The convention itself was rather tame. There were opening addresses by Secretary of Labor Davis in which he deplored jurisdictional disputes and praised the Federation's restrictive immigration policy, and by British fraternal delegates who spoke of the need of international organizations for labor, etc. Resolutions submitted to the committee called for the inclusion of Mexicans and Canadians in the quota law, the establishment of old-age pensions, Philippine independence, approval of the Boulder Dam project, condemnation of Fascism in the United States. For the first time in eight years, recognition of Soviet Russia was not urged. John P. Fry, who first had broached the question of basing wages on productivity at the 1925 convention, attacked the current talk of prosperity, insisting that it was applicable only to highly organized employees. It was pointed out from the floor, too, that the injunction was increasingly being used as an anti-labor weapon and that labor's right to strike, underwritten by the Clayton Act, had been destroyed by the Supreme Court in the "Duplex Case." Trade-unionists were urged to defy the injunction. The executive council vindicated the Mexican Federation of Labor from the charge that it was the tool of the Mexican government, in a lengthy report.

Resolutions of the following tenor were adopted: An American merchant marine and an eight-hour day for sailors. The study of mass-production industries for the purposes of unionization. Expressing appreciation of the fights waged by several unions on "Communist political adventures." The "yellow-dog contract" was a menace. The executive council was to make a thorough study of company unions in order to expose them. Denouncing Federal court decisions which deprive workmen of the right to work. Education was to be strengthened. The Worker's Education Bureau's research department was endorsed. Self-government for Porto Rico and independence for the Philippines were urged. Rigid immigration restrictions were reaffirmed. The convention attacked the evidences of Fascism in America, President Green linking it with Communism. Conscription and military education in non-military schools were opposed. The executive council was endorsed in its stand on old-

age pensions, expansion of labor banks, need for the five-day week, and fight on child labor. The Federation declared its continued nonpartisanship in politics. Certain other resolutions, notably approval of the Boulder Dam project and a call on the Labor Department for economic research as it affects labor, were referred to the executive council. No action was taken on affiliation with the Amsterdam International Federation of Trade-Unions. Besides President William Green the following officers were reelected: James Duncan, first vice president; Frank Duffy, second vice president; T. A. Rickert, third vice president; Jacob Fischer, fourth vice president; Matthew Woll, fifth vice president; Martin F. Ryan, sixth vice president; James Wilson, seventh vice president; James P. Noonan, eighth vice president; Daniel J. Tobin, treasurer; Frank Morrison, secretary. New Orleans was chosen for the 1928 convention.

LABOR ARBITRATION AND CONCILIATION. The U. S. Secretary of Labor reported that for the fiscal year 1927 his department had been called upon to handle 554 trade disputes. Of these, 24 cases were still pending, 345 cases (with 41 more, from the preceding fiscal period) were adjusted; while 69 cases were closed without the department's assistance and 57 were unadjusted. In the 545 trade disputes, 575,723 workers were affected. The Secretary wrote of the success of the Conciliation Service:

Official experience shows that in approximately 85 per cent of the cases submitted to the Conciliation Service for mediatory counsel, satisfactory settlements have been secured, and this has been accomplished under the theory and practice that commissioners of conciliation have no power to compel contending parties to accept mediation. Neither have they authority to make awards or decide issues in dispute. Their duties are, rather, to negotiate, advise, and counsel with management and men, with the view to bringing about industrial peace upon the best possible basis for all concerned.

In speaking of the success of these voluntary efforts the Secretary declared that American employers and employees appeared averse to the use of compulsory arbitration.

The services performed by the Department may be ascertained from the following partial list of disputes handled:

Porto Rican-American Tobacco Co. Strike involved 8000 cigar makers of Porto Rico. Strike had lasted from August, 1926, to January, 1927, when the Department was called in. Workers' demands prevailed and strike was settled after a loss to the company of \$1,000,000 and to the workers of \$3,500,000 in wages.

Transue-Williams Steel Forging Corporation. Men struck because of further mechanization of their work with seeming wage reduction. A Department commissioner gained a guaranty for the men and they returned to work.

Musicians, motion-picture houses, Chicago. A four-day strike occurred in which 3000 musicians were involved. As a result of a commissioner's offices the strike was called off pending arbitration.

Fur Workers, Boston, Mass. 10,000 men went out for a 40-hour week and limitation of apprentices. The strike was amicably settled through the Department's intercession.

RAILROAD LABOR ACT. By the Railroad Labor Act of 1926 machinery was set up for the settlement of labor disputes through a Board of Mediation. In cases of dispute, where mediation is unavailing, special boards of arbitration may be set up made up of representative members of both sides as well as neutral parties. Decisions of the arbitrators are binding upon the disputants. Disputes have for the most part centered in the matter of wages, where the men have

usually been successful, and have involved blacksmiths, clerks, conductors and trainmen, firemen and enginemen, maintenance-of-way employees, telegraphers, and train dispatchers.

Soon after the Board's creation it was confronted by a case involving the 65,000 employees of the American Express Co. Arbitrators gave the men an increase of $2\frac{1}{2}$ cents per hour. They had asked for $11\frac{1}{2}$ cents. On Mar. 26, 1927, an arbitration decision was handed down giving wage increases to the station employees of the Grand Central Terminal in New York. At the end of April 10,000 employees of the Southern Pacific Railway Co. received wage increases. Other station employees affected by arbitration proceedings were: 6000 men of the Southern Railway Co., 9700 men of the Illinois Central Railroad Co. The conductors and trainmen similarly submitted wage claims to arbitrators. The men on the eastern railroads received a $7\frac{1}{2}$ per cent increase in wage rates. The men on the western railroads—some 70,000 workers on 55 roads—were denied any increase. The firemen and enginemen of the southeastern railways received increases of 7 per cent in the existing rates, as a result of a Board decision of June 20. The locomotive engineers of the eastern roads—some 30,000—as a result of conferences received $7\frac{1}{2}$ per cent increase, effective August 1. On single railroads maintenance-of-way employees, signalmen, telegraphers, and train dispatchers, by conferences or arbitration, were also the recipients of wage increases. Of the 289 cases submitted to the United States Mediation Board, up to September 17, a settlement had been brought about in 145.

LABOR BANKS. See COÖPERATION.

LABOR CONFERENCE, INTERNATIONAL.

The tenth session of the Conference of the official International Labor Organization was held at Geneva, May 25 to June 16, 1927. Forty-three countries were represented, 26 European, 10 Latin-American and four Asiatic States and three British dominions. The Turkish Republic instructed its representative to attend as an observer. The number of regular delegates was 145 of which 80 were for governments, 43 for employers and 31 for workers. In addition there were a number of substitutes and about 175 technical advisers, making the total official attendance 341. Sir Atul Chatterjee, Indian government delegate, was elected president, while delegates from Italy, Spain and Denmark were made vice presidents. As at five previous sessions, the seating of the Italian workers' delegate, Mr. Rossini, was protested, but, in spite of the unanimous opposition of the workers' delegates from all countries, was accepted by the Conference. The Conference likewise decided in favor of workers' delegates from Hungary, Czechoslovakia, Bulgaria and Cuba appointed by the governments and protested by the workers' groups as not representative of the principal labor organizations.

Action was taken on three questions (1) sickness insurance; (2) minimum wage-fixing machinery in trades in which organization of employers and workers is defective and where wages are exceptionally low, with special reference to the home-working trades, and (3) freedom of association. The first subject was the only one on which a final decision in the form of a draft convention or recommendation could be made. The other two were submitted for preliminary

discussion, final action to be taken at the next session.

Two draft conventions and a recommendation concerning sickness insurance were adopted. One draft convention covers workers in industry and commerce and domestic servants (adopted by a vote of 97 to 9), and the other draft convention covers agricultural workers (adopted by a vote of 85 to nine). These draft conventions "lay down minimum conditions which must be complied with from the beginning by every system of sickness insurance." The recommendation, adopted unanimously, lays down "a number of the general principles which practice shows to be the best calculated to promote a just, effective, and appropriate organization of sickness insurance." In taking this action the Conference, after extended discussion in committee—with almost all the employers' representatives urging that each country be left free to choose between voluntary and compulsory insurance—finally adopted the principle of compulsory insurance.

The Conference reached a positive conclusion as to minimum wage-fixing machinery. It approved a questionnaire by 80 votes to 19 and placed the question on the agenda of the 1928 session of the Conference by a majority of 89 to 22.

The question of freedom of association, however, fell by the wayside. The employers' group insisted upon inserting in the proposed questionnaire to the various governments certain expressions which the workers' group protested against as tending to hamper rather than encourage the development of the trade-union movement in certain countries. As a result the remodeled committee draft of the questionnaire met with the hostility of the workers' group as a whole because it appeared "to encroach upon the inviolable rights of the working classes," and it was rejected by the Conference, 54 to 42. The insertion of the subject in the agenda of the 1928 session was also rejected by 66 votes to 28. Both the workers' and the employers' groups voted solidly against the insertion. See LEAGUE OF NATIONS.

LABOR LEGISLATION. In 1927, the legislatures of 44 States, two U. S. territories, and two insular possessions, and the Federal Congress held regular sessions. In addition, several of the States held special sessions. Notable among new laws were the Federal longshoremen's compensation act, providing compensation for half a million harbor workers suffering injuries not covered by state laws; old age pension laws in Maryland and Colorado, and a women's eight-hour law in New York. Thirty-four States and the Federal government liberalized workmen's compensation laws by more or less important amendments. Two States, Indiana and Ohio, provided for rock-dusting in coal mines, Maine and Kansas accepted the provisions of the Federal maternity act, and South Carolina the provisions of the Federal vocational rehabilitation law.

Alabama. Law requiring bonding of contractors to insure payment of wages enacted. (Session law volume for the adjourned session not available but no labor legislation reported.)

Alaska. Miners' and watchmen's lien laws amended; act authorizing cooperation of the governor with the Federal government in mine regulation continued; workmen's compensation law amended; benefits for death or injury raised about 15 per cent, making total maximum payment \$9000 instead of \$7800; every beneficiary to be entitled to a lien for full amount of award upon all property connected with the work performed by the

employee at time of injury; benefits to non-resident alien dependents reduced.

Arizona. Hour law for female employees extended to cover all employments excepting domestic service and preservation of perishable foods; weekly hour limit reduced from 56 to 48 and weekly rest day required for women.

Arkansas. Mechanics' lien law amended; boiler inspection law amended; compensation for state employees blinded in the course of their employment provided; law enacted forbidding release of insurance carrier of an insolvent employer from payment of damages for injury to an employee.

California. Laws regarding payment of wages amended; provisions of mechanics' lien law amended; provisions of loggers' lien law extended to cover work performed with a laborer's livestock, machinery or appliances and all labor performed in connection with manufacture of timber products; time for foreclosing lien extended and procedure liberalized; law regulating advertising for employees in time of strike strengthened; 8 hour law for public works amended; commission's power to regulate hours for women and minors strengthened; law regulating private employment agencies amended; law including false representation to defraud labor in the definition of theft enacted; hiring of additional employees without advising each of them of every labor claim due and unpaid declared prima facie evidence of intent to defraud; law against misrepresentation of conditions of employment amended, penalty reduced, and violators of the law made liable to additional civil action for double damages; law requiring bonds from employers amended; compulsory school attendance law amended; law providing for establishment of public labor camps enacted; workmen's compensation law amended; agricultural employers and employees presumed to have accepted provisions of the compensation act unless notice of rejection is given; accident prevention and industrial accident fund abolished and their resources transferred to the general fund, from which \$204,000 was appropriated for support of the industrial accident commission; state fund empowered to insure employers under the federal longshoremen's act and the industrial commission authorized to cooperate with the federal commission in its administration; laws providing for rehabilitation of physically handicapped children extended; department of public welfare directed to investigate old age pensions; commission to investigate retirement systems of public employees authorized; law regulating group life insurance of employees and members of labor unions enacted; department of labor and industrial relations reorganized.

Colorado. Law making wages of public employees subject to garnishment enacted; hours of labor in cement and plaster plants limited to 8 per day except at time of changing shifts; coal mine safety laws revised, limiting requirement of certified foremen, and specifying methods of ventilation of mines where more than five men are employed underground; boiler inspection law amended; workmen's compensation law amended in regard to administration of the state fund and employers' acceptance of act; old age pension law enacted, conditioned upon acceptance by each county; pensioners must be at least 70 years of age, citizens of the United States and residents of the county for fifteen years, and not possessed of property exceeding value of \$3000; maximum benefit one dollar per day; act administered by county courts and financed by each county.

Connecticut. Law for bonding contractors on public work amended; law limiting night work is extended to males under 16 years of age; law penalizing fraudulent procuring of labor of public employees enacted; law regulating minors' employment certificates amended; factory inspection law strengthened; investigation and regulation of occupational diseases by board of health authorized; workmen's compensation law amended; provisions regarding occupational disease and compensable injury revised; compensation for loss of certain members increased; burial allowance raised from \$100 to \$200; maximum weekly payment in death cases raised from \$18 to \$21; right of employee with physical defect to waive his compensation rights extended to death benefits.

Delaware. Workmen's compensation law amended; state and county brought under the act if so elected by the governor and county court, respectively.

Florida. No labor legislation reported.

Georgia. No labor legislation reported.

Hawaii. Compulsory school law strengthened; workmen's compensation law amended; public employees' retirement system extended.

Idaho. Farm laborers' lien law amended; State mine inspectors' salary increased; law regulating employees in eating houses amended; workmen's compensation law amended; second injury fund created; coverage and other provisions of act liberalized.

Illinois. Mechanics' lien law amended; coal mine

safety law amended; workmen's compensation law amended; provisions regarding second injury fund and other procedure revised; death benefits in case of dependent minors increased; compensation for death or injury of illegally employed minors increased by 50 per cent of regular awards; compensation for loss of certain members increased; salaries of arbitrators raised and appointment of assistants authorized; appointment of arbitrators in the labor department authorized.

Indiana. Regulation of private employment agencies strengthened; coal mine safety law amended; rock dusting in mines employing more than ten men required; workmen's compensation law amended, weekly minimum and maximum wages, upon which compensation is computed raised from \$10 and \$24 to \$16 and \$30, respectively.

Iowa. Coal mine safety law amended; workmen's compensation law amended; commission to investigate old age pensions authorized.

Kansas. Law requiring vacations for certain public employees enacted; workmen's compensation law repealed and reenacted, administration of act vested in a commission instead of in the courts; employers required to insure and regulation of insurance companies provided; total maximum death benefit increased from \$3800 to \$4000; weekly maximum revised from \$12-15 to \$18; funeral benefit of \$150 required in all cases; compensation for permanent partial disability raised from 50 per cent to 60 per cent of wages for the scheduled number of weeks; additional compensation for healing period authorized; employer's liability for medical care extended; coverage of act extended and other provisions liberalized; provisions of the federal maternity act accepted.

Louisiana. No labor legislation.

Maine. Compulsory school attendance law amended and educational requirement for employed minors between 14 and 16 years of age raised from sixth to eighth grade, law prohibiting certain employments to minors extended; workmen's compensation law amended; provisions of the Federal maternity act accepted.

Maryland. Law limiting hours of employment on horse railways and law forbidding employment of females in places of amusement repealed; workmen's compensation law amended; members of the national guard excluded from the act but officers of the state police, guards in penal institutions, and prisoners engaged in extra-hazardous labor for which wages or a stipulated sum are paid, brought under the act; minors illegally employed are brought under the act and provided double compensation; city authorities of Baltimore or commissioners of any county authorized to establish an old age pension system and to appropriate annually money for its maintenance; pensioners must be 65 years of age, citizens of United States and residents of city or county for fifteen years and not possessed of property valued at more than \$3000; administration by courts under direction of local authorities and board of state aid and charities.

Massachusetts. Law providing annual vacations for certain public employees amended; law relating to building inspectors amended; employers' liability law amended, raising maximum amount of damages recoverable from \$5000 to \$10,000; workmen's compensation law amended; weekly maximum raised from \$16 to \$18 and total maximum for disability from \$4000 to \$4500. Weekly minimum raised from \$7 to \$9 and weekly payments to widow with more than three children increased. Coverage of act extended to employees working outside the state; an employee particularly susceptible to injury allowed to waive his rights to compensation for disability; public employees' retirement systems revised.

Michigan. Law safeguarding payment of wages by contractors amended; exemption from hour regulations for women and minors extended; regulation of private employment agencies amended; compulsory school law amended; mine and railway safety laws amended; workmen's compensation law amended; compensation is increased from 60 to 66 2/3 per cent of wages, weekly maximum from \$14 to \$18 and maximum total payment from \$7000 to \$9000. Minors illegally employed brought under the act and for those between 16 and 18 years of age double compensation provided; benefits to alien non-resident dependents are reduced; investigation of claims against the state by injured employees authorized.

Minnesota. Loggers' lien law extended; exemptions to women's hour law extended; law regulating employment of minors weakened; workmen's compensation law amended; boiler inspection law amended; State employees brought under the act.

Missouri. Salaries of certain public employees increased; law for protection of construction workers in large cities enacted; department of labor reorganized.

Montana. Mechanics' lien law amended; child labor amendment to the Federal constitution ratified; coal mine safety regulations regarding shot firing and ven-

tilation weakened; maintenance allowance during vocational rehabilitation increased.

Nebraska. Compulsory school attendance law amended; workmen's compensation law amended.

Nevada. Law providing for collection of small debts amended; eight-hour law for underground workers strengthened; law forbidding employment of minors in certain occupations amended; coverage extended to men drafted to fight forest fires.

New Hampshire. Law providing laborers' liens against contractors on public works amended.

New Jersey. Mechanics' lien law amended; barbering on Sunday prohibited; civil service law amended; workmen's compensation law amended; public employees' retirement systems extended; law regulating group life insurance of employees and members of labor unions amended.

New Mexico. Law establishing bureau of mines enacted; workmen's compensation law amended; law safeguarding carriers of group insurance of employees enacted.

New York. Law regarding collection of wages amended; mechanics' lien law amended; wages of certain public employees increased; investigation of hours and wages of employees on public works authorized; eight-hour law for women employees in factories and mercantile establishments enacted; 78 hours overtime annually allowed and, in case one day is shortened to 4½ hours, nine hours on other five days and 49½ hours per week permitted; civil service law amended; factory sanitation law strengthened; legislative investigating committee on conditions of labor continued; workmen's compensation law amended; weekly maximum in cases of total disability raised from \$20 to \$25; maximum payment for disability raised from \$3500 to \$5000 for total and \$4000 for partial disability; compensation for loss of hearing of one ear, instead of only for loss of hearing of both ears, provided; law providing rehabilitation for physically handicapped children amended; committee to investigate condition of the aged poor continued; public employees' retirement systems extended; labor department administration revised.

North Carolina. Law regulating small loans secured by assignment of wages enacted; wages of certain public employees increased; hour law for minors between fourteen and sixteen years of age amended, to forbid work after 7 instead of 9 P.M. and, in case of those who have not completed the fourth grade, to limit hours to eight a day and 48 a week in occupations forbidden to minors under 14.

North Dakota. Women's hour law amended; compulsory school law amended; workmen's compensation law amended; total maximum payment in cases of death or total disability limited to \$15,000.

Ohio. Commission to investigate compensation and duties of public employees authorized; mine safety law amended; substitution of rock-dusting for water sprinkling authorized; regulations regarding examination and qualifications of mine officials strengthened; regulations regarding drilling and closing of oil and gas mines much extended and strengthened; public employees retirement systems extended.

Oklahoma. Labor lien law amended; mine inspection law amended; commission to revise laws relating to coal and metal mining authorized.

Oregon. Workmen's Compensation law amended; inclusion of the state and its subdivisions under the act, made compulsory; law establishing bureau of labor statistics and factory inspection amended.

Pennsylvania. Law authorizing registry of emblems of labor organizations enacted; commission to investigate compensation and services of public employees authorized; all laws providing for indenture of minors repealed; law regulating employees in eating houses enacted; coal mine safety law amended; distance allowed between "cut throughs" extended in certain mines under special safeguards; commission to investigate barrier pillars in the bituminous coal region authorized; workmen's compensation law amended; waiting period reduced from ten to seven days; rate of compensation raised from 60 to 65 per cent of wages; total maximum payment raised from \$5000 to \$8500 and weekly minimum and maximum from \$6 and \$12 to \$7 and \$15 respectively. Death benefits and burial allowance increased; public employees' retirement systems revised.

Philippines. Session law volume not yet available.

Rhode Island. Workmen's compensation law amended; payments for loss of certain members increased; maintenance allowance during period of vocational rehabilitation provided; maternity and infant welfare law amended.

South Carolina. Provisions of the federal vocational rehabilitation act accepted.

South Dakota. Law regulating garnishment of public employees' wages amended; mechanics' lien law amended; vacation of two weeks and fourteen working days' leave of absence for sickness annually provided for all State employees; workmen's compensation law

amended; maximum allowance for medical and hospital charges increased.

Tennessee. Mechanics' lien law amended; committee to investigate mine safety laws authorized; law providing compensation for injury or death of employees of the state highway department provided; workmen's compensation law amended; weekly maximum raised from \$12-\$15 to \$16; law protecting insurance carriers in group insurance of employees enacted.

Texas. Workmen's compensation law amended; waiting period made retroactive after four weeks' disability; law exempting from garnishment benefits from employers' annuity plans enacted.

Utah. Retirement system for certain public employees established.

Vermont. Workmen's compensation law amended; employees of the state department of highways brought under the act.

Virginia. Workmen's compensation law amended; law reorganizing labor department enacted.

Washington. Law exempting portion of wages from garnishment enacted; mechanics' and farm laborers' lien laws amended; law forbidding profit making employment agencies, already declared unconstitutional, repealed; law authorizing indenture of indigent minors repealed; coal mine safety; safety committees, consisting of miners and mine officials, in all mines and intensive safety education required; workmen's compensation law amended; discrimination against non-resident aliens to whom compensation is due increased; surplus fund to provide workmen with medical aid needed after expiration of employers' contracts with physicians and hospitals established; law safeguarding funds for employees' services enacted; law regulating group insurance of employees amended.

West Virginia. Law prohibiting payment of wages in scrip amended to allow such payment under certain circumstances; license fee for agencies engaged in recruiting labor to go outside the state, raised from \$250 to \$5000 per year; law regulating work certificates for minors amended; coal mine safety law amended; provision for rescue work extended; law forbidding lawyers to solicit business in damage suits for personal injury enacted; committee to investigate state workmen's compensation insurance fund authorized.

Wisconsin. Laws exempting portion of wages from garnishment and regulating garnishment of wages of public employees amended; law regulating assignment of wages to secure small loans enacted; one-day-of-rest-in-seven law modified; law regulating public employment agencies strengthened; railroad safety law amended; workmen's compensation law amended; maximum annual earnings upon which compensation is based raised from \$1400 to \$1500; compensation for prisoners and other inmates of state institutions, when permanently disabled in the course of their employment, provided; provisions regarding second injury fund and compensation for loss of members revised; appropriation for vocational rehabilitation increased; law providing special educational facilities for physically handicapped children extended.

Wyoming. Coal mine safety law amended; rock-dusting in gaseous mines made obligatory; required qualifications of mine officials revised; workmen's compensation law amended.

United States. Longshoremen's compensation law enacted covering harbor workers not covered by State laws when death or injury occurs upon navigable waters, including dry docks. Masters and crews of vessels, workers on vessels under 18 tons and government employees are excluded. Percentage of wages for disability is 66%, weekly maximum and minimum \$25 and \$8, total maximum payment for injury or death, \$7500. Death benefits vary with number of dependents; widow entitled to benefits until death or remarriage; occupational disease considered same as accidental injury; reasonable medical aid unlimited in time and amount; second injury fund provided; waiting period one week; administration by United States employees' compensation commission through deputies; workmen's compensation for federal employees amended, raising monthly minimum and maximum payments from \$53.83 and \$58.33 to \$66.67 and \$116.66, respectively, maximum burial allowance increased from \$100 to \$200. Sheppard-Towner Maternity Act extended to 1929, to be thereafter repealed; federal employees' retirement act amended; more assistants in Department of Labor authorized.

See also WORKMEN'S COMPENSATION.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. Founded in 1906, this membership organization of socially minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, fearlessly attacking needless industrial evils from the gen-

eral welfare viewpoint. It planned to continue its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment and social insurance. See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR.

Progress of the Association was recorded in its substantial quarterly, *American Labor Legislation Review*, the December issue of which contained a convenient annual summary and index of all new labor laws enacted in the United States. One of the most important activities of the Association during 1927, in cooperation with influential labor groups and their advisers, resulted in the passage of a Federal workmen's compensation bill to protect longshoremen. This legislation was passed by the United States Senate, June 3, 1926, and finally enacted during the closing hours of Congress, Mar. 4, 1927. Among other activities in the line of workmen's compensation, were those in favor of the Fitzgerald bill for protection of private employees in the District of Columbia, which had been favorably reported by the House District Committee, and in support of the new Missouri compensation law which became effective Jan. 9, 1927.

The campaign in which the Association had been energetic for several years for rock-dusting coal mines to prevent great coal dust explosions resulted in encouraging increase in the number of coal companies which have voluntarily adopted rock-dusting. At the beginning of the Association's special campaign five years ago, only three mines could be discovered that had employed rock-dusting. At the close of 1927, the number of coal companies (many of them operating several mines each) which were officially on record as employing this means of preventing explosions had grown to more than 240. In 1927 two additional States, Indiana and Ohio, adopted rock-dusting legislation.

Measures which the Association sponsored were adopted in several States, establishing old age pensions, vocational rehabilitation, one day of rest in seven, and measures for the mitigation of unemployment. The twenty-first annual meeting was in Washington, Dec. 27-30, 1927, several sessions being held jointly with the American Statistical and American Economic Associations. The chief subjects of discussion were the administration of protective standards, use of injunctions in labor disputes, social cost of illness and old age, newer developments in social insurance, labor legislation and the business mind, industrial efficiency and social welfare, the industrial revolution in the new south, new developments in workmen's compensation and accident prevention in the bituminous coal industry. Among the speakers were: Leifur Magnússon, Mary Van Kleeck, John A. Lapp, John A. Fitch, Joseph P. Chamberlain, E. E. Witte, Charles H. Verrill, Walter Gordon Merritt, Charles M. Joseph, John P. Frey, Michael M. Davis, Walton H. Hamilton, Glenn Bowers, Ernest G. Draper, Paul H. Douglas, Sidney Hillman, Otto T. Mallory, Irving Fisher and Mary Anderson. The president in 1927 was Sam A. Lewisohn; the secretary, John B. Andrews, with headquarters at 131 East 23rd Street, New York City. See LABOR LEGISLATION.

LABRADOR. A large peninsula in British North America, forming the easternmost part

of the North American continent; lying between the Atlantic Ocean and Hudson Bay. It includes the northeast portion of the province of Quebec in Canada and a small strip along the northeast coast dependent upon Newfoundland. The term Labrador is also applied to the latter portion, which has an area of 120,000 square miles; with a population in 1924 of 3874. (See NEWFOUNDLAND for a discussion of the settlement of the boundary question.)

LABUAN. A small island off the northeastern coast of Borneo, included in the settlement of Singapore after Jan. 1, 1907. Area, 30 square miles; population, in 1925, 5694, mostly Malays from Borneo. Capital, Victoria, with a population of 1500. Revenue, 1925, \$132,137, expenditure, \$135,028; trade, \$8,250,000.

LACROSSE. This sport retained its hold on the American college world during 1927 and it was noticeable that several new clubs devoted to the game were organized in various parts of the United States and Canada. First place in the annual ranking of the United States Intercollegiate Association went to Johns Hopkins University. The United States Naval Academy ranked second and Yale third. At the annual meeting of the association it was decided to send a team to the Olympic Games at Amsterdam, but it was not definitely determined just how the members of this team should be selected.

LAFAYETTE COLLEGE. An institution for the higher education of men at Easton, Pa.; founded in 1826. In the autumn of 1927 the enrollment was 1088. The faculty numbered 90. The productive funds amounted to \$2,750,000, and the income for the year to \$450,000. The number of volumes in the library was 65,000. William Mather Lewis, A.M., LL.D., was installed as president on Oct. 20, 1927, to fill the vacancy caused by the resignation of President John H. MacCracken on October 1, 1926. In addition to \$163,750 received as gifts during the year 1926-27, a gift of \$500,000 from John Markle, for a mining engineering building and its endowment, was announced on the occasion of the inauguration of Dr. Lewis. Easton Hall, a dormitory for freshmen, the gift of the citizens of Easton, was completed at a cost of \$185,000.

LAFFAN, THE REV. ROBERT STUART DE COUROY. British clergyman and educator, died at London, January 16. He was born Jan. 18, 1853, and was educated at Merton College, Oxford, from which he received an M.A. degree in 1884. He was ordained deacon in 1882 and a priest in 1883. He was headmaster of King Edward VI's School, Stratford-on-Avon, from 1884 to 1895, and was then made principal of Cheltenham College, in which position he remained until 1899, when he became rector of St. Stephen, Walbrook, with St. Benet Sherehog. He was serving there at the time of his death. He was keenly interested in sports and had been a member of the International Olympic Committee since 1899 and of the British Olympic Council since 1905.

LANDS, PUBLIC. The Commissioner of the U. S. General Land Office reported that for the fiscal year ending June 30, 1927, a total of 50,298 original homestead and similar entries embracing an area of 3,594,838 acres was allowed, as compared with 44,524 entries for 3,243,446 acres in 1926, while 13,952 homestead entries were patented during the year, title passing to entrymen for 4,456,000 acres. The total receipts

for the year of \$9,210,697.25 were distributed as follows: Reclamation fund \$4,338,341.72; to the public land States, \$2,550,200.24; general fund of the United States, \$1,692,460.63; and to the various Indian tribes \$620,694.66.

As a result of improved conditions in the mining industry, mineral entries totaling 1,582, or an increase of 252 over 1926, were received; two applications for the establishment of State irrigation districts, embracing 36,257.77 acres were received by the General Land Office, and 69 withdrawals under the Federal water power act were made during 1927 for an area of 71,751 acres, of which 54,103 acres were situated in national forests; 42 orders of reclamation restoration involved 50,642 acres, while 77,802 acres were withdrawn; 1,440 acres were withdrawn under the act of June 14, 1926, to be utilized for recreational purposes by States, counties and cities; 1,909,688 acres were placed in a state of reservation and 2,493,806 acres released either by Executive or departmental orders pursuant to various applicable acts; and the sum of \$50,314.94, as against \$13,100.81 for the previous year, was collected in connection with the use and occupancy of public lands for hydro-electric power development.

The total expenditures for the conduct of the business of the General Land office and its field activities amounted to \$2,284,020.33, or less than one-fourth of the receipts; this amount being \$86,000 less than the expenditures for 1926. The Washington office reduced its force considerably during the year and reduction in the number of district land offices from 42 to 29 further reduced the field personnel. The Southern inspection division, with headquarters at Jackson, Miss., was abolished and the work taken over by the Washington office; the Cheyenne inspection division was likewise abolished and the work divided between the Denver, Col., and Helena, Mont., offices. The sum of \$430,000 was available for the inspection service, composed of 74 workers, which was instrumental in returning 185,937.77 acres to the public domain, representing fraudulent entries. The field force investigated and reported 16,320 cases, of which 3,666 were adverse to entrymen and 12,654 favorable; 65 civil suits brought through the Department of Justice upon the recommendation of the field service were won and 13 lost; these cases restoring 7,218.51 acres to the public domain netted \$44,443.36. Fifty-nine indictments were returned for offenses under public land laws, and 20 of the criminal cases tried resulted in convictions, with prison sentences in five cases.

For the work of the cadastral engineering service, with headquarters at Denver, Colo., \$888,518.75 was available, and an aggregate of 5,160,072 acres was included in surveys or resurveys. Among the miscellaneous surveys made during the year were 38 field investigations of erroneous or fictitious surveys in 7 Western States and Florida; surveys of 10 townsites in Alaska, Idaho, New Mexico, Oregon, and Florida; 45 islands in 12 States; 31 lighthouse reservations; 23 mineral segregations; 4 military reservation boundaries in Alaska, Idaho, Washington, and Florida; 3 Spanish-grant boundaries; and an Indian village in Alaska.

The programme of extending resurveys over oil-shale areas in western Colorado was continued, while surveys on a large scale were carried

on in Utah along the Colorado, San Juan and Green Rivers, on lands valuable for oil and oil-shale. Numerous surveys were made in the various National parks, in coal and oil areas, and within the boundaries of Indian reservations. Surveys and resurveys under the rectangular system, based on the requirements of agricultural settlement, industrial expansion, administrative and special purposes, amounted to 17,877.7 miles and averaged \$21.46 per mile. The map of the United States was revised for 1927 to show the extent of the surveys of public lands, national parks, reservations, county seat locations, lines of railroads, towns, cities, private-land grants, irrigation projects, the acquisition of public lands, lighthouse and other stations. In addition State maps of New Mexico and Michigan were being printed and a map of California was being prepared.

A revival in the stock industry during the year showed the importance of protecting and improving public grazing lands, by repealing stock-raising acts and desert-land laws and modifying timber and stone laws to eliminate the provision authorizing the purchase of lands chiefly valuable for timber. The act of Mar. 4, 1927, enabled the Secretary of the Interior to establish grazing districts upon any public lands in Alaska, except on certain reservations, and provided for leases for definite areas over a period of twenty years, in order to stimulate the raising of cattle, sheep, goats and reindeer in Alaska. A total of 261,031.17 acres was conveyed to the States under school grants and indemnities, and on Jan. 25, 1927, Congress extended the school grant to include unappropriated mineral school sections. Tribal Indian allotments aggregating 384,310.40 acres were received and disposed of; patents were issued to Indians, under the homestead law, for 217,248.20 acres; and 1400 patents conveying title to Indians or their heirs of 174,048.79 acres were issued. In addition to the areas set aside for public purposes, such as national parks, water-power, stock-driveway withdrawals and other government reservations, there remain 193,737,588 acres in the public domain, of which 139,886,998 are surveyed, and the government retains mineral rights on more than 17,500,000 acres patented under the stock raising homestead law, and reserves coal, oil and other mineral deposits on more than 12,500,000 acres.

LANDSBERG, MAX. American rabbi, died at Rochester, N. Y., December 9. He was born at Berlin, Feb. 26, 1845, and was educated at the Universities of Gottingen and Breslau, the Jewish Theological Seminary at Breslau, and the University of Halle. He became a rabbi in 1870. Going to America in 1871, he became a minister at the Berith Kodesh Congregation, Rochester, N. Y., and remained there until 1915, when he was made rabbi emeritus. He was president of the New York Association of Correction and Charities in 1911, and served as governor of the Hebrew Union College at Cincinnati and as a trustee of the Reynolds Library and Rochester General Hospital. He was active in civic and charitable organizations at Rochester and throughout the country. He wrote a *Ritual for Jewish Worship*. (1884). (3d. ed., 1910).

LANDSDOWNE, HENRY CHARLES KEITH PETTY-FITZMAURICE, Fifth Marquis of. British statesman, died June 3 at Clonmel, Ireland. He was born at Lansdowne House, London, Jan. 14.

1845, the eldest son of the fourth marquis. He was educated at Eton and at Balliol College, Oxford, and succeeded at the age of 21 to the numerous family titles. He joined the Liberal Party and was appointed a Lord of the Treasury by Gladstone in 1868, continuing in his political career as parliamentary under secretary in the War Office from 1872 to 1874, when the Liberal government fell. He became under secretary for India in 1880 when Gladstone returned to power, but resigned within a short time, disapproving of the government's compensation for disturbance (Ireland) bill. In 1883 he was appointed Governor-General of Canada, a position he held for five years, during which time the rebellion of Northwest Indians under Riel occurred. He handled this situation with diplomacy and effected a lasting settlement with the Indians. In 1888 Lord Lansdowne accepted the viceroyalty of India, succeeding Lord Dufferin. Returning to England in 1893, he became Secretary of State for War in 1895 in Lord Salisbury's cabinet, and in 1900 was appointed foreign secretary. In this latter position he brought about the Japanese alliance and also the entente cordiale with France, the latter in pursuance of his policy of establishing a closer understanding with France. He was the leader of the Conservative Opposition or Unionist party in the House of Lords from 1905 to 1915 and opposed the Irish home rule and Welsh disestablishment bills and was responsible for their defeat in the House of Lords. In 1915 he was invited to join the coalition government of Mr. Asquith, in which he became minister without portfolio, retiring from the ministry on the resignation of Mr. Asquith in 1916. In 1917 he wrote the "Lansdowne Letter," which was responsible for much controversy, although it merely advocated an early and definite statement of peace terms by the Allies. At the close of the War he came forward with several plans for a moderate settlement of peace, and some of his proposals were included in the treaty of Versailles.

LAOS. See FRENCH INDO-CHINA.

LATOUR, FRANCIS SANCHEZ. Minister from Guatemala to the United States, died at Washington, D. C., November 8. He was born in Quezaltenango, Aug. 21, 1876, and was educated in France and England, serving later as an officer in the British navy. In 1908 he was sent by Guatemala to Washington on a special mission connected with the treaty of the preceding year, and in 1910 was appointed chargé d'affaires. From this time on he became identified largely with Pan-American affairs, and after the resignation of the Orellana government in 1922 was appointed minister to the United States. At Washington he enjoyed the warm friendship of the officials of the government to which he was accredited and of his fellow diplomats. He was vice chairman of the governing board of the Pan-American Union. He was an author and musician.

LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF. A religious body commonly known as the Mormon Church, existing chiefly in the United States. It was organized Apr. 6, 1830, at Fayette, N. Y., by Joseph Smith, whom his followers credit with having discovered, through a Divine revelation, a set of plates, buried in a hill, from which, by a special power received from God, he translated the text of the Book of Mormon, the special sacred book of the Church.

The Mormon articles of faith include belief in God, Jesus Christ, and the Holy Ghost, the punishment of men for their own sins, the atonement, divine authority, baptism, laying on of hands, prophecy, salvation for the dead, the Bible "as far as it is translated correctly," the common virtues, and obedience to constituted authorities. The membership of the church is chiefly in the Mountain States, owing to the early migrations of Mormons and their final settlement in Utah.

The administrative divisions of the church are known as the stake, ward, branch, and mission. A stake comprises wards and branches, and is directed by a presidency of three. A ward is frequently a part of a city, and is directed by a bishop and two counselors. The branch, similar to the ward, is directed by an elder. In 1927 the church consisted of 99 stakes, 915 wards and 77 independent branches. The estimated membership in 1927 was 624,000. Eleven missions in America had a membership of approximately 82,000; those in Europe, 27,000, and in the Pacific Islands, 14,000 members. The chief authorities of the church were: Heber J. Grant, president; Anthony W. Ivins, first counselor; Charles W. Nibley, second counselor; Rudger Clawson, president of the Quorum of the Twelve Apostles; and Reed Smoot, George Albert Smith, George F. Richards, Orson F. Whitney, David O. McKay, Joseph Fielding Smith, James E. Talmage, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, and John A. Widtsoe, apostles. Hyrum G. Smith was presiding patriarch; Brigham H. Roberts, J. Golden Kimball, Rulon S. Wells, Joseph W. McMurrin, Charles H. Hart, Levi Edgar Young, Rey L. Pratt, Seven Presidents of Seventy; Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

The church authorities reported 2280 missionaries at work in various countries, 850 being outside the United States. The Melchizedek Priesthood, a senior order, had 70,925 members, and the Aaronic Priesthood, a junior order, 69,808 members. The Church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptisms, endowments and marriages. The Church maintains Brigham Young University (q.v.) at Provo, Utah, six junior colleges, one high school and 70 seminaries, small schools connected with high schools and providing special religious instruction. The auxiliary bodies include a women's relief society numbering about 61,627, which cares for the poor and sick, Sunday schools with 257,717 pupils and 26,250 officers and teachers. The two Mutual Improvement Associations, composed of young persons, had an enrollment of 104,588. The primary association had 103,318 children under 14. Religion Classes had an enrollment of 61,131. The Church holds general conferences in the first week of April and of October of each year, at Salt Lake City, Utah, at which the work of the general authorities is reviewed.

LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF. After the death of Joseph Smith in 1844 several factions developed among the Latter-Day Saints. In 1852, in Wisconsin, some of these scattered congregations effected a partial reorganization, which was later completed under the name of the "Reorganized Church of Jesus Christ of Latter-Day Saints,"

and which claims to be the true continuation of that established by Joseph Smith. This claim has been successfully sustained in the Supreme Court. In 1860 these organizations were joined by Joseph Smith, the son of the prophet, who became presiding officer, a position which he held until his death in 1914, when his son, Frederick M. Smith, succeeded him. The Reorganized Church holds the same faith and religious practice which Smith established, but rejects as false and inconsistent with Smith's revelation the doctrine of polygamy. The membership as reported in 1927 was 100,574, including members throughout the United States and in Canada, Great Britain, Australia, and Germany, Isle of Pines, Holland, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii and New Zealand. The organization comprises 692 churches, 6680 ministers, 751 Sunday schools, and 41,082 scholars. It maintains Graceland College at Lamoni, Ia., the Institute of Arts and Sciences, at Independence, Mo., and several homes for orphans and the aged, as well as a powerful radio broadcasting station, at its headquarters in Independence, Mo. Its official periodical, the *Saints' Herald*, is issued weekly.

LATVIA. A Baltic state formed after the war from territories of the old Russian Empire. Capital, Riga.

AREA AND POPULATION. The total area is approximately 24,400 square miles, made up as follows: The former province of Courland (about 10,435 square miles); the four southern districts of the province of Livonia (about 7815 square miles); and three districts of the province of Vitebsk (5292 square miles). According to the census of 1925, the population was 1,844,805, of whom 1,779,593 were Latvian citizens and 65,212 foreigners. The birth rate during 1924 was 22.32 per thousand and the death rate 15.39 per thousand. The chief cities with their populations at the census of 1925 are: Riga, 337,700; Libau, 60,762; Dvinsk, 40,640; and Mitau, 28,321.

EDUCATION. According to Latvian law, every national minority has a right to its own school, which may employ its own language in instruction, and the state contributes to such institutions in proportion to the percentage of total inhabitants. During the year 1925-26 there were 1891 elementary schools in Latvia, with 173,099 pupils and 7227 teachers, while 20,000 children between the ages of seven and 14 could not find accommodation at schools. In the 121 secondary schools there were 2290 teachers and 22,071 pupils. After the University of Dorpat became an Estonian institution, the polytechnic school at Riga became the Latvian University (1919). In 1925-26 there were 309 professors and 6314 students in the university.

PRODUCTION. Latvia is mainly an agricultural country, but an increasing number of people are passing from agricultural to industrial life. In 1925 the principal crops were rye, 666,250 acres, 315,090 metric tons; barley, 441,500 acres, 177,850 metric tons; oats, 824,000 acres, 303,850 metric tons; potatoes, 197,500 acres, 750,460 metric tons; flax 195,250 acres, 30,020 metric tons (27,910 metric tons linseed). The state and private timber lands of Latvia produced in 1924-25, 91,000,000 cubic feet of timber and 51,000,000 cubic feet of firewood. Livestock in 1925 numbered: Horses, 351,900; cattle, 915,800; sheep, 1,180,600; and pigs, 497,100. At the

beginning of 1926 there were 2839 industrial enterprises in Latvia employing 49,900 hands. The largest industry is the manufacture of matches. Latvia has no mineral resources.

COMMERCE. No later statistics for commerce were available than those given in the preceding YEAR BOOK when the exports in 1925 totaled 179,598,010 lats and the imports 280,324,401 lats.

FINANCE. The budget bill for 1926-27 called for ordinary revenues of 148,500,000 lats and extraordinary revenues of 12,000,000 lats; ordinary expenditure of 109,134,005 lats and extraordinary expenditure of 51,352,283 lats. The budgets for 1925-26 and 1926-27 were the first to be drafted in accordance with the State budget law that went into effect July 1, 1924, and the proposed budget for 1926-27 was the first to total below the preceding year's estimates as voted by parliament instead of greatly exceeding them as heretofore. The national debt of Latvia on Apr. 1, 1926, was as follows: To the United States \$5,775,000; to Great Britain, £2,262,500. The internal debt amounted to 479,000 lats.

COMMUNICATIONS. In 1925, 4117 vessels of 1,443,682 tons entered and 4106 of 1,445,417 tons cleared from the ports of Latvia. A review of the Latvian railways for the fiscal year ended Mar. 31, 1927, indicated that there were 2900 kilometers of lines. The State Railways had 1484 kilometers of Russian gauge (1.524 meters), 460 kilometers of standard gauge (1.435 meters), and 794 kilometers of narrow gauge and field gauge (750 and 600 millimeters); while of the privately owned lines, one is of 48.8 kilometers (1 meter gauge), connecting the port of Liban with the town of Aikput, and the other is 113.2 kilometers (750 millimeter gauge), connecting the small port of Ainazi with the town of Smiltena. Construction work on the new broad-gauge line of 169 kilometers between Libau and Gluda was progressing satisfactorily. This line when completed, will form a new and important link between the hinterland of Soviet Russia and the Baltic Sea and will do much to utilize the excellent port facilities of Libau, which are now little used owing to the closing of the freight traffic across the Lithuania boundary on the Romney-Minsk-Vilna-Libau line.

The operating statistics during the fiscal year ended March 31, 1926, as compared with the estimated expenses appearing in the 1927 budget are shown in the following table:

OPERATING STATISTICS OF LATVIAN RAILWAYS
[In lats*]

Item	1925-26	Budget estimates, 1926-27	Per cent increase or decrease
Passenger traffic ..	14,018,272	14,820,018	+ 2
Baggage	1,184,948	1,154,040	- 3
Freight traffic	17,790,980	19,980,524	+12
Miscellaneous	1,788,945	2,866,438	+82
Total	34,778,095	37,771,010	+ 9

* The lat = \$0.198.

GOVERNMENT. Under the constitution adopted by the constituent assembly, Feb. 15, 1922, executive power is vested in a president, elected by parliament for three years; and legislative power in the Saeima, or parliament, comprising 100 members elected for three years, by universal suffrage (men and women), equal, direct,

and secret ballot, on the basis of proportional representation. The ministries are those of Interior, Foreign Affairs, Finance, War, Public Works, Education, Agriculture, Justice, Communications, and State Control. President, in 1927, J. Chakste, who died Mar. 14, 1927; Prime Minister, M. Skujenieks (appointed December, 1926).

HISTORY. The year passed comparatively quietly for this tiny republic. In the first month of the year an agreement between Estonia and Latvia was reached whereby the two states would cooperate along the lines of economic legislation, including such items as customs, excise, direct taxation, monopolies, banking laws, and measures of a like nature. Relations were also friendly with Moscow and the two governments made a sincere effort to gain peace between themselves by adopting a policy of non-aggression. A severe blow to Latvia occurred on March 14 when the first and only president the republic had, Jan Chakste (q.v.), died. He was elected by the first Latvian parliament in 1922 and was reelected in November, 1925. His successor was Gustav M. Zemgals, the candidate of the Democratic Central party, who was elected on April 8 by a vote of 73 to 72.

Latvia was stirred in the fall by the discovery of a revolutionary plot, the leader of which, a man by the name of Behrsin, was one of the chief movers of the Bolshevik reign of terror in 1910. Many passports and a large sum of money were found in Behrsin's possession. The Latvian government reported that the passports were stolen or forged, but that the money was sent from Moscow with definite instructions as to how it was to be spent. According to the press nothing further was disclosed concerning the plot before the end of the year.

LEAD. The output of primary domestic desilverized lead in the United States in 1927 was about 375,000 tons; of soft lead about 240,000 tons, and of desilverized soft lead about 61,000 tons, making a total output from domestic ores of about 676,000 tons of refined lead, according to statistics compiled by the U. S. Bureau of Mines. Corresponding figures in 1926 were 366,413 tons of desilverized lead, 258,565 tons of soft lead, and 55,707 tons of desilverized soft lead, making a total of 680,685 tons. The output of lead smelted and refined from foreign ore and bullion was about 131,000 tons, as compared with 118,256 tons in 1926. The total primary lead smelted or refined in the United States in 1927 was thus about 807,000 tons, as compared with a total of 798,941 tons in 1926—a gain of about 1 per cent. The output of antimonial lead in 1927 was about 16,000 tons, as compared with 22,524 tons in 1926.

The imports of refined pig lead for eleven months amounted to 2,442 tons, of which 1,764 tons came from Mexico. The base bullion imported during the same period contained 109,848 tons of lead, almost wholly from Mexico. The exports of lead of foreign origin amounted to 111,835 tons, as compared with 67,660 tons exported in the entire year 1926. Exports of lead of domestic origin amounted to 2,233 tons, as compared with 4,276 tons exported in 1926. Ex-

clusive of stocks of lead at smelters and refineries and estimating the amount of lead exported with benefit of drawback, for which figures are not available, it is calculated that the new supply of lead made available for consumption in 1927 was about 685,000 tons, as compared with 717,653 tons in 1926.

According to figures published by the American Metal Market, the average quoted price of lead for prompt delivery at New York for the year was 6.78 cents a pound, as compared with an average selling price of 8.0 cents in 1926. The quotation at the beginning of the year was 7.80 cents and in the closing days of the year it was 6.5 cents.

The following were the average monthly prices on lead for prompt delivery at New York, in cents a pound:

January	7.6	July	6.4
February	7.5	August	6.7
March	7.6	September	6.3
April	7.1	October	6.3
May	6.6	November	6.3
June	6.4	December	6.5

The recoverable lead contained in ore mined in the United States in 1927 was about 664,300 short tons, as compared with an output of 682,381 tons in 1926, a decrease of nearly 3 per cent, according to the Bureau of Mines' figures. The output of soft lead by mines of the Mississippi Valley and a small output from the Eastern States amounted to about 288,000 tons, and that of argentiferous lead by mines of the Western States amounted to about 376,000 tons. Corresponding figures for 1926 were 310,708 tons from the Mississippi Valley and the Eastern States, and 370,897 tons from the Western States. The largest output came from the southeastern Missouri district and amounted to about 202,300 tons, as compared with 203,062 tons in 1926. The output of Utah came next and amounted to about 148,950 tons, compared with 147,635 tons in 1926. Idaho ranked third with an output of about 146,800 tons, compared with 136,490 tons in 1926, and made the only important increase in production in 1927. In the Joplin district there was a decrease from 102,117 tons to 81,800 tons, 20 per cent.

The price at Joplin of 80 per cent lead concentrates was \$97.50 a ton at the beginning of the year and the down trend of prices which began in September, 1926, carried the price to \$90 a ton in the last week in January, 1927, where it remained for four weeks. An advance of \$10 a ton was made in the next two weeks, but by the last week in March another downward movement was started which carried prices to \$75 a ton early in July. The price recovered to \$87.50 in August, dropped to \$80 during the second week in September, where it remained for 12 weeks, then advanced to \$85 which held during all of December. See **METALLURGY** for developments in handling of flotation concentrates and other processes.

In addition to the United States, Canada with an estimated output of 151,000 short tons and Mexico with 267,000 short tons, brought up the total for North America to 1,096,000 short tons. In addition, Australia with an estimated output of 185,000 tons, Spain and Tunis with 168,000 tons, Germany and Silesia with 121,000 short tons, Burma with 73,000 tons, and other countries with a total of 185,000 tons brought

the world production in 1927 to 1,828,000 short tons according to estimates made in the Annual Review of the *Engineering and Mining Journal*. This figure corresponds with 1,758,000 tons, the world's total in 1926. There was increased production during the year due to improved metallurgical processes, notably selective flotation, and the industry as a whole was in a fair condition, with an increased demand. Attention was called to the progressive exhaustion of many of the world's oldest and greatest mines and the necessity of considering new deposits of which those immediately available seemed to be in Newfoundland, the Australian Mount Isa and certain sources in South America. See METALLURGY.

MINE PRODUCTION OF LEAD IN THE UNITED STATES IN 1926 AND 1927, IN TERMS OF THE RECOVERED AND RECOVERABLE METAL CONTENT, IN SHORT TONS. (1927) ESTIMATED

District	Lead	
	1926	1927
Eastern States	3,250	2,100
Central States:		
Tri-State district	102,117	81,800
Southeastern Missouri	203,062	202,300
Upper Mississippi Valley	1,819	1,400
Michigan
Other	458	400
	307,456	285,900
Western States:		
Arizona	11,629	9,910
California	4,047	1,270
Colorado	38,000	33,780
Idaho	136,490	146,800
Montana	21,153	18,250
Nevada	11,184	8,410
New Mexico	3,880	7,750
Oregon	6	3

Washington	2,273	610
	370,897	375,983
Alaska *	778	800
Total	682,381	664,283

* Figures obtained from the Geological Survey, Department of the Interior.

LEAF, WALTER. British banker, scholar, linguist and author, died at Torquay, England, March 8. He was born at Norwood, in 1852, and was educated at Harrow and at Trinity College, Cambridge. He won high honors in classic scholarship and intended to study for the bar, but the illness of his father brought him into the family firm of Leaf, Sons & Co., in 1877. He was chairman of the company, 1888-92, but in 1891 he had been elected a director of the Westminster Bank, and he devoted the rest of his life to banking and to scholarship. He was not only an authority on national British and international finance, but was also a brilliant Greek scholar and writer on ancient Greek history and literature. His translations of Homer are classic. He was known also as an Alpinist and had to his credit several adventurous ascents. He was president of the Institute of Bankers, 1919-21, of the Classical Association, 1921, and of the International Chamber of Commerce, 1925-26. He wrote: (With J. H. Pratt) *The Story of Achilles* (1880); *A Modern Priestess of Isis* (trans-

lated from the Russian) (1894); *Versions from Hafiz, an Essay in Persian Metre* (1898); *Troy, a Study in Homeric Geography* (1912); *Homer and History* (1915); *Little Poems from the Greek* (1922), and *Strabo on the Troad* (1923). He also wrote and edited, under his own name and with the collaboration of Andrew Lang and E. Myers, three books on Homer and the Iliad, and he contributed numerous papers to the *Journal of Philology*, *Hellenic Studies*, *The Geographic Journal*, and other learned periodicals.

LEAGUE OF NATIONS. Herr Gustav Stresemann, Germany's foreign minister, presided over the 44th session of the Council of the League of Nations (March 7-12) and to him must go the major credit for the success of the meeting. Three irritating differences between Germany and her neighbors were either solved or made easier of final settlement. As to the Saar, Herr Stresemann yielded what seemed to be his legal right under the Treaty of Versailles to demand the elimination altogether of French troops, and agreed, in view of a promise of the French to withdraw their occupying troops within three months, that an inter-Ally railway guard of eight hundred men might be continued, but under the direct control of the Saar Government Commission.

In regard to German schools in Polish Upper Silesia, Herr Stresemann agreed to yield the extreme German contention and to accept a settlement that provided that parents in the part of Silesia formerly belonging to Germany were to have the absolute right to determine whether their children go to the German schools, provided only that children who speak only Polish must attend Polish schools.

As to German-Polish commercial relations, this difficult subject that had repeatedly strained the relations between Warsaw and Berlin was not on the agenda of the Council, but Briand and Chamberlain used their good offices to bring Stresemann and the Polish Foreign Minister Zaleski together, with the result that they agreed on a basis for the reopening of negotiations for a commercial treaty.

Herr Stresemann was severely criticized at home for his concessions on these points, particularly because he did not seem to have secured from France any promise to expedite the evacuation of the Rhineland. In defense of his policy of conciliation, Stresemann at the conclusion of the Council meeting declared that he was acting more as a "League Man" than as a German and that as Germany's first President of the Council he desired to avoid creating a situation which could not be settled by unanimous vote. The German Foreign Minister's work at Geneva was, however, unanimously approved by the Marx Cabinet on March 15, at a special meeting presided over by President von Hindenburg himself.

Another interesting item of the session was the agreement by Persia to accept with reservations the recommendations contained in the report of the League Commission which in the previous year, under the chairmanship of Frederic A. Delaio of Washington, studied the opium problem in Persia. Through its Director of Internal Revenue, Colonel D. W. MacCormack, an American, the Persian government agreed that after a three-year preparatory period it would reduce its opium production by 10 per cent a

year for three years. Colonel MacCormack insisted, however, that further reduction would have to be considered anew at the end of the trial period because of Persia's financial needs.

In addition to the sessions of the Council there were nine different League meetings during March. The most important referred to disarmament. The preparatory commission for the Disarmament Conference meeting on March 21 had before it the work done by its various technical sub-commissions since June. The question of the international supervision of the private manufacture of arms was also to be dealt with, since a special commission on which the United States was represented met on March 14 to draw up a draft international convention for the conference which was to be summoned by the League in the autumn. In addition to the League's financial committee it studied the possibility of establishing a common scheme of financial assistance to a state which had been attacked, and to consider the legal position which would result from enforcing in peace-time the measures of economic pressure indicated in Article 16 of the Covenant, particularly by a maritime blockade. Besides dealing with security problems, the financial committee advised the Council on the progress of the settlement of Greek and Bulgarian refugees, and various matters relating to the balance of the Austrian and Hungarian reconstruction loans.

On March 22, a committee of legal experts met in Geneva to prepare a draft international agreement ensuring the execution of arbitral awards rendered abroad. This was intended to reinforce the League's protocol on Arbitration Clauses in Commercial Contracts in force since July, 1924. The same day the Committee for the Progressive Codification of International Law began its session. It examined the replies received from twenty-six governments, including the United States, on questions such as the exploitation of the products of the sea, which the committee considers ripe for settlement by international action. On March 23, a sub-committee of educational experts examined the observations of a number of private organizations on the sub-committee's report on instructing young people in the aims and objects of the League.

It was an inspiring moment in June when the leaders began gathering for the forty-fifth Council meeting. It was called for Monday, June 13. Sunday, the day before, saw a succession of the leading statesmen of Europe passing from various points in Europe to Geneva. Five European countries were represented by their Foreign Ministers. One of the Council's first acts was to approve the action of Sir Eric Drummond, secretary general, in extending the facilities of the League to the three-power naval limitation conference which met in Geneva the same month.

A call for an international conference at The Hague for the codification of international law was made by the Netherlands. One of the main reasons for holding the conference in Holland was the desire to assure the participation of the United States and other non-members of the League, while another was the important place held by The Hague in framing international legal codes, declared a report presented by Foreign Minister Zaleski, of Poland, which the Council adopted.

One of the features of this session of the Council was a vehement denial by Sir Austen

Chamberlain that he had any ulterior motive in advancing his recent proposal that the League Council meet three times instead of four times yearly. Geneva newspapers criticized the suggestion, declaring that it cloaked a desire on the part of the European statesmen to settle their political problems secretly outside of Geneva. Sir Austen asserted he wished to do nothing to impair the authority and usefulness of the League, but added it was difficult for the various Foreign Ministers to come to Geneva so often. He expressed the opinion that the best interests of the League would be served by reducing the number of meetings, thus assuring the presence of the various Foreign Ministers. "Moreover," he added, "as the world settles down we can confidently hope that there will be fewer questions for submission to the Council."

Observers of European affairs, in the opinion of the Foreign Policy Association, had come to regard the temper of the meetings of the Council as the barometer of political and economic conditions prevailing in Europe. The 45th meeting of the Council reflected the agitation caused by the Anglo-Russian break, the assassination of the Soviet Ambassador in Warsaw, the crisis in Jugo-Slav-Albanian relations and the unfavorable report of Marshal Foch regarding the disarmament of Germany. Discussion of these pressing questions was carried on behind closed doors and the formal agenda of the Council meeting were pushed into the background.

It was reported that Sir Austen made efforts to obtain Germany's support in the following measures:

- 1) A joint note of protest by the Powers against Communist propaganda.
- 2) Permission for the passage of troops through Germany under Article 16 of the League Covenant in case of need for the protection of Poland.

This proposal for a joint note was shelved at the request of M. Zaleski, the Polish Foreign Minister, who pointed out the great danger of stirring up the Soviets by announcing a common front against Russia. The second point was referred by Dr. Stresemann to Berlin.

Germany's attitude was the crux of the crisis. Germany was bound by treaty with Russia to come to an agreement on all questions of political and economic character affecting the two countries and to refrain from joining any economic or financial blockade against the Soviets. In a letter appended to the treaty, Dr. Stresemann undertook to oppose any efforts directed exclusively against the U. S. S. R. that might evolve within the framework of the League. On the other hand, by the Locarno treaties and membership in the League, Germany is closely tied to both France and Britain. Finding herself bound to both sides in the diplomatic crisis following the Anglo-Russian break, Germany expressed her neutrality. It was believed by some observers, however, that Dr. Stresemann was holding out for special compensation to make it worth while to bring German pressure to bear upon the Soviets.

Mussolini's veto upon any discussion of the Treaty of Tirana at the Council blocked a consideration of the Balkan crisis. It was anticipated at first that the Council would make the break in Jugo-Slav-Albanian relations the occasion for a thorough examination of the situation created by the Treaty of Tirana, generally

acknowledged to be the underlying cause of Jugo-Slav-Albanian misunderstanding. The political situation in the Balkans was eased, however, by Sir Austen Chamberlain, who, it was reported, requested Premier Mussolini to prevent any further irritations from developing at present in the Adriatic.

Illness necessitated M. Briand's sudden departure for Paris, thus breaking off the private discussions before any final measures were agreed upon. Marshal Foch's report was considered, criticizing Germany concerning the destruction of the eastern fortifications.

During the month of June the activities of the League included the following meetings: Conference of Infant Mortality Experts, Montevideo; Drafting Committee of the Committee of Experts on National Defense Budgets, Geneva; Financial Committee, Geneva; Twelfth Ordinary Session of the Permanent Court of International Justice, The Hague; Committee of Experts on National Defense Budgets, Geneva; Permanent Mandates Commission, Geneva; Mixed Committee of Experts on the Counterfeiting of Currency, Geneva; Sub-Committee for Buoyage in the Cardinal System, Stockholm-Helsingfors.

The forty-sixth session of the Council opened on September 1 for the transaction of the usual quarterly business. The Council approved the protocol submitted to the Greek government whereby a further loan of £9,000,000 was authorized for the settlement of refugees. It directed the Financial Committee and the Secretariat to inquire into a request from the Bulgarian government for financial reconstruction. If the plan for this assistance is adopted, Bulgaria will be the sixth country, including the Free City of Danzig, to receive financial resuscitation from the League since the War. The League arranged a provision of nearly \$350,000,000 for work in these countries needing assistance.

From the standpoint of nationality, representation in the permanent agencies of the League was becoming more and more general. A German member, Dr. Kastl, was appointed by the Council to the Permanent Mandates Commission and Jeremiah Smith, Jr., of Boston, who acted as the League's High Commissioner in the financial reconstruction of Hungary from 1924 to 1926, was appointed a member of the Financial Committee. The Council was able to drop from its future agenda the details of the liquidation of the property of refugees exchanged under the emigration convention between Greece and Bulgaria. This incident at one time threatened to disturb the peace of Europe, but has now been settled satisfactorily.

The forty-seventh session of the Council, which opened on September 17 with the newly elected members sitting, had before it the immensely difficult and important case of Hungarian Optants. The remainder of the Council's work at its sessions was for the most part referred to the Assembly.

EIGHTH ASSEMBLY. The Eighth Assembly of the League convened at Geneva in September and elected by a majority of one vote Señor Alberto Guani of Chile, President, over Count Albert Dietrichstein Mensdorff-Pouilly, of Austria. The past presidents in order of their incumbency were: Paul Hymans, Belgium, 1920; Herman Adriaan Van Karnebeek, The Netherlands, 1921; Augustine Edwards, Chile, 1922; Cosme de la

Torriente y Peraza, Cuba, 1923; Giuseppe Motta, Switzerland, 1924; Senator Raoul Dandurand, Canada, 1925; Montchilo Nintchitch, Jugo-Slavia, 1926. Argentina, Bolivia, Brazil, Honduras, Peru and Spain did not send delegates. The non-member nations were also absent: United States, Mexico, Russia, Turkey, Egypt.

Peace was the main topic of discussion in the deliberations. The speeches of the week, however, resolved themselves into extended oratorical efforts. Poland was the sponsor of the following propositions:

1) Any recourse to war in order to settle international disputes is and remains forbidden.

2) Every dispute of whatever nature arising between states or nations cannot be settled except by pacific means.

In consequence the Assembly urges members of the League to take action on these declarations and conform to their principles in their mutual relations.

In view of the vigorous objections offered to these statements Poland modified the plan to read thus:

Recognizing the solidarity which united the Commonwealth of Nations, inspired by a strong will to insure the maintenance of universal peace, affirming that war ought never to serve as a means of settlement for disputes between nations and that, therefore, a war of aggression represents an international crime, and considering that solemn renunciation of all war of aggression would be an excellent means of creating an atmosphere of general confidence eminently favorable to the procedure and development of the work begun along the lines of disarmament, the Assembly declares as follows:

1) All wars of aggression are forbidden.

2) The Assembly declares that states, members of the League of Nations, assume the obligation to conform to this principle.

In consequence the Assembly invites states, members of the League of Nations, to proceed to the conclusion of compacts of non-aggression, inspired by the idea that pacific means should be employed for the settlement of differences of every kind arising between states.

M. Briand's speech was the most notable event of the week. He proclaimed the passionate desire of France—"who had been nailed to the bloody cross of a war she has no desire to see repeated"—to be freed from the horrors of modern hostilities; and pledged his faith in the League. Bringing his clenched fist down upon the table with a crash, he said: "The world people will see to this, for if the League disappeared they would see that they were in danger of new and bloody conflicts; hence will they defend it with tenacity and trace for us our duty."

Through Foreign Minister Stresemann the German government let it be known that it would shortly accept the compulsory arbitration clause of the Permanent Court of International Justice. This meant that the Reich, first of all the great powers, had offered to blaze the trail of peace by accepting in advance, without any reservations whatever, the verdicts of the World Court, to which it pledged itself to refer all disputes with other nations. This announcement was roundly cheered.

Felix Cileas, Foreign Minister of Latvia, drew the attention of the Assembly to the 1926 military budgets of Europe which he said amounted to \$1,500,000,000 or about the same

amount expended in 1913, while the aggregate number of soldiers, more than 3,000,000, was only slightly under the 1913 figure.

Dr. Eusebio A. Morales, Minister of the Treasury of Panama, denied that his country had not been true to the League and stated that, unless the United States recognized Panama's sovereignty over the Canal Zone, the dispute should be referred to an impartial court of arbitration, which was taken to mean the World Court.

When Belgium was barred from presenting itself for reelection to a non-permanent seat on the League Council, the principle was upheld of extending in rotation the privilege of Council membership to as many states as possible. Thus Cuba, Finland and Canada were elected on September 15 to take the places formerly occupied by Belgium, Czechoslovakia and Salvador. Cuba received 40 votes, Finland 33 and Canada 26. Senator Raoul Dandurand represents Canada in the Council. One of the first acts of the three new representatives was to ask for an opportunity to hear the arguments of Hungarian and Rumanian delegates with respect to a dispute upon which the Council was about to take action. Hungarian landowners in Transylvania dispossessed of their estates under Rumania's agrarian laws, claimed heavy indemnities. Rumania maintained that Hungarian landowners in Transylvania could not claim exemption from the laws of the land and were entitled to no more indemnity than were dispossessed Rumanian landowners themselves. A Committee of the Council had already considered the dispute and presented through Sir Austen Chamberlain a report upholding Rumanian contentions in the main. The Hungarian delegate protested that the dispute was one which came under the jurisdiction of the Permanent Court of International Justice and not under that of the League Council. The Council postponed action, hoping for a direct settlement by the parties concerned.

The Third Assembly Committee continued the patient pursuit of its three-fold object—arbitration, security and disarmament. A subcommittee adopted a resolution which would commit the League to promoting particular or collective agreements for arbitration and security, and would lead to the apportionment of responsibility among member states for upholding Council decisions in case of conflict, distributing responsibility in such manner that individual states will tend to reduce their armaments. The Committee itself adopted in substance the Polish proposal forbidding all member states from entering on wars of aggression and binding them to observe the principle that pacific means must be used for the settlement of any international dispute whatsoever. It also decided to recommend the calling of an early conference on the supervision of the private manufacture of arms.

Substantial encouragement was drawn by the Committee from M. Briand's suggestion that it work on the assumption that next year's Assembly would adopt a new security covenant. Even more encouragement was generated by the understanding that got abroad about the same time that Sir Austen Chamberlain would not oppose the revival of a security covenant of the sort referred to by M. Briand providing it were not unpalatable to the British Dominions in the same sense that the Geneva Protocol of 1924 had been unpalatable to them.

A resolution submitted by M. Paul-Boncour of

France was elaborated into a draft agreed to by a subcommittee of the League of Nations Assembly Disarmament Committee. This resolution impressed upon the League of Nations Preparatory Disarmament Commission that the principal condition of success in the matter of disarmament depends on assuring each State "of not having to respond alone to the needs of its security by means of its own particular armaments, but that it may make its security repose as well upon a collective action organized by the League of Nations." Hence the progressive extension of arbitration by means of particular or collective agreements was recommended, including the agreements between member states and non-members of the League.

The Preparatory Commission was asked to hasten its technical work, in order that the Disarmament Conference might be called at the earliest possible moment. The Council was asked to empower the Commission to form a committee from its members to study measures that would help disarmament by giving all States guarantees of arbitration and security. Measures recommended were: Coördination of arbitration or security agreements; help by the League to the members to execute their obligations; voluntary offering to the League by different States of their armed resources to uphold the Council's decisions in a conflict; graduation of arbitration, security and disarmament proposals according to the geographic situation of members.

The resolution was formally approved by the Assembly Committee. The Judicial Committee also approved Dr. Nansen's plan for an optional treaty of compulsory arbitration, opposed as impractical by Signor Scialoja. In general, the French proposals placed security as the first issue to be considered, while the Germans, it would appear, required that disarmament must come first.

The Assembly closed on September 27, with the address of the President, Alberto Guani. Discussion concerning the proposed Arbitration and Security Committee prolonged the Council's session until the following day. The meeting of the Preparatory Disarmament Commission was set for December 1. Cuba and Canada were added to this Commission, on which the New World was already represented by Argentina, Brazil, Chile, Colombia, Uruguay and the United States. The outlawry of war was solemnly and unanimously voted by the Assembly. A similar resolution was adopted by the Council concerning the Polish proposal for the outlawing of war, as follows:

"The Council, considering the resolution adopted by the Assembly on September 4, forbidding all wars of aggression and declaring that all pacific means must be employed to settle differences of whatever nature which may arise between States, begs the Secretary General to bring the said resolution to the attention of all states members of the League."

After prolonged discussion the Assembly yielded to the Latin-American and Scandinavian delegates, who insisted that sufficient credits be voted to make permanent the efforts for the codification of international law.

The Disarmament Committee of the Assembly voted to ask the United States not only to continue to sit on the Preparatory Commission but also on the special Security Committee which will be created to study the best means of ex-

tending security and arbitration compacts, as necessary for the reduction of armaments. Dr. Stresemann, who announced on September 23 that Germany had signed the compulsory arbitration clause of the Permanent Court of International Justice, insisted in a speech on the following day that armaments could not and should not form the basis of security, arguing that their inevitable effect was a threat to other nations. His plea was echoed by other leaders of France, Holland and Belgium. The Assembly adopted a report by Senor Guerrero of Salvador on the private manufacture of arms and the publicity of manufacturing figures. The report calls for an international conference on the subject.

Unspectacular and without striking concrete achievements, the Eighth Assembly demonstrated more clearly than any previous session that the League of Nations was "a going concern" firmly entrenched in the confidence of the responsible leaders of more than fifty countries. During the three weeks, the speakers in their public debates and in their discussions in the lobbies frequently criticized it for specific failures. But this was as though no one any longer feared that the League might be endangered by frank speaking, so accepted and essential a part of the peace machinery of the world has it now become.

For the first time the representatives of the small states criticized the actions of the great powers within and without the League. Speaker after speaker charged M. Briand, Sir Austen Chamberlain and Dr. Stresemann with imperiling the future of the League by tripartite arrangements made outside of Geneva and by the establishment of a secret council within the Council of the League.

The replies of the Foreign Ministers of France, Great Britain and Germany were direct and forceful. They argued that any agreement which strengthens the friendly ties between two or more countries must in the long run strengthen the League. As to private conferences during the sessions of the League, what could be more natural than that they should take advantage of their meeting in Geneva to confer in a friendly and intimate manner about matters which might only be complicated by public or formal diplomatic discussion. The persistent determination of many of the smaller states and of France to secure through the League of Nations the revival of the essential principles of the Geneva Protocol was manifest early. This movement, despite the open opposition of the British, grew until it was recognized as the dominant feeling of the Assembly. This keen desire to tighten the Covenant's guarantees against war and to stiffen and make more certain the penalties against an "aggressor" state was reflected very inadequately in the resolution about disarmament, security and the codification of international law finally adopted.

To carry out the resolutions of the recent International Economic Conference, the Assembly created a Consultative Committee. This is to be made up of thirty-five members prominent in industry, commerce, agriculture, finance and transport. Americans, as well as citizens of states members of the League, are to be included.

In the view of the Foreign Policy Association the election of Canada as one of the non-

permanent members of the Council was an interesting precedent. For the next three years, the British Empire would have two members on the League's executive board. It was significant that this fact seemed not to have weighed at all against Canada's eligibility. Incidentally it might be recalled that Ireland at the Assembly of 1926 unsuccessfully proposed herself as a candidate.

Germany at Geneva strengthened herself and the League. Though a member for exactly one year, as the Foreign Policy Association pointed out, the representatives of the Reich conducted themselves with such discretion and such an evident desire to fit into the traditions of the Assembly and the Council that one heard little but praise of their actions. There seemed no sufficient reason to doubt the sincerity of Stresemann's contention that the government in Germany had resolutely set itself to work out Germany's security in large part through the instrumentality of the League. Indeed, the Reich occupied at Geneva a peculiarly strategic position. As a great power, and together with France and Great Britain subjected to criticism by the smaller states, she had been drawn closer to her former enemies. On the other hand, German interests, particularly in the matter of disarmament, were frequently the same as those of the smaller countries. Therefore, with one foot in each camp, Germany was courted by both.

This Eighth Assembly was assuming, in retrospect, the aspect of being perhaps the best of the annual meetings since the League began functioning in 1920. There was nothing startlingly dramatic; merely a month's incessant work in which every phase of international life to-day was touched upon—disarmament, arbitration, law, economics, transit, health, social and intellectual problems. Forty-nine nations were represented, all the members of the League except Spain and Brazil, which had given notice of withdrawal because they were not given permanent seats on the Council, and four of the score of South and Central American States. Practically one half of those present were represented by statesmen immediately responsible for their country's foreign affairs; one head of a government, Switzerland; two Prime Ministers, Lithuania and Luxemburg; the Locarno trio of Briand, Stresemann and Chamberlain, Foreign Ministers respectively of France, Germany and Great Britain; and the Foreign Ministers of eighteen other nations; Albania, Belgium, Bulgaria, Czechoslovakia, Denmark, Estonia, Finland, Greece, Hungary, Latvia, Lithuania, Netherlands, Poland, Portugal, Rumania, Salvador, the Serb-Croat-Slovene Kingdom and Sweden.

Discussions ranged far and wide from the broadest principle to the most particular detail. There was at the beginning of the session, in accordance with a custom which was developed, a general debate on the work of the past year. In some previous years this debate had been dull and perfunctory; it had even been difficult to find speakers. In this Assembly, however, it showed an extraordinary spontaneity, running over five days with thirty different speakers, and with a fitting climax by Briand, Stresemann and Chamberlain.

In the general debate, the most striking declaration gave notification of Germany's signature of the Optional Clause giving the Permanent Court of International Justice compulsory jurisdiction in legal disputes. France took the

same action in 1924 under Herriot, and both nations accepted the obligations as between themselves in the Locarno treaties.

The United States was not represented in any of these discussions. In the preparatory committees or special conferences, whose work was reviewed by the Assembly, both the American government and American citizens had often taken a prominent part, and in the future work outlined by the Assembly both will undoubtedly continue to do so, but in the central gathering America's voice was unheard.

A brochure printed in Geneva and distributed in America by Professor Manley O. Hudson, of the Harvard Law School, gives in full detail the extent of American cooperation from the beginning. It is entitled "The United States and the League of Nations, 1920-1927."

The general debate was not only of importance to the United States as manifesting the present political tendencies of the world, but also because of definite references made to American policies. There were, for instance, the explanations of Briand and Chamberlain for the failure of the Naval Conference, which might or might not have coincided with the American viewpoint; references to United States government cooperation in the forthcoming Arbitration and Security Committee and in the previous conferences such as Economics and Transit; discussions for sending League technical commissions to South America; even the speech of the delegate of Panama, who had come all the way to Geneva in order, while asking for no action, to outline the relationship between that country and the United States, and thus remove certain doubts created in Europe by the recent draft treaty between the two countries. Where the other great governments, Great Britain, France, Italy, Japan, and Germany, had delegations of from twenty to fifty persons to watch over their interests and express their views, the United States was in no way officially represented, though unquestionably the largest number of visitors and journalists were Americans.

Another vital topic was that of the economic situation of the world in which the League was playing a useful part as a cooperative association of governments in the economic and financial reconstruction of Europe. The Brussels Financial Conference of 1920 laid down principles of sound finance which proved the salvation of several governments; the Financial Committee authorized seven international loans totaling \$350,000,000 and based on principles which had remodeled the financial organization of certain states and served as the basis of the Dawes plan; and the Economic Committee and Conference had opened the way for the next line of progress in world economic problems.

Next to armaments, the economic work of the League was the most widely discussed subject at the Assembly. Where the Economic Conference had brought together business men, economists and technical experts, the Assembly provided a new and even wider platform for political leaders, such as Briand, Stresemann and Chamberlain, to discuss the technical results of the Conference in the light of political considerations. To put it briefly, the debates provided a complete endorsement of the work of the Conference.

The League Council increased the number of members of the Permanent Mandates Commis-

sion from nine to ten, the new seat going to Germany. Thus after nine years, the Reich was to have a voice in the control of its former colonies.

On October 31, the tenth anniversary of the Russian Revolution, an announcement was made by the League that Russia would participate in the work of the Preparatory Commission for a Disarmament Conference. The lack of Russian cooperation heretofore had been considered by many authorities as an almost insuperable obstacle to substantial progress in the matter of land disarmament. Russia's part, therefore, in the discussions of the Commission, resumed in November, was watched with the closest interest throughout the world, although they proved to be disconcerting rather than helpful.

In regard to the League's investigation on the amelioration of labor conditions in Portuguese and African colonies, the last definite step taken was the submission by the Secretary General to the Council of a resolution, adopted by the Assembly at its meeting Sept. 25, 1926, which read as follows: "Taking note of the work undertaken by the International Labor Office in conformity with the mission entrusted to it and within the limits of its constitution and considering that these studies naturally include the problem of forced labor; the Assembly requests the Council to inform the Governing Body of the International Labor Office of the adoption of the Slavery Convention, and to draw its attention to the importance of the work undertaken by the Office with a view to studying the best means of preventing forced or compulsory labor from developing into conditions analogous to slavery."

Several British reports dealing with slavery were discussed in the League's Sixth Committee (for political questions), in the Eighth Assembly. Domestic slavery was reported as abolished at Kalat in Baluchistan. Slavery was also reported suppressed in remote parts of Burma, as a result of government freeing expeditions, one of which had released four thousand slaves. Slavery was also completely abolished in Tanganyika territory in East Africa. As a result of the discussion every colonial Power promised to ratify the Slavery Convention, which heretofore had been signed only by Great Britain.

LEATHER. The American leather industry by the end of 1927 had recovered materially from the post-war difficulties of 1919 and 1920, which were due to over-expansion caused by the stimulus given to production by the War, to the unforeseen decline in export sales after the War, and to a large supply of hides on the market as a result of deflation in the cattle industry. The industry in the United States had devoted itself, however, during the intervening years to the problem of adjusting output to demand and to working off the surplus supply of hides, with the result that tanners' stock of leather was decreased at the end of 1927 as compared with 1926 by 42 per cent in the case of sole leather and 10 per cent in other lines, and in some cases stocks had reached their lowest recorded point.

About 80 per cent of the American leather was taken by the boot and shoe industry, with the upholstery, harness, belting, bag, case and strap leather, glove and fancy leather industries absorbing the remainder of the supply.

In 1927, statistics from the Federal inspec-

tion of slaughter houses indicated fewer cattle and other animals slaughtered than in the previous year, the figures being for 1927: 9,520,000 cattle as compared with 10,180,000 for 1926; 4,887,000 calves as compared with 5,153,000 calves in 1926; 12,882,000 sheep as compared with 12,961,000 sheep in 1926; and 23,000 goats as compared with 32,000 goats in 1926. In the estimate of figures for animals on farms in the United States the cattle at the end of the year 1927 were stated at 55,696,000 as compared with 56,872,000 on January 1; the sheep, 44,545,000 on December 31 as compared with 41,846,000 on January 1; horses, 14,541,000 on December 31 as compared with 15,145,000 on January 1; and mules, 5,566,000 on December 31 as compared with 5,679,000 at the beginning of the year. See LIVESTOCK.

The tanning industry of the United States in 1927 consumed 132,217,000 hides and skins as compared with 126,238,000 pieces in 1926, according to the United States Bureau of the Census. These were distributed as follows:

	1927	1926
Cattle-hide leatherhides	21,820,000	21,496,000
Calf and kip leatherskins	16,986,000	15,745,000
Goat and kid leatherdo.	50,785,000	49,776,000
Sheep and lamb leatherdo.	36,062,000	31,665,000
Other leatherpieces	6,614,000	7,556,000
Total, hides and skins	132,217,000	126,238,000

The production of cattle hide leather in 1927 amounted to 43,758,000 sides as compared with 43,165,000 sides in 1926, and the consumption was 45,770,000 sides in 1927 as against 45,920,000 sides in 1926. The 1927 production was distributed as follows: sole, 15,829,000 sides; belting, 929,000 butts; side upper, 13,459,000 sides; patent sides, 8,388,000 sides; harness, 1,016,000 sides; bag, case, and strap, 1,105,000 sides; upholstery, 502,000 hides; and all other, 1,099,000 sides.

The production of calf and kip leather in 1927 totaled 16,986,000 skins as against 15,745,000 skins in 1926; goat and kid leather, 50,735,000 skins in 1927 as against 49,776,000

trade in these commodities in 1913 was valued at \$163,705,000, increasing to \$198,317,000 in 1926, and as stated on the basis of preliminary figures amounting to \$230,691,000 in 1927. Of the total number of the hides and skins tanned annually in the United States, which was approximately 50 per cent of the world's leather output, more than 22 per cent of the cattle hides, almost 50 per cent of the calf skins, and about 99 per cent of the goat and kid skins are of foreign origin. In 1927 the imports of hides and skins were valued at more than during previous years, but largely through increased purchases from foreign sources. In 1913 the value of hides imported was \$105,873,000, declining to a value of \$96,811,000 in 1926, and rising to \$112,845,000 in 1927.

At the same time the United States was also exporting hides and skins, there being during the year a world-wide scarcity in this field causing a decided increase in American exports. Hides and skins exported from the United States were valued at \$11,466,000 during 1927 as compared with \$10,833,000 in 1926 and \$2,979,000 in 1913.

The imports of leather into the United States had increased from a value of \$0,292,000 in 1913 to \$28,622,000 in 1926, and approximately \$37,436,000 during 1927, the leather imports being equal to almost 70 per cent of the total value exported from the United States during the same year.

For the first time since 1920 the leather exports from the United States were valued at more than \$54,000,000, due in part to increased prices, but foreign shipments on a quantity basis were about 5 per cent greater than the average yearly sales for the five years previous. The growth of the export market can be appreciated when it is stated that exports of leather from the United States in 1913 were valued at \$38,438,000 as compared with \$49,814,000 in 1926, and approximately \$54,004,000 in 1927. The value of the United States foreign trade in hides, skins, leather, and tanning materials as summarized in *Commerce Reports* is given in the accompanying table.

Item	1913	1926	1927*
Imports of hides and skins	\$105,873,000	\$96,811,000	\$112,845,000
Exports of hides and skins	2,979,000	10,833,000	11,466,000
Reexports of hides and skins	2,519,000	4,959,000	6,586,000
Imports of leather	9,292,000	28,622,000	37,436,000
Exports of leather	38,438,000	49,814,000	54,004,000
Imports of tanning materials and extracts	4,032,000	5,842,000	6,623,000
Exports of tanning materials and extracts	571,000	1,436,000	1,781,000
Total	163,705,000	198,317,000	230,691,000

* Preliminary figures.

skins in 1926; sheep and lamb leather, 36,062,000 skins in 1927 as against 31,665,000 skins in 1926; chamois and fleshers, 3,090,000 pieces in 1927 as against 3,498,000 pieces in 1926; cabretta leather, 3,407,000 skins in 1927 as against 4,477,000 skins in 1926; splits, 20,489,000 pieces in 1927 as compared with 20,161,000 pieces in 1926.

The American foreign trade in hides, skins, leather, and tanning materials during 1927 was considerably in excess of \$230,000,000, which sum represented a substantial increase in these items not only as compared with previous years, but as regards the quantity. The United States

Leather manufactured goods to the amount of \$23,499,194 were exported from the United States in 1927. Of this amount foreign countries took \$18,382,798 and non-contiguous territories \$5,116,396, the grand total being an increase of 3.2 per cent over the 1926 valuation of \$22,756,650, of which \$18,527,705 went to foreign countries and \$4,228,945 to non-contiguous territories.

The imports of leather manufactured goods into the United States during 1927 were valued at \$21,657,420, an increase of 25.8 per cent over \$17,206,950 for 1926, of which leather gloves constituted 48.8 per cent, or \$10,569,182,

and footwear 27.3 per cent, or \$5,918,366. Of the 3,003,839 pairs of footwear imported, 1,477,435 pairs were leather boots and shoes (free); 460,073 pairs, leather slippers (free) and 1,066,331 pairs, dutiable footwear.

A million-dollar foundation was established during the year by the Tanners' Council of America to stimulate the study of leather with the view of improving American leather through scientific research. Another significant development was the founding of style bureaus and the addition of stylists to staffs of shoe manufacturers in order to meet the demands of the consuming public and to expand further the production in the industry.

LEEDS, GEORGE GODOLPHIN OSBORNE, Tenth Duke of. British yachtsman, died in London, May 10. He was born at London, Sept. 18, 1862, and was educated at Eton and Trinity College, Cambridge. As the Marquis of Carmarthen he represented the Lambeth-Brixton division in the House of Commons from 1887 until 1895, when he succeeded to the title. He next served as treasurer of the Royal Household, from 1895 to 1901, being also a member of the London County Council from 1898 until his death. For a time he was a lieutenant in the Yorkshire Hussars. He was said to be the greatest manufacturer of gin in the world, owning and managing the Holland distilleries in London. A leading sportsman, his greatest interest was in yachting, and for years he was vice commodore and, after the death of Lord Ormonde in 1920, commodore of the Royal Yacht Squadron at Cowes.

LEEWARD ISLANDS. A group of islands belonging to Great Britain in the West Indies; the most northerly group of the British Lesser Antilles, lying to the north of the Windward group and southeast of Porto Rico; comprising Antigua, Dominica, Montserrat, St. Kitts (with Nevis and Anguilla), and the British Virgin Islands. Total area, 715 square miles; population at the census of 1921, 122,242, as compared with 127,193 in 1911. The two largest islands with their area and population in 1921 were: Dominica, 305 square miles and 37,059 inhabitants; Antigua, 108 square miles, but with Barbuda and Redonda 170 square miles, with a population of 29,767. The chief towns are: Roseau (Dominica), 7000 inhabitants; St. John (Antigua), 9262 inhabitants; and Basseterre (St. Kitts), 7736 inhabitants. The British Virgin Islands comprise all those in the group which do not belong to the United States; area, 58 square miles; population (1921), 5082. The staple products in most of the islands are sugar and molasses. Cacao and onions are also grown. The culture of tobacco and cotton is successfully carried on in Dominica. On that island and Montserrat, lime juice and citrate of lime are important products. The accompanying table from the *Statesman's Year Book* for 1927 gives statistics of finance and commerce for 1924-25 and 1925-26:

	1924-25	1925-26
Revenue	240,272	246,902
Expenditure	268,285	259,472
Public debt	281,340	279,250
Imports	753,170	786,558
Exports	667,628	727,852

The islands are divided into five presidencies under a central government, at the head of

which is a governor, who is also commander-in-chief, a federal executive council, and a federal legislative council. Governor, Sir Eustace Fiennes.

LEGION, AMERICAN. See AMERICAN LEGION.

LEGISLATION. See AGRICULTURE LEGISLATION; LABOR LEGISLATION; paragraphs on *Legislation* under the several States; and the article UNITED STATES.

LEHIGH UNIVERSITY. A non-sectarian institution for the higher education of men at Bethlehem, Pa.; founded in 1886. It is composed of colleges of engineering, business administration, and arts and science. The enrollment for the autumn of 1927 was 1517, and for the summer session of that year there were 446 registered. The number of members of the faculty was 151. Productive endowment funds for the year amounted to \$5,024,490.40, and the income for the year to \$913,415.22, exclusive of gifts. There were 121,967 bound volumes and 51,390 pamphlets in the library. In the early part of 1927 announcement was made of the gift of \$1,000,000 from James Ward Packard, founder of the Packard Motor Car Company, to be used for the erection of an Electrical and Mechanical Engineering Laboratory, plans for which have been completed. President, Charles Russ Richards, M.M.E., Eng.D., LL.D.

LELAND STANFORD UNIVERSITY. See STANFORD UNIVERSITY.

LENHER, lén'ér, VICTOR. American chemist and educator, died at Madison, Wis., June 13, suddenly. He was born at Belmond, Iowa, July 13, 1873. He studied at Dickinson College, 1889-90, and at the University of Pennsylvania. He was an assistant in chemistry at the University of California, 1893-96, and at Columbia University, 1898-1900, and served at the University of Wisconsin as assistant professor of general and theoretical chemistry, 1900-04; assistant professor of chemistry, 1904-07, and thereafter as professor. He was noted for his research work concerning the properties and uses of selenium and tellurium, and was the discoverer of the unusual solvent properties of selenium oxychloride. During the World War he was a major in the chemical warfare service, U. S. Army, and he served also as chief of university relations and adjutant to Maj.-Gen. William L. Sibert, chief of Governmental relations. From 1919 to 1924 Professor Lenher was chairman of the National Research Council's committee on the uses of selenium and tellurium. He wrote: *Laboratory Experiments* (1902; 4th ed., 1906); *The Electric Furnace* (translated from the French of Moissan) (1904) and numerous papers on research in inorganic chemistry.

LEPROSY. The most important movement of the year in the campaign against leprosy was made the subject of an editorial in the *Journal of the American Medical Association* for May 28. It is the project favored by the late General Leonard Wood, U. S. A. (q.v.) of appealing to the American people to subscribe \$2,000,000 to fight leprosy in the Philippine Islands. The lepers in this area, as should be well known, had been segregated in the Island of Culion to the number of 6000, constituting the greatest leper colony with the greatest opportunity for a clinical research laboratory in the history of the world. More than 1000 lepers, thanks to the physicians of the colony and the recent improvements in treatment have been returned to their

homes with the disease "arrested and non-contagious." Heretofore this colony has been administered solely by the Philippine Health Department, which annually appropriates \$600,000 for upkeep, about a third of its total appropriation. Since this amount is insufficient for the needs of the colony it has been advocated, in connection with the proposed endowment of \$2,000,000, to establish a special commission to relieve the regular local health department of some of its burdens. This has the objection of divided authority and of the possibility of destroying the present excellent relations between the health department and the natives, the latter being naturally suspicious toward and aloof from foreign control.

Under date of October 5 The Leonard Wood Memorial for the Eradication of Leprosy under the chairmanship of General J. G. Harbord sent out a circular to the medical profession incidentally as former colleagues of the late General Wood, asking for contributions to carry out the original plan of the deceased to obtain a fund of \$2,000,000 to end for all time the deadly menace of leprosy. During his incumbency as Governor General of the Philippines, Wood had made seventeen visits to the Island of Cullion and had seen over a thousand cures among the milder cases. He brought the message that leprosy could be eradicated not only in the Philippines but throughout the world if the necessary funds could be obtained for an adequate medical staff and equipment. His friends were zealously taking up the task to complete the work for the 3,000,000 lepers of the world as a memorial to a great physician, soldier and administrator.

LE QUEUX, le kü, **WILLIAM TUFNELL**. British novelist, died at Knocke, Belgium, October 13. He was born in London, July 2, 1864. He was educated at London and in Italy, was first an art student and then a journalist in Paris, and returned to London to become editor of *Gossip and Piccadilly*. From 1888 to 1893 he was a member of the staff of the *Globe*. His taste for travel took him to the Orient, to Africa and to the Arctic regions. At one time he was a member of the council of the Republic of San Marino, Italy. His novels dealt principally with mystery and melodrama and the secret services of the various European countries. During the war he was an adviser to the British government on secret service. He wrote many novels, including: *Guilty Bonds* (1890); *Devil's Dice* (1896); *Of Royal Blood* (1899); *Her Majesty's Minister* (1901); *Secrets of the Foreign Office* (1903); *The Invasion* (1906), in which, it was said, he forecast the World War; *The House of Whispers* (1909); *Fatal Fingers* (1912); *The Hand of Allah* (1914); *The War of the Nations* (1914); *Whoso Findeth a Wife* (1915); *German Spies in England* (1915); *Rasputin, the Rascal Monk*; *the Secret Life of the Em-Tsaritsa*, *The Intriguers* (1920); *Landru* (1921); *Where the Desert Ends* (1923); *Fine Feathers* (1924); *The Crystal Claw* (1924); *The Broadcast Mystery* (1924); *Hidden Hands* (1925); *The Blue Bungalow* (1925), and *The Fatal Face* (1926).

LEROUX, le rôd, **GASTON**. French novelist, died in April. His detective and mystery novels were popular in France, and, in translations, in England and the United States. Two of them, *The Mystery of the Yellow Room* and *The Phantom of the Opera*, were turned into motion pic-

ture plays in the United States. Leroux had been a traveler and a newspaper correspondent before becoming a novelist, and had visited parts of the world that are seldom seen by Americans or Europeans. In an interview with him written several years before his death it was said that he had been a lawyer, a legal chronicler, a stage critic, a writer on hygiene, a dramatist, a newspaper correspondent, a globe trotter and a novelist.

LEVERMORE, **CHARLES HERBERT**. American educator and peace advocate, died at Berkeley, Cal., October 20. He was born at Mansfield, Conn., Oct. 15, 1856. He graduated at Yale University, 1879. From 1879 to 1883 he was principal of the Guilford, Conn., Institute, and in 1884-85 was university fellow in history at Johns Hopkins University, Baltimore, Md. While there he formed a close personal friendship with Woodrow Wilson, who also was taking a post-graduate course. In 1885-86 Mr. Levermore was instructor in history and German at the Hopkins Grammar School, New Haven, Conn., and in 1886-88 instructor in history at the University of California. Then for one year he was assistant professor of history at the Massachusetts Institute of Technology, becoming professor in 1889 and remaining there until 1893, when he accepted the principalship of Adelphi Academy, Brooklyn, N. Y. In 1896 the academy became Adelphi College, and he was president until 1912 and professor of history, 1912-14. Dr. Levermore was director of the college and university bureau of the World Peace Foundation, Boston, Mass., 1913-17, secretary of the New York Peace Society from 1917, and secretary of the World Court League and League of Nations Union from 1919. He attained international prominence in 1923 when he won the prize of \$50,000 offered by Edward Bok for the best plan for preserving the peace of the world, an additional \$50,000 being offered by Mr. Bok for payment when the prize-winning plan should be adopted by the Senate of the United States. (See *THE NEW INTERNATIONAL YEAR BOOK*, 1923 and 1924, *International Peace and Arbitration*.) Following the receipt of the prize, Dr. Levermore spent some time in Europe, in a study of political and economic conditions. He wrote *The Republic of New Haven* (John Marshall Prize, Johns Hopkins University) (1886); *Forerunners and Competitors of the Pilgrim and Puritan* (2 vols., 1912); *Year Books of the League of Nations*, vols. i, ii and iii, covering the years 1919-22; *Life of Samuel T. Dutton* (1922), besides several song books and hymnals for students.

LIBERIA. A negro republic on the west coast of Africa, reaching from the British colony of Sierra Leone on the west to the French Ivory coast on the east, with about 350 miles of coast line, and extending inland at some points to a distance of 200 miles. Area, variously estimated at 35,000 to 43,000 square miles, and population at 2,000,000 to 2,500,000, most of whom live in the interior. They belong to about 40 tribes and speak as many languages, though they fall into the six main stocks of: Mandingos, who are Mohammedans; Gola, Kpwezi, Gissi, Kru, and Greboes. The civilized inhabitants, reported at about 50,000, live along the coast, speak English, and are industrious. Capital, Monrovia, with 6000 inhabitants (including Krutown). The ports of entry are Monrovia, Robertsport, Marshall, Grand Bassa, Buchanan, River Cess, Libe-

rian Gene; Saywolu, Greenville, Nana Cru, Grand Cess, Sasstown, Harper, Kablake, Half Cavalla, and Webo.

PRODUCTION. Agriculture, mining and industrial resources are comparatively undeveloped. Although the soil is very fertile, cultivation is backward. Cacao and cotton are produced in small quantities, but the staple product is native coffee. Other products include: Piassava fibre, palm oil, palm kernels, chillies, beniseed, anatto seed, rice, beeswax, and tortoise shell. The mineral resources include: Gold, copper, tin, zinc, monazite, lead, corundum, lignite, and iron. The last named is worked by natives. Some diamonds have been found.

COMMERCE. The total value of exports in 1925 was \$1,715,060 and the total value of imports \$2,115,000. In 1926 the imports from the United Kingdom were valued at £173,970 and the exports to the United Kingdom £89,338. The chief exports are coffee, cacao, palm kernels, piassava fibre, palm oil, ivory, rubber, and camwood. The chief imports are rice, cottons, haberdashery, salt, provisions, arms and ammunition, hardware, tobacco, ready-made clothing, glass and earthenware, rum, gin, building timber, dried and preserved fish, and beads.

FINANCE. No later statistics on finance are available than those for 1924-25 when the revenue and expenditure balanced at \$943,208. The public debt on Sept. 30, 1924, was \$2,150,000.

COMMUNICATIONS. In 1927 there were no railways of any kind, and only three stretches of motor roads, of 50, 40, and 23 miles, respectively. Ox-carts were the chief means of conveyance. There are two wireless stations at Monrovia and there is direct cable communication with Europe and New York.

GOVERNMENT. The constitution is modeled after that of the United States. Under it executive power is vested in the president, who is assisted by a council of six ministers, and legislative power in the Congress made up of the Senate and House of Representatives. Qualifications for the franchise are negro blood and ownership of land; although the natives are not disfranchised, they take no part in political affairs. The official language of the administration is English. President, in 1927, Charles D. B. King (chosen for the term of 1924-28); vice president, H. Too Wesley.

LIBRARY ASSOCIATION, AMERICAN. An official organization that functions "to promote library service and librarianship" and to carry out the avowed intention of its founders "by disposing the public mind to the founding and improving of libraries" in the United States and Canada. In 1876 it had 103 members; in 1927 more than 10,000. Its activities were carried on by its officers; by a staff of nearly seventy people engaged in studying the problems of adult education and the library, education for librarianship, library extension, and in giving advisory assistance to all who were interested in library development; by 64 voluntary committees engaged in studying library problems, such as book buying, library legislation, revenues, salaries, international relations, school libraries, cataloguing, civil service relations, library extension, work with the blind, work with the foreign-born, etc., and by hundreds of individual volunteer workers who gave their time without remuneration. The activities of the

Association also included publishing and distributing books and pamphlets on different aspects of library work and providing buying lists for libraries, schools and individuals, and by the distribution of leaflets about library work, posters, broadsides, etc.

The Association published books and pamphlets on library work, buying lists for libraries, etc. Two periodicals are issued: *The Bulletin*, a monthly publication, including the *Conference Proceedings* and *The Handbook*; and the *Book-list*, issued in 10 numbers, as a guide to the selection and purchase of the best current books. During 1927 thirty-nine publications were issued, among them *A Survey of Libraries in the United States*, vols iii and iv; *Classics of the Western World*; *Bibliography of Library Economy and Circulation Work in Public Libraries*.

The Association up to the end of 1927 had published 43 *Reading with a Purpose* courses in connection with its work for the advancement of adult education. These courses were prepared by specialists in various subjects and were designed to help men and women and boys and girls who wished to continue their education through systematic reading after leaving school.

The forty-ninth annual conference of the A. L. A., held in Toronto, June 20-27, 1927, was attended by nearly two thousand members. The John Newberry Medal, conferred annually by the Children's Librarians' Section for the most distinguished contribution to literature for children by an American author published during the year, was awarded to Will James for *Smoky*. The executive headquarters of the A. L. A. are at 86 East Randolph Street, Chicago, Illinois, and its officers for 1927 were: President, Carl B. Roden, Public Library, Chicago, Illinois; first vice president, Charles H. Compton, Public Library, St. Louis, Missouri; second vice president, Charles E. Rush, Public Library, Indianapolis, Indiana; treasurer, Matthew S. Dudgeon, Public Library, Milwaukee, Wisconsin; secretary, Carl H. Milam, 86 East Randolph Street, Chicago, Illinois; assistant secretary, Sarah C. N. Bogle, 86 East Randolph Street, Chicago, Illinois.

LIBRARY PROGRESS. Over 800 delegates, representing 17 countries attended the Jubilee Conference of the Library Association (British) in Edinburgh in September. At this meeting official delegates from the American Library Association together with representatives from Austria, Belgium, Canada, China, Czechoslovakia, Denmark, France, Germany, Great Britain, Holland, Italy, Norway, Sweden, and Switzerland, formed the International Library and Bibliographical Committee.

In Canada and the United States during the year two library schools were established, at McGill University in Montreal, and at the New York State College for Teachers at Albany, the aim of the latter school being to prepare for school library work. Plans for the new graduate library school at the University of Chicago, for which funds were given by the Carnegie Corporation, were well under way for its opening to students in 1928. Through the Paris Library School, conducted under the auspices of the American Library Association, American library methods were being spread throughout Europe. In 1927 a training school for librarians

was established at Jerusalem by one of the graduates of the Paris Library School.

A committee to study the development of habits of reading was appointed by the American Library Association and the American Association for Adult Education and received through the latter a grant from the Carnegie Corporation for its first year's work, the purpose of the study being to discover what it was in the experience of some persons which caused them to acquire and continue desirable habits of reading and what was lacking from the experience of others which left them without such habits. The first meeting of the committee was held in December. The first national congress of librarians of Mexico was held in March, 1927, and a constructive programme of expansion and extension of Mexican libraries was inaugurated during the year.

There were several large gifts made for library purposes during 1928. John D. Rockefeller, Jr., gave \$2,000,000 for the erection of a library for the League of Nations and \$700,000 to the Library of Congress to be used over a period of five years to enlarge the collection of transcripts or facsimiles of source material in American history and to enlarge the bibliographic apparatus of the Library in the interest of making its information service available to other libraries and to research investigators. The Carnegie Corporation of New York made a grant of \$35,000 to continue for two more years the parish or county library demonstration which was being carried on in Louisiana. The Carnegie Corporation also appropriated \$6000 to complete a survey of library conditions in British Columbia. The Laura Spelman Rockefeller Memorial gave \$2515 for the use of the Association in 1927 in supplying foreign libraries with American periodicals and \$1500 for work in connection with the preparation of the List of Foreign Government Serials; \$37,500 was received from John D. Rockefeller, Jr., for the use of the Paris Library School during 1926-27; the Carnegie Corporation of New York gave \$118,750 towards the maintenance of the American Library Association in 1927, and the Carnegie Endowment for International Peace appropriated \$3800 for the use of the Association for international library coöperation.

Notable new library buildings completed during 1927 were those at the University of Arizona, at the University of Washington, at Dartmouth College, at Los Angeles, Philadelphia, Birmingham, and at Queens (New York).

LIBYA. The name of a former Italian colony on the north coast of Africa. In 1919, for administrative and military purposes it was divided into Cyrenaica and Tripolitania. See articles under these titles.

LIFE INSURANCE. See **INSURANCE.**

LIGHTHOUSES. On June 30, 1927 the U. S. Bureau of Lighthouses was maintaining a total of 18,363 aids to marine navigation, as compared with 18,090 at a corresponding date in 1926, or a net increase of 273 during the year. There were also in commission 755 airway aids, including 616 aids maintained by the Post Office Department up to June 30, and transferred to the Bureau of Lighthouses, July 1, 1927. According to the annual report of George R. Putnam, Commissioner of Lighthouses, improvements made in aids to marine navigation during the fiscal year, were as follows: 84 fixed lights were

changed to flashing or occulting; the illuminant of 7 lights was changed to incandescent oil vapor; the illuminant of 80 lights (including 15 lighted buoys) was changed to acetylene; the illuminant of 13 lights (including 3 lightships), was changed to electric incandescent; 12 radio-beacons were established; 1 gas-operated fog signal was installed at a light station; 7 diaphones and 1 electric siren were established and the fog signals at 8 other important stations and light ships were improved by the installation of more efficient apparatus; 700 aids to navigation of various classes were discontinued during the year; in Alaska 41 new aids were established, making a total of 767, including 284 lights, 19 gas buoys, 1 radio-beacon (the first to be established in Alaska and placed in commission July 14, 1926), 14 fog signals, 290 buoys, and 159 day marks. In 1910 the total number of aids in Alaska was 160. On Mar. 1, 1927, a system of broadcasting weather reports by radio on four lightships on the Pacific Coast was put into effect.

The most important new projects undertaken by the Lighthouse Bureau during the year were the building of a primary light and fog signal station on Lansing Shoal near the northern end of Lake Michigan, to take the place of a lightship; the rebuilding of the Harbor of Refuge Light Station, the principal signal of the entrance to Delaware Bay, was nearing completion, while a light station on Martins Reef, near the end of Lake Huron, to replace a lightship, was well advanced. Other work of the year included a station on Milwaukee North Breakwater and the enlargement of the important lighthouse depot at Portsmouth, Va.; one new lightship (No. 111) was completed during the year, being the first to be equipped with a Diesel engine; this was placed in service Dec. 30, 1926, on North End, N. J.; a new light tender was finished and immediately put in service in Mississippi flood work; 2 surplus mine planters were reconditioned and were placed in service in Porto Rico and California. During the year 12 additional radio-beacon stations were placed in condition, including 1 at Cape Spencer, Alaska, and 1 at Makpuu Point, the first in the Hawaii Islands. This made a total of 37 radio-beacons in operation with installation in progress at 17 stations. In view of the turning over to the Lighthouse Bureau of the aids to air navigation an officer of the lighthouse service was appointed chief engineer of the airways division, and on the 1386 airways lighted during the year 139 aids were established and placed in operation, while work was begun on 649 miles of additional airways. During the year 54 new automatic marine lights on fixed structures were established and 28 lights were changed from attended to automatic, making at the end of the fiscal year a total of 1203 automatic fixed lights on fixed structures; in addition to 830 buoys with automatic lights, 14 fog bells were also operated automatically. The table on page 469 summarizes the aids to navigation and changes in the fiscal year ended June 30, 1927.

In England Trinity House installed experimentally at Round Island in the Scilly Isles wireless signals which were to be established generally at lights stations on the coast of England. This system involved an automatic direction finder useful in time of fog to enable a ship to take its bearings on the transmitting station.

SUMMARY OF AIDS TO NAVIGATION AND CHANGES DURING FISCAL YEAR

Class	Estab- lished	1927 Discon- tinued	Increase	Decrease	Total, June 30— 1926	1927
Lighted aids:						
Lights (other than minor)	125	40	85	2,076	2,161
Lightship stations	1	..	1	46	45
Gas buoys	105	53	53	464	517
Gas buoys, with whistles and bells	34	8	26	287	313
Minor lights	218	230	..	12	3,360	3,348
Float lights	10	14	..	4	197	193
Total lighted aids	492	345	147	6,430	6,577
Fog signals:						
Radio-beacons	11	...	11	26	37
Sound fog signals (air)	8	11	..	3	552	549
Submarine fog signals	9	..	9	47	38
Gas buoys, with whistles and bells	34	8	26	287	313
Whistling buoys, unlighted	3	3	81	81
Bell buoys, unlighted	10	9	1	246	247
Total fog signals	66	40	26	1,239	1,265
Unlighted aids:						
Buoys	305	207	98	7,523	7,621
Day beacons	144	116	28	3,185	3,213
Total	449	323	126	10,708	10,834
Grand total *	973	700	273	18,090	18,363
Aids to air navigation	755

* Gas buoys with whistles and bells are counted only once in the grand total.

LIGHTSHIPS. See LIGHTHOUSES.

LIME. The lime sold by producers in the United States in 1927 amounted to 4,337,000 short tons, valued at \$38,210,000, according to estimates furnished by lime manufacturers to the United States Bureau of Mines, Department of Commerce. This is a decrease of 5 per cent in quantity and 8 per cent in value as compared with sales in 1926, which amounted to 4,560,398 tons valued at \$41,566,452. The sales of hydrated lime, which are included in the 1927 figures, amounted to 1,562,000 tons, valued at \$14,300,000, a decrease of 3 per cent in quantity and 6 per cent in value, from 1926 when the amount was 1,606,811 tons. The average unit value of all lime showed a decrease from \$9.11 a ton in 1926 to \$8.81 in 1927, and that of hydrated lime a decrease from \$9.45 a ton in 1926 to \$9.15 in 1927.

The conditions in the lime industry during 1927 were reported as unsettled and unsatisfactory, especially for the last six months of the year. Demand for building, chemical, and agricultural lime was irregular, and although in general it was reported as less or the same as in 1926, there were many reports of good or increased demand. Ohio, the leading State, showed a decrease of 7 per cent in total quantity of sales (978,000 tons) and 8 per cent in sales of hydrated lime (690,000 tons) from 1926 when the total was 1,056,589 tons and the hydrated lime 752,764 tons. Pennsylvania, which ranked second, showed a decrease of 2 per cent in total sales, 780,000 tons as against 794,196 in 1926. Of the 23 States in which more than 25,000 tons were sold, only 8 showed increased sales. Sales of lime for building in 1927 were estimated at 2,200,000 tons; for chemical uses, 1,947,000 tons; and for agriculture, 290,000 tons.

LINDBERGH. COLONEL CHARLES A., American Aviator. See AERONAUTICS.

LINES. THE RT. REV. EDWIN STEVENS, American clergyman, Protestant Episcopal Bishop of

the diocese of Newark, N. J., died at Newark, October 25. He was born at Naugatuck, Conn., Nov. 23, 1915, and, working in a factory to obtain means to acquire an education, entered Yale and graduated in 1872. He graduated at the Berkeley Divinity School in 1874, and from that year until 1879 was rector of Christ Church, West Haven, Conn. From 1879 to 1903 he was rector of St. Paul's Church, New Haven, Conn., and in the latter year became bishop of Newark. He held many high offices in the Protestant Episcopal Church and was a member of important boards and committees, including those having charge of foreign missions, religious education and social service. Yale, Rutgers and Princeton Universities conferred the honorary degree of D.D. on him.

LIONS CLUBS, INTERNATIONAL ASSOCIATION OF. An organization of business men's clubs united in one association for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and in the professions. In 1917 the Business Circle of Chicago issued a call to approximately 150 business organizations, inviting them to send representatives to a meeting in Chicago on June 7. More than 20 delegates, representing 50 clubs, attended this meeting and voted to form the Association of Lions Clubs, with the understanding that each club was to retain its own name. Additional Lions Clubs have been organized by choosing one man from each business or profession in the community.

At the 1927 convention, held June 15-18 at Miami, Fla., 1185 clubs, with a total membership of 52,758, were reported in the association. The officers for 1927-28 elected at this meeting were: President, Irving L. Camp, U. S. National Bank Building, Johnstown, Pa.; immediate past president, William A. Westfall, Mason City, Ia.; vice presidents, Ben A. Ruffin, Richmond, Va.,

Ray L. Riley, Sacramento, Cal., and Earle W. Hodges, New York City. It was decided to hold the 1928 convention at Des Moines, Ia. *The Lion* is the official organ of the Association. The international headquarters are in the McCormick Building, 332 South Michigan Avenue, Chicago, Illinois.

LIPSIUS, MARIE. German writer on music, died at Leipzig, in February. She was born at Leipzig, Dec. 30, 1837. As a member of Liszt's circle at Weimar she became personally acquainted with the foremost musicians of the period. All her books were published under the pseudonym "La Mara." Her most famous work is *Musikalische Studienköpfe* (5 vols., 1873-80), a collection of authoritative sketches of contemporary composers. She also edited much of the correspondence of Wagner, Liszt and Berlioz. In 1917 appeared her autobiography, *Durch Musik und Leben im Dienste des Ideals* (2 vols.)

LITERATURE, ENGLISH AND AMERICAN. That many people, in America at least, would like to read but do not know what to read was proved by the development during 1927 of the Book-of-the-Month Club and the Literary Guild, whose object was to sell books by persuading their clients that they were reading the right ones. Each had a board of more or less distinguished literary people who chose monthly a book which was sent to subscribers with the assurance that it was important. The Literary Guild professed to sell its books at less than the bookstore prices, and therefore met with opposition from both bookstores and publishers. The Book-of-the-Month Club, which distributed its recommended books at the regular price, was first in the field and in 1927 had won more subscribers. But both together had a membership approaching 100,000. Their growth and activity undoubtedly constitute the event of the year in the American publishing world, for the choice of a book by either board puts it in the best seller class immediately. The books recommended have usually deserved the wide reading such choice gives them. It is probably true that these organizations have won for the publishers customers who without them would buy books less often and less wisely.

The year was also noteworthy for the prizes offered and awarded by publishers. Prizes offered by individuals or periodicals have for a long time been used to live and enrich the somewhat moribund endeavor in poetry, but only lately have publishers sought manuscripts by offering prizes. Fiction, of course, is most often desired, but prizes are also offered for history and biography. The fiction prizes are sometimes as much as \$25,000 when the offer is made by a publisher in combination with a magazine and a motion-picture company. Sometimes the prize-winning author gets royalties in addition, sometimes not. Apparently the publishers hoped that the publicity attaching to the award of the prize, as well as the rights obtained to non-prize-winning manuscripts, would bring the money back.

FICTION. There was in the air a feeling of dissatisfaction with the state of fiction. Though it is assiduously cultivated, though people read it avidly, one hears too often of critical discontent. The new devices, such as the "stream of consciousness," prove barren, seem too easy for the writer and too hard for the reader. The old conventional realism no longer gives delight. Contemporary taste seems to be demanding

novels of bright and polished surfaces, novels of detachment, in which both the fact and the philosophy are rather implied than expressed. Such novels as Thornton Wilder's *The Bridge of San Luis Rey*, or Eleanor Carroll Chilton's *Shadows Waiting*, showed the sort of thing which won critical acclaim during 1927. Both were primarily novels of imagination, not fantasy indeed, but certainly Miss Chilton's book, and Rosamond Lehmann's *Dusty Answer*, a sweet story about nasty people, were the most highly regarded first novels of the year. The latter was a best seller, as was John Erskine's *Adam and Eve*, in his by now well-known and plotless dialogue form, which nevertheless seems to stimulate and amuse. His book, with James Branch Cabell's *Something about Eve*, a fantasy, left the lady with a sadly changed reputation.

Working again in his old vein of satirical realism, Sinclair Lewis published *Elmer Gantry*, about an incredible minister, a book which makes all Lewis's previous work suspect. A typical H. G. Wells novel was *Meanwhile*, concerned principally with the British general strike of 1926, but considering also a better organization of the universe. Virginia Woolf developed her advanced technique still further in *To the Lighthouse*, and Dorothy M. Richardson, in *Oberland*, gave Miriam Henderson life for two more weeks in which nothing much happened. These two remained the best, if not the only, practitioners of what once seemed the "new" English novel.

C. E. Montague imagined a bitter and tragic war in *Right Off the Map*. H. M. Tomlinson's *Gallions Reach* was a novel primarily of beautifully done scene. *Death Comes to the Archbishop*, by Willa Cather, showed her turning to the history of the American Southwest for material, with somewhat disappointing results. Three prize novels of the year were: *The Grandmothers*, by Glenway Wescott; *Jalna*, by Mazo de la Roche; and *Rebellion*, by Mateel Howe Farnham, all concerned primarily with family life. Is there a formula for prize-winning?

Striking novels of fantasy were: *Mr. Fortune's Maggot*, by Sylvia Townsend Warner; *The Love Child*, by Edith Olivier; *The Blessing of Pan*, by Lord Dunsany; *The Midnight Folk*, by John Masefield; *The House Without Windows*, by Barbara Newhall Follett; *Witch Wood*, by John Buchan; *The Return of Don Quixote*, by G. K. Chesterton. Among historical novels there were: *Forever Free*, by Honoré Willis Morrow, about Lincoln; *The Immortal Marriage*, by Gertrude Atherton, about Pericles and Aspasia; *Brother John*, by Vida D. Scudder, and *Brother Saul*, by Donn Byrne, both based on the Bible.

Of the type best classified as realistic were: Elizabeth Madox Roberts' *My Heart and My Flesh*, a melodrama done with splendid restraint; Beatrice Kean Seymour's *Three Wives*, showing that marriage is not paradise; Jim Tully's rough, tough *Cirous Parade*; Anne Douglas Sedgwick's *The Old Countess*, American ways of life versus French; Upton Sinclair's *Oil*; Louis Bromfield's *A Good Woman*; Charles G. Norris' *Zelda Marsh*; Dan Totheroh's *Wild Orchard*; St. John Ervine's *The Wayward Man*; Floyd Dell's *An Unmarried Father*; Anne Parrish's *To-morrow Morning*; Ernest Pascal's *The Marriage Bed*; Evelyn Scott's *Migrations*; James Stevens' *Mattock*; Ben Ames Williams' *Splendor and Immortal Longings*. Novels aiming at pure entertainment were: *The Vanguard*,

LOUIS BROMFIELD

ROSAMOND LEHMANN

EMIL LUDWIG

WARWICK DEEPING

FOUR AUTHORS PROMINENT IN 1927

by Arnold Bennett; *The Honorable Picnic*, by Thomas Raucaut; *The Kingdom of Theophilus*, by William J. Locke; *Strange Woman*, by Elmer Davis; and *I Think I Remember*, by Cleone Knox. Among the many mystery stories were: *The Dark Chamber*, by Leonard Cline; *The Haunted House*, by Hilaire Belloc; and *The Murder at Crome House*, by G. D. H. and M. Cole.

Other novels deserving mention were: Edith Wharton's *Twilight Sleep*; Margaret Kennedy's *Red Sky at Morning*; Warwick Deeping's *Doomsday and Kitty*; Francis Brett Young's *Love is Enough*; James Boyd's *Marching On*; Michael Arlen's *Young Men in Love*; May Sinclair's *The Allingham* and *The History of Anthony Waring*; Storm Jameson's *The Lovely Ship*; Dale Collins' *The Sentimentalists*; Frederick Hazlitt Brennan's *God Got One Vote*; Harold Bell Wright's *God and the Groceryman*; Louis Golding's *The Miracle Boy*; Martha Ostenso's *The Mad Carous*; Hugh Walpole's *Jeremy at Orle*; Robert Nathan's *The Woodcutter's House*; Mathilde Eiker's *Over the Boat-Side*; G. B. Stern's *The Dark Gentleman*; Struthers Burt's *The Delectable Mountains*; Allen Updegraff's *Whatever We Do*; Felix Riesenbergs' *East Side, West Side*; Percy Marks' *Lord of Himself*; Julia Peterkin's *Black April*; Nancy Hoyt's *Unkind Star*; Ludwig Lewisohn's *Roman Summer*; and Ernest Poole's *Silent Storms*.

The volume of short stories which attracted most attention was Ernest Hemingway's *Men Without Women*, crisp studies of hard-boiled people. There were also among the short story books: Theodore Dreiser's *Chains*; Edna Ferber's *Mother Knows Best*; Christopher Morley's *The Arrow and Pleased to Meet You*; A. E. Coppard's *The Field of Mustard*; Captain John W. Thomason's *Red Pants*; Leonard Nason's *Three Lights from a Match*; William Gerhardi's *Pretty Creatures*; Thyra Samter Winslow's *People Round the Corner*; R. B. Cunningham Graham's *Redeemed*; G. B. Stern's *Jack A'Manory*; Wyndham Lewis' *The Wild Body*; Arnold Bennett's *The Woman Who Stole Everything*; Laurence Housman's *Ironical Tales*; Mary Borden's *Four o'Clock*; Basil King's *The Spreading Dawn*.

There were the usual number of fascinating translations, noteworthy among which were: *Giants in the Earth*, translated by the author, O. E. Rølvaag, who lives in America but writes in Norwegian; *Avarice House*, by Julian Greene, an American who writes in French; André Gide's *The Counterfeiters*, by Dorothy Bussy; the third volume of Sigrid Undset's trilogy, *The Cross*; Romain Rolland's *Mother and Son*; Arthur Schnitzler's *Rhapsody and Daybreak*, by W. A. Drake; Maxim Gorki's *Decadence*; Knut Hamsun's *Mysteries*; Karel Capek's *The Absolute at Large*; Thomas Mann's *The Magic Mountain*, by H. T. Lowe-Porter; Franz Werfel's *The Man Who Conquered Death*, by William A. Drake and Clifton P. Fadiman; Lady Murasaki's *A Wreath of Clouds*, the third volume of the *Tale of Genji*, by Arthur Waley; Jacob Wassermann's *The Triumph of Youth*; André Maurois' *Bernard Quesnay*, by Brian Downes; and Paul Morand's short stories, *Nothing But the Earth and East India and Company*.

POETRY. The most striking new poet to appear during 1927 was Hart Crane, whose *White Buildings*, though a difficult and highly individual collection of lyrics, yet contained much startling and

fresh beauty. Edwin Arlington Robinson's *Tristram* subtilized the old love story, to many people's delight. Humbert Wolfe's *Requiem* showed this important poet widening and deepening his art. Other important books of poetry were: John Crowe Ransom's *Two Gentlemen in Bonds*; Edith Sitwell's *Rustic Elegies*; H. Phelps Putnam's *Trino*; Sacheverell Sitwell's *The Cyder Feast*; Robinson Jeffers' *The Women at Point Sur*; Osbert Sitwell's *England Reclaimed*; Walter de la Mare's *Stuff and Nonsense*; Lizette Woodworth Reese's *Little Henrietta*; F. R. Higgins' *The Dark Breed*; Amy Lowell's *Ballads for Sale*; Siegfried Sassoon's *Satirical Poems*; Maxwell Bodenheim's *Returning to Emotion*; Marguerite Wilkinson's *The Radiant Tree*; Donald Davidson's *The Tall Men*; Beatrice Ravenel's *The Arrow of Lightning*; Leonard Bacon's *Guinea Fowl and Other Poultry*; Jean Starr Untermeyer's *Steep Ascent*; Christopher Morley's *Translations from the Chinese*; Evan Morgan's *The Eel and Other Poems*. Some distinctively negro contributions were *Copper Sun*, by Countee Cullen; *Fine Clothes to the Jew*, by Langston Hughes; and *God's Trombones*, sermons in verse by James Weldon Johnson. There were many collections of American folk-songs, such as: *The American Songbag*, by Carl Sandburg; *Frontier Ballads: Songs from Lawless Lands*, by Charles J. Finger; *A Book of Chanties*, by C. Fox Smith. Other anthologies were: *The Third Book of Modern Verse*, by Jessie B. Rittenhouse; *Miscellany of American Poetry, 1927*; and *The Oxford Book of 18th Century Verse*, by David Nichol Smith.

DRAMA. Eugene O'Neill, now one of the commanding figures in the drama of the world, published two new and unperformed plays during 1927. One, *Marco Millions*, is a satiric comedy, a new mode for O'Neill. The other, *Lazarus Laughed*, is designed for "the imaginative theatre" rather than for actual production. It requires huge choruses, numberless masks, multitudinous scenes, and leading actors of tremendous powers. The raised Lazarus preaches joy in living, but is burned on account of the terror of those who love death. John Masefield, like so many other authors, turned to Malory for material and brought out *Tristan and Isolot*. Edna St. Vincent Millay's *The King's Henchman* was a sensation as the libretto of Deems Taylor's opera. Other important plays were: W. Somerset Maugham's *The Constant Wife* and *The Letter*; Arthur Goodrich and Rose A. Palmer's *Caponsacchi*; Maurine Watkins' *Chicago*; George S. Brooks and Walter B. Lister's *Spread Eagle*; Clemence Dane's *Mariners*; Paul Green's *The Field God* and *In Abraham's Bosom*; Philip Dunning and George Abbott's *Broadway*; Maxwell Anderson's *Saturday's Children*; S. N. Behrman's *The Second Man*; Sidney Howard's *The Silver Cord*; Stephen Phillips' *Harold*; Paul Sifton's *The Belt*; E. E. Cummings' *Him*; and Ashley Dukes' *The Song of Drums*. Among collections were: *Plays of Negro Life*, by Alain Locke and Montgomery Gregory; and *More One Act Plays by Modern Authors*, by Helen Louise Cohen.

ESSAYS. Among the more noteworthy volumes in this catch-all classification were: *Castles in Spain*, by John Galsworthy; *Essays Old and New*, and *Proper Studies*, by Aldous Huxley; *Sibylla, or the Revival of Prophecy*, by C. A. Mace; *Character and the Conduct of Life*, by William McDougall; *The Next Chapter: the War*

against the Moon, by André Maurois; *Reliquias*, by A. D. Godley; and *Lay Sermons*, by Margot Asquith, which are more or less philosophical; *Variety*, by Paul Valéry; *Leaves and Fruit*, by Sir Edmund Gosse; *Essays*, by Leonard Woolf; *Books in Bottles*, by W. G. Clifford; *Wild Gossings*, by William Rose Benet; *Tokefield Papers*, by Frank Swinnerton; *Show Window*, by Elmer Davis; which are more or less literary; *The Almost Perfect State*, by Don Marquis; *The Early Worm*, by Robert Benchley; *The Life and Times of Martha Hepplethwaite*, by Frank Sullivan; which are more or less humorous; *Some People*, by Harold Nicolson; *Eight o'clock Chapel*, by C. H. Patton and W. T. Field; *Morrow's Almanac* for 1928, edited by Burton Rascoe; and *Guides, Philosophers, and Friends*, by Charles F. Thwing; these mainly biographical. Others, quite miscellaneous, were: H. L. Mencken's *Prejudices, Sixth Series*; George Jean Nathan's *Land of the Pilgrim's Pride*; G. B. Stern's *Bouquet*; D. H. Lawrence's *Mornings in Mexico*; Odell Shepard's *The Harvest of a Quiet Eye*; W. C. Brownell's *Democratic Distinction in America*; Alfred Noyes' *New Essays and American Impressions*.

Mention must also be made somewhere of *The American Caravan*, 1927, edited by Van Wyck Brooks, Alfred Kreyenborg, Lewis Mumford, and Paul Rosenfeld, who claim that this annual-to-be is necessary to provide outlet for the younger writers whom the mean old editors won't listen to. It contained poems, plays, short stories, novelettes, and articles, most of which many a magazine would have been glad to pay for.

CRITICISM AND THE HISTORY OF LITERATURE. 1927 was a notable year in this field. Among general works were: Elizabeth Shipley Sargent's *Fire Under the Andes*; Van Wyck Brooks' *Emerson and Others*; Edwin Avery Park's *The Backgrounds for a New Age*; Stuart Sherman's *The Main Stream*; Raymond Pearl's *To Begin With*; John Rodker's *The Future of Futurism*; George Philip Krapp's *The Knowledge of English*; John Drinkwater's *A Book for Bookmen*; Mary Cass Canfield's *Grotesques*; Percy Holmes Boynton's *More Contemporary Americans*; Upton Sinclair's *Money Writes*; Ernest Boyd's *Literary Blasphemies*.

About poets and poetry: John Livingston Lowes' remarkable detective work on the sources of Coleridge, *The Road to Xanadu*; Harriet Monroe's *Poets and their Art*; Gilbert Murray's *The Classical Tradition in Poetry*; Joseph Auslander and Frank Ernest Hill's *The Winged Horse*. About Shakespeare: *The Lion and the Fox; the Role of Hero in the Plays of Shakespeare*, by Wyndham Lewis; *Shakespeare and Demi-Science*, by Felix E. Schelling; *Shakespeare Studies*, by Elmer Edgar Stoll.

About drama and dramatists: *The Theatre in Life*, by Nicolas Evreinoff; *Modern English Playwrights*, by John W. Cunliffe; *An Outline of Contemporary Drama*, by Thomas H. Dickinson; *A Short History of the Drama*, by Martha F. Bellinger; *A History of Late Eighteenth Century Drama*, by Allardye Nicoll; *Annals of the New York Stage*, by George C. D. Odell; *A History of the American Drama*, by Arthur Hobson Quinn; *Gilbert and Sullivan*, by A. H. Godwin; *Studies in the Contemporary Theatre*, by John Palmer; *The House of Satan*, by George Jean Nathan. About novels and novelists: Elmo

Railo's *The Haunted Castle: a Study of the Elements of English Romanticism*; E. M. Forster's *Aspects of the Novel*; G. K. Chesterton's *Robert Louis Stevenson*. Also James C. Johnston's *Biography: the Literature of Personality*.

BIOGRAPHY AND AUTOBIOGRAPHY. The "new" biography is definitely a form of entertainment, and biographical works during 1927 provided lots of it. Picturesque and odd Americans were much in vogue, as: *Calamity Jane and the Lady Wildcats*, by Duncan Aikman; *Annie Oakley*, by Courtney Ryley Cooper; *Barnum's Own Story*, by Waldo R. Browne; *Anthony Comstock: Roundsman of the Lord*, by Heywood Brown and Margaret Lynch; *A Methodist Saint: the Life of Bishop Asbury*, by Herbert Asbury; *John Paul Jones: Man of Action*, by Phillips Russell; *Navigator: the Story of Nathaniel Bowditch of Salem*, by Alfred Stanford; *Caspar Collins*, by Agnes Wright Spring; *Riata and Spurs*, by Charles A. Siringo; "Boss" Tweed, by Denis Tilden Lynch.

American political figures: Volumes I and II of *Woodrow Wilson: Life and Letters*, by Ray Stannard Baker; *Andrew Jackson*, by Gerald W. Johnson; *Alfred E. Smith*, by Henry F. Pringle; *Men of Destiny*, by Walter Lippman, which dealt with literary men also; *The President's Daughter*, by Nan Britten, scandalous matter; *Washington*, by Joseph Dillaway Sawyer; *Col. Bob Ingersoll*, by Cameron Keyes; *Uncle Joe Cannon: Reminiscences of a Pioneer American*, as told to L. White Busbey.

American literary persons: *The Rebellious Puritan: Portrait of Mr. Hawthorne*, by Lloyd Morris; *Nathaniel Hawthorne*, by Herbert Gorman; *The Heart of Thoreau's Journals*, edited by Odell Shepard; *Henry Thoreau, the Cosmic Yankee*, by J. Brooks Atkinson; *The Father of Little Women*, by Honoré Willie Morrow; *Epoch: the Life of Steele Mackaye*, by Percy Mackaye; *The Road to the Temple*, by Susan Glaspell, about George Cram Cook; *The Locomotive God*, by William Ellery Leonard, and *Transition*, by Will Durant, autobiographies; and *The Story of a Wonder Man*, by Ring Lardner, autobiography with a difference. Other Americans: Carl Christian Jensen's *An American Saga*; Paxton Hibben's *Henry Ward Beecher*; Evan Charteris' *John Singer Sargent*; Harry Kemp's *More Miles*.

English literary men and women: *The Journals of Katharine Mansfield*, edited by J. Middleton Murry; *Joseph Conrad: Life and Letters*, by G. Jean-Aubry; *Carlyle at His Zenith, 1848-1853*, by David Alec Wilson; *Thomas Carlyle*, by Mary Agnes Hamilton; *Anthony Trollope*, by Michael Sadleir; *George Eliot and Her Times*, by Elizabeth S. Haldane; *The Letters of George Gissing*, collected by Algernon and Ellen Gissing; *Thomas Love Peacock*, by J. B. Priestley; *Horace Walpole*, by Dorothy Margaret Stuart; *Dorothy and William Wordsworth*, by C. M. MacLean; *O Rare Ben Jonson*, by Byron Steel. English political figures: *Disraeli*, by André Maurois; *Disraeli*, by D. L. Murray; *Rhodes*, by J. G. MacDonald; *King Edward VII, 1901-1910*, by Sir Sidney Lee; *James Bryce*, by H. A. L. Fisher. Other English people: the year's favorite, *Charles Darwin*, by Henshaw Ward, *The Life of Darwin*, by Leonard Huxley, and *The Evolution of Charles Darwin*, by George A. Dorsey; the somewhat incredible *Trader Horn*,

by Alfred Aloysius Horn; *Viscount Leverhulme*, by his son; *Field Marshal Sir Henry Wilson's Life and Diaries*, edited by Sir C. E. Callwell; *Letters of Gertrude Bell of Arabia*, edited by Lady Bell.

Continental and others: *Bismarck, Napoleon, and Genius and Character*, by Emil Ludwig; *Memoirs of Catherine the Great of Russia*, translated by Katherine Anthony; *That Man Heine*, by Lewis Browne and Elsa Wiehl; *Balzac*, by René Benjamin; *The Romance of Villon*, by Francis Carco; *Flaubert's Youth*, by Piaget Shanks; *Marcel Proust*, by Leon Pierre-Quint; *Jean-Paul Marat: a Study in Radicalism*, by Louis R. Gottschalk; *Pierre Loti: the Romance of a Great Writer*, by E. D. D'Auvergne; *The Life and Letters of Anton Tchekhov*, translated and edited by S. S. Kotliansky and Philip Tomlinson; *Cavour*, by Maurice Paleologue; *Genghis Kahn: the Emperor of All Men*, by Harold Lamb; *Those Quarrelsome Bonapartes*, by Robert Gordon Anderson; *A Greater than Napoleon: Scipio Africanus*, by Capt. B. H. Liddell Hart; *Five Years in Turkey*, by Liman von Sanders; *Eleanora Duse*, by Arthur Symonds; *Pages from My Life*, by Feodor Ivanovitch Chaliapin; *Polonoise*, by Guy de Portales, about Chopin; *The Prodigious Lover*, by Louis Barthou, about Wagner; *Hans Christian Andersen: the True Story of My Life*, translated by Mary Howitt.

THE FINE ARTS. There was the usual press of books concerned with architecture, such as: *Towards a New Architecture*, by Le Corbusier; *The Story of Architecture in America*, by Thomas E. Tallmadge; *The A B C of Architecture*, by Matlock Price; *The Architect in History*, by Martin S. Briggs; *Form in Gothic*, by Wilhelm Worringer; *The Development of the Theatre*, by Allardye Nicoll; *Architectural Design in Concrete*, by T. P. Bennet; *Balbus, or the Future of Architecture*, by Christian Barman; *Charleston, South Carolina*, about the old houses there, by Albert Simons and Samuel Lapham, Jr.; *The Glory of New York*, by Joseph Pennell.

These considered painting: Bernard Berenson's *Three Essays in Method*; Frank Jewett Mather, Jr.'s *Modern Painting*; Newton Wethered's *From Giotto to John*; Andre Blum and R. R. Tatlock's *A Short History of Art*; R. H. Wilenski's *The Modern Movement in Art*; Clive Bell's *Landmarks in Nineteenth Century Painting*; Roger Fry's *Cézanne*; Julius Meier-Greefe's *Cézanne*; Ambrose Vollard's *Degas*; Richard Offner's *Studies in Florentine Painting*. National art was dealt with in: R. L. Hobson's *Chinese Art*; Louis V. Ledoux's *The Art of Japan*; Ananda K. Coomaraswamy's *History of Indian and Indonesian Art*. John C. Van Dyke revised long-standing judgments in *The Rembrandt Drawings and Etchings*.

RELIGION. Among the noteworthy works in this field were: *The Church in the World*, by William Ralph Inge; *Spiritual Values and Eternal Life*, by Harry Emerson Fosdick; *The Impatience of a Parson*, by H. R. L. Sheppard; *The Creator Spirit*, by Charles E. Raven; *Should Such a Faith Offend?* by Ernest William Barnes; *The People and the Book*, edited by Arthur S. Peake; *Changing Backgrounds in Religion and Ethics*, by H. Wildon Carr; *English Modernism*, by H. D. A. Major; *Protestant Europe: Its Crisis and Outlook*, by Adolf Keller and George Stewart; *What Can a Man Believe?* by Bruce

Barton; *Evolution in Science and Religion*, by Robert Andrews Millikan; *Jesus: a New Biography*, by Shirley Jackson Case; *Forerunners of St. Francis*, by Ellen Short Davison; *The Catholic Church and its Reactions with Science*, by Bertram C. A. Windle; *The Catholic Church and Philosophy*, by Vincent McNab; *Paul the Jew*, by the author of *By an Unknown Disciple*.

SOCIOLOGY AND EDUCATION. Important books in sociology included: Pitirim Sorokin's *Social Mobility*; Edward J. Urwick's *The Social Good*; Ernest R. Groves' *Social Problems of the Family*; Frank H. Hankins' *The Racial Basis of Civilization: a Critique of the Nordic Doctrine*; John Langdon-Davies' *A Short History of Woman*; Count Hermann Keyserling's *The Book of Marriage*; Robert Briffault's *The Mothers*; Jacques Fischer's *Love and Morality*; Anthony M. Ludovici's *Man: an Indictment*; Charles A. Wood's *The Myth of the Individual*; Charles Hose's *Natural Man: a Record from Borneo*; Langdon Mitchell's *Understanding America*; Philip Guedalla's *Conquistador*; Herman Feldman's *Prohibition*; Clarence Darrow and Victor S. Yarros' *The Prohibition Mania*; Ben B. Lindsey and Wainwright Evans' *The Companionate Marriage*; Silas Bent's *Ballyhoo: the Voice of the Press*; Frederick M. Thrasher's *The Gang*; Martha Bensley Bruere's *Does Prohibition Work?* Montague Summers' *The Geography of Witchcraft*; Tsi C. Wang's *The Youth Movement in China*.

EDUCATION. Among the books on education were: *Education for a Changing Civilization*, by William Heard Kilpatrick; *Cultural Evolution*, by Charles A. Ellwood; *Educational Psychology*, by Edward Herbert Cameron; *Adventuring with 12-year-olds*, by Leila Scott; *The Junior College*, edited by William M. Proctor; *College: What's the Use?* by Herbert E. Hawkes; *The Changing College*, by Ernest Hatch Wilkins; *The Idea of a College*, by Chauncey Brewster Tinker.

POLITICS AND ECONOMICS. Among the general works in the rich and interesting field of politics were: *The Public Mind: Its Disorders, Its Exploitation*, by Norman Angell; *The Public and Its Problems*, by John Dewey; *The Origin of the State*, by R. W. Lowie; *The Natural History of Revolution*, by Lyford P. Edwards; *Democracy Under Revision*, by H. G. Wells; *Constructive Citizenship*, by L. P. Jacks; *Bolshevism, Fascism, and Democracy*, by Francesco Nitti; *Where Freedom Falters*, by the author of *Pomp of Power*; *Naves and Nations*, by Hector C. Bywater; *The Modern Development of City Government*, by Ernest S. Griffith.

Books which approached their problems historically included: Archibald Cary Coolidge's *Ten Years of War and Peace*; Frank H. Simonds' *How Europe Made Peace without America*; *The Problems of Peace*; *A Frenchman Looks at the Peace*, by Alcide Ebray, translated by E. W. Dicks; *The European Situation*, by A. Mendelssohn-Bartholdy; *The Vanished Empire*, by Putnam Weale; *The Political Ideas of the Greeks*, by John L. Myers. The political problems of single nations or groups of nations were dealt with in: Katherine Mayo's searching *Mother India*; Alleyne Ireland's *The New Korea*; Arnold J. Toynbee and Kenneth P. Kirkwood's *Turkey*; Arnold J. Toynbee's *The Islamic World Since the Peace Settlement*; Nathaniel Peffer's *The White Man's Dilemma*; Upton Close's *The Revolt of Asia*; Sarah Gertrude Mil-

lin's *The South Africans*; Sisley Huddleston's *France*; René Fulop-Miller's *The Mind and Face of Bolshevism*, translated by F. S. Flint and D. F. Tait.

Concerned particularly with America were: André Siegfried's *America Comes of Age*; André Tardieu's *France and America*; Edward M. Chesney Sait's *American Parties and Elections*; John Dickinson's *Administrative Justice and the Supremacy of Law in the United States*; William English Walling's *American Labor and American Democracy*; James M. Beck's *The Vanishing Rights of the States*.

E. R. A. Seligman considered a moot question in *The Economics of Installment Selling*, with conclusions favorable to that business method; *Your Money's Worth*, by Stuart Chase and F. J. Schlink, exposed many malpractices in modern business. Other books of economics were William Trufant Foster and Waddill Catchings' *Business without a Buyer*; F. Creedy's *Human Nature in Business*; Harry Jerome's *Migration and Business Cycles*; Rexford Guy Tugwell's *Industry's Coming of Age*; Sir Alfred Mond's *Industry and Politics*; Carl Snyder's *Business Cycles and Business Measurements*; Harold Glenn Moulton and Leo Pasvol'sky's *World War Debt Settlements*; Constance McGuire's *Italy's International Economic Situation*; George Unwin's *Studies in Economic History*; J. H. Clapham's *An Economic History of Modern Britain*; Mandell M. Bober's *Karl Marx's Interpretation of History*; Henry F. Grady's *British War Finance*; Russell C. Engberg's *Industrial Prosperity and the Farmer*; *Farm Income and Farm Life*; G. K. Chesterton's *The Outline of Sanity*.

HISTORY. Probably the year's most picturesque event in the field of history was the publication of T. E. Lawrence's *The Seven Pillars of Wisdom*, privately, and its abridgment, *Revolt in the Desert*, publicly. These were accompanied by additional details in *Lawrence and the Arabs*, by Robert Graves. Two books revived American history: *The Rise of American Civilization*, by Charles A. Beard and Mary R. Beard, and *Main Currents in American Thought*, by Vernon Louis Parrington, which seemed to approach their material from new angles.

Other interesting books on America were: *The Emergence of Modern America*, by Allan Nevins; *Provincial Society*, by James Truslow Adams; *America*, by Hendrik Willem Van Loon; volume II, *America Finding Herself*, of *Our Times: the United States 1900-1925*, by Mark Sullivan; seven volumes of the pictorial history, *The Pageant of America*, edited by Ralph Henry Gabriel and others; *The Oxford History of the United States*, by S. E. Morison; *Roosevelt and the Caribbean*, by Howard C. Hill; *Tombstone*, by Walter Noble Burns; *The American Secretaries of State and Their Diplomacy*, edited by Samuel Flagg Bemis; *Marching with Sherman: Passages from the Letters and Campaign Diaries of Henry Hitchcock*, edited by M. A. DeWolfe Howe.

Historical material on the World War still accumulated in: Volumes I and II of *British Documents on the Origins of the War, 1898-1914*, edited by G. P. Gooch and Harold V. Temperley, with Mr. Gooch's *Recent Revelations of European Diplomacy*; *The World Crisis, 1916-1918*, by Winston Churchill; *Five Weeks*,

by Jonathan French Scott. Other books of history were: *The Present Position of History*, by George Macaulay Trevelyan; *The Catastrophe*, by Alexander F. Kerensky; *The Rise of the German Republic*, by H. G. Daniels; *The Making of a State*, by Thomas Garigue Masaryk; *Twentieth Century Europe*, by Preston Slosson; *The Inquisition*, by A. L. Maycock; *Life in Regency and Early Victorian Times*, by E. Beresford Chancellor; *History of England, 1688-1815*, by E. M. Wrong; *Byzantine Portraits*, by Charles Diehl, translated by Harold Belle; *India's Past*, by A. A. Macdonell; *A History of the Ancient World*, by Michael Rostovtzeff; *Victor Emmanuel and the Union of Italy*, by C. S. Forester; volume V, *Athens*, and volume VI, *Macedon*, of the *Cambridge Ancient History*, edited by J. B. Bury, S. A. Cook, and F. E. Adcock; *An Outline History of Japan*, by Herbert H. Gowen.

SCIENCE. Popular science fills every year a bigger place in the book-lists, especially with the growing tendency to question its values, which comes not only from the religious point of view. Such books as C. E. Ayres' *Science: the False Messiah*, and Arthur Lynch's *Science: Leading and Misleading*, represented this tendency. Other leading works: Biological: Julian S. Huxley's *The Stream of Life*, and *Essays in Popular Science*; Albert E. Wiggam's *The Next Age of Man*; Logan Clendenen's *The Human Body*; G. K. Chesterton's *Eugenics and Other Evils*; William S. Sadler's *The Truth about Heredity*; Michael F. Guyer's *Being Well Born*; Griffith Taylor's *Environment and Race*; Maurice Maeterlinck's *The Life of the White Ant*; geological: Allan L. Benson's *The Story of Geology*; Ellsworth Huntington's *The Human Habitat*; Charles Schukert and Clara Le Vene's *The Earth and its Rhythms*; Arthur Holmes' *The Age of the Earth*; physical: P. W. Bridgman's *The Logic of Modern Physics*; Benjamin Harrow's *The Romance of the Atom*; *What is the Atom?* by E. N. da C. Andrade; *Archimedes: or the Future of Physics*, by L. L. Whyte; *The New Reformation*, by Michael I. Pupin; chemical: *The Romance of Chemistry*, by William Foster; astronomical: *Modern Astronomy*, by Hector MacPherson; *The New Universe*, by Baker Bronwell; *Astronomy*, by Henry Norris Russell; general: *Creative Knowledge*, by Sir William Bragg; *Creation*, by Edwin Tenney Brewster; *The Seven Seas of Science*, by Joseph Mayer; *The Science of To-day*, by Sir Oliver Lodge; *From Myth to Reason*, by Woodbridge Riley; *The War on Modern Science*, by Maynard Shipley.

TRAVEL AND THE OUT-OF-DOORS. Since the year's epic journey was Col. Charles A. Lindbergh's flight to Paris, his story of that flight, *We*, must lead the list of travel books. Not the least of his achievements was the publication of the volume so soon after the event. Among the other numerous books in this field were *Adventures in Arabia*, by W. B. Seabrook; *Passenger to Teheran*, by V. Sackville-West; *A Voyage to the Squid Seas in H. M. S. The Wager, 1740-1741*, by John Bulkeley and John Cummins; *The Himalayan Adventures of Gypsy Davy and Lady Ba*; *Encounters*, by B. Ifor Evans; *Cannibal Nights*, by Capt. H. E. Raabe; *The Glorious Adventure*, by Richard Halliburton; *Byways of the Tropic Seas*, by Hermann Norden; *Silver Cities of Yucatan*, by Gregory

Mason; *Jungle Paths and Inca Ruins*, by William Montgomery McGovern; *In Barbary*, by E. Alexander Powell; *In China*, by Abel Bonnard, translated by Veronica Lucas; *The Frantic Atlantic*, by Basil Woon; *In Savage Australia*, by Knut Dahl; *Pheasant Jungles*, by William Beebe; *Mallorca, the Magnificent*, by Nina Larey Duryc; *River Thames*, by F. V. Morley; *Orient Express*, by John Dos Passos; *What about North Africa?* by Hamish McLaurin; *Across Arctic America*, by Knud Rasmussen; *European Skyways*, by Lowell Thomas; *The Balearics and Their Peoples*, by Frederick Chamberlin; *Father Mississippi*, by Lyle Saxton; *That's New York*, by Morris Markey and Johann Bull; *My Journey to Lhasa*, by Alexandra Daid-Neel; *Camping in the Sahara*, by E. M. Hull; *Runaway Days*, by Samuel Scoville, Jr.; *The Sea: Its History and Romance*, by Frank C. Bowen; *On the Old Trail*, by Morley Roberts; *Canadian Footprints*, by M. O. Hammond; *Manhattan, the Magical Island*, by Ben Judah Lub-schitz; *Nine Thousand Miles in Eight Weeks*, by Mrs. Victor A. Bruce; *Islands of Queen Wilhelmina*, by Violet Clifton; *Mackenzie and His Voyageurs: By Canoe to the Arctic and the Pacific, 1789-1793*, by Arthur P. Woollacott; *Suhail*, by Coleridge Kennard; *In the Heart of Spain*, by Thomas Ewing Moore; *To the Mysterious Lorian Swamp*, by Capt. C. Wightwick Haywood; *The Breath of the Desert*, by Ferdinand Ossendowski, translated by Lewis Stanton Palen; *Wayfaring in Africa*, by Daisy M. Chown.

Books relating to out-of-door life included: *Lions in the Path*, by Stewart Edward White; *Tiger, Tiger*, by W. Hogarth Todd; *With a Camera in Tiger-land*, by F. W. Champion; *Down the Fairway*, by Robert T. Jones, Jr., and O. B. Keeler; *Trails Plowed Under*, by Charles M. Russell; *Cow Country*, by Will James; *Touchdown*, as told by Amos Alonzo Stagg to Wesley Winans Stout.

LITHUANIA. One of the new states formed out of the territory of the Russian Empire after the War. Capital, Kovno, although the Lithuanians claim Vilna as the capital of their country.

AREA AND POPULATION. The eastern boundary of the country was defined in a treaty with Russia, July 12, 1920; on the north the boundaries nearly coincide with the former boundary between Courland and Kovno; on the south they are still undetermined. (See below under *History*.) The area, based on 1914 figures, is 59,633 square miles; population, Jan. 1, 1926, 2,229,876. On Feb. 16, 1923, the Council of Ambassadors transferred the Memel district with a population of 170,000 to Lithuania. Just a month later they gave Vilna to Poland. Lithuania, however, continued to claim this district and to consider Vilna the Lithuanian capital. Important cities are: Kovno, 94,405; Grodno, 61,600; Memel, 36,041; Suvalki, 31,600; and Shavli, 21,878.

EDUCATION. In 1925 there were 2089 primary schools with 2882 teachers and 122,592 pupils, and 112 secondary schools with 22,949 pupils. The University of Kovno which was opened in 1922 had, in 1926, 130 professors and teachers and over 8000 students.

PRODUCTION. Lithuania is an agricultural country and preponderantly rural in character. The resources consist chiefly of agricultural produce and timber. Production in 1925 was as follows in cwts: rye, 13,333,300; wheat, 3,124,-

800; barley, 4,899,500; oats, 5,692,500; potatoes, 31,622,000; peas, 2,415,500; and flaxseed 798,000. In the same year the country possessed 497,000 horses, 1,339,000 cattle, 1,455,000 sheep, and 1,488,000 pigs. Poultry farming and bee keeping are also important occupations. The forests cover 1,956,000 acres, more than half of which are pines.

COMMERCE. No later statistics on commerce were available than those for 1925, when the unfavorable balance of trade was \$1,140,000, resulting from exports of \$22,280,000 and imports of \$23,423,000. In 1924 the balance of trade was favorable to Lithuania to the extent of \$6,004,980.

FINANCE. Preliminary statistics indicated that the state budget for 1926 was realized, with a surplus of 7,000,000 litas (one litas is worth \$0.10). Revenues collected amounted to 235,160,000 litas as against 241,940,000 litas estimated, and actual expenditures were 228,160,000 litas as against 236,220,000 litas estimated. Actual returns from indirect taxes, totaling 101,350,000 litas, were 6,000,000 litas below estimates, but the returns from other taxes and from State enterprises were above budget estimates. The budget for 1927 was balanced at 229,535,630 litas and was about 50,000,000 litas less than the 1926 budget.

COMMUNICATIONS. All railways in Lithuania are owned and operated by the State, and at the close of 1926 comprised 1954 kilometers of line. Until 1918, when Lithuania became independent, they formed a part of the Imperial Russian railway system. Operating revenues amounted to \$3,129,305 and operating expenses to \$3,341,039. Other revenues were \$403,869 and other expenses were \$218,614. Rolling stock in operation in 1926 consisted of some 240 locomotives, 443 passenger cars, and 4427 freight cars. The greater part of the rolling stock was received from Soviet Russia and Germany, and much of it was antiquated and in a dilapidated condition. A new railway between Amaliai and Telshy, 56 kilometers long, was constructed during the 1925-26 fiscal period, and several small constructions and rebuilding of bridges were made.

GOVERNMENT. According to the constitution of Aug. 1, 1922, executive power is in the president of the republic who acts through a responsible ministry; and legislative power in a diet, elected by universal, equal, direct, and secret suffrage. President in 1927, M. Smetona; Prime Minister, Professor Valdemaras.

HISTORY. The outstanding event of the year as far as Lithuania was concerned was the settlement of the Vilna dispute towards its close. As noted in the preceding *YEAR BOOK*, Lithuania fell under the sway of a dictator near the end of 1926, when Antona Smetona successfully carried out a *coup d'état* in December. The new régime established as a result of this stroke suppressed all opposition and to outward appearances, at least, kept the country under control and at internal peace during the year. The only untoward incident was a revolt on September 10, under the leadership of a Communist general. Arrests and imprisonment for the leaders quickly followed the suppression of the uprising by the government troops and the country was at peace again when the Vilna problem loomed on the horizon.

In the early part of October the relations be-

tween Lithuania and Poland were severely strained when Polish authorities arrested several Lithuanians in Vilna and closed many schools in that city because of alleged harsh treatment of Polish subjects at the hands of the Lithuanian government. Premier Valdemaras, the chosen lieutenant of Smetona, practically took no action in the matter, declaring that the next move was up to Poland, inasmuch as his government was ready to negotiate in the entire Vilna matter. The state of "peaceful war" between the two countries over this issue continued and threatened from time to time to burst forth into actual war and possibly drag the rest of Europe into the conflagration.

Early in November the attention of Europe was drawn to the Lithuanian-Polish dispute by charges emanating from Moscow to the effect that Poland was just waiting for the proper time to gobble up Lithuania and secure what she always desired, the port of Memel. To many competent observers it was the port of Memel rather than the city of Vilna that was the real root of the troubles between the two post-war States. Lithuania was chiefly agricultural and had practically no seagoing trade to speak of, yet she had the very fine port of Memel. Poland already had Vilna and was in a strong enough position to keep it, but Lithuania had Memel and Poland's problem was to gather in this seaport without disturbing the peace of Europe. The press of Europe in the fall continually discussed the proposition of the partition of Lithuania between Poland and Germany. Russia was chiefly interested through her friendship for Latvia, hoping, it was believed, to get a slice of Lithuania for that country. Poland, of course, denied that she had any intentions of dismembering Lithuania, but stated that she thought the matter ought to be cleared up one way or the other.

The other powers of Europe looked upon this question as a sore spot, and the concern of Great Britain, France, and Italy was expressed on November 21, when these powers told the Lithuanian government that it would please them mightily if it ended the "state of war" which had existed since 1920 and open the boundaries to Poland.

Premier Valdemaras declined to accept this friendly suggestion and stated that he would personally take the case of his country before the League of Nations. To complicate matters further the Russian government sent notes to the two governments concerning the matter which contained the significant statement that a treaty between Russia and Lithuania guaranteed the independence of the latter country. Charges and counter-charges were rife in the two countries, Lithuania, in particular, claiming that she had creditable evidence of a Polish plot to move against her.

In a note addressed to Russia, Great Britain, Germany, France, Italy, and the United States on November 28, the Polish government again denied any hostile intent toward Lithuania and again stated that the unnatural "state of war" should be abolished and the Niemen River and the Port of Memel should be opened up to Polish traffic. In the meantime, all kinds of rumors were spreading throughout Europe to the effect that the attitude of Valdemaras had considerably weakened his position at home and that he was in danger of losing his office at any time. He vigorously denied the reports, and

stated that he was planning to organize a coalition government which would represent all shades of opinion in the country. Polish newspapers were as active in reporting hostile Lithuanian acts as the Lithuanian papers were in reporting Polish activities. There is no doubt that the two countries were on the brink of war and only the interest of the other powers of Europe kept back the flood.

When the League of Nations met at Geneva early in December the matter was discussed by the representatives of the great powers in advance of its discussion in the League itself. Chamberlain, Briand, Stresemann, and Litvinov all agreed that Lithuania must give up her "state of war," even though she might theoretically claim the province of Vilna. The Lithuanian minister refused to accede to this formula, claiming that his country had a legal right to Vilna which it did not intend to surrender. After the matter was publicly brought before the League gathering, a committee, consisting of Foreign Minister van Blokland of the Netherlands, was appointed to consider the matter and make a proposal for its solution. Another committee was immediately sent to the disputed frontier to investigate conditions there. After the arrival of Marshal Pilsudski on December 10, he and Premier Valdemaras held several conferences with the League Council, as a result of which the "state of war" between the two countries was declared ended, and in the event of future troubles between the two countries League officials were to take steps to bring about a settlement. For further details of the temporary settlement of this vexing problem, consult the article LEAGUE OF NATIONS.

LIVERSIDGE, ARCHIBALD. Australian scientist, died at Kingston Hill, England, September 26. He was born at Turnham Green, England, Nov. 17, 1847. He was educated at the Royal School of Mines and the Royal College of Chemistry, and at Christ's College, Cambridge University. In 1872 he was appointed to the chair of chemistry and mineralogy at the University of Sydney, New South Wales. From that time until his retirement with the title of emeritus professor in 1907 his services to science in Australia were of high value. He was one of the founders of the Australasian Association for the Advancement of Science and acted as its secretary and president. He was honorary secretary of the Royal Society of New South Wales for thirteen years, and also its president and editor of its *Journal*. He founded the School of Mines in the University of Sydney in 1890. He was the author of more than a hundred papers on scientific subjects.

LIVESTOCK. The outstanding feature of the domestic livestock and meat situation during 1927 was an approximate 25 per cent reduction in the exports of meat, particularly pork, to the European countries. However with the maintenance or slight increase in the total slaughtering of meat animals, prices of beef, lamb, and pork were fairly well maintained throughout the year. These conditions indicated a better stabilized livestock industry than had existed at any time since the War.

Unusually favorable conditions prevailed throughout 1927 in the extensive range areas of the western part of the United States. Though pastures were a little late in starting they were generally good and the production of grains

and forage in nearly all the States was much above the preceding year and ample for carrying available livestock through the winter. No general drought movements of livestock were necessary and ranges were generally improved in carrying capacity due to ample rainfall. Such favorable climatic conditions and plentiful feed resulted in a tendency among cattlemen to restock with a consequence that slaughterings were somewhat less than in 1926, though prices were somewhat higher. There was some indication of a prospective reduction in the feeding of cattle in the fall and winter because of the poor corn crop in certain cornbelt States where early spring floods had interfered with corn planting. See LEATHERS.

Recent tendencies for expansion in the sheep industry were reflected in a generally prosperous year for sheepmen largely because of a considerable demand for breeding stock. The western lamb crop was smaller than in 1926 and wool and lamb prices were slightly less. Late spring storms, however, in many states resulted in heavy losses of aged ewes as well as lambs.

The swine industry encountered relatively unfavorable conditions as compared with 1926, due largely to decreased exports of cured pork. Production and storage were only slightly greater than in 1926 and approximately equal to the three-year average for 1924, 1925 and 1926, but the prices declined. Because of relatively cheap corn in the spring there was little decline in the corn-hog ratio from the very favorable one experienced throughout 1926, but in June the ratio dropped to approximately half that for the corresponding month of 1926, making 100 pounds of pork equivalent to 9.4 bushels of corn. The low corn-hog ratio continued during the summer but improved somewhat in the fall.

For the purpose of comparison, data showing the numbers of animals slaughtered and the weights of the dressed meats killed under Federal inspection in the United States during the years 1926 and 1927, together with the three-year average for 1924, 1925, and 1926, are presented in the accompanying table.

the egg and poultry markets in the fall and poultrymen were in a somewhat better position at the end of the year.

Some interesting trends in livestock production which had been developing for some time became sufficiently evident during 1927 to call for comment. Considerable expansion occurred in the sheep and goat industry in Texas where conditions are favorable for wool and mohair production. Wool production continued to outrank lamb production as a factor in sheep raising and a considerable number of wether sheep are kept solely for wool production. The extent of the sheep industry in Texas is largely dependent upon climatic conditions, which proved very favorable in 1927. In the Gulf Coast states livestock production continued to decline as a result of the operation of tick eradication and stock control laws. The relatively high prices of cattle for slaughter were tending, however, to stimulate a new interest in cattle production in the Southern States. The area west of the Continental Divide was no longer able to supply the Pacific Coast States with meat the year round and the eastern boundary of the area supplying the Pacific Coast trade continued to move east, coast packers reaching into Colorado for beef and lamb supplies. A considerable number of the hogs raised in the Great Plains States as far east as the Missouri River were shipped west for marketing at certain seasons. The evidences of specialized and localized production is quite striking when one considers the immense Pacific Coast shipments of eggs to the Atlantic seaboard, while at the same time hogs are being shipped from the Dakotas and Nebraska to California.

Disastrous floods in certain parts of the United States resulted in considerable losses to livestock. In the Mississippi flood alone it was estimated that 25,000 horses and mules, 50,000 cattle, 150,000 swine and 1,250,000 poultry were destroyed. There were also considerable losses to dairymen from the flood in the New England States.

The increasing interest in the quality of meat, particularly beef, culminated in a widespread

MEAT SLAUGHTERED AND STORED UNDER FEDERAL INSPECTION IN THE UNITED STATES
IN 1927, WITH COMPARISONS

	<i>Cattle</i>	<i>Calves</i>	<i>Hogs</i>	<i>Sheep and lambs</i>
Number slaughtered:

3-year average ^f —lbs.	74,741,000 ^f	742,618,000 ^g	2,282,000

^a Average for 1924, 1925, and 1926.

^b 37,767,000 lbs. fresh and 21,298,000 lbs. cured beef.

^c 160,799,000 lbs. fresh, 509,068,000 lbs. cured pork, and 102,926,000 lbs. lard.

^d 160,799,000 lbs. fresh, 509,068,000 lbs. cured pork, and 102,926,000 lbs. lard.

^e 108,614,000 lbs. fresh, 448,100,000 lbs. cured pork, and 94,884,000 lbs. lard.

^f 50,857,000 lbs. fresh and 24,884,000 lbs. cured beef.

^g 128,288,000 lbs. fresh, 516,746,000 lbs. cured pork, and 97,584,000 lbs. lard.

Conditions in the poultry industry were less satisfactory than in 1926. Egg production was heavy during the first half of the year but low prices failed to stimulate consumption sufficiently to move the large supplies on hand. Sales of poultry were likewise heavy. There was considerable indication of recovery, however, in both

education programme materially assisted by the Department of Agriculture. In May official beef graders began stamping carcasses of prime and choice grades for the information of the consumer. The keen interest shown in quality was indicated by the action of certain hotels in the Eastern States in recommending that their

patrons eat meats other than beef on the grounds that the quality was poor and the prices too high. This action was not approved by various livestock producers' associations who pointed out the fallacies of such an attitude and set forth that a boycott of beef would result in an undeserved hardship to the stock farmer.

INTERNATIONAL CONDITIONS. The most significant factor in the international trade in meats, which had a very definite reaction on local supplies and prices, was the British embargo against continental fresh meats, thus automatically forcing continental producers of fresh pork to cure their products. As a result Great Britain was supplied with an overabundance of ham and bacon, making cured pork prices relatively unattractive to the American packers; at the same time unusually high fresh pork prices prevailed. The latter condition so stimulated pork production in Great Britain and Ireland that the British Ministry of Agriculture estimated that the imports of continental fresh pork in British markets were adequately replaced from British and Irish sources even during the peak of the season. As a result British bacon factories found considerable difficulty in getting hogs at reasonable prices for curing. The prospects for American pork products in British markets were further complicated during the year by an increased production of all classes of meat animals in most of the European countries.

WORLD'S POULTRY CONGRESS. The economic importance of the poultry industry internationally was emphasized by the interest shown in the third World's Poultry Congress, held at Ottawa, Canada, from July 27 to August 4. Representatives from nearly 40 foreign countries, all of the Canadian provinces, and practically every State in the United States attended. There were exhibits of practices and equipment in use in various countries as well as an international poultry exhibition with over 8000 entries. There were sectional meetings on marketing, nutrition, breeding, disease and extension, sponsored by the Poultry Science Association, for attendants from the various colleges and experiment stations. An outstanding achievement of the Congress was the formation of a closer bond between practical poultrymen and poultry scientists throughout the world.

RESEARCH. The importance of supplying animals with rations containing adequate amounts of minerals was thoroughly emphasized in investigations conducted during the last few years. Numerous disease conditions which were not previously thought to be related to nutrition were found due either directly or indirectly to mineral deficiencies. Failure of livestock to thrive properly on certain pastures in England, Wales, and Scotland, was due to a mineral deficiency in the forage plants resulting from a reduced mineral content in the soil. A lack of lime in forage plants was found to be the indirect cause of diseases known in various parts of the United States as bone chewing, loin disease, and in South Africa as lamziekte. This trouble results from range cattle gnawing at the bones of putrid carcasses which either contain injurious saprophytic organisms or toxins which cause definite diseases and heavy losses.

Another complicating factor which has developed in the studies of the mineral requirements of confined animals is the need for the anti-rachitic vitamin, known as Vitamin D,

which may be supplied in certain feeds and for which the ultra-violet rays of the sunlight or the quartz mercury vapor lamp are also sources. Further than this, a need has been shown for proper balance between the phosphorus and calcium in the rations. Studies at a number of the State Agricultural Experiment Stations showed that where a ration was lacking in lime or in the anti-rachitic vitamin, or in a proper proportion of phosphorus and calcium, there resulted abnormal reproduction and lactation in mature animals, and unfavorable growth and deficient bone formation in growing animals. The indication of such results was usually pointed out in experiments with laboratory animals such as rats, and similar results were then obtained when such tests were applied to dairy and beef cattle, swine and poultry.

Efforts have been made for many years to determine why high protein feeds from plant sources were not as satisfactory as protein supplements from animal sources for swine and poultry. Preliminary studies were largely concerned with qualitative differences in the proteins in the vegetable and animal feed but the results in recent years indicated that differences in the mineral content are at least an important factor. In many cases when vegetable proteins were supplemented with proper minerals equally good growth and reproduction were obtained as with animal proteins.

CHANGES IN PERSONNEL. The more important changes in personnel during the year included the resignation of F. B. Morrison, Professor of Animal Husbandry of the Wisconsin Agricultural College and Assistant Director of the State Experiment Station, to accept the position of Director of the New York State Agricultural Experiment Stations; he was succeeded by Dr. G. Bohstedt, Animal Husbandman of the Ohio Experiment Station. Professor R. T. Parkhurst, Head of the Poultry Department at the Idaho University and Agricultural Experiment Station, was appointed Director of the National Institute of Poultry Husbandry at the Harper Adams Agricultural College of England, succeeding Prof. W. C. Thompson, who resumed his position as Head of the Poultry Husbandry Department of Rutgers Agricultural College. H. W. Vaughan, Professor of Animal Husbandry in the University of Minnesota, was appointed Head of the Animal Husbandry Department of the Montana Agricultural College to succeed Prof. C. N. Arnett, who resigned.

BIBLIOGRAPHY. Among the more important recent livestock publications were: F. W. Powell, *The Bureau of Animal Industry: Its History, Activities, and Organization* (Baltimore, 1927); J. Porter, *The Stockfeeder's Companion* (London, 1927, 2 ed., rev.); R. Schneider, *Die Anlage von Dauerweiden und ihr Betrieb nach Neueren Erfahrungen* (Breslau, 1926, 3 ed., rev.); C. Kronacher, *Allgemeine Tierzucht* (Berlin, 1927, 8 ed., rev.); T. B. Wood, *Animal Nutrition* (London, 1927, 2 ed., rev.); R. G. Linton, *Animal Nutrition and Veterinary Dietetics* (Edinburgh, 1927); J. Hammond, *The Physiology of Reproduction in the Cow* (Cambridge, 1927); D. J. Slater, *Market Classes and Grades of Cattle*, U. S. D. A. Bul. 1464 (1927); L. J. Horlacher, *Sheep Production* (New York and London, 1927); W. C. Davis and J. A. Burgess, *Market Classes and Grades of Dressed Lamb and Mutton*, U. S. D. A. Bul. 1470 (1927); W. H.

Peters, *Swine Questions Answered* (St. Paul, 1927); W. A. Lippincott, *Poultry Production* (Philadelphia, 1927, 4 ed., rev.); E. T. Brown, *The "How to do it" Poultry Book* (London, 1927). See also VETERINARY MEDICINE.

LLOYD, ALFRED HENRY. American educator, died at Ann Arbor, Mich., May 11. He was born at Montclair, N. J., Jan 3, 1884. He graduated at Harvard in 1888, and studied also at the Universities of Göttingen, Berlin and Heidelberg, 1889-91. His entire teaching career was spent at the University of Michigan, from 1891 until his death, successively as instructor in philosophy, assistant professor, junior professor and professor of philosophy. He was dean of the graduate school since 1915, and acted as president of the university in 1925. The University of California conferred on him the degree of LL.D. in 1924. Professor Lloyd was a member of the American Philosophical Association and of the Western Philosophical Association, and president of the latter body, 1915-16. He wrote: *Citizenship and Salvation* (1897); *Dynamic Idealism* (1898); *Philosophy of History* (1899); *The Will to Doubt* (1907); *Leadership and Progress* (1922), and numerous articles in philosophical, psychological, theological, historical, and sociological journals.

LOEW, LO, MARCUS. Motion picture producer and theatre owner, died at Glen Cove, N. Y., September 5. He was born at New York, May 7, 1875. He had but a scanty education, being compelled to earn his own livelihood at an early age. After various business experiences, he entered the theatrical field with David Warfield and Adolph Zukor as the proprietor of "penny arcades," consisting of penny peep shows. When the moving pictures began to attract attention, he was quick to see the possibilities in their exploitation, and he rose to prominence as an exhibitor, later adding vaudeville houses and picture producing studios to his holdings. At the time of his death he was the president of nearly one hundred subsidiary motion picture, vaudeville and booking companies, and was one of the wealthiest and most influential showmen in the world.

LONG, JOHN LUTHER. American novelist and playwright, died at Clifton Springs, N. Y., October 31. He was born at Hanover, Pa., in 1861, graduated at Lafayette College and practiced law in Philadelphia until he became successful as a writer. He frequently wrote about the Japanese and was well informed concerning their customs, although he had never visited Japan. His *Madame Butterfly*, written in 1898 as a short story, was revised in 1900 by David Belasco, with his collaboration, for a play, and later inspired Puccini to write the opera of the same name. Among the other books and plays which he wrote, some of them in collaboration with other playwrights, were: *Miss Cherry Blossom of Tokyo* (1895); *The Fox-Woman* (1900); *The Darling of the Gods*, with Belasco (1902); *Adrea* (1904); *The Dragon Fly* (1905); *Heimweh*, and *Other Stories* (1905); *Billy Boy* (1906); *Dolce* (1907); *Remembrances* (1909); *Kassa*, written for Mrs. Leslie Carter (1910);

Baby Grand (1912); *What Happens When One Loves One's Enemy* (1913); *Lady Betty Martingale*, written for Mrs. Minnie Maddern Fiske (1914); *Crowns* (1922); and the cantatas: *Yo-Nennen* (1903); *Gar-Anlaf* (1905); *The Song of Times* (1911); and the operas: *Hosi-San* (1906); *The Unjust Judge* (1916); and *Seffy* (1907).

LOUISIANA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,798,509. The estimated population on July 1, 1927, was 1,934,000. The capital is Baton Rouge.

AGRICULTURE. Severely handicapped by reason of the spread of mosaic disease and low prices for their produce, as well as by the Mississippi floods, the cane growers of the State nevertheless made progress with the planting of an East Java cane known as P. O. J., obtained from the Federal Government Experiment Station. High yields and freedom from mosaic were reported of this cane, and according to the New Orleans *Times-Picayune* over 130,000 acres were planted to it and other new canes in the autumn, with expectancy of a restoration of this branch of the State's agriculture. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1927	1,560,000	545,000*	\$52,820,000
	1926	1,979,000	829,000*	45,595,000
Rice	1927	481,000	17,816,000	15,065,000
	1926	501,000	16,282,000	17,096,000
Corn	1927	1,161,000	20,318,000	18,286,000
	1926	1,127,000	19,722,000	17,750,000
Potatoes	1927	41,000	2,665,000	4,897,000
	1926	35,000	2,196,000	4,172,000
Sweet potatoes	1927	99,000	9,702,000	6,791,000
	1926	79,000	7,110,000	6,399,000
Hay	1927	296,000	374,000*	5,097,000
	1926	251,000	296,000*	4,212,000
Sugar cane	1927	80,000	1,120,000*
	1926	127,918	864,299*

* bales, * tons.

MINERAL PRODUCTION. The output of petroleum, the chief mineral product of the State, was much increased in 1926, both as to quantity and as to total value. There were produced 22,803,000 barrels of petroleum, in 1926, as against 20,272,000 barrels in 1925; the product for 1926 was valued at \$38,400,000, that for 1925 at \$32,500,000. Natural gas production was 152,620,000 M cubic feet in 1925, the latest year of available statistics, and in 1924, 160,945,000 M cubic feet; in value, \$8,125,000 in 1925 and in 1924, \$7,626,000. From natural gas were derived in 1926 47,000,000 gallons of gasoline, as against 43,489,000 gallons in 1925; having a value of some \$4,100,000 for 1926 and for 1925 of \$4,216,000. The production of salt was 520,400 short tons in 1926, to 500,350 short tons in 1925; the product was valued at \$2,457,875 in 1926, in 1925 at \$2,218,265. The total value of the State's mineral production in 1925 was \$80,603,981 with deductions made for duplication; in 1925 it was \$59,930,681.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of general departments of the State

government in the fiscal year ending December 31, 1926, were \$17,178,455; their rate per capita was \$8.95. They included \$4,367,379 apportioned for education. Totals not included above, of \$80,911 expended in public service enterprises, \$729,734 in interest and \$8,522,548 in permanent improvement outlays, brought the aggregate of State expenditure to \$26,491,648. Of this, \$10,413,929 was for highways; \$2,790,689 being for maintenance and \$7,623,240 for construction.

Revenue receipts were \$26,794,207; or per capita, \$13.96. Of their total, property and special taxes yielded 39.9 per cent, or \$5.58 per capita. Earnings of departments and compensation paid the State for officials' services supplied 4.9 per cent of revenue; 37.4 per cent was derived from sale of licenses, chiefly on incorporated companies, on motor vehicles, and on trades and professions, from the severance tax, and from a sale tax on gasoline.

Net State indebtedness on December 31, 1926, was \$14,687,700 or \$7.05 per capita. Property subject to ad valorem taxation bore a valuation of \$1,717,877,125. State taxes levied were \$9,877,793, or \$5.15 per capita.

TRANSPORTATION. The number of miles of railroad line in the State Jan. 1, 1927, was 4,828.36. There was no new construction reported in 1927.

EDUCATION. The large yield of the tobacco sales tax in the first year of its operation, attaining about \$1,500,000, aided educational work in many parishes. The Secretary of the State Teachers' Association, in the *Journal of the National Education Association*, reported at the end of the year that school buildings and equipment ruined by the flood had been generally restored, and that full sessions were in prospect of being held.

CHARITIES AND CORRECTIONS. The State Board of Charities and Corrections, though possessing no administrative powers, exercises supervision over State institutions. It is composed of six members, with the Governor as chairman ex officio. The chief charitable and penal institutions conducted by the State or receiving State aid are the Charity Hospital, New Orleans; Charity Hospital, Shreveport; Central Louisiana Hospital (insane), Pineville; East Louisiana Hospital, Jackson; State Colony and Training School for Feeble-minded, Alexandria; State School for Deaf, Baton Rouge; State School for Blind, Baton Rouge; State School for Blind Negroes, Baton Rouge; Soldiers' Home of Louisiana, New Orleans; Louisiana State Penitentiary, Baton Rouge; Louisiana Training Institute (correctional), Monroe. According to the Department of Commerce 765 prisoners were admitted to the State penal institutions in 1926; there were 3458 patients in State hospitals for the insane on Jan. 1, 1927.

LEGISLATION. A special session of the State Legislature convened September 6, to pass relief measures in the emergency brought about by the Mississippi River floods earlier in the year. The session lasted five days, ending September 10. Among the matters dealt with was the claim of inhabitants of the parishes of St. Bernard and Plaquemines for compensation for the losses and sustenance expenses that they incurred when their territory was inundated through the intentional opening of a crevasse in the levees near Caernarvon, to lower the

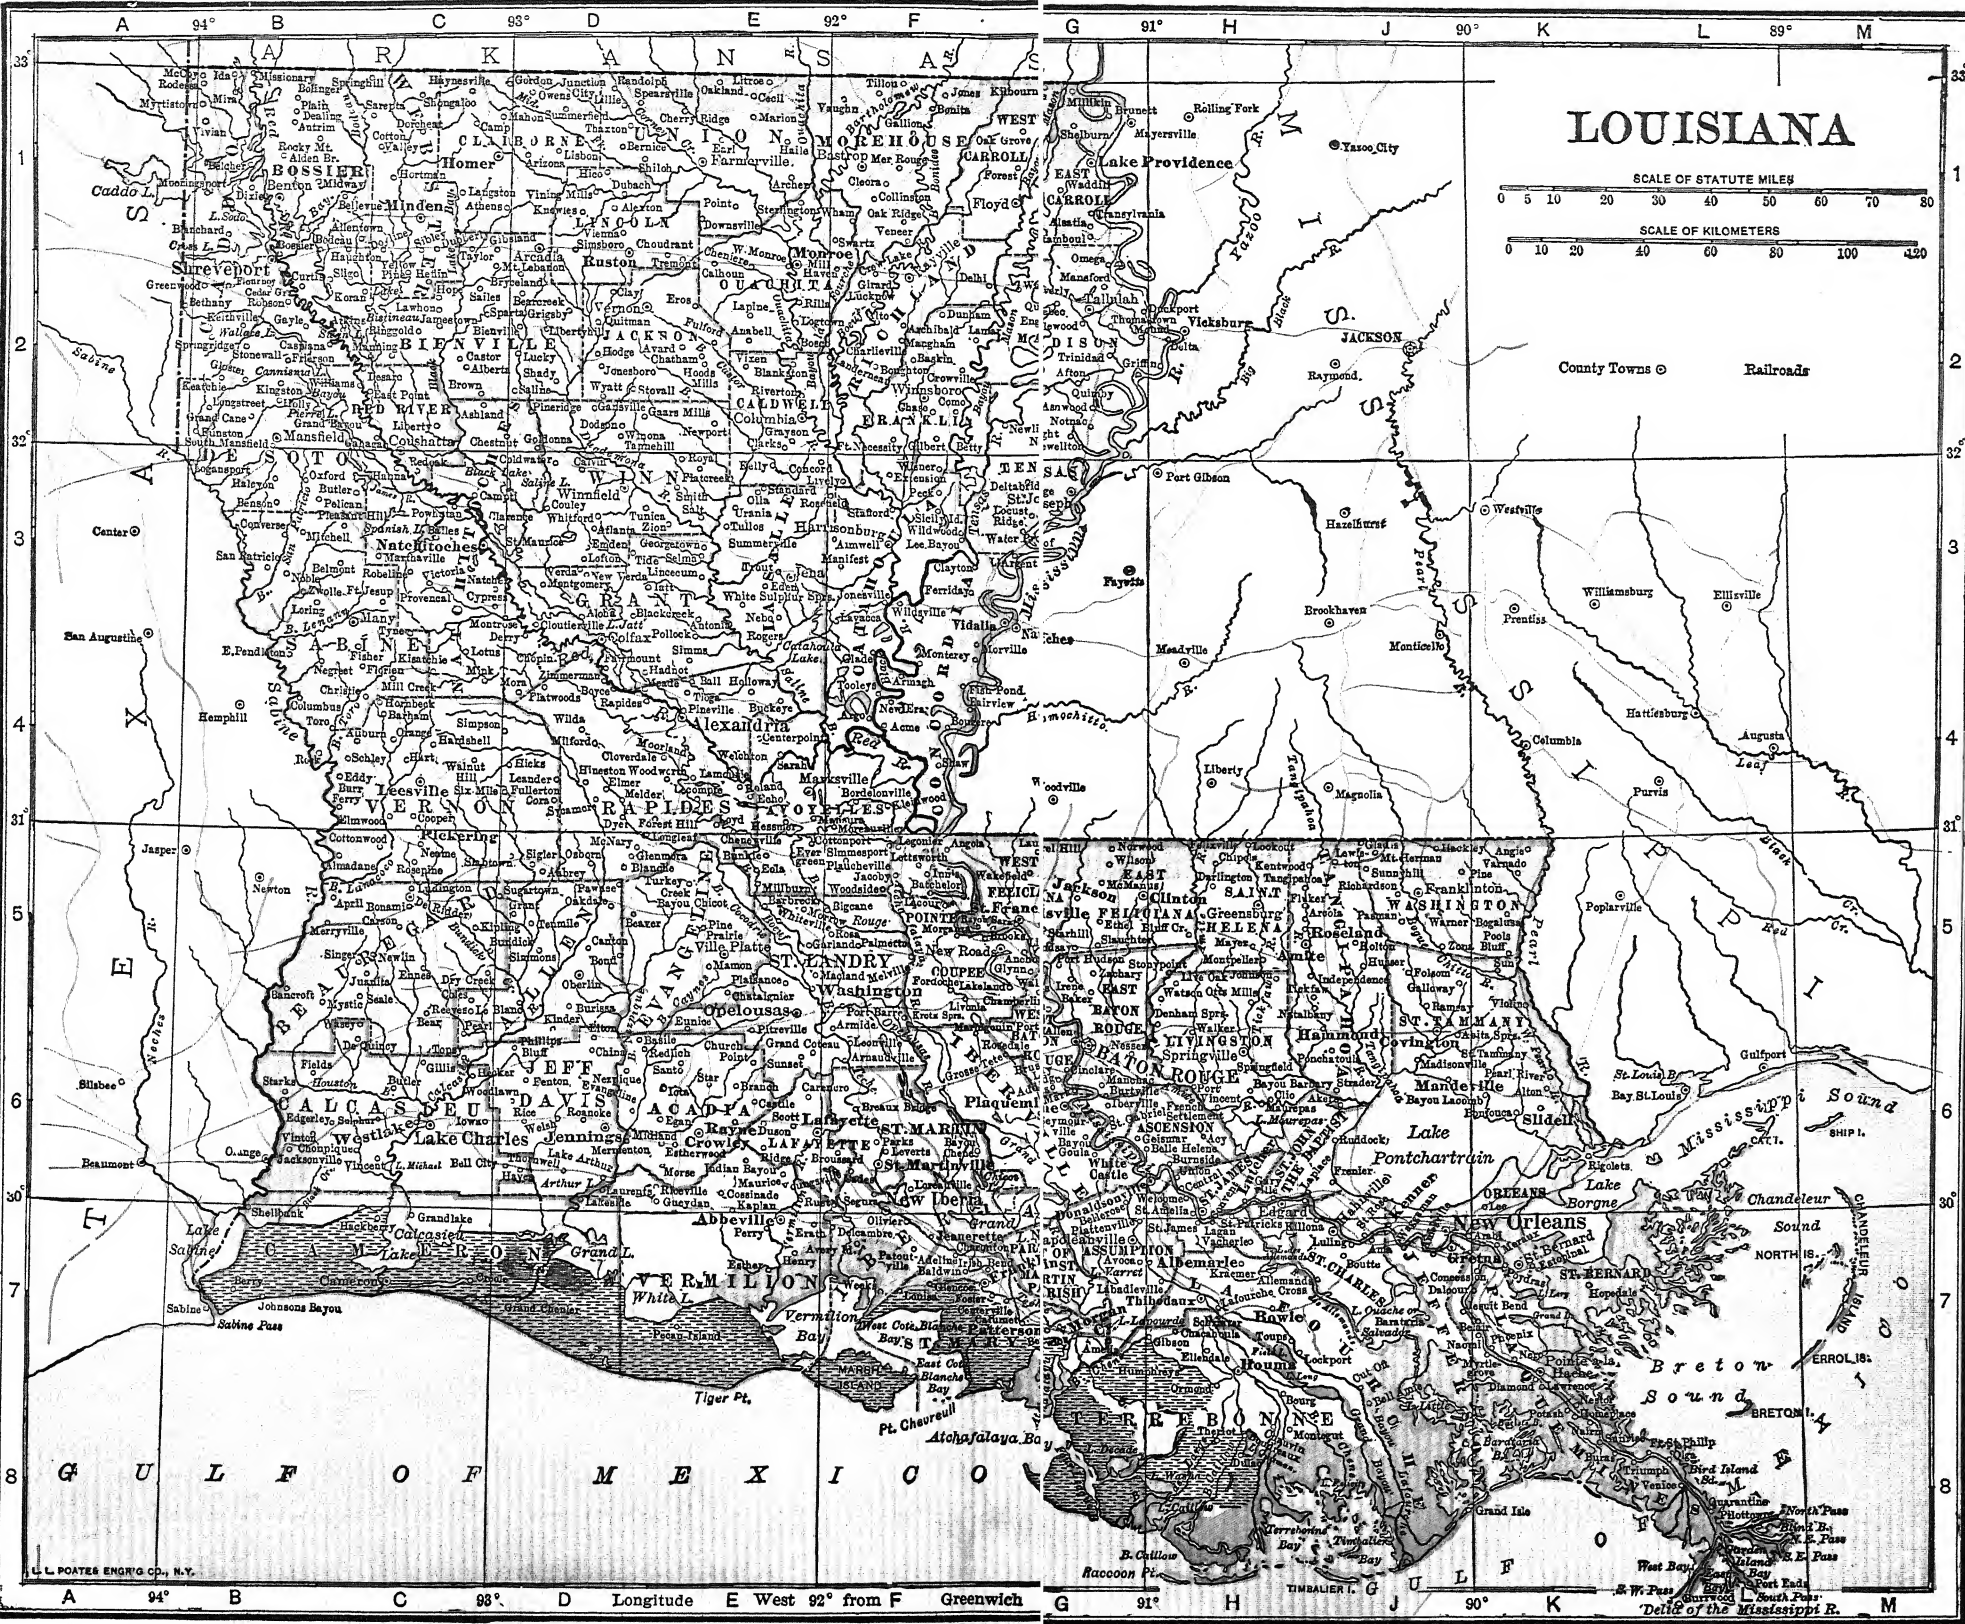

water level of the river below that point and remove the peril to New Orleans.

POLITICAL AND OTHER EVENTS. Gov. Oramel H. Simpson was reelected and the regular Democratic State ticket were elected on November 8. The State suffered severely in the Mississippi Valley floods of April and May. Before the end of April the height of the river at New Orleans attained an unprecedented level which threatened to break or overflow the levees there and cause the inundation of the city. In order to hasten the movement of the water past the city, the Governor ordered the dynamiting of the levee at Poydras, some 12 miles downstream. Inhabitants of the Acadian parishes of St. Bernard and Plaquemines, which lay in the track of the intended discharge, were warned, and several days were given them to withdraw. On April 29 the levee was dynamited and the flood was admitted to the abandoned lands. Levees at Bayou des Glaisses broke May 12, laying waste 35,000 homes along the Atchafalaya. The New Orleans Clearing House Association voted a fund of \$2,000,000 to be lent to needy refugees for immediate succor. Many of these were muskrat trappers, and later presented, among their claims against the State, demands to be indemnified for the loss of the muskrats which abounded in the parishes before the inundation, and formed one of the chief sources of local livelihood. The Legislature was convened to provide relief for the flood sufferers (see *Legislation*, above). In October the New Orleans Levee Board formed plans to increase the height of levees fronting the city by 3 feet to 28 feet, at a projected cost of \$11,433,700. During the period of flood hardship in the State Secretary of Commerce Hoover, acting as the head of the Federal relief organization, appointed former Gov. John M. Parker as director of relief within the State.

Suit was brought by Governor Simpson for the ousting of State Conservation Commissioner V. K. Irion, who had previously refused to resign. Contentions in this suit had to do with the business conduct of the Conservation Department, and especially the disposal of its funds. A judicial order ousting Irion resulted. Failure of judges to impose criminal sentences in accordance with the indeterminate sentence law of 1925 led to legal efforts to obtain the freedom of more than 100 convicts alleged to have been illegally sentenced, but the Supreme Court adopted the course of remanding such cases to the sentencing judge for resentencing. The State Supreme Court in a decision of January 3 upheld the constitutionality of the State stamp tax on tobacco products, levied by an act of 1926 for the providing of State aid to schools. The United States Supreme Court sustained May 3 the State medical statute under which a chiropractor had been prevented from practicing without first conforming to the State medical requirements. The same court held March 14 that a State law and city ordinances of Louisiana having the effect of segregating negro and white races where the majority of a community demanded it were invalid. The Louisiana Highway Commission began work in July on the Chef and Rigolets bridges and the Lake Shore highway, to be completed in 1928.

The Board of American Missions of the United Lutheran Church aggressively spent its first year of organization, and devoted itself to the task of evangelization. The Canada Synod established a Lutheran Immigration Board to care for and to bring Lutheran immigrants to Canada. The Lutheran Builders' Association of metropolitan New York was organized under the New York Synod, and \$100,000 was raised by the New York and New England Synods to aid in establishing home missions in the metropolitan area. Evangelization was further carried forward through radio broadcasting stations. The institutional and non-institutional inner mission work of the Lutherans included the establishment of the National Lutheran Sanitarium, at Albuquerque, N. Mex.; the erection of a chapel, at a cost of \$50,000, on the grounds of the Augustana Deaconess Home, Omaha, Neb.; and the erection of new hospitals, one in New York City, another in Brooklyn, N. Y.

Foreign mission work in China was handicapped by conditions there, but a new field was acquired in Tanganyika under the direction of the Augustana Synod Foreign Mission Board, which received a bequest of \$500,000 during the year for its foreign mission work. The United Lutheran Church of the Andhra country, India, associated with the United Lutheran Church in America, established Andhra College which began its career with an endowment of over \$300,000. Developments in India were further marked by the movement toward separate established native churches, and especially in the organization of the Telugu Lutheran Church with 140,000 baptized members and 55,000 adult communicants, and in the formation of the India Lutheran Federation at Rajahmundry, consisting of first, the Lutheran Church in the Andhra country; second, of the Tamil Lutheran Church, and, third, of the Gossner Evangelical Lutheran Church.

The National Lutheran Council continued to aid the countries of Europe that suffered from the World War and especially the Lutheran people of Russia. A theological seminary was established at Leningrad during the year and the Lutherans of Siberia were visited by Bishop Theo. Myer, D.D. A considerable movement of educational and evangelistic nature was the inauguration of Chautauqua Summer Assemblies; the development of summer colonies at Paradise Falls and Lutherland in the Poconos, Pennsylvania, the Finnish Colony in Dutchess County, New York, and the Lutheran Colony on Lake Geneva, Wis.; and in Lutheran tours of Europe. Other important achievements of the year were: The successful inauguration of a \$400,000 campaign for pension and relief for Lutheran pastors of the United Lutheran Church; the organization of campaigns to cancel the budget indebtedness of numerous churches; and campaigns conducted for such educational institutions as Hartwick Seminary, Otsego County, New York, and the Pacific Lutheran College, Parkland, Wash.

Among the publications of the year were: The fifth edition of the *Lutheran World Almanac*, and the *Ansvar Lutheran*, an English organ of the United Danish Lutheran Church. Progress was also reported in the preparation of an intersynodical hymnal and in the preliminary translation of Luther's Catechism.

LUXEMBURG, lüks'em-burg. A small state of western Europe, bounded by Germany, France, and Belgium; neutralized by the Treaty of London, 1867; occupied by the Germans during the war; restored to independence after the armistice. Area, 999 square miles; population, according to the census of 1922, 260,767, as compared with 263,824, Dec. 1, 1916. The great majority of the population is Roman Catholic. Luxembourg is a country of small landowners and of farmers tilling their own holdings. The total area of land devoted to agriculture is about 500,000 acres, and of this amount approximately 430,000 acres are farmed by resident proprietors. Individual farms number in the neighborhood of 40,000. The principal foodstuffs raised in the grand duchy are potatoes and cereal grains, including rye, wheat, barley, and oats. The cultivation of oats covers the largest area of land and is followed in importance by potatoes. The leading industry of the state, however, is mining and the production of iron and steel. The mineral resources of Luxembourg include comparatively extensive iron-ore mines, as well as slate, lime, dolomite, quartzite, and stone beds. The production of pig iron which in 1913 was some 2,510,000 gross tons, in 1926 had reached 2,520,000 tons and for 1927 was estimated at 2,660,000 tons. In 1927 the production of steel ingots and castings which had amounted to 2,210,000 tons in 1926 was estimated at 1,420,000 tons. Brick, printing, and leather and glove industries are also relatively important. Separate figures on foreign trade have not been available since the economic union in 1922 with Belgium. The budget estimates for 1926 were: Revenue, 168,477,347 francs; expenditure, 162,299,434 francs. The public debt on Dec. 31, 1924, amounted to 468,742,945 francs. In 1924 there were 334 miles of railways. Under the constitution, as amended in 1919, sovereign power rests in the nation and the representatives are elected on the basis of universal suffrage and proportional representation. The Grand Duchess in 1927 was Charlotte Aldegonde, born Jan. 23, 1896, who succeeded to the throne, Jan. 9, 1919. The Minister of State and President of the government was M. Bech (appointed July, 1926). The other members of the cabinet were: Director-General of Justice, Public Works, Trade and Industry, N. Dumont; Social Welfare and Labor, M. Dupong; Finance and Public Instruction, M. Clemang.

LUXOR. See **ARCHAEOLOGY**.

LUZZATTI, lóo-tsát'té. LUIGI. Italian statesman and financier, died March 29. He was born at Venice, Mar. 11, 1841, of a Jewish family. He studied economics at Padua, and devoted considerable time to literature, philosophy and the natural sciences. Soon after his graduation from college the authorities at Venice, then under the control of Austria, compelled him to leave that city; he was charged with treason as a result of his organization of a mutual aid society among the gondoliers. In 1863 he first taught political economy at Milan, and launched a campaign for people's banks. When the province of Venice was annexed to Italy he was made

professor of constitutional law in the University of Padua. In 1870 he was elected to the House of Deputies, in which he sat for more than fifty years, until he was elected to the Senate in 1921. Luzzatti's ability as a financier won early recognition, and he was only twenty-eight when he became vice minister in the cabinet of Minghetti, in 1869. Five times, in 1891, 1896, 1903, and 1906, and finally in 1920, at the age of seventy-nine, he held the portfolio of finance. In 1910 he was head of the government, with the portfolio of minister of the interior. In March, 1911, his term as premier was ended by an adverse vote on an electoral reform bill.

Throughout his political career Luzzatti retained his interest in education, and from 1907-09, a period of comparative calm in politics in Italy, he taught constitutional law at the University of Rome and prepared his book, *La Liberté de Conscience et de Science*, published in 1910. His activities were widely varied, but his most notable successes were achieved as a financier and an advocate of social and economic reforms. He was also an active philanthropist. Among his numerous honors and decorations were those of membership in the Institute of France and Grand Cross of the Legion of Honor; knighthood of the Order of Savoy; Grand Cross of Sts. Mauritius and Lazarus, and Grand Cross of the Order of Leopold of Belgium. In his latter years he took little part in politics, but occupied himself with the preparation of his memoirs and of a complete edition of his numerous books. Among them were, besides the one already named: *La Diffusion du Crédit et les Banques Populaires* (1863); *L'Eglise et l'Etat en Belgique avec Applications à l'Italia* (1866); *Pro Italico Nomine*; *Scienza e Patria* (1916); *Sul Filosofo Dalmata Giorgio Politeo*; *Grandi Sacrifici per la Patria* (1924); *Dio nella Libertà* (1926).

LYFORD, RALPH. American composer and conductor, died at Cincinnati, September 3. He was born at Worcester, Mass., in 1882. After graduation at the New England Conservatory, he studied conducting with Nikisch at Leipzig. He was associated as conductor with the San Carlo Opera Company, the Boston Opera Company, the Aborn English Opera Company and the Cincinnati Zoo Opera. From 1914 on he was head of the operatic and orchestral departments at the Cincinnati Conservatory and assistant conductor of the Cincinnati Symphony Orchestra. His works include many songs, six string quartets, a symphony and an opera, *Castle Agrazant* (Cincinnati, 1926).

LYNCHINGS. The Tuskegee Institute of Alabama reported that for 1927 sixteen negroes were lynched in the United States. In 1926 the number of lynchings had been 30; in 1925, 17; in 1924, 16; in 1923, 33. The States in which the 1927 crimes had taken place were: Arkansas, 3; Kentucky, 1; Louisiana, 1; Mississippi, 7; Missouri, 1; Tennessee, 2; Texas, 1. The negroes lynched had been charged with the following offenses: murder, 7; attempted murder, 2; rape, 2; attempted rape, 3; improper conduct, 1; charge not reported, 1. Twelve of the persons lynched had been taken from the hands of the law, 6 from jails and 6 from officers of the law outside of jails. Four of the lynched negroes were burned to death and 2 were put to death and their bodies then burned. In 42 cases

officers of the law prevented lynchings. Eight of these had occurred in northern States and 34 in southern States. In 24 cases the prisoners were removed or the jail guards increased. In 18 other cases armed force was used to repel the would-be lynchers. In these 42 instances 68 persons were saved from mobs, 15 being whites and 53 negroes. A notable example of official bravery in the face of threatened mob violence was that of the sheriff of Hillsborough County, Florida, who for three days, in June, stood off a Tampa mob that was seeking to lynch one of his prisoners. State troopers were called for who fired into the mob and dispersed it after killing 5 persons and wounding 32 others. But the intended victim of the mob was a white man and not a negro.

LYNN-JENKINS, FRANK. English-American sculptor, died at New York, September 1. He was born at Torquay, England, in 1870, and was educated at Weston College, the Lambeth School of Modeling and the schools of the Royal Academy, England. Before going to the United States to make his home there, ten years before his death, he exhibited in England at the Royal Academy and the Paris Salon. He won many prizes, notably the silver medal of the International Exposition at Paris in 1900. One of his pieces, a Madonna and Child, is in the Metropolitan Museum of Art, New York. At the time of his death he was working on a marble group for Fairmount Park, Philadelphia, Pa. He made his home in New York.

MAAS, ANTHONY J. Roman Catholic theologian, died near Poughkeepsie, N. Y., February 20. Born at Bainkhausen, Westphalia, Germany, Aug. 23, 1858, he was educated at the private schools of Hellefeld, 1869-72; Stockum, 1872-72; and Arnsberg, 1874-77, going to the United States in 1877. He was ordained a Roman Catholic priest, entering the Society of Jesus and continuing his studies at Manresa, N. Y., and at Woodstock College, Frederick, Md., where he became professor of Greek and Latin. He went to Manresa, Spain, in 1893-94. In 1912 he was made Provincial of the Society of Jesus in the Province of New York and Maryland, and, upon his termination of office, assumed the professorship of ascetical theology at the novitiate of St. Andrew, Poughkeepsie, N. Y. He was an authority on Oriental languages; author of *Day in the Temple*, 1892, *Christ in Type and Prophecy*, 1893-96, *Commentary of Gospel of St. Matthew*, 1898. His *Life of Christ*, 1891, was a textbook in Catholic schools and colleges. He was a contributor to theological journals and to the *American Catholic Quarterly Review*.

MABERY, CHARLES FREDERICK. American chemist, died at Portland, Me., June 26. Born Jan. 13, 1850, at New Gloucester, Maine, he attended the public schools of that town and entered Harvard, receiving the degree of bachelor of science from the Lawrence Scientific School in 1876, and the doctor's degree from Harvard in 1881. He was assistant instructor of chemistry at Harvard from 1874 to 1883 when he became professor of chemistry at Case School of Applied Science serving until 1911. In 1887, after working on the development of electrical smelting, he became interested in oil refining and did notable research work in organic chemistry, especially in the study of the composition of lubricating oils from petroleum, which resulted in his inventions of the lubricants oilpac and amolpac.

Some of his investigations and researches were carried on in Europe. A lover of art, he was active in the development of the Cleveland School of Art. At the time of his death he was professor emeritus of Case School of Applied Science, having retired from active teaching in 1911.

MACAO, māk'ō. An island at the mouth of the Canton River, in China, which, with the two adjacent islands of Taipa and Colôane, constitutes a province of Portugal. Area, 4 square miles, population, according to the census of 1910, 74,866, of whom 2171 were Portuguese and the remainder for the most part Chinese. The trade is chiefly in transit and is mainly in the hands of the Chinese. In 1926-27 the revenue was estimated at 3,029,210 escudos and the expenditure at 3,321,742 escudos. The city of Macao is divided into two parts, inhabited respectively by Chinese and non-Chinese, each under its own administration.

McCOOK, JOHN JAMES. American clergyman and educator, died at Hartford, Connecticut, January 9. Born in New Lisbon, Ohio, Feb. 2, 1843, he was educated at Jefferson College, and Trinity College, from which he graduated in 1863, and then attended the College of Physicians and Surgeons of Columbia, and later Berkeley Divinity School. He served as professor of modern languages at Trinity College from 1883 to 1923 and at the time of his death he was professor emeritus and trustee. During the Civil War he served as a lieutenant in the First Virginia Volunteers, and he was the last survivor of the "Fighting McCooks" of Ohio. After his ordination as a priest of the Protestant Episcopal Church in 1867 he was rector of St. John's Church in East Hartford for many years. A writer as well as a linguist, he was the author of many articles on various sociological topics, and editor of the *Church Weekly* in 1872. In 1910 he was honored with the degree of D.D. by the Berkeley Divinity School. He served as a member of public committees for penological legislation, and wrote extensively on penological subjects, and welfare and charities.

MCDANIEL, GEORGE WHITE. American clergyman, died at Richmond, Va., August 18. He was born Nov. 30, 1875, in Grimes County, Texas, and, after receiving the degree of bachelor of arts from Baylor in 1898, he graduated from the Southern Baptist Theological Seminary, in 1900. In 1905 he received the degree of D.D. from Richmond College, and, in 1920, the degree of LL.D. from Baylor University. Ordained in the Baptist ministry in 1900, he held pastorates at Temple, Tex., 1900-02; at Gaston Avenue Church, Dallas, Tex., 1902-04; and at the First Baptist Church, Richmond, Va., from 1904 until his death. He served three years as president of the Southern Baptist Convention; was trustee of the Southern Baptist Theological Seminary; president of the Baptist General Association of Virginia; and president of the Board of Directors of the Baptist Orphanage of Virginia. Among his writings were *The People Called Baptists*, *The Churches of the New Testament*, *A Memorial Wreath*, *Seeing the Best*, and *The Supernatural Jesus*.

MCDONALD, HOWARD. American educator, died July 10. He was born at Duncan Falls, Ohio, Apr. 11, 1876, and was educated at Muskingum College, Ohio (A.B., 1901), Princeton University (A.B., 1902), and the University of Michigan, where he received a Ph.D. in 1916. He

was professor of Greek and Latin at Knoxville College, 1902-03, of Greek and Philosophy at Muskingum College, 1903-09, serving from 1910 until 1913 as clerk of the Common Pleas Court of Muskingum County, Ohio, and as dean and professor of political science of Muskingum College from 1915-18. In 1918 he became dean and professor of history and economics at Parsons College, Fairfield, Iowa, of which he was made president in 1922.

MACEDONIA, mäs'e-dō'nīā. A region in the Balkan peninsula, nearly corresponding to the vilayet of Saloniki, in the former Turkish Empire; after the Balkan Wars partitioned among Greece, Serbia, and Bulgaria, Greece receiving the largest share. The departments under Greek control with their populations, according to the census of 1920, are as follows: Saloniki, 407,238; Drama, 182,593; Kosani, 163,004; Florina, 127,941; Serres, 112,135; Pellis, 97,521; total, 1,090,432.

McEVOY, AMBROSE. British painter, died at London, England, January 4. He was born in 1878. He was educated at the Slade School. He was a member of the International Society of Painters, the National Portrait Society and the Royal Society of Portrait Painters, and was elected an associate of the Royal Academy in 1924 and an associate of the Royal Society of Painters in Water Colors in 1926. Among the galleries in which his works were hung were the National Gallery of British Art (Tate Gallery), London; the Luxembourg Museum, Paris, and the Municipal Gallery of Johannesburg, South Africa.

McGILL UNIVERSITY. A coeducational institution of higher education at Montreal, Quebec, Canada; founded in 1821. The enrollment for the autumn session of 1927 was 2772; distributed as follows: arts, 997; applied science, 339; medicine, 470; commerce, 212; graduate school, 120; music, 166; dentistry, 56; law, 61; physical education, 59; pharmacy, 26; social workers, 29; graduate nurses, 24; Macdonald College (agriculture and household science), 213. The registration in the French Summer School of 1927 was 192. The number of members on the teaching staff was 452. Additions to the staff during the year included: A. Grant Fleming, M.B., D.P.H., to be acting head of the department of public health and preventive medicine; Wilbert George McBride, B.Sc., to be Macdonald professor of mining engineering; Louis d'Hautesserve, Diplômé ès lettres Philosophie de l'université de Paris, to be lecturer in French; and 11 other assistant professors, and lecturers in the various departments. The productive funds of the University amounted to \$18,178,843, and the income for the year to \$1,949,193. The library contained 268,059 volumes. Principal, Sir Arthur William Currie, G.C.M.G., K.C.B., LL.D.

McGOVERNITE. See MINERALOGY.

MACH, mag, EDMUND (ROBERT OTTO) VON. German-American writer and lecturer on art, and outstanding advocate of Germany in the World War, died at Bangor, Me., July 14. He was born at Gaffert, Pomerania, Germany, Aug. 1, 1870. After serving two years in the German army, 1889-91, he went to America, and entered Harvard University in the latter year. He graduated in 1895, and in 1899-1903 was an instructor in fine arts at Harvard. He was also an instructor in the history of art at Wellesley

College, 1899-1902, and a lecturer in the history of art at Bradford Academy, Cambridge, Mass., 1902-15. At the outbreak of the World War he became one of the most outspoken advocates, in America, of Germany's cause, and until his death he wrote and spoke indefatigably in the service of his native land. He was a member of the Archaeological Society of America and of the Copley Society, of Boston, and a governor of the latter for three years. In 1923 he gave up his academic career to study law. He wrote: *Greek Sculpture, Its Spirit and Principles* (1903); *A Handbook of Greek and Roman Sculpture* (1904); *Outlines of the History of Painting* (1905); *The Art of Painting in the Nineteenth Century* (1908); *What Germany Wants* (1914); *Germany's Point of View* (1915); *Why Europe Is at War* (1915); *Sir Edward's Evidence* (1915), besides numerous translations and magazine and newspaper articles.

MCKEAN, HORACE GRANT. American educator, died at Newark, N. J., January 9. He was born at Hammonton, N. J., Dec. 13, 1864, and, after graduating from Colgate University in 1889, studied at Crozer Theological Seminary, being ordained in the Baptist ministry in 1890. For five years he held pastorates at Philadelphia and Arlington, N. J., and then began his teaching career at Pennsylvania Military College, Chester, Pa., where he was professor of English and literature 1895-99. He was headmaster of Colby Academy, New London, N. H., 1899-1905, and going to Union College in the latter year held the chair of rhetoric and public speaking for twenty-two years.

MCKENZIE, DONALD DUNCAN. Canadian jurist and statesman, died at Halifax, N. S., June 27. He was born at Lake Ainslie, N. S., Jan. 8, 1859. He was educated at the Sydney, N. S., Academy, and was admitted to the bar of Nova Scotia in 1889. He was first elected to the legislature of Nova Scotia in 1900, resigning in 1904, and in 1907 becoming a member of the Dominion House of Commons. He was reelected in 1908, 1911, 1917, and 1921. After the death of Sir Wilfred Laurier in 1919, Mr. McKenzie was elected House leader of the Liberals in the Canadian Parliament, the Liberals being then in opposition. This position he relinquished to Mackenzie King. In 1921-23 he was solicitor general of Canada, and then he became puisne judge of the Supreme Court of Nova Scotia and judge in bankruptcy.

McLOUTH, LAWRENCE AMOS. American Germanic scholar, died at New York, February 24. He was born at Ontonagon, Mich., Jan. 19, 1863. He graduated in 1887 at the University of Michigan, to which, after three years as principal of the Danville, Ill., high school and two years of study at Leipzig, Heidelberg and Munich, he returned as instructor in German. In 1895 he became professor of Germanic languages and literatures at New York University. In 1920-21 he was exchange professor at Peking, China. He contributed articles on literary, philological and pedagogical subjects to periodicals; translated and edited Zwingli's sermons (1902) and some of the novels of Gerstäcker (1904) and Heyse (1910); and had charge of the department of German literature in the second edition of *THE NEW INTERNATIONAL ENCYCLOPEDIA* (1913-16).

McNABY-HAUGEN FARM RELIEF BILL. See *AGRICULTURAL LEGISLATION*; also under *UNITED STATES*.

MACPHERSON, CHARLES. British organist, died at London, May 28. He was born at Edinburgh, Mar. 10, 1870. After studying the organ under Sir George Martin, he entered the Royal Academy of Music in 1890, and two years later won the coveted Lucas Prize. In 1896 he was appointed professor of composition at the Royal Academy, and in 1916 organist of St. Paul's Cathedral, filling both positions till his death. From 1920 to 1922 he was president of the Royal College of Organists. His most important composition is a setting of the 137th Psalm for soli, chorus, organ and orchestra. He also wrote chamber music and numerous works for the organ.

MACPHERSON, MAJOR GENERAL SIR WILLIAM (GRANT). British military surgeon and editor, died at London, England, October 15. He was born at Kilmuir, Scotland, Jan. 27, 1858, and was educated at Fettes College, Edinburgh, and at Edinburgh, Tübingen and Leipzig Universities; he completed his medical studies at the last-named institution. His career as a medical officer of the British army took him to South Africa, Morocco, Panama, Cuba, India and other parts of the world. In the Russo-Japanese War of 1904-05 he gained valuable experience while attached to the Japanese army in the field. The Government of Japan conferred on him the war medal, and the Japanese Red Cross awarded him its decoration, for meritorious service in the war.

He was one of the first British medical officers sent to the front in the World War, and from 1914 to 1918 he was director of medical services of the First Army and deputy director general at headquarters. In 1915-16 he was director of medical services of the British force in Macedonia. He received high honors, being made a Knight Commander of the Order of St. Michael and St. George for his services in the War, while Japan and Italy conferred decorations on him and America gave him the Distinguished Service Medal. He was editor-in-chief of the British official medical history of the World War.

MADAGASCAR. An island belonging to France lying off the southeast coast of Africa, from which it is separated by the Mozambique Channel, about 240 miles wide at its narrowest point. The island, whose area is estimated at 228,707 square miles, has over 3000 miles of coast, and is 980 miles long with a greatest breadth of 360 miles. The population according to the census of 1925 (including the Mayotte and Comoro Islands), was 3,598,728, of whom 3,565,593 were Malagasy, 22,627 Europeans, and 10,508 Asiatics. The most numerous tribes of the Malagasy are the Hova or Merina, which are the most industrious and enterprising, and whose language is the prevailing dialect. Capital, Antananarivo, in the centre of the island with a population in 1925 of 70,812. Other large towns are: Tamatave, with a population in 1925 of 13,395; and Diego Suarez, with 13,788. The former is the principal port on the east coast and the latter in the north. Education is compulsory from eight to 14 years of age. On Sept. 15, 1925, there were 991 official schools for European and native children, with 90,833 pupils and 1739 teachers, and 517 private schools, with 49,750 pupils from 1144 teachers.

PRODUCTION. The chief occupation of the people is agriculture and the principal product grown

by the natives is rice. Other products are vanilla, cloves, coffee, sugar cane, manioc, butter beans, and mangrove bark. The French have introduced the culture of cotton, rubber, tobacco and the silk worm. The forests contain many valuable woods. Among the minerals are graphite, corundum and mica, gold, precious stones, iron, and copper. Some radio-active ores have been exported in small quantities.

COMMERCE. Preliminary statistics furnished by the Madagascar customs service show imports into Madagascar during 1926 totaling 130,000 metric tons valued at 574,590,000 francs. As compared with imports in 1925 these figures represent an increase in tonnage of 11 per cent and in franc value of 16 per cent. Exports, which declined by 4 per cent in tonnage but increased by 20 per cent in franc value, totaled 221,000 metric tons valued at 535,857,000 francs. However, on a dollar basis, both imports and exports showed heavy losses as compared with the preceding year.

The higher imports in 1926 were attributable chiefly to general progress in the industries of the island and to larger purchases of petroleum products, alcoholic beverages, and a number of other items. Purchases of cotton piece goods, always the leading article of import, were much lower than in 1925; nevertheless, such goods comprised nearly one-third of the total value of imports in 1926. Next in order of importance came clothing, machinery and parts, petroleum and petroleum products, household articles, coal, silk goods, unmanufactured metals, wines, yarns, unscented soap, and paper. Imports of passenger automobiles numbered 281, as compared with 269 in 1925. Imports of trucks numbered 124, of motor cycles 281, and of bicycles 5281.

There was a heavy falling off in exports of rice during 1926, owing to the smaller French demand for Madagascar rice in competition with that from French Indo-China, and also because of export prohibition on rice during the first half of the year. Other products showing a decline were corn, graphite, essential oils, raw hides, and frozen meats. Increases were noted in exports of manioc, raffia, and other fibres, mica, nuts, and oleaginous seeds, and vanilla beans.

FINANCE. The latest statistics on finance showed that actual receipts for 1924 amounted to 131,286,274 francs, and expenditures to 103,682,750 francs. The budgetary estimates for the calendar year 1925 balanced at 122,497,834 francs.

COMMUNICATIONS. In 1925, 5790 vessels of 2,149,797 tons entered and 5868 vessels of 2,143,495 tons cleared at the ports of Madagascar. The total railway mileage at the beginning of 1926 (including narrow gauge lines), was 430 miles.

GOVERNMENT. The colony is under a governor-general aided by a consultative council of administration. Governor-General in 1927, Marcel Olivier (appointed Jan. 11, 1924). Dependent upon Madagascar are the small islands of Nossi Bé, Diego Suarez, Ste. Marie, and the Comoro group.

MADGE, SIR WILLIAM THOMAS. British editor, died at Putney, England, January 29. He was born at Plymouth, England, Oct. 6, 1845. He was first employed as a bank clerk. In 1860 he entered the office of the *Western Morning News*, with which he remained until 1866, gaining experience in various departments. In August,

1866, he joined the staff of *The Globe*, in London, later becoming publisher and manager, in which capacity he was serving when he resigned in 1908 after 42 years' connection with the paper. He became identified with the paper again in 1914, as its sole proprietor. In 1881 he and Sir William Armstrong, a colleague on *The Globe*, established *The People*, a weekly, which became a popular and prosperous advocate of conservative principles. From 1904 until 1906 he managed *The Sun*, but was not so successful in this enterprise. He was made a baronet in 1919 in recognition of his public writings during the War and for his services to the Conservative party through his newspapers.

MAGNETISM. See **PHYSICS.**

MAINE. POPULATION. According to the fourteenth census, the population of the State on Jan. 1, 1920, was 768,014. The estimated population on July 1, 1927, was 793,000. The capital is Augusta.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Potatoes	1927	142,000	32,092,000	\$27,278,000
	1926	127,000	36,830,000	48,984,000
Hay	1927	1,273,000	1,555,000*	19,698,000
	1926	1,285,000	1,440,000*	18,958,000
Oats	1927	129,000	4,778,000	8,246,000
	1926	136,000	5,168,000	8,256,000

* tons.

MINERAL PRODUCTION. Production of stone, the chief mineral product of the State, was more active in 1925, the year of latest available record, attaining 361,570 short tons, as against 263,720 tons in 1924. Stone produced had a total value, in 1925, of \$2,870,442; in 1924 of \$2,411,938. Lime, second in importance, was produced to the quantity of 134,000 short tons, as estimated from producers' sales, in 1926, and in 1925 of 115,571 tons; in total value, \$1,452,000 in 1926 and in 1925, \$1,291,812. Slate production was active, reaching a total value for 1926 of \$662,184; in 1925, of \$604,062. Clay products and feldspar were produced in material quantities. The total value of the State's mineral products with duplications eliminated was \$5,838,718 in 1925; in 1924, \$6,035,160.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of general departments of the State government in the fiscal year ending June 30, 1926, were \$10,306,775; their rate per capita was \$13.08. They included \$2,246,969 apportioned for education. Totals not included above, of \$159,518 expended in public service enterprises, \$734,366 in interest and \$3,851,088 in permanent improvement outlays, brought the aggregate of State expenditure to \$15,051,747. Of this, \$5,775,518 was for highways; \$2,210,426 being for maintenance and \$3,565,092 for construction.

Revenue receipts were \$15,097,827; or per capita, \$19.16. Of their total, property and special taxes yielded 44.3 per cent, attaining a rate of \$8.49 per capita. Earnings of departments and compensation paid the State for officials' services supplied 8.4 per cent of revenue; 40.2 per cent was derived from sale of licenses, chiefly on incorporated companies, motor vehicles, hunters and fishermen, and from a gasoline sale tax.

Net State indebtedness on June 30, 1926, was \$17,554,054, or \$22.28 per capita. Property subject to ad valorem taxation bore a valuation of \$700,437,130. State taxes levied were \$5,068,407, or \$6.43 per capita.

TRANSPORTATION. The number of miles of railroad line in the State Jan. 1, 1927, was 2,217.73. New construction in 1927 was 0.11 mile of first track.

EDUCATION. The State compulsory education act was amended by the Legislature so as to require pupils to complete study through the eighth grade before reaching the age of sixteen years, instead of completing study through only the sixth grade. The endeavor to advance teaching proficiency was carried on through summer schools and extension courses, for both of which the enrollment was large.

CHARITIES AND CORRECTIONS. Some 51 institutions of the welfare category derive support in whole or in part from State appropriations. The State Department of Public Welfare exerts supervision over these. This body, formerly the State Board of Charities and Corrections, was changed in name in 1927. It continued to consist of a board of five members nominated by the Governor for terms of five years and receiving (since 1925) per diem compensation of \$5. The department administers mothers' aid under the State law of 1917 and directs work among dependent children and children in custody. It had in September, 1927, supervision over 2061 children. The chief institutions supported wholly by State appropriation and their approximate populations in 1927 were: Augusta State Hospital, 1300; Bangor State Hospital, 900; Central Maine Sanatorium, Fairfield, 125; Northern Maine Sanatorium, Presque Isle, 125; Maine State Prison, Thomaston; Pownal State School, 625; Reformatory for Men, South Windham, 150; Reformatory for Women, Skowhegan, 150; State School for Boys, South Portland, 125; State School for Girls, Hallowell, 150; Western Maine Sanatorium, Greenwood Mountain, 125. Patients in State hospitals for mental disease on Jan. 1, 1927, according to the Department of Commerce, numbered 1918.

LEGISLATION. The Legislature convened in regular biennial session January 5. A law was enacted increasing the State tax on gasoline from 3 cents to 4 cents a gallon. The revenue expected from this increase to amount to some \$700,000 a year, was granted to highway expenditure. Another important fiscal law was passed affecting the taxation of railroads. This provided a change in the existing method for assessing the excise tax on railroads; instead of their being assessed on gross receipts, the law required that the roads be assessed according to a graduated scale, on the relation of gross receipts to net income. The expected effect of the law was to relieve railroads with a high ratio of gross receipts to net. It was estimated that the State would lose \$300,000 or more a year by affording this relief to the low-income earners among its railroads, and accordingly the legislators representing farm constituencies vigorously opposed the measure. Governor Brewster vetoed it, but it was repassed over his veto. A bill was enacted to enable the State to accept the terms of the Federal maternity and infancy act. A bill to incorporate the Fish River Power and Storage Company, an adjunct to projected power development by the International Paper

Company on the St. John River in New Brunswick, was rejected on the ground that it would not suit the State's interest to provide water storage for a Canadian power development.

POLITICAL AND OTHER EVENTS. At a special election held October 18, a referendum proposal to repeal the State direct primary act of 1911 was defeated by a vote of about two to one. The referendum was brought about largely by former Governor Percival P. Baxter, who conducted a campaign for return to the convention system of nomination. Governor Brewster advocated the retention of the primary. Petitions for referenda on the State gasoline tax and on the amended tax on railroads failed, because of insufficiency of signers, to come to a vote. The Governor's veto of the Smith-Wyman bill for the limited export of hydro-electric power gave occasion for demand that a special session of the Legislature should be called in 1928 to enact a power bill, some interests favoring the Oakes New England compact measure. A \$3,000,000 highway bridge over the Kennebec River at Bath was completed, and was opened for traffic November 15, replacing the ferry service. It was reported at Portland, October 4, that the U. S. Army would withdraw from and dismantle Fort McKinley on Great Diamond Island in Casco Bay, adding the battalion there posted to the garrison of Fort Williams. Governor Brewster and Portland interests negotiated with the Bardo group, projecting a four-day steamship service to Southampton, with the purpose of having the intended line select Portland as its terminus in the United States. The dormitory of the old State Reformatory at South Windham was burnt November 9, and the inmates were removed to the new building adjoining, then approaching completion. After ten years of protection from the hunters, moose were again hunted, starting with November 28, in Washington, Hancock, Waldo, and five other counties. It was reported at the opening of the moose season that these animals had become partly tame from long immunity, frequently straying into villages in several of the counties where they occurred in greatest number.

OFFICERS. Governor, R. O. Brewster; Secretary of State, Edgar C. Smith; Treasurer, William S. Owen; Auditor, E. D. Hayford; Attorney General, Raymond Fellows; Commissioner of Education, A. O. Thomas; Adjutant General, James W. Hanson; Chairman Public Utilities Commission, Charles E. Guernsey.

JUDICIARY. Supreme Court, Chief Justice, Scott Wilson; Associate Justices, Warren C. Philbrook, Charles J. Dunn, Luere B. Deasy, Guy H. Sturgis, Charles P. Barnes, Norman L. Bassett, and William R. Pattangall.

MAINE, UNIVERSITY OF. A coeducational State institution of higher education at Orono, Me.; founded in 1862. The enrollment for the autumn of 1927 was 1369, and for the summer session of 1927, 334. There were 205 members on the faculty, distributed as follows: teaching and administration, 140; experiment station, 24; agricultural extension service, 41. The productive funds of the University amounted to \$735,920.94, and the income for the year to \$849,133.17. There were 85,000 volumes in the library. It was provided by the Trustees that the income from the fund of \$100,000 bequeathed to the University by Thomas Upham Coe of Bangor should be devoted to a foundation for

research which should have some bearing upon the development of the State. A brick dairy building, to provide for laboratory instruction in dairy husbandry and for the handling of milk, cream, and other dairy products, was under construction for the Department of Dairy Husbandry in the College of Agriculture, and the Crosby Memorial Laboratory for mechanical engineering, the gift of Oliver Crosby of the class of 1876, was completed. President, Harold Sherburne Boardman. C.E., D.Eng.

MALTA. An island in the Mediterranean Sea, forming along with the adjacent islands of Gozo and Comino a British colony, lying 58 miles south of Italy and 180 miles from the African coast. Area of the island of Malta, 95 square miles; total area with Gozo and Comino, 122 square miles. Population, according to the census of Apr. 24, 1921, 224,680, of whom the civil population numbered 213,024. Valletta is the chief town and port. There were 112 public schools with 224,680 pupils at the beginning of the school year 1925-26; a university with six faculties and 107 students; a lyceum for boys with 370 students; two secondary schools; and 25 technical manual schools. Farming is the principal occupation and the chief products include: Wheat, potatoes, onions, barley, tomatoes, forage, cotton, grapes and other fruits. The value of agricultural produce in 1925-26 was £898,376. Stock-raising and fisheries are also of importance. The manufactures include lace, cotton, cigarettes, and filigree. The imports normally exceed exports, although invisible items of trade such as tourist money, the importance of the island to the British navy, and as a port of call for merchant steamers, and money sent home by emigrants tend to balance the imports and exports. The imports in 1925 were valued at £4,495,966 and the exports at £1,186,153. Most of the imports come from Great Britain and British possessions. The revenue in 1925-26 was £862,246 and the expenditure, £828,725. Executive power is in the governor and commander-in-chief and legislative power in a legislature of two chambers. Governor and commander-in-chief in 1927, Gen. Sir John Du Cane (appointed Mar. 16, 1927); Prime Minister, Ugo Pasquale Mifsud. The other members of the cabinet were: Public Health, Carmelo Mifsud; Public Instruction, Rev. Enrico Dandria; Public Works, Giovanni Adami; Industry and Commerce, Enrico Mizzi; Treasury, Carmelo M. Bonnici.

MALTA (UNDULANT) FEVER. This acute, infectious disease which has been known by an unusually large number of names was first isolated through the discovery of its causal agent, the micrococcus melitensis, in the Mediterranean basin, where it is mostly transmitted by contact, usually mediate, with domestic animals and through the consumption of their raw milk. It was first recognized in the United States in 1913 and five years later Dr. Alice C. Evans of the Public Health Service showed that the causal agent was the same as that of infectious abortion in domestic animals. Of the cases of

undulant fever which had occurred up to 1927 in the United States some had developed from exposure to animals (meat, milk, etc.) although in a few cases animal contagion seemed to be lacking. In the *Journal of the American Medical Association* for Feb. 12, 1927, Drs. Hull and Black gave reasons for the belief that undulant fever may often have been masked as typhoid. In 69 patients suspected of the latter but cleared of suspicion by negative Widal test, five were in all likelihood examples of undulant fever, the microorganism however being of the bovine, not human type. This common origin of the human and animal diseases was recognized officially in South Africa, Italy, Palestine, etc.

MALTZAN, mül-tsän, ADOLF GEORGE OTTO (Ago), FRETHERRE VON (BARON MALTZAN). German diplomat, Ambassador to the United States of America, died in an airplane accident near Scheiz, Thuringia, Germany, September 23. He was born at Klein-Varchow, Mecklenburg-Schwerin, Germany, July 31, 1877. He was christened Adolf Georg Otto, but his father contracted the initials into the nickname "Ago," and when he became of age he adopted it legally. He studied at the Universities of Bonn and Breslau, and served for a brief time in the army. In 1912 he was appointed counselor of legation at Peking, China, but when China entered the War he returned to the Foreign Office in Berlin. From 1919 to 1921 he represented the office in Estland and Letland, and from 1921 to 1922 he was ministerial director at the Foreign Office. In the latter year he became secretary of state at the Foreign Office, and in 1925 was chosen to succeed the late Dr. Otto Weidfeldt as the second German ambassador to the United States since the War. He made friends in America, and did much to restore friendship between the two countries.

MAMMALS. See ZOOLOGY.

MAN, PRIMITIVE. See ANTHROPOLOGY.

MANAGERS, CITY. See MUNICIPAL GOVERNMENT.

MANCHURIA, man-chōo-rē-ā. A vast region is Asia, lying between the province of Chihli in China proper and the Amur River, extending eastward from the Hingan Mountains to Korea and the Usuri River; divided into the three provinces of Feng-tien, Kirin, and Heilungchiang. The total area is estimated at about 285,000 square miles and the population estimates vary from slightly under 6,000,000 to almost 30,000,000. A census completed by the research office of the South Manchuria Railway Co. in 1927 reported the population of Manchuria as 27,490,000. This is probably as nearly correct a figure as can be ascertained. Capital, Mukden, with a population of about 250,000. Other important cities are: Newchang, 65,600; Ying-K'ou, 60,000; An-tung, 74,600; and Changchun, 80,000.

The soil of Manchuria generally is of almost exhaustless fertility and it possesses immense potential resources in agriculture, timber, and mineral wealth. In 1920 the total production of north Manchuria alone was estimated at a value of \$320,000,000. Soya beans, wheat, millet, and kaoliang are the principal crops raised, but the cultivation of sugar beets and the breeding of livestock are of growing importance. While industrially undeveloped, there are in the larger cities modern flour mills, bean-oil mills, soap works, sugar refineries, sawmills, distil-

leries, breweries, glass factories, and tanneries. Although the population of Manchuria constitutes but 6 per cent of the population of China, in 1925 Manchuria's total trade constituted 30 per cent of the total Chinese trade.

At the end of the nineteenth century Manchuria had no railways and its population was less than 2,000,000. At the end of 1927 its railways totaled nearly 4000 miles and its population over 27,000,000. Railway development has brought into Manchuria probably the greatest colonization movement that has ever taken place in history, in an area of similar size and in a similar length of time. In 1927 the total permanent migration to Manchuria was estimated at 1,000,000. Railway construction in China in 1927 was practically confined to Manchuria. Military activities and political uncertainties, combined with lack of funds, were the retarding factors. In Manchuria on the other hand, at least five principal lines had been under construction during the past two years. Among these railways is the Hulan-Hailun Railway, which is fed by the fertile valley of the Hulan River, one of the richest wheat growing regions of Manchuria. The road had been completed through Hulan to Suihua, a distance of 70 miles, but at the end of the year work was being extended 50 miles further to Hailun. Another important railway in course of construction was the extension of the existing Tahushan-Changwu branch of the Peking-Mukden Railway from Changwu to Tungliachien. Its completion (in 1928) would bring into existence the whole southern section of the old Chinchow-Aigun project, for the construction of which an American concession was obtained in 1910 and subsequently allowed to lapse. A third line, opened September 3, is the Mukden-Hailungchen Railway, which is to be extended northward from Hailungchen to Kirin, about 90 miles.

MANDATES. See LEAGUE OF NATIONS.

MANGANESE. The manganese used in the American steel industry, and the same is true for the leading steel producing countries of the world, is largely imported. The imports of manganese ore, exclusive of those from Cuba, coming into the United States in 1926, were 347,378 long tons of metallic manganese, estimated to be equivalent to 738,000 tons of manganese ore. In 1926 the imports from Cuba were 14,112 tons of manganese ore, containing 47 per cent of manganese. In 1927, notwithstanding the reduced activity in the steel industry the United States imports from all countries, up to the end of November, amounted to approximately 554,382 tons or 276,823 tons of manganese content in ore. The main producing centres of manganese ore were India, the Caucasus, Brazil and the West Coast of Africa, while new deposits in South Africa and Australia were being worked.

Shipments of manganese ore from mines in the United States containing 35 per cent and more of metallic manganese totaled in 1927 approximately 43,600 long tons, valued at \$1,142,000, according to preliminary figures compiled by the U. S. Bureau of Mines. This was a decrease of 6 per cent from the 1926 shipments, which amounted to 46,258 tons. The decrease in average value per ton of all ore shipped in 1927 was due in part to the decreased world's price of metallurgical ore and also to the decreased shipments of chemical ore in comparison with

those of metallurgical ore. The shipments of metallurgical ore amounted to 26,000 tons, valued at \$416,000, while those of 1926 were 26,530 tons, valued at \$379,893. The shipments of chemical ore in 1927 amounted to 17,600 tons, valued at \$726,000, while those of 1926 were 19,728 tons, valued at \$848,770. The quoted price of high-grade manganese ore in 1927 decreased materially in the latter part of the year. Quotations for foreign ore, crude, were approximately 33 cents per unit, whereas the average price of 1926, Atlantic seaboard, was 39 cents per unit.

The shipments of domestic ore containing from 10 to 35 per cent of manganese (ferruginous manganese ore) in 1927 were 134,000 tons, valued at approximately \$609,000, as compared with 364,312 tons, valued at \$1,179,429, in 1926. The domestic shipments of ore containing from 5 to 10 per cent of manganese (manganiferous iron ore) in 1927 were 1,317,000 tons, valued at \$3,306,000, as compared with 835,412 tons, valued at \$1,934,381, in 1926. There was a very decided increase of production of ferruginous manganese ore in Colorado in 1927, when 20,600 tons were produced, as compared with 2925 tons in 1926.

The apparent outstanding features of the year were the increase in the domestic manufacture of spiegeleisen and the increased production and consumption, relative to the production of steel, of ores having a low metallic manganese content. While the combined production of ferruginous manganese and manganiferous iron ores in 1927 differed but slightly from the production of 1926, the gross tonnage of steel produced decreased.

MANITOBA, mǎn'ttô'bá. The most eastern of the Prairie Provinces of Canada, situated west of the province of Ontario and Hudson Bay and east of the province of Saskatchewan, extending from the American boundary north to latitude 60°. Area, 251,832 square miles: population, according to the census of 1921, 610,188; 1926, 639,056. Capital, Winnipeg, with a population in 1921 of 179,087 (Greater Winnipeg, 230,000); Brandon, 15,359; St. Boniface, 12,821; Portage la Prairie, 6748. The movement of population in 1925 was: Births, 14,866; deaths, 5245; marriages, 4377. In 1925 there were 4028 teachers and 145,834 pupils in the 3912 public classrooms. There are 45 high schools, 9 junior high schools, 9 collegiate departments, and 11 collegiate institutes. For higher education there is the University of Manitoba at Winnipeg, with 2428 students enrolled for the full courses.

The estimated area of arable land in Manitoba is 25,000,000 acres of which about 30 per cent is under cultivation. In 1925 the mineral output consisting mainly of building material and gypsum was valued at \$2,276,759. Other important resources are forests and fisheries. In August, 1926, there were 682 grain elevators in Manitoba with a capacity of 25,430,000 bushels. The revenue in 1926 was \$10,870,258 and the expenditure, \$10,269,869. The total funded debt on Apr. 30, 1926, \$72,882,803. The railway mileage was 4585.

The government consists of a lieutenant governor appointed by the governor general of Canada and a legislative assembly consisting of 55 members elected for five years. Women have the right to vote and are eligible to parliament. Manitoba is represented in the Dominion Parlia-

ment by 6 members in the Senate and 17 in the House of Commons. Lieutenant governor in 1927, Theodore A. Burrows; prime minister, president of the council, and provincial treasurer, John Bracken; education, C. Cannon; agriculture, lands commissioner, and provincial secretary, A. Prefontaine; public works, W. R. Clubb; attorney general and minister of telephones, R. W. Craig; municipal affairs and public utilities commissioner, D. L. McLeod.

MANLY, CHARLES MATTHEWS. American mechanical engineer and airplane pioneer, died at Kew Gardens, N. Y., October 16. He was born at Staunton, Va., Apr. 24, 1876, and was educated at Furman and Cornell Universities, graduating from the latter institution as a mechanical engineer, in 1898. In the same year he became chief assistant to the late Samuel P. Langley in aviation development work, and in 1901 the Langley airplane used his gasoline engine, which was of unprecedented lightness. From 1905 until his death he was vice president and chief engineer of the Manly Drive Company, of New York, and a consulting engineer for large corporations. From June to September, 1915, he was consulting engineer to the British War Office for the development of large airplanes in America, and later he served also as consulting engineer, chief inspection engineer and assistant general manager of the Curtiss Aeroplane and Motor Corporation, and member of the automotive advisory committee to the U. S. Ordnance Board. He received about 50 patents on automotive transportation, power generation, and transmission. He wrote (with Samuel P. Langley) the *Langley Memoirs on Mechanical Flight* (No. 3. vol. 27, *Contributions to Knowledge, Smithsonian Institution*) (1911).

MANOUVRIER, mánoo-vri-á, Léonoe PIERRE. French anthropologist, died at Paris, January 18. He was born at Gueret, France, June 28, 1850, and was educated in medicine at Paris, receiving his degree in 1881. In 1880 he had become an assistant at L'École des Hautes Études, of the Sorbonne, Paris, in the anthropological laboratory, and subsequently he became assistant director and director of the laboratory. Among his other activities were those of a member of the commission of hygiene and physiology of the Paris Exposition of 1900; secretary general of the Society of Anthropology of Paris since 1902; president of the section of anthropology of the French Association for the Advancement of the Sciences; president of the Psychological Society of France. He was a chevalier of the Legion of Honor. He published about 150 papers dealing with the results of his original researches in zoology, anthropology, ethnology, sociology, criminology and other sciences.

MARIETTA COLLEGE. A non-sectarian co-educational college at Marietta, Ohio; founded in 1835. The autumn term of 1927 had a total registration of 375 students, of whom 137 were women and 238 were men. The faculty numbered 34, three new members having been added since 1926. The productive funds amounted to

\$1,264,000, and the income for the year to \$151,911.54. The library contained approximately 92,214 volumes. The new Betsey Mills Club, containing a fully equipped women's gymnasium with swimming pool, was established as a centre for the physical education work of the young women of the college. The sum of \$76,000 was subscribed towards a new men's gymnasium. The alumni contributed \$5700 during 1926 through the Marietta Fund. President, Edward Smith Parsons, A.M., L.H.D.

MARKIEVICZ, CONSTANCE GEORGINE, COUNTESS DE. Irish agitator, died at Dublin, July 15. She was the daughter of the late Sir Henry and Lady Gore-Booth, of Lissadell, Ireland, and was married in 1900 to Count Casimir Dunin de Markievicz, a Pole. She was known variously as Madame and Countess de Markievicz. Her first public activity was in 1913, when she became identified with the Larkin labor movement, and later she joined the militant wing of the Sinn Fein movement, becoming one of its most fiery orators and prominent leaders. For her part in the Easter Week rising in 1916 she was sentenced to death, but the sentence was commuted to imprisonment for life. She was released at the amnesty of 1917. A year later she was elected as the first woman member of the British House of Commons, but she never took her seat. She was imprisoned on several occasions, and was released finally when the Anglo-Irish treaty was signed. She was minister for labor in the cabinet of De Valera, and was one of his staunchest supporters, suffering imprisonment again at the hands of the Irish Free State. In 1922, 1923 and 1927 she was elected a member of the Irish Parliament (the Dail Eireann) for South Dublin.

MARQUETTE UNIVERSITY. An institution of higher education under Roman Catholic direction at Milwaukee, Wis.; founded in 1907. It comprises the following departments: Arts and sciences, applied science and engineering, dentistry, law, journalism, science, conservatory of music, schools of nursing, hospital administration, business administration, and speech. The enrollment for the autumn of 1927 was 2744 regular students, distributed as follows: arts and sciences, 877; graduate school, 138; business administration, 329; dentistry, 220; engineering, 485; journalism, 137; law, 185; medicine, 342; music, 28; speech, 3. In addition there were 286 students in night courses in business administration, 16 in dental hygiene, 480 in the high school, 36 in the college of hospital administration, 219 in the music academy, 89 in the nursing courses, and 319 in teachers' courses, making a grand total of 4210 in the University. The registration for the 1927 summer session was 764. The faculty had 367 members. Endowment funds amounted to \$2,604,761.57, and the income for the year to \$1,055,907, from the following sources: endowment income, \$148,614; tuition, \$718,508; from private bene-

factions for increase in plant, \$585; for increase of endowment, \$158,101; for current expenses, \$4225; miscellaneous, \$25,874. Marquette University also enjoys the services of Jesuit instructors and administrative officers who receive no compensation other than maintenance. The value of their services over the cost of their maintenance for 1926-27 was estimated at \$119,500. The library contained 47,150 volumes. President, the Rev. William M. Magee, S.J., M.A.

MARRIAGE AND DIVORCE. The question of a uniform marriage and divorce law continued to be agitated in the United States during the year. *The Congressional Digest* in a comprehensive discussion of the subject pointed out that there prevailed two lines of thought, the first advocating Federal enactment through a constitutional amendment, and the second State enactment of a uniform regulatory law.

Agitation along Federal lines dates back to 1884 when the first attempt was made, in the House of Representatives, to amend the Constitution to incorporate a uniform law on marriage and divorce. The movement in Congress in 1927 was headed by Senator Capper who introduced his first resolution in 1921. In the Sixty-ninth Congress (1925) Senator Capper presented his bill again, this time in amended form. The bill called for a constitutional amendment on the following lines: Congress to make uniform marriage and divorce laws, the legitimation of children, and the care of children affected by divorce. The enacting bill called for: 1. The requirement of a marriage license for marriage. 2. Minimum age for males 18, for females 16. No licenses to be granted to epileptic, feeble-minded, tubercular or syphilitic persons or first cousins. 3. Males between 18 and 21 and females between 16 and 18 must have the consent of parents or guardians. 4. Applications for marriage are to be made two weeks before the issuance of the license. 5. The lawful marriage of the father and mother of an illegitimate child shall legitimate it. 6. Divorce may be decreed on the following grounds: adultery; cruel and inhuman treatment; abandonment or failure to provide for one year; incurable insanity; conviction of an infamous crime. 7. All divorce actions must be defended. 8. The final decree may be granted after the lapse of one year only during which either party may not remarry. 9. Alimony may be decreed. 10. In providing for the children, the court shall favor the mother. Both parents may visit the children and must contribute to their support according to their ability. 11. A divorce decreed in one State shall be recognized in all States.

Demands for State action date back to 1879 when the American Bar Association established a committee to consider uniformity. The question had the attention particularly of the Commissioners on Uniform State Laws who are individuals appointed by their State executives. In 1927, each State had such commissioners and it was the purpose of the National Conference of the group "to promote uniformity in State laws on all subjects where uniformity is deemed desirable and practicable." Since its first consideration of the matter the Conference has approved a series of uniform laws affecting marriage and divorce procedure. But the question of a uniform law relating to marriage and one relating to divorce (similar to the Capper bill

Commissioners and the American Bar Association. It is interesting to note what success the Commissioners on Uniform State Laws had had with certain uniform laws. The following, according to the *Congressional Digest*, have been adopted by the States mentioned:

1. *Desertion and Non-Support Act.* Alabama (1915), Delaware (1913), Illinois (1915), Kansas (1911), Massachusetts (1911), Mississippi (1920), Nevada (1923), New Jersey (1917), North Dakota (1911), Texas (1913), Utah (1915), Vermont (1915), Virginia (1915), West Virginia (1917), Wisconsin (1911), Wyoming (1915).

2. *Divorce Procedure Act.* Delaware (1901), Wisconsin (1901).

3. *Annulment of Marriage and Divorce Act.* Delaware (1907), New Jersey (1907), Wisconsin (1909).

4. *Marriage Evasion Act.* Illinois (1915), Louisiana (1914), Massachusetts (1913), Vermont (1912), Wisconsin (1915).

5. *Divorce Statistics Act.* Louisiana (1913).

6. *Marriage Statistics Act.* Louisiana (1908).

7. *Marriage and Marriage License Act.* Massachusetts (1913), Wisconsin (1917).

8. *Migratory Divorce Act.* Wisconsin (1917).

The debate during the year was earnest and there was manifested the strange spectacle of the conservatives and radicals attacking the Capper proposal. It was generally agreed that there were fine things in the Capper amendment, that the grounds for divorce ought to be increased, and that a divorce granted in one State ought to be recognized in all others. But the objections were fundamental: the bill was not honest in that it did not recognize collusive divorce (i.e. where both parties agree on their incompatibility), and its danger was the difficulty of passage and the difficulty of further amendment. It was pointed out that Federal amendments like the Fourteenth, Fifteenth, and Eighteenth have had an unhappy history in that they were not based on general public sentiment. The radicals, it was pointed, would rather work in the States, and, by pressure on legislatures, pass divorce laws that they consider honest. In short, in 1927, they would rather have the whole or nothing, and the whole means complete separation of husband and wife if they agree they are no longer mated.

STATISTICS. The U. S. Census Bureau reported that for the year 1926 there were 1,020,079 marriages in the United States and there were 180,868 divorces. Marriages increased 13,745 or 1.2 per cent over 1925. The increase in divorces for the year was 5419 or 3.1 per cent. Annulment figures, gathered for the first time, showed 3823 annulled marriages for 1926. For 1926 the number of marriages per 1000 of population was 10.26 as against 10.30 in 1925. The number of divorces in 1926 was 1.54 per 1000 population as against 1.52 in 1925. Marriages and divorces are of course affected by changes in law. Thus, Michigan's marriages decreased 14 per cent because of the enactment of a law requiring a five days' waiting period while Nebraska's marriages increased 19.5 per cent because of the repeal of a similar law. The marriage rates show a wide range in the individual States. Delaware's rate per 1000 population in 1926 was 4.6 and Wisconsin's 5.8 to 16.35 for Maryland and 21.6 in Florida. Di-

TABLE I—MARRIAGES IN THE UNITED STATES, 1925-26

Division and State	1926	1925	Per cent of increase *	Number per 1,000 of the population	
				1926	1925
United States	1,202,079	1,188,384	1.2	10.26	10.80

^a A minus sign denotes decrease.

greatly. The rate was 0.18 per 1000 in the District of Columbia and 0.41 in New York, as against 3.52 in Oregon and 13.19 in Nevada. The tables accompanying show the number of marriages and divorces with per cent increase and rates per 1000 population. Annulments are included in the divorce table.

DIVORCE SECRECY. During the year both Great Britain and the State of Delaware passed laws making it illegal to give publicity to divorce proceedings. It is interesting to note that France has had such a law since 1886. Delaware's law was passed late in 1926 and put into operation in the summer of 1927. It prohibits the presence of newspapermen or spectators at divorce proceedings. While there was general agreement that many metropolitan newspapers, in recording in full divorce proceedings, were overstepping the bounds of ordinary decency, the presence of such laws as England's and Delaware's was greeted with misgivings. Secrecy, it was pointed out, would lead to many frivolous matches because of the feeling that a divorce action would be comparatively painless. Point was given to this objection by the fact that there had been a 50 per cent increase in undefended divorce actions in England since the law's passage. However, such figures are misleading. It may be that persons, separated and not living together any more but yet timid about instituting a divorce action because of unwelcome publicity, took advantage of the secrecy offered by the law. Again, a sufficiently long period has not yet elapsed to indicate a trend. Finally, a larger number of persons are saying every year that marriage and divorce are private matters.

COMPANIONATE MARRIAGE. This subject, largely stimulated by the book of the same name written by Judge Ben B. Lindsey and Wainwright Evans, was much in the public mind at

the end of the year. Judge Lindsey, from his experience on the bench in Denver, arrives at the conclusion that there is much wanting in our present marriage and divorce laws. He advocates laws that will permit a childless couple to separate if they find marriage uncongenial. Companionate marriage stands for childless marriage to be dissolved by mutual consent, in Judge Lindsey's meaning. The implications of the term were evidently misunderstood, for people began to talk of contracting "companionate marriages," failing to grasp that under the law the marriage tie was quite binding, under any name. It is not likely, of course, that at the present time the various States will amend their marriage codes to permit of the dissolution of a marriage by collusion.

MARRIAGE RESTRICTIONS. See CHILD WELFARE.

MARSHALL, CHARLES EDWARD. American microbiologist, died at Amherst, Mass., March 26. He was born near Port Clinton, Ohio, Oct. 6, 1866. He graduated at the University of Michigan, and studied bacteriology at Copenhagen, Paris and Berlin. From 1893 to 1896 he was assistant in bacteriology at the University of Michigan, and from 1896 to 1912 he was, successively, assistant in bacteriology, bacteriologist, scientific and vice-director of the experiment station, and professor of bacteriology and hygiene, at Michigan Agricultural College. From 1912 until his death he was director of the graduate school and professor of microbiology at the Massachusetts Agricultural College. He was president of the Society of American Bacteriologists in 1914. He wrote many pamphlets, articles and bulletins on bacteriology and hygiene.

MARSHALL, HENRY RUTGERS. American architect and psychologist, died at New York,

May 2. He was born at New York, July 22, 1852. He graduated at Columbia University in 1873, and from 1878 until his death was a practicing architect in New York, combining with that profession such varied activities as that of lecturer on aesthetics at Columbia, Yale and Princeton Universities, writer of books on aesthetics, psychology and other subjects, and executive secretary of the Municipal Art Commission of the City of New York. In 1920 he received the Nicholas Murray Butler medal, awarded annually for the year's most distinguished contribution to philosophy or to educational theory, for his book, *Mind and Conduct*. Rutgers University conferred on him the honorary degree of L.H.D. in 1903, and Hobart College that of D.Sc. in 1910. He was president of the New York chapter of the American Institute of Architects, 1902-04, and president of the American Psychological Association, 1907. He wrote: *Pain, Pleasure and Aesthetics* (1894); *Aesthetic Principles* (1895); *Instinct and Reason* (1898); *Consciousness* (1900); *War and the Ideal of Peace* (1915); *Mind and Conduct* (1919); *The Beautiful* (1924).

MARTIN, VICTORIA CLAFLIN WOODHULL. American author and editor and pioneer in the woman suffrage cause, died at Norton Park, Bremons, Worcestershire, England, June 9. She was born at Homer, Ohio, Sept. 23, 1838. She made her home in England for 50 years before her death. From 1870 until 1877, the year of their removal to London, she and her sister, Tennessee Claflin (later Lady Francis Cook), were two of the most prominent women in America, winning much notice by their advocacy of woman's suffrage, spiritualism, a single standard of morality for the two sexes, and other causes. Victoria Claflin had been married, when she was 14, to Dr. Canning Woodhull, but the marriage had proved unhappy and there had been a separation. In 1866 she had become the wife of Col. James H. Blood, but this marriage had also been unsuccessful and had been terminated by divorce. In 1870, Mrs. Woodhull, as she was known, and her sister formed in New York a brokerage firm called Woodhull, Claflin & Co. It prospered, and so did a weekly magazine published by the sisters for several years with the name *Woodhull & Claflin's Weekly*. In 1870 Mrs. Woodhull, who was deeply interested in the cause of woman's suffrage, memorialized Congress in its behalf. In 1871 she was nominated for the House of Representatives, and both sisters tried to vote in New York. Both had become mediums and clairvoyants, and Mrs. Woodhull was elected president of the National Association of Spiritualists in 1871. In May, 1872, she was nominated for President of the United States by the Equal Rights party. In December of that year she and her sister were arrested on a charge of sending improper matter through the mails in their weekly; the article criticized dealt with the Beecher-Tilton case. They were acquitted in June, 1873. Four years later, Mrs. Woodhull went to England and became the wife of the late John Biddulph Martin (died 1895), a London banker. Mrs. Martin appeared in recent years as a benefactor of the Sulgrave Institute, to which she presented Sulgrave Manor, the ancestral home in England of the Washington family, and as a patroness of aviation. In 1914 she offered a

prize of \$5000 for a trans-Atlantic flight. She wrote several books on social subjects.

MARTINIQUE, mār'tenek'. One of the Lesser Antilles group of the West Indies, forming a colony of France. Area, 385 square miles; population, according to the census of 1921, 244,439. Capital and chief port, Fort-de-France, with a population of 26,309. Sugar, rum, cacao, coffee, tobacco, pineapples, and bananas are the chief products of the colony. The foreign trade of Martinique in 1926 amounted to \$14,183,609, a decrease of \$1,671,022 from that of 1925, which was \$15,854,631. The year's trade was not only lower than that of the two previous years, but it was the first year since 1818 that Martinique had had an unfavorable balance, imports exceeding exports by \$106,000. Sugar and rum comprise the chief exports of Martinique. The production of sugar in 1926 amounted to 45,039 long tons as compared with 48,122 long tons in 1925. Rum production in 1926 was 27,400,960 liters as compared with the 25,933,469 liters produced in 1925. The unfavorable situation was attributed in large part to the adverse exchange rates of the franc throughout part of the year, which raised the franc values of goods imported from countries other than France, and to the general rise in prices in the French markets from which the bulk of Martinique's imports come. The colony is administered by a governor and a general council, and an elected municipal council; it sends one senator and two deputies to the French Parliament.

MARTINY, mār-tē'nī, PHILIP. American sculptor, died at New York, June 26. He was born in Alsace (then French), May 19, 1858, and studied sculpture under Eugene Dock. He went to the United States in the early eighties and entered the studio of the late Augustus Saint-Gaudens. He did much to raise the standard of decorative sculpture in the United States. His conceptions are original and spontaneous, his execution skillful, his modeling simple yet rich. Among his best known decorative works are the sculpture for the grand staircase of the Congressional Library, Washington, D. C.; for the Carnegie Library, Washington, and for the Hall of Records, New York; the bronze doors of St. Bartholomew's Church, New York; two groups in the Chamber of Commerce, New York; and figures and a fountain for the former residence of the late Senator William A. Clark in New York. Among his monumental works are the soldiers' and sailors' monument, Jersey City, N. J.; the McKinley monument, Springfield, Mass.; the monument to Admiral de Gernay, Newport, R. I., the portrait statue of Vice President Hobart, Paterson, N. J.; and the World War memorials in Chelsea Park and Abingdon Square, New York.

MARYLAND. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,449,661. The estimated population on July 1, 1927, was 1,597,000. The capital is Annapolis.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	515,000	22,680,000	\$18,128,000
	1926	554,000	22,049,000	14,111,000
Wheat, winter	1927	525,000	9,188,000	11,669,000
	1926	520,000	11,960,000	15,548,000
Hay	1927	446,000	728,000*	11,206,000
	1926	400,000	521,000*	10,890,000

Crop	Year	Acreage	Prod. bu.	Value
Tobacco	1927	32,000	26,176,000 ^b	4,973,000
	1926	31,000	26,040,000 ^b	6,171,000
Potatoes	1927	48,000	5,248,000	5,508,000
	1926	39,000	3,510,000	4,914,000
Sweet potatoes	1927	11,000	1,584,000	1,109,000
	1926	11,000	1,815,000	1,861,000

* tons, ^b pounds.

MINERAL PRODUCTION. Coal mining, chiefly in Allegany County, contributed about one-third to the total value of the State's mineral products. There were mined in 1926, 3,078,353 net tons of bituminous coal; in 1925, 2,694,572 tons. The product was valued at \$6,800,000 for 1926 and for 1925 at \$5,312,000. There were produced in by-product coke ovens 1,120,610 short tons of coke in 1926; in 1925, 1,019,209 tons. Clay products attained for 1925, the year of latest available record, a total value of \$2,868,452; for 1924, of \$3,973,074. Sand and gravel and stone were produced in important quantities. The total value of the State's mineral products, duplications eliminated, was \$21,557,810 in 1925; in 1924, \$18,506,867.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Sept. 30, 1926, were \$16,979,570; their rate per capita was \$10.78. They included \$3,373,727 apportioned for education. Totals not included above, of \$151,313 expended in public service enterprises, \$1,442,810 in interest and \$4,330,791 in permanent improvement outlays, brought the total of State expenditures to \$22,903,484. Of this \$7,129,007 was for highways; \$3,548,238 being for maintenance and \$3,580,769 for construction.

Revenue receipts were \$23,218,243; or per capita, \$14.74. Of their total, property and special taxes yielded 31.1 per cent, attaining a rate of \$4.58 per capita. Earnings of departments and compensation paid the State for officials' services supplied 17.9 per cent of revenue; 37.4 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles, and from a sale tax on gasoline.

Net State indebtedness on Sept. 30, 1926, was \$22,491,478, or \$14.28 per capita. Property subject to ad valorem taxation bore a valuation of \$2,188,965,190. State taxes levied were \$5,545,401, or \$3.52 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State Jan. 1, 1927, was 1,446.63. There were constructed in 1927, 11.50 miles of new second track.

EDUCATION. The Teachers' Retirement system of the State, as reported to the *Journal* of the National Education Association, was established on a basis of a fund to which teachers and the State were to contribute equally. Retirement with benefit of pension from the fund became possible at 60 years of age, and compulsory at 70. It carried an allowance equal to half salary for those retiring after 35 years of service. Disability and death benefits were also provided.

CHARITIES AND CORRECTIONS. The State Department of Welfare includes a Board of Welfare, administering the Maryland Penitentiary and House of Correction. Other branches have authority over four State hospitals, a training school and activities in mental hygiene. A second department, the Department of State Char-

ties, deals with State aid to public and private institutions, and enforces laws as to children, including a law to prevent the separation of babies from mothers. This department has under it the three State tuberculosis sanitarium. The chief State institutions are: Maryland Penitentiary, Baltimore; House of Correction, Jessups; Crownsville State Hospital; Eastern Shore State Hospital, Cambridge; Rosewood State Training School, Owings Mills; Spring Grove State Hospital, Catonsville; Springfield State Hospital, Sykesville; Maryland Tuberculosis Sanatorium, at Sanatorium, Md.; Maryland School for the Deaf and Dumb, Frederick; Maryland Training School for Boys, Loch Raven; Montrose School for Girls, Woodensburg. A State system of parole for prisoners in the Penitentiary and the House of Correction was administered by a Parole Commissioner, who reported that 196 paroles had been recommended for issue by the Governor in 1926, and that 166 had been recommended in 1927, up to December 11.

LEGISLATION. The State Legislature convened in regular biennial session January 5. Governor Ritchie in his message urged the restriction of the number of laws to be passed, recommended that Congress be memorialized to repeal the Federal estate tax, opposed raising State inheritance taxes in Maryland, and suggested increasing the State gasoline tax to 4½ cents from 2½ cents. A bill for the compulsory insurance of owners of motor vehicles against liability for damages caused, up to a maximum of \$10,000 for deaths and of \$1000 for property damage, or, as an alternative, certification by the State Insurance Commissioner of the owner's financial responsibility in the requisite amount, was introduced. The House, by vote of 93 to 17, rejected the proposed Child Labor amendment to the Federal Constitution. The Legislature ratified an interstate stream conservation agreement with Pennsylvania that had been executed in November, 1926, to promote the maintenance of sanitary conditions in streams.

POLITICAL AND OTHER EVENTS. Governor Ritchie, succeeding himself, was inaugurated January 12. An explosion and fire at the United States Army ammunition depot at Curtis Bay occurred September 23, and led to renewal of the efforts of Baltimore interests to have this depot removed. Four Federal prohibition agents were indicted under State law in September for the murder of a farmer near Leonardtown who had been killed while opposing a search of his premises without warrant. A Federal judge removed them from State jurisdiction by writ, arousing controversy over the conflict of judicial jurisdictions. The State Public Service Commission allowed the purchase of the Washington, Baltimore and Annapolis Railway, with its power and light subsidiary, by the Consolidated Gas and Electric Company. The State Conservation Commission gave notice in August that the law requiring the replanting of oysters would be enforced against persons seeking permits to take oysters away. The construction of the Conowingo hydro-electric plant on the Susquehanna River, four miles above tidewater, was reported near the end of the year as approaching completion.

At the municipal election of May 3, William Broening, a Republican and former mayor, was elected Mayor of Baltimore, by a majority of about 17,460 votes, over the Democratic candi-

date, William Curran. Direct weekly steamship passenger service between Baltimore, Jacksonville and Miami was inaugurated at the end of November.

OFFICERS. Governor, Albert C. Ritchie; Secretary of State, David C. Winebrenner, 3d; Treasurer, J. M. Dennis; Auditor, L. M. Milbourne; Comptroller, William S. Gordy, Jr.; Attorney General, T. H. Robinson; Superintendent of Schools, Albert S. Cook.

JUDICIARY. Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges: John R. Patterson, T. Scott Offutt, Wm. H. Adkins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lindley Sloan.

MARYLAND, UNIVERSITY OF. An institution of higher education at College Park and Baltimore, Md.; founded in 1807. The enrollment for the autumn term of 1927 was 3254, distributed as follows: agriculture, 121; arts and sciences, 541; dentistry, 369; education, 133; engineering, 231; graduate school, 75; home economics, 54; pharmacy, 358; law, 296; medicine, 391; nursing, 113. The enrollment for the 1927 summer school, held at College Park, was 572. The faculty in 1927 numbered 481. The total income from appropriations and other receipts amounted to \$2,162,729.51. The library contained 49,065 volumes. During the year a new dining room and a science building were completed; and in addition, the campus was landscaped and new roads and walks were laid. President, Raymond A. Pearson, M.S., D.Agr., LL.D.

MASSACHUSETTS. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,852,356. The population by the State census of 1925, was 4,144,205. The estimated population on July 1, 1927, was 4,242,000. The capital is Boston.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	479,000	687,000 ^a	\$14,841,000
	1926	488,000	606,000 ^a	14,877,000
Potatoes	1927	14,000	1,400,000	2,170,000
	1926	18,000	2,015,000	3,627,000
Corn	1927	46,000	1,886,000	2,263,000
	1926	45,000	1,980,000	2,277,000
Tobacco	1927	7,100	8,688,000 ^b	8,218,000
	1926	6,500	8,412,000 ^b	8,294,000
Cranberries	1927	13,900	870,000 ^c
	1926	13,900	430,000 ^c

^a tons, ^b pounds, ^c barrels.

MINERAL PRODUCTION. Stone, the chief article of the State's mineral industry, was produced in the quantity of 2,209,560 short tons in 1925, attaining a considerable increase over the production of 1924, 1,936,520 tons. The stone produced in 1925 was valued at \$6,640,333, that in 1924 at \$6,063,048. Clay products had a value of \$3,789,164 for 1925 and of \$3,859,253 for 1924. Lime production, as estimated on producers' sales, was 187,000 short tons in 1926, and in 1925, 197,732 short tons; the value of the product, \$2,263,000 for 1926 and for 1925, \$2,610,279. Sand and gravel and coke in fairly important quantities were produced. The total value of the State's mineral products, duplications eliminated, was \$16,831,529 in 1925; in 1924, \$15,725,882.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and op-

eration of the general departments of the State government in the fiscal year ending Nov. 30, 1926, were \$39,300,021; their rate per capita was \$9.37. They included \$2,119,725 apportioned for education. Totals not included in the above, of \$163,816 expended in public service enterprises, \$1,691,982 in interest and \$6,290,927 in permanent improvement outlays, brought the total of State expenditure to \$47,446,748. Of this, \$11,091,068 was for highways; \$6,954,318 being for maintenance and \$4,136,750 for construction.

Revenue receipts were \$55,296,327; or per capita, \$13.19. Of their total, property and special taxes yielded 46.7 per cent, attaining a rate of \$6.16 per capita. Earnings of departments and compensation paid the State for the services of officials supplied 6.3 per cent of revenue; 29.8 per cent was derived from sale of licenses, chiefly for incorporated companies and motor vehicles.

Net State indebtedness on November 30, 1926, was \$23,867,747, contingent debt excluded, or \$5.69 per capita. Property subject to ad valorem taxation bore a valuation of \$6,905,087,771. State taxes levied were \$12,000,000, or \$2.86 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 2,019.02. There were constructed in 1927 according to the *Railway Age* 3.54 miles of new third track.

EDUCATION. A law went into effect whereunder a city or town must establish a special class for the mentally retarded in case an examination made by the State division of mental deficiency determined that such city or town had 10 or more children of school age who were mentally retarded to the extent of three years or more. The estimated school population of the State in 1927 was 840,263. There were enrolled in the public schools 729,529 pupils. Of these, 595,645 were in the common schools and 133,884 in the high schools. The expenditure for public school education, including outlay, was \$78,413,848. The average of the salaries of teachers, elementary and high, men and women, in 1926 was \$1606.

CHARITIES AND CORRECTIONS. The Department of Public Welfare, as functioning in 1927, consisted of a Commissioner, Richard K. Conant, and of an advisory board of six members. It had organized divisions of Aid and Relief, of Child Guardianship and of Juvenile Training. It administered aid under the mothers' aid law and aid to persons without legal settlement; cared for dependent, delinquent and neglected children; supervised housing and town planning, private charitable corporations, almshouses, maternity hospitals, and boarding homes for infants. State aid given to some 70,000 persons in the course of 1927 occasioned a total expenditure of \$5,000,000 approximately. In 1926, 3440 mothers and 10,244 children were assisted under the mothers' aid law. Minor wards in State custody Dec. 1, 1927, numbered 5600, and there were 3016 children on parole from the three State training schools. The State Infirmary, Tewksbury, had, December 1, a population of 2338; Massachusetts Hospital School, Canton, 278; Lyman School for Boys, Westborough, 480; Industrial School for Girls, Lancaster, 279; Industrial School for Boys, Shirley, 277. State penal and reformatory institutions received in

1926, according to the U. S. Department of Commerce, 818 prisoners.

LEGISLATION. The Legislature convened in regular annual session January 5, and adjourned April 28. It enacted a measure creating a tax of 2 cents a gallon on gasoline sold for motor vehicle fuel. An amendment of the law passed by the previous Legislature, as to professional bail bondsmen, which would have increased from three to 10 the number of instances of service in this capacity causing bondsmen to rank as professionals, was vetoed by the governor. There was passed a measure for the purchase of radium for State institutions. Bills bearing on the Sacco-Vanzetti case (q.v.), one to empower the Supreme Judicial Court to reconsider the case and another to authorize the governor to appoint a commission to consider a pardon appeal, were rejected. Salaries of Supreme Court judges were raised from \$12,000 to \$15,000; those of Superior Court judges, from \$10,000, were raised to \$13,000. The automobile registration fee was reduced to a flat \$3. A recess committee of seven legislators to recommend changes in the State election law was created. Provision was made for an increase of 60 members in the State police patrol. The poor debtor law was revised by an act to provide for supplementary proceedings in civil actions. This act rendered it possible to sue the debtor not only in the county within which he resided, but also in the judicial district in which he was employed. The \$20 limit, the former minimum for debt suits, was removed, and power was conferred on the courts to order installment payments from the debtor's salary.

POLITICAL AND OTHER EVENTS. The Sacco-Vanzetti Case (q.v.) was terminated August 23 by the execution of the two defendants, who were put to death by the electric chair in Charlestown prison, after Governor Fuller had reviewed their case and had refused clemency. The Bar Association of the City of Boston appointed a committee to inquire whether any changes in the legal procedure of the State were advisable, in view of the record of this case, and particularly in view of its long duration over the period of six years. Governor Fuller, inaugurated January 6, in his inaugural address questioned the wisdom of continuing the system of pensioning State employees, and urged numerous governmental economies. The Pondville State cancer hospital, between Walpole and Wrentham, was opened June 21. With regard to the coal situation, which had been causing hardship in the State for a number of years, a State commission on the necessities of life recommended, January 12, that a body be created to examine coal fields said to underlie some 500 square miles of southeastern Massachusetts, and to get definite data on the amount and quality of the coal there situated, as a means of domestic supply. Two petitions were circulated in September by rival agencies for a referendum to ask the State's delegation in Congress to work for the repeal of the Eighteenth Amendment, but the referendum did not come to a vote in November.

A petition of 24,443 names for repeal of the amendment was filed, December 7. The notorious "get-rich-quick" operator, Charles Ponzi, who had long fought extradition to Massachusetts, after having jumped his bail, was brought to Boston, and was sentenced to from seven to

nine years of prison on February 15. The Boston authorities in March proscribed as indecent nine current books of the season. In April Sinclair Lewis's *Elmer Gantry* was added to the blacklist. A test case was made of *An American Tragedy*, by Theodore Dreiser, published by Boni and Liveright. D. Friede was fined \$100 on April 22, for offering the work in Boston.

Late in the year there occurred some resumption of the removal of manufacturing plants from the State. The Appleton Manufacturing Company announced October 31 that it had determined to remove 30,000 or more spindles and 900 looms from its cotton mills at Lowell to buildings to be erected at Anderson, S. C., the change to cost \$780,000. Of the equal or greater amount of equipment not to be removed from Lowell it was predicted by the president of the company that part at least would be sold out. Another Lowell concern, the Pepperell Manufacturing Company, at the same time announced a 10 per cent wage reduction. Inability of the companies to meet taxes from revenue was alleged in both cases.

The State of Connecticut opposed the diversion of water from the Swift River, as provided by act of the Massachusetts legislature, for increasing the supply of the Boston water system.

OFFICERS. Governor, A. T. Fuller; Lieutenant Governor, F. G. Allen; Secretary of State, F. W. Cook; Treasurer, W. S. Youngman; Auditor, A. B. Cook; Attorney General, Arthur K. Reading; Commissioner of Education, Payson Smith; Commissioner of Public Welfare, Richard K. Conant.

JUDICIARY. Supreme Court: Chief Justice, Arthur Prentice Rugg; Associate Justices: Henry King Braley, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, William C. Waite, George A. Sanderson.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A non-sectarian institution for technical education at Cambridge, Mass.; founded in 1861. The enrollment for the autumn of 1927 was 2712, including 374 graduate and 25 unclassified students. For the summer session the registration was 1448. There were 199 members on the faculty, and 268 others on the staff of the Institute. The productive funds amounted to \$29,400,000, and the income for the year to \$3,010,000, from various sources, as follows: funds, \$1,599,000; student fees, \$894,900; miscellaneous, \$515,000. The book value of land and buildings in Boston and Cambridge was \$12,654,000. The library contained 240,000 volumes. An infirmary and two dormitories were under construction. President, Samuel Wesley Stratton, D.Eng., D.Sc., Ph.D., LL.D.

MATERNITY PROTECTION. The chief of the U. S. Children's Bureau, Miss Grace Abbott, under whose supervision the Federal maternity and infancy act is operated, reported for 1927 the addition of Kansas and Maine to the roll of States accepting Federal aid. Thus, to that time, all the States but Massachusetts, Connecticut, and Illinois were coöperating in the protection of mothers and infants. The amounts available to the States and Hawaii from Federal maternity and infancy funds were as follows: maximum amount available from 1922 appropriations, \$477,500; amounts accepted by States from 1922 appropriation, \$316,554.02; maximum amounts available from 1923, 1924, 1925, 1926,

and 1927 appropriations, \$1,201,725.96. The amounts accepted by the States and Hawaii from yearly appropriations were as follows: 1923 appropriations, \$716,333.40; 1924 appropriation, \$877,122.04; 1925 appropriation, \$932,754.69; 1926 appropriation, \$949,646; 1927 appropriation, \$904,824.71.

During the fiscal year 1927, in 44 States and Hawaii 1808 combined prenatal and child-health conferences were held, 21,347 child-health conferences, and 3231 prenatal conferences. It was estimated that the number of expectant mothers reached by this work was 161,000, and that the number of infants and preschool children reached was 1,034,000. The year marked a further growth of permanent local agencies. In 1927, 70 local combined prenatal and child-health centres were established, 235 child-health centres, and 14 prenatal centres. At the Bureau's offices, January 11-14 was held the fourth annual conference of the State directors supervising the act. There were present representatives from 37 cooperating States and from three non-cooperating States. The Bureau employed its staff for special studies, and in the instruction of midwives, physicians, etc. Two important tasks in which Bureau units cooperated during the year were the work for the extension of the registration area and in planning a study of maternal mortality. With regard to the latter, the year saw the beginning of research in three States.

There is no doubt that the maternity and infancy act contributed mightily toward the

lowering of the infancy death rate. The accompanying table shows infant mortality rates for those States which had accepted the act prior to 1924, and which had been in the registration area for three years prior to acceptance.

It will be noted that for every State, the rates declined during 1922-25. In areas where work had been particularly intensive, the decline in rates was even more marked. Miss Abbott cited the case of a number of counties in central Wisconsin where the rate fell from 65.9 per thousand live births for 1919-22 to 57.8 for 1923-26. On the other hand, in another group of counties not so worked the 1919-22 rate was 73.5 and the 1923-26 rate 68.2.

The work in maternal protection progressed less rapidly. Table II indicates that puerperal septicæmia and puerperal albuminuria still take their terrible toll. It was pointed out, however, that in some localities where prenatal care was given the rate fell.

The infant mortality rate of the United States did not change its position in 1925. For the 14 countries for which comparable statistics were available, four countries (New Zealand, Australia, Netherlands, Irish Free State) had lower rates while nine countries (Belgium, Chile, England and Wales, Finland, Hungary, Japan, Northern Ireland, Scotland, Uruguay) had higher rates. The United States had a higher maternal mortality rate than those of all the countries for which statistics were available. See also CHILD WELFARE.

TABLE I

COMPARISON OF INFANT MORTALITY PRIOR TO PERIOD OF COÖPERATION UNDER SHEPPARD-TOWNER ACT WITH INFANT MORTALITY DURING THE PERIOD OF COÖPERATION; STATE, URBAN, AND RURAL AVERAGE RATES FOR THREE- AND FOUR-YEAR PERIODS FOR SPECIFIED STATES *

State	State		Urban		Rural	
	1919-21, inclusive	1922-25, inclusive	1919-21, inclusive	1922-25, inclusive	1919-21, inclusive	1922-25, inclusive
California	70.5	69.9	64.1	63.3	78.8	79.3
Indiana	77.2	67.9	87.6	75.6	70.1	61.8
Kentucky	71.7	68.9	87.4	83.6	69.1	66.0
Maryland	100.9	91.2	96.4	86.5	108.7	97.4
Michigan	86.5	75.6	92.4	80.0	79.6	69.7
Minnesota	68.9	59.1	65.7	59.7	63.0	55.8
New Hampshire	89.1	82.1	97.4	89.8	80.1	78.9
New York ^b	79.6	69.6	80.7	69.6	74.7	69.7
North Carolina	81.1	80.4	108.4	102.8	78.2	77.0
Ohio	82.2	70.6	85.9	73.0	77.3	67.2
Oregon	58.3	55.1	59.0	52.8	57.8	56.6
Pennsylvania	94.8	84.7	94.4	84.2	95.1	85.2
South Carolina	108.0	97.0 ^c	135.4	114.0 ^c	104.7	94.9 ^c
Utah	71.5	62.1	70.7	59.7	72.3	63.4
Virginia	84.2	79.3	102.6	95.5	79.2	75.5
Washington ^b	61.2	56.4	59.8	50.9	63.0	62.2
Wisconsin	76.0	68.2	87.2	73.1	69.0	64.7

* States included were those that cooperated under the act prior to 1924 and had been in the birth-registration area three consecutive years prior to cooperation under the act.

^b Rates are for 1920 to 1922, and 1923 to 1925, inclusive, as New York and Washington did not cooperate under the act until 1923.

^c Rate is for 1922 to 1924, inclusive, as South Carolina was dropped from the birth-registration area in 1925.

TABLE II

MORTALITY FROM PUERPERAL CAUSES PER 10,000 LIVE BIRTHS; UNITED STATES BIRTH-REGISTRATION AREA, 1921-1925

Year	Rate per 10,000 live births	Numbers of live births	Total	Deaths from puerperal causes		
				Puerperal septicæmia	Puerperal albuminuria and con- vulsions	All other
1921	68.2	1,714,261	11,688	4,689	3,081	3,968
1922	66.4	1,774,911	11,792	4,249	3,211	4,332
1923	66.5	1,792,646	11,922	4,495	2,966	4,461
1924	65.6	1,930,614	12,672	4,704	3,441	4,527
1925	64.7	1,878,880	12,158	4,569	3,256	4,383

GERMANY. In July, Germany ratified the Washington Convention of 1919 applying to the employment of women before and after childbirth, and amended its present statutes bearing on that point. The new code prohibits the employment of women for six weeks before and six weeks after confinement, including in its purview all wage-earning women except those employed in agriculture, forestry, animal husbandry, and fisheries.

MATHERS, THOMAS GRAHAM. Canadian jurist, died at Rochester, Minn., August 16. He was born at Lucknow, Ont., Apr. 16, 1859, and was educated at Lucknow and Kincardine, Ont. He went to Manitoba in 1883, and was called to the bar of the province in 1889. He was head of the law department of the Manitoba Government Railways for a few years, and in 1896-1905 was agent minister of justice for Manitoba and counsel for the several departments of the Dominion government. He was alderman of Winnipeg, 1898-1899, and contested the mayoralty in 1900. From 1899 to 1900 he was chairman of the board of license commissioners, and in 1905 was appointed to the King's Bench of Manitoba, as puisne judge. Since 1910 he was chief justice of the King's Bench of Manitoba.

MAURITANIA. A French colony in French West Africa (q.v.), consisting of eight districts; having the status of a colony since Jan. 1, 1921. Area, 347,400 square miles; native population, 287,338, mostly Moorish Mohammedans; European population, about 300. The budget for 1926 was 8,409,100 francs. The colony is under a lieutenant governor, subject to the governor general of French West Africa.

MAURITIUS, ma-ri-sh'us. An island possession of Great Britain in the Indian Ocean, situated 500 miles east of Madagascar, which, with its dependencies of Rodrigues, Diego Garcia, the St. Brandon group of six islands, and other small islands, forms a colony of the British crown. Area of Mauritius, about 720 square miles; population, according to the census of 1921, 385,074. The estimated population at the end of 1925 was 393,708. Capital, Port Louis, with a population of 53,708 in 1925 (including suburbs). In recent years the greater part of Port Louis has passed from the hands of the Europeans to Asiatic or Chinese hands. The movement of population in 1925 was: Birth rate, 45.2 per thousand (exclusive of Indians); death rate, 23.8 per thousand (also exclusive of Indians). Primary education is free but not compulsory. At the end of 1925 there were 57 government schools, 92 aided schools, and three technical schools. The average attendance in government schools in 1925 was 9886, in aided schools, 14,084, more than three-fourths of whom were in Roman Catholic schools. In 1925 the exports were valued at £2,977,630 and the imports at £4,128,821. The staple exports are sugar, aloë fibre, and coconut oil. The principal participants in the foreign trade are the United Kingdom, the British possessions, France, and the islands of Réunion and Madagascar. The registered shipping on Jan. 1, 1926, 23 vessels of 6966 tons. Vessels entered in 1925, 234 of 632,951 tons; vessels cleared, 229 of 619,221 tons, the greater part of each being British. Railway mileage, 144, of which 24 miles are narrow gauge. There is cable connection with Australia, South Africa, and the islands of Madagascar, Zanzibar, and Réunion. The colony is under a governor aided

by an executive council and a council of government, the latter having a minority of elected members. Governor in 1927, Sir Herbert James Read.

MAXIM, HUDSON. American inventor and engineer, died at Lake Hopatcong, N. J., May 6. Born at Orneville, Me., Feb. 3, 1853, he was educated at the Maine Wesleyan Seminary, Kent's Hill, Me., and devoted himself to the study of chemistry, engineering and natural science. At the age of 22 he formulated an hypothesis of the compound nature of atoms, and similar abstruse subjects engaged his attention throughout his career. At the time of his death he was completing a pamphlet in which he sought to maintain that he and not Einstein was the author of the theory of relativity. His first business activity was printing and publishing at Pittsfield, Mass., 1883-88, but in the latter year he turned his attention to the field in which he achieved his greatest success, that of ordnance and explosives. He was among the first to make smokeless powder in the United States. Extending this business, he developed the multi-perforated smokeless cannon powder, and in 1901 sold to the United States government the secret of his high explosive, named maxinite after himself. This is a picric acid compound, said to be 50 per cent more powerful than dynamite, which could be fired through armor plate without exploding until after it had penetrated the plate. His later inventions included various processes connected with the electric furnace; a detonating fuse for high-explosive projectiles; stabilite, a smokeless powder invented by him and developed by him in connection with the E. I. du Pont de Nemours Powder Company; motorite, a self-combustive material for driving torpedoes, and a torpedo ram. In 1915 and during the War he was a member of the United States Navy Consulting Board. Hudson Maxim was a brother of the late Sir Hiram Maxim, inventor of the Maxim gun and other devices for use in peace and war. For 20 years the brothers were estranged over the issue of the invention of smokeless powder, each claiming priority. A joint board of army and navy experts gave Hudson Maxim the credit of being the first man to make smokeless powder in the United States. An author he prided himself most on *The Science of Poetry and the Philosophy of Language*, published in 1910 after 10 years' preparation. He wrote also *Defenseless America* (1915) and *Dynamite Stories* (1916).

MAYOTTE (mä-yôt') AND COMORO ISLANDS. An archipelago belonging to France and administered by the governor general of Madagascar. Total area, about 790 square miles; population in 1921, 109,860; in 1925, 119,305. The area of Mayotte is 140 square miles, and the population (1925) about 12,674. Vanilla is one of the chief products. Others are sugar, cacao, aloes, and perfumes. The chief imports are cotton fabrics, metals, and rice; the principal exports, hides, sugar, copra, and vanilla. The islands are in the Mozambique Channel, midway between Africa and the northern end of Madagascar.

MEARA, FRANK SHEERMAN. American physician and educator, died at New York, October 9. He was born at Salem, Mass., May 6, 1866, and was educated at Yale University, and the College of Physicians and Surgeons, Columbia

University. He received his M.D. degree in 1895, and began to practice medicine in that year at New York. Between 1903 and 1904 he was an instructor in medicine at the College of Physicians and Surgeons, New York, and he was connected with Bellevue Hospital, New York, in various capacities from 1904 until 1920. He was consulting physician at St. Luke's and other New York hospitals, as well as at institutions in Bronxville, and Mount Vernon, N. Y., and Dover and Morristown, N. J. From 1920 until his death he was professor of clinical medicine at the Cornell University Medical School, New York. He was the author of *Treatment of Infectious Diseases* (1916, 1921).

MECHANICAL ENGINEERS, AMERICAN SOCIETY OF. An organization founded in 1880 and incorporated in 1881 under the laws of the State of New York, with the following objects: to promote the arts and sciences, to encourage original research, to foster engineering education, to advance the standards of engineering, to promote the intercourse of engineers among themselves and with allied technologists, and, in cooperation with other engineering societies, to broaden the usefulness of the engineering profession. Considerable progress was made in standardization in mechanical engineering during the year, 23 projects being sponsored by the Society under the direction of various committees, many of which completed the tasks assigned to them. Four new projects for which the Society accepted sole or joint sponsorship in 1926-27 were: Wire and sheet metal gauges, wrought iron and wrought steel pipe and tubing, electric motor frame dimensions, and plumbing equipment. Eleven research committees with a personnel of 113 members initiated and fostered researches on specific subjects. Over 400 meetings were held during the year throughout the country in the various geographical groups in addition to the annual and spring meetings and regional meetings. There were 89 local sections and 16 professional divisions, caring for the different phases of mechanical engineering.

The publications of the Society included *Mechanical Engineering*, the journal; *Transactions*, containing the annual papers of permanent value, and issued quarterly on the basis of registration in the professional divisions; the *Record and Index* of all papers presented at authorized meetings, committee proceedings, the presidential address, etc.; The *Engineering Index* to the technical press of the world; *Condensed Catalogues of Mechanical Equipment*; the *A.S.M.E. News*, the semi-monthly newspaper; and the *Year Book* of the Society. The 1927 meeting was held at the headquarters in New York, on December 5 to 8. In November, 1927 the membership was 18,262. Officers elected for 1927-28 were: President, Alex Dow; vice presidents, Charles L. Newcomb, E. O. Eastwood, Edwards R. Fish, John H. Lawrence, E. A. Muller, Newell Sanders and Paul Wright; managers, Robert L. Daugherty, William Elmer, Charles E. Gorton, Paul Doty, Ralph E. Flanders, Conrad N. Lauer, Frederick H. Dornier, William A. Hanley, and Luther B. McMillan; treasurer, Erik Oberg; secretary, Calvin W. Rice. Headquarters are located in the Engineering Societies Building, 29 West 39th Street, New York.

MECHANICS. See **PHYSICS.**

MECHANICS LIEN LAWS. See **LABOR LEGISLATION.**

MEDICINE AND SURGERY. The policy of the *Year Book* has for some years upheld the primacy of the great social maladies in the province of medical interest. The greater the damage inflicted on society and industry, the more inevitable is the appearance of organized effort, which, at first local or national, eventually becomes international. In all of these maladies we see governmental aid and private philanthropy active in supplying funds, technical service and other resources. In the great majority of these diseases the incidence is high and the victims are reckoned in many thousands, but there are some affections of relatively low incidence which attract attention because of the high death rate and disabling sequelae. The fact that science may have succeeded for the time in almost eradicating certain diseases does not and should not rob them of their interest. In some of these the gain is more apparent than actual and in others new outbreaks follow sanitary sins of omission. Naturally an attempt is made to cover the progress of joint effort in obtaining a better insight into diseases, but a year is too short an interval to judge wisely of new discoveries. In these pages an attempt is made to keep track of the progress of our knowledge of revolutionary discoveries such as those of insulin in therapeutics and vitamins in biology. There has been no striking announcement of new diseases in 1927.

The subjects announced during 1927 which suggest the greatest promise include the allergic chamber (see **ALLERGIC DISEASES**) for the treatment at home of respiratory affections of the type of asthma, whooping cough and hay fever; the Minot-Murphy diet for pernicious anemia (see **ANEMIA, PERNICIOUS**); the endorsement of a new form of painless childbirth by leading maternity institutions (see **ANALGESIA, OBSTETRICAL**); a dietetic cure of childhood **EPILEPSY** (q.v.); a serum treatment of **ERYSIPELAS** (q.v.); the treatment of **ROCKETS** (q.v.) by irradiated food substances which have the values of vitamins; a promising treatment of **SEASICKNESS** (q.v.) and the discovery of new **VITAMINS** (q.v.).

MEGRUE, ROY COOPER. An American dramatist, died in New York on February 27. He was born in New York on June 12, 1883, and was educated at Trinity School, N. Y., and graduated from Columbia University in 1903. He gained his knowledge of the art of writing for the stage while employed as a play broker with Elisabeth Marbury. His first play *Under Cover* was produced in Boston in 1913. It was enthusiastically received there and later in New York. The following year *It Pays to Advertise*, written in collaboration with Walter Hackett, scored an even greater success. Then followed *Under Fire* which he wrote alone, and *Potash and Perlmutter in Society* which he wrote with Montague Glass. The most successful of his other plays was *Tea for Three*, which revealed a talent for light comedy, had a long run on the legitimate stage, and was successfully filmed in 1927.

MELLEN, CHARLES SANGER. An American railroad president, died at Concord, N. H., November 17. He was born in Lowell, Mass., Aug. 16, 1851, and when a boy went to live at Concord where he graduated from the high school. In 1867 notwithstanding an opportunity to go

to college he went to work in the office of the Northern New Hampshire R. R. at Concord. From there he went to the Central Vermont, but soon returned to the Northern N. H. R. R. as assistant treasurer. A few years later he was made superintendent of the Boston and Lowell R. R. His knowledge of operating was gained by practical experience in the yards at all hours studying the manifold activities of traffic and operation until he had familiarized himself with them. He soon attracted the attention of other railroad men, and in 1888 he went to the Union Pacific as purchasing agent, and rapidly rose to become general traffic manager. In 1892 he was appointed general manager of the New York and New England R. R. A few months afterwards he was selected as vice president of the New York, New Haven and Hartford R. R. He then commenced to fight the New York Central. The late J. P. Morgan was a director of both these roads and soon realized that the young vice president was a shrewd railroad man. In 1897 when Morgan wanted some one to build up the Northern Pacific, Mellen was selected for the job. The business of the Northern Pacific was increased during Mellen's régime so that the gross earnings rose 156 per cent. He resigned in 1903 to become president of the New Haven. At this period of his career he undoubtedly did one of the finest pieces of rehabilitation work ever known in American railroads. In the first years of his control he made the New Haven a railroad of remarkable operating efficiency; but his desire for the expansion of the system led to such sweeping plans that in 10 years it had absorbed outside land and water competition amounting to \$200,000,000. This strained the finances; the stock collapsed, leaving the road heavily in debt. In 1913 Mr. Mellen was repudiated by his directors and he passed into retirement.

MEMEL. See LITHUANIA.

MENDES, FREDERICK DE SOLA. American rabbi, died at New Rochelle, N. Y., October 26. He was born at Montego Bay, Jamaica, B. W. I., July 8, 1850. He was educated at the Universities of Breslau and Jena, Germany, and at the Jewish Theological Seminary, Breslau, graduating in 1873. In the same year he became preacher at the New Synagogue, Great St. Helen's, London, but after a few months' service there he went to the United States and became assistant preacher of the West End Synagogue, New York, Jan. 1, 1874. He succeeded the late Dr. S. M. Isaacs as rabbi of the congregation, and continued in that post until November, 1920, when he became rabbi emeritus. He founded *The American Hebrew* in 1879, and was the author of several books on Judaism. He took a middle course between orthodox Judaism and the advanced thought of the twentieth century.

MERCURY. See QUICKSILVER.

MERCURY BOILERS. See BOILERS.

MESOPOTAMIA, IRAK or IRAQ. A territory under British mandate in Asia. It comprises the region on the Tigris and Euphrates Rivers between Persia and Northern Arabia; formerly consisting of the vilayets of Bagdad, Basra, and Mosul in the Turkish Empire; conquered by British and Indian troops during the World War and recognized afterwards as an independent state to be placed under a mandatory power, in this case Great Britain.

AREA AND POPULATION. The area is given at 143,250 square miles; population, according to the census of 1920, 1,849,282, distributed as follows among the respective divisions: Bagdad, 1,360,304; Basra, 785,600; Mosul, 703,378. The inhabitants are mainly Mohammedan and are divided among the two Mohammedan sects as follows: Shiites, 1,494,015; Sunnites, 1,146,685. The Jews in 1920 numbered 87,488 and the Christians, 78,792. The chief seaport is Basra on the Persian Gulf.

EDUCATION. According to the latest available statistics on education there were in 1925, 21,755 pupils in 233 government schools and 12,900 pupils in 45 private schools. During 1927, the University of Bagdad was nearing completion, the first block of it having been opened in March, 1926.

PRODUCTION. Mesopotamia is a land of great potentialities. The soil of the country is rich, but there are vast areas which can only be cultivated if irrigated by canals or pumps. The amount of land under cultivation by pump irrigation is steadily increasing. The problem of economic cultivation with pump irrigation is closely connected with the question of cheap oil. The natural oil resources have not as yet been fully investigated, but rich deposits are believed to exist. A concession for the exploitation of the oil in the Bagdad and Mosul Vilayets was granted to the Turkish Petroleum Co. in March, 1925, and the Anglo-Persian Oil Co. has concession rights on the Persian frontiers near Khanigah. The British Cotton Growing Association was encouraging cotton cultivation by offering a secure market to cultivators, and the Department of Agriculture cooperated by undertaking scientific experiments and seed culture. In 1925, 3500 bales of cotton were exported. Although the oil deposits have marked it a region of international importance, it has other valuable resources, particularly its rich soil, which has great possibilities under cultivation. Wheat, barley, cotton, dates, rice, and ground nuts are the chief products. Industrially Mesopotamia is very little developed, such activity being confined mainly to a few ice plants and other small industries in the chief cities of the country.

COMMERCE. Mesopotamia's chief commercial importance is as a medium for transit trade to and from Persia. Great Britain easily leads among countries exporting to Irak, with India a close second, but Persia is so much more important as a purchaser of exports and reexports that the total volume of trade with Persia is considerably above that with any other country. The greater part of British and Indian exports to Irak are in reality transit shipments to Persia. Exports in 1925-26 amounted to 50,293,783 rupees as compared with 142,008,617 in 1925. Imports in 1925-26 amounted to 107,040,626 rupees as compared with 191,240,989 in the preceding year.

FINANCE. The revenue in 1925-26 was 57,671,543 rupees and the expenditure 50,813,955. The estimated revenue in 1926-27 was 55,171,900 rupees and the estimated expenditure 54,962,820 rupees.

COMMUNICATIONS. The Mesopotamian railway system in 1927 consisted of (1) a meter gauge line from Basra, at the head of the Persian Gulf, to Bagdad, a distance of 350 miles; (2) a meter gauge line, connected with the Basra line

by a train ferry across the Tigris River at Bagdad, from Bagdad to Khaniqin (109 miles) which is an important town near the Mesopotamian frontier; (3) a branch meter gauge line from the Bagdad-Khaniqin to Kikuk (109 miles); (4) a standard gauge line from Bagdad to Shergat (186 miles) along the right bank of the Tigris toward Mosul.

GOVERNMENT. The organic law passed by the Constituent Assembly in June, 1924, provides for a limited monarchy and a responsible government. The legislative body consists of a senate of 20 nominated "elder Statesmen," and the lower house of 88 elected deputies. King in 1927, Faisal. The cabinet as formed at the beginning of the year was as follows: Premier and Minister of Foreign Affairs, General Jafar Pasha el Askari; Interior, Rashid Ali Beg el Gilam; Defense, General Nuri Pasha Said; Finance, General Yasin Pasha el Hashimi; Justice, Rauf Beg el Shahdirshi; Works, Amin Zaki Beg; Education, Abdul Mahdi el Mumtafif; Aqqa, Amin Ali Beg Bashayan.

HISTORY. The chief event in a comparatively quiet year for Mesopotamia was the signing of a new treaty between that country and Great Britain on December 14, announced in the British Parliament on December 20. As noted in previous YEAR BOOKS, the relations between Great Britain and Mesopotamia were to be terminated as soon as Mesopotamia was made a member of the League of Nations. During the entire year 1927 there was considerable agitation throughout the country for entrance into the League. In order to bring about this desired result the government had to undertake full military and financial responsibility both as against external and internal foes. The only way out, according to the Irak government, was by having an army based on the conscription idea. This was opposed not only by Great Britain, but by many influential citizens within Mesopotamia itself.

During the fall King Faisal and Prime Minister Jaafar Pasha visited London and entered into negotiations with the British government concerning a new treaty. Although these negotiations seemed for a long time sure to fail, they were finally successful just as Faisal and his Prime Minister were about to start for home. The chief provision of the new treaty was the recognition on the part of Great Britain that the Kingdom of Irak was an independent sovereign state, while, on the other hand, the proposal that Irak be admitted to the League of Nations was deferred until 1932, provided that the present level of progress in the country be maintained and that things go well in the meantime. As noted above under *Government*, the Mesopotamian government is guided by the British government in all matters pertaining to financial operations and international relations. The purport of the new treaty is that similar control is to be exercised by the British government at least until 1932.

MESSEL MEDAL. See *CHEMISTRY, INDUSTRIAL*, under *Medals*.

METALLURGY. The outstanding development in the realm of nonferrous metallurgy in 1927 was the advance made in the art of selective or differential flotation of complex ores, by which two or more commercial concentrates can be made from one ore, or one concentrate can be made of much higher grade than has here-

tofore been possible. As a result, many ores, chiefly those of lead and zinc, have become profitable to mine, even with lower metal prices. Smelting practice has also undergone somewhat of a change, owing to the fact that this new method of concentration gives a purer material for furnace reduction.

ORE DRESSING. Symons cone crushers were the outstanding recent development in crushing machinery. They were very satisfactory at most of the installations where they have been made, giving an unusually large reduction in one step, and a uniform product. At the Chino plant, for instance, a crusher of this type reduces a 10- to 12-inch feed to $\frac{3}{8}$ inch at the rate of 400 to 500 tons per hour. They are designed somewhat after the manner of a gyratory, with flattened conical crushing plates. Conical ball mills have been made of 10-foot diameter with an unexpected increase in crushing efficiency; and a rod mill with conical ends was also put on the market. The use of cubical grinding media in ball mills seemed still to be confined to the one or two plants where they were first tried, but they were giving satisfaction there. The circulating load of ball and rod mills was being increased where possible, and hydraulic deslimers were being increasingly favored. Three kinds of thickening equipment were available, whereas until recently the usual form of Dorr tanks found almost universal application.

A new filter came on the market in 1927, the principle of which seems most logical. It is known as the Dorco filter, and in shape is similar to the drum filters of the Oliver type. However, instead of sucking the pulp upward against the periphery of the filter, the pulp is admitted to the inside of the drum and naturally settles in the same direction as that in which it is drawn by the vacuum for filtration. A scraper removes the moist filter cake, and a conveyor carries the filtered material out of the interior of the drum. Much greater capacity is the outstanding advantage over the older form. The disk type of filter also continued popular, and dewatering apparatus of the continuous centrifuge type was introduced for metallurgical purposes.

Advances were made in the art of selectively floating the various minerals in complex ores, through improvements in machinery, in reagents, and in technique. The latest type of flotation machines required much less power than cells of the older design and caused less trouble in operation. Xanthate still had a field all its own as a flotation reagent, but a new compound of this nature was developed at the Braden mine in Chile, which was said to give improved metallurgical results. Also, the metallurgists of the Utah Copper Co. developed the use of di-cresol-di-thio-phosphoric acid, or as it is commonly termed phospho-cresylic or Aero-Float, which has resulted in marked economies at that plant. It was not many years ago that the Utah ore was considered a particularly difficult one to treat by flotation, the recovery being only about 70 per cent on an ore running a little over 1 per cent of copper. About 90 per cent of the copper in 1927 was being recovered on an ore averaging slightly less than 1 per cent. Numerous reagents are customarily used at one plant for various purposes. At a prominent lead-zinc mill for example, the pulp is made alkaline with soda ash; sodium cyanide

is used as a zinc depressant in the preliminary lead flotation; xanthate is used as a general conditioner and stabilizer; and cresylic acid as a frother and collector. In the zinc circuit, copper sulphate is used to condition the zinc sulphide, a mixture of cresylic acid and water-gas tar as a frother and collector, and a small amount of "fumol" as a scavenger oil. In cleaning the zinc concentrate, the pulp is heated to depress the silica or the gangue present. A small amount of potassium dichromate may also be used to stabilize the zinc float and to depress iron.

Other reagents used at various plants include: sodium sulphide, as a sulphidizer and deflocculator of slime; pine oil, as a frothing oil; lime as a pulp conditioner and pyrite depressant; thio-carbanilid as a selector or collector; barium sulphide as a deflocculator; tar oil as a froth stiffener; coal tar, as a collecting oil; sodium resinate, to stabilize froth; zinc sulphate, to depress zinc; sodium sulphite, as a zinc depressant; cement, as an alkaline reagent and iron depressant; crude turpentine, for froth control; ortho-toluidine, used mixed with thio-carbanilid; xylidine, in connection with the preceding two reagents, to increase the froth; and sulphuric acid, as a conditioning agent for the flotation of iron sulphides. Two or three other patented reagents were being experimentally used with results soon to be made public.

Some experimental work was conducted by the U. S. Bureau of Mines in the flotation of non-metallic minerals such as limestone, phosphate, and bauxite; graphite, of course, is easily floated.

During the year, the American Institute of Mining and Metallurgical Engineers held a regional meeting in Salt Lake City which was especially devoted to the subject of flotation, and many interesting papers on the subject were published and discussed at that time.

Important mill construction in 1927 included the plant of the American Metal Co., near Santa Fe, N. M.; United Verde Copper Co., Jerome, Ariz.; Noranda Mines, Rouyn, Quebec; and the American Smelting & Refining Co.'s Buchans River plant in Newfoundland.

HYDROMETALLURGY. The new ammonia leaching plant of the Bwana M'Kubwa company, in Africa, met with several difficulties and had not reached the production that was hoped. On the other hand, the new Inspiration Copper Co.'s plant, in Arizona, using acid for the solution of the oxidized copper, and iron sulphate for dissolving the chalcocite, both in warm solution, had proved remarkably successful. Two or three small copper leaching plants had come into production; one at Contact, Nevada, applies the method used by the Ohio Copper Co., leaching the ore in place with 3 per cent sulphuric acid, and precipitating the copper, about 80 per cent of which in the ore is thought to be soluble, on scrap iron.

Production of electrolytic zinc is constantly becoming of greater importance. Two new plants were being built during 1927 and were to be in production early in 1928. One is Anaconda's new plant at Anaconda, Mont., which will duplicate the practice at Great Falls, and the other, that of the Sullivan Mining Co. at Kellogg, Idaho. Several innovations will be made in the last-named plant. For one thing, a much stronger

cell acid was to be used—close to 30 per cent instead of 10 to 15 per cent as was the practice elsewhere. Solution of the calcine will be carried out with the acid at near the boiling point, the calcine first being run over magnetic separators to make a high-iron and a low-iron product. The high-iron product will contain most of the relatively insoluble ferrates and will be treated with the hot acid first, the low-iron product being added towards the end of the agitation period. Single-stage batch treatment will be practiced. Filtration is expected to be easier than usual, Burt revolving pressure filters being used. Arsenic and antimony will be removed by precipitation with iron hydroxide; copper, cadmium, and cobalt possibly by metallic zinc. The solution for electrolytic precipitation will contain over 20 per cent zinc, and a current density of over 100 amperes per square foot of cathode area will be used, or more than three times that of other plants. Many other innovations will be tried, which will make this plant of outstanding interest to hydrometallurgists in 1928. For the development of these new ideas, U. C. Tainton is primarily responsible.

The Tainton electrolytic cell was successful in the electrolytic lead plant of the Bunker Hill & Sullivan company, and similar equipment is being considered by the Cerro de Pasco Copper company, which is developing a large low-grade lead-silver deposit in Peru.

Several new cyanide plants for the treatment of gold ores were constructed in 1927, largely in Ontario and on the Rand, in Africa. In general, American and Canadian practice was to grind in solution in ball mills followed by tube mills, using bowl classifiers, with particular attention given to classification and fine grinding of metallics and sulphides. In some instances, the sulphides are removed by flotation and separately treated. The pulp, containing from 90 to 98 per cent of minus-200-mesh material goes to thickeners, followed by agitators, and the residue is finally filtered on continuous vacuum filters. Tandem filters are a successful novelty at some plants. Regeneration of cyanide is a matter of small moment for gold mines, but the comparatively large amount of cyanide used by silver reduction mills makes its recovery important and much success has been attained in this procedure at several Mexican plants.

PYROMETALLURGY. The litigation with regard to the Carson patents for the side-feeding of reverberatory furnaces continued, and as a result there was little published information concerning current practice. Some smelters went back to centre charging, which does not infringe the Carson patents, and claimed to have obtained increased tonnage and lower copper losses by so doing. Watercooling of the side walls and roof arches was being tried at some smelters, and screw feeding of a part of the charge through the furnace walls was still in vogue at the plant where it had been tried for the last two or three years.

Two interesting copper smelters were built during the year. That of the Phelps Dodge Corporation at Douglas, Ariz., has a novel design and arrangement of its roasting furnaces. Formerly, there was not considered sufficient room for roasters to be placed directly above the smelting furnace, so that the calcines could fall by gravity. But owing to the fact that higher-

grade concentrates are now available through selective flotation, and to the design of a 11-hearth roaster for this special purpose, six roasters at the new Douglas smelter were found ample for feeding the furnace underneath. The calcined material is thus fed into the furnaces at a red heat, and the fuel ratio thereby secured is well below a half barrel of oil per ton of charge, with a furnace capacity in excess of 1000 tons a day. The practice here was perhaps the most advanced of that at any copper smelter in the world.

A brand new smelter was built in the recently discovered Rouyn district of northwestern Quebec, by the Horne Copper Co., controlled by Noranda Mines. This was blown in in December. Special mention should be made of large bin capacity over the roasters at this plant, insuring a sufficient supply of unfrozen ore. A novelty is the use of heat regenerators through which the waste gases from the reverberatories pass, the hot air thus secured being blown into the furnaces with the powdered coal used for fuel. Brick checkerwork is ordinarily used in steel furnaces, and similar construction has been used in two or three copper reverberatories in the past, but in this installation the heat transfer is made through metal, a nickel alloy being used, as developed by Victor Hybinette. Early results were favorable. At this plant Peirce-Smith basic-lined converters of the horizontal type are used, present practice rather favoring this type over the upright form.

For local reasons, an attempt was recently made to adopt the old-style method of acid converting at one of the Arizona smelters. Though practice was improved over what it was 20 years previously, when basic converting was adopted, it apparently could not equal the more modern method, and the plant in question went back to basic-lined furnaces. The development of an improved and longer-wearing magnesite brick has cut converting costs somewhat.

The feeding of wet concentrates directly into a reverberatory furnace without preliminary roasting, which originated at Cananea, was adopted by the Consolidated Company at Trail, B. C. The higher grade of concentrates make roasting virtually unnecessary at many plants. It was thought likely that there might be some resumption of the work done at Anaconda several years ago in blowing concentrates into a converter, as conditions were more favorable to that practice than they were when the trials were made.

Blast-furnace smelting was abandoned by the United Verde Company, with the completion of its new concentrating plant. The first step in supplanting blast furnaces at the Katanga property in the Belgian Congo also was taken with the erection and blowing-in during the year of a reverberatory furnace for smelting the oxidized copper ore of that region, heretofore treated in blast furnaces. The ore and flux is mixed with a small amount of coal for reduction, and powdered coal is used for fuel, a reducing atmosphere being maintained. Slag losses should be less with this method.

The only new lead smelter of importance built in the United States during the year was that of the Phelps Dodge Corporation at Douglas, Ariz. This consists of an automatic sampling and crushing plant, a nine-hearth roasting fur-

nace, blast furnace, storage bins, sintering machine, lead kettles, casting machine, and bag-house. Further work was done with the Harris process for refining lead by passage of the bullion through molten caustic soda and nitre. Antimony, arsenic, and tin are thereby removed. The American Smelting & Refining Co.'s plant at Perth Amboy, N. J., was perhaps the leader in the development of this method.

Marked progress was made in the handling of flotation concentrate by the zinc smelters. No difficulty was met with in reducing this type of material by the ordinary retort methods, provided it is suitably prepared by roasting in multiple-hearth furnaces followed by sintering in Dwight & Lloyd machines. Dust arising in the pre-roasting process is caught by Cottrell fume precipitation equipment. The pre-roasting carries the sulphur down to about 2 per cent; manufacture of sulphuric acid from the roaster gas is the common practice. The calcine is broken up to pea size, mixed with about 5 per cent of fine coal or coke, moistened, and sintered. Almost complete elimination of sulphur is thus secured, and the physical condition of the product is excellent for retort distillation. An outstanding example of a modern plant of this kind is that of the American Steel & Wire Co., at Donora, Pa. The Coley and Ashcroft processes were still of only laboratory application.

The Waelz process, originating in Europe, was of much promise. Crude zinc oxide is reduced in a rough way in a revolving cylindrical kiln, and immediately burned under proper conditions, the zinc oxide in a comparatively pure form being collected. The Anaconda Company, at East Helena, Mont., has installed a different method for recovering oxidized zinc, charging lead blast-furnace slag containing a large amount of zinc into a special furnace in which powdered coal is introduced into the tuyeres, the reduced zinc being volatilized.

Copper refining is carried on much as it has been in the past. An electrolytic plant using about twice the usual current density was being built by the Mount Lyell Company at Queenstown, in Australia. Extremely cheap hydro-electric power makes this economically advisable. The Union Minière's electrolytic refinery in Belgium went into operation at the end of the year, the first unit having a capacity of 30,000 or 40,000 tons of copper a year. Katanga production increased by about this amount, so approximately the same tonnage as heretofore will continue to be refined by the Nichols Company, in New York City.

METCALFE, JAMES STETSON. An American dramatic critic and author, died in New York on May 26. Born in Buffalo, N. Y., on June 27, 1858, he was graduated at Yale in 1879, later receiving the honorary degree of A.M. in 1891. For six years prior to becoming a dramatic critic he was editor of *The Modern Age*, editorial writer on *The Buffalo Express*, editor of *The People's Pictorial Express*, and manager of the American Newspaper Publishers' Association. In 1889 he became dramatic critic of *Life*, and for 31 years he held the position. He was recognized as a vigorous critic and was at one time barred from the theatres on account of his fearless attacks on theatrical producers. He severed his connection with *Life* in 1920 to

become the art and dramatic critic of *Judge*. In 1923 he joined the staff of *The Wall Street Journal* as dramatic editor, and was on this paper until his death. He established the Metcalfe Dramatic Prize at Yale University in 1915. His published works were: *Mythology for Moderns* (1900); *The American Slave* (1900); *Another Three Weeks* (1908); *The Diary of a District Messenger* (1909) and *Jane Street* (1921).

METEOROLOGY. In recent years, the general conclusion has been reached by most authorities that the variations of climate known to have taken place on the earth during geological times probably were brought about entirely by terrestrial factors, and that it is unscientific to postulate external cosmic controls. C. E. P. Brooks, in particular, has sought to show that, under the right conditions, profound effects may follow a very slight change in temperature. For example, if the temperature in the polar regions happened at any time to be just above the freezing point of sea water, and if then, by a change in the distribution of land and water, the mean annual temperature in high latitudes were decreased by only 2°, the ocean would freeze at the pole; cold water would then flow away at the bottom until the entire ocean was cooled down, when an ice sheet would begin to form, the ice sheet would automatically accelerate its own growth through its powerful and ever increasing cooling effect, and might ultimately extend to latitude 65°; the temperature at the pole would meanwhile have been lowered by 45°. Conversely, a slight rise in the general temperature would suffice to cause the ultimate disappearance of the whole ice sheet; at the present time, a very small rise would clear the Arctic of ice, and there is evidence that the Arctic actually was clear of ice from about 500 A.D. to 1000 A.D.

G. C. Simpson, however, has taken the extreme viewpoint that no redistribution of land and water, or of ocean currents, could have produced a much higher or lower mean annual temperature over any limited region of the earth than to-day can be found *somewhere on the same parallel of latitude*; the average temperature of any given parallel is to-day practically the same in both northern and southern hemispheres in spite of the very different distribution of land and water in the two; the lowest mean annual temperature on any given parallel over North America is about the same as that on the same parallel over the much more extensive Asiatic land mass. Thus, while the distribution of land and water is very important in determining the actual mean annual temperature *at any one place* in a given latitude, it seems to play little part in determining the *average of all places* in that latitude; and the maximum possible variations between different places in the same latitude apparently exist today.

The primary cause of all meteorological phenomena is the heating in tropical regions and the cooling in polar regions. The temperature contrast thus set up induces the general atmospheric and oceanic circulations; the transportation of heat by the latter tends to eliminate the temperature difference; a steady state is reached when a balance is struck between the two opposing tendencies. Simpson argues that if the temperature contrasts between polar and tropical regions were reduced, the general cir-

culations would decrease until the original contrast was again restored; the present zonal distribution of temperature, with about the same latitudinal differences, is a physical characteristic of the atmosphere that cannot be materially disturbed by any change in the distribution of land and water, though the distribution of temperature along a given parallel may be disturbed within certain limits.

DYNAMICAL METEOROLOGY. In the long run, the total amount of heat lost by the earth as a whole, through outgoing terrestrial radiation, must be just equal to the total heat gained through incoming effective solar radiation (since no part of the earth is growing steadily warmer or colder); but at any one place this is not in general true—the equatorial regions receive more radiation than they emit, the excess of heat being transported by the circulations to higher latitudes where more radiation is given out than is received. Important studies of this transport of heat have been made by Angstrom, Exner, and others; Exner has calculated the intensity of atmospheric circulation that should theoretically correspond to the observed temperatures and amounts of incoming and outgoing radiation at different latitudes, and obtains good agreement with observation.

Cyclones and anticyclones are necessary dynamical consequences of the general planetary circulation (as has been shown, in different ways, by Jeffreys and by Exner), and draw their energy from the circulation; but the details of the manner in which they originate, their structure and mechanism, and the immediate source of their energy, constitute completely solved problems.

Humphreys has pointed out that in those regions of the United States where tornadoes are most frequent, cold anticyclonic winds often overrun warm cyclonic winds and produce a windshift line in midair, in advance of the surface shift. This necessarily leads to strong local convection, starting from this higher level, at or near the boundary between the two systems of winds. Now, although the directions of the two winds *relative to the earth* may be southwest and northwest respectively, nevertheless if both are moving eastward with the same speed they will be moving in exactly opposite directions *relative to each other*; and convection along the midair windshift line between two such currents will drag in air from each, and lead to strong rotation. Probably the tornado vortex, which starts at the cloud level in the warm sector of a cyclone, more or less east of the surface windshift line, is formed in this way.

METEOROLOGICAL PHYSICS. Simpson has shown that lightning discharges always start from a positively electrified region and progress outward from it, although the current is carried by electrons that move in the opposite direction; the branches are directed away from the positive region. The majority of discharges start in the forward part of the thunderstorm cloud, where there is an accumulation of positively charged raindrops due to the strong ascending air currents there; the flashes which branch upward are mostly hidden by the cloud, while many of those which branch downward fail to reach the earth. Discharges from the earth to the cloud are less frequent; and when they occur they appear thick and intense, the branches

(directed upward) usually being hidden in the cloud.

A diffuse aurora extending to an altitude of 1000 kilometers was observed in Norway on Sept. 8, 1926. Störmer has found that auroral rays situated more than 400 kilometers above the earth are always in regions then exposed to sunlight, while 96 per cent of those below 400 kilometers are in darkness; sunlight apparently has some action on the very high atmosphere that renders auroras visible to much greater heights than otherwise.

Studies of the amount of ozone in the upper atmosphere and the intensity of ultra-violet light reaching the surface of the earth from the sun, together with their variations, and relations to weather conditions and solar activity have claimed a great deal of attention recently.

STATISTICAL METEOROLOGY. A periodogram analysis, by Brunt, of several exceptionally long European weather records has given evidence of the existence of 44 different periods in temperature, pressure, etc., from one to 35 years in length; but this evidence is not convincing to all authorities. Sir Gilbert Walker, after applying more rigid statistical criteria, has concluded that periods in temperature of 12.3 months and of 18 months are all that may definitely be regarded as real, though a few others are worthy of more investigation.

MISCELLANEOUS. Extensive studies of the forms, and physical conditions of formation, of clouds, and their relations to weather conditions and to the thermodynamical structure of the atmosphere, were being made at the Lindenberg observatory in Germany.

The continued development of aviation in the United States had led to many activities in aeronautical meteorology, and to the further development of meteorological services for aviation.

METHANOL. See CHEMISTRY, INDUSTRIAL.

METHODIST, WESLEYAN CONNECTION OF AMERICA. A branch of the Methodist Episcopal Church, organized May 31, 1843, at Utica, N. Y., the outgrowth of controversy over what was termed "liberty of testimony and freedom of discussion," and also a protest against the exercise of ecclesiastical authority. The purpose of the new organization was a church that should be anti-slavery and non-Episcopal. In doctrine the church is in accord with the Methodist bodies generally. In 1927 the branch comprised 29 annual conferences, including mission conference in India, Africa, and Japan. Its General Conference meets quadrennially and convened in June, 1927, at which time the use of tobacco in any form, its growth, sale or manufacture, was made a test of full membership. Statistics

for 1927 gave 651 churches, 666 ministers, 22,011 church members, and 979 associate members in addition to full members, 603 Sunday schools with an enrollment of 41,694. The Home work was being pushed aggressively and six new conferences were organized in 1926-27. Colleges maintained by the church were: Central College, Central, S. C.; Houghton College, Houghton, N. Y.; Marion College, Marion, Ind.; and Miltonvale College, Miltonvale, Kan. In June, 1927, Houghton College received its permanent charter from the Regents of the University of the State of New York, having been operated under a provisional charter. *The Wesleyan Methodist* (weekly), Syracuse, N. Y., is the official organ of the church. A large printing plant is maintained at Syracuse and all the literature of the church is printed there. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

METHODIST EPISCOPAL CHURCH.

Methodism in its widest signification and intention was a "revival of Christian earnestness, simplicity and power." John Wesley (1703-91) had no intention of establishing a new church. His effort was to revive pure and undefiled religion. He taught the doctrines of the Church of England, and "faithfully urged the people to attend its ordinances, to be present at its public assemblies, and be interested in its prosperity." Had the authorities of the Church of England accepted some of Wesley's plans in place of driving him away from them, things might have worked out differently. He sent two of his workers to America in 1769, Richard Boardman and Joseph Pilmoor. These men were followed in 1771 by a man who was destined to be the great leader of the infant church, Francis Asbury. The first Conference was held in Philadelphia in 1773 at which were present 10 preachers, who reported 1170 members. The work grew until 1784, at which time there was organized in Baltimore, at the "Christmas Conference," the Methodist Episcopal Church.

The governing body is the General Conference that meets once in four years, composed of an equal number of ministerial and lay delegates. They make all the rules and regulations. The Annual Conference meets once a year, presided over by a bishop, when all pastoral changes are considered and reports of the local churches gathered and compiled. There is a church conference called the Quarterly Conference, that administers all the matters that pertain to the work of the local church. There were in the United States, in 1927, 106 annual conferences and missions, and in the various foreign fields 61, a total of 167.

The Methodists have long had missions that have grown into Annual Conferences, in Mexico, South America, Europe, Africa, Southern and Eastern Asia, the Philippines and the islands of many seas. This work is carried on by the Board of Foreign Missions. They received during 1927, \$2,870,046. There was also a Board of Home Missions and Church Extension that looked after weak churches in new and growing places in the United States, where church buildings were needed, and ministers had to be supported. The Board also cared for the religious work among many foreign language groups. During the year 1927 a total of \$2,608,000 was expended on this work. There were two Women's Missionary Societies, the Foreign and the Home.

The receipts for the year were \$5,698,172 for the two societies.

The Board of Education had under its oversight 44 colleges and universities; 28 secondary or preparatory schools; 44 professional and graduate schools. Among the colored people there were 17 schools, of which 10 were colleges, four secondary and three professional schools. There were in attendance 81,378 students, besides those in the professional schools; the faculties numbered 4000; property was valued at \$78,000,000, and the endowment was \$74,000,000. The Church had 79 hospitals; 45 homes for the aged; 46 homes for children; 60 deaconesses' homes; 23 homes for business girls and young men. The value of these was \$53,797,592. There were 29,409 church buildings worth \$414,226,836; 16,150 parsonages, valued at \$69,945,910; and 34,586 Sunday schools with an enrollment of 4,616,171. The Epworth League, the young people's society of the Church, had a membership of 650,000.

The membership of the Methodist Episcopal Church for 1927 was 5,230,340. The statistics of general Methodism in all branches, as reported from London were: Ministers, 59,824; lay preachers, 93,081; church members, 11,869,388; Sunday schools, 79,372; officers and teachers, 1,023,673; scholars, 10,086,907; churches, 105,596.

tion of slavery. Figures for 1926 reported 56 conferences, of which 42 were in the United States and 14 in foreign countries.

The executive body is the College of Bishops, which in 1927 had 14 members who hold office for life. The denomination sponsors 248 educational institutions, including 32 universities and colleges, 23 junior colleges, 22 academies, and 46 mission schools. In 1927 the enrollment in these institutions was 33,000 students. The value of educational institutions was \$40,000,000, with \$10,000,000 additional in endowment. In the same year there were 8348 traveling preachers, 5001 local preachers, and 17,535 churches with a membership of 2,630,538. There were 270,290 members in the Epworth League and 16,335 Sunday schools with an enrollment of 2,028,311. The Board of Missions carries on work in Belgium, Brazil, Mexico, China, Czechoslovakia, Poland, Japan, Cuba, Korea, Siberia, and the Congo. The most important periodicals of the denomination are the *Methodist Quarterly Review* and the *Christian Advocate*. The official *Yearbook* of the Church is edited by Curtis B. Haley, Nashville, Tenn. The headquarters of the Church are also in Nashville. The secretary of the last General Conference was A. F. Watkins, Meridian, Miss.

* Seating accommodation, 2,418,356.

* These figures include the Solomon Islands Mission with 64 lay preachers, 4,791 members, 41 Sunday schools, 1,384 scholars and 122 churches and preaching places.

* Methodism is also represented in several European countries by Conferences and Missions affiliated to the Methodist Episcopal Church of America, and their membership is included in the figures given above. The latest returns available are: Austria, 1,042 members; Bulgaria, 757; Denmark, 4,201; Finland, 2,254; France, 1,094; Germany (North), 23,200; Germany (South), 18,054; Hungary, 692; Italy, 3,860; Jugo-Slavia, 1,440; Norway, 7,567; Russia (and Baltic Mission), 3,545; Sweden, 16,475; Switzerland, 11,938.

METHODIST EPISCOPAL CHURCH, SOUTH. A separate branch of the Methodist Episcopal Church formed in 1845 over the ques-

tioned members. One of these, the Colored Methodist Episcopal Church, formed in 1870 as an offshoot of the Methodist Episcopal Church,

South, effected the separation from that body of its remaining colored membership. Its quadrennial general conference was held at Kansas City, Mo., May, 1926, when it reported 10 bishops (one retired). It sponsored 14 schools and a hospital at Memphis, Tenn., and maintained missions in Trinidad, and the British West Indies. It had 3647 traveling clergymen and 2186 local clergy. Its churches numbered 4306, with 448,956 members. There were 3132 Sunday schools with an enrollment of 256,203, and Epworth Leagues to the number of 1192 had 36,923 members. The amount raised during the year for educational purposes was \$223,566; for Sunday schools, \$310,560; and for salaries of pastors, bishops, and general officers, \$1,167,522.30. It published the following periodicals: *Christian Index*, *Western Index*, *The Index Herald*, and *Colored Methodist*. Its headquarters are at Jackson, Tenn.

METHODISTS, CONGREGATIONAL. A group of Methodists organized at Forsyth, Ga., in May, 1852, for the purpose of securing a more democratic form of church government. Latest available statistics report 13 State conferences, 352 churches, with about 21,000 members and 500 ministers, and 182 Sunday schools. The movement is strongest in the Southern States, although there are some churches in the North. The general conference meets quadrennially. The president of the general conference in 1927 was the Rev. N. E. Pair, and the secretary, J. M. Hays, Laurel, Miss.

METHODISTS, WESLEYAN. The principal branch of the Methodist denomination in Great Britain and Ireland, founded at the University of Oxford in 1729 by John and Charles Wesley, and holding its first Conference at London in 1744. This is the mother church of the denomination and is composed of five divisions: Great Britain; Ireland; Foreign Missions; French Conference; and South African Conference. Statistics for all divisions for 1927 were: churches, 19,056; lay preachers, 36,780; church members and probationers, 1,008,199; Sunday schools, 11,663; officers and teachers, 136,564; pupils, 1,063,329. In Great Britain alone there were 8600 churches, 19,024 lay preachers, and a church membership of 519,510. In July, 1927, the church held its 184th Conference. The denomination maintains a publishing house at 25 City Road, London, C. E., 1. The Methodist Church of Ireland held its 158th Conference in June, 1927. This division of the church in 1927 had 416 churches, 602 lay preachers, and a membership of 29,590; it published *The Irish Christian Advocate* at 75 Rosemary Street, Belfast. See also **METHODIST, WESLEYAN CONNECTION OF AMERICA**.

PRIMITIVE METHODIST CHURCH. Commonly known as the "Camp Meeting Methodists," organized in Staffordshire in 1810, the American church being organized in 1844 by Hugh Bourne, one of the leaders and founders of the movement in England. In 1927 there were reported to be 4554 churches, 13,456 lay preachers, 220,806 members and probationers, and 3971 Sunday schools, with 54,866 teachers and officers and 394,050 pupils. The church maintained a publishing house at Holborn Hall, Clerkenwell Road, London E. C. The American branch of this denomination, comprising the Western, the Pennsylvania and Eastern Conferences, reported 86 churches, 85 ministers, 9086 members, 87

Sunday schools, with an enrollment of 16,807 and \$279,584 raised for all purposes, in 1927. The last General Conference, which meets quadrennially, was held in September, 1925, at Kewanee, Ill.

UNITED METHODIST CHURCH. Established in England in 1907 and composed of the New Connection, the Bible Christians, and the United Methodist Free Churches. In 1927 there were 2216 churches, 4735 lay preachers, a church membership of 153,857, 2068 Sunday schools with 37,777 officers and teachers and an enrollment of 242,836 pupils. Publishing House, 12 Farringdon Avenue, London, E. C.

WESLEYAN REFORM UNION. One of the smaller divisions of the denomination. It separated in 1850 from the Wesleyan Methodists and organized as a separate body in 1859. For statistics, see **METHODIST EPISCOPAL CHURCH**.

INDEPENDENT METHODIST CHURCHES. These churches were founded in 1796, and united with other societies in 1806. The title was changed twice but in 1898 the old name was resumed. In 1927 there were 165 churches with 10,502 members and probationers; 165 Sunday schools with 3243 teachers and officers and 24,563 pupils. The annual meeting of the churches was held in June, 1927.

AUSTRALASIAN METHODIST CHURCH. Methodism in Australia dates from 1812, the first conference being held in 1855. In 1927 there were 3752 churches; 8033 lay preachers; 166,101 members; 3511 Sunday schools, with an enrollment of 203,431. Publishing houses are maintained in Sydney, Melbourne, Adelaide, Brisbane, and Perth.

Other foreign branches of the denomination include the New Zealand Methodist Church and the Japan Methodist Church, for statistics of which, see **METHODIST EPISCOPAL CHURCH**.

MEXICO. A federal republic lying between the United States and Central America. Capital, Mexico City.

AREA AND POPULATION. The area of the republic, which is divided into 28 states, one federal district, and two territories is 767,189 square miles. The population, according to the census of 1921, was 14,234,799 of whom 6,974,213 were males and 7,267,586 females. The prevailing religion is Roman Catholic, but, according to the new constitution of 1917, the church is separated from the state, and there is toleration of all other religions. No ecclesiastical body can acquire landed property. Mexico City, the capital of the republic, had a population of 615,367, of whom 23,668 were foreigners, at the census of 1921. Other large cities are Guadalajara, 119,468; Monterey, 73,528; San Luis Potosi, 68,022; and Merida, 62,447. Immigration in 1925 was 127,336 and emigration, 81,757, leaving a balance in favor of immigration of 45,579. According to estimates of the National Bureau of Statistics, published in June, 1927, the inhabitants of Mexico are occupied as follows:

MEXICANS, OCCUPATIONS, 1927

Occupation	Number	Per cent
Exploitation of the surface of the soil (agriculture, hunting and fishing, surface mining, quarrying, extraction of salt)	3,490,029	24.35
Extraction of minerals (subsoil mining)	27,842	0.19
Industries, excepting transportation	632,679	4.41
Transportation	74,897	0.52
Commerce	270,660	1.89
Public protection (army, police, firemen, etc.)	54,195	0.38
Public administration	8,769	0.06
Professions	80,110	0.56
Housewives and domestics	4,740,006	33.07
Miscellaneous	215,539	1.50
Unknown or unproductive occupation (persons living on income, children, students, the indigent, etc.)	4,740,044	33.07
Total	14,334,770	100.00

EDUCATION. Education is free and compulsory, and, according to the constitution of 1917, secular. It is regulated by the State authorities except in the Federal District where it is regulated by the national government. The 1921 census figures showed the percentage of illiter-

tained by the federal government in the various States during 1926:

Aguascalientes, 964; Campeche, 3067; Coahuila, 1,545; Colima, 2,070; Chiapas, 3211; Chihuahua, 861; Durango, 876; Guanajuato, 1616; Guerrero, 750; Hidalgo, 2957; Jalisco, 364; Mexico, 2848; Michoacán, 2836; Morelos, 2253; Nayarit, 1146; Nuevo León, 2795; Oaxaca, 1704; Puebla, 2319; Querétaro, 1266; San Luis Potosí, 1679; Sinaloa, 1073; Sonora, 403; Tabasco, 655; Tamaulipas, 622; Tlaxcala, 1310; Vera Cruz, 372; Zacatecas, 1385. Of the 42,957 pupils enrolled, 27,215 were boys and 15,742 were girls. The States which showed the fewest pupils enrolled in the government primary schools were those which, in response to the requests of the Secretary of Education, had established schools supported by their local governments.

AGRICULTURE. Production of practically all agricultural products in Mexico showed increases in 1926, as compared with 1925, in spite of severe damage suffered by the crops from floods and insect pests, according to *Commerce Reports*. The following table shows the various products for which 1926 production figures were available, with comparative figures for 1925:

MEXICAN AGRICULTURAL PRODUCTION
[In kilos]

Products	1925	1926	Increase	Decrease
Corn	1,889,563,895	2,077,001,699	187,437,804

* Figures given out by the Mexican Department of Agriculture.

† Figures given out by the national department of statistics.

‡ Wheat production shows either an increase or decrease, depending on which figure is used.

ates to be 62.29, while the 1926 statistics showed that there were in the country 2,652,199 children of school age, of whom only 1,040,521 were attending school, or 35.57 per cent of the school population. Therefore, of each 10 Mexican children six were not attending school. The need for rural schools was very great, the total number maintained by the states being 4635 and by the federal government, 2690. Dr. Puig Casauranc, Secretary of Public Education, announced on Nov. 26, 1926, that in spite of the economy programme of the administration during 1927, 1000 more rural schools would be opened by the federal government, 10 cultural missions would travel through certain sections of the country, and 10 normal schools for rural school teachers would be established. The location of the new schools was to be decided upon the basis of population and the funds for education allotted to each district by the federal government, the schools to be established preferably in those places where there have been few or no schools.

The Department of Education toward the end of 1927 made public the following figures on enrollment in the elementary day schools main-

Products showing a decrease in yield are vanilla beans, coffee, leaf tobacco, sugar cane, and henequen. Owing to the two sets of figures given out in the case of wheat, it is impossible to determine whether there was a decrease or an increase. As the amount of henequen produced in 1925 was much greater than the amount sold, the government ordered a curtailment of 25 per cent in its production for 1926. Although the operations of the agrarian law affected many of the large "haciendas," according to figures is-

MEXICAN CROP AREAS, IN HECTARES *

* 1 hectare equals 2.47 acres.

† Estimated.

sued by the Mexican government, the amount of land cultivated in 1926 was greater in all cases, except that sown to corn and wheat, than in 1925. As acreage figures were not available for all crops, the following table is necessarily incomplete.

Although the amount of land devoted to corn shows a decrease, the production of this crop was stated to have increased considerably in 1926, as compared with 1925. Wheat acreage decreased approximately one-third and this fact, together with increased imports, would appear to support the production figures of the Department of Statistics, and cast some doubt on the accuracy of the reports of the Department of Agriculture.

In a number of cases the agriculture commodities produced are insufficient to supply the local needs with the result that importation is necessary, this being especially true of wheat and corn. During the calendar year 1926, the United States exported to Mexico 1,781,266 bushels of wheat as compared with 1,253,010 bushels in 1925. Corn exports amounted to 4,211,704 bushels in 1926, which is the largest amount since 1921. During 1925, only 2,412,957 bushels of corn were exported to Mexico. Although the United States is the largest supplier of corn and wheat to Mexico, there are a number of other countries which also ship these products to that country.

According to preliminary figures issued by the Mexican Government the wheat produced in 1927 amounted to 313,496,651 kilos as compared with 281,214,728 kilos in 1926, owing to the considerable increase in acreage. On the other hand cotton production in 1927 was but 33,823,251 kilos as compared with 78,016,452 kilos in 1926 on account of the reduced cotton acreage in the Laguna district due to losses sustained by the cotton growers of the country in the previous years.

Coffee production, which had been showing a decrease, increased during 1927 when the output was 33,125,598 kilos as compared with 27,349,945 kilos in 1926. The garbanzos (chickpeas) crop of 1927 amounted to 80,554,106 kilos, or a decrease of 1,398,496 kilos from 1926. This product was fast becoming the most important crop among Mexico's exports. In 1927 there was an increased yield of fresh vegetables, the total amounting to 8695 carloads; tomatoes alone giving 79,880,523 kilos as compared with 67,917,538 kilos in 1926. In Yucatan 678,244 bales of henequen were shipped as compared with 555,360 bales in 1926; 174,109 bales remaining unsold as compared with 250,000 bales at the end of the previous year.

During the revolutions of 1910 to 1920, the livestock industry suffered severely. Since that time, however, the industry has flourished, with the result that at present the number of animals is reported to be greater than before the revolution. The accompanying table gives the census of the livestock raised in Mexico in the years 1902, 1923, and 1926.

The revolutionary activities from 1910 to 1920 were centred in the northern states where the cattle ranches are located, and as a result thousands of cattle were driven off, or slaughtered to feed the troops. The Mexican department of agriculture states, however, that the country has fully recovered in approximately three years from the losses suffered in 21 years. This recov-

ery is especially remarkable when it is considered that the large ranches which were depleted during the revolutions have never been restocked.

Mexico has many small national industries, foremost of which are the textile mills and the shoe factories. These were becoming increasingly important, and, in the cheaper grades, afford serious competition to imported goods. However, on account of the relatively high wages and excessive demands of labor as compared with their efficiency and production, many of the manufacturing industries found it difficult to continue operations in 1926, and production in practically all lines of manufacture was curtailed.

According to a report of the Department of National Statistics, published in *El Universal*, of Mexico City, for June 1, 1927, the textile industry had shown a remarkable growth during recent years. The fact that the textile industry was in harmony with the racial aptitudes of the Mexican people was said to be responsible, in part, for the development of that branch of industry. The following figures give an idea of its progress:

Year	1921	1925
Number of factories	121	130
Looms	28,409	30,800
Spindles	770,945	881,524
Cotton consumed kilos.	89,924,285	40,996,884
Sales pesos.	93,841,985	108,895,604
Number of workers	88,227	48,199

MINING AND PETROLEUM. There was a notable increase in the production of all important metals in Mexico during the calendar year 1926 as compared with 1925, except of gold and graphite, which showed a slight reduction in output. The production of silver, lead, and zinc exceeded all former records. The production of copper was greater than in any previous year with the exception of 1918, when this metal was at a high premium on account of the demand caused by the War.

The accompanying table shows comparative figures for the production of the principal metals and minerals in 1925 and 1926 and values in Mexican pesos.

Notwithstanding the decline in silver prices during the second half of 1926, the total value of silver production during the year surpassed the 1925 output by 5.78 per cent. Lead production was 22.7 per cent greater than in the preceding year and copper production 4.72 per cent. The output of zinc was not only the greatest in the history of Mexican mines, but it also surpassed the best previous year. 1925, by more than 130

MINERAL PRODUCTION OF MEXICO

Product	Kilos	1925	Value Pesos ^a	Kilos	1926	Value Pesos ^a
Gold	24,541		32,722,554	24,083		32,040,616
Silver	2,889,962		134,889,843	3,057,268		123,843,906
Lead	171,787,429		68,412,747	210,794,894		83,912,921
Copper	51,386,155		32,653,883	53,763,192		24,119,705

Amorphous graphite	5,889,228			4,434,548		

^a The Mexican peso had an average value of \$0.4939 in 1925 and \$0.483087 in 1926.

per cent. The production of antimony increased 36.94 per cent. The State of Coahuila has the only highly developed coal fields in Mexico. The 1926 output was estimated at 800,000 metric tons, a considerable decrease from the 1,302,000 tons produced in the preceding year. A large percentage of the 1926 production was converted into coke.

The mining industry in Mexico in 1927 showed marked improvement over the previous year, with better feeling between the government and the mine operators. According to government estimates the tonnage of ores treated declined 4.05 per cent as compared with 1926, the reduction being attributed to lower metal prices and higher government taxation. The *Engineering and Mining Journal* (New York) published the following table covering the years 1926 and 1927, which indicates the production for the two years:

	1927 ^a	1926
	Kilos	Kilos
Gold	22,000	24,083
Silver	3,110,000	3,057,268
Copper	56,474,000	53,768,192
Lead	238,503,000	210,794,894
Zinc	130,634,000	105,366,568
Antimony	1,707,000	2,614,444
Arsenic	8,205,000	6,458,224
Graphite	6,510,000	4,434,548
Mercury	78,000	45,416

^a Production for last two months estimated.

In October, 1927, the United States Bureau of Foreign and Domestic Commerce reported that the downward trend in Mexican petroleum production exhibited from month to month in 1926 continued consistently in 1927. The January production of 6,078,726 barrels was below the minimum established for 1926 in December of that year, and the output continued to decline during succeeding months until 5,320,680 barrels were produced in June, 1927, although a slight recovery to 5,488,421 barrels followed in July.

One conspicuous cause of the decline was the refusal of the Mexican government to grant drilling permits to American companies which did not change their properties for "concessions" before December, 1926, as required by the petroleum law of 1925. No new permits were granted to American or other foreign-owned producing companies which did not make this change, and attempts to drill without permits have been stopped. Naturally, the refusal of permits to a group of companies representing approximately 75 per cent of the oil output of the country has prevented the bringing in of sufficient new production to make up for natural exhaustion. The following table shows the declining production of crude oil in 1926.

MEXICAN PRODUCTION OF CRUDE OIL IN 1926

Month	Heavy crude Barrels	Light crude Barrels	Total Barrels
January	6,496,078	8,022,792	9,518,866
February	6,077,700	2,481,638	8,559,338
March	5,484,641	2,860,780	8,345,421
April	5,347,966	3,372,390	8,720,356
May	5,141,654	3,150,177	8,291,831
June	4,755,718	2,624,062	7,379,780
July	4,396,584	2,546,928	6,943,512
August	4,130,071	2,582,630	6,712,701
September	3,975,771	2,480,178	6,455,949
October	4,262,658	2,558,803	6,821,461
November	4,118,635	2,339,100	6,457,735
December	3,905,191	2,513,333	6,218,524
Total	58,092,662	32,328,311	90,420,973

The official statistics of Mexico show the accompanying record of oil shipments during 1926.

COMMERCE. The foreign trade of Mexico in 1926 amounted to 1,053,874,337 pesos, showing the expected falling off from the total of 1,073,480,000 pesos in 1925. During 1926 exports amounted to 681,428,061 pesos and imports to 372,446,276 pesos and in 1925 exports were 682,484,000 pesos and imports 390,996,000 pesos. Converting the foregoing figures at the average rate of exchange for the two years, exports and

PETROLEUM EXPORTS FROM MEXICO IN 1926

Month	From Tampico Barrels	From Tuxtepec Barrels	From Puerto Mexico Barrels	From other points Barrels	Total Barrels
January	6,565,993	4,806	20,354	9,834	6,600,487
February	6,709,405	1,925	6	17,901	6,729,237
March	8,696,434	9,165	86,462	21,147	8,813,208

May	8,278,621	4,378	53,320	22,091	8,358,410
June	6,984,076	39,476	24,858	15,524	7,063,934
July	7,504,599	113,673	49,887	9,875	7,677,014
August	5,986,207	149,903	24,178	1,761	6,114,044
September	5,551,699	23,827	48,357	1,679	5,625,562
October	5,641,715	79,486	66,844	3,894	5,791,939
November	5,292,173	6,284	73,121	2,591	5,374,169
December	4,948,557	237,875	27,406	3,101	5,216,939
Total	79,402,614	692,253	498,726	183,480	80,722,078

imports in 1926 amounted to \$329,129,753 and \$179,791,551, respectively, and in 1925 exports were \$338,463,000 and imports \$192,761,000. The actual decrease is greater therefore than it appears at first glance.

According to United States figures imports from Mexico amounted to \$169,368,000 and exports to \$134,994,000; in 1925 imports were \$178,835,000 and exports \$144,720,000. It is evident therefore that during 1926 American exports to Mexico decreased by \$9,726,000, or approximately the same as the decline in imports which was \$9,467,000. This slump continued into 1927 and affected practically all other countries as well as the United States.

For the first four months ended Apr. 30, 1927, exports from the United States to Mexico were \$38,044,159 and imports \$53,880,119, as compared with the corresponding figures of \$48,375,525 and \$66,061,813, respectively in a like period in 1926. Thus in the first third of the year 1927 American exports to Mexico decreased by over \$10,331,000 and imports by \$12,182,000 from the low figures of 1926.

FINANCE. According to the *Journal of Commerce* (New York) for Dec. 28, 1927, the two measures fixing the 1928 budget which were delivered to the Chamber of Deputies by Luis Montes de Oca, Secretary of Finance and Public Credit, revealed that actual revenue in 1927 will be about 45,000,000 pesos lower than the original estimates of 335,000,000. Revenues for 1928 have been calculated at 290,000,000 pesos, a sum considered sufficiently large to warrant the disbursements of the period without the danger of a lack of balance when the year ends. Revenues for 1927 and for 1928 thus would be considerably less than those for 1925 and 1926. In 1926 the federal revenue collected amounted to 317,000,000 pesos. No increase in taxes was contemplated nor recommended. The disbursements called for amount to 289,900,000 pesos, including 20,000,000 pesos for service on the debt. The revenue of the republic was fixed at an estimated total of 290,000,000 pesos, a sum of which the principal items are: Import tax, 63,000,000 pesos; internal revenue stamp tax, 39,400,000; consular charges, 30,000,000; tax on manufactures, 18,000,000; income tax, 16,000,000; mining tax, 14,000,000; alcohol tax, 14,000,000. In so far as concerns the taxes derived from the production and exportation of petroleum, they have been calculated at an approximate return of 13,700,000 pesos, and 6,300,000 pesos, respectively.

Disbursements for 1928 amount to 289,000,000 pesos, an amount less by 100,000 pesos than that corresponding to revenue. Of this sum the branches which represent the heaviest expenditures are: War and Marine, with 84,500,000 pesos; Public Instruction, 27,000,000; Finance and Public Credit, 26,000,000; and Communications and Public Works, 25,000,000. The government will continue to meet the service of the public debt, especially abroad, and for this intended to devote in 1928, in addition to the figures stated, any excess of revenues over the anticipated 290,000,000 pesos.

COMMUNICATIONS. In 1925 there entered at all the ports of Mexico 4178 vessels of 8,364,362 tons and cleared 4216 vessels of 8,394,614 tons. The railways of Mexico total about 14,000 miles. The return of the National Railways of Mexico (see preceding YEAR BOOK) to the management of

foreign bondholders has resulted in a bettering of service. The railroad bed and rolling stock in particular show a great improvement, especially on the line running to the banana centre at El Hule. During the year the Mexican Railroad completed its tentative programme of electrification between Cordoba and Esperanza, a distance of 45 miles. It embraces the high grade section of the road between Vera Cruz and Mexico City and makes the former port more than ever the natural entrepôt for cargo intended for distribution in Mexico City. It was possible to decrease the running time and to give much better service for both passengers and freight. During April it was reported that slow but steady progress was being made in the construction of the Kansas City, Mexico and Orient Railroad northeast from Marquez, Mexico, to Ojinaga, the crossing point on the Rio Grande opposite Presidio, Tex., 75 miles distant. The first 25 miles of this extension was expected soon to be opened for traffic and the remainder was to be pushed to completion as rapidly as possible. This section traverses the fertile Conchos Valley, where cotton growing is carried on. There was a further gap of 75 miles between Presidio and Alpine, Tex., but work on this section was expected to begin in 1927. The new line of the Southern Pacific from Tepic to La Quemada in Mexico, 103 miles, which provides a through line from the southwestern part of the United States to Mexico City, was opened to through traffic on Apr. 15, 1927.

GOVERNMENT. Under the constitution of 1917, executive power is vested in the president, elected by direct popular vote for four years and ineligible for reelection; legislative power in the Congress consisting of the House of Representatives elected for two years by universal suffrage, and the Senate, comprising two members from each State, elected in the same manner. President in 1927, Plutarco Elias Calles (elected July 6, 1924; assumed office Nov. 30, 1924). See ARBITRATION, INTERNATIONAL, under *The General Claims Commission*.

HISTORY

SITUATION AT THE BEGINNING OF THE YEAR. The outstanding events at the beginning of the year were undoubtedly connected with the questions of the oil concessions, the ownership of land and the so-called Catholic revolt against the decrees of the government. The roots of these questions were discussed in the previous YEAR BOOK. As noted therein the provisions of the new oil law became operative on January 1. The first move made by President Calles was the request from the Department of Industry, Commerce, and Labor for a list of all companies which had not met the provisions of the new laws. As soon as this list was drawn up the activities of the government were confined to the canceling of drilling permits and the suspension of drilling operations in fields where owners had not adhered to the government regulations concerning the ownership of property. Naturally American interests were seriously affected by these measures of the Mexican government. The Mexican courts were appealed to in order to get an injunction preventing the legislative and executive branches of the government from carrying out their intentions. Temporary injunctions were granted in several cases restraining the President's order for a

short period of time. Permanent injunctions were not granted in any instance.

In the meantime the Mexican government announced that a vast majority of the companies operating in the oil fields had accepted the new regulations. This announcement was met by a semi-official statement from the State Department at Washington that those companies which opposed the Mexican law and refused to abide by its provisions represented 88 per cent of the oil production in Mexico. It is only necessary to study the figures on oil production given above to see the disquieting effect that the controversy had on the production of crude petroleum and consequently upon the exports and imports of the country, for, after all, if Mexico does not export her maximum amount of oil, she is unable to buy those things abroad which she would in the normal course of events. As the year advanced the Mexican government and press took a more favorable attitude toward the economic necessities of the country and it was not surprising to find at the very end of the year that she had virtually reached a workable decision in the dispute.

As was to be expected, the attempt to enforce the "confirmatory concession" law was met with severe criticism and comment in the United States and was the subject of almost constant discussion and debate in the short session of Congress which ended March 4. In response to a Senate resolution, Secretary of State Kellogg on February 16 gave that body statistics on the matter. According to his figures there were 58 individuals or corporations who owned or claimed land in Mexico which was generally placed under the heading of oil lands. He stated further that only four of the 58 had applied for confirmatory concessions and that the remaining 54 controlled about 90 per cent of the active producing fields of Mexico and produced about 70 per cent of the total crude production. These figures were assailed by Luis Morones, the Mexican Minister of Industry, Commerce and Labor, who claimed that there were only 16 American companies which owned land and that half of these had applied for the necessary confirmation of their holdings. This wide divergence of American and Mexican figures was the rule rather than the exception in any discussion of the oil difficulties.

The second Mexican law passed under the constitution of 1917 which caused considerable concern in the United States was that relating to alien possession of land. This law became operative on January 21, and under its provisions all aliens who owned land before its passage were compelled to file a statement of such ownership with the Department of Foreign Relations or forfeit ownership in case of failure to do so. The most controversial point of the law was that which compelled foreign corporations which possessed more than 50 per cent of the interest or stock of any company owning rural property for agricultural purposes to dispose of its interests above 50 per cent within a period of 10 years. The provisions of the law will be found in the 1925 YEAR BOOK.

The United States contended that this was a confiscatory measure and one that it could not accept. Whether or not it was because the oil controversy overshadowed the land controversy it is certainly true that the land measure went into effect smoothly and practically all foreign

land owners met the regulations prescribed by the government. While these measures were continuously before the public of both the United States and Mexico, there was a strong demand in certain quarters in the United States for the submission of the troublesome acts to arbitration, either to the Hague Tribunal or the General Mixed Claims Commission, which had been established by the Claims Conventions between the United States and Mexico in 1923.

On January 25 the United States Senate passed a unanimous resolution recommending that the oil and land laws and their attending causes of friction be arbitrated. This gesture was somewhat marred by the inclusion of a clause aimed at the protection of the lives and property of nationals of the United States. This attitude on the part of the Senate was at direct variance with that of President Coolidge who let it be known that he was opposed to arbitration inasmuch as the only issue at stake was whether American owned property in Mexico was being confiscated. The press commented on the apparent divergence of opinion between the President and Secretary of State Kellogg who leaned toward the arbitration scheme.

The other outstanding feature of Mexican history at the beginning of the year was the religious question. A discussion of the attitude toward the Catholic Church by the government was presented in the preceding YEAR BOOK. When the full force of the restrictive measures was felt by the Church and its communicants there were widespread demands in many quarters for armed revolt against the government which the Church time and again accused of Bolshevism. Sporadic outbreaks were reported in the first two months of the year and the government was certain, despite the denials of the episcopate, that the religious element was at the bottom of them. While the so-called revolts were widespread, they did not seem to present an insurmountable obstacle to the government troops, who had little difficulty in suppressing them.

The most conspicuous figure involved in the revolutionary movement was Bishop Díaz, secretary of the episcopate, who was arrested on January 10 and deported to Guatemala. After making his way to New York, Bishop Díaz denied that he had anything to do with the revolutionary movement and stated that his deportation was unjust. Despite this denial the Calles government from time to time published documents purporting to show the connection between the enforcement of the religious and educational laws passed under the constitution of 1917 and the revolts throughout the country. The deportation of several other important members of the Catholic episcopate occurred from time to time during the year.

THE NEW AMERICAN AMBASSADOR. In the first week of June, Ambassador Sheffield returned to the United States on a leave of absence from Mexico City. After a conference with Secretary of State Kellogg, he visited President Coolidge at his summer "White House" in the Black Hills. Shortly after a talk with the President he handed him his resignation which was immediately accepted to take effect upon the selection of a successor. Dwight W. Morrow, long connected with the banking firm of J. P. Morgan & Co., was appointed to succeed Mr. Sheffield by President Coolidge on October 6. Mexican securities on the New York Stock Exchange made

rapid and substantial advances immediately after the announcement of Mr. Morrow's appointment was made public.

THE OCTOBER REVOLUTION. Throughout the year there was considerable discussion and campaigning in connection with the presidential campaign to be held in 1928. Under Mexican law President Calles was ineligible to succeed himself, and, consequently, the field was wide open. The three chief candidates for the office were former President, General Obregon, Gen. Francisco Serrano and Gen. Arnulfo Gómez. Generally speaking, the three candidates held the same tenets as did President Calles, and promised to support the laws concerning oil concessions, the alien ownership of land, and the Church.

During the summer there had been considerable campaigning in a comparatively quiet manner, but in October a real revolution, which for a time threatened to attack the safety of the State, broke out under the leadership of Generals Serrano and Gómez. President Calles took drastic steps immediately and on October 4 the federal troops, which, for the most part, remained loyal, captured General Gómez and several of his important leaders. They were given short shrift, being courtmartialled and shot at once. In a statement made public the government said that it had known about these revolutionary activities for some time and was prepared to put them down as soon as they started, but felt that it was a wiser plan to wait for an overt act. The revolution spread over nine states but was ruthlessly suppressed and the leaders were executed. On Nov. 3, General Gómez was captured and put to death in the State of Vera Cruz, thus ending the abortive revolution, in which only a small part of the army broke away from the Calles government.

The execution of Serrano and Gómez seemed to leave the stony way to the presidential chair entirely in the hands of ex-President Obregon, who from time to time had gone on record as firmly supporting President Calles and his policies. The revolution and its quick suppression strengthened the position of President Calles considerably and showed the world that he was the master of the situation in Mexico. Although nothing was definitely proved, rumors were rife that the revolutionists had the moral and financial support of the clerical group of Mexico as well as of the conservative element in general.

SITUATION AT THE CLOSE OF THE YEAR. The year closed with the relations between the United States and Mexico on the most friendly basis in years. Ambassador Morrow had apparently made a profound impression on President Calles and the Mexican government by his open, friendly, and non-superior attitude. He had told American citizens not to forget that they were in the nature of guests of the Mexican government and must abide by the rules and laws of the country. To the good will engendered by Ambassador Morrow must be added the tremendous emotional effect of "Ambassador" Lindbergh, when he arrived in Mexico City after a non-stop flight from Washington on the morning of December 14. See **AERONAUTICS**.

The oil controversy appeared to be well on the way toward settlement by the end of the year. The first step in this settlement was a

favorable decision by the Mexican Supreme Court in a case involving the Mexican Petroleum Company. Although the Mexican government did not take over the property of any oil company because of failure to comply with the provisions of the law, it did, as noted above, cancel drilling permits. The Mexican Petroleum Company obtained an injunction from a lower court preventing the government from interfering with its activities on the grounds that certain provisions of the oil law were unconstitutional. In November the Supreme Court upheld the contentions of the company and declared that provisions 14 and 15 of the oil law were unconstitutional on the grounds that the oil law deprived the company of its rights. Of course this decision merely affected this one company, and, according to Mexican judicial procedure, it would take several similar decisions before the provisions of the law would be unconstitutional as affecting all companies. Nevertheless, this particular decision was hailed as a triumph for the American contention that the oil law was retroactively confiscatory. The Department of Industry, Commerce and Labor announced that it would conform to the court's decision.

Late in December, the Mexican Congress passed a law which virtually abolished the causes of friction between the Governments of the United States and Mexico over the oil lands. The new measure did away with the 50 year confirmatory concessions which were substituted by article 14 of the oil law for titles obtained by oil companies before May 1, 1917, and confirmed contracts made before that date for the length of the contracts. Editorial opinion throughout both countries hailed the new law as the beginning of a rapprochement between the American government and American capital, on the one hand, and the Mexican government on the other.

One untoward affair cast considerable gloom over the better Mexican-American relations near the end of the year. This was the publishing by the chain of Hearst newspapers of documents purporting to have been stolen from the Mexican archives. Generally speaking the documents attempted to show that the Calles régime was attempting to destroy the influence of the United States in Central America, particularly in Nicaragua, and at the same time was seeking to substitute Mexico as the dominant nation there. There were also several documents which aimed to prove that Mexico was disseminating Communistic teachings wherever possible. The most sensational of all the documents published was one appearing on December 9, which authorized the payment of \$1,215,000 to four United States Senators.

The publishing of this charge resulted in the appointment of a Senate committee to investigate the entire matter. This committee held its first meeting on December 15, when, from the documents turned over to it by Mr. Hearst, it was revealed that the four Senators who were supposed to get the cash from the Mexican government were Borah, Norris, La Follette and Heflin. Needless to say, these four men branded the document as an impudent forgery and stated in no uncertain tones that they had never received one cent from the Mexican government and had never been approached in any way by its agents.

The Senate called innumerable witnesses, including Mr. Hearst and his aids who were responsible for the publishing of the documents. The chief witness for the authenticity of the documents was Miguel Avila, who claimed to have seen them extracted from the Mexican state files, both at Mexico City and in New York City (from the files of Consul General Elias). A whole mass of testimony was taken, as a result of which newspapers throughout the country asserted the documents were forgeries and accused Mr. Hearst of willful neglect for failure to check their authenticity before publishing them. The investigation was still under way when the year closed. The Senate Committee investigating the affair stated as early as December 19 that there was not the slightest shred of evidence connecting Borah, Heflin, La Follette or Norris with any "slush fund." It was asserted that Avila had been involved in several matters of a similar nature.

In a New Year's message to the Mexican people delivered on December 31, President Calles urged unity between Mexican peoples and abandonment of prejudices. "The development of an ideal programme of revolutionary construction which Mexico needs and the final aims which we are pursuing for the betterment of the masses deserve and require the cooperation of all those who really love their country in order to achieve their fulfillment. These aims which tend toward better general order, make for the progress of the country and justify the abandonment of prejudices, the forgetting of rancors and the spiritual unity of all. One of the leading chapters of the events of recent years was the resistance by the high Catholic clergy to the laws. They were persistent and malevolent in fomenting discontent and rebelliousness among the groups of believers—fanatics either through ignorance or deception. These activities culminated in uprisings in various places, which naturally carried all sorts of bad consequences. All this we sincerely lament. I can announce to the country the pacification of those groups which were rebelling on account of religious motives. Presently there will exist but a few insignificant ones, in Jalisco, Michoacan and Guerrero, which I will exterminate in a short time."

Referring to the difficult economic situation the President said: "But timely economic foresight and the attainment of a strong policy of honest and orderly administration has enabled us to live to attend regularly to public services and not to interrupt projects of a reconstructive nature. This was particularly true in education, irrigation, and roads." There was only a short reference to foreign relations in the entire message: "Along with the undeniable improvement in domestic conditions, there has been ushered in an era of the most cordial and intelligent relations between Mexico and all other nations. This obviously must contribute to the easier development of progress in national life. With only one year before the end of our period, we have the right to hope the people may come to realize that our work was disinterested and impersonal. Our aims always have been to strengthen the character of our nationality. We have wanted to attain real, not merely apparent, aggrandizement for the nation by improving every aspect of the economic, moral, and political life of the masses."

MICHIGAN. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,668,412. The estimated population on July 1, 1927, was 4,490,000. The capital is Lansing.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	1,418,000	38,995,000	\$38,146,000
	1926	1,593,000	54,162,000	89,588,000
Hay	1927	3,081,000	4,804,000 ^a	52,665,000
	1926	2,951,000	4,194,000 ^a	57,688,000
Wheat,	1927	891,000	19,156,000	22,987,000
winter	1926	979,000	17,916,000	21,858,000
Wheat,	1927	6,000	114,000	137,000
spring	1926	5,000	82,000	100,000
Oats	1927	1,617,000	54,170,000	26,002,000
	1926	1,570,000	51,180,000	20,724,000
Potatoes	1927	289,000	23,120,000	20,808,000
	1926	249,000	29,880,000	85,856,000
Beans, dry	1927	566,000	5,004,000	15,282,000
	1926	552,000	6,624,000	18,547,000
Rye	1927	178,000	2,617,000	2,829,000
	1926	178,000	2,336,000	1,822,000
Barley	1927	186,000	5,301,000	4,029,000
	1926	133,000	3,790,000	2,464,000
Sugar	1927	99,000	688,000 ^a	
beets	1926	100,000	793,000 ^a	5,552,000

^a tons.

MINERAL PRODUCTION. The mining of iron ore, in which the State ranked second in 1925, went on with increased activity in 1926. There were mined in 1926, as estimated from producers' shipments, 16,699,984 long tons of iron ore, as against 15,254,003 tons in 1925; the ore mined in 1926 had a total value of \$43,932,982, that in 1925 a value of \$40,926,315. Pig iron was produced within the State, and shipped to the quantity of 638,282 long tons in 1926; in 1925 of 831,435 tons. This product was valued at \$13,180,113 for 1926 and \$18,452,346 for 1925. Production of copper rose to 175,881,565 pounds for 1926, from 155,157,488 pounds for 1925; in value it was \$25,553,419 for 1926 and \$22,032,363 for 1925. The State's coal production was some 649,000 short tons in 1926 and in 1925, 808,233 tons; the value of the coal mined in 1925 was \$3,391,000. Coke production grew to 1,826,638 short tons all from by-product ovens, for 1926, from 1,571,118 tons for 1925; production for 1926 was valued at \$12,713,083 and for 1925 at \$11,708,519. Production of cement yielded 12,037,400 barrels in 1926; in 1925, 10,936,181 barrels. Shipments of cement in 1926 were valued at \$19,499,788 and in 1925 at \$17,511,908. Salt production was 2,260,320 short tons in 1926; in 1925, 2,172,600. In value it was \$7,594,418 in 1926 and in 1925, \$7,710,331. Gypsum was produced to the quantity of 649,053 short tons in 1925, the latest reported year, and of 577,626 tons in 1924; in value, \$5,447,294 in 1925 and in 1924, \$5,950,822. Clay products in 1925 were valued at \$7,396,071; for 1924 at \$10,246,935. Stone, sand and gravel, and calcium chloride were produced in important quantities. The total value of the State's mineral products, duplications eliminated, was \$122,212,254 in 1925; in 1924, \$114,239,836.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of general departments of the State government in the fiscal year ending June 30, 1926, were \$45,204,560; their rate per capita was \$10.42. They included \$15,773,928 apportioned for education. Totals not included

in the above, of \$107,335 expended in public service enterprises, \$4,946,279 in interest payments and \$21,074,675 in permanent improvement outlays, brought the aggregate of State expenditure to \$71,332,849. Of this, \$19,555,439 was for highways; \$3,545,551 being for maintenance and \$16,009,888 for construction.

Revenue receipts were \$77,989,157; or per capita, \$17.07. Of their total, property and special taxes yielded 50 per cent, attaining a rate per capita of \$8.99. Earnings of departments and compensation paid the State for officials' services supplied 7.7 per cent of revenue; 31.1 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles, and from a tax on gasoline sales.

Net State indebtedness on June 30, 1926, was \$75,845,438, or \$17.48 per capita. Property subject to ad valorem taxation bore a valuation of \$7,341,790,181. State taxes levied were \$28,480,305, or \$6.56 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 8,355.96. New construction in 1927 as reported by the *Railway Age* was 22.15 miles of second track.

EDUCATION. The enactment of the Turner bill, appropriating \$1,000,000 from the general fund of the State for distribution among the poorer school districts, was characterized by W. H. Pearce, Superintendent of Public Instruction, in the *Journal* of the National Education Association as the most important educational development of the year. Districts having a school tax rate of 10 mills or more on the dollar of assessed valuation were to share in the distribution. Their proportionate shares were to be determined in each case by the amount of excess in the average school membership of the district, in its ratio to equalized valuation, over the like ratio, as averaged for the entire State. This system of educational equalization payments was one of the most noteworthy of the many enacted by Legislatures of the several States in the course of the year.

CHARITIES AND CORRECTIONS. The State Welfare Department, as functioning in 1927, included the State Welfare Commission, with powers of regulation over the parole of patients from certain institutions, and duties of inspection of jails, maternity hospitals, and boarding homes for children, and control over probation officers and county agents; it included also four commissions in charge of groups of State institutions. These were the State Hospital Commission, State Prison Commission, State Corrections Commission and State Institute Commission. Hospitals, with the numbers of their inmates on Oct. 1, 1927, were Kalamazoo State Hospital, 2427; Pontiac State Hospital, 1666; Traverse City State Hospital, 2089; Newberry State Hospital, 1108; Ionia State Hospital, 622; Farm Colony for Epileptics, 851; Michigan Home and Training School, Lapeer, 2857. Prisons were: State Prison, Jackson, 3353; Michigan Reformatory, Ionia, 1796; Branch Prison, Marquette, 974. Places of correction were: Boys' Vocational School, Lansing, 572; Girls' Training School, Adrian, 292. Schools under the Institute Commission were: School for the Deaf, Flint, 326; School for the Blind, Lansing, 156; Employment Institution for the Blind, Saginaw, 59; State Public School, Coldwater, 326. The patients in State hospitals for mental disease on

Jan. 1, 1927, as reported by the Department of Commerce, numbered 7765.

LEGISLATION. The State Legislature convened in biennial session January 5. It enacted a new criminal code to go into effect September 5. By this code it was made possible for a criminal defendant to waive trial by jury if he chose, and to be tried by a judge alone. Fourth offenders, by a provision cognate to that of the Baumes laws of New York, were made subject, after September 1, to a sentence of life imprisonment. An effort to provide capital punishment for murderers failed through opposition in the Senate. A bill to allow flogging as a punishment for robbery with arms was enacted; it limited the punishment to the administration of six lashes at one time, but permitted repetition of the flogging, as the sentencing judge might direct. The penalty for breaking and entering in the night was made 15 years; for the same act in the day, five years. In order to meet a deficiency in the highway funds left by the Groesbeck administration, there was enacted a tax of 3 cents a gallon on motor fuel gasoline sales. The State tax commission was abolished by statute, and a new commission of three members was created in its place; this proceeding had the effect of removing from office the previous chairman of the tax commission, an appointee of the Groesbeck administration. A deficiency appropriation act imposed a tax of \$4,600,000 of which sum \$2,000,000 was required of Wayne County. A traffic code enacted at the session abolished the previous statutory speed limit of 35 miles an hour for motor vehicles on the highways, outside cities and villages. Among other laws passed were one restricting the operation of drug stores to those owned by licensed pharmacists, or in case of corporations, unless 25 per cent of the stock were so owned; and one requiring the licensing of anglers, and providing a \$1 license fee to be used for trout propagation.

POLITICAL AND OTHER EVENTS. Governor Fred W. Green took office January 1, and declared that he would seek to correct the highway finance system of the State as developed by his predecessor. He recommended in March that plans for the State prison to be erected at Jackson should be abandoned as likely to cost a further \$5,000,000. According to his report work on the prison from its start in 1923 up to Jan. 1, 1927, had cost \$2,656,006, leaving a deficit beyond appropriations of \$1,904,404. The prison as designed was to hold 5000 convicts. The State Supreme Court in January declared unconstitutional a law of 1925 enabling State or local highway commissioners to designate lands for condemnation without further process to determine the public need for the lands.

In the criminal procedure there developed unexpected consequences of laws passed in 1926. The Legislature had made even minor infractions of the prohibition law felonies, punishable with imprisonment, and it had also enacted a measure providing for the longer imprisonment of those convicted for fourth felonies. Under this combination of statutes, it became possible to send a man guilty of previous offenses to prison for life because a raid on his home had disclosed a pint of liquor. Fred Palm, a resident of Lansing, was so sentenced under these circumstances in November, advocates of prohibition approving. Under the feature of the new law allowing the accused to waive

jury trial, it was reported that up to September 5 out of 118 defendants in the Recorder's Court at Detroit 55 had dispensed with jury trial.

Legal proceedings against Benjamin Purnell and the religious colony known as the House of David resulted, November 10, in a court order placing the common property of the colony in the charge of an outside receiver, and removing Purnell from the colony. Prominent in the litigation of the year was a suit against Henry Ford, the automobile manufacturer, brought by Aaron Sapiro and tried during March at Detroit. The suit was for libel alleged to have been committed by Ford's periodical, the *Dearborn Independent*, in attacking Sapiro in common with other Jews. Sapiro asserted his purpose to be opposing of unfounded attacks on his race. A mistrial occurred, and the case was re-tried. After efforts had been undertaken by the plaintiff to require the appearance of Ford as a witness, the trial was discontinued and the suit settled out of court, Mr. Ford publishing a statement expressing his regret for the statements to which exception had been taken. See JEWS.

On the newly created State tax commission, two of the members opposed the effort of the third, acting on behalf of the rural element, to have earnings form the basis of valuations (November 1). The effect of such a step would have been to increase heavily the share of Detroit in the total assessment of the State.

In Detroit a municipal election held November 8 resulted in the defeat of Mayor John W. Smith, running for reelection on an anti-prohibition platform, and in the election of John C. Lodge, supported by the prohibition element, but without having bound himself to any policy on the subject. At a special election on June 28, the people of Detroit ratified an ordinance for the construction of an international bridge over the Detroit River to connect the city with Windsor, Ont. The City Council in June selected a site for a city airport. During several months of the year the Ford motor works ceased operation, in order that changes might be made in the plant to permit of the production of a new model of car, and extensive unemployment resulted. Rules limiting the freedom of Canadians to cross into Detroit to work there daily went into force, under the authority of the Federal government, in the course of the year. A new home of the Detroit Institute of Art was opened October 7.

OFFICERS. Governor, Fred W. Green; Lieutenant Governor, Luren O. Dickinson; Secretary of State, John S. Haggerty; Treasurer, Frank D. McKay; Auditor, Oramel B. Fuller; Attorney General, William W. Potter; Superintendent of Public Instruction, Webster H. Pearce.

JUDICIARY. Supreme Court: Chief Justice, Nelson Sharpe; Associate Justices, Howard Wiest, George M. Clarke, John E. Bird, John S. McDonald, Richard C. Flannigan, Walter H. North, Grant Fellows.

MICHIGAN, UNIVERSITY OF. A coeducational State institution of higher education at Ann Arbor, Mich.; founded in 1837. The University, made up of ten colleges and schools, admits graduates of accredited high schools to the college of literature, science, and arts, to the college of engineering and architecture, to the college of pharmacy, and to the training school for nurses, as well as to the special programme

for dental hygienists and the curriculum in physical education. In 1926-27 the enrollment was 13,257, of whom approximately 33 per cent were women, while 63 per cent were inhabitants of the State of Michigan, and the remaining 37 per cent, with the exception of 287 foreign students, from all parts of the United States. Of the total enrollment 5630 were in the college of literature, science and arts, 1542 in the colleges of engineering and architecture; 666 in the medical school; 89 in the school of business administration; 236 in the nurses' training school and 804 in the graduate school. The registration for the 1927 summer session was 3666. The teaching staff was composed of 742 members. The University libraries contained 649,912 volumes. For current expenses, the State appropriated \$4,600,000, while over \$2,500,000 was derived from other sources. A new architectural building was constructed during the year, and the stadium was completed for the autumn games. The new University Museum was also completed by the end of the year, and construction was begun on the Michigan League Building for Women, to cost about \$750,000 and having an endowment of \$250,000. President, Clarence Cook Little, Sc.D., LL.D.

MIDDLEBURY COLLEGE. A coeducational, non-sectarian college at Middlebury, Vt.; founded in 1800. For the autumn term of 1927 a total of 643 students were registered as undergraduates, and 11 as graduates, of whom 300 were women and 354 men. The summer session enrollment was 512. There were 63 members on the faculty, including administrative officers and those on leave of absence. The productive funds of the College amounted to \$2,537,274.47, and the income to \$302,974.42. The library contained 50,000 volumes. Gifts to the College in 1926-27 totaled \$60,535.32. President, Paul D. Moody, D.D.

MIDDLE CONGO. See FRENCH EQUATORIAL AFRICA.

MIETHE, ADOLF. German chemist, died in Berlin on May 5. He was born on Apr. 25, 1862, at Potsdam, and educated at Charlottenburg. For some years he held the chair of chemistry in the Berlin Technical Institute, where he was active in his research work. One of his special fields was color photography and he had several patents on methods for producing photographs in natural colors. He was practically unknown to the public until 1924, when his announcement that he had found a method of changing elements and had succeeded in converting mercury into gold startled the whole world. His method involved the use of a high electric charge, but the enormous expense involved in the conversion by electrical currents prevented it from becoming of practical value, and doubt was cast on the value of the experiment from a scientific standpoint. In 1925, Prof. H. H. Sheldon of New York University duplicated, with funds supplied by *The Scientific American*, Professor Miethe's experiment as described in detail by him. Exhaustive tests brought no results and Professor Sheldon expressed the belief that the reason Dr. Miethe had found gold was that he had used Spanish mercury, which contains a small quantity of gold. Later several German authorities also failed to duplicate the feat.

MILITARY PROGRESS, GENERAL. There was not much to chronicle in the way of military progress of the world's nations during the

year 1927. A survey revealed danger zones whose elimination could be brought about only by leaders arising who are determined to preserve peace. An unannounced author, "F. F.," contributing his thoughts in the *Infantry Journal* predicates his interesting articles on the political and economic problems of each continent. They are worth summarizing.

President Coolidge has stated plainly that Washington would not meddle with Mexico's religious issue. The revolution over the presidential candidacy of Obregon, resulting in drastic and prompt action on the part of President Calles, was cut short by the summary execution of the leaders Serrano and Gómez and a hundred anti-Calles military leaders. In South America the Tacna-Arica controversy between Chile and Peru remains unsettled. Chile controls these provinces. Peru cannot wage war successfully against Chile, and Bolivia stands by watchfully waiting. She wants an outlet to the Pacific.

In South Africa native races clash with the dominating whites. The Nile country, rich in resources, is still the prize that nations have fought for in centuries past. Egypt effectively cut off from powerful allies can do little alone; yet is a prime breeding ground for trouble. Valuable as she is to Great Britain the latter will hardly relinquish to others her favored position.

In Europe, Russia's increasing efforts to foster world revolution, her avowed policies and her standing army, constantly threaten the peace of Europe. Finland, Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Bulgaria, and Greece are all engaged in more or less serious disputes with their neighbors and suffering from internal political struggles. Russia is unified and her government highly centralized. Her armies moving westward would have a tremendous initial advantage over the disorganized forces that could be assembled in opposition, continues "F. F." The other European powers are drawing closer together. Economic interests and the necessity for common defense are responsible for this. Great Britain and Russia, though widely separated geographically, have conflicting interests in India, in China and in all the territory from the western end of China to the Black Sea. The influence of Russia in China, Afghanistan, Persia, and Turkey is powerful.

In western Europe and in the countries bordering on the Mediterranean the British influence is increasing. England's recognition of Italian supremacy in the Adriatic and especially Albania has strengthened her political ties with Italy.

In Spain General Rivera has acknowledged British leadership in the international affairs of Europe. It is recalled that Mussolini said in one of his speeches: "We must be able at a certain time to mobilize 5,000,000 men. We will be able, then, between 1935 and 1940, when I believe there will be a crucial point in European history, finally to make our voice heard and see our rights recognized."

The defense of India is as troublesome as anything else there. Since the Ameer of Afghanistan two years ago secured the removal of the British Resident Minister, Russian influence has supplanted that of Great Britain. Warlike mountain tribes that inhabit Afghanistan and Baluchistan adjoining are under Russian guidance. In Eastern Afghanistan and Khyber Pass the con-

centration of British forces where they can meet an advance from the north of India shows that Great Britain considers the situation dangerous.

In China the great civil war was still in progress. In the north Chang Tso-lin controlled Manchuria and likewise had possession of Peking. In the south the Nationalist armies occupied the Hankow-Canton area. As December approached its close the ascendancy of Chiang Kai-Shek in Nationalist councils was evident and he again became a factor not to be neglected. But with this difference, and it is important: The influence of Soviet Russia has been minimized if not eradicated and will probably end up with the breaking off of all relations with Russia. The latter of course will not give up easily. Her support of Feng Yu-hsiang and Yen Hsi-Shan, Governor of Shansi, may yet materialize. It appears as if Canton, as a result of the attack on Chang Fah Kwei, the labor leader who drove out Li-Chai-Sum from Canton, was again in the hands of Li and the Nationalist troops. The situation in the north as that in the south presents serious problems. Chang Tso-lin established himself in Peking as generalissimo and thus necessarily had to leave Manchuria to subordinates. Difficulties with Japan have arisen over the new Chinese railway being constructed from Hulutao on the opposite side of the Gulf of Liaoting from Dairen and paralleling the South Manchurian Railway.

The message of President Coolidge to Congress asking for the provision of cruisers and other auxiliary vessels of war leads one on in the discussion and thought whether an issue is raised with that of the Russians at Geneva asking the nations to disarm completely. The Russian proposal, according to P. W. Wilson in the *New York Times*, meant that all nations must disarm completely within a period of four years, troops disbanded, no recruits enrolled and aircraft reserved strictly for civil use; manufacture of munitions, including poison gas, ended forever; the Soviet Republic itself maintains a very vigorous Red army and so these Russian delegates knew these proposals meant nothing and would not be accepted. At least they had a polite hearing by the Preparatory Commission on Disarmament before it adjourned until March, 1928.

What President Coolidge said about "much cooperation by Japan" and inability "to come to an agreement with Great Britain" will hardly end developments but rather begin them again, as will be evident when the Washington Agreement on battleships comes up in 1931.

It is not absolute disarmament on land but limited armament that is wanted. There shall be no surplus of troops available for aggression—but only enough for maintenance of internal order. If one soldier to one thousand civilians is not a menace then our survey of world conditions shows that the whole of North and South America has a strictly limited armament. In the United States including outlying possessions a population of 120,000,000 provides an army of 120,000 soldiers!

In Canada for its 9,000,000 population there might be 9000 troops. Applying the measure, Latin America, Australia, New Zealand, South Seas and the Arctic are demilitarized. Likewise Africa and Southern Asia, excepting Turkey. India's population of 330,000,000 sustains a force of 62,000 British and 187,000 Indians

or 249,000 officers and men. The important fact is apparent that limited armament on land applies to almost one-half of the human race. The Far East and Europe alone are affected by the problem. Japan has a large army, some 200,000 men out of 83,000,000 people, or 1 soldier to 415 civilians. However, she is remote from Europe. According to *The Europa Year Book* for 1927, in 1913 there were 4,189,000 men in the various armies, against 3,042,000 in 1925, showing a reduction of 1,147,000. Taking the corresponding population of 475,000,000, it makes one soldier to about 150 civilians.

We are told Europe's sense of security prevents the reduction of armies there to the basis being discussed. It is a security outside itself, as this interesting writer continues, that Europe finds it impossible to organize.

The United States refused to accept the covenant of the League of Nations or join any discussion of diplomatic guarantees. Great Britain signed the pact of Locarno by which it will be remembered she joins the powers in a guarantee of the frontier between France, Belgium and Germany, but declines to extend her guarantees to eastern areas of Europe. The British Dominions have joined the League of Nations and ratified the Covenant but are unwilling to specify more precisely their commitments.

Russia claims disarmament itself is the best security of peace. If the Red army be the accepted figure of 563,000 men, the ratio to her 140,000,000 of population is large—four times that necessary. What about her neighbors? Finland with an army of 29,000 and ratio to population of 1-120; Estonia, 18,000, 1-60; Latvia, 20,000, 1-90; Lithuania, 22,000, 1-90; Poland, 27,000, 1-100; Czechoslovakia, 125,000, 1-110; Rumania, 130,000, 1-130; and Turkey, 120,000, 1-110; or a total of forces 9 times greater than they would be under a non-aggressive limit. Was it due to the fear of Russia?

France has a strength of 673,000 men; Belgium 80,000 and Great Britain 179,000 or a total of 932,000 on a peace footing with complete equipment.

The question of reserves must also enter in any calculations. It is not how many men at the moment are under arms—but how many could be put under arms without delay in event of war.

In Germany, Austria, Hungary, and Bulgaria conscription has been abolished by treaty; in Great Britain, there is voluntary service with no compulsion. In France and other Allied countries conscription has been retained. Conscription does not mean merely that the citizen in time of peace is forced to serve as a soldier. It means short service and larger reserves.

Italy has 248,000 men under arms and second only to France in equipment and efficiency. Italy would not abolish conscription and France could not. It would appear therefore that Europe must abolish conscription would she avoid the peril that confronts her. The discussion of naval armaments is essential, of course, to the solution—but that is discussed elsewhere. (See *NAVAL PROGRESS*.)

UNITED STATES. In his annual report for 1927 F. Trubee Davison, Assistant Secretary of War or Aviation, comments on the loss of efficiency due to the morale of air officers. The five year programme calling for 1800 planes, 1650 officers and 15,000 enlisted personnel was the most

effective possible. The achievements of the Air Corps were the Pan-American circumnavigation flight, the non-stop flight to Hawaii, the visit of the First Pursuit Group, at Selfridge Field, Michigan, to Ottawa, in winter, and the maneuvers at San Antonio, Texas, with ground troops. The War Department contracted with the Curtiss Corporation for 35 of the O-11 type observation planes for distribution to the National Guard units. Beginning the middle of November three per week were being delivered.

According to the War Department the total enrollment of 39,676 young men for summer training in the Citizens' Military Training Camps was almost four times that of 1921. Fifty-two camps in 33 States were in operation, with one in Porto Rico exceeding 500. The applications for enrollment totaled 57,127, exceeding that of any other year. Three deaths occurred, two from accident and one from disease, a remarkable record for a month's camp and transportation to and from of nearly 40,000 boys. The number of young men trained in these camps since 1921 was as follows: 10,299; 22,199 in 1922; 24,483 in 1923; 34,082 in 1924; 33,614 in 1925; 34,194 in 1926; 39,676 in 1927, or 107,767 in the seven years.

OFFICERS RESERVE CORPS. The 1927 strength of the Officers Reserve Corps is 107,838, of which number 38,552 had commissioned service in the World War, 31,542 had enlisted service and 37,744 no service at all. After seven years of experiment new revised policies were promulgated Jan. 10, 1927. These policies provide for a definite procurement objective, an objective that will take care of, first, reservists for active and inactive units of the Regular army; second, those required for the Philippine and Hawaiian Departments; third, those for industrial mobilization; fourth, for branch installations for peace time organizations and first mobilization; fifth, Corps Area headquarters; sixth, for assignment to National Guard units; seventh, for all Organized Reserve units of the first phase of mobilization in War Department General Mobilization Plan; eighth, for the 27 Organized Infantry Reserve and six Organized Cavalry Reserve Divisions; ninth, a surplus over and above these requirements to permit when practicable the assignment of officers residing in a unit area to a unit of the Organized Reserves.

In regard to promotion, which seems to be uppermost in the minds of the Reservist as well as the Regular army, the new policy provides for it only when the officer has a certificate of capacity, and when there is an appropriate vacancy under peace time procurement objective, and when he shall have served a minimum time in grade as follows; 2nd lieutenant four years; 1st lieutenant eight years; captain eight years; major six years; lieutenant-colonel four years.

There is no doubt that the United States is the most liberal in this matter. In Great Britain no reservist appointed after Feb. 1, 1924, is entitled to promotion above the grade of lieutenant. In Japan one out of six is promoted above 2nd lieutenant. In Italy a reservist is not promoted until the last man in his class in the regular army has been promoted. The new policy provides further that no reservist who was not in the World War as an officer shall be promoted to a grade higher than that of Major unless he first shall have completed the full courses at

the special school of his branch, and at the command and general staff school, and further, no promotions to or in the grade of general officer, except in the case of Federally recognized National Guard officers.

In the matter of reappointments in grade and section upon the termination of his commission provision is made as follows: (a) he must have a certificate of capacity for his present or higher grade; (b) have written record of 200 hours of military work; (c) have been on active duty for three months or longer; (d) have taken either the prescribed correspondence course or the special or regular course at a Special Service School, the Command and General Staff School or Army War College. A physical examination is required for officers of field grade. If the officer has not these requirements he may be re-commissioned in the Unassigned Section, with suitable notation as to branch in which he formerly held a commission.

RESERVE OFFICERS TRAINING CORPS. In 1927, 4917 Reserve Officers Training Corps graduates accepted appointments as Second Lieutenants in the Officers Reserve Corps. There were 5891 students altogether who graduated or over 98 per cent of acceptances of commissions.

New war strength tables for units of the infantry brigade have been issued. They were badly needed. The new tables show a return to the organization of the World War for machine gun companies, each having three platoons. Within the regiment there appears an elimination of ration and water carts with reduction of ammunition and ration allowances.

The War Department authorized not to exceed five graduates of the United States Military Academy and not to exceed five officers, non-graduates, to undertake a course of study at Oxford University in accordance with the provisions of Rhodes Scholarships which may be awarded them. Heretofore but one officer was authorized annually.

One would scarcely expect to hear that a supposedly obsolete form of case shot was about to be re-introduced by the U. S. Army for use with the Infantry tank. Such was the fact, for the Ordnance Department was experimenting with it. The development of special artillery for the use of tanks had become necessary. As is well known, the tank is primarily used for attack on machine gun nests and other tanks. The new canister was being developed for use against personnel at ranges from 25 to 100 yards, and is for use with infantry tanks carrying the 37-millimeter guns or one-pounders.

The 37-millimeter gun Model 1915 E. designed to replace the 37-millimeter gun hitherto in service, was adopted, as its ability to pierce armor plate, its rapidity and ease of traverse, make it more efficient than the old model.

TANKS. Fire Extinguisher Foamite 2½-gallon type for Mark VIII heavy tank will reduce materially the fire hazard of this type of tank and add to the safety of the tank crew. With the manufacture of a suitable sub-calibre for the six-pounder gun on the Mark VIII tank, target practice with this gun was possible and efficiency of the gunners maintained notwithstanding reduced appropriations.

The Chief of Infantry reported that the reduction in the amount of ammunition, rations and equipment formerly carried on the person had the effect of reducing the weight of

the Infantry pack from 77 pounds to about 52 pounds. This reduction was accomplished by authorizing gas masks, steel helmets, overcoats, reserve rations and extra ammunition to be carried on the trains until entering combat areas.

It was interesting to note that 522 stallions were in service on June 30, 1927, divided into 461 thoroughbred sires, 30 Arabs, 27 Morgans, 1 standard bred, 2 saddle bred, and 1 hackney. It was apparent that the army horse breeding plan made it the greatest breeder of horses in the world.

On June 30, 1917 there were 12,010 Federally recognized officers in the National Guard, a gain of 737 during the twelve months. The turnover of Guard officers during this time was about 14 per cent. About 8000 officers were also members of the Reserve Corps, 1300 more than in the previous year holding two commissions.

The Joint Army and Navy Board with the approval of the Secretaries of War and Navy defined the relative functions of the Army, Navy and Marine Corps in matters of National Defense. The Board clearly defined the functions of the Air Corps and Naval Aviation in the matter of coast-line defenses. The primary responsibility for aerial protection of the coast-line remains with the navy. In emergencies special provision is made for coordination of the Army Air Corps and Naval Aviation and the use of one for the other. In reference to the point of former controversies regarding command of joint operations, the President may delegate his authority as commander in chief so far as such specific operations are concerned by the appointment of either an army or naval officer to exercise command. In the foreword to the publication in one volume, of all joint policies, agreements or instructions with a view to securing effective coördination, appears: "It is vital to success in war that the army and the navy so coordinate their actions as to produce the most effective mutual support. To accomplish this it is essential that both services have a common, definite understanding of their respective functions in national defense and of the approved methods for attaining 'coördination in operations.'" Part I relates to policies to govern joint army and navy actions. Part II, minor policies, agreements and joint instructions which by providing effective organizations and agencies for coördination, and by enumerating standard practice, promote harmonious joint action. The policies and procedure enunciated in the volume known as Joint Board Policies were published to the Services in August, 1927.

On June 10, 1927, the 75-millimeter mortar was accepted by the War Department as to type and approved as standard for manufacture. It is to replace the old unsatisfactory smooth-bore muzzle-loading 3-inch trench mortar used by the troops during the World War. According to the *Infantry Journal* of September 1927 the new mortar was entirely modern, rifled, breech loading, more powerful and more accurate and safe. Its adoption made an important step forward for the infantry. Its range is 1800 yards and rate of fire 15 shots per minute. It and its caisson can be pulled by one mule and are light enough to be carried forward by hand if animal transportation is not desirable due to terrain or hostile fire.

AVIATION. Under conditions existing in 1927 only airplanes of the United States Army and

Navy were permitted to fly over the Canal Zone. In July 1913 President Wilson issued an order forbidding flying over the Zone without written authority of the governor. This order was still in effect. Under the new American-Panaman treaty all aircraft and aviation centres in the Republic of Panama were subject to inspection by United States authorities, and all aircraft other than those pertaining to the defensive forces of the Canal "must follow routes prescribed jointly by the United States and Panama. . . ." The Republic of Panama agreed not to permit flying in Panaman territory over areas near the defenses of the Canal, except in agreement with the United States, and in the enforcement of the rules and regulations regarding aircraft and aviation the deciding factor is the safety of the Panama Canal. In time of war or threatened hostilities complete control reverts to the United States under Article XI of the same treaty. Panama cannot give concessions for air bases except with consent of the United States.

This treaty had not been ratified up to the end of 1927. All this was interesting in view of the application of the Germans for a base to establish a commercial air route between Panama and the east coast of Colombia.

Despite the radio and telegraph, pigeons fill an essential rôle as message bearers. The United States Army had in 1927 more than 1500 birds within the limits of the country, in the Canal Zone, Hawaii and the Philippines. About 500 were stationed at the Signal School at Port Monmouth, New Jersey, where they are bred and trained.

Night flying of pigeons was the latest development in handling these birds. In Hawaii five army pigeons were trained to fly from any point in the Island of Oahu to their loft. In the Panama Canal Zone one loft has pigeons that can be liberated at any point on the Isthmus on the darkest night and find their way back as quickly as other birds do in daylight, according to the *New York Times* of Nov. 14, 1927.

AVIATION. On December 7 the U. S. War Department approved construction of an emergency landing field at Fort Tilden, New York, to cost \$75,663. Fort Tilden is on the air route from Bolling Field, District of Columbia, and Mitchel Field, Long Island. The War Department also awarded contracts to the Atlantic Aircraft Corporation of New York for 8 model C-2A cargo planes and spare parts to cost \$328,076.80. The unit cost of the planes is \$35,125 and they are tri-motored monoplanes with capacity for 10 persons.

President Coolidge in his budget message to Congress stated: "In 1927 there was available for expenditure for defense purposes, excluding all non-military items and retired pay, \$576,000,000. Army estimates contemplate a regular army of 118,750 men, with 12,000 officers, 30,000 trainers for Civilian Military Training Camps, 125,000 cadets in the Reserve Officers Training Camps, and a National Guard of 188,000 men. For housing purposes a total of \$13,280,000. In addition, \$10,440,000 for repairs and maintenance of barracks, quarters, sewers, roads and water systems. There is an increase of \$2,000,000 for ammunition and estimates provide for second year increment in the five year programme looking toward 1800 airplanes at the end of five years."

During the year the Army Air Service had many notable achievements to its credit including the flight of Lieutenants Maitland and Hegenberger from Oakland, California, to Hawaii, and the good will flight around South America. The Hawaiian flight was over 2400 miles over water and made in the army transport C-2 in slightly more than 25 hours. (See AERONAUTICS.) During the flood in the Mississippi Valley and the one in Vermont, army pilots performed invaluable service carrying messages, food and medicine to flood sufferers and performing such other duties as tended greatly to expedite relief measures which were instituted. The war time training plane was eliminated altogether and planes with metal fuselages were superseding those of wooden fuselage construction. On May 20-21 Captain Charles A. Lindbergh, alone, made his New York-Paris flight in the "Spirit of St. Louis"—3610 miles in 33 hours 30 minutes.

In the tests conducted by the Chemical Warfare Section in conjunction with the Air forces at France field, Canal Zone, when ten airplanes simulated an attack on the locks at Pedro Miguel, which were concealed by a smoke screen of white phosphorus, the principal object sought was the protection of the control house gates, the most vital parts of the locks structure. The results were not available but the tests indicate what was being done by this branch of the Service there. Undoubtedly more extended tests will have to be held if anything definite is to be determined as to the value of these smoke screens.

According to the Chief of Chaplains in his annual report there were 28 denominations represented in the Chaplains Corps, providing "abundant variety" in religious expression. There were 21,208 religious services in the army during the fiscal year with an estimated attendance of 1,680,578, and in addition 581 army weddings, 1079 baptisms and 1283 funeral services.

Facts hitherto unrevealed but of interest to all military students were told by Newton D. Baker in his introduction to *The American Reinforcement in the World War* by Captain T. G. Frothingham, U. S. R., a naval expert who wrote three volumes of *Naval History of the World War*, says the *New York Times* of Nov. 15, 1927. The real purpose of the Balfour and Viviani Missions to the United States when the latter country entered the war was to get immediate financial assistance and they didn't expect the United States could send many soldiers to France. Joffre thought America might send 500,000 men! The idea of the draft law was credited to General Hugh L. Scott, Chief of Staff. This provided 2,000,000 before the Armistice. "Have the law drawn at once," President Wilson told the Secretary of War, "so that if I should be obliged to go to the Congress I can refer to it in my message as a law ready to be presented for their consideration." With this in mind he prevented the formation of volunteer units such as Roosevelt wanted to form. He selected General Pershing because of his robust health, energy, tact, and self-restraint and military ability shown in the punitive expedition into Mexico after the Villa border raids. Pershing never once was interfered with from Washington. The only limitation upon the complete authority given Pershing was that the identity of the American army in France must be pre-

served. This was settled before the first American went over.

GREAT BRITAIN. Under date of Sept. 11, 1927, the New York *Herald-Tribune's* London Bureau announced drastic changes in British army administration following the development of mechanized forces. The War Office announcement indicated the addition of a new office of Deputy Master General of Ordnance who was to control practically the mechanized forces. He will be the fourth principal officer of the staff at General Headquarters. The new post was assigned to Lieutenant General Sir Webb Gilman, formerly inspector of Artillery. The Salisbury Plain maneuvers evidently convinced the Army Council that concentration of all mechanized forces, including lorries and six-wheeled automobiles as well as tanks and armored cars, was essential. The original estimate for airship development, including two giant dirigibles now being constructed, was £1,350,000, which was too little by £130,000. The cost of one ship, the R-101, was to be about £400,000.

GERMANY. A balance of \$218,929,926.51 was due the United States from Germany, the War Department announced on December 6, for the cost of the American army of occupation. Payments under Article 3 of the Finance Ministers' Agreement of January 14, 1925, from Sept. 1, 1926, to Oct. 31, 1927, the end of the reparations year, were \$13,057,939.47. Emil Ludwig in the *New York Times* wrote an illuminating article December 18. Among other things: "And the subject of sport subdues the German war spirit and shows that now that compulsory military service is gone the nation finds an outlet for its energies in outdoor life. Liberated suddenly from such service they have set themselves to creating a higher means of physical culture. The spirit underlying the new German movement in sports is not a desire for military prowess, but its opposite. The growing development of sports is driving away the warlike spirit instead of arousing it. The personal courage of Lindbergh was not surpassed by that of any soldier in the war."

Under date of Sept. 6, 1927, Foreign Minister Stresemann of Germany was notified by the Acting President of the Allied Conference of Ambassadors, that the allied army of occupation would be reduced from 70,000 men to 60,000. This reduction would include a cut in the number of the High Command who are occupying buildings in various German cities needed for municipal governmental purposes.

RUSSIA. According to foreign observers the militant temper of the proletariat dwelling in towns was most noticeable. An estimate that conscripts at the rate of a million a year receive military training gives Russia in the decade of Bolshevik rule 10,000,000 recruits! Figures were given for the Red army, without the mobile and uncounted forces of the political militia, O. G. P. U., as 770,000 troops. The campaign for an air fleet by making every town and trade-union responsible for one new plane has had an enormous success.

The *New York Times* of October 15 published the interesting news from Riga that the training of women in the various forms of military service was an object of special attention in connection with the feverish preparations for war being made in Russia. According to the Commissary of War Voroshiloff there were 72 commis-

sioned women officers or commanders in the Red army. Eight women had passed through the General Staff Academy. During the Russian Civil War, 79 women fought beside the men and received the "Order of the Flag."

The annual Red army's grand maneuvers were held in September 1927 in the zone between the Black Sea's northeast coast and the main Transcaucasian Railroad from Moscow through Borlof to Baku. The experimental full mobilization of reservists was held in the Leningrad and Crimean military regions, possibly with the idea that these are the most vulnerable points from the standpoint of an attack by Great Britain.

According to dispatches in the *New York Times*, November 27, from Moscow, the Red army despite lack of information concerning it was not to be despised. Notwithstanding difficulty in getting information in Russia concerning it, there was certain information available. The Red army and fleet combined had a total of 528,000. The army was made up mostly of short-time conscripts serving from one to three and a half years, depending on the branch of service. It was organized along lines of the British territorials and the army of Switzerland. There was an additional force, said not to be counted in the army total, the so-called "Gaypayou" troops, which form the garrisons of the principal cities and guard railroads and frontier stations. Its estimated number is between 60,000 and 90,000 men enlisted for from five to seven years. In tanks and heavy artillery it is probably weak. In discipline, training, and spirit it is excellent.

FRANCE. Under the treaty of arbitration and friendship between France and Jugo-Slavia, they bind themselves not to go to war and to arbitrate all differences not adjusted by direct negotiations. In addition, they engage to act in concert in dealing with problems concerning the general situation established by treaties, except when the League of Nations intervenes by virtue of Article XI in case world peace is threatened. Just why Italy objected was not evident for she herself had similar treaties with almost all the Balkans and even with Jugo-Slavia. Perhaps it was the implied endorsement by France of Jugo-Slavia's anti-Italian attitude!

Early in the year Italy signed a treaty with Albania and gave Italy the right to intervene militarily if "their reciprocal interests" are threatened by a hostile power. The results of the Franco-Jugo-Slavia treaty were that France gets definite military alliances with Belgium, Poland, Czechoslovakia, Rumania, and Jugo-Slavia. They are called by France regional security compacts. Notwithstanding all the discussion of the whys and the wherefores of what caused these treaties, France does not fear an attack from Italy—considering it, no doubt, a geographical impossibility. The road to Paris was just as difficult as the road to Rome.

Disarmament in Europe was impossible as long as Russia remained outside. Besides, Germany had a military understanding with Russia.

The terms of the treaty referred to were (1) not to make war on each other, with the exception noted of their duties as members of the League of Nations; (2), to examine together all questions threatening their security or disturbing the status quo as fixed by peace treaties; (3) in case of attack against either of them the two nations pledge themselves to act con-

jointly to safeguard their interests; (4) ten year limit to the treaty.

The poilu's horizon blue was displaced by khaki. On November 11 the French troops wore that material en route to the Tomb of the Unknown Soldier.

CANADA. It is not generally known that Canada has a regular and permanent military force and that British troops are not stationed there. This permanent force is officially designated "Permanent Active Militia." "The Permanent Force" as it is generally known was fixed during the reorganization of 1923 at 3643 officers and men. The fortifications at Halifax and Esquimalt, arsenals, and military district headquarters, are garrisoned by this force. The Non-Permanent Militia, comparing with the U. S. National Guard, numbers 129,467. In addition to training and instructing these troops, the Permanent Force trains Cadet Corps and conducts their summer camps.

The Royal Canadian Regiment was increased after the war by two Infantry battalions—the Twenty-Second, a French Canadian unit, and Princess Patricia's Canadian Light Infantry. The cavalry consists of two regiments, the Royal Canadian Dragoons and Lord Strathcona's Horse, raised during the South African War. Three battalions of Royal Canadian Horse Artillery, five companies of Royal Canadian Garrison Artillery, two companies of Royal Canadian Engineers, with technical and administrative services, are included. The Royal Military College is at Kingston. Vacancies in the grade of first lieutenant are reserved for graduates of this school, with five specially selected for commission in the Imperial army. The course of instruction, like that at West Point, is four years. Most of its graduates retire to civil life and become officers in the Non-Permanent Militia. The enlistment period of such personnel is two years, with initial pay for the private soldier of \$1.70 per day, with retirement at the end of ten years. The Force is under the direct control of the Minister of National Defense at Ottawa, responsible to the Parliament of Canada.

ITALY. The maneuvers of the Italian Air Force during September indicated a high degree of efficiency, carried out as they were on a scale exceeding anything undertaken in Europe. That there was marked success is shown by the fact that the 527 machines involved flew in the five days from September 15 to 20 approximately 19,700 miles without an accident of any kind. Flying was done at night as well as by day, with bombing attacks part of the programme. In 1922 Mussolini reorganized the air force and caused it to be run as a separate ministry. Within three years there were 1600 first line machines. Two years more saw an additional 1700 installed. The Italian estimates call for a force of 2800 military planes by the close of 1929. Recently the Assistant Secretary for Air, Balbo, informed the Deputies that Italy then had 2797 machines as follows: Bombers 865; chasers 1250; scouts 682. While commercial aviation is receiving much attention, Mussolini and his ministers have brought home to the nation the necessity for an air force second to none.

As a result of the recognition by the Italian army of the value of physical training after the World War, the Central School of Physical Education was established in 1922 at Farnesina just outside of Rome. The climate is such that out-

door instruction can be given practically throughout the year. Its primary mission is the athletic training of junior officers of the army, who upon completing the three months course are returned to their regiments as physical instructors of the enlisted men. A special nine months course was established for those officers who made the best record in the three months course. These officers were to direct physical training in regiments, recruiting schools for officers and noncommissioned officers and divisional centres of physical training. The results were so beneficial in the regular army that Mussolini decided to introduce it in the National Security Militia in 1925. These were three months' courses. It ought to be noted that this militia is charged with the pre-military training of Italian youth, which is mostly physical.

On February 22 Colonel Francisco de Pinedo began his flight from Rome to South America and completed a 25,000 mile four-continent flight at Ostia near Rome on June 16. (See AERONAUTICS.)

At Turin, December 23, Renato Donati broke the world's altitude record with 38,792 feet.

MILITARY TERRITORY OF THE NIGER. A territory under the governor general of French West Africa (q.v.). Capital, Zinder.

MILK. See DAIRYING; FOOD AND NUTRITION.

MILLER, CHARLES R. Former governor of Delaware, died at Pine Valley, N. J., September 18. He was born in Chester, Pa., Sept. 30, 1857. He was graduated from Swarthmore College in 1879 and afterwards studied law at the University of Pennsylvania. For many years he figured as officer or director in various industrial concerns. He was elected to the Delaware Senate in 1910 for a term of four years, but resigned in 1912 to accept the Republican nomination for governor. He served 1913-17.

MINERAL DEPOSITS. See GEOLOGY.

MINERALOGICAL CHEMISTRY. See CHEMISTRY.

MINERALOGY. The year 1927 witnessed the extension of knowledge regarding the mineral constituents of the earth, along several lines. Much research work was done in the relatively new branch of mineralogy that was concerned with the atomic structure of minerals, which was rapidly being advanced by the labors of crystallographers and physicists to the rank of a separate science. The year also was a productive one in the field of discovery of new minerals. These ranged in practical importance from a new borate, which was found in sufficient quantity to be of distinctly economic value, to a new arsenate of manganese and zinc, of which our knowledge is confined to a single specimen.

The mines of the New Jersey Zinc Company at Franklin, N. J., added three new mineral species to the long list of rare compounds occurring at this famous locality. *Holdenite*, the new arsenate of manganese and zinc, was discovered on a single specimen in the collection of the late A. F. Holden at Harvard University, and named in honor of him. It occurs in minute orthorhombic crystals of a clear pink to a deep and yellowish red color. *Cahnite*, a new borate-arsenate of calcium, in very small white transparent crystals of tetragonal-sphenoidal symmetry was named in honor of Lazard Cahn, a prominent collector and investigator of Franklin minerals. Another new Franklin mineral, whose name records a former local collector, is

McGovernite, named for J. J. McGovern. This is an arseno-silicate of manganese, magnesium and zinc, occurring in red-brown granular masses.

The Belgian Congo, which of late years has been a prolific source of new minerals, added two new species to its already long list. A hydrated uranium oxide from Katanga has been named *ianthinite* in recognition of its violet color. It is found in small black crystals of a violet tint and a semi-metallic luster. *Kipushite*, a new phosphate of copper and zinc, was found in dark blue monoclinic crystals at the Prince Leopold mine at Kipushi. From Tsumeb, in the Otavi district of S. W. Africa, came the new lead arsenate, *Schultenite*, named in honor of Baron A. de Schulten. The monoclinic crystal of this mineral, of which only two specimens are known, is clear, transparent and colorless. *Lopasite*, a new titanate of rare earths of the perovskite group, occurring in small black cubic crystals, was found in Lapland.

From the confusing series of copper vanadates occurring at the Tange Gorge in Fergana, Turkestan, emerged the new mineral named *Tangeite*, a crystalline, dark olive green mineral. A new manganese silicate from the Val d'Err, Switzerland, was named *Sursassite*. It occurs in fibrous copper-red aggregates. Material recently collected from the crater of Vesuvius added

two new mineral species; *avogadrite*, a yellow to reddish caesium and potassium fluoborate, and *mallardite*, a sodium fluosilicate in small hexagonal prisms.

A new sulph-antimonite of silver and bismuth from a silver mine at Chocaya, Potosi Department, Bolivia, was given the name of *aramayoite*, in recognition of Señor Don Felix Avelino Aramayo. The mineral has a brilliant metallic iron-black color and occurs in irregular cleavable aggregates. A new fava mineral of complex composition and containing yttrium and erbium was found in dark reddish gray pebbles on the upper Rio Doce, Minas Geraes, Brazil, and was named *eschwegeite*, in honor of Baron W. L. Eschwege. *Toddite*, a new uranium columbate from the Sudbury district, Ontario, occurs in small pitch-black rounded masses. It was named in honor of E. W. Todd of the Ontario Department of Mines. A new telluride of copper, named *weissite* in honor of Dr. Louis Weiss, owner of the mine in which it was found, occurs in bluish black metallic veins at Vulcan, Colorado, closely associated with other tellurides.

Kernite, a new sodium borate, from Kern County, California, has been found in large colorless, transparent, orthorhombic crystals, and white crystalline masses. See CHEMISTRY, under *Mineralogical Chemistry*.

MINERAL PRODUCTS OF THE UNITED STATES, 1925-26*

Product	Quantity	1925 Value	Quantity	1926 Value
Metallic				
Aluminum	\$36,430,000	\$37,533,000
Antimonial lead ^b short tons (2,000 pounds)	19,667	3,785,547	22,524	3,916,714
Antimony ^c do.	2,624	918,400	2,693	856,400
Bauxite long tons (2,240 pounds)	316,540	1,988,250	392,250	2,415,200
Cadmium pounds	502,824	276,553	810,428	429,527
Chromite long tons	108	2,105	141	2,079
Copper, ^d sales value pounds	1,674,869,886	237,832,000	1,739,622,094	248,547,000
Ferro-alloys long tons	616,222	53,048,100	689,258	61,368,407
Gold ^e troy ounces	2,411,987	49,860,200	2,335,042	46,269,600
Iron:				
Ore ^f long tons	63,924,763	160,796,886	69,292,892	174,015,645
Pig do.	86,814,702	739,316,333	38,181,053	749,632,468
Lead (refined ^g) sales value short tons	654,921	113,956,000	680,685	108,910,000
Manganese ore (35 per cent or more Mn) long tons	98,324	1,857,769	46,258	1,228,663
Manganiferous ore (5 to 35 per cent Mn) ^h do.	1,448,054	3,752,486	1,285,431	3,188,489
Mercury:				
Metal flasks (75 pounds net)	9,174	762,616	7,642	702,323
Ore short tons	65,000	(^a)	51,000	(^a)
Nickel (value at New York City) do.	272	169,664	306	223,598
Ores (crude), tailings, etc.:				
Copper do.	53,282,000	(^a)	(^c)	(^a)
Copper-lead and copper-lead-zinc do.	229,000	(^a)	(^c)	(^a)
Dry and siliceous (gold and silver) do.	8,995,000	(^a)	(^c)	(^a)
Lead do.	8,560,000	(^a)	(^c)	(^a)
Lead-zinc do.	17,741,000	(^a)	(^c)	(^a)
Zinc do.	3,411,000	(^a)	(^c)	(^a)
Platinum and allied metals (value at New York City) troy ounces	49,643	5,661,809	84,981	9,210,669
Silver do.	66,155,424	45,911,864	62,718,746	39,186,497
Tin (metallic equivalent) short tons	14	15,980	8	10,400
Titanium ore:				
Ilmenite do.	5,666	89,000	(^j)	(^j)
Rutile do.	46	11,000	(^j)	(^j)
Tungsten ore (60 per cent concentrates) do.	1,191	755,500	1,382	920,400
Uranium and vanadium ores do.	13,070	831,000	21,624	329,000
Zinc, ^k sales value do.	555,681	84,456,000	611,991	91,799,000
Total value of metallic products (approximate)	1,880,280,000	1,402,920,000

* In this general statement certain of the figures represent shipments rather than quantity mined, and some of the figures for 1926 are estimates.

^b From both domestic and foreign ores.

^c Figures represent antimony content of antimonial lead. Value excluded from metallic total as the value of the antimony is included in the antimonial lead value. Value for antimony other than that in antimonial lead is included in metallic total; Bureau of Mines not at liberty to publish figures.

^d Produced from domestic ores only.

^e Value, \$20.67183462528 an ounce.

^f Value not included in total value.

^g Including ore used for fluxing.

^h Figures showing values not available.

ⁱ Figures for 1926 not yet available.

^j Value included in total value of metallic products. Bureau of Mines not at liberty to publish figures.

MINERAL PRODUCTS OF THE UNITED STATES, 1925-26 *—Continued

<i>Product</i>	<i>Quantity</i>	<i>Value</i>	<i>Quantity</i>	<i>Value</i>
<i>Nonmetallic</i>				
Arsenious oxide short tons..	12,817	\$1,199,247	11,805	\$674,350
Asbestos do....	1,258	51,700	1,358	134,731

Silica (quartz) short tons..	25,444	205,876	27,743	274,333
Slate do. . . .	724,600	12,675,326	718,000	12,352,767
Stone do. . . .	115,851,370	174,216,792	124,000,000	184,800,000
Sulphur long tons..	1,858,003	29,000,000	2,072,657	37,300,000
Sulphuric acid (60° Baumé) from cop- per and zinc smelters short tons..	1,006,915	7,512,568	1,068,449	8,274,435
Talc and soapstone [‡] do. . . .	182,256	2,011,793	181,568	2,110,994
Total value of nonmetallic products (approximate)		4,291,100,000		4,852,000,000
<i>Summary</i>				
Total value of metallic products		1,380,280,000		1,402,920,000
Total value of nonmetallic products (exclusive of mineral fuels)		1,231,800,000		1,231,800,000
Total value of mineral fuels		3,058,680,000		3,620,200,000
Total value of "unspecified" (metallic and nonmetal- lic) products (partly estimated) [†]		6,250,000		7,080,000
Grand total approximate value of mineral products		5,677,630,000		6,262,000,000

[†] Value not included in total value.

[‡] Figures for 1926 not yet available.

[‡] Figures obtained through cooperation with Bureau of the Census. Figures for 1926 not yet available; estimate of value included in total value of nonmetallic products.

[‡] Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania.

[‡] No canvases. Estimate of value included in total value of nonmetallic products.

[‡] Canvases discontinued after 1915. Value of iron ore sold for paint included under last item ("Unspecified").

[‡] Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

[‡] Figures obtained through cooperation with Bureau of the Census.

[‡] Figures represent talc only. Value of soapstone is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

[‡] Includes for 1926 the value of bismuth, cadmium sulphide and other cadmium compounds, chats (\$548,540), columbite (\$650), flint lining for tube mills and pebbles for grinding (\$85,148), fluorspar (optical), iron ore sold for magnets, iron ore sold for paint (\$129,541), lithium minerals (\$58,400), natural magnesium chloride (\$701,580), natural magnesium sulphate (\$339,220), calcareous marl (\$146,094), greensand marl (\$174,740), mineral soap, molybdenum, selenium (\$438,182), silica sand and sandstone (finely ground) (\$1,398,478), sodium salts (carbonate, bicarbonate, sulphate, and trona) from natural sources (\$1,321,640), tellurium (\$2,229), silicon (\$180,880), and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

MINERAL PRODUCTION AND RESOURCES OF THE UNITED STATES. In 1926 the mineral industries were, as a whole, maintained at a higher level of productivity than during the previous year and the output of mineral products was estimated by the U. S. Bureau of Mines at \$6,262,000,000, the next largest ever recorded, as 1920 had the record, being \$6,981,340,000. Inasmuch as price levels had declined since that year, when they were at their peak, the real value for 1926 represented at least an appreciable, if not a substantial, increase over 1920. The 1926 production showed an increase of 10 per cent over 1925 and 18 per cent over 1924. In 1926 the total output of bituminous coal was closely approximate to the War record and exceeded the record made in 1923, a more normal year, while the anthracite production was maintained at a good rate after the strike settlement in February. A new record was made in the output of crude petroleum, while the aggregate value of the metals produced in the United States showed a small increase over 1925. Gold and silver showed notable decreases, but a large increase was shown for zinc; the domestic production of copper increased moderately, with larger imports of copper into the United States. In 1926 the production of steel was the largest ever recorded and the production of pig iron was but little less than in 1923, a record year. The output of iron ore was greater than in 1925 but still below the record in 1917. The accompanying statistical summary prepared by the U. S. Bureau of Mines indicates the mineral products of the United States in the years 1925 and 1926. As usual, detailed discussions of the various important minerals and their production, together with information available for 1927, are described in separate articles, such as gold, copper, silver, iron, etc. (See tables, pages 524 and 525.)

MINES, UNITED STATES BUREAU OF. This bureau of the Department of Commerce is divided into the Technological, Economic, Health, and Safety, and Administrative branches. During the fiscal year ended June 30, 1927, the Bureau was striving to bring about safer and more healthful working conditions in mines and quarries and was extending its safety activities to the winning of petroleum from underground. Thorough rock dusting as a means of preventing or limiting mine explosions was being further extended in bituminous coal mines, while a special investigation of the falls of roofs of mines was under way. The coal mining industry was found to be using an increasingly large proportion of "permissible" explosives and "permissible" mining machinery and equipment. The training of miners in first-aid and mine rescue work continued, bringing the total number trained by the Bureau of Mines to 206,425. Investigations were in progress to conserve the nation's mineral resources through the development and improvement of mining practices and lessening the cost of recovery researches, and investigations were in progress, such as the utilization of manganese iron ores in northern Minnesota, in the hope of increasing the production of manganese. The Bureau of Mines also was engaged in technical research on non-metallic industries and its search for and development of potash deposits. (See POTASH.) Methods to increase the recovery of oil from oil sands were being studied. The Bureau also con-

tinued the study of increased efficiency in the use of fuels and continued the accumulation of statistics and other information related to the economic problems of the mineral industry.

MINIMUM WAGE. The record of the year indicated that for the time being American courts continued to regard unfavorably the enforcement of minimum wage legislation. The attitude adopted in the District of Columbia case (see previous YEAR BOOKS) still prevailed. During the year the U. S. Supreme Court declared unconstitutional the minimum wage law of Arkansas (Mr. Justice Brandeis dissenting). The Arkansas law, enacted in 1915, fixed a statutory minimum wage of \$1.25 per day for experienced female workers and \$1 per day for inexperienced workers. The Supreme Court quoted its decision in *Adkins v. Children's Hospital*, though in the case of the District of Columbia Congress had provided for a minimum wage commission. Canada's history was the reverse. In December, 1926, the appeal court of British Columbia affirmed the constitutionality of the male minimum wage act of the province.

MASSACHUSETTS. This State, because its minimum wage findings are not compulsory, remained practically the only one in the United States to act. Its commission was active during the year, and prepared schedules for a series of new industries. For January 1 it posted a minimum wage rate for women employed in jewelry and related industries; for March 1 it did similarly for women employed in the toys, games and sporting goods industry. The scheduled wages were based upon a carefully prepared weekly budget necessary for a self-supporting woman over 18 years. For those in the jewelry industries the minimum wage was fixed at \$14.40; for those in the toys, games, etc. industry the minimum wage (and budget) was \$13.50 weekly. The following are the items in the budget: board and lodging, \$8; clothing, \$3; laundry, 35 cents; church, 15 cents; self-improvement, 20 cents; vacation, 25 cents; recreation, 25 cents; reserve, 20 cents; Mutual Association dues, 10 cents; incidentals, 25 cents. During the year, the commission began the study of the following industries: Boot and shoe findings, and electrical machinery and supplies.

The Boston papers continued to cooperate with the commission by publishing the names of noncomplying employers, though they were not required by law to do so. During the early part of the year, the *Monthly Labor Review* reported, the names of 38 such employers were posted. The commission, in recounting the tale of its activities for the fiscal year ending Nov. 30, 1926, declared that it had secured the wage histories of 36,454 women in 1361 establishments under 15 decrees. In the cases of 94.6 per cent, the decrees had been complied with. The 1926 cases of noncompliance had been found in 328 plants. What moved the commission to undertake the issuance of a decree for the electrical machinery and supplies industry was the fact that a study revealed that 47.1 per cent of 2443 female employees received less than \$15 weekly.

CALIFORNIA. An interesting series of rebuttals was presented by the Industrial Welfare Commission of California to the usual arguments against the minimum wage. In a report covering its activities during 1922-26, the commission showed that it has under its jurisdiction some 160,000 working women and children. (1) The

commission denied that the minimum wage tends to become the maximum wage. For a group of industries the minimum wage fixed was \$16. In 1920 of some 56,000 women, 46.4 per cent were getting \$17 or more per week. In 1925, of 76,000 women, 63.2 per cent were getting \$17 or more. (2) The commission denied that it was the tendency to drop apprentices who were about to reach the minimum wage, these to be replaced by other apprentices. In 1920, of 50,704 women on the pay rolls of certain industries 14.3 per cent were receiving less than \$16 per week as learners. In 1925, of 68,228 women, 5.8 per cent were receiving less than \$16. (3) The commission denied that infirm or substandard workers would displace normal workers. Substandard employees are licensed by the commission only after it had been ascertained that they are unable to earn a minimum wage. This group, also, has not increased. At the end of 1925 there were only 335 licenses for substandard workers in the industries under inspection. (4) The commission denied that the legislation was injurious to the more skilled workers who would be made to equalize the wages of their less competent fellow-employees. The commission showed that in 1919, when the wage minimum was \$10, only 446 women were receiving \$30 a week or more; in 1925, with a \$16 minimum, 6084 women in the same industries were receiving \$30 weekly or more.

MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905, "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 28 local sections and has 40 affiliated societies at colleges throughout the country. There are four classes of membership: members, men who have been practicing engineers for at least six years; associates, men interested in or connected with mining, geology, metallurgy, or chemistry, but not practicing engineers; junior associates, students in engineering schools; and honorary members, those elected by unanimous vote of the Board of Directors. On Jan. 1, 1927, there were 8560 members, distributed as follows: honorary, 17; members, 6528; associates, 884; junior associates, 1131. The income for 1926 was \$201,359. In addition to the monthly meetings of the local sections, the annual meeting, a four-day convention, is held on the third Tuesday in February, in New York City, and regional meetings are held in various important mining or metallurgical centres in the United States or abroad. The Institute publishes *Transactions*, an annual containing the best papers of the year on mining and metallurgical subjects; *Mining and Metallurgy*, a monthly bulletin; the *Year Book* which constitutes a "Who's Who" in the profession; *Technical Publications*, a series of individual technical pamphlets; and special volumes from time to time. In connection with three other societies the Institute maintains the Engineering Societies Library and an employment bureau. The headquarters are at the Engineering Societies Building, 20 West 39th St., New York.

MINNEAPOLIS. See CITY PLANNING.

MINNESOTA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,387,125. The estimated

population on July 1, 1927, was 2,268,000. The capital is St. Paul.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	4,172,000	127,246,000	\$81,437,000
	1926	4,343,000	147,662,000	82,691,000
Oats	1927	4,496,000	120,493,000	48,197,000
	1926	4,522,000	129,162,000	43,915,000
Hay	1927	4,264,000	7,644,000*	60,883,000
	1926	4,132,000	4,469,000*	58,237,000
Wheat	1927	1,658,000	18,080,000	19,888,000
	spring	1,788,000	22,256,000	27,875,000
Wheat	1927	155,000	3,317,000	3,616,000
	winter	146,000	2,555,000	3,066,000
Barley	1927	1,503,000	45,090,000	29,308,000
	1926	1,307,000	32,625,000	16,664,000
Rye	1927	409,000	7,485,000	6,362,000
	1926	440,000	5,940,000	4,514,000
Flaxseed	1927	757,000	7,343,000	14,099,000
	1926	814,000	7,652,000	15,074,000
Potatoes	1927	328,000	83,128,000	19,877,000
	1926	298,000	29,800,000	34,270,000

* tons.

MINERAL PRODUCTION. The mining of iron ore, supplying the bulk of the State's mineral production, was active in 1926, attaining a total quantity of 40,961,361 long tons in 1926, as indicated by shipments; in 1925, production was 38,022,237 tons. The value of ore shipped in 1926 was \$103,715,621 and of that shipped in 1925, \$96,083,485. Coke production held second place in importance. By-product coke ovens produced in 1926, 619,905 short tons of coke, and in 1925, 518,355 tons; in value, \$6,014,738 for 1926 and for 1925, \$4,992,024. Stone, sand and gravel, manganiferous ore and cement were produced in material quantities. The total value of the State's mineral products, duplications eliminated, was \$110,252,956 in 1925 and in 1924, \$107,884,680.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of general departments of the State government in the fiscal year ending June 30, 1926, were \$32,464,421; their rate per capita was \$12.34. They included \$9,754,561 apportioned for education. Totals not included in the above, of \$4,184,872 in interest and \$13,064,858 in permanent improvement outlays, brought the aggregate of State expenditure to \$49,714,151. Of this, \$15,610,877 was for highways; \$4,421,969 being for maintenance and \$11,188,908 for construction.

Revenue receipts were \$57,248,433; or per capita, \$21.76. Of their total, property and special taxes yielded 23.2 per cent, attaining a rate of \$5.05 per capita. Earnings of departments and compensation for services of officials supplied 9.2 per cent of revenue; 50 per cent was derived from the sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a sales tax on gasoline.

Net State indebtedness on June, 30, 1926, save for county reimbursement road bonds obligating the State, was \$12,227,564, or \$4.65 per capita. Property subject to ad valorem taxation bore a valuation of \$2,365,980,294. State taxes levied were \$15,245,760, or \$5.79 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 8,789.98. New construction in 1927, as reported by the *Railway Age* was 38 miles of first track.

EDUCATION. The Legislature, according to Commissioner of Education McConnell in the *Journal* of the National Education Association, increased by about \$1,500,000 the previous total of State appropriation for the elementary and high schools. Effort was exerted toward the amendment of the existing teachers' retirement fund law, which the teachers had found unsatisfactory. A teachers' tenure law affecting only cities of the first class was enacted. Minneapolis was named as the scene of the 1928 convention of the National Education Association. The number of pupils enrolled in the public schools of Minnesota in 1927 was 550,330. Of these, 464,461 were in the common schools and 85,869 in high schools. Expenditure on public school education in the State in 1927 attained \$54,264,674. Teachers to the total number of 22,099 received in salaries \$27,698,732, or an average of \$1253.

CHARITIES AND CORRECTIONS. The State Board of Control, as functioning in 1927, exercised general control over 18 State hospitals, asylums, special and reformatory schools, sanatoria and penal institutions. It also supervised 14 county tuberculosis sanatoria, acted as a parole board for the inmates of reformatory schools, collected maintenance for the insane, inspected jails and poorhouses and appointed county child welfare boards. Institutions in its charge, with their inmate populations on Dec. 1, 1927, were: Anoka State Asylum, 1021; Hastings State Asylum, 987; Willmar State Asylum, 727; Fergus Falls State Hospital, 1654; Rochester State Hospital, 1429; St. Peter State Hospital, 1598; School for the Feeble-minded, Fairbault, 1,908; Colony for Epileptics, Cambridge, 171; School for the Blind, 82; School for the Deaf, Fairbault, 267; State Public School, Owatonna, 401; State Training School for Boys, Red Wing, 283; Home School for Girls, Sauk Center, 261; State Reformatory for Women, 94; State Reformatory, St. Cloud, 843; State Prison, Stillwater, 1254; Sanatorium for Consumptives, 251; Hospital for Crippled Children, St. Paul, 214. Prisoners received in the three penal institutions of the State in 1926, as reported by the U. S. Department of Commerce, numbered 822.

LEGISLATION. The forty-fifth Legislature convened January 4 and adjourned April 21. It passed a law restricting the issue of bonds by municipalities, by setting limits to the amount of indebtedness and by requiring that bonds be issued to mature serially in not more than three years from date of issue. Pursuant to a constitutional amendment previously voted in the State, to enable the State to undertake a reforestation programme, the Legislature enacted laws to promote reforestation. Bills of this group provided for the creation of commissions of investigation and survey, the setting aside of an 80,000 acre tract for a State forest, permission to owners of land to have it qualified with the authorities as forest land, on meeting the requisite conditions, and thus to be released from the liability to all assessment for State taxation, save a small fire assessment, until the payment of a final tax of 8 per cent on the forest crop. Legislature with regard to crime gave occasion to much dispute, particularly in the State Senate. The report of the State crime commission, based on a year of study, recommended the establishment of a central State organization of criminal law enforcement, a stiffening of

criminal procedure and penalties with particular reference to recidivists, and the reorganization of the parole system. Finally, meeting these recommendations in part, the Legislature provided a State bureau of criminal investigation and records with 12 investigators; a modification of the Baumes system of penalties of New York State, setting increased penalties for repeating offenders, and modifications of detail in the parole law, without change in the organization of the board.

A mass of banking legislation was enacted, with the purpose of preventing the recurrence of experiences of the two adverse banking years preceding. A State bank guaranty law was proposed but not adopted. Bills were passed to strengthen the bank examiner's department, to restrict banks' lending power and to fix responsibility more definitely on bank officials. A measure known as the Basic Science bill was enacted to limit the ability of members of certain groups to practice medicine. It required that osteopaths and chiropractors, in particular, before being licensed to practice, must pass a State examination to determine their proficiency in basic scientific knowledge of such extent as would be attained by a two-year course of study in an institution of learning. The measure provided that one osteopath and one chiropractor should be on the examining board. A State Senate committee investigated the expenses of the 1924 campaign of Thomas D. Schall which resulted in his election to the U. S. Senate. There was enacted a teachers' tenure bill forbidding the discharge of teachers without a hearing, after they had served for a probationary period, during which summary discharge was to be permitted. See **WOMEN IN INDUSTRY**.

POLITICAL AND OTHER EVENTS. The first life sentence under the habitual criminal act of 1927 was imposed October 20. The Governor's veto of a pay increase for district judges was contested at law as having been delayed beyond the legal three-day period, but was declared legal May 25 by Judge Stanton of the District court at Bemidji. Suits to contest the power of the Department of Administration and Finance to regulate expenditure were brought by the regents of the State University and by the Livestock Board, in September. By order of the State Senate the Attorney General undertook April 6 an investigation of the conduct of the State Securities Commission under the former commissioner, Andrew E. Nelson, with special reference to authorization of the sale of notes issued by interests controlled by the promoter Cochran. The Conservation Commission began in September a land classification survey of the State's timber area, in connection with reforestation legislation.

In St. Paul, business interests brought forward March 20 a project for a \$2,500,000 river terminal to occupy 1000 acres in the Riverview district. The Governor's Metropolitan Drainage Commission started October 8 a two-years' study of plans for the drainage of the St. Paul-Minneapolis area and the disposal of sewage by tunnel or by a disposal plant so as to stop the pollution of the Mississippi River. At Minneapolis a Fridley filtration plant was put into service in the course of the year, to supply an added 45,000,000 gallons a day of potable water. The United States Supreme Court confirmed a State Supreme Court decision upholding the

Minneapolis zoning regulations against an owner unable to obtain building permits for an apartment house. The new Minneapolis municipal auditorium, completed at a cost of some \$3,000,000, was opened June 11. An ordinance was drawn by the city authorities for the paving and widening of a system of arterial streets at the rate of \$200,000 a year. Several large business buildings were undertaken in Minneapolis, including the Foshay Building, 28 stories; Medical Arts Building, 22 stories; and an 18 story addition to the Yeates building. The Cream of Wheat Company started construction of a \$1,000,000 addition to its plant at the Northwest Terminal.

OFFICERS. Governor, Theodore Christianson; Lieutenant Governor, W. I. Nolan; Secretary of State, Mike Holm; State Treasurer, Julius A. Schmahl; Auditor, Ray P. Chase; Attorney General, Albert F. Pratt; Commissioner of Education, James M. McConnell.

JUDICIARY. Supreme Court: Chief Justice, Samuel B. Wilson; Associate Justices: Homer B. Dibell, Andrew Holt, Clifford L. Hilton, Royal A. Stone.

MINNESOTA, UNIVERSITY OF. A State institution of higher education at Minneapolis, Minn.; founded in 1851. The 1927 autumn enrollment was 11,391, and there were 5444 registered for the summer session. There were 600 members on the faculty, including professors, associate professors, assistant professors and instructors on full time basis. The endowment of the University amounted to \$8,666,152, including a permanent fund of \$3,678,166.64, and lands and buildings in trust \$1,590,837.55; the income from these funds together with that of service enterprises and revolving funds and intercollegiate athletics amounted to \$2,232,960.26. State appropriations for maintenance, building and special purposes for 1926-27 were \$4,490,085.87, and Federal aid, \$281,456.50. The library contained 522,000 volumes. A gift of \$305,000 was received from William H. Eustis and other gifts totaled \$21,450. The following buildings were under construction: Botany building, at a cost for the year of \$200,000; physics building, at a cost of \$431,881; new law building at a cost of \$250,000; new plant industry building at a cost of \$250,000; and a field house for athletics at a cost of \$650,000. Construction was to begin on a Memorial Auditorium to cost \$1,000,000, of which \$750,000 was available, and on a medical school and hospital to cost \$890,500. President of the university, Lotus D. Coffman, Ph.D., LL.D.

MINOTTO, COUNTESS AGNES. A German actress, died at Crown King, Ariz., February 10. She was born in Breslau, Germany, in 1864, and had lived in the United States since 1916. She first appeared at Breslau in children's roles at the age of 14. In her stage career she used the name of Agnes Sorma, and though she made several tours of America she was best known in Europe. In her early appearances in the United States she met with great success in Hauptmann's *Die Versunkene Glocke* and as Nora in Ibsen's *Doll's House*.

MISSISSIPPI. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,790,618. Owing to a decrease between 1910 and 1920 no later estimates have been made. Capital, Jackson.

AGRICULTURE. The following table gives the

acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1927	3,388,000	1,340,000 ^a	\$137,350,000
	1926	3,752,000	1,888,000 ^a	109,504,000
Corn	1927	1,918,000	34,140,000	31,750,000
	1926	1,918,000	36,826,000	30,197,000
Hay	1927	526,000	681,000 ^b	9,328,000
	1926	441,000	516,000 ^b	8,140,000
Potatoes	1927	12,000	936,000	1,584,000
	1926	12,000	852,000	1,534,000
Sweet potatoes	1927	69,000	7,728,000	6,182,000
	1926	55,000	5,720,000	5,434,000
Oats	1927	48,000	912,000	688,00 ^c
	1926	41,000	902,000	595,00 ^c

^a bales, ^b tons.

MINERAL PRODUCTION. The total value of the State's mineral production in 1925 was \$2,171,945; in 1924, \$2,090,422. Clay products, constituting about half this total, were valued at \$1,050,241 for 1925 and for 1924 at \$955,328.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Sept. 30, 1926, were \$12,018,939; their rate per capita was \$6.71. They included \$3,940,925 apportioned for education. Totals not included in the above, of \$814,597 in interest and \$2,997,022 in permanent improvement outlays, brought the aggregate of State expenditure to \$15,830,558. Of this, \$4,492,182 was for highways; \$1,734,004 being for maintenance and \$2,758,178 for construction.

Revenue receipts were \$17,076,372; or per capita, \$9.54. Of their total, property and special taxes yielded 47.6 per cent, attaining a rate of \$4.54 per capita. Earnings of departments and compensation paid the State for officials' services supplied 7.2 per cent of revenue; 22.6 per cent was derived from the sale of licenses, chiefly on incorporated companies and on motor vehicles, and from the privilege and gasoline taxes.

Net State indebtedness on Sept. 30, 1926, was \$16,566,180, or \$8.25 per capita. Property subject to ad valorem taxation bore a valuation of \$751,144,403. State taxes levied were \$4,506,866, or \$2.52 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 4,168.86. New construction in 1927, as reported by the *Railway Age*, was 105.13 miles of first track.

EDUCATION. The spring floods imposed the difficult task of restoring educational facilities in the areas that had been afflicted. Several agencies lent aid for this purpose; benevolent foundations contributed, funds were raised among the school children of several States, and the State equalization fund was employed for school maintenance in the autumn session.

CHARITIES AND CORRECTIONS. The State government has no single unified branch for welfare administration. The chief charitable institutions of Mississippi are Belvoir Soldiers' Home, Gulfport; State Insane Hospital, Jackson; East Mississippi Insane Hospital, Meridian; State Charity Hospital, Jackson; South Mississippi Charity Hospital, Laurel; Vicksburg Charity Hospital; State Charity Hospital, Natchez; institutes for the blind and for the deaf and dumb, Jackson; Industrial Institute and Training School, Columbia; Colony for the

Feeble-minded, Ellisville. The number of inmates in the State prison on Jan. 1, 1927, was reported by the U. S. Department of Commerce as 1564; the number of admittances in 1926 at 640; the number of patients in State hospitals for mental disease, Jan. 1, 1927, as 2855.

POLITICAL AND OTHER EVENTS. Former Gov. Theodore G. Bilbo defeated Gov. Dennis Murphree for the Democratic nomination for Governor in the August primary and was elected with 16 other State candidates on the Democratic ticket November 8. Governor Whitfield died March 18 while in office, and was succeeded by Murphree, the Lieutenant Governor. Soon after his accession the Mississippi River floods overwhelmed a wide area of bottom land in the State. Governor Murphree issued an appeal for aid and the services of the American Legion and of the Mississippi National Guard were enlisted. Gulf Coast interests sent to the State three trainloads of boats, which were employed in transporting thousands of marooned inhabitants from the submerged area to safety. The neighborhood of Greenville was that most severely afflicted. From that district some 13,000 persons were reported to have been removed up to April 23. Secretary of State Wood reported early in the year that Mississippi charters had been issued to foreign corporations with a total capital of \$219,807,400 in 1926, and of \$67,920,900 in the first two months of 1927. According to the Mississippi River Flood Control Association damage done in the State by the 1927 spring floods amounted to \$45,931,924. See **WOMEN IN INDUSTRY.**

OFFICERS. Governor, Dennis Murphree; Lieutenant Governor, M. P. L. Love; Secretary of State, Walker Wood; State Treasurer, Ben S. Lowry; Auditor, George D. Riley; Attorney General, Rush H. Knox; Superintendent of Education, W. F. Bond.

JUDICIARY. Supreme Court: Chief Justice, Sydney Smith; Associate Justices: W. D. Anderson, James G. McGowan, George Ethridge, J. B. Holden, and W. H. Cook.

MISSISSIPPI UNIVERSITY OF A STATE institution of higher education at University, Miss.; founded in 1848. The total enrollment for the autumn of 1927 was 1072. The University consisted of the following colleges and schools: college of liberal arts, school of law, school of engineering, school of medicine, school of pharmacy, school of commerce and business administration. There was also a school of education, the students of which, however, counted their education courses toward a degree in one of the other schools. The summer school enrollment was 240. The faculty numbered 52, not including three instructors, three assistants, five teaching fellows and 35 student assistants. There were approximately 40,000 volumes in the library. The productive funds amounted to approximately \$170,600, derived from legislative appropriation and from \$42,000 interest on the \$700,000 University funds in the State Treasury, while the student fees for the year amounted to over \$60,000. A new chapel for which the legislature in 1926 had appropriated an extra \$150,000 was completed and in use. Chancellor, Alfred Hume, C. E., D.Sc.

MISSISSIPPI FLOOD. See **AGRICULTURAL EXTENSION; AGRICULTURE; FLOODS; FORESTRY; RED CROSS, AMERICAN; and under UNITED STATES.**

MISSOURI. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,404,055. The estimated population on July 1, 1927, was 3,510,000. The capital is Jefferson City.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	5,953,000	172,637,000	\$129,478,000
	1926	6,471,000	176,011,000	119,687,000
Hay	1927	3,683,000	5,861,000 ^a	52,441,000
	1926	3,277,000	3,648,000 ^a	48,888,000
Wheat, winter	1927	1,558,000	15,580,000	19,008,000
	1926	1,391,000	21,232,000	26,390,000
Wheat, spring	1927	10,000	120,000	188,000
	1926	12,000	192,000	240,000
Oats	1927	1,630,000	27,710,000	18,024,000
	1926	2,173,000	43,460,000	18,253,000
Cotton	1927	281,000	104,000 ^b	10,660,000
	1926	484,000	218,000 ^b	10,900,000
Potatoes	1927	85,000	7,055,000	8,113,000
	1926	81,000	6,480,000	11,016,000
Sweet potatoes	1927	12,000	1,844,000	1,613,000
	1926	10,000	1,120,000	1,456,000

^a tons, ^b bales.

MINERAL PRODUCTION. Missouri held first rank among the States as a lead producer in 1925, and in 1926 approximately maintained its lead production. (See **LEAD.**) There were mined in the State in 1926, 207,012 short tons of lead, as compared with 211,666 tons in 1925; in value \$33,121,920 in 1926 and in 1925, \$36,812,484. Cement production was 7,653,111 barrels in 1926; in 1925, 8,331,751 barrels. In value, cement shipments were \$12,917,342 in 1926 and in 1925, \$14,155,795. Of coal there were mined 3,008,495 net tons in 1926; in 1925, 2,694,215 tons. The product for 1926 had a value of \$8,951,000; for 1925, of \$8,281,000. Clay products in 1925, the latest reported year, had a total value of \$17,521,866, and in 1924 of \$16,388,161. Zinc was mined to the extent of 26,018 short tons in 1926, and of 14,794 tons in 1925; in value, \$3,902,700 in 1926 and in 1925, \$2,248,688. Lime production, as estimated by shipments of producers, was 253,000 short tons in 1926; in 1925, 273,348 tons. In value it was \$2,188,000 in 1926 and in 1925, \$2,610,954. Stone, sand and gravel, and native asphalt were produced in important quantities. The total value of the State's mineral production, duplications eliminated, was \$92,548,473 in 1925; in 1924, \$81,054,122.

FINANCE. As reported by the United States Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Dec. 31, 1926, were \$24,141,683; their rate per capita was \$6.90. They included \$5,981,647 apportioned for education. Totals not included in the above, of \$3,006,328 in interest and \$24,700,702 in permanent improvement outlays, brought the aggregate of State expenditure to \$51,848,713. Of this, \$26,409,585 was for highways; \$2,657,980 being for maintenance and \$23,751,605 for construction.

Revenue receipts were \$42,049,767; or per capita, \$12.03. Of their total, property and special taxes yielded 31.6 per cent, attaining a rate of \$3.80 per capita. Earnings of departments and compensation paid the State for officials' services supplied 15.7 per cent of revenue; 39.6 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on Dec. 31, 1926, was \$68,006,102, or \$19.44 per capita. Property subject to ad valorem taxation bore a valuation of \$4,846,684,834. State taxes levied were \$5,810,022, or \$1.66 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 8,021.94. There were built in 1927, as reported by the *Railway Age*, 20.01 miles of second track.

EDUCATION. A group of educational experts composed a new course of elementary study for the public schools of the State. The commission that performed this work, according to State Superintendent Lee, writing in the *Journal* of the National Education Association, consisted of four members of the State department, 25 graduate students of elementary education and, as directing head, Prof. Claude A. Phillips of the University of Missouri.

CHARITIES AND CORRECTIONS. The institutions of the State include four State hospitals, the Missouri Colony for the Feeble-minded and Epileptic, Missouri State Sanitarium, Confederate Home, State Federal Soldiers' Home, Missouri State Penitentiary, Missouri Reformatory, Industrial Home for Girls, Industrial Home for Negro Girls. Patients in State hospitals for mental disease on Jan. 1, 1927, numbered 5706, according to statistics furnished by the Department of Commerce; inmates of State prisons and reformatories on that date numbered 3442.

LEGISLATION. The Legislature convened in regular biennial session January 5. It passed appropriations aggregating some \$18,152,330 for the conduct of the State government over the period of two years, materially exceeding the anticipated revenue for the period. Measures were enacted to render more liberal the incorporation laws; under these measures companies might incorporate with stock in excess of the previous maximum of \$50,000,000; might obtain perpetual charters; hold directors' meetings outside the State; and organize as holding companies. Another law enacted removed the minimum limit of 50,000 population from the restrictions to the permission to cities to establish zoning regulations by local ordinances, and made the permission apply to all cities, towns and villages. Two State departments were consolidated into a single State Department of Labor and Industrial Inspection. Laws affecting penalties for crime were modified in two important respects, by providing the segregation of criminals between 17 and 25 from mature lawbreakers, the two groups to be confined in separate institutions, and by providing death by the electric chair in the State penitentiary at Jefferson City as the method of inflicting capital punishment.

For the support of public schools were assigned by law one-third of the State revenues for the ensuing two-year period. Motor bus lines in interurban service were rendered subject to regulation by the State Public Service Commission. With the purpose of checking the so-called "diploma mill" abuse, the Legislature enacted a measure requiring medical colleges to give diplomas only to students who had complied with statutory requirements as to attendance. Laws governing the examination of nurses were amended so as to permit the licensing of obstetrical nurses. A State Board of

Chiropractic Examiners was created, through which licensed chiropractors might obtain certified professional standing. A law against "loan sharks," similar to those existing in 23 other States, was passed; it placed under regulation concerns making loans of \$300 and less, required them to make deposit to guarantee observance of regulations, limited interest on their loans to 3½ per cent a month, required that borrowers be furnished with clear statements of amounts owed on balance, and limited assignments on the part of the borrower to 10 per cent of his pay.

Laws to strengthen the system of State banks provided an increase of the capital required for banks of the least size, added new restrictions to the lending of banks' money, required larger minimum reserve funds and empowered the Finance Commissioner to refuse charters to applicants in cases where in his judgment the intended bank had better not be established. Certain of the expenditures of the city of St. Louis with regard to its police force were rendered no longer mandatory by State statute. The sale of game fish was prohibited. The teaching of the Federal and State constitutions in the schools of the State was required. Boxing bouts were legalized, under the supervision of a State Boxing Commission created for the purpose, and with the proviso that the bouts should be limited to 10 rounds and that there should be no official decision as to the victor. A child labor law to regulate the working conditions for children and to limit work to children of a certain age was defeated.

POLITICAL AND OTHER EVENTS. St. Louis was in part devastated by a tornado September 29. First striking at Manchester and Taylor Avenues, the disturbance swept over a wide area between Kings Highway, Prairie Avenue, and Glasgow Avenue. Its force was felt over some six square miles. Property damage estimated at \$25,000,000, and according to some sources much higher, was done, chiefly in the wrecking of some 5000 houses, many of which were completely demolished. Approximately 100 lives were lost, including those of persons injured who died later in the hospitals. The storm swept a residential district, containing many houses of more than average cost. The Red Cross organization listed about 8000 families as having suffered by the disaster, and estimated 60 per cent as requiring aid. The number of injured approached 1000. The Governor employed State facilities for aid, but no special fund had to be raised for relief work, outside of money contributed within the city itself.

Bills providing for the southern approach to the projected municipal bridge across the Mississippi River were passed by the city Board of Aldermen June 24, and the assent of the Missouri Pacific Railroad to a necessary encroachment on its property removed the chief obstacle to the \$1,500,000 project. Following the previous year's municipal advertising campaign, it was estimated in April that 41 industrial enterprises had come to St. Louis within a year.

A contest at law against the State tax on the capital, surplus, and undivided profits of National banks, imposed by a law of 1923, was carried to the United States Supreme Court, which in January affirmed the constitutionality of the tax, and in April denied a review. The State Supreme Court in a decision of October

10, asserted free comment and criticism of public policy and officials justified, and denied a sheriff a judgment for libel against an editor, because of an account of bootleg liquor drunk at a revival. The Attorney General brought divers suits in the effort to put an end to betting under the certificate form at the four dog race tracks in the State, which had attained large proportions. The Kansas City Joint Stock Land Bank, with headquarters in the State, went on May 4 into the hands of a receiver appointed by the Federal Farm Loan Board.

Portions of Missouri suffered greatly in the Mississippi Valley floods during the spring. New Madrid was overflowed and evacuated by the inhabitants April 20, and scores of towns and villages suffered in like manner. A tornado partly destroyed Poplar Bluff May 9, doing about \$3,000,000 damage.

OFFICERS. Governor, Sam A. Baker; Lieutenant Governor, Phil A. Bennett; Secretary of State, Charles U. Becker; Auditor, L. D. Thompson; Treasurer, C. Eugene Stephens; Attorney General, North T. Gentry; Superintendent of Public Schools, Charles A. Lee.

JUDICIARY. Supreme Court: Chief Justice, Robert F. Walker; Associate Judges: Walter W. Graves, William T. Ragland, John Turner White, Frank E. Atwood, and David E. Blair.

MISSOURI, UNIVERSITY OF. A State institution of higher education at Columbia and Rolla, Mo.; founded in 1830. The enrollment for the first semester of 1927-28 at Columbia and Rolla was 4467, of whom 3150 were men and 1317 were women. This enrollment was distributed as follows: agriculture, 266; arts and science, 1872; business and public administration, 193; education, 371; engineering, 454; mines, 467; fine arts, 127; graduate, 278; journalism, 298; law, 144; medicine, 75; short course in agriculture, 48. The total enrollment for the 1927 summer session was 2052, of whom 868 were men and 1184 women. The total annual enrollment of all classes of students, including correspondence and extension classes, was more than 9000. There were 400 members on the faculty. The endowment of the University was approximately \$2,500,000, and the total income from all sources a little over \$3,500,000. The libraries of the institution contained approximately 326,000 volumes. President, Stratton Duluth Brooks, LL.D.

MITCHELL, EDWARD PAGE. American newspaper editor, died at New London, Conn., January 22. He was born at Bath, Me., on Mar. 24, 1852, and in 1871 was graduated at Bowdoin College, which conferred on him the honorary degree of Litt.D in 1907. He commenced his journalistic career on the staff of the Boston *Advertiser* in 1871, and in 1875 joined the editorial staff of the New York *Sun* and became the editor in 1911. In 1909-11 he was president and after that vice president of the Sun Printing and Publishing Company. In 1913 he was special lecturer at the Columbia School of Journalism. His writings on the editorial page of the *Sun* attracted nation wide attention for their brilliancy. He wrote *Memoirs of an Editor* (1924), and contributed stories to magazines.

MITCHELL, JOHN J. An American banker, died in Chicago, Ill., October 28. He was born at Alton, Ill., on Nov. 3, 1853, and was educated at Kent's Hill, Me. He entered the employment of the Illinois Trust and Savings Bank as mes-

senger in 1873 and in a few years rose to a high place in the counsels of the bank, becoming president in 1880. In 20 years the deposits of this bank grew from \$1,000,000 to \$69,000,000. He retired in 1919, but a few years later when a merger had made the newly named Illinois Merchants' Trust Company the second in ranking in Illinois, Mr. Mitchell was persuaded to come out of retirement to become president.

MITTAG-LEFFLER, MAGNUS OLOF. A Swedish mathematician, died at Djursholm, Sweden, on July 12. He was born in Stockholm in 1846. He studied mathematics at Upsala and later in Paris under Weirstrass and in Berlin. He began his teachings as docent at Upsala in 1872, obtained a doctorate there, and in 1877 became professor of mathematics at Helsingfors. From 1881 until 1911 he was professor of mathematics at the University of Stockholm. He was a member of the Royal Society of London, the Académie des Sciences of Paris, and many other learned societies. He founded and edited the *Acta Mathematica*, a journal of international reputation. His library contained one of the most valuable and extensive collections of works on mathematics in existence. In his will he left funds to found an international mathematical institution.

MOLLENHAUER, EMIL. American conductor, died at Boston, December 10. He was born at Brooklyn, N. Y., Aug. 4, 1855, of a very musical family, his father and two uncles being among the best known violinists of their time. At the age of eight Emil was already a regular violinist in Jullien's orchestra, and when only sixteen he joined the orchestra of Theodore Thomas as first violin. Accepting a similar position with the Boston Symphony Orchestra, he moved to Boston in 1884. In 1888 he began his career as conductor at the head of the Germania Orchestra and, simultaneously, of the Boston Festival Orchestra; with the latter organization he made extended tours of the United States. In 1899 he was elected conductor of the famous Handel and Haydn Society, in 1902 the Apollo Club, and in 1915 of the Brookline Choral Society, holding all these positions till his death. Besides, he conducted the People's Symphony Concerts from 1920 to 1925. At the St. Louis Exposition, 1904, and at the Panama-Pacific Exposition, 1915, he conducted the concerts given by the Boston Symphony Orchestra.

MOLYBDENUM. See **CHEMISTRY, INDUSTRIAL.**

MONACO, mōn'ā-kō. A principality on the Mediterranean coast, surrounded on the land sides by the French department of Alps Maritimes. Area, eight square miles: population, according to the census of 1923, 22,153. It is chiefly known for its gambling resort, Monte Carlo (population in 1923, 9428). Other towns are Monaco (2020) and La Condamine (10,705). Under the constitution of Jan. 7, 1911, the government consists of the prince assisted by a council of state and a national council elected by universal suffrage. The ruler in 1927 was Prince Louis II, born July 12, 1870, who succeeded his father, Prince Albert, June 26, 1922.

MONEY. The table on page 533 from the annual report of the Director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1927, in comparison with the totals for June 30, 1926, Nov. 1, 1920, and Jan. 1, 1879.

[From the Report of the Director of the Mint]

Kind of money	Stock of money ^a	Total	Money held in the Treasury			Money outside of the Treasury				
			Amount held in trust against gold and silver certificates (and Treasury notes of 1890)	Reserve against United States notes (and Treasury notes of 1890)	Held for Federal reserve banks and agents	All other money	Total	Yield by Federal reserve banks and agents ^b	In circulation	
Gold coin and bullion . . .	\$4,565,098,196	\$8,651,406,496	\$1,025,278,749	\$155,420,721	\$1,712,002,986	\$188,704,030	\$918,691,700	\$527,635,307	\$386,056,393	\$8.80

January 1, 1879 . . .	1,007,084,463	7,212,420,402	21,602,640	100,000,000		90,817,762	816,266,721		816,266,721	10.93

* Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank at Atlanta. Does not include silver bullion (a potential monetary asset) to the value of \$6,925,100, nor nickel and bronze coin, the value of which depends almost exclusively on the Government impression rather than intrinsic metallic value or a specific reserve.

^a Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

^b Population of continental United States (estimated) June 30, 1927, 116,943,000; June 30, 1926, 115,523,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 90,027,000; Jan. 1, 1879, 43,281,000.

^c Does not include gold bullion or foreign coin outside of vaults of the Treasury. Federal reserve banks, and Federal reserve agents.

^d These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

^e The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

^f This total includes \$19,988,297 of notes in process of redemption, \$189,124,080 of gold deposited for redemption of Federal reserve notes, \$7,355,599 deposited for redemption of national bank notes, \$2,880 deposited for redemption of additional circulation (act of May 30, 1908), and \$6,426,700 deposited as a reserve against postal savings deposits. Nov. 3.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$155,420,721 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the Treasurer of the United States for redemption of all outstanding Federal reserve bank notes. National bank notes are secured by lawful money has been deposited with the Treasurer of the United States for their redemption. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

MONEY RATES. See **BANKS AND BANKING**; **BUSINESS REVIEW**; **FINANCIAL REVIEW**.

MONGOLIA. A vast and indefinite tract of territory lying to the west of Manchuria. Area, about 1,875,000 square miles, although some authorities place it as low as 1,367,000 square miles. Population, variously estimated at 750,000 to 2,000,000. Capital and chief town, Urga. It is inhabited by nomadic Mongol and Kalmuk tribes, but latterly the Chinese have immigrated in considerable numbers. The chief occupation is stock raising, and the principal exports are furs, skins and hides, horns, and wool. The soil is naturally fertile but needs irrigation to be productive. Gold, iron, copper, silver, and tin, are found, but are not worked extensively. Since 1917 there has been a motor car freight service across the Gobi desert. The trip takes three days and is only feasible in the summer.

MONOPLANES. See **AERONAUTICS**.

MONTAGU, LOUIS SAMUEL. See **SWATHLING**.

MONTANA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 548,889. The estimated population on July 1, 1927, was 714,000. The capital is Helena.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Wheat, winter	1927	625,000	13,750,000	\$12,650,000
	1926	521,000	7,294,000	7,805,000
Wheat, spring	1927	3,202,000	65,952,000	63,978,000
	1926	3,049,000	37,450,000	42,318,000
Hay	1927	2,139,000	3,701,000*	30,192,000
	1926	1,702,000	2,377,000*	24,645,000
Barley	1927	195,000	6,435,000	8,861,000
	1926	150,000	3,600,000	2,304,000
Flaxseed	1927	239,000	2,438,000	4,266,000
	1926	165,000	693,000	1,282,000
Potatoes	1927	40,000	5,400,000	3,510,000
	1926	35,000	2,975,000	3,570,000
Oats	1927	596,000	23,840,000	10,490,000
	1926	641,000	16,666,000	8,833,000
Rye	1927	184,000	2,412,000	1,761,000
	1926	107,000	1,284,000	968,000
Corn	1927	805,000	7,168,000	5,161,000
	1926	359,000	3,949,000	3,638,000
Dry Beans	1927	55,000	935,000	2,805,000
	1926	48,000	480,000	1,204,000

* tons.

MINERAL PRODUCTION. The State again ranked second in 1925 in the quantity of copper produced, and copper furnished nearly half the total value of the mineral output of that year. In 1926 copper production declined slightly, being in amount, 255,372,862 pounds, as against 268,910,847 pounds in 1925; in value, the production was \$38,185,340 in 1925. Zinc produced totaled 147,401,507 pounds in 1926, with a value of \$11,055,113, and in 1925 115,316,922 pounds, with a value of \$8,764,036. Lead production rose to 42,306,193 for 1926, from 37,530,644 for 1925; the 1925 production was valued at \$3,265,166. Gold and, more particularly, silver production continued important. The quantity of gold produced in 1926 was 60,504 fine ounces; in 1925, 82,123 fine ounces. Its value in 1925 was \$1,697,630. There were produced of silver 12,769,092 fine ounces in 1926; in 1925, 13,158,191 fine ounces, valued at \$9,131,784. The value of the production of all five metals above mentioned was for 1926, \$59,410,453; for 1925, \$61,044,006. Coal production was approximately maintained, being 2,905,000 short tons in 1926 as against 3,043,686 tons in 1925. The value of

this product for 1925 was \$7,879,000. Petroleum was produced to the extent of 7,645,000 barrels in 1926; in 1925, 4,091,000 barrels. The product for 1926 had a value of \$11,800,000; for 1925, \$6,420,000. Manganese ore was produced in considerable quantity. The total value of the State's mineral production in 1925, duplications eliminated, was \$79,261,284; in 1924, \$70,631,806.

The value of gold, silver, copper, lead, and zinc produced from Montana mines in 1927, according to estimates of the U. S. Bureau of Mines, was \$18,078,000, a decrease from \$59,410,453 in 1926. Curtailment of operations at Butte together with the increase in metal prices resulted in a general increase in the quantity and value of the five metals. A decrease of about 12 per cent was shown in the output of copper, and there was a corresponding decrease in the associated gold and silver. The value of the gold output decreased from \$1,250,731 in 1926 to \$1,111,500 in 1927. The largest gold producers in the State were the Anaconda, St. Louis, Liberty Montana, New Gould, Sterling (Keating), Butte & Superior, and Angelica properties. There was naturally a decrease in gold from copper ores, but there was also a large decrease in gold from gold ores. The mine output of silver decreased to 11,097,100 ounces in 1927, and the value to about \$6,292,000. The output of silver was decidedly less on account of the curtailment in the output of copper ore from Butte. The mines of the Anaconda Copper Mining Co. and the Butte & Superior Mining Co. produced nearly three-fourths of the State's silver. The copper output decreased to about 224,600,000 pounds in 1927, and the value to about \$29,198,000. Decrease of output of copper in Montana, as in other States, was in part a reflection of the decrease of about one cent a pound in average price of copper in 1927. The Anaconda Copper Mining Co., as in the past, produced most of the copper from its mines at Butte. The milling and smelting of copper ore was done almost exclusively at Anaconda, although two mills making copper concentrate were operated in Cascade and Madison Counties.

The production of lead decreased to about 38,500,000 pounds valued at \$2,471,000 in 1927. The output of zinc recovered from ore mined in Montana decreased to about 143,400,000 pounds in 1927. The value decreased to about \$9,005,500. The electrolytic zinc plant near Great Falls was operated continuously, treating concentrate from Anaconda and Butte and custom material chiefly from Idaho and Utah.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$5,272,745; their rate per capita was \$7.71. They included \$1,244,190 apportioned for education. Totals not included in the above, of \$520,499 in interest and \$1,541,607 in permanent improvement outlays, brought the aggregate of State expenditures to \$7,334,851. Of this, \$1,163,846 was for highways; \$159,368 being for maintenance and \$1,004,478 for construction.

Revenue receipts were \$8,419,007; or per capita, \$12.31. Of their total, property and special taxes furnished 31.1 per cent, attaining a rate of \$3.83 per capita. Earnings of departments and compensation paid the State for the services of officials supplied 9.9 per cent of revenue; 24.2

per cent was derived from sale of licenses, chiefly on incorporated companies and from a sales tax on gasoline. Revenue from motor vehicle licenses did not appear in State revenue, being credited to the counties.

Net State indebtedness on June 30, 1926, was \$1,785,178, or \$7 per capita. Property subject to ad valorem taxation bore a valuation of \$429,945,385. State taxes levied were \$1,919,501, or \$2.81 per capita.

TRANSPORTATION. The number of miles of railroad line in the State Jan. 1, 1927, was 5,094.62. There was no new construction in the course of 1927.

EDUCATION. The State was among those which enacted provisions for the distribution of equalization funds in the course of the year. It was estimated that the amount provided in Montana, while relatively not large, would render possible the holding of nine months of school a year in several hundred of the less fortunate districts where school time had previously been shorter. A teachers' retirement bill was introduced but not passed.

CHARITIES AND CORRECTIONS. Among the charitable and correctional institutions of the State were the following: State Soldiers' Home; State School for the Deaf and the Blind; State Prison; State Hospital for the Insane; State Tuberculosis Sanatorium; State Industrial School for Boys; State Vocational School for Girls; State Orphans' Home. Prisoners in the State penitentiary on Jan. 1, 1927, according to statistics furnished by the Department of Commerce, numbered 437; the number admitted in 1926 was 277.

LEGISLATION. The State Legislature convened in biennial session January 3. The charge was made in the Senate that a bill passed in the next previous session, setting 4 per cent as the rate of interest to be paid on State warrants, had been altered after passage, so that the rate as given in the statute book was $4\frac{1}{2}$ per cent, thus increasing the State's interest payments. An investigating committee was named to make an inquiry. The State Senate tried the former Secretary of State, Charles T. Stewart, on an impeachment, and found him guilty of having accepted commissions on State insurance policies written at the order of the State Board of Examiners, of which he was a member. Stewart was impeached by the House on March 3.

POLITICAL AND OTHER EVENTS. A controversy between the State and the Federal government over a sum said by the latter to be owed by the State led to the reported suspension in September, of a payment of \$1,551,499 of Federal contribution to the State road building programme. The extermination of wild horses, which had become so numerous as to impoverish the ranges as pasturage for cattle, was carried on.

OFFICERS. Governor, J. E. Erickson; Lieutenant Governor, W. S. McCormack; Secretary of State, William Powers; Treasurer, W. E. Harmon; Auditor, George P. Porter; Attorney General, L. A. Foot; Superintendent of Public Instruction, May Trumper.

JUDICIARY. Supreme Court: Chief Justice, Lew L. Callaway; Associate Justices: John A. Mathews, Albert J. Galen, Albert P. Stark and Henry L. Myers.

MONTANA, STATE UNIVERSITY OF: A coeducational State institution of higher education

at Missoula, Mont.; founded in 1895. The enrollment for the autumn of 1927 was 1411, of whom 760 were men and 451 were women, distributed among the various schools as follows: arts and sciences, 950; business administration, 56; forestry, 84; journalism, 122; law, 59; music, 32; pharmacy, 50; music specials, 37; unclassified, 12. In the summer session 472 students were registered, of whom 121 were men and 351 were women. The faculty had 90 members. The productive funds and income for the year amounted to \$489,044.46. There were about 103,000 volumes in the library, including government documents. President, Charles H. Clapp, Ph.D.

MONTENEGRO, mōn'tē-nē-grō. An integral part of the state of Jugo-Slavia (q.v.). Before the war it was a Balkan kingdom, bounded by Serbia on the east, Albania on the south, Dalmatia on the west, and Herzegovina on the west and north, with an area of 5603 square miles and a population of 436,789 on Jan. 1, 1917. After Dec. 1, 1918, its status was indeterminate until 1921 when it became an integral part of Jugo-Slavia. The area in 1921 was placed at only 3733 square miles, and the population, according to the census of that year, 199,357. Capital, Cetinje, with a population of 5500.

MONTREAL. See TYPHOID FEVER.

MONTERRAT, mōnt'ss-rāt'. One of the presidencies of the Leeward Islands (q.v.).

MOORE, WILLIS LUTHER. An American meteorologist, died at Pasadena, Cal., on December 18. He was born on Jan. 18, 1856, at Seranton, Pa. His early schooling was in the Binghamton, N. Y. public schools; afterwards he worked his way through Norwich College, and took advanced degrees at St. Lawrence College. He began to specialize in meteorology and entered the U. S. Signal Corps (now Weather Bureau) and was a student of natural science for many years. He passed through successive grades to become local forecast official at Milwaukee, Wis., in 1891. He was chief of the Weather Bureau at Washington, D. C., from 1895 till 1913 and did much to popularize weather conditions as a subject for scientists to study and for the public to understand. He was the author of *Descriptive Meteorology* (1901). *The New Air World* (1922), and when seized with his last illness was engaged in completing a book and compiling information on weather conditions for trans-oceanic aviators. He was a past president of the National Geographic Society.

MORAVIANS. A religious denomination comprising, in the United States, three branches: The Moravian Church (Unitas Fratrum); the Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. It was formed in Bohemia in 1457, under the leadership of John Huss and Jerome of Prague, and opposed the efforts of Austria and the Roman Catholic authorities to suppress it. At the beginning of the Reformation it had more than 400 churches. In 1741 Moravians settling at Bethlehem, Pennsylvania, founded the first Moravian church in the United States. The doctrine is evangelical, without doctrine peculiar to itself, and in its polity the denomination follows a modification of the episcopacy, having a ministry of three orders, bishops, presbyters, and deacons.

The Unitas Fratrum, the largest branch, is

organized in two coordinate provinces: the Northern, with a provincial synod meeting every fifth year (a meeting of the Northern Province was to be held in 1930); and the Southern, of which the provincial synod meets every third year. The church maintains the following five educational institutions: Linden Hall, Lititz, Pa.; Moravian College and Theological Seminary and Moravian Seminary and College for Women, Bethlehem, Pa.; Nazareth Hall, Nazareth, Pa.; and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and abroad, in Nicaragua, the West Indies, Jamaica, Labrador, Surinam, South America, the Himalayas, and Unyanwesi, Central Africa. The official periodical, *The Moravian*, is published weekly at Bethlehem, Pa. In 1927 there were: 131 churches; 159 ministers; 25,820 communicant members, while the actual membership was estimated at 35,942; and 123 Sunday schools with 21,534 scholars.

The Evangelical Unity of Bohemian and Moravian Brethren in North America, of which the first congregation was organized in 1864, at Wesley, Tex., is under the direction of a synod which meets each year on July 6, the day of the death of John Huss. In 1926 this denomination reported 34 churches in North America with 5241 members and 24 Sunday schools, with an enrollment of 1708; total expenditures were \$12,023; and church property was valued at \$76,700. The Independent Bohemian and Moravian Brethren Churches were founded in 1858 in College Township, Iowa. In 1926 there were three churches with one minister and 356 members. Three Sunday schools had 381 scholars.

MORMONS. See LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.

MOROCCO. The largest of the Barbary states, occupying the northwestern corner of the continent of Africa; bounded on the west by the Atlantic Ocean, on the north by the Mediterranean Sea, on the east by Algeria, and on the south by the Sahara Desert and the Spanish colony of Rio de Oro. From an administrative and political point of view, Morocco is divided into three zones: First, and most important, the French protectorate, including approximately 85 per cent of both area and population, with Fez as the political capital and Casablanca as the leading port and commercial centre; second, the Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean with Ceuta, Melilla, and Tetuan as the principal localities; and third, the international Tangier zone, ruled in accordance with the terms of the Paris convention of Dec. 18, 1923, between France, Great Britain, and Spain. The latest estimate of the total area places it at 218,525 square miles, of which the area claimed by Spain for her zone in the north was 8000 square miles; for her southern zone, 9500 square miles; and for Ifni on the west coast, 800 square miles. In 1921, the area effectively held by the French was estimated at 92,664 square miles.

A census of the French Zone taken in March, 1926, puts the population at 4,016,882 native Moslems, 107,552 native Jews and 104,712 foreigners, making a total of 4,229,146. That of the Spanish Zone may be put at something under 1,000,000 and that of the Tangier Zone at about 80,000. The largest towns in the French zone

with their populations according to the census of 1926 are: Marrakesh, 194,254; Casablanca, 107,787; and Fez, 81,163. In the Spanish zone the largest town is Tetuan with a population of 24,000. The population of Tangier is approximately 60,000. The chief languages are French, Spanish, Arabic, and Berber dialects. According to the latest available statistics, there were in the French zone 199 schools; in the secondary schools there were 188 teachers and 2322 pupils; in the high schools, 26 teachers and 417 pupils; in the primary schools, 645 teachers and 23,327 pupils; in the professional schools, 79 teachers and 1029 pupils. There are Moslem schools at Rabat and Fez, and a research institute for the study of the Arabic and Berber languages at Rabat.

PRODUCTION. Agriculture is by far the most important industry, although the country must depend upon timely rainfalls to reap the full benefit of the soil's possibilities. The methods and implements of farming are very crude. The yield of the principal crops in metric quintals in 1925 was as follows: barley, 12,287,479; wheat, 7,723,523; beans, 311,026; oats, 164,432; maize, 1,194,566; chickpeas, 190,778; linseed, 130,680. In the same year there were 3,215,595 olive trees, 170,849 orange and lemon trees, 326,924 palm tree (dates), 1,154,184 almond trees, and 2,956,197 fig trees. The latest estimate of animals in the French Zone (1925) was: cattle, 1,954,000; sheep, 9,277,000; goats, 2,930,000; pigs, 67,000; horses, 185,000; asses, 563,000; camels, 116,000. Over 3,000,000 acres of the total area is covered by forests, but only one-sixth can be exploited at present, owing to the lack of transportation facilities and uncertain conditions in many parts of the country. Cork and gum are the main products from this source. The development of the rich mineral resources of Morocco is also retarded by the adverse conditions which prevent the exploitation of the forests. No coal is to be found, but the phosphate mines in the vicinity of Casablanca are steadily increasing their output, which was estimated at 700,000 tons in 1925 as compared with 400,000 in 1924. These mines are exploited by the government and under its monopoly. Iron mines in the Spanish zone are also being exploited.

COMMERCE. Of total imports in 1926, valued at 1,692,268,000 francs (franc averaging \$0.0333), as compared with 1,189,605,000 francs in 1925 (franc averaging \$0.04676), France with Algeria furnished two-thirds. A substantial part of the imports from France, however, originated in other countries. England and Gibraltar ranked second as suppliers, with 12.5 per cent, the United States third, with 5.5 per cent; followed by Belgium and Italy. Imports from the United States increased in nominal value over 1925 by almost 85 per cent. This does not by any means represent the whole of the import trade from that country, for a considerable amount of merchandise credited to France, Belgium, and Spain came originally from the United States. The trade with the United States was of a varied nature, but considerably more than 50 per cent was composed of petroleum products.

Manufactured goods comprise only 5 per cent of the exports from French Morocco, the balance being the products of phosphate beds, mines, forests, agriculture, and stock raising. France, with Algeria, took 45 per cent of the total

exports in 1926, at a value of 710,555,000 francs as compared with 564,417,000 francs in 1925. Other principal buyers were Spain and its islands, together with Spanish Morocco, 24.5 per cent; England and Gibraltar, 10.5 per cent; Italy, 4 per cent; and the United States 2.4 per cent. Exports to the United States, on a nominal franc basis, showed a gain over 1925, but on a dollar basis their value was about 13.5 per cent below that of 1925. Imports in the Spanish Zone in 1924 totaled 123,000,000 pesetas and exports 18,000,000 pesetas. Imports in the Tangier Zone in 1925 amounted to 108,061,614 francs and exports to 18,096,725 francs.

FINANCE. The estimated revenue of the French Zone in 1926 was 407,422,020 francs and the estimated expenditure, 406,915,772 francs. The budget for the Spanish Zone in the same year balanced at 18,233,550 pesetas. In 1927 the revenue for the Tangier Zone was estimated at 25,575,000 francs and the expenditure 24,392,409 francs.

COMMUNICATIONS. In 1925, 1752 vessels of 2,045,570 tons entered the ports of French Morocco and 1557 vessels of 1,102,816 tons entered the port of Tangier. There are about 730 miles of railroad in French Morocco, 308 in the Spanish Zone, and none at all in the Tangier Zone.

GOVERNMENT. The Tangier Zone is permanently neutralized and demilitarized and is governed by an international control organization. The French Zone constitutes a protectorate, under a French and native administration. Its status was defined in the treaty of Mar. 30, 1912. The highest local authority is the French Resident General. The office of Sultan continues but the Sultan is obliged to follow the advice of the French Resident General in all matters. The native Shereefian administration comprises a Grand Vizier and the Viziers of Justice, Crownlands, Pious Foundations, and Instruction, and the Resident of the Native High Court. The position of War Minister is held by the officer commanding the French troops in Morocco. Sultan in 1927, Mulai Yusef (proclaimed Aug. 18, 1912; died Nov. 17, 1927; succeeded by his son, Mulai Mohammed, born 1913); French Resident General, Theodore Steeg (appointed Oct. 11, 1925). Spanish High Commissioner, General Sanjurjo.

MORROW, DWIGHT W. See MEXICO, under *History*.

MORSS, CHARLES ANTHONY, American banker, died at Cohasset, Mass., on July 5. He was born in Boston, Mass., July 13, 1857. He graduated from high school in 1875 and entered the wool business. He was admitted as a partner to the firm of Hobbs, Taft and Co., in 1884 and later became associated with his father in the wool business. In 1917 he was appointed governor of the Federal Reserve Bank of Boston. He held this position for five years, and during his term of office he directed successful campaigns for the third and fourth Liberty Loans. It was under his leadership that a new Federal Reserve Bank was built. He resigned in 1922 to devote more time to his business interests. He was a director of the Simplex Wire and Cable Company, the Simplex Electric Heating Company and the Morss and Whyte Company.

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women at South Hadley, Mass.; founded in 1837. The registration for the autumn session of 1927 was 1006, divided as follows: seniors, 250; juniors, 240; sophomores, 227; freshmen, 271; specials, 3; graduate students, 15. The faculty, including professors, associate professors, assistant professors, instructors, and chief administrative officers, numbered 122, exclusive of 40 assistants, readers, graduate teaching fellows, curators, and secretaries. During the year 20 new appointments were made to the faculty, including Lawrence B. Wallis, assistant professor of English Literature, Erika von Erhardt-Siebold, associate professor of English Literature, Patis J. Groves, M.D., assistant professor of hygiene, Blanche B. Boyer, assistant professor of Latin. The productive funds of the College amounted to \$3,901,247.85, and the income for the year to \$181,313.59. There were 99,000 volumes in the library. President, Mary Emma Woolley, A.M., Litt.D., LL.D.

MOVING PICTURES. The industry was characterized by great activity during the year. A large number of new productions, some of really great merit, were brought out, as well as many that were quite mediocre in quality. Many new large theatres were built and apparently drew crowds as much by their novelty and unusually gorgeous interiors as by the photoplays that were shown. In New York City alone, two new theatres of very large seating capacity were opened, the Roxy and the Paramount. The designs of the exteriors were distinctly modern and the heights were in keeping with other high buildings of recent construction, while the interiors were exceedingly elaborate in finish, furnishings and equipment. In many of the older and the medium size houses there was an increasing tendency to combine vaudeville with pictures; others again, as in past years, made a specialty of offering some of the big "releases" with reserved seats, at legitimate theatre prices.

In Europe, especially in England and France, great efforts were being put forth in attempts to establish the film industry on a firmer basis, as American competition, as had been the case for some years, was making such serious inroads into the business that it was felt that something must be done. In all the cities in the countries mentioned, American pictures were usually shown and the films of domestic make were in a small minority. At the close of the year, there was a noticeable advance reported and it was said that a large number of photoplays of strictly English origin were about to be produced. Moreover, the public were appealed to, through the press, to patronize those cinemas showing strictly English productions. Talking moving pictures were further developed and the apparatus for recording and reproducing pictures and music simultaneously were

considered to have advanced in a marked degree. Some of the public demonstrations were with music to accompany feature films, the music being supplied by a large orchestra. The music of the latter was recorded on a film, after which, picture, titles and sound record were printed on one film in the proper time relation.

The U. S. Department of Commerce during the year published statistics of the world's motion picture industry, based on a report from one of its European trade commissioners. It was stated that there were approximately 52,000 motion picture theatres scattered over the whole globe, with a capacity of about 20,000,000, for a population of 1,750,000,000. America provided 53 seats for every 1000 persons, while in Europe the average was below 20 seats. The capital invested in the motion picture industry in the world was estimated at from \$2,500,000,000 to \$3,000,000,000. Of these figures, America's share was approximately \$2,000,000,000. On the basis of the entire population of the world, each inhabitant's per capita share in the invested capital of the industry would be \$1.50, but on the basis of countries the average per capita share of each inhabitant would be as follows: United States, \$13.00; North and South America, \$8.20; England, \$5.70; Germany, \$4.00; France, \$2.50; all of Europe, \$2.20.

The statistics quoted do not include admission receipts which were estimated at about \$1,000,000,000 yearly. The following table shows the distribution of theatres in proportion to the population in the regions of the world:

Regions	Population	Number of cinemas	Number of seats	Average number of seats per 1,000 persons	Capital invested (millions)	Per capita share
Europe	451,000,000	22,000	9,000,000	20	\$1,000	\$2.20
America	207,000,000	25,000	11,000,000	53	1,700	8.20
Australia	8,000,000	1,200	350,000	44	2	1.20
Africa	132,000,000	800	200,000	1.5	2	.01
Asia	995,000,000	8,000	600,000	.6	8	.003
Total	1,798,000,000	52,000	21,150,000	10.5	2,715	1.50

A new type of camera and a new reproducing projector were developed that gave highly satisfactory results. So far as could be observed, however, public interest was not stimulated to the extent that might have been expected; yet it seemed likely that this type of entertainment would have its special field after it became a regular part of the producing business.

MOYES, THE REV. JAMES. Roman Catholic theologian and historian, died at London, England, on March 11. He was born in Scotland in 1861, educated in Ireland, in France and in Rome, but spent 50 years of his working life in England. At the age of 25 he was a professor at St. Bede's College, Manchester. Bishop (afterwards Cardinal) Vaughan made him Canon Theologian of Salford in 1891 and sent him to London in the following year; and from 1895 until his death Canon Moyes was a theologian in the archdiocese of Westminster. For a time he was honorary secretary of the Historical Research Society. He was editor of *The Dublin Review* from 1892 to 1903, and he also contributed many controversial articles to *The Tablet*. His work *Aspects of Anglo-Catholicism* (1907) aroused interest.

MOZAMBIQUE. See PORTUGUESE EAST AFRICA.

MUIR, JOSEPH JOHNSTONE. American clergyman and chaplain of the U. S. Senate, died at Washington, D. C., November 17. Born in Parsonstown, Ireland, in 1847, he was educated in private schools in Ireland and Scotland and was ordained in the Baptist ministry in 1869. He went to the United States four years later. The first pulpit he occupied was at Montana, N. J., and he successively held pastorates at East Marion, New York, from 1871-73; Ticonderoga, N. Y., 1873-75; MacDougal Street Church, New York City, 1875-79; Park Church, Port Richmond, N. Y., 1880-83; North Church, Philadelphia, 1883-89, and Temple Baptist Church, Washington, D. C., from which he resigned in 1924, after 35 years of service. In January, 1921, he was appointed chaplain of the U. S. Senate.

MULDOON, RT. REV. PETER J. Roman Catholic bishop, died at Rockford, Ill., October 8. He was born in Columbia, Cal., Oct. 10, 1863. He received his education in schools in California and Kentucky and at St. Mary's College, Baltimore. Ordained in 1886 he became auxiliary bishop of Chicago in 1901. In 1908 he was chosen to administer the newly formed Rockford diocese which was composed of 12 counties formerly in the Chicago area. He remained in this diocese until he died. He was a very active chairman of the administrative committee of the National Catholic War Council.

MUNICIPAL GOVERNMENT. Adoption of a council-manager charter by Indianapolis, re-

jection of a proposed charter amendment designed to do away with the city manager and proportional representation at Cleveland, adoption of a new charter at Buffalo under which the city will return to the mayor-council plan after having been under commission government for 10 years, conviction of the mayor of Indianapolis under the State corrupt practices act of accepting money before election with the understanding that the giver would be permitted to name members of the new Board of Public Works, were outstanding events of the year. For reasons given below the Indianapolis charter was not to go into effect until Jan. 1, 1930. When Indianapolis and Rochester came under the city-manager plan, which Rochester was to do early in 1928, there would be 11 cities with over 100,000 population each by the census of 1920 that have city managers. In order of population these are: Cleveland, Cincinnati, Indianapolis, Kansas City, Rochester, Norfolk, Dayton, Grand Rapids, Miami, Tampa and Fort Worth. Virtually committed to the city-manager plan was Toledo, Ohio, which in November, 1927, elected a charter drafting commission, all the members of which had previously announced

that they were in favor of the manager plan, as did also 13 other candidates who were not elected. According to *Public Management*, up to Mar. 10, 1927, 346 cities in the United States, 16 in Canada and two in New Zealand had adopted the manager plan. During the year the manager plan was rejected by popular vote at Warren, Ohio, and at Chickasaw and Guthrie, Okla., but Auburn, N. Y., voted to retain the plan instead of returning to ward aldermen. The rejection of the proposal to amend the charter of Cleveland, Ohio, by eliminating the city manager and proportional representation, was by a majority of about 6400 votes in a total of 154,000. Most, but not all, of the municipalities having managers were operating under typical council-manager charters. In some cases the manager is appointed by ordinance, as was provided for late in the year at Englewood, N. J., where the new official was to take office in January, 1928, and is called city supervisor.

Indianapolis adopted the council-manager plan at a special election on June 21 by a vote of 64,000 to 7000. The council consists of seven members, elected by plurality vote. The manager, to be appointed by the council, need not be a resident of either the city or the State. The charter does not provide for the referendum, initiative or recall. In anticipation of the adoption of a council-manager charter at Indianapolis and perhaps in other of the larger cities of Indiana, the Indiana legislature passed an act providing that all city officials should serve out the time for which they were elected. While this act was designed by opponents of the manager plan, and to protect officeholders, it helped disarm opposition to the new charter for Indianapolis. Other events, outlined below, defeated the purpose of the act so far as the mayor of Indianapolis was concerned. The term of the mayor of Indianapolis not expiring until 1930, the question was raised as to whether a new council could be elected until November, 1929, and the court decided that it could not. Meanwhile, the mayor of Indianapolis was put under trial for alleged violation of the State corrupt practices act, convicted and sentenced to be fined \$1000 and imprisoned for 30 days. An appeal was pending at the close of the year. Following the sentences, there was a series of kaleidoscopic changes in the mayoralty situation at Indianapolis. Under the old charter, when a vacancy occurs in the mayoralty, the city comptroller became mayor. The convicted mayor appointed his wife as city comptroller; the mayor resigned and on the office being taken by his wife, she appointed a new city comptroller and then resigned, whereupon the appointee sought to take the mayor's chair. Meanwhile the defeated mayoralty candidate at the last election claimed the chair. Then the city council declared the office vacant and after a tie for some 30 ballots, a "dark horse" was chosen mayor in the person of a prominent business man.

The new charter for Buffalo, N. Y., effective in January, 1928, was adopted by a vote of 32,000 to 21,000 at a special election held August 29. Under this charter Buffalo was to return to the mayor-council plan after 10 years of government by a commission of five members. The new council consists of 15 members, including the president, elected as such, five others elected at large, and nine elected three

each from districts composed of three wards each. The only other elected officers are the mayor and the comptroller. Save for district councilmen, all these men are elected to serve four years. The mayor and the councilmen elected at large cannot be elected to succeed themselves and the district councilmen can be re-elected for a second two-year term only. The elected officers will be nominated at party primaries, but there may be independent nominations. The principal executive departments of the city are: (1) executive, (2) surveys, (3) audit and control, (4) assessment, (5) public works, (6) parks, including recreation and airport divisions, (7) police (8) fire, (9) health, (10) social welfare, (11) law. All these departments have a single head except assessment, health, and welfare which are administered by boards, but there is an advisory airport board. Department heads and commissions are appointed by the mayor, with the exception of the board of assessors, which is appointed by a board composed of the mayor, president of the council and comptroller. All these appointments are subject to approval by the council, but the mayor has full power of removal of his appointees. The mayor, president of the council, and comptroller may be removed by the governor of the state. The charter contains civil service provisions. Although the charter declares that the legislative and executive powers are separate yet the mayor has a limited veto power over legislation and the council can refuse to confirm appointments by the mayor. Sole power of removal of department heads appointed by the mayor and confirmed by the council rests with the mayor.

COUNTY GOVERNMENT. For the second time in two years a proposed new charter for Westchester County, adjacent to New York City, was defeated. A constitutional amendment authorizing the consolidation of all the governmental bodies in Multnomah County, Oregon, including the city of Portland, was defeated at a special election on June 28. This is in line with several other defeats elsewhere during the past three years.

GENERAL VILLAGE LAW. Based on recommendations of a joint legislative committee, the New York Legislature enacted what is in effect a model village law, uniform for the 450 villages in the state, effective July 1, 1927. The law substitutes the title of mayor for that of village president heretofore used in New York State, and provides that the mayor and board of trustees shall be the only elective officers for villages. Mayors are made executive heads of village government and the trustees are made responsible for legislation. The new law permits the adoption of the manager plan by villages. It makes it necessary to install budget systems.

Indiana established State control of municipal budgets, tax levies and tax rates in 1927. Every local taxing unit must adopt a budget in form established by the State Board of Accounts. Such budgets stand unless an appeal is taken to the State Tax Board, whose decision, on the points covered in any petition, is final, but not until after advertised public hearing in the county where the budget was adopted. Appropriations after and outside the budget may be made to meet casualties, accidents or great emergencies, but they also are subject to appeal to the State Board of Tax Commissioners. Under a

liberal interpretation of the law it would appear to be easy for a small group, or a number of groups, to throw into State control the financial and thus the legislative and administrative control of any city or other taxing district.

BIBLIOGRAPHY. New books on municipal government include Buck, *Municipal Finance* (New York); Griffith, *Modern Development of City Government in the United Kingdom and in the United States* (London); McComb, *City Health Administration* (New York); Upson, *Practice of Municipal Administration*; White, *The City Manager* (Chicago). MUNICIPAL HOME RULE. See **MUNICIPAL GOVERNMENT.**

MUNICIPAL LEAGUE, NATIONAL. An organization to promote efficient and democratic government in city, county, state, and nation; founded in 1894, and incorporated in 1923. It has committees of experts at work studying, from practices in different parts of the United States, sound principles of government methods and government administration. These committees submit reports which are approved by the League and distributed where they will have most effect. The active committees in 1927 were as follows: Committee on Government for Regional Areas; Committee on Municipal Budget Law; Committee on Revising Model City Charter; Committee on Election Administration. Recent publications included a model municipal bond law; a model system of election registration; and a monograph, *The Merit System in Government*.

The thirty-third annual meeting of the League was held in New York, Nov. 10 and 11, 1927. Joint sessions held with the Governmental Research Conference and the National Association of Civic Secretaries were unusually well attended. Topics of discussion included: Budget Procedure; Proposed Model Budget Law of National Municipal League; Special Assessments; State Supervision of Local Finances; Popular Misconceptions Regarding Crime; A Municipal Programme for Combating Crime: What Makes Public Opinion: Is the Slacker Vote a Menace?; Improving College Courses in Municipal Governments; University Training for Public Service.

Among the speakers on the program of the annual meeting were: Henry Burke, Assistant Budget Director of North Carolina; H. P. Siedemann, Washington; Charles J. Fox, Boston; Joseph O'C. McCusker, Maryland; George M. Link, Minneapolis; Philip Cornick, New York Bureau of Municipal Research; Philip Zoercher, Indiana State Board of Tax Commissioners; Bruce Smith, National Institute of Public Administration; W. B. Munro, Harvard University; Raymond Moley, Columbia University; Harry A. Overstreet, author of *Influencing Human Behavior*; A. C. Hanford, Harvard University; Samuel May, University of California. The officers of the League in 1927 were: Frank L. Polk, president; Carl H. Pforzheimer, treasurer; Clinton Rogers Woodruff, honorary secretary; H. W. Dodds, secretary; G. R. Howe, assistant

secretary. Headquarters are at 261 Broadway, New York.

MUNICIPAL RESEARCH. See **MUNICIPAL GOVERNMENT.**

MURPREE, ALBERT ALEXANDER An American educator, died at Jacksonville, Fla., December 20. He was born at Walnut Grove, Ala., Apr. 29, 1870. He was educated at Walnut Grove College and at Peabody College, Nashville, Tenn., receiving his bachelor's degree at the University of Nashville in 1894. In 1887 he began teaching in rural schools in Tennessee, subsequently becoming superintendent of the city schools in Cullman, Ala., and principal of the Summit Institute, Ala. In 1895, he was professor of mathematics in Florida State College and two years later was president of that institution. On July 1, 1909, he became president of the University of Florida. He received the degree of LL.D. from the University of Alabama in 1919.

MUSIC. GENERAL NEWS. In the musical world the year 1927 was memorable for the universal observance of the centenary of the death of Beethoven. The celebrations, begun with the opening of the fall season of 1926, did not end on the actual date of death (March 26), but continued uninterruptedly to the end of the calendar year. With very few exceptions the programmes contained only the masterpieces familiar to all lovers of music, and the inherent beauty and grandeur of these bid fair to outlast another century. Isolated performances of a few unfamiliar works only proved the futility of any attempt to reverse the general verdict of enlightened public opinion.

In connection with the musical celebration the city of Vienna exhibited in the Municipal Museum the greatest collection of Beethoveniana ever brought together. Delegates from 16 nations were present at the formal opening of this exposition, and the Austrian government issued a souvenir postal card with the likeness of Beethoven instead of the usual stamp. A memorable event of the Paris celebration was the performance of the *Missa Solemnis* in its entirety during actual High Mass at Notre Dame. There is no record of any performance of this work as part of a divine service prior to this occasion, when a splendid rendition was given under Gabriel Pierné conducting the Colonne Orchestra, a chorus of 400 voices and soloists from the Grand Opéra, while Widor presided at the organ. Innumerable cities presented the work in concert form, and the Boston Symphony Orchestra, after the conclusion of its regular series of festival concerts, repeated the *Missa Solemnis* at its annual concert for the benefit of the Pension Fund, instead of presenting the customary Wagner programme.

At La Scala, Toscanini, besides conducting all the symphonies, directed what came near being the local première of *Fidelio*, since the opera had been heard only once in Milan, in 1883. Even far-off Tokio honored the memory of the great master by a special Beethoven week, when all the symphonies, the *Missa Solemnis* and *Fidelio* were produced. A unique and lasting contribution to the centenary was made by the issue of phonograph records in a special Centennial Edition, all records being made by

the new electrical process. The list includes complete recordings of all nine symphonies, the three great overtures (*Egmont*, *Coriolanus*, *Leonore No. 3*) and about 20 string-quartets, trios and sonatas.

The same phonograph company announced its intention of issuing a similar Schubert Centennial Edition for the coming Schubert centennial (1928) and offered a prize of \$10,000 for a Scherzo and Finale to complete the famous Unfinished Symphony of that master. This competition, however, aroused such decided opposition among musicians, that the original plan was abandoned, and prizes aggregating \$20,000 were offered for compositions "written in the style of Schubert." In this connection the Columbia Phonograph Company also announced that they had acquired possession of an original manuscript of Schubert containing 130 bars of the Scherzo of the Unfinished Symphony. This fragment was performed by the Judson Symphony Orchestra and broadcast during the Columbia Hour on October 30, with the further announcement, that any composer wishing to avail himself of this material for the competition was at liberty to do so.

Owing to the fact that the renovation of the Festspielhaus could not be completed in time, the semi-centenary of the establishment of the Bayreuth Festival was observed with lavish splendor one year late (July 19-August 20). The works produced were *Tristan und Isolde*, *Parsifal* and *Der Ring des Nibelungen*. The conductors were Dr. Karl Muck, Franz von Hösslin and Karl Elmendorff, while of the principal singers Nanny Larsen-Todsen, Emmy Krüger, Lauritz Melchior, Friedrich Schorr, Alexander Kipnis and Karl Braun were well known to American audiences. There was only one opinion regarding the playing of the orchestra and the singing of the chorus, which could only be characterized by the use of superlatives. The installment of the latest improvements in stage machinery, new decorations and costumes enabled the technical staff to attain a level of mechanical excellence superior to anything achieved before. For every performance the house was sold out.

The annual Donaueschingen Chamber-Music Festival, devoted exclusively to modernist compositions, was held this year at Baden-Baden, because the programme included five short operas, each of less than half an hour's duration, and there was no suitable theatre at Donaueschingen.

At the seventh Händel Festival in Göttingen (June 22-8), under the direction of Rudolf Schulz-Dornbusch, the operas chosen for revival were *Enio* and *Radamisto*.

Sixty-five years after its première, in St. Petersburg, Verdi's *La Forza del Destino* had its first performance anywhere in Germany at the Berlin Staatsoper, in April, under Leo Blech. No explanation of this belated German production of one of Verdi's best earlier works has been given.

With great pomp and ceremony the remains of Boccherini, who died and was buried in Madrid in 1805, were transferred, in October, to the magnificent mausoleum erected in his native city of Luca.

In the museum of Burghausen Ernst Schmidt, of Tübingen, discovered the manuscript of an unknown Requiem in C minor by Joseph Haydn.

The work had its first performance in Munich, in December.

At an auction in New York, in May, the original manuscript score of Wagner's *Rheingold* was sold for \$15,400, while a collection of 29 unpublished letters by the master brought \$500.

A Chickering piano, which Liszt used in some of his concerts, was acquired by the manufacturers, who intended to use it for exhibition purposes. Their plan was to exhibit the instrument in various cities throughout the country in special recitals by famous pianists. The first of these recitals took place in New York, October 30, when Josef Lhevinne was the artist. The instrument was in excellent condition, but its tone was rather thin in comparison with the power and sound qualities of the concert grand of to-day.

The trustees of the Curtis Institute of Music, in Philadelphia, appointed a permanent director in the person of the famous pianist Josef Hofmann, who entered upon his new duties in the fall, and also opened the new concert hall with a recital (December 3). A additional gift of Mrs. Mary Curtis Bok increased the permanent endowment fund to \$12,500,000, thus assuring the future of the institution.

After the consolidation of the Graduate School of the Juilliard Foundation and the Institute of Musical Art (See YEAR BOOK for 1919 and 1926) Prof. John Erskine, of Columbia University, was made chairman of the Board of Directors and Ernest Hutcheson dean of the Graduate School. It was estimated that, while formerly the Juilliard Foundation directly benefited about 200 students annually, the direct consolidation had increased the number to 1000. As a result of competitive examinations 95 scholarships were awarded.

On August 12, the entire country celebrated the 50th anniversary of the invention of Edison's phonograph. The importance of this invention to music cannot be over-estimated. Even discounting all improvements still to be made in the future, the present perfection of the phonograph itself and the new electrical process of recording assure faithful reproductions, in the minutest details, of the performances of individual artists or large bodies of instruments and choral masses. According to personal inclination the records can be used for æsthetic enjoyment or for critical study. Of what inestimable value would it be to us, if, instead of being obliged to depend upon mere description by contemporaries, we had actual records of the art of Paganini, Liszt, Rubinstein, Jenny Lind and others of almost legendary fame; whereas flawless specimens of the art of Paderewski, Hofmann, Kreisler, Caruso and a host of others are available, not only for our own present delight, but also for that of unborn generations.

From Berlin and Paris came reports of demonstrations by a Russian scientist, Professor Thermanin of Moscow, who produced what he called "Music of the Ethereal Waves." As a matter of fact, he actually did produce musical sounds by merely moving his hands before a metal wand standing in a field of electro-magnetic waves. As to the value of the music produced competent opinion differs widely. Under the circumstances it seemed wise to reserve judgment, the more so as Professor Thermanin arrived in New York in December for the purpose of demonstrating his invention in the United States.

ARTISTS. The sensation of the year was the appearance of an 11-year-old violin prodigy, Yehudi Menuhin, playing the colossal Beethoven concerto at a concert of the New York Symphony Society, under Fritz Busch (November 25). Since the War, when New York became the arena of débutants, there had appeared so many prodigies that the appearance of one more attracted little attention, especially since almost invariably the only marvelous thing about those children was a precocious and, in most cases, really extraordinary, exhibition of technical skill; and the programmes offered on those occasions very wisely were made with this object in view. Thus it can be explained that young Menuhin's New York début on Jan. 17, 1926, passed practically unnoticed, for his programme consisted exclusively of pieces demanding a brilliant technic. In the autumn of 1927, however, reports came of two concerts given by Menuhin in Paris, which acclaimed him a violinistic genius of the first magnitude. His rendition of the Beethoven concerto with the Symphony Society proved beyond peradventure that the French critics had not exaggerated. Although the boy played only a three-quarter violin (Grancino, 1695), he produced a tone equally remarkable for power and beauty. His intonation was impeccable, even in double stops. Technical difficulties he surmounted with ease. But above all this, he took his place, irrespective of age, among the elect by virtue of superior musical intuition, depth of feeling and maturity of conception.

The next day after Menuhin's triumph Yelli d'Aranyi, a grand-niece of Joachim, made her American début in New York (November 26) with more than ordinary success. She is a violinist of the grand style, with splendid technical equipment and reverence for the composer's intentions. In subsequent concerts she also proved herself an ensemble player of the first rank.

Among the more important of the violinists who were heard during the year were Flesch, Feuermann, Kerekjarto, Kochanski, Kortschak, Kreisler, Szigeti, Spalding, Cecilia Hansen, Kathleen Parlow, and Renée Chemet.

A host of new pianists made their début during the year. Those that made a deeper impression were the Austrian Robert Goldsand (New York, February 28), the Dutchman Paul Roes (New York, March 1), and the Spaniard José Echaniz (New York, October 16). The very favorable reception accorded the Hungarian Bela Bartók at his American début (December 22), when he played his own Rhapsody, op. 1, with the New York Philharmonic Orchestra, under Mengelberg, was a tribute to the composer, rather than to the pianist. The work itself is far less "advanced" than his later ones, and, perhaps for that very reason, more beautiful, while the skillful development of the thematic material and splendid orchestration enhance the total effect. In certain passages the music even attains the level of the sublime. To do full justice to this composition the pianist must have at his command an infinite variety of tonal shading and, above all, a warm, singing tone. Bartók's technic is ample, facile and very clear, but his tone is cold, lacking in subtle differentiation of color.

Another European composer, Alexander Tansman, an extreme futurist, made his American début as a pianist with the Boston Symphony

Orchestra (December 29), playing his new second concerto for piano and orchestra. The work, in three movements, seemed devoid of any recognizable themes, utterly planless and disjointed. Excessively heavy orchestration, especially of the first movement, frequently drowned the piano, and when the solo instrument could be heard, there was such a bewildering succession and combination of sounds as to render any critical appraisal of the pianist's ability impossible.

Of the great pianists Katharine Bacon was the only one who observed the Beethoven centenary by playing all 38 piano sonatas in a series of seven recitals (New York, January 24-March 7), while the others contented themselves with including in their programmes only the immortal masterpieces. After his resignation as conductor of the St. Louis Symphony Orchestra Rudolph Ganz once more delighted his numerous admirers by his masterly piano playing. The outstanding pianists of the year were Brailowsky, Casella, Cortot, Dohnányi, Friedmann, Gabilowitsch, Gieseking, Grainger, Hess, Hilsberg, Horowitz, Hutcheson, Hofmann, Kreutzer, Leginska, Levitzki, Lhevinne, Merö, Moisseiwitsch, Münz, Novaes, Rachmaninov, Rosenthal, Samuel, Scharrer, Schnitzer.

While but few lines have always sufficed to record the activities of the cellists, the record of 1927 is even briefer than usual. Not a single new artist appeared, and the most important event was the reappearance, after several years' absence, of the famous English cellist Beatrice Harrison at a concert of the Philadelphia Orchestra, under Fritz Reiner (October 28), when she introduced a new cello concerto by Delius. It was a pity that the interpreter's rare art was wasted on such a dull work. Mention of the names of Casals, Durieux, Shuk and Willeke completes the list for the year.

It is a well established fact, that during the last decade the noble cello has steadily been losing ground as a solo instrument. Two principal causes have contributed to this decline: The higher musical intelligence of the present-day audience and the dearth of a significant cello literature, especially of works in the larger forms. Twenty years ago the chief interest of an audience at a symphony concert was centred in the personality and technical skill of the solo artist. The merit of the composition itself was a matter of secondary consideration. Gradually, with increasing musical culture, the interest shifted from the soloist to the music of the composer, so that a solo performer is no longer a necessary factor in the scheme of symphonic programmes. In fact, a symphony concert presenting a soloist is the exception, and even then the composition offered is examined rather critically as to its intrinsic musical worth. Thus, with the opportunities for solo appearances greatly reduced, the cellist, because of the limitations of his repertory, is at a decided disadvantage as compared with the violinist or pianist. These latter artists have the choice of an extensive repertory of great concertos by the greatest masters—Bach, Beethoven, Brahms, Mendelssohn, Schumann, Liszt, Saint-Saëns, Tchaikovsky, Grieg, Franck, Rachmaninov—while the cello concertos of Schumann, Dvořák, Reinecke, Elgar and the latest addition by Delius must be classed among the inferior works of these composers. And withal, there is no lack

of really great cellists, but they are found among the personnel of the great chamber-music organizations. Rather than waste their art selfishly as soloists playing pretty trifles or dull concertos, they prefer the coöperation of fellow artists proclaiming the glories of the masterpieces of chamber-music.

In Boston Sergei Kussevitsky gave a concert for the benefit of needy students in Russia, Palestine and the United States (September 24). The main interest centred in the first appearance in the United States of the famous conductor as solo virtuoso on the double-bass, playing his own concerto in A minor with a virtuosity that elicited frantic applause. Before winning distinction as a conductor (1907) Kussevitsky on his tours of Europe had established his reputation as the greatest living master of the double bass.

Another of the great French masters of the organ, Louis Vierne, organist of Notre Dame at Paris, created a profound impression on the occasion of his American début at the magnificent organ at Wanamaker's in Philadelphia (February 9).

After more than half a century crowded with triumphs Ernestine Schumann-Heink made her farewell tour of the United States, giving her closing recital in New York (December 10) amid scenes of indescribable enthusiasm. After the last of innumerable encores Walter Damrosch appeared upon the stage and presented to the artist a portfolio containing 48 personal letters of appreciation, one from every governor in the Union.

In commemoration of the 50th anniversary of her début Marcella Sembrich was the guest of honor at a grand dinner arranged by the Bohemians of New York (December 18). Although she retired from the operatic stage in 1909, and has appeared on the concert stage but rarely since then, she was in 1927 one of the dominating personalities in the world of music because of her activity as one of the greatest of singing teachers.

After her somewhat sensational retirement in 1922, Geraldine Farrar made a tour of the principal cities of the United States, beginning in Chicago (November 20). Everywhere she was greeted with unbounded enthusiasm, for her fascinating personality had lost none of its charm, while the long rest has been decidedly beneficial to her voice, which had a rich quality even in the highest register.

Two newcomers were heartily welcomed at their American début as masterly interpreters of the German lied: Johanna Klemperer (January 26), a soprano and wife of the eminent German conductor, and Max Kaplick, a baritone (February 23).

CHAMBER-MUSIC. Throughout the year the majority of the organizations gave prominence to the works of Beethoven, several, and among them the London String Quartet, performing all the quartets in a series of six concerts. Less interesting was a series of three concerts, in which Harold Bauer, assisted by Zimbalist, Kochansky and Spalding, played all the violin sonatas.

In December the Verbrugghen String Quartet celebrated its silver jubilee by repeating the identical programme played at the initial concert in Edinburgh. The organization during all the years of its existence had made only

one change in its personnel, in 1918, when J. Cullen replaced the original second violin. D. E. Nichols (viola) and J. Messeas (cello) followed Mr. Verbrugghen in 1915 to Sydney, Australia, and in 1918 to the United States.

The International Composers' Guild, founded in 1921 by Edgar Varese, was disbanded. In an open letter to the press the founder stated that the objective of the society had been realized, since the public was converted to futurism and futuristic works were securely established in the repertory of the great orchestras. The League of Composers and Pro Musica, however, did not seem to take this optimistic view, for they continued their work of propaganda with unabated vigor. In Philadelphia the Society for Contemporary Music, pursuing the same object as the New York futurists, began its career with the first concert on February 28. In San Francisco Henry Cowell, one of the extreme futurists, founded the New Music Society, which gave its first concert on October 25 to a bewildered audience.

CHORAL SOCIETIES. The first complete performance of Bach's Mass in B minor ever heard in New York was given by the Oratorio Society under Albert Stoessel (April 21). The only reason why the great work had never been produced in New York in its entirety is its length, which far exceeds the limits of the ordinary concert. On this occasion the plan adopted at the Bethlehem Festival of giving the Mass in two parts, with a long intermission, invested the concert with the atmosphere of a festival. The work had been rehearsed from the early fall and the performance was well nigh flawless.

For the first time since 1893 Cleveland held a Söngfest on a large scale (June 22-24). The combined orchestras of the Cleveland and Detroit Symphony Orchestras, under the direction of Bruno Walter, constituted the festival orchestra, while the festival chorus numbered 4000 voices and was conducted alternately by Arthur Messer, Rudolf Schuller, Karl Reckzeh and Hugo Anschutz.

The Florentine Polyphonic Choir (mixed voices), under the direction of Sandro Benelli, at their American début (New York, October 11) made a deep impression in a programme of a cappella music ranging from Palestrina to composers of the present day.

Of special interest was the programme rendered by the Society of the Friends of Music on December 18, when New York heard the first performance of Purcell's opera *Dido and Aeneas* in concert form. Even without scenic accessories the inherent power of the music roused the audience to prolonged demonstrations of approval. The soloists, chorus and orchestra, under the direction of Artur Bodanzky, belonged to the personnel of the Metropolitan Opera House.

During the interregnum following the resignation of Kurt Schindler, in 1926, the Schola Cantorum, of New York, gave its concerts under the direction of Margarete Dessoff as guest-conductor, who had the distinction of being the only woman that ever conducted a choral society in New York. In the fall the organization resumed its concerts under the direction of its new permanent conductor, Hugh Ross.

FESTIVALS. The 28th biennial Cincinnati May Festival (May 3-5) was held under the direction of Frank Van der Stucken. A splendid per-

formance of the *Missa Solemnis* was given in honor of the Beethoven centenary. The fourth concert (May 4) was devoted entirely to works of Bach, and on this occasion a secular cantata, *Eolus Appeased*, had its first American performance. The orchestral numbers were played by the Cincinnati Symphony Orchestra under Frederick Stock as guest-conductor.

The 7th annual Harrisburg Festival was conducted by Ward Stephens (May 10-12). From very modest beginnings the programmes have steadily presented more ambitious works, until this year creditable performances were achieved of Verdi's *Requiem* and Saint-Saëns' *Samson et Dalila*. As the financial condition of the treasury did not permit the engagement of an orchestra, the instrumental accompaniment was played on the organ by H. R. Shelley.

The 21st annual Bethlehem Bach Festival was held under the direction of Dr. F. J. Wölle (May 13, 14). The programme of the first day consisted of six Motets, while the second day, as customary, was devoted to the Mass in B minor, in the performance of which a somewhat daring innovation might have been made the subject of adverse criticism, if the perfection of the execution and the resultant tremendous effect had not silenced all objections. Dr. Wölle had dispensed with the services of soloists and had all the solo passages executed in unison by the respective sections of the chorus. Virtuoso orchestras have come to be taken almost as a matter of course, but a virtuoso chorus mastering difficulties assigned to highly trained soloists is something new even in this age of musical innovation.

The 34th annual Ann Arbor Festival took place under the direction of Earl V. Moore, with the assistance of the Chicago Symphony Orchestra under Frederick Stock (May 18-21). A superb performance of the *Missa Solemnis*, at the second concert, marked the organization's observance of the Beethoven centenary. A novelty was Howard Hanson's *Heroic Elegy*, written especially for the festival in honor of the Beethoven centenary, and conducted by the composer. Whether this *Heroic Elegy*, a typically futuristic work, can be considered a fitting tribute to the composer of the *Heroic Symphony* is a question that not everybody will answer in the affirmative.

The 19th annual North Shore Festival was held at Evanston (May 23-25) under the direction of Peter Lutkin, with the assistance of the Chicago Symphony Orchestra under Frederick Stock. The splendid playing of the latter organization was practically the only satisfactory feature of the festival. In former years Mr. Lutkin's listless conducting of choral masses elicited much unfavorable comment, and there was no improvement in this respect. As a matter of fact, the attendance at all concerts was much below the average of other years.

At the 68th annual Worcester Festival, under Albert Stoessel (October 5-8), the work that aroused the greatest enthusiasm was a novelty, Henegger's *Le Roi David*, which had met a decidedly cool reception at earlier performances in New York and Boston.

The 31st annual Maine Festival (Portland, Bangor and Lewiston, October 2-10) was the last given under the direction of its founder and only conductor, William R. Chapman. His

successor is Adelbert W. Sprague, while Mr. Chapman retains his connection with the organization as honorary conductor.

ORCHESTRAS. Every symphony orchestra throughout the country observed the Beethoven centenary. The most elaborate celebration was that arranged by the Boston Symphony Orchestra, which gave a Beethoven Festival lasting an entire week (March 22-29), devoting four concerts to the symphonies, two to the *Missa Solemnis* and one to chamber-music. The performance of the mass (March 22) was the first heard in Boston since the opening of Symphony Hall (1901). Needless to say that the execution of all the programmes reached the level of absolute perfection. The programmes for the rest of the year were made in accordance with a scheme that Mr. Kussevitky seems to have adopted as a permanent one: One part is given over exclusively to the modernists, the other to works of the standard repertory. Two concerts (February 18, 19) were devoted entirely to works of Respighi, who appeared both as conductor and pianist. Alfredo Casella, who succeeded Agide Jacchia, conducted the regular series of summer concerts, the famous "Pops."

The New York Philharmonic Orchestra played under its regular conductors, Wilhelm Furtwängler and Willem Mengelberg, and under three guest-conductors, Georges Georgesco (January 23), Fritz Reiner (January 25, 27, 30) and Arturo Toscanini (February 1, 6). The two concerts conducted by the latter were the sensation of the season. Both programmes contained only symphonies of Beethoven (3 and 5, 1 and 9). At the second concert the police were obliged to clear the streets of those unable to gain admission. Later on the society paid a further tribute to Beethoven with two more concerts (March 24, 25), under Furtwängler, when the great Fugue in B \flat for string-quartet, was performed with magnificent tonal effect by the entire string orchestra. With the assistance of the Choral Symphony Society three impressive performances, conducted also by Furtwängler, were given of Brahms' *German Requiem* (March 31, April 1, 3).

After 42 years of continuous service Walter Damrosch retired as conductor of the New York Symphony Orchestra, making his farewell appearance on April 10 with a superb rendition of Beethoven's Ninth Symphony. But before that date a signal honor was paid to him, when his own orchestra joined forces with the Philharmonic Orchestra in a testimonial concert at the Metropolitan Opera House (March 25). The conductors of this imposing body of 250 artists were Mr. Damrosch himself, Fritz Busch and Wilhelm Furtwängler. Fritz Busch, of Dresden, at his American debut with the Symphony Orchestra (March 13) at once was recognized as a conductor of the first rank. He also conducted the concerts from the opening of the fall season until the end of the year. Michael Gusikov succeeded Mischa Mischakov as concert-master, and Josef Emmonts replaced Josef Malkin as first cellist.

During the absence of Leopold Stokowski the concerts of the Philadelphia Symphony Orchestra, from October to the end of the year, were conducted by Fritz Reiner, of Cincinnati, who, in turn, was temporarily replaced by Victor de Sabata.

Differences between the Musical Union and the board of directors of the Chicago Symphony Orchestra once more precipitated a crisis. The Union demanded an increase of the minimum wage of \$80 a week to \$100. When, after prolonged discussion, no agreement could be reached, the orchestra was actually disbanded. This unexpected action induced several music-lovers to raise a special fund to pay the difference between the old and the new schedules in time to reassemble the players for the opening of the fall season.

Because of the precarious financial condition of the St. Louis Symphony Orchestra Rudolf Ganz resigned as conductor and resumed his career as concert pianist. However, a sufficient amount was subscribed to enable the organization to resume its activities in the fall under Emil Oberhoffer as guest-conductor.

After the sudden death of Walter Rothwell (March 13), conductor of the Los Angeles Philharmonic Orchestra, the season was completed by Emil Oberhoffer. In the fall Georg Schneevogt, the famous Finnish conductor, entered upon his new duties as permanent conductor.

William F. Hoffmann, the concert-master of the People's Symphony Orchestra, of Boston, was elected conductor, succeeding Emil Mollenhauer, who died December 10.

The Minneapolis Symphony Orchestra, under Henri Verbrugghen, celebrated the 25th anniversary of its foundation (November 4) by repeating the program of the initial concert in the presence of its founder, Emil Oberhoffer, and its first soloist, Marcella Sembrich, whose selections on this occasion were rendered by her pupil, Dusolina Giannini.

The 10th season of the Stadium Concerts, New York (July 6-Aug. 30), under Van Hoogstraten, Stock and Monteux, was the most successful in their history, the record attendance of 250,000 (1925) being exceeded by 50,000. Equally favorable were the reports regarding the sixth season of the summer symphony concerts at the Hollywood, Cal., Bowl (July 5-August 27) and the second season of the Summer Symphony Association of San Francisco (July 7-August 28). Taking advantage of their geographical proximity, these two latter organizations adopted the system of exchanging conductors, so that the audiences were able to appreciate Hertz, Walter, Van Hoogstraten, Goossens, Gabrilowitsch, Monteux, Sokolov and Shavitch.

Of new orchestras that began their career during the year by far the most important was the Beethoven Symphony Orchestra (100 performers), of New York, under Georges Zaslavsky, introducing itself in an all-Beethoven programme (February 22). The New Brunswick (N. J.) Symphony Orchestra of 80 players, under J. Earle Newton, gave its first concert on February 11.

NOVELTIES. The following list includes the more important new works heard during the year: Boston Symphony Orchestra, under Kussevitky: J. Achron, Violin Concerto (Jan. 14); A. Roussel, Suite in F (Jan. 21); A. Copland, Piano Concerto (performed by composer, Jan. 28); O. Respighi, *Vebrate di Chiesa* (Feb. 25); F. Converse, *Never 10,000,000* (Apr. 15); A. Dukelsky, Suite from ballet *Zéphire et Flore* (Apr. 29); R. H. Sessions, Symphony No. 1 (Apr. 22); A. Honegger, Preludes to acts 2 and

3 and *Malédiction de Thésée* from incidental music to d'Annunzio's *Fedra* (Oct. 28); F. Malipiero, Suite *Cimariosiana* (Nov. 11); B. Martinu, *La Bagarre* (Nov. 18); A. Tansman, Piano Concerto No. 2 (played by composer, Dec. 29).—New York Philharmonic Orchestra, under Furtwängler; A. Miaskovsky, Symphony No. 7 (Feb. 17); J. Sibelius, *The Tempest*, overture (Feb. 24); Beethoven, *Leonore No. 2*, new version of the overture recently discovered (Mar. 4); W. Brauniels, *Don Juan*, symphonic poem (Mar. 17); under Mengelberg: A. Ferroud, *Foules* (Oct. 13); E. Bloch, Symphony in C minor (Oct. 20); Bartók, *Rhapsody* for piano and orchestra (Dec. 22); E. Schelling, *Marocco*, symphonic poem (Dec. 22).—New York Symphony Orchestra, under Busch: Y. Merò, *Capriccio on-garese* for piano and orchestra (played by composer, Nov. 3); A. Busch, Symphony in D minor (Nov. 25); V. Dubensky, Symphony (Dec. 29).—Philadelphia Symphony Orchestra, under Stokowski: J. Carillo, *Concertino* in quarter, eighth and sixteenth tones (Mar. 4); S. Rachmaninov, Piano Concerto No. 4, G minor (played by composer, Mar. 18); B. Kontzen, *Solitude*, poème-nocturne (Apr. 1); E. Varese, *Arcanes* (Apr. 8); under Busch: F. Delius, Cello Concerto (played by Beatrice Harrison, Oct. 28).—Chicago Symphony Orchestra, under Stock: A. Oldberg, Symphony No. 3 (Mar. 18).—Baltimore Symphony Orchestra, under Strube: E. Schenck, *In a Withered Garden*, tone-poem (Dec. 11).—Syracuse Symphony Orchestra, under Shavitch: E. Fabini, *Las Islas de los Ceibos*, tone-poem (Apr. 16).

OPERA. At the Metropolitan Opera House in New York 198 performances were given from a repertory of 49 operas by 28 composers. According to nationality these were divided as follows: Italian, 23 works by 12 composers totaled 100 performances; German, 14 works by 6 composers totaled 55 performances; French, 8 works by 6 composers totaled 28 performances; American, 2 works (including 1 ballet) by 2 composers totaled 10 performances; 1 Bohemian opera (sung in German) and 1 Russian (sung in French) had 3 and 2 performances, respectively. Wagner, represented by 9 works, stood first with 32 performances. Next came Verdi, represented by 6 works and 28 performances. Third stood Puccini, represented by 6 works and 26 performances. Four operas were given only once.

The first novelty was Deems Taylor's *The King's Henchman* (February 7), under Serafin, with Easton, Johnson and Tibbett as principals. The book, by Edna St. Vincent Millay, is one of unusual excellence in respect to diction and dramatic construction, and was in no small measure responsible for the emphatic success of the opera. The music, entirely free from any modernistic influences, is always expressive, often truly emotional and in some telling climaxes rises to great heights. The work aroused genuine enthusiasm and had five repetitions.

Of the 12 operas by American composers produced in this opera house it was by far the best.

Alfredo Casella's ballet *La Gira* (March 19), under Serafin, with Galli, Berger, Bonfiglio and Angelo as principals, illustrated a silly plot with unintelligible futuristic music. Erich Korngold's *Violanta* (November 5), under Bodansky,

with Jeritz, Kirchhoff and Whitehill, was seriously handicapped when it was given in a double bill with a masterpiece like *Hänsel und Gretel*. Nevertheless, as the work of a boy of 18 it is quite remarkable for excellence of workmanship and skill in orchestration. The thematic material, however, is hardly more than commonplace. The same composer's *Die Tote Stadt*, produced in 1921, marks a long step in advance over the earlier work.

Of the revivals of older works by far the most important was the production of Beethoven's *Fidelio* (January 22), under Bodanzky, with Larsen-Todsen, Laubenthal, Bohnen and Schorr, in honor of the Beethoven centenary. For this occasion Bodanzky had provided a new version by setting all the spoken dialogue to music, employing, of course, only the master's own material. The reverence and the skill with which he approached his task cannot be praised too highly. The performance itself was nothing less than superb. But all this will not change the status of *Fidelio* in the operatic repertory. From the very beginning, it was only the great name of its composer that compelled respectful attention for a work that never found its way into the affection of the public.

After an interval of almost 20 years Thomas' *Mignon* was revived (March 10), under Hasselmans, with Bori, Talley, Gigli and Whitehill, but sounded terribly old-fashioned, and left the audience apathetic. On the other hand, Bellini's *Norma* upon its revival after 31 years (November 16), under Serafin, with Ponselle, Telva, Lauri-Volpi and Pinza, created almost a sensation. The real truth is, that Ponselle was the sensation, and by no means Bellini.

Of the new artists it can be said that those who made their debuts in principal rôles were, without exception, singers and actors of the first rank. Walter Kirchhoff (as Loge in *Das Rheingold*, January 28), Grete Stückgold (as Eva in *Die Meistersinger*, November 2), Richard Mayr (as Pogner in *Die Meistersinger*, November 2), Philine Falco (as Curra in *La Forza del Destino*, November 4), Dorothee Manski (as the Witch in *Hänsel und Gretel*, November 5), Louise Lerch (as Gilda in *Rigoletto*, November 5), Frederick Jagel (as Rhadames in *Aida*, November 8), Everett Marshall (as the Herald in *Lohengrin*, November 12), Leonora Corona (as Leonora in *Il Trovatore*, November 24), Elena Rakovska (as Rachel in *La Juive*, December 23).

After the lovers of opera in Cleveland had secured the necessary guarantee fund, they contracted with the Metropolitan Opera House for a one-week season of opera for five years. The first of these short seasons was given in Cleveland from May 2-7, with a repertory of eight operas, to capacity houses. The receipts covered all expenses, leaving the guarantee fund intact.

The Chicago Civic Opera gave 100 performances of 40 operas by 27 composers. According to nationality these were distributed as follows: Italian, 22 works by 11 composers totaled 63 performances; German, 8 works by 6 composers totaled 17 performances; French, 8 works by 8 composers totaled 16 performances; Russian, 2 works by 2 composers were given each twice. The operas heard most frequently were *Traviata*, *Tosca* and *Bohème* (each 5 times), while not fewer than 12 operas had only one hearing. Only one novelty was introduced, Honegger's *Judith*

(January 27), under Polacco, with Garden, Loring, Formichi and Cotreuil. The audience evidently was not far enough advanced to appreciate a typical futuristic opera written in the polytonal style, for the work disappeared after a single rendition.

After the close of the regular Chicago season the company gave about 50 performances on a tour embracing 17 cities, the longest stay being at Boston (16 performances). Among the new singers three scored unusual success at their debuts: Leone Kruse, as Elisabeth, and Heinrich Schlusnus, as Wolfram, in the same opera (*Tannhäuser*, November 4) and René Maison (in the title-rôle of *Faust*, December 21). The other newcomers were Maria Kurenko (as Rosina in *Il Barbiere di Siviglia*, January 25), John Sample (as Rhadames in *Aida*, November 12), Robert Ringling (as Tonio in *Pagliacci*, November 17), Olga Kargau (as Nedda in *Pagliacci*, November 17), Kathryn Witwer (as Micaela in *Carmen*, December 9), Della Samoilov (as Santuzza in *Cavalleria Rusticana*, December 17).

The year marked the end of the five-year period covered by the guarantee fund raised in 1922, when the Chicago Civic Opera Company began its career (See YEAR BOOK, 1922). A detailed report issued by the directors showed that during these five years 252 performances had been given in the regular Chicago seasons from a repertory of 68 operas, that the attendance had risen from 233,571 to 271,192, and the receipts from \$717,161 to \$936,134. At the time of publication the new guarantee fund, covering the next five years, had not yet been completed, but the subscriptions already received exceeded the first fund.

The San Carlo Opera Company, established in 1910 by Fortune Gallo as a traveling organization, opened its 18th season in its own new home, the Gallo Theatre in New York, with a splendid performance of Puccini's *La Bohème* (November 7), and thus has taken its place as a permanent institution. Through its extended tours from coast to coast the organization has been a powerful factor in arousing wider interest in grand opera and, incidentally, has won for itself a solid reputation for the excellence of its general ensemble.

The Philadelphia Civic Opera Company showed remarkable enterprise, when it opened its second season (December 1) by giving the American première of Richard Strauss' *Feuersnot*, under Alexander Smallens, with Helen Stanley, Marcel Salzinger and Sigurd Nilssen as principals. On the same night Gluck's *Maienkönigin* (1755) also had its American première.

In Seattle Karl Krueger, conductor of the local symphony orchestra, organized a Society for Opéra Intime, which gave the American première of Erich Korngold's ballet *Der Schneemann* (May 13).

Another American première to be recorded was that of Händel's *Julius Caesar*, at Smith College, Northampton, Mass. (May 19), all the principals, the entire chorus and orchestra being either members of the faculty or students of the music department.

For a fourth short season of opera the Los Angeles Civic Opera Company and the San Francisco Opera Company joined forces (Sept. 12-Oct. 17), as in the preceding year. While the orchestra was selected from the players of

the respective symphony orchestras, the majority of the singers were artists of the Metropolitan and Chicago companies. The outstanding event of the season was a splendid performance of *Tristan und Isolde*, with Elsa Alcen and Rudolf Laubenthal in the title rôles, under the direction of Karl Rieder (Oct. 4).

BIBLIOGRAPHY.—REFERENCES H. Abert, *Illustriertes Musiklexikon* (Berlin), brief, complete and accurate. Grove's *Dictionary of Music and Musicians*, third revised edition, edited by H. C. Colles (London), 4 volumes issued [A-Sonatina] largely rewritten and brought down to date; a cosmopolitan point of view has replaced the rather limited British perspective of the earlier editions; many new names among the contributors. J. Pulver, *A Biographical Dictionary of Old English Music* (London), scholarly, comprehensive and very valuable for information about performers, publishers and makers of musical instruments during the 17th and 18th centuries. G. Saleski, *Famous Musicians of a Wandering Race* (New York), 425 authentic sketches of famous Jewish composers and performers.

BIOGRAPHY: H. Grace, *Ludwig van Beethoven* (London), follows Thayer as to facts and does not attempt to portray the master as a superman above all human frailties; much space given to careful and unbiased appraisal of works. E. Newman, *The Unconscious Beethoven* (London), a psychological study of the man, overemphasizing faults and weaknesses; too many suppositions and inferences not substantiated by proofs. G. E. Abraham, *Borodin: The Man and His Music* (London), the best biography in English. W. C. Sayers, *Samuel Taylor Coleridge, Musician: His Life and Letters* (London), a revised and enlarged edition of a work published in 1915. A. Tessier, *Couperin* (Paris), valuable for critical analysis, complete catalogue of works and extensive bibliography. C. Koehlin, *Gabriel Fauré* (Paris), uncritical, vastly overrates the composer's importance. P. de Stoecklin, *Grieg* (Paris), appreciative and impartial. G. de Pourtales, *La vie de Franz Liszt* (Paris), brings nothing new, but treats the subject with sympathetic insight. K. von Wolfert, *Mussorgsky* (Berlin), very complete as to biographical facts and sources, but rather brief in discussion of works. U. Prota-Giurleo, *Nicola Logroscino, il dio dell' opera buffa* (Naples) valuable as result of study of original documents, corrects a number of long accepted errors. D. Arundel, *Henry Purcell* (Oxford), sane and scholarly. H. Dupré, *Purcell* (Paris), enthusiastic, but critical. U. Prota-Giurleo, *Alessandro Scarlatti, il palermitano* (Naples), corrects errors on basis of original documents. E. Schumann, *The Schumanns and Brahms: Memoirs* (New York, translated by Marie Busch, interesting because of the eminent position of the artist, the chapter dealing with Brahms' ideas of interpretation of special value. F. Chaliapin, *Pages de ma vie* (Paris), a very frank story of early privations and struggles. L. Slezak, *Meine sämtlichen Werke* (Berlin), a most amusing book of reminiscences. R. Stein, *Tchaikovsky* (Stuttgart), undertakes to explain the works as direct expression of personal experiences. O. Russell, *The American Orchestra and Theodore Thomas* (New York); chiefly a biography touching upon the orchestral situation only in relation to the work

of Thomas. P. Warlock, *Thomas Wythorn, An Unknown Elizabethan Composer* (Oxford), a valuable contribution to the history of the period.

HISTORY. F. Densmore, *The American Indians and their Music* (New York), valuable for information regarding their domestic life, gives many aboriginal melodies. H. Engel, *Die Entwicklung des deutschen Klavierkonzerts von Mozart bis Liszt* (Leipzig), comprehensive and authoritative. F. Gillman, *The Evolution of the English Hymn* (London), a popular, readable presentation. L. Nalder, *The Modern Piano-forte* (London), very thorough and lucid in description of mechanical details. C. Pearce, *The Evolution of the Pedal Organ and Matters Connected Therewith* (London), a brief account of the progress of organ-building in England. J. Prod'homme, *Beethoven, raconté par ceux qui l'ont vu* (Paris), an interesting collection of estimates by contemporaries. E. Rabich, *Die Entwicklung der Oper* (Langensalza), a strictly historical account written in attractive style. T. Reinach, *La musique grecque* (Paris), an authoritative treatise with numerous examples in notation. O. Sonneck, *Beethoven: Impressions of Contemporaries* (New York), a copious collection covering the composer's life from 1786 till his death. O. Sonneck, *The Riddle of the Immortal Beloved* (New York), very important in bringing out facts about Beethoven that suggest the possibility of two love affairs. E. Wellesz, *Byzantinische Musik* (Breslau), a valuable summary of the theories advanced by recent investigators. R. Wilhelm, *Chinesische Musik* (Frankfurt), an historical investigation.

CRITICISM, ESTHETICS. W. Bardas, *Zur Psychologie der Klaviertechnik* (Berlin). H. Berl, *Das Judentum in der Musik* (Stuttgart), a sensational attempt to brand the music of Jewish composers as antagonistic to, and incompatible with, Western European music. U. Goguel, *Sterbende Kultur. Der Niedergang der deutschen Tonkunst* (Freiburg), regards modernistic music as hopeless decadence of art. A. E. Hull, *Musio: Classical, Romantic and Modern* (London), a presentation of the evolution of musical styles, with strongly marked bias toward modernism. A. B. Klein, *Color-Musio: The Art of Light* (London), regards the combination as nothing more than an æsthetic experiment without practical value. K. Kobald, *Beethoven; Seine Beziehungen zu Wiens Kunst und Kultur* (Vienna), a splendid tribute to the master's dominating personality. M. Koch, *Wagners geschichtliche volkische Sendung* (Langensalza), in commemoration of the semi-centenary of the Bayreuth Festival. J. G. Prod'homme, *La Jeunesse de Beethoven* (Paris), a critical study of the life and works of the period from 1770-1800, with complete thematic catalogue. J. W. Sullivan, *Beethoven: His Spiritual Development* (New York), an entirely subjective study attempting to place inferior compositions on the same level with the masterpieces. L. Vallas, *Les idées de Claude Debussy, musicien français* (Paris), interesting for the composer's very personal, and often eccentric, estimates of other composers. W. Wallace, *Liszt, Wagner and the Princess* (London), revives and exaggerates old scandals for the purpose of belittling the artistic stature of the composers. M. Auer, *Bruckner als Kirchenmusiker* (Ratisbon), the estimate of a panegyrist. H. Mersmann, *Angewandte Musikästhetik* (Berlin). J. Wirth,

Julius Stockhausen, der Sänger des deutschen Liedes (Frankfort), a tribute by his daughter for the centenary of his birth, entirely objective and impartial.

THEORY. J. H. Arnold, *Plain Song Accompaniment* (Oxford), an excellent treatise with numerous examples harmonized. H. Beauchamp, *Méthode élémentaire d'accompagnement du plain chant* (Rouen), concise and practical. A. Haba, *Neue Harmonielehre des diatonischen, chromatischen, viertel-, drittel-, sechstel- und zwölftel-Tonsystems* (Leipzig), a purely speculative exposition of non-existing systems without practical application. C. H. Kitson, *Counterpoint for Beginners* (Oxford), a lucid exposition of fundamental principles applied in 3 part counterpoint. C. H. Kitson, *Elementary Harmony* (Oxford), excludes consideration of modernist combinations. C. Koehlin, *Précis des règles du contrepoint* (Paris), a summary rather than an explanation of principles.

CORRESPONDENCE. O. Sonneck, *Beethoven's Letters in America* (New York), reproduction in facsimile of 35 letters now owned by Americans, with translation and detailed commentary; many never published before. R. Du Moulin-Eckart, *Hans von Bülow: Neue Briefe* (Munich). J. Durand, *Lettres de Claude Debussy à son éditeur* (Paris), cover the period from 1902-17, very valuable for information regarding unfinished works. B. Litzmann, *Clara Schumann-Johannes Brahms: Briefe* (Leipzig), cover period from 1853-96; throw new light on personal relations and contain interesting comments on contemporary musicians and musical events.

MYOPIA. The enormous importance of myopia from the industrial and social viewpoints seldom receives adequate consideration because of the fact that it is largely remediable by wearing minus glasses. Dr. Poos of the eye clinic of Professor von Szily of the University of Münster considers the problem for Germany, a country where it is popularly believed to be unusually in evidence. (*Klinische Wochenschrift*, Aug. 27, 1927.) There are two types of short sight, one due to abnormal length of the anteroposterior axis of the eyeball and the other, less common, to anomalies of the refracting media. But few individuals are born with short sight, so that myopia must be regarded as an acquired disease; but attempts to learn enough of the causes to prevent its appearance have mostly failed. A hereditary factor is often present, and if this is the chief causal factor the fatalist attitude towards the affection must then be that it is beyond prevention by practicable means. So-called close work can never of itself cause myopia but can aggravate it; nevertheless progressive myopia has often been seen in families of laborers who have never learned reading or writing. It is of interest to note that of 25 apes examined, 4 were found to be myopic. If myopia were not so often progressive and extreme we could be content to look on these eyes as mere biological variations from the normal, but, as stated, it partakes of many attributes of actual disease.

In the Paris letter to the *Journal of the American Medical Association* for March 26 some statistics of myopia are given illustrative of its increased incidence with age up to a certain period. Thus, while in the primary grades

it involves less than 7 per cent of the pupils the figure for intermediate grades is about 10 per cent, for high schools up to 26 per cent and for universities nearly 60 per cent. The only preventive measures in use or inculcated are the erect posture while studying and a minimum focal distance of 33 cm. for both reading and writing with of course satisfactory illumination.

MYRICK, HERBERT. An American publisher and editor, died at Bad Nauheim, Germany, on July 6. He was born on Aug. 20, 1860, at Arlington, Mass., and educated at Boston University. He also obtained the degree B.S. at the Massachusetts Agricultural College. For many years he was president of the Phelps Publishing Company and editor-in-chief of its weekly *New England Homestead*, Springfield, Mass. He published *Good Housekeeping*, 1900-11. He was publisher and editor of *American Agriculturist* (New York); *Orange Judd Farmer* (Chicago) 1888-1920. He founded in 1910 a school of agriculture, domestic science, and manual training at Springfield, Mass. He developed the metallic system for drawing fibre of cotton. He was one of the original advocates of coöperative dairying, tariff on farm products, experimental stations, coöperative buying and selling by farmers, the Federal farm loan act, and various other movements in behalf of education and agriculture. His periodical *Farm and Home* was the first in the world to provide a general radio-phone service to its subscribers throughout the United States in 1921. His published works include: *The Federal Farm Loan System* (1916); *Rural Credits System* (1922); *Making a Boy into a Citizen* (1926).

NABOKOFF, CONSTANTINE. Russian diplomat, died in London, England, March 18. He was born in St. Petersburg in 1874. At an early age he entered the diplomatic service and for many years he filled various posts in the Ministry of Foreign Affairs in St. Petersburg. Following a short term of service in Brussels he went to the United States and served on the Russian delegation during the peace negotiations with Japan leading to the Peace of Portsmouth in 1905. He remained in the embassy at Washington D. C., until his appointment as consul-general in India in 1911. Just before the World War he was transferred to London where he did admirable work, particularly after the death of Count Benckendorff. Neither the imperial nor the provisional governments of Russia appointed a successor to Benckendorff and for two critical years Mr. Nabokoff was in charge of the embassy in London. This experience he vividly described in his book *The Ordeal of a Diplomat* (1921). He retired from the diplomatic service in 1919. In addition to writing his memoirs he translated the memoirs of General Denikin and General Lukomsky. Nabokoff and his family suffered from the Bolsheviks, yet he always refrained from abusing them. As he had no private means he earned a living lecturing in England during the last years of his life. In 1926 Cambridge University conferred on him the honorary degree of Master of Arts.

NATAL, ná-tál. An original province of the Union of South Africa. See SOUTH AFRICA, UNION OF.

NATIONAL ACADEMY OF DESIGN. See ART EXHIBITIONS.

NATIONAL ACADEMY OF SCIENCES. A body of American scientists incorporated by Act of Congress approved by President Lincoln in 1863, for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art, when called upon by any department of the government, the actual expense of such investigations, examinations, experiments, and reports, to be paid from appropriations made for the purpose without compensation for any services to the government. The membership is limited to 250 active members and 50 foreign associates. New members are elected by the Academy on nominations from its 10 sections: mathematics, astronomy, physics, engineering, chemistry, geology and paleontology, botany, zoology and anatomy, physiology and pathology, anthropology and psychology. Fifteen new members and three foreign associates were elected in 1927, as follows: Members, E. T. Bell, C. P. Berkeley, William Bowie, A. H. Compton, B. M. Duggar, Thomas A. Edison, R. A. Emerson, H. M. Evans, W. K. Gregory, C. S. Hudson, A. N. Richards, E. P. Hubble, Peyton Rous, Albert Sauveur and H. V. P. Wilson; Foreign Associates, Paul Sabatier, Godfrey H. Hardy, and Carl Stumpf. The Academy holds two meetings each year: the annual meeting, held in Washington beginning the fourth Monday in April; and the autumn meeting, held at a place and on dates decided upon by the Council of the Academy. The autumn 1927 meeting was held in October at Urbana, Illinois. These meetings are devoted to business and the presentation of scientific papers by Academicians or persons introduced by them.

The Academy has trust funds which grant money for the furtherance of research investigations, and other trust funds which provide for gold medals in recognition of outstanding scientific work. One medal was presented at the annual meeting in April, 1927: the Agassiz Medal for Oceanography, awarded to Max Weber, emeritus professor of zoology at the University of Amsterdam and director of the Siboga Expedition, in recognition of his distinguished research in the field of oceanography. The Academy publishes a series of Memoirs, consisting of monographs by Academicians and others, and reports of investigations conducted for the government; also *Biographical Memoirs* of the deceased members. *Proceedings*, issued monthly, is devoted to condensed reports of the most recent scientific discoveries. The officers in 1927 were: T. H. Morgan, president; Frederick E. Wright, vice president; R. A. Millikan, foreign secretary; David White, home secretary; George K. Burgess, treasurer. The headquarters are at B and 21st Streets, Washington, D. C.

NATIONAL BANKS. See BANKS AND BANKING.

NATIONAL CIVIC FEDERATION, THE. An American movement, organized in 1900, for the purpose of seeking the solution of some of the great problems related to social and industrial progress, providing especially for the discussion of questions of national import, aiding in the crystallization of the most enlightened public opinion, and promoting legislation when desirable. The Federation is directed by an executive committee composed of representatives of the public, of employers, and of wage-earners. Its activities are conducted through specialized departments and committees. It is essentially

a patriotic institution, advocating proper and adequate military defense, and opposing super-pacifist efforts against "all war," including defense of the country against invasion.

The Department of Industrial Relations seeks to reduce to a minimum the friction and misunderstanding which exist between employers and wage-earners, and to this end a national commission was appointed to study the following questions: The Sherman Anti-Trust Act; Government by Injunction; The "Yellow Dog" Contract; and The Company Union. The Department on Active Citizenship, with John Hays Hammond as Chairman, was made up of representative Republican and Democratic men and women, from various professional, patriotic, commercial, labor, farm, religious, and other civic bodies, who are endeavoring to induce citizens to participate actively in their respective party organizations and in the elections of their parties.

The Industrial Welfare Department was a movement to secure improvements in working and living conditions of wage-earners voluntarily by employers, and advocates a proposal for retirement annuities to provide against destitution in old age.

In April, 1927, the Department held a conference on old age pensions which was attended by representatives of corporations, and published a report which is of scientific value in helping to solve this problem. A joint committee, composed of members of the Industrial Welfare and Woman's Departments, was appointed to study housing conditions in army posts, to inform the public of the needs of officers and enlisted men. The Woman's Department made a survey of illiteracy among adults and completed a survey of almshouses in New York, Pennsylvania, New Jersey and Connecticut to aid in the problem of the care of the indigent aged. The Federation had a Department on Current Economics and a Committee on Free Speech, held a number of national conferences devoted to questions of foreign policy and immigration, and has sent various commissions to Europe to obtain information on the experience of foreign countries from which the United States might profit.

The Executive Council of the Federation for 1927 included the following: Elihu Root, honorary president; Matthew Woll, acting president; Samuel McRoberts, treasurer; D. L. Cease, secretary; Ralph M. Easley, chairman of the executive council; Miss Maude Wetmore, chairman, Woman's Department; Charles L. Edgar, chairman, Industrial Welfare Department; Condé B. Pallen, chairman, Department on Subversive Movements; Archibald E. Stevenson, chairman, Committee on Free Speech; John Hays Hammond, chairman Department of Active Citizenship; V. Everit Macy, chairman Department on Industrial Relations; Marcus M. Marks, chairman Industrial Round Table Department; Jeremiah W. Jenks, chairman Department on Current Economics; Gertrude Beeks Easley, secretary, executive council; Mrs. Coffin Van Rensselaer, executive secretary, Woman's Department; and Peter J. Brady, secretary Department of Political Education. The headquarters are in the Metropolitan Tower, East 23rd Street, New York.

NATIONAL DEFENSE. See MILITARY PROGRESS; NAVAL PROGRESS.

NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES. An organization of persons actively engaged in educational work and others interested in education; organized at Philadelphia, Aug. 26, 1857, under the name of the National Teachers' Association, and on June 30, 1907, incorporated by Congress under its present name. In July, 1920, at the annual meeting, the Association was reorganized and provision was made for a Representative Assembly composed of delegates from State and local educational associations. The other governing bodies are: a board of directors; an executive committee of five; a board of trustees; departmental organizations; standing and special committees; and a staff at headquarters which is held responsible for carrying out the decisions of the governing bodies. There are 18 departments, each having its own officers, and more than 20 committees actively at work on professional problems. Two conventions are held annually. The summer meeting serves as a clearing house for educational ideas and reviews the progress of the year in education. At this time, in addition to the general sessions, meetings of the Representative Assembly, the departments of the Association, and a number of allied organizations are held. In 1927 this meeting was held at Seattle, Washington, July 3-8, with an estimated total attendance of more than 15,000. The 1928 Summer convention was to meet in Minneapolis the first week in July. The Department of Superintendence holds a winter convention the last week in February of each year. The 1927 meeting was in Dallas, Texas; that for 1928 was to be in Boston. This department was planning to complete in 1928 a four-year programme of coöperative research on the school curriculum in which more than 300 cities have taken part.

The chief objective of the Association is to secure from the American public a broader recognition of education, and, through a legislative programme, to provide for increased educational opportunities for American children. The Association stands for a Department of Education with a Secretary in the President's Cabinet; a competent well-trained teacher in every public school position in the United States; increased facilities for teacher training; continued investigation of educational problems as the basis for revised educational standards and methods; and active assistance to state and local affiliated associations in securing needed legislation and in promoting their interests.

The Association's monthly *Journal*, established in 1921, supports the policies and programmes of the Association, aims to reflect the activities of professional organizations, and gives special consideration to new movements in education of national and international interest. The Association also publishes an annual volume of *Proceedings* and numerous reports on its activities. *Research Bulletins* containing statistical information on educational subjects are issued regularly. The finances of the Association are embodied in two funds, the current and the permanent, the latter amounting to \$290,072.31, on May 31, 1927, the receipts for the year ending on that date being \$413,849.80. The enrollment at the end of 1927 was 180,000. The headquarters of the Association are maintained at 1201 Sixteenth Street, Northwest, Washington, D. C. Officers elected for 1927-28 were: Presi-

dent, Cornelia S. Adair, Richmond, Virginia; secretary, J. W. Crabtree, Washington; and treasurer, Henry Lester Smith, Indiana University, Bloomington, Indiana.

NATIONAL SAFETY COUNCIL. An international organization of 4433 members, companies and individuals, located in the United States and abroad, representing about 8000 workshops and 8,000,000 workers. Formed as a result of a safety congress held in Milwaukee in 1912 under the auspices of the Association of Iron and Steel Electrical Engineers, it functions for the prevention of accidents in factories, in the streets, air, schools and homes, as well as for the health, sanitation and general welfare of the public at large. The Council maintains an extensive safety service, issuing posters for bulletin boards, pamphlets describing safety devices, and three monthly periodicals: the *National Safety News*; *Public Safety*; and *Safety Education*, for teachers and school pupils. During 1927 more than 3,000,000 illustrated safety posters were distributed and 6500 new and original bulletins, relating to industrial accidents for the most part, were issued, in addition to a 700,000 copy circulation of the 1927 *Safety Calendar*.

The industrial membership of the Council is divided into 24 sections, such as automotive, cement, chemical, construction, electric railway, food, marine, metals, mining, packers and tanners, public utilities, quarry, rubber, steam railway, taxicab and fleet owners, and textile and woodworking. Affiliated with the National Council are about 60 local community safety councils, many of which issue their own bulletins and magazines, and are served by volunteer executive committeemen. The Council participated in the drawing up of more than 40 national safety codes, and carried on community safety surveys, made by engineering specialists, in addition to the numerous regional industrial and public safety conferences held during 1927. The 16th annual congress, which was held at Chicago, September 26-October 2, was attended by more than 6000 delegates and 75,000 witnessed the pageants of safety staged by the Council at Soldier Field after the annual convention. The education division, which is located in New York City and receives financial support from the National Bureau of Casualty & Surety Underwriters, has a trained staff of specialists who devote all their time to serving the schools of the nation, thousands of whom are now teaching accident prevention fundamentals to pupils in public, parochial, private, and high schools, universities and colleges. The Council received financial contributions from the Rockefeller Foundation and was endeavoring to obtain additional assistance for its public safety programme, in an effort to reduce materially the large number of accidental deaths reported annually.

Officers elected by the 1927 Safety Congress were: President, Homer E. Niesz; and the following vice presidents: for industrial safety, Ernest W. Beck; for public safety, Miller McClintock; for public relations, Charles J. Moore; for finance, C. E. Pettibone; for membership, Henry A. Reninger; for engineering, George E. Sanford; for education, Albert W. Whitney; for health, Prof. C.-E. A. Winslow; treasurer, G. T. Hellmuth; managing director, William H.

Cameron. The headquarters are at 108 East Ohio Street, Chicago, Illinois.

NAUMBERG, HIRSH DAVID. Polish journalist, died at Warsaw, November 21. Born in 1876 at Mszczonow, Poland, of Hasidic parentage he received the traditional Jewish education in the house of his grandfather. When a young man he became prominent in Jewish literary circles as a writer of fiction. He was a strong advocate of Yiddish as a national language of the Jews scattered throughout the eastern hemisphere, and he abandoned the writing of fiction to enter journalism in the furtherance of the cause. Many classical works were translated by him into Yiddish. He visited the United States in 1911 and in 1926.

NAVAL PROGRESS. The marked feature of the year's naval history was the failure of the new naval conference at Geneva for the limitation of naval armaments. Nor was much expected of it. No sooner was the Five Power Treaty completed at Washington than the various nations began to make the most of its provisions. No restriction was placed on the total tonnage of cruisers possessed by any nation but the maximum size of cruiser permitted was set at 10,000 tons and the calibre of her heaviest guns limited to 8 inches. Japan hastened work upon cruisers under construction, which carried only 6-inch guns, and laid down a new class armed with 8. In less than three years, all the five signatory powers except the United States had under construction cruisers of 10,000 tons, carrying 8-inch guns. Great Britain and Japan laid them down so rapidly that a new building race seemed to be on. It was to curb this that the United States proposed another conference but the field was extended to include destroyers and submarines.

Presuming that the views of the people of a country are mirrored with fair accuracy in its press, the prospect of achieving any valuable results in checking new construction of the vessels in question was doubtful. France and Italy declined to join in the conference. Great Britain and Japan took part but without enthusiasm. The proposals of the United States were simple and included restriction of the tonnage of cruisers, destroyers, and submarines as follows: (a) Limiting the tonnage of cruisers of the United States and Great Britain to 200,000-300,000 tons each, and of Japan to 150,000-180,000. (b) Limiting the tonnage of destroyers of the United States and Great Britain to 200,000-250,000 tons each, and of Japan to 120,000-150,000. (c) Limiting the tonnage of submarines of the United States and Great Britain to 60,000-90,000 tons, and of Japan to 36,000-54,000. The age limits, for the three classes of vessels, which they must reach before replacement is to be permitted, were placed at 20, 15, and 12 to 13 years respectively.

These proposals were apparently not objectionable to Japan but she desired a larger tonnage in each class than was afforded by the 5-3 ratio. Great Britain declined to accept the tonnage limitations and set a much higher figure for cruisers. Her delegates offered nine proposals, not one of which bore exactly upon the questions before the Conference. Three concerned battleships—their age, tonnage, and guns—all drawn so as to increase, and prolong the present inferiority of the American fleet to that of Great Britain. Two concerned aircraft car-

riers, drawn with the same end in view. Three concerned the size, numbers, and guns of cruisers, drawn to support British plans for the effective use of her vast supply of high-speed merchant ships as cruisers in war and to curb the desire of the United States and Japan to build cruisers adapted to their requirements. Proposal No. 9 placed limits on the sizes of hulls and guns of destroyers and submarines—limits which Great Britain desired for such vessels in the navies of other nations and found unacceptable in her own.

These proposals were rejected by the United States and, so far as known, few were approved by Japan. The members of the British delegation were then recalled to London for consultation with the Cabinet. Upon their return they made new proposals, viz: A combined tonnage of cruisers, destroyers, and submarines: For the British Empire and the United States, 590,000; for Japan, 385,000. This included all vessels of less than replacement age. In addition, each nation might retain over-age vessels to a tonnage equal to one-fourth the foregoing allotments. Cruisers of Class A to be of 10,000 tons and carry guns of 8-inch or smaller calibre; cruisers of Class B to have a maximum displacement of 6000 tons and carry guns not exceeding 6 inches. The age limits for replacement were to be: cruisers of Class A, 18 years; Class B, 16 years; destroyers, 16 years; submarines, 13 years. Class A cruisers for the United States and the British Empire to be limited to 12 in number; for Japan, 8. Flotilla leaders to be of 1850 tons or less, and destroyers of 1500 tons or less; no gun to be carried by either in excess of 5-inch calibre; not more than 16 per cent of the total tonnage of these two classes to be composed of flotilla leaders (i.e. between 1500 and 1850 tons). Submarines to be divided into: Class A, 1000 to 1800 tons; Class B, 600 tons or less. The maximum tonnage of submarines for the British Empire and the United States to be 90,000; for Japan, 60,000. Not more than two-thirds of the allotted tonnage to be composed of Class A.

The new British proposals were objectionable to the American delegates on four main grounds: (1) that they restricted the liberty of the United States and Japan to apply their allotted tonnage to the construction of cruisers of such tonnage and guns (not to exceed 8 inches in calibre) as they saw fit (i.e. needed for their own naval purposes); (2) that they departed from the idea of limitation by categories of types; (3) that they imposed the 6-inch gun upon the United States and Japan as the main cruiser arm; and (4) that the low age limits of Class B cruisers would permit a total tonnage in that class of 500,000 to 550,000 in which the hitherto generally accepted replacement age for cruisers was not exceeded. This would constitute an enormous increase over all previous records and be in flat defiance of the purpose of the Conference which was to reduce and not increase expenditure.

The developments of navies of the world during 1927 and the condition of each at the end of the year are given in the following sections.

NAVIES OF THE WORLD IN 1927

ALBANIA. Although the naval force of Albania consists of a few small coast guard boats, a naval flag has been designed and adopted.

ARGENTINA. The latest naval programme was approved by the Argentine parliament in 1926. It provides for three light cruisers to replace the *Veinticinco de Maio*, the *Nueva de Julio*, and the *Patria*; for six destroyers to replace four superannuated boats and four others ordered in Germany (order canceled); for the necessary river gunboats to replace the four old monitors *Andes*, *Plata*, *Libertad*, and *Independencia*; such auxiliaries as are necessary for the naval service; two groups of three submarines each; a submarine school, and the necessary shops for submarine repair; and to acquire radio, anti-aircraft guns, catapults, and other necessary naval material. The expense is to be spread over 10 years; 35 million pesos (1 peso = \$0.424) in each of the first three years and 20 million in each subsequent year. Two cruisers of 6500 tons have been ordered in Italy. The dimensions are: length, 541.3 feet; beam, 58 feet. The engines are designed to develop 85,000 h.p. and give a speed of 32 knots; the fuel supply is 2000 tons. The armament will consist of 6 guns of 7.5 inches in pairs in three turrets on the midship line, two forward (the second raised sufficiently to fire over the first), and one aft; of 12 guns of 4.7 inches with high-angle fire; 6 1-pounders; and 6 55-cm. torpedo tubes. The complement is to be 600 officers and men. When launched, these cruisers will be named the *Almirante Brown* and the *Veinticinco de Maio*. Two flotilla leaders, the *Ohurruca* and the *Alcala Galiano*, of 1650 tons and 38 knots, had been purchased from the Spanish navy; and three others of 2350 tons and 35 knots had been ordered in England.

AUSTRALIA. Five vessels of importance were under construction for the Australian navy in 1927. Two light cruisers of 10,000 tons, the *Canberra* and *Australia*, were being completed in England and should both be ready for service before the summer of 1928. These vessels are similar to the cruisers of the *Berwick* class of the British navy. At full load, with 3400 tons of fuel oil and several hundred tons of reserve feed water, they will have a displacement of nearly 14,000 tons. The machinery is designed for 80,000 h.p. and the expected speed is at least 31.5 knots. The main battery will consist of eight 8-inch guns. Two submarines, the *Otway* and the *Owley*, of 1400 tons, were completed in 1927. They are similar in all essential respects to the *Oberon* class of the British navy. An aircraft carrier of 6000 tons, the *Albatross*, was under construction at the Australian dockyard on Cockatoo Island. A floating dry dock of 15,000 tons capacity was under construction by the Government of New South Wales and was to be placed at Walsh Island, Newcastle. The Australian government was taking an increased interest in naval affairs and was likely to add other vessels to its fleet in the near future. Of the 262 officers on board Australian ships, in grades of and above that of sub-lieutenant, only 49 were from the British navy. Of these, 1 admiral, 6 captains, 11 commanders, 20 lieutenant-commanders, and 4 lieutenants were included in the line or executive branch.

BELGIUM. The Belgian government decided to abolish its naval department and returned to France the old cruiser which was lent for use as a naval school.

BRAZIL. The only new construction recently undertaken by the Brazilian navy consisted of a large submarine which had been ordered in Italy.

CHILE. The six destroyers mentioned in *Naval Progress* for 1926 were ordered of Thornycroft in England. The details are: Length over all, 300 feet; beam, 29 feet; depth, 18.25 feet; displacement, 1050 tons; designed speed, 35 knots; armament, 6 torpedo tubes, 3 4.7-inch guns, and some smaller pieces. It will be noted that these are smaller than any destroyers recently ordered by other nations, but they were said to be very strongly built and adapted to the rough weather often found off the Chilean coast. The construction of two light cruisers was reported to be under consideration by the Chilean naval authorities.

DENMARK. The naval budget for 1928 is 21 million crowns, as opposed to 23,620,756 crowns (1 crown = 26.8 cents) for 1927. The only new construction in the Danish navy in recent years consisted of two submarines that were completed in 1927. Their approximate dimensions are: length, 161 feet; beam, 15 feet; surface draft, 9 feet. The horse power and speeds are 1000/650 and 14/9; and the armament consists of one 3-inch anti-aircraft gun and six torpedo tubes of 457 mm., four forward and two aft. Early in 1927 the government announced that it would submit a programme of new construction in the near future.

FINLAND. On account of its close proximity to Russia the Finnish government felt the necessity for acquiring an adequate naval force of special type. The project as developed involved two programmes, the building and costs of which are to be spread over 12 years. The first programme consists of two armored gunboats, three large submarines and one small one, four motor torpedo boats, and several minelayers and mine sweepers. The second programme consists of one armored gunboat, three large submarines, one or two small submarines, and four to six motor torpedo boats. The three large submarines of the first programme have been ordered in Holland and are to be completed in 1928, 1929, and 1930—one each year.

FRANCE. Notwithstanding the fact that, under the terms of the Five Power Pact of the Washington Conference, France can build two battleships of 35,000 tons, or any number or kind of capital ships of which the total tonnage does not exceed 70,000, the government had made no move to build such ships but had confined its attention to the production of light cruisers, flotilla leaders, destroyers, and submarines. The naval estimates for 1928 amounted to 2552 millions of francs (about \$100,800,000 at the 1927 value of the franc), an increase of about \$30,000,000 over that of 1927. The building programme for 1928 consisted of one light cruiser of 10,000 tons, six flotilla leaders of about 2700 tons, five large submarines, four coastal submarines of about 600 tons, one submarine minelayer, and two gunboats for foreign service. The enlisted personnel was fixed at 57,000. The officer personnel was set at 3822 as follows: 15 vice admirals, 30 rear admirals, 115 captains, 252 commanders, 360 lieutenant commanders, 800 lieutenants, 540 sub-lieutenants, 428 engineer officers of various ranks, 183 naval constructors and designing engineers, 135 ordnance engineers, 25 hydrographic engineers, 214

AIRPLANE CARRIER, UNITED STATES NAVY

commissariat officers, 341 medical officers, 49 pharmacists, and 335 warrant officers.

About \$8,000,000 was allotted for naval aviation, bringing the naval aviation force from 18 to 20 squadrons, and allowing for increases in land and buildings at aviation bases. This allotment was almost twice that of 1927 which was found to be quite inadequate. The modernizing of the six battleships of the two 23,000-ton classes was to be continued and was a heavy charge on the budget. The building of the new naval academy at Brest, after a long delay, was to be carried on vigorously, and completion is expected in 1932. The aircraft carrier *Bearn* was completed in 1927 and has passed into service. The speed was said to be unsatisfactory but reports indicated that the anticipated displacement of 21,450 tons had been considerably exceeded.

Of the 10,000-ton cruisers building, the *Duquesne* was practically completed; the *Tourville* was to be ready for service early in 1928; the *Suffren* was launched in May, 1927; and the *Colbert* was laid down in June. The cruiser-mine-layer *Pluton*, 5560 tons, and the aircraft carrier *Commandant Teste*, 10,000 tons, were also laid down in 1927. Not quite all of the smaller vessels of the 1927 programme had been commenced, but the delayed craft were to be taken in hand early in 1928.

GERMANY. The cost of the new German navy was constantly increasing. The naval budget for 1927 was 223,300,000 marks (1 mark = 23.8 cents); for 1926, 198,100,000; and for 1924, 104,200,000. That the government was looking forward to the day when the restrictions of the peace treaty were removed was shown by the large proportion of officers and petty officers (4979) to that of the general enlisted force (9935). Nor was the navy department satisfied to repair and retain its old ships until the happy day arrives, but was considering the designs of 10,000-ton battleships to replace the vessels she was allowed to retain by the treaty. It should be noted that the new ships of 10,000 standard tons will be of 11,000 to 12,000 tons under the old rating. According to published reports the designs provided for very moderate speed and radius of action. The engines were to be of the Diesel type. The protection against all forms of attack was to be particularly efficient and the battery to be the most powerful ever mounted on hulls of this size. Guns of 16-inch calibre were mentioned; but the Germans never were particularly keen for the largest sizes in guns, and pieces of somewhat less calibre may be chosen. While the general description seemed to imply a large monitor type, it was probable that the freeboard was to be greater than that of any monitors built by the United States.

While the battleship design was most favorably received, many officers strongly advocated fast armored cruisers of the same tonnage carrying eight to 12 8-inch guns—both guns and ship to be strongly protected by armor. The engines would be of Diesel type and the designed speed is probably much less than that of the average 10,000-ton light cruiser, but the radius of action might be fully as large.

While the battleship replacement is still under consideration, the partial modernization of the old battleships and the building of up-to-

date cruisers, destroyers, and torpedo boats was proceeding steadily. The light cruiser *Konigsberg* was launched at Wilhelmshaven on Mar. 26, 1927; a sister ship, the *Karlsruhe*, was launched at Kiel on Aug. 20, 1927; and a third (*Cruiser D*—not yet named) was reported to be ready for launching. These vessels were developments of the *Emden*, completed in 1925, and have the same displacement. The improvements were said to have been made possible by economies effected in the weight of the hull. The length on the water line is 553.8 feet; beam, 46.59 feet; draft, 17.4 feet; displacement, 6000 tons. The armament consists of: nine 5.9-inch (or larger) Krupp guns of a new type; four anti-aircraft guns (probably of 3.46 inches) 4 triple torpedo tubes. The heavy guns are in three triple turrets—one forward, two aft, on the midship line. The after turret is low enough for the next turret to fire over it. Geared turbines of 65,000 h.p. form the main engines; speed, 32 knots. Diesel engines are provided for cruising and are designed to give a cruising radius of 5500 miles at 14.5 knots. Protection to vital parts is afforded by light armor and efficient subdivision. The complement is 500 officers and men.

GREAT BRITAIN. The amount of the naval budget for 1927-28 is £58,820,023 (£1 = \$4.8665), which is £88,205 less than that of the budget for 1926-27. Of this, £3,537,780 was allotted to new construction in the government dockyards and £5,894,475 in private establishments. Repairs, modernization of ships, etc., call for £7,522,522, and include special work on four battleships, six cruisers of the *Oleopatra* class, eight destroyers, two aircraft carriers (*Courageous* and *Glorious*), nine submarines and some auxiliary craft. The budget provided for a total personnel of 102,275, divided as follows: (a) Officers in active service, 5324; subordinate officers, 727; warrant officers, 948; petty officers and men, 76,023; boys (including apprentices, etc.), 8100; total, 86,122. (b) Marines: officers, 360; warrant officers, 33; non-commissioned officers and men, 10,045; total marines, 10,438. Total of seagoing services, 96,560. Cadets at the naval academy, 550; officers of the enrollment service, 75; boys and apprentices under instruction, 3311 (naval, 2600—mechanical, 711); total, 3936. Miscellaneous services, 1779. Grand total, 102,275. In addition to the expenditure of the Air Ministry on naval aviation, the naval budget supplies £882,000—£146,000 for the personnel, £32,000 for maintenance, £704,000 for material.

The programme for the construction of new vessels included one cruiser of 10,000 tons, two cruisers of 8000 tons, one flotilla leader, eight destroyers, six submarines, and two mine sweepers. Only one cruiser and the two mine sweepers had been ordered according to late reports, but tenders have been invited for the construction of the flotilla leader and the eight destroyers. No information concerning the flotilla leader had been given out, but it was said that the destroyers were to be of about 1300 tons and generally similar to the *Amazon* and *Ambuscade*, recently completed. The two battleships, *Nelson* and *Rodney*, of 35,000 tons, were completed during the year. Of the five cruisers of the *Kent* class (10,000 tons) all were completed or will be before the end of the fiscal year (Mar. 31,

1928). Six others of the *London* class (10,000 tons, but differing somewhat from those of the *Kent* class) were under various stages of construction—two had been launched, three had just been commenced, and one cruiser of 8000 tons had been ordered. The five vessels of the *Kent* class—*Kent*, *Berwick*, *Suffolk*, *Cumberland*, and *Cornwall*—were of 10,000 tons standard displacement; but at full load this would probably be over 13,600 as the fuel oil capacity was 3400 tons. The length on the waterline is 590 feet; beam, 68.33 feet; draft (at 10,000 tons), 16.25 feet. The hull has a flush upper deck and very high freeboard. There is some armor over the guns; and a turtle-back protective deck, with 4-inch slopes, covers the ship's vitals. The propelling machinery consists of four geared turbines, of 20,000 h.p. each, designed to give a speed of at least 31.5 knots. The main battery is composed of eight 8-inch guns in four turrets on the midship line—two forward, two aft—the second and third turrets being raised sufficiently to fire over the first and fourth respectively. Four 4-inch anti-aircraft guns, four 3-pdrs., and four 1-pdrs. are also carried.

The *Devonshire* class—*London*, *Devonshire*, *Shropshire*, *Sussex*, *Dorsetshire*, and *Norfolk* have a beam of 66 feet, horse power of 90,000, and speed of 32 knots but are otherwise like the *Kent* class. The large minelayer *Adventure* was completed late in 1926 and the submarine *Oberon* in 1927. Six other submarines were laid down in 1927, and four small gunboats (262 to 310 tons) for service in China were completed. The transformation of the cruiser *Courageous* into an aircraft carrier was reported to be complete at a cost of more than £2,000,000. Her sister ship, the *Glorious* was still under construction.

Work on the great naval base at Singapore was being steadily carried on. The contract for a floating drydock (amount, £1,200,000) was let and the work was well advanced. Five firms had been requested to submit tenders for the construction of docks and harbor works at Seletar, the site of the new naval base, on the northern side of the island of Singapore. It was said that the dredging at the base was approaching completion. The greatest item of this work was the mooring pool, for the new floating dock, which must be 1200 feet long, 900 feet wide, and 70 feet deep. A concrete dry dock, capable of taking two of the largest warships, was to be constructed as rapidly as possible. Other works contemplated or in process of construction were an airdrome, a high-power radio station, an oil fuel depot, workshops, offices, magazines, wharves, railways, roads, power plants, etc. Thanks to generous contributions from the Federated Malay States, New Zealand, and Hongkong—amounting in all to £3,250,000—Great Britain's share of the cost of the undertaking was not to exceed £6,000,000 if the expenditure was kept down to estimates.

GREECE. The vessels under construction for the Greek navy were three submarines of 730/930 tons—the *Proteus*, *Nereus*, and *Triton*—which are building in France. The *Proteus* had been launched and was completing afloat, but the other two were still on the ways. The surface speed is 14 knots and the submerged speed 9 knots. The extreme cruising radius is 4000 miles.

The armament consists of one 100-mm. gun, one of 40 mm., and eight 21-inch torpedo tubes—six forward, two aft. The complement is 4 officers and 37 men. The smaller submarines (600 tons) were completed in France in 1927. The armored cruiser *Giorgios Averoff* (9956 tons, 24 knots, launched in 1910) and the light cruiser *Helle* (2600 tons, 20 knots, launched in 1912) had been repaired and to some extent modernized in France. The battleship *Salamis*, ordered in Germany before the war and still unfinished at the builders' yard, may be completed and turned over to Greece if the decision of the council of ambassadors is carried out. The *Ares*, a new schoolship of 1870 tons, for the cadets and sailors, was completed during 1927 at a private ship-building establishment in France. It is equipped with sail power and a steam engine of 1000 horse power which gives a speed of 10 knots.

ITALY. The naval budget for 1927-28 was 1,218,970,630 lire (present value of 1 lira = 5.4 cents) an increase of 9.5 millions over the budget for the preceding year. The actual expenditure for the navy was set at 1,070,658,000 lire, the remainder being for miscellaneous nautical services. The sum of 367,678,000 lire was allotted to new construction. The budget provides for 2200 officers, 6000 petty and warrant officers, and 43,000 men. Aviation was under the Minister of War (Mussolini), with operational control by the Grand General Staff (army and navy), and was rapidly developing. In 1922, there were but 600 planes; in 1927 there were about 2000; and in 1930, when the plans adopted will be completed, the number will be 2800 (army and navy). In 1927, in addition to aviation, the navy was especially concerned with minelaying and its strategic keys—scouts, destroyers, and submarines. The new programme provided for four scout cruisers of 5300 tons which will have the remarkable speed of 36 knots; for 12 flotilla leaders (or small scouts) of 2000 tons and 38 torpedos, each mounting 6 4.7-inch guns and 6 torpedo tubes; 1 large aircraft carrier; 3 submarine mine layers; and 6 submarines of moderate tonnage. The 2000-ton scouts were also to be equipped for the work of mine laying.

Nothing definite had been given out as to the new aircraft carrier except that it was to be of large size, of high speed, and that the plans were under preparation. The *Giuseppe Miraglia*, a former merchant vessel, was transformed into an aircraft carrier. The work was supposed to be completed in 1926 but further alterations were under way. She is of 5000 tons, has turbine engines which give her a speed of 21.5 knots, and is able to carry 20 planes. All of the vessels of the new programme except the 5300-ton cruisers and the new aircraft carrier were reported to be under construction. The 10,000 ton cruisers *Trieste* and *Trento* were greatly delayed. They belonged to the 1923-24 programme, but their actual laying down was deferred until early in 1925—one in February, one in March. The *Trieste* was launched Oct. 24, 1926, and the *Trento* Oct. 4, 1927. These and the other vessels under construction in the Italian navy are listed in the following table:

WARSHIPS BUILDING FOR ITALY

	Tons	Condition
Light Cruisers:		
Trieste	10,000	Launched Oct. 25-'26
Trento	10,000	" Oct. 4-'27
Bande Nere	5,300	ordered, 1927
Colleoni	5,300	" "
Da Barbiano	5,300	" "
Da Guassano	5,300	" "
Scouts (or flotilla leaders):		
12	2,000	all ordered, some laid down
Destroyers:		
8	1,155	all except 1 or 2 launched in 1927
Submarines:		
6	850/1065	all laid down in 1927
4	1390/1884	2 or 3 launched in 1927
3 minelayers	1400/1735	Bldg.
Minelayers:		
2	800	Launched 1927. Possibly completed

JAPAN. The naval budget for 1927-28 called for an expenditure of 255,000,000 yen. Of this the sum of 89,275,000 yen is to be devoted to new construction—75,000,000 (fifth installment) on the general program to be completed in 1928-29; 10,000,000 (second installment) on the modified programme of 1926 (four destroyers of 1700 tons); and 4,725,000 as first installment on the new 5-year replacement programme which is as follows:

	yen
4 light cruisers of 10,000 tons	106,000,000
15 destroyers of 1,700 tons	98,000,000
4 submarines (1 of 2,000 and 3 of 1,700 tons)	32,000,000
3 gunboats	4,800,000
1 aircraft carrier	31,000,000
1 minelayer	
Total	261,800,000

The budget also called for the creation of another air squadron, the equipment of the aircraft carriers *Amagi* and *Kaga*, the construction of new storage tanks for oil fuel, the extension of chemical research into matters which concern the navy, the lengthening of courses at the naval schools, and other matters of less importance. Like the *Constitution* in the United States and the *Victory* in England, the *Mikasa*, flagship of Admiral Togo at the battle of Tsushima, represents to the Japanese the greatest ship of their naval tradition; and they propose to convert her into a national monument. The funds necessary for the project are being raised by public subscription. So far as could be ascertained the vessels shown in the accompanying table were under construction for the Japanese navy on Dec. 31, 1927.

Of the aircraft carriers mentioned in the accompanying table, the *Kaga* (ex-battleship) was nearly complete and should be ready for service early in 1928. The *Naruto* was a former fuel-oil tanker of large size but having a speed of no more than 12 or 13 knots. Recent reports seemed to indicate that she was being fitted as an aircraft tender or practice ship and not a carrier as defined by the Five Power Pact. The cruisers *Nachi*, *Myoko*, *Ashigara*, and *Haguro* were the first of the 10,000-ton cruisers to be built by Japan and were reported to be similar in all essential respects. The length between perpendiculars is 630 feet; beam, 67 feet; draft, 16.5 feet; standard displacement 10,000 tons;

displacement at full load, nearly 14,000. These vessels have a triple hull, designed to give the greatest possible protection against attack by submarines.

The vertical belt (3 to 4 inches thick) and the protective deck, over the boilers, engines, and other vitals, are each 410 feet long. It was reported that these vessels were to carry ten 8-inch guns; but a statement, said to have been given out by the Japanese navy department, asserted that the main battery was to consist of eight 8-inch guns in pairs in four turrets on the mid-ship line, the second and third turrets being raised high enough to fire over the first and fourth respectively. The character of the auxiliary battery was not disclosed, but four 4.7-inch anti-aircraft guns were to be mounted as well as twelve above-water, 21-inch torpedo tubes. The designed speed of the vessels at normal load was 32 knots.

WARSHIPS BUILDING FOR JAPAN

Name	Tons	Condition
Aircraft Carriers:		
<i>Kaga</i>	26,900	To be compl. early in 1928.
<i>Naruto</i>	15,000	Converting from tanker.
<i>X</i>	Unknown	To be laid down 1927-28.
Light Cruisers:		
<i>Nachi</i>	10,000	Lchd. June 14-'27.
<i>Myoko</i>	10,000	Lchd. Apr. 16-'27.
<i>Ashigara</i>	10,000	Ld. down, Apr. '25.
<i>Haguro</i>	10,000	" " " " " " " "
<i>Atago</i>	10,000	" " " " " " " "
<i>Takao</i>	10,000	" " " " " " " "
<i>X</i>	10,000	" " " " " " " "
<i>X</i>	10,000	" " " " " " " "
<i>Aoba</i>	7,100	Ready for service
<i>Kinugasa</i>	7,100	Trials compl. Oct.-'27.
Destroyers:		
Nos. 35 to 58	1,700	7 lchd. 8 or 10 laid down.
" 30 to 34	1,400	Nearly ready for service.
Submarines:		
1 1st class	2000/2500	Ordered.
3 "	1650/2200	"
3 or 4 (minelayer)	1100/1550	Nearly complete.
7 1st class	Unknown	Probably laid down.
Gunboats:		
3 river gunboats	300 to 400	To be laid down 1927-28.
Aircraft carrier:		
1	Unknown	Nothing known.
Minelayer:		
1	Unknown	To be laid down 1927-28.

The *Atago*, *Takao*, and the two ships ordered in 1927 were presumed to be similar to those of the *Nachi* class but no information on this point was available. The *Aoba* and *Kinugasa* were the last of a class of four light cruisers to be completed. All carry six 8-inch guns in the main battery but the *Aoba* and *Kinugasa* have them in three turrets on the centre line—two forward, one aft; while on the *Kako* and *Furutaka* these guns are mounted singly in six turrets on the midship line—three forward, three aft—the middle gun of each group being high enough to fire over the others of the group. The destroyers of the new class have a large tonnage for vessels of that type but are rather small in comparison to recently designed flotilla leaders. No details are as yet available; nor are any details yet given out as to the new submarines, the new minelayer, or the new aircraft carrier.

JUGO-SLAVIA. The naval budget for the fiscal year beginning May 1, 1927 and ending April 30, 1928, amounted to 220 million dinars (1

dinar = 1.7 cents at present rates). This is an increase of 69 million dinars over the budget figures of 1926-27. The increase included 12 millions for improvement of the condition of the personnel and 30 millions for aviation, of which 15 millions was for the purchase of material. Two submarines, of 630 tons, that had been ordered in England, were completed in 1927 and were due to reach Cattaro before the end of the year. Six destroyers were ordered from the same firm but no notice of their completion and delivery had been given out. In 1926 the government bought from Germany the old protected cruiser *Niobe*. This vessel has a length on the waterline of 342.5 feet; beam, 38.7 feet; draft, 15.8 feet; displacement, 2600 tons, with about 8000 horse power. The engines gave a speed of 21 knots. The cruiser was to be thoroughly overhauled at Cattaro, and modernized as far as practicable. Two submarines, ordered from the Armstrong Company (England), were laid down in 1926, and were approaching completion. These boats have displacements of 975/1164 tons, with corresponding speeds of 15.5/10 knots. The armament consists of two 4-inch guns and six 21-inch torpedo tubes. Two boats, of 620 tons surface displacement, were building at Nantes (France). They were laid down in 1926 and should be completed in 1928.

LATVIA. The submarines, *Ronis* and *Spidola*, which were built in France for the Latvian navy, were completed early in 1927 and turned over to the Latvian government. These boats have a length of 180.5 feet, a beam of 15 feet, and a displacement of 390 tons on the surface and 514 tons when submerged. The corresponding speeds are 14 and 9.25 knots. The armament consists of one 3-inch anti-aircraft gun, three machine guns, and six 17.7-inch torpedo tubes. The complement of each of the submarines is 41 officers and men.

NETHERLANDS. The naval budget for 1927 was 40,982,965 florins (1 florin = 40.2 cents), a reduction of about 3,120,000 florins as compared with the budget of 1926. Of the total, the sum of 11,202,400 florins was allotted to new construction, 23,529,374 to general expense and upkeep of the navy, and 6,251,191 to non-military purposes. Four large destroyers of 1620 tons and the submarine *O-12* were building for the Netherlands navy. The destroyers are of the same design in all respects as the two described in the *YEAR BOOK* for 1925, p. 475, and which were completed in 1927. Two of the four that were building were launched in 1927; the other two were laid down in 1927 but had not been launched. The number of torpedo tubes is six, on two triple mounts. The horse power of the engines is 31,000, giving 34 knots at full load and 36 knots at light load. The complement is 126 officers and men. The patrol vessels or gunboats, *Flores* and *Soemba*, mentioned in *NAVAL PROGRESS* for 1925 and 1926, were completed about the end of 1926. They are designed for service in tropical waters and have roomy quarters, two sets of Diesel engines (2000 h.p.—15 knots speed), three 5.9-inch guns on the centre line (two forward, one aft), one 3-inch anti-aircraft gun, two machine guns, a strong steel deck over vitals, a conning tower, large shields over the guns, and a very complete system of subdivision. The dimensions are: length on the waterline, 242.7 feet; beam, 37.7 feet; draft, 11.9 feet; displacement, 1676 tons.

NEW ZEALAND. The New Zealand Parliament voted the sum of one million pounds towards the development of the Singapore Base for the British navy. The payment was to be divided into annual installments for seven or eight years. The government had under consideration the further assistance to the British fleet of furnishing all or a part of the money to build two 8,400-ton cruisers (the new class B type of the British navy) to replace the *Diomedé* and *Dunedin* of 4,650 tons that were about 19 years old.

NORWAY. The budget of national defense for 1927 provided for an expenditure of 12 million crowns (1 crown = 26.8 cents) for ordinary maintenance and the completion of submarines *B.5* and *B.6*. According to the Norwegian press it was the intention of the government to provide 20 million crowns for the renovation of the principal vessels of the navy. This renovation would include modern guns, new propelling machinery, and certain modifications of structure. New construction was to be limited to flotilla leaders, destroyers, submarines, aircraft, and aircraft apparatus. The budget for 1928 provided a plan for the expenditure of five million crowns each year for the new work.

PERU. In 1924 the Peruvian government ordered from the United States two submarines of 576/682 tons. These are 200 feet long. They are propelled by two Diesel engines of total horse power of 880, giving a surface speed of 14.5. The electric motors of 1000 horse power give a submerged speed of 9.5 knots. The cruising radius is 8000 miles. The armament consists of four 21-inch torpedo tubes and one 3-inch gun. The complement is 30 officers and men. After the work was well started in 1925 the Peruvian navy department sent to the builders a commission comprising the officers and petty officers who were to be included in the complements of the boats, for instruction. After a year's training and several short cruises the boats proceeded to Peru unescorted, stopping only at the Panama Canal for eight days as a short rest. The trip was made from New London to Colon in eight days and from Panama to Peru in six. No difficulties of any kind were experienced on the trip. A submarine base had been built on the Island of San Lorenzo, Callao Bay. Four additional boats were building, two to be completed in 1928.

POLAND. Up to the end of 1927 the Polish navy had no naval dockyard, naval stations at Modlin and Pinsk having shops for the repair of river craft and small boats only. The new naval base at Gdynia was to be of more pretentious character but would not be completed until 1930. Two former French vessels—the protected cruiser *D'Entrecasteaux*, of 8000 tons, and the armored cruiser *Desaix*, of 7600 tons—had been turned over to the Polish government as station training ships at Gdynia. The former, which was renamed *Vladislaw IV*, was to be used for recruits and mechanics, and the latter as the naval school for officers. The vessels building for the Polish navy consisted of two destroyers, *Bura* and *Wicher*, and three submarines, *Rys*, *Zbik*, and *Wilk*. The destroyers are of 1500 tons; the h.p. is 30,000 and the speed 32 knots; the armament consists of four 5.1-inch guns, one 1.5-inch anti-aircraft gun, and six torpedo tubes in two triple mounts. The submarines have displacements of 900 (surface) and 1200 (submerged) tons; the corresponding speeds are 12 and 8 knots. The armament consists of one 3.9-inch

gun, one 1.5-inch anti-aircraft gun, and six 21-inch torpedo tubes. These boats are fitted as mine layers and carry 32 mines.

PORTUGAL. It was reported that the Minister of Marine had submitted to the Council of Ministers a project for reorganizing the Portuguese navy and replacing the older vessels by those of new type, as well as adding to the numbers of the existing force. The programme consists of about thirty units and included light cruisers, destroyers, and submarines. The frequent changes in Portuguese government render the carrying out of such a programme rather improbable. In 1927, only six units of the new programme were definitely proposed—two flotilla leaders of 2000 tons and four destroyers of 1200 tons, and none of these had been ordered.

RUMANIA. In 1926-27 orders were placed in Italy for one submarine tender or depot ship, two destroyers, and two submarines. The destroyers, which are large enough to be styled flotilla leaders, are of 1800 tons displacement, will have engines of 44,000 horse power, and a speed of 35 knots. They were building at Naples. The submarines will have a surface displacement of 680 tons; the speed on the surface will be 14 knots and, when submerged, nine knots. The armament will be one 4-in gun and seven or eight torpedo tubes. They are building at Fiume.

RUSSIA. From time to time the Soviet government published a programme for new naval construction which was to be undertaken without delay. Not one of these various programmes had been commenced. The wages in the Russian shipyards were only 60 per cent of the pre-war rates and such workmen as could be obtained for this low pay were few and inefficient. Obtaining credit or cash for building abroad was difficult. The programmes were therefore only pompous gestures designed to deceive other nations. The latest programme, published early in 1927, called for the building of six light cruisers of 3000 tons, a speed of 30 knots, armed with 6-inch guns and several torpedo tubes; four destroyers of 1400 tons; and an aircraft carrier of 8000 tons and a speed of 20 knots. In addition, several flotilla leaders or scouts, of the *Leone* (2200 tons) type, were to be ordered in Italy. The condition of the ships in the Russian navy is believed to be poor, the character of the personnel to be very inferior to that in any of the larger navies, the discipline to be relatively worse, and the general efficiency to be very low indeed.

SPAIN. The naval budget for 1928 allotted 177 million pesetas 1927 value of 1 peseta = 16.7 cents) for new construction and for improvement of the dockyards at Vigo, Cartagena, and Mahon. The vessels provided for are two light cruisers of 10,000 tons, three flotilla leaders of 1650 tons, and two submarines of the *O* class. These are included in the ones authorized by the royal decree of July 4, 1926 (see *YEAR BOOK* of 1926, p. 513), for completion in six years. The vessels under construction were: the light cruiser *Almirante Cervera*, 7850 tons; three flotilla leaders of the *Churrucua* (1650 tons) class; 2-4 submarines of the *O* class, and the *Juan Sebastian de Elcano*, 3420 tons. The *Cervera* should have been completed in 1927 but seemed to be in hand at the end of the year. The flotilla leaders were laid down at Cartagena late in 1926. Two submarines of the *O* class, *O-5* and

O-6, were laid down in 1927; *O-3* and *O-4* were laid down in 1926 and no reports of completion had appeared in 1927. These boats have displacements of 915/1290 tons; corresponding speeds, 16/8.5 knots. The approximate dimensions are: length, 247 feet; beam, 20.75 feet; depth, 13.5 feet. Machinery: two sets of eight cylinder Diesel engines. Battery: one 2.76-inch anti-aircraft gun, six 21-inch torpedo tubes—four in bow, two in stern. The schoolship *Elcano* was launched March 5, 1927, and was nearly complete if not quite so at the end of the year.

SWEDEN. The committee, charged with preparing a programme of construction based on the decisions taken by the Riksdag in 1925, presented its report. The committee insisted on a naval force capable of defending the entire coast of the country. It recommended a total expenditure for new construction, spread over the years 1928-38, of 105,400,000 crowns (1 crown = 26.8 cents) for the building of one coast defense battleship of the *Gustav V* type (7,900 tons), with certain improvements, costing 27,800,000 crowns; four destroyers of the *Nordenskjold* (975 tons) class; seven submarines; eight vessels combining the qualities of mine layers and submarine chasers; and one aircraft carrier capable of launching 12 seaplanes. The naval estimates for 1927-28, as prepared, called for an expenditure of 44,554,390 crowns. Of this, 5,049,000 crowns are allotted for operations of the fleet; 6,500,000 for the maintenance of vessels; 8,160,000 for new construction; and 170,000 for transforming the *Dristigheten* (armored coast defense ship of 3600 tons) into an aircraft depot ship. The Swedish government submitted its plans for the cruising or high sea fleet which was as follows: four coast defense battleships of the *Gustav V* type (one to be built); eight destroyers (two divisions) of the *Nordenskjold* type (six to be built); eight vedettes (two divisions—combined minelayers and submarine chasers) of 200 tons; nine submarines (three of type A—700/850 tons, two of type B—particulars not disclosed); and one aircraft carrier and minelayer combined (to carry 12 planes and a catapult for launching; displacement, 4500 tons and speed 22 knots). The only vessels under construction in 1927 for the Swedish navy were the destroyers, *Nordenskjold* and *Ehrenschild*, and the submarines, *Draken* and *Gripen*. The destroyers are of 975 tons; armed with three 4.7-inch guns, two 1-pounder anti-aircraft guns, and six 20.5-inch torpedo tubes in triple mounts; speed, 35 knots. These vessels should have been completed before the end of 1927. The submarines are of 700/850 tons; the *Draken* should be approaching completion but the *Gripen* would not be finished for another year.

TURKEY. Work upon the new naval port and dockyard at Ismid was being carried out. It was presumed that the new dock at Ismid was approaching completion, or completed, as it had been reported that the battle cruiser *Sultan Selim* (ex-*Goeben*) was to be placed in it for repairs. Two submarines of 500 tons were completed at Rotterdam in 1927. Another boat was projected; also five destroyers of 36 knots and some mine sweepers of 20 knots.

UNITED STATES. The naval budget for 1927-28 was \$313,815,500. The vessels under construction were eight cruisers of 10,000 standard tons, three large submarines, and six river gunboats. Two of the cruisers, the *Pensacola* and *Salt*

Lake City, were laid down in 1926—the former at New York Navy Yard and the latter at the yard of the American Brown-Boveri Electric Corporation, Philadelphia. These vessels, which should be completed in 1929, have a length over all of 585.5 feet, a beam of 65.2 feet, and a draft at normal displacement (about 11,570 tons) of 19.5 feet. The side armor is 1.5 in. thick and the deck over the vitals is three inches. The armament consists of ten 8-inch guns in four turrets on the centre line—six in two triple turrets (Nos. 1 and 4—one forward, one aft) and four in two double turrets (Nos. 2 and 3—one forward, one aft), turrets Nos. 2 and 3 being high enough to fire over Nos. 1 and 4, respectively; four or six 5-inch anti-aircraft guns; five or six torpedo tubes; perhaps some other light guns.

Six other 10,000-ton cruisers were ordered; No. 26, at the yard of the Bethlehem Shipbuilding Corporation, Quincy, Mass.; contract price, \$10,675,000—contract time, 36 months; No. 27, at the yard of the American Brown-Boveri Electric Corporation, Camden, N. J.; contract price, \$10,815,000—contract time, 36 months; Nos. 30 and 31, at the yard of the Newport News Shipbuilding and Dry Dock Co., Newport News, Va.; No. 28 was to be built at the Navy Yard, Puget Sound, Wash.; and No. 29 at the Navy Yard, Mare Island, Cal. These six cruisers are practically identical in design but differ considerably from the *Pensacola* class—slightly in dimensions, somewhat in protection, but especially in the main battery which consists of nine 8-inch guns mounted in three triple turrets. The speed of the vessels of both classes will be about 33 knots; radius of action at 15 knots, about 13,000 miles.

V-4, a very large minelaying submarine, was launched in 1927 and should be completed in 1928. The particulars of submarines are not given out by the Navy Department. According to reports the surface displacement is 2890 tons and the surface speed, 17 knots. She is therefore the largest submarine afloat. The armament consists of one 6-inch gun, four 21-inch torpedo tubes, 60 mines. Submarines V-5 and V-6 were begun at Portsmouth and Mare Island navy yards, respectively, on June 1, 1926. No details are reported but it is said that the surface displacement will be in excess of 3000 tons.

Six gunboats were building at Shanghai, China, for service on the Chinese rivers. The *Guam* and *Tutuila* are of 380 tons and 5.25 feet draft. They will carry two short 3-inch guns behind shields, eight machine guns, and have a speed of 14.5 knots. The *Oahu* and *Panay* are of 440 tons and 5.5 feet draft. They will carry two 3-inch, 50-cal., anti-aircraft guns and eight machine guns, and have a speed of 15 knots. The *Iuzon* and *Mindanao* are of 575 tons and have a mean draft of six feet. They will carry two 3-inch, 50 cal. anti-aircraft guns and eight machine guns and have a speed of 16 knots.

The aircraft carriers *Saratoga* and *Lexington* were to receive the last finishing touches and join the fleet early in 1928. They were the largest, best-armed, best-protected, and much the fastest vessels of their type in the world. The length over all is 888 feet; breadth of flying deck, 106 feet; mean draft, 22 feet. The hull protection consists of an armor belt of considerable thickness, armored deck, triple-hull, and other defense against torpedoes. The armament consists of eight 8-inch guns of very high power,

twelve 5-inch anti-aircraft guns, and four 6-pounders. The propellers will be electrically driven and the designed speed is 34.5 knots. Every necessity and convenience for the handling and storage of airplanes and for facilitating their flight has been adopted. Planes can take off, or be catapulted, as found desirable, in any kind of weather; and they can land on the flight deck under almost any conditions. Each ship is designed to carry 72 planes. The modernizing of the battleships of the navy is being steadily carried out. This includes bilge and internal protection against torpedoes and mines, deck protection against airplane bombs, more rigid masts to improve range observation, change to oil-burning in older ships, addition or rearrangement of auxiliary or anti-aircraft guns, increased elevation of the turret guns of the older ships, and many other changes.

The aviation service of the navy still maintains its high reputation for efficiency as the best organized, equipped, and managed air service in any navy. In July, 1926, the number of modern planes on hand, fit in all respects for use, was 351. On July 1, 1927, the number had reached 468. During the fiscal year 1927-28, 436 planes were to be delivered. Making the necessary allowances for age, wear and tear, etc., the number of modern planes in first class condition on July 1, 1928, should be 718.

On December 17, 1927, the submarine *S-4* was sunk in collision near Provincetown by the Coast Guard patrol boat *Paulding*. The entire crew of 40 officers and men was lost but some remained alive and transmitted signals for about 30 hours. Every effort to reach these men was made but failed, largely because of the weather.

NAVIES. See NAVAL PROGRESS.

NEBRASKA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,296,372. The estimated population on July 1, 1927, was 1,396,000. The capital is Lincoln.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	8,805,000	291,446,000	\$180,697,000
	1926	8,994,000	189,407,000	94,797,000
Hay	1927	4,783,000	7,201,000*	54,485,000
	1926	4,291,000	4,926,000*	64,032,000
Wheat, winter	1927	8,457,000	70,868,000	77,246,000
	1926	2,881,000	37,165,000	43,483,000
Wheat, spring	1927	173,000	2,958,000	8,106,000
	1926	196,000	2,920,000	3,270,000
Oats	1927	2,441,000	69,813,000	27,925,000
	1926	2,537,000	52,516,000	21,006,000
Potatoes	1927	84,000	8,904,000	6,673,000
	1926	78,000	5,329,000	8,526,000
Barley	1927	246,000	7,577,000	4,187,000
	1926	327,000	4,699,000	2,725,000
Rye	1927	274,000	4,110,000	3,165,000
	1926	253,000	2,606,000	1,981,000
Sugar beets	1927	82,000	1,048,000*	
	1926	79,000	928,000*	7,274,000

* tons.

MINERAL PRODUCTION. The total value of the mineral production of the State in 1925 was \$3,358,585; in 1924, \$3,209,425. Cement, sand and gravel, and stone were the chief products in point of total value produced.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$9,695,366; their rate per capita

was \$7.04. They included \$1,320,758 apportioned for education. Totals not included in the above, of \$138 in interest and \$6,745,558 in permanent improvement outlays, brought the aggregate of State expenditure to \$16,441,062. Of this, \$5,419,135 was for highways; \$748,679 being for maintenance and \$4,670,456 for construction.

Revenue receipts were \$17,362,037; or per capita, \$12.60. Of their total, property and special taxes yielded 41.2 per cent, attaining a per capita rate of \$5.19. Earnings of departments and compensation paid the State for officials' services supplied 10.4 per cent of revenue; 27.2 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles, and from a gasoline sales tax.

The State had on June 30, 1926, no indebtedness save a minor amount in outstanding revenue loans and warrants. Property subject to ad valorem taxation bore a valuation of \$3,310,758. State taxes levied thereon were \$7,556,615, or \$5.48 per capita.

TRANSPORTATION. The number of miles of railroad line in the State on Jan. 1, 1927, was 6,200.87. New construction in 1927, as reported by the *Railway Age*, was 6.03 miles of first and 0.45 mile of second track.

EDUCATION. Legislative enactment provided two important developments in the educational system of the State, as reported by State Superintendent Charles W. Taylor in the *Journal* of the National Education Association. The character education law was put into effect throughout the State; it provided that all schools, public, religious and private, must conduct courses in character education in the grades from 1 to 12. The adult immigrant education law created a division of adult immigrant education within the State Department of Education; its function was to deal with the training of such persons, both for naturalization and for the fuller performance of duty as citizens.

State statistics covering the school year 1926 gave the school population, including all individuals between the ages of five and 21 years, as 415,053. The number of school pupils enrolled was 327,472; average daily attendance was 267,833. Enrollment in the graded schools was 205,056; in high schools, 60,106. Teachers employed numbered 1642 men and 12,869 women. Average of teachers' salaries, in cities and villages, was, for men, \$1,977.52; for women, \$1,325.59. In rural schools, salaries of men averaged \$797.24; of women, \$797.59. The year's total of expenses for public school instruction came to \$16,985,485. Total expenditure of all sorts, including outlays and debt service, was \$31,200,710.

CHARITIES AND CORRECTIONS. A Department of Public Welfare exercised important powers, particularly with regard to child care. This body however did not have charge of the State institutions, which were under the authority of a separate Board of Control. Institutions under this board, with their populations as reported July 1, 1927, were: Nebraska Institution for the Feeble-minded, Beatrice, 827; inmates; Girls' Training School, Geneva, 227; Nebraska Soldiers' and Sailors' Home, Burkett, 253; Hastings State Hospital, Ingleside, 1356; State Industrial School, Kearney, 213; Hospital for Tuberculosis, Kearney, 95; Lincoln State Hospital, 1118; Orthopedic Hospital, Lincoln, 106; State Penitentiary, Lincoln, 761; Nebraska In-

dustrial Home, Milford, 83; Soldiers' and Sailors' Home, Milford, 98; Nebraska School for the Blind, Nebraska City, 48 (on June 1); Norfolk State Hospital, 877; Nebraska School for the Deaf, Omaha, 190 (June 1); State Reformatory for Women, York, 52; Nebraska Home for Dependent Children, Lincoln, 101; State Reformatory for Men, Lincoln, 253. A furniture manufactory was operated at the Penitentiary. Admittances to the three State penal institutions in 1926, according to the United States Department of Commerce, numbered 495.

LEGISLATION. The State Legislature convened in biennial session January 4. It enacted various revisions of the criminal code, notably by extending the maximum penalty for robbery with a deadly weapon from 15 years to 50. Committees were named to confer with representatives of several of the large railroad systems, having tracks within the State, for the purpose of shaping a plan to end the yearly appeals taken by these systems from the valuations set on their properties by the Nebraska State Board of Assessment.

EVENTS. There were found in deposits of Pliocene date, in the Western part of the State, in 1925 and 1926 objects supposed by palaeontologists to have probably been bone implements. From the age of the beds in which they were found, it was deduced that if they were authentic man must have existed on the site over a million years earlier. Business conditions in the State improved sharply in the latter part of the year, because of the realization of large prices for crops. The United States Supreme Court affirmed the validity of the State's law as to securities May 2, in a suit brought against it by an investors' syndicate of Minneapolis.

OFFICERS. Governor, Adam McMullen; Lieutenant Governor, George A. Williams; Secretary of State, Frank Marsh; Treasurer, W. M. Stebbins; Auditor, L. B. Johnson; Attorney General, O. S. Silliman; Superintendent of Public Instruction, C. W. Taylor.

JUDICIARY. Supreme Court: Chief Justice, Charles A. Goss; Associate Justices: William B. Rose; James R. Dean; W. H. Thompson; George E. Eberle; Edward E. Good; George A. Day.

NEBRASKA, UNIVERSITY OF. A State institution of higher education at Lincoln, Nebr., founded in 1869. The enrollment for the autumn term of 1927 was 6340 of whom 3686 were men and 2654 women. They were distributed as follows; agriculture, 507; arts and sciences, 1986; business administration, 714; dentistry, 89; engineering, 705; graduate, 279; law, 170; medicine, 303; nursing, 106; pharmacy, 110; teachers, 1459. Included in arts and sciences and in teachers' college were 469 students of the school of fine arts and 157 of the school of journalism. There were 3401 students registered in the summer sessions of 1927, of whom 938 were men, and 2463 women. The faculty numbered 357 in the autumn of 1927. The total income for the year was \$4,444,817.76. The library contained 222,844 volumes. A department of business research was created during the year, a new hospital unit at Omaha was completed and the gymnasium at Curtis was remodeled. Acting Chancellor of the University, Edgar A. Burnett, D.Sc.

NEBULÆ. See **ASTRONOMY.**

NEBULIUM. See **PHYSICS**, in the section on Spectroscopy.

NECROLOGY. The following list contains the names of notable persons who died in 1927. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Abbeema, Louise.

Abbot, Edwin Hale.

Abbot, Henry Larcom.

Abert, Hermann.

Ackert, Charles H.

Adams, Brooks.

Adams, Edwin Augustus.

Adams, John Haslup. American editor, died at Ruxton, Md., October 13. He was born at Baltimore, Md., Jan. 31, 1871, and was first employed by the Baltimore and Ohio Railroad. In 1899 he became connected with the *Baltimore News* and in 1904 was made managing editor, a position which he held until 1906. In 1910 he left the *News* to become editor of the *Baltimore Evening Sun*, a position he held until 1912, when he became editor of the *Baltimore Morning Sun* also, being engaged in this dual work until 1920, when an editor for each paper was appointed and Mr. Adams became editor of *The Sun*. In addition to his editorial interests, which involved a close study of politics and included the preparation of many of the leading articles in *The Sun*, he was well known as an art connoisseur.

Adams, Samuel. American editor and newspaper man, died at Washington, D. C., January 4. He was born at Westfield, Mass., May 13, 1876, and, after studying at the Florida State College at Lake City, entered the newspaper business. He served various daily newspapers in the business department. He later studied at George Washington University, 1907-08, and became editor of the *Fruit Grower and Farmer* in 1910. Later he became editor of *Public Affairs* of Washington, D. C. He served as director general of the National Federation of Uncle Sam's Voters, and was associate editor of the *American Fruit Grower Magazine*, of Chicago. In addition to his editorial work, Mr. Adams was an extensive fruit grower and farmer. He was a candidate for the nomination for Vice President at the Republican National Convention in Chicago in 1920.

Aiken, John Adams. American jurist, died January 28. He was born at Greenfield, Mass., Sept. 16, 1850, and after graduating at Dartmouth College in 1874 was admitted to the Massachusetts bar in 1876, taking up practice with his father at Greenfield. In 1883 he was a member of the Massachusetts House of Representatives, and from 1890-1897 was district attorney for the northwest district of Massachusetts. In 1898 he became a justice of the Superior Court and in 1905 its chief justice, serving until 1923.

Aikens, Charles Thomas.

Aitken, The Rev. William Hay MacDowall Hunter. British clergyman of the Church of England, died at Norwich, England, October 28. He was born at Liverpool, Sept. 21, 1841, and was the son of the Rev. Robert Aitken, one of the founders of the parochial mission movement. The younger Aitken was educated at home and at Wadham College, Oxford. He was ordained to the curacy of St. Jude, Mildmay Park, England, in 1865, and six years later to that of Christ Church, Everton. He was closely associated with Moody and Sankey, the American evangelists, when they visited England in 1873. From 1875 on he gave himself up entirely to the work of an evangelistic mission preacher. He visited the United States twice, and made an extended tour of Canada. He was the author of many volumes of sermons and devotional studies.

Albee, Ernest. Professor of philosophy at Cornell University, died at Ithaca, N. Y., May 26. He was born at Langdon, N. H., Aug. 8, 1865, and after graduating at the University of Vermont in 1887 studied as a fellow at Clark University and at Cornell. He became instructor of philosophy at Cornell in 1892 and in 1907 was made professor of philosophy, after service in the intermediate grades. He was co-editor of *The Philosophical Review* from 1908-08, and from 1924 until his death. He wrote *A History of English Utilitarianism* (1902), and magazine articles.

Alden, Earl Stanley. American educator and author, died by drowning at North Pownall, Vt., July 12. He was born in 1887, and graduated at Colorado College. He studied at the University of Illinois and Harvard University also. He had been connected with the faculties of the University of Illinois and of Smith College in the departments of English, and at the time of his death was head of the English department at St. John's College, Annapolis, Md. He lectured extensively on English literature.

Alderson, Lieut. General Sir Edwin Alfred Hervey.

Aldrich, Sherwood.

Alexander, Charles Beatty.

Ashben, Frank. American editor and genealogist, died at New York, February 15. He was born at Oberlin, Ohio, Jan. 30, 1867, and was educated at Oberlin

College. After spending many years in Illinois as a newspaper man, he went to New York, and in 1911 became editor of the *Journal of American History*. He was also editor of the *Journal of American Genealogy* and managing editor of *MacMaster's Commercial Cases*. He was president of the National Historical Society.

Almy, Aimée Geraldine, formerly Baroness Michelham. British philanthropist, died at Paris, January 1. She was the daughter of Octavius Bradshaw, and in 1899 was married to the first Baron Michelham, who died in 1919 leaving her one of the richest peeresses in England, the estate of her husband being estimated at some £20,000,000. During the World War she equipped and maintained at her own expense a series of hospitals, and was president of the League of Mercy. She received many decorations from the French government, including the Order of Mercy and the Médaille des Epidémies, and was made a member of the Legion of Honor. On February 5, 1926, she was married to Frederick Almy, an American citizen, in Clearwater, Fla. Her philanthropies were numerous and extensive. Lady Michelham maintained a racing stable, in her own name.

Alves, Mrs. Carl.

Alvord, Benjamin.

Anchor, Michael Peter.

Anderson, John Francis.

Anderson, the Rt. Rev. Joseph Guadentius.

Armour, Jonathan Ogden.

Armour, Malvina Bell. Widow of Philip D. Armour, founder of Armour & Company, meat packers, died at Chicago, Ill., July 25. She was the daughter of Jonathan Ogden of Cincinnati, Ohio, where she was born May 7, 1842. She was educated in Cincinnati, and in October, 1862, married Mr. Armour, who died in 1901.

Arnold, Edward D. American economist, died at New York, November 20. After graduating at Syracuse University in 1909 with the degree of B.S., he taught school at Lyssander, N. Y., and Gouverneur, N. Y., before going to New York University, at New York, as assistant professor of finance. He served in the World War as a major in the American Expeditionary Forces.

Arrhenius, Svante August.

Artybashev, Mikhail Petrovitch.

Ashley, Sir William (James).

Azerio, Emilio. Italian Consul General at New York, died in that city August 14. He was born in 1877 and entered the Italian consular service in 1903, as vice consul at Rio de Janeiro, Brazil. During the World War he was recalled to the home office, where he supervised the importation of coal from Wales. Later he became consul at Liverpool, and in 1924 was made consul general.

Ayer, Edward Everett.

Bailey, George M. American editor, died at Houston, Tex., July 4. He was born in Wiscasset, Me., in 1864, and at the age of 14 became a printer's apprentice on the Danville, Va., *News*. In 1882 he went to Columbus, Ga. as city editor of the *Columbus Times*, and in the following year moved to Texas, where from 1890-1904 he was a member of the staff of the *Dallas Morning News*, serving for the last five years of this period as its correspondent in Washington. In 1904 he became connected with the *Houston Post*, and in 1924 became editor of the *Houston Post-Dispatch*, a position which he held at the time of his death. He was well known for his editorial and political writings, and had been asked to prepare a survey of European political, financial, and sociological conditions for a party of prominent American editors sent to Europe by the Carnegie Foundation in 1927, but illness intervened.

Bain, George Washington. American lecturer and temperance worker, died at Lexington, Ky., March 28. He was born at Lexington, Sept. 24, 1840, and was educated at Hutchinson School, Kentucky, 1848-58. He began his career as a lecturer in 1880. He was grand counselor of the Good Templars of Kentucky, 1870-75, and grand chief templar, 1875-80.

Baker, Charles Fuller.

Bakhterev (Bachtirev) Vladimir Michalevich. Russian psychologist, died December 24. See *PSYCHOLOGY*, under *News and Notes*.

Balch, Edwin Swift. American author and explorer, died at Philadelphia, Pa., March 15. He was born in Philadelphia in 1856, and after graduating at Harvard in 1878 studied law and was admitted to the bar in Philadelphia in 1882. He traveled extensively and made explorations, and wrote numerous papers on mountains, caves, the Antarctic regions, prehistoric man, etc. He was a member of many scientific societies. His published works include: *Mountain Exploration* (1895); *Glaciers or Freezing Caverns* (1900); *Antarctica* (1902); *Comparative Art* (1906); *The North Pole and Bradley Land* (1918); *Mount McKinley and Mountain Climbers' Proofs* (1914); *Elise Welling Balch, in Memoriam* (1917); (with Eugenia, Mac-

Balch, Thomas Willing.

Baldwin, George Johnson.

Baldwin, Simeon Eben.

Ball, Ernest R. American composer of popular songs, died at Santa Ana, Cal., May 3. He was born at Cleveland, Ohio, July 21, 1878, and received his musical education at the conservatory there. He then went to New York, where he was well known on the vaudeville stage. Of his numerous songs, many enjoyed immense popularity, the most widely known being *Love Me, and the World is Mine*, and *Mother Machree*.

Barsotti, Charles. Italian-American publisher, died at Coytesville, N. J., March 30. He was born at Pisa, Jan. 4, 1850. Eight years after his arrival in the United States as an immigrant in 1872, he founded *Il Progresso Italo-Americano*, which became one of the most influential Italian-language newspapers published outside of Italy. He was decorated by King Victor Emmanuel with the Cross of Grand Officer of the Crown of Italy in appreciation of his work to promote better relations between Italy and the United States. He was responsible for the erection of statues of Columbus, Verazzano, Garibaldi, Verdi and Dante in New York and other cities.

Bartlett, John.

Bartlett, Joseph Gardner. American genealogist, died at Boston, Mass., November 11. He was born at Boston, Mass., Aug. 25, 1872, and after studying for two years at the Massachusetts Institute of Technology practiced as an architect in Boston, 1892-1904. In the latter year he took up genealogical and historical research professionally, and became active in that field in the United States and England, publishing special genealogies and other works.

Battle, Samuel Westray. American physician and surgeon, died at Asheville, N. C., April 28. He was born at Westrayville, Nash County, N. C., Aug. 4, 1854, and after graduating at the University of Virginia in 1874 studied medicine at the Bellevue Hospital Medical College, New York. He was for ten years a surgeon in the United States navy, but retired on account of injury, and entered private practice; he was medical director of the Clarence Barker Memorial Hospital, Biltmore, N. C., from its organization. He was surgeon general of the National Guard of North Carolina for many years, retiring with the rank of brigadier general.

Bauer, Sybil. American swimmer, died at Chicago, January 31. She was born in 1904, and at the time of her death was said to hold 28 world's back-stroke swimming records, after eight years of swimming. In October, 1922, she broke the swimming record held by a man, for 440 yards, back-stroke. She was a senior at Northwestern University at the time of her death.

Baxter, Sylvester.

Bazzani, Luigi. Italian painter and teacher of art, died at Rome, February 3. He was born in 1846, and was said to have acted as teacher in drawing and water color to King Victor Emmanuel. He was especially known as a painter of theatrical scenery.

Bearded, Viscount (Marcus Samuel).

Beatty, James Helmick. American jurist, died at Los Angeles, Cal., October 21. He was born in Lancaster, Ohio, and graduated at Ohio Wesleyan University in 1859. During the Civil War, 1863-65, he served as first lieutenant of the Fourth Iowa Battery. From the time of his discharge from the army to 1872 he practiced law in Lexington, Mo., and in the latter year he moved to Bailey, Idaho, where he practiced until 1882. Then he moved to Boise City, where he became United States attorney for Idaho. He was a member of the Territorial Council of Idaho, 1886-87, and a delegate to the Constitutional Convention in 1889, in the same year becoming chief justice of the Supreme Court of Idaho, serving for two years. In 1891 he was judge of the United States District Court, serving until 1907.

Bechterev, Vladimir Michaelovich. Russian psychologist, died December 24. See *PSYCHOLOGY, News and Notes*.

Beer, William. American librarian, died at New Orleans, La., in January. He was born at Plymouth, England, May 1, 1849, and graduated at the College of Physical Science, Newcastle-on-Tyne, England. In 1879 he was in business, later becoming a mining engineer in the United States, 1886-90. In the latter year he became librarian at the Topeka, Kan., Public Library and in 1891 librarian of the Howard Memorial Library in New Orleans, serving jointly in charge of the New Orleans Public Library, 1897-1906. He was well known for his knowledge of history and bibliography, being a member of numerous organizations in those fields.

Bell, Carl.

Benjamin, George Ellard.

Bennett, Edward Brown. American lawyer, died at Hartford, Conn., March 24. He was born at Hampton, Conn., Apr. 12, 1842, and after graduating at Yale began the practice of law in Hampton, removing to Hartford in 1869. In 1868 he was a member of the Connecticut General Assembly; assistant clerk of the House in 1869; clerk, 1870; secretary of the Republican State Central Committee, 1870-76; clerk of the Senate, 1871; clerk of the Hartford Police Court, 1871-73; member of the Common Council, 1872; judge of the City Court of Hartford, 1878-91; postmaster of Hartford, 1891-98, and again, 1900-07. He was president of the Hartford Yale Alumni Association, 1901-02. At the time of his death he was president of the Hartford City Gas Light Company, and a director in several other corporations.

Benton, Guy Potter.

Benton, Sir John. British civil engineer, died at Eastbourne, England, August 29. He was born at Sherrifhaugh, Scotland, Aug. 5, 1850, and was educated at Aberdeen University, at Edinburgh University, and the Royal India Engineering College. He was appointed assistant engineer in the India Public Works Department in 1873, and became executive engineer in 1881, superintending engineer in 1897, chief engineer in 1900, and inspector-general of irrigation in 1905. He retired in 1912, having been responsible for most of the canal construction in the Punjab and Burma making possible irrigation work and power developments. In 1902 he was created a Companion of the Order of the Indian Empire, and in 1911 promoted to Knight Commander of the Indian Empire.

Bergmann, Sigmund. German electrical engineer, died at Berlin, July 7. He was born in Muehlhausen, Thuringia, in 1851, and emigrated to the United States when 17 years of age, eventually becoming an official of the Edison Company and assistant to Thomas A. Edison. In 1891 he returned to Germany and founded several electrical firms, which in 1900 were consolidated into the Bergmann Elektrizitaetswerke zu Berlin.

Bernard, the Most Rev. and Rt. Hon. John Henry.

Bernard, Sam. American comedian, died at sea on his way to Europe, May 17. He was born of Jewish parents in Birmingham, England, June 16, 1863, and was taken to New York by his mother in 1868, being educated in the public schools of that city. At an early age he made his appearance on the stage at concert halls in Coney Island. After a successful career in various music halls in German impersonations, he made his appearance on the legitimate stage in New York in 1886, and from that time on was a popular favorite, playing in many comedies.

Bernstein, Claus. Danish statesman, died at Copenhagen, March 27. He was born in 1854, and was for many years a member of the Danish Parliament. He was at one time Liberal premier. He had retired from public life in November, 1926.

Berry, Walter Van Rensselaer. International lawyer, died at Paris, October 12. He was born at Paris, France, July 29, 1859, and graduated at Harvard in 1881. He studied law at Columbia and was admitted to the bar in 1885. He practiced at Washington, D. C., specializing in international law, and in 1908 was made judge of the International Tribunals of Egypt. Retiring from this position in 1911, he devoted himself to the practice of international law in Paris. He served as president of the American Chamber of Commerce in Paris, 1916-23. He was made a Commander of the Legion of Honor of France, and received from Italy the Order of the Crown of Italy and the Order of St. Maurice and St. Lazarus.

Beveridge, Albert Jeremiah.

Bingham, Amelia.

Bingham, Robert.

Bird, Charles Sumner. American paper manufacturer, died at East Walpole, Mass., October 9. He was born at Walpole, Mass., Aug. 18, 1855, and after attending the public schools of that place and Phillips Andover Academy graduated at Harvard in 1877. He entered his father's paper mills at East Walpole, and later, coming into the control of it, he extended the business. He was president of Bird & Son, Inc., acquiring mills at Phillipsdale, R. I., Hamilton and Pontronge, Canada, and Chicago. Originally a Democrat, in 1912 he joined the Progressive Party and was its candidate for Governor of Massachusetts in 1912 and 1913, but was defeated.

Black, Ebenezer Charkon.

Blaisdell, Albert Franklin.

Blau, the Rev. Dr. Joel. Rabbi and senior member of the West London Synagogue of British Jews, died in London, October 22. He was born in Hungary in 1878, and, going to the United States in 1903, graduated from the Hebrew Union College and the University of Cincinnati in 1908. He served as pastor of synagogues in Rochester and Brooklyn, and of the Congregation B'nai Jehshurun and Temple Peli-El in

New York. In 1925 he was appointed senior minister of the West London Synagogue of British Jews, which was founded by Spanish and Portuguese Jews in 1830. He was an able preacher, and his sermon on "The Great Hunger" was considered, at the time of its delivery in 1925, one of the notable sermons of the year. He wrote extensively both in English and Hebrew. His writings include: *The Problem of Modern Faith* and *The Wonder of Life*.

Boltwood, Bertram Borden
Bonbright, William Prescott
Bond, the Rt. Hon. Sir Robert.
Bonzano, John, Cardinal.

Borden, Lisbeth A. (Lizzie). Accused of murder and tried in 1892, but acquitted after a notable trial, died at Fall River, Mass., June 1. She was born in 1859, and came into public notice on Aug. 4, 1892, when the bodies of her wealthy father and stepmother were discovered in their home at Fall River. They had been hacked to death. Miss Borden was arrested and charged with the crime, which baffled the authorities, and the trial attracted widespread attention, involving as it did the services of some of the most eminent lawyers in Massachusetts. Miss Borden was acquitted, and lived in retirement until her death. A sister who lived with her for a number of years later declared her positive belief in the innocence of Lizzie.

Borghese, Prince Luigi Scipione. Head of a famous Italian family, died at Rome, March 15. He was born at Migliarino, near Pisa, Feb. 11, 1871, and was the son of Paolo, the ninth Prince of Borghese. Prince Luigi in 1895 married Anna Maria de Ferrari of the family of the ancient Dukes of Ferrara.

Bosworth, Edward Increase.

Bouchier, Arthur.

Bowen, Herbert Wolcott.

Bowles, Rear Admiral Francis Tiffany, U. S. N.

Brackett, Charles Albert. American dentist and educator, died at Newport, R. I., March 20. He was born at Lemper, N. H., Jan. 2, 1850, and after graduating at the Harvard Dental School in 1873 with the degree of D.M.D., practiced at Newport until his retirement in June, 1923. He held various positions at the Harvard Dental School, from 1874 until 1923, when he retired as professor emeritus of oral pathology. From 1888 to 1897 he was president of the Rhode Island State Board of Registration in Dentistry. He was a delegate to the International Medical Congress in London in 1881, to the Ninth International Medical Congress at Washington, D. C., in 1887, and to the World's Columbian Dental Congress, Chicago, Ill., in 1893. He was a member of many dental and medical societies, being at one time president of the New England Dental Society and also of the American Academy of Dental Science.

Braganza, Dom Miguel, Duke of. Pretender to the crown of Portugal, died at Castle Seebenstein, near Vienna, October 11. He was born at Kleinheubach, Austria, Sept. 19, 1853, the son of the Prince Miguel who was banished from Portugal in 1832. He took little interest in European politics, and made but few attempts to enforce his claim to the throne of Portugal. One of these attempts was after the murder of King Carlos in 1908 and during the short period of the reign of King Manuel.

Brandes, Georg Morris Cohen.

Brannan, Jon.

Brett, Lloyd M.

Bristol, Sir Edmund James. Canadian statesman died at Toronto, Ontario, July 14. He was born at Napane, Ont., Sept. 4, 1861, and after receiving the degree of B.A. from Toronto University became a barrister in 1886. He was a member of the House of Commons of Canada, for Centre Toronto, from 1905 as a Conservative. He served in the Dominion Parliament from 1920, and from September to December, 1921, he was a cabinet minister, without portfolio, in the cabinet of Arthur Meighen, and a privy councillor. He was knighted in 1908.

Brown, Abbie Farwell. American author, died at Boston, Mass., March 5. She was born at Boston, and was educated at the Girls' Latin School and Radcliffe College, later traveling extensively abroad. She was a member of the Poetry Society of America, and president at one time of the New England Poetry Club. Among her writings are: *The Book of Saints and Friendly Beasts* (1900); *The Lovesome Doll* (1901); *In the Days of Giants* (1902); *A Pocketful of Poets* (verse) (1902); *The Curious Book of Birds* (1908); *The Flower Princess* (1904); *The Star Jewels and Other Wonders* (1905); *The Story of St. Christopher* (1905); *Brothers and Sisters* (1906); *Friends and Cousins* (1907); *Fresh Poets* (verse) (1908); *John of the Woods* (1909); *Tales of the Red Children* (with J. M. Bell) (1909); *The Christmas Angel* (1910); *Their City Christmas* (1912); *Swapping Day* (play) (1912); *The Lucky Stone* (1914); *Songs of Stapepe* (verse) (1914); *Kington Town* (1915); *Surprise*

House (1917); *Heart of New England* (poems) (1920); *Round Robin* (1921); *The Lights of Beacon Hill* (1922); *Gigi* (motion picture) (1923); *The Boyhood of Edward MacDowell* (1924), and *Our Christmas Tree* (1925).

Brown, William Cabell.

Brownell, Clarence Ludlow.

Bruckner, Eduard.

Brush, Edward F. American surgeon and politician, died at New York City, October 3. He was born at Dublin, Ireland, in 1847. He went to Canada with his father when three years of age, and in 1864 enlisted as a private in the Sixteenth Maine Infantry, Union army, serving to the end of the Civil War. He was graduated from Bellevue Medical College in 1875, and in 1878 moved to Mount Vernon, N. Y., of which he became the first mayor, serving four terms. He was leader of the Republican Party in that city.

Brush, George Washington. American physician and author, died at Brooklyn, N. Y., November 18. He was born at West Hills, N. Y., Oct. 4, 1842, and after studying and practicing dentistry for several years studied medicine, graduating at the Long Island College Hospital in 1876. He served throughout the Civil War in the Union army, and received the Congressional Medal of Honor for conspicuous gallantry. Dr. Brush practiced medicine in Brooklyn, N. Y., and was also conspicuous in public and civic movements in that part of New York City. He wrote many magazine articles on medical subjects, and was a frequent contributor to newspapers on civic and municipal questions.

Brushingham, John Patrick.

Bryan, Charles W.

Buell, Caroline Brown. American temperance worker and lecturer, died at Hartford, Conn., October 13. She was born at Marlboro, Mass., October 24, 1848, and was educated at public and private schools. She was assistant recording secretary of the national Woman's Christian Temperance Union, 1878-80, and corresponding secretary, 1880-93. She originated the Loyal Temperance Legion, the children's branch of the Woman's Christian Temperance Union, and wrote and lectured in behalf of temperance.

Bullard, William Hannum Grubb.

Burchard, Anson Wood.

Burn, the Very Rev. Andrew Ewbank.

Burnham, Clara Louise.

Bury, John Bagnall.

Bush, Benjamin Franklin.

Butler, Joseph Green, Jr.

Butler, Nathaniel.

Byrne, Frank M. Former Governor of South Dakota, died at San Francisco, December 25. He was born at Volney, Iowa, Oct. 23, 1858, and received a grammar school education. In 1879 he went to Sioux Falls, in what was then Dakota Territory, and took up a homestead in McCook County, later moving to Faulk County. He was engaged in farming and the real estate business. He was elected to the legislature, and served as Lieutenant Governor of South Dakota, 1909-13, and Governor, 1913-1917, as a Republican. From 1922 until shortly before his death he was commissioner of the State department of agriculture.

Cagliano de Azevedo, Octavius, Cardinal. Chancellor of the Roman Catholic Church, died at Anzio, near Rome, July 11. He was born in Spain in 1845, and succeeded Monsignor Della Volpe as major domo of the Vatican when the latter became a cardinal in 1901. Mgr. de Azevedo was created a cardinal in 1905.

Caldwell, John A. American jurist and former lieutenant governor of Ohio, died at Cincinnati, Ohio, May 24. He was born at Fairhaven, Ohio, Apr. 21, 1853, and, after working as a farm hand and teaching school, graduated at the Cincinnati Law School in 1876. He was elected prosecuting attorney of Cincinnati in 1881, and as a Republican was elected to the 51st, 52nd, and 53rd Congresses, resigning from the last May 1, 1894, having been elected Mayor of Cincinnati. He served for twenty-five years as judge of the court of common pleas, and at one time was lieutenant governor of Ohio. He established the Juvenile Court at Cincinnati, and was an advocate of probation for criminals.

Calles, Señora Natalia. Wife of Plutarco Elias Calles, President of Mexico, died at Los Angeles, Cal., June 2, where she had been sent for surgical treatment. She was born at Nogales, Mex., the daughter of one of the leading families of the State of Sonora. She was educated at Mexico City. Because of her democratic ideas and her philanthropies she was popular among the Mexican people. She took little part in politics.

Cambridge, Lt.-Col. the Marquis of.

Cameron, Josephine (Mrs. Marion Josephine King). American actress, died at Portland, Me., November 1. She was born in 1848, and her first engagement was at Portland, Ore., with a stock company. She made her debut as leading woman at San Francisco, playing Julia in *The Hunchback*, and also was a member of the Ford Stock Company at Baltimore, in addition to

playing with Kate Claxton in *The Two Orphans*, and in Bartley Campbell's *White Slave* company. In 1886 she went on a joint starring tour of the West Indies and South America with Barton Hill, and later traveled through the United States with Louis Mann as her leading support.

Cameron, William E. Former Governor of Virginia, died at Richmond, Va., January 25. He was born at Petersburg, Va., Nov. 29, 1842, and was active in Virginia newspaper life, being editor of several important papers. He was the Governor of Virginia, 1882-86, and in the Bryan campaign of 1896 opposed free silver, while editing a newspaper in Petersburg, Va. He was later editor of *The Virginian-Pilot* of Norfolk, Va. He was influential in the calling of the Virginia constitutional convention in 1904.

Campanari, Giuseppe.

Campbell, George S. Canadian banker, died at Montreal, Canada, November 21. He was born at Edinburgh, Scotland, July 8, 1851, and was educated at a private school in Glasgow. He entered the firm of F. D. Corbett & Co., steamship agents, Halifax, N. S., in a subordinate capacity, rising to a partnership, and, when Mr. Corbett retired, to the position of principal, the firm becoming G. S. Campbell & Company. He was president of the Halifax Board of Trade, and was active in many patriotic, civic and philanthropic works.

Canevin, the Most Rev. John Francis Regis.

Carrillo, Gómez. French author, died November 29. He was born in South America, but the greater part of his life was spent in France, where he had considerable vogue as a writer. One of his books was *The Mystery of the Life and Death of Mata Hari*; she was the dancer who was shot as a spy during the War, after a trial which interested all France because of her friendship, real or alleged, with men in high places.

Carpenter, Joseph Estlin.

Carson, John Fleming.

Carver, W. F. Former American scout, champion marksman and showman, died at Sacramento, Cal., September 1. He was born in 1840, and after serving through the Civil War as a scout against the Indians became a champion rifle and pistol shot. He traveled through India and Australia as well as the United States, displaying his skill. With William F. Cody ("Buffalo Bill") he originated the "Wild West" show, which tried to depict conditions of the frontier days in the United States.

Casanowicz, Immanuel Moses.

Cathcart, Earl of (George Cathcart). Died at London, November 19. He was born June 26, 1862, the third son of the third earl, and succeeded his brother in 1911. His name came prominently before the public, American and British, in 1926, when his divorced wife, Vera, Countess of Cathcart, was barred temporarily from the United States on the ground of moral turpitude, following her elopement with the Earl of Craven. The earl had divorced her in 1922. He was formerly a lieutenant in the Fourth Battalion of the Prince of Wales' Own York Regiment.

Cavanaugh, Colonel James B.

Chajes, The Rev. Dr. Hirsch Peretz. Chief rabbi of Vienna, Austria, died December 18. Dr. Chajes was called by Dr. Stephen S. Wise, of New York, "one of the great Jews of his generation." In 1921 he visited the United States in behalf of the starving children of Europe.

Chakste, Janis.

Chamberlain, Houston Stewart.

Charlotte, Princess.

Choate, Charles Francis, Jr.

Clague, Stanley. American publisher and advertising manager, died at Chicago, January 19. He was born on the Isle of Man in 1871, and, going to the United States when 20 years of age, became secretary to the late Charles W. Eliot, president of Harvard University. Later he served in the advertising department of the Curtis Publishing Company, Philadelphia. In 1908 he organized an advertising agency of his own in Chicago, which developed and was consolidated with another organization. He became connected with the Audit Bureau of Circulation, an institution maintained by newspapers and publications to certify circulation and otherwise promote fair dealing with the advertisers, serving as managing director and chairman of the Standard Forms and Audit Company. He was also president of the Affiliated Agents' Association of America and of many other advertising organizations.

Clark, Francis Edward.

Clark, John Goodrich.

Clark, J. Ross. American railway builder and mine owner, died at Los Angeles, Cal., September 18. He was born at Connelleville, Pa., in 1851 and moved to the West in 1870 with his brother, William A. Clark, who later became United States Senator and owner of copper mines. At first he was engaged with his brother in the establishment of banks and various mining projects, including the Butte Reduction Works and the Colusa, Parrot and other mines, including the

Mayflower, which were extremely profitable to his brother and himself. He was for twenty years vice president of the Los Angeles & Salt Lake R. R., which he built, and was a director of the Citizens' National Bank in Los Angeles, being chairman of the board from 1924.

Clark, William Braddock. Connecticut insurance leader, died at Hartford, Conn., August 6. He was born at Hartford, Conn., June 29, 1841, and was educated at grammar and high schools, entering the fire insurance business at an early age. He was at the time of his death chairman of the board of the Etina Insurance Company, and a director of the Travelers' Insurance Company, of the First National Bank, and of the Society for Savings.

Clarke, Hugh Archibald.

Clement, Percival Wood.

Clendenin, Henry Wilson. American editor, died at Springfield, Ill., July 19. He was born at Schellsburg, Pa., Aug. 1, 1837, and was educated at private schools and by tutors. He began newspaper work on the Burlington *Hawkeye*, Burlington, Ia., in 1852. During the Civil War he served as a private in the Twentieth Pennsylvania Volunteer Infantry. From 1876 to 1881 he was editor and part owner of the Keokuk, Ia., *Constitution*, and in the latter year became editor and part owner of the *Illinois State Register*. He was a member of the Democratic State committee in Illinois, 1884-88, and a delegate to the Democratic national convention in 1896. He was postmaster of Springfield, 1886-90, and was a member of the board of directors of the Lincoln Public Library of Springfield.

Cluett, Robert. American manufacturer and philanthropist, died at Chicago, Ill., November 24. He was born at Birmingham, England, June 14, 1844, and went to the United States early in life. He was educated at the grammar schools of Troy, N. Y., and at Troy Academy. In 1866, with two brothers, J. W. A. Cluett and George B. Cluett, he founded the shirt and collar manufacturing firm of George B. Cluett, Brother & Company, Troy, N. Y.; after several changes in personnel the firm was incorporated in 1901 as Cluett, Peabody & Company, of which Robert Cluett was vice president until his retirement in 1907. He was formerly president of the National City Bank, of Troy. He was a liberal contributor to the public philanthropies of the city, especially to the Troy Young Men's Christian Association, to which he presented a building, and of the Samaritan Hospital, of which he was vice president. He was also an organizer of the Troy Civic League. Mr. Cluett compiled three series of Scripture readings, *Every Morning, Day by Day With the Master*, and *Responsive Scriptures*.

Clune, William H. American moving picture producer, died at Los Angeles, Cal., October 18. He was born at Hannibal, Mo., in 1862, and, going to California, in his early life was a railroad engineer. Later he became successful in real estate and establishing a "penny arcade." He became connected with the moving picture industry, and was one of the largest film producers in the United States, being interested in *The Birth of a Nation*, *The Glensman*, *Ramona*, and other productions.

Coates, Florence Earle.

Coco, Adolph Valery. American lawyer, died at Marksville, La., December 23. He was born in Louisiana, Mar. 21, 1857, and was educated at the Louisiana State University, St. Vincent's College and Tulane University, receiving his bachelor's degree in law from the last-named institution in 1881. He was a district judge, 1888-1896, and attorney general of Louisiana, 1916-24. In the last named capacity he was the central figure in the Mer Rouge case, in which members of the Ku Klux Klan were accused of killing two men, mutilating their bodies and casting them into a lake. The case finally was dropped without indictments being found. The original family name of Judge Coco was Baldimodo, of Italian origin, but his grandfather was once a dealer in coconuts, and the name "Coco" was applied to the latter and was retained by the family.

Coffin, William. United States Consul General at Berlin, Germany, died at Berlin, February 18. He was born in Brooklyn, N. Y., Oct. 8, 1877, and was educated at St. Paul's School, Concord, N. H. He was in mercantile life in Tennessee, Kentucky, and New York until 1906, and was appointed American consul at Masket, Arabia, in that year, serving until 1908, when he was made consul at Tripoli. From 1910 to 1913 he was consul at Jerusalem, and served on special duty in the United States in connection with the Twelfth International Congress of Navigation, Philadelphia, in May and June, 1912. He served as consul general at Budapest, Hungary, from September, 1913, at Christiania, Norway, July 21, 1917, at Stockholm, Sweden, from Nov. 5, 1917, and was appointed to the Department of State, Apr. 1, 1918. On Dec. 1, 1919, he was made consul general at Berlin.

Coghlan, Sir Charles Patrick John.

Coleridge, Bernard John Seymour Coleridge, Second Baron.

Colgate, Ansten.

Collingwood, Herbert Winslow.

Collins, Herbert Seward. President of the Union Tobacco Company and one of the founders of the United Cigar Stores Company, died at New York, N. Y., September 11. He was born at Albion, N. Y., July 7, 1875, and at the age of 16 became a clerk in the tobacco and cigar store of Whelan Bros., being associated later with George and John F. Whelan in the cigar business in Syracuse, N. Y. In 1901 Mr. Collins and the Messrs. Whelan went to New York, where they organized the United Cigar Stores Company. Mr. Collins becoming vice president, and a chain of stores was developed which increased throughout the principal cities of the United States. On Jan. 1, 1914, Mr. Collins became affiliated with the Riker-Hegeman Drug Stores, and temporarily resigned the vice presidency of the United Cigar Stores Company. In the summer of 1927 he became president of the Union Tobacco Company, which was organized to serve as a retail outlet for the combined business of the United Cigar Stores Company and the Schulte Stores Corporation and their agencies.

Collins, the Most Rev. Thomas Gibson George.

Colvin, Sir Sidney.

Comer, Braxton Bragg.

Cook, Albert Stanburrough.

Cook, David C. American editor and publisher of Sunday school publications, died July 30. He was born at East Wooster, N. Y., Aug. 28, 1850, and since 1875 had been engaged as an editor and publisher in the preparation of Sunday school works and papers. This business grew very large. Mr. Cook at the time of his death was president of the David C. Cook Publishing Company.

Cornwell, Herbert C. De V. American neurologist, died at Scarsdale, N. Y., April 25. He was born in 1875 and graduated from Harvard College in 1897 and the Harvard Medical School in 1900. He was at one time with the Post-Graduate Hospital, New York, and during the World War served as regimental surgeon of the 816th Infantry, 79th Division. He was twice cited for heroic conduct under fire, and was stationed for a time at a French base hospital. He was discharged with the rank of lieutenant colonel.

Cowdrey, Westman Dickinson Pearson, First Viscount.

Coxe, William Griscom.

Crak, Sir Henry.

Crandall, Irving Bardshar. American research physicist and inventor, died at New York, April 22. He was born at Chattanooga, Tenn., May 27, 1890, and after graduating at the University of Wisconsin in 1909 took his master's degree at Princeton University in the following year. He became connected with the Bell Telephone Laboratories, and at the time of his death was a member of the technical staff. He had previously received the degree of Ph.D. from Princeton. He was the author of *Sound and Vibrating Systems*.

Crane, Robert Newton.

Crane, Thomas Frederick.

Crapsey, The Rev. Algernon Sidney.

Creed, Wigginton Ellis.

Crossley, Arthur William.

Crothers, Samuel McChord.

Crumpacker, Maurice Edgar. American Congressman, died at San Francisco, Cal., July 24. He was born at Valparaiso, Ind., Dec. 19, 1886. He was educated in the public schools of that city and at Washington, D. C., at the Culver Military Academy, at which he graduated in 1905, and the University of Michigan, where he took the A.B. degree in 1909. He completed the law course at Harvard University in 1912 and entered upon the practice of law in Portland, Ore., in the same year. During the World War he served in the United States army with the rank of captain. In 1921 he was special deputy district attorney for Multnomah County, Oregon, and in 1925 he was elected as a Republican to the Sixty-ninth Congress.

Csernoch, Johann. Cardinal.

Curtis, John. American writer on music, died at Norberth, Pa., April 26. He was born at Philadelphia, in 1868. In 1906 he founded the Philadelphia Operatic Society, which in 1914 was reorganized as the Behrens Opera Club, but it had to be disbanded during the war. Mr. Curtis was the author of a valuable book, *One Hundred Years of Opera in Philadelphia* (1926).

Cutwood, James Oliver.

Cuzon, Frank.

Cushman, Henry Irving. American Universalist clergyman and former professor of homiletics at Tufts College, died at Providence, R. I., September 15. He was born at Oxford, N. H., in 1844, and at one time was secretary of Dean Academy at Franklin, Mass. For fifty-one years he served as a Universalist preacher in Rhode Island, resigning the pastorate of the First Universalist Church of East Providence in June, 1926. He received the degree of doctor of theology from

Cutler, James Goold.

Cuzanian, Antranik.

Da Cunha, Gastao.

Daggett, Mrs. Mabel Potter.

Dall, William Healey.

Daly, Arnold.

Dalzell, John

D'Amato, Frederico. Assistant professor of architecture of Princeton University, died in New York, October 1. He was born in Italy in 1884, and was educated in Paris, at the Ecole des Beaux Arts, where he studied under Victor La Loux, and where he also taught and practiced until the outbreak of the World War, when he served with the Italian engineers. He joined the faculty of Princeton University in 1926 as assistant professor of architectural design, and later was promoted to a full professorship. Under the terms of his will he bequeathed his property in the United States, including his library on architecture, to Princeton University, to encourage the study of architecture in that institution.

Dana, William Parsons Winchester.

Danilowski, Gustave. Polish novelist and poet, died, October 22. He was born in 1872 and was educated for a literary career, writing novels and poetry in which the struggle for Polish independence was featured. During the World War he served with Marshal Pilsudski's Polish Legion. He was a popular figure throughout Poland for his patriotism and literary attainments, which were widely appreciated.

Davies, Hywel.

Davila, Miguel R.

De Boe, William J. Former United States Senator, died at Marion, Ky., June 15. He was born in Crittenden County, Kentucky, in 1849, and received his education at local schools and at Ewing College, Illinois. He studied law and later medicine, graduating from the medical department of the University of Louisville, Ky., and practiced for a few years. Later he resumed the study of law and was admitted to the bar. He was superintendent of schools in Crittenden County. In 1888 was a delegate to the Republican National Convention in Chicago. He was elected to the State Senate in 1898, and was a candidate for United States Senator in 1895 and in 1896, withdrawing in favor of Dr. William E. Hunter. He was nominated and elected to the United States Senate as a Republican, and served from Mar. 4, 1897, to Mar. 3, 1903.

Deering, Charles. American manufacturer and capitalist, died in Florida, February 5. He was born at Paris, Me., in 1852, the son of William Deering, and graduated at the United States Naval Academy in 1873. He served in the United States Navy until 1881, when he resigned to become secretary of the Deering Harvester Company, which had been established by his father at Plano, Ill. After this business was merged with other leading harvester interests in the International Harvester Company, he became a director of that corporation and was chairman of its board of directors.

Delsor, Nicholas. French clergyman, editor and politician, died at Strasbourg, France, December 20. He was born in 1847. Abbe Delsor had the peculiar distinction of having served in both the German and the French parliaments, as a representative of Alsace. For 30 years he sat in the Reichstag, although he was an opponent of German rule in Alsace-Lorraine. When the two provinces were restored to France after the War, he became a senator from Bas Rhin. He held the office until 1926, when differences with the leaders of the Republican Union party prevented his renomination. He was a chevalier of the Legion of Honor.

Denning, Joseph M.

De Puy, Frank A. American journalist, died April 5. He was born at Lima, N. Y., in 1854, and was graduated at Union College in 1877. He joined the staff of the *New York Times* in the same year, and after several years' experience as a reporter became a Washington correspondent. In 1898 he joined the staff of the *New York Herald*, and returned to the *Times* in 1920. He was one of the founders of the Gridiron Club, Washington, D. C.

De Visne, Henri Pierre Williamson. American educator, died at New Brunswick, N. J., June 22. He was born at Middlebury, Vt., Aug. 20, 1874, and graduated at Middlebury College in 1895, later studying as a graduate student at Princeton, 1900-02. He was a member of the department of romance languages at the University of Chicago, and in the autumn of 1926 went to Rutgers, where he was head of the department of French at the New Jersey State College for Women.

Dewart, the Rev. Murray Wilder. American clergyman, died at Baltimore, Md., December 4. He was stricken as he left his church after morning service, and died almost immediately. He was born at Chardon, Ohio, Feb. 14, 1874, and was educated at the University of Minnesota and at the Episcopal Theological School. After holding charges at Roxbury and Winchester, Mass., he became rector of Christ Protestant Episcopal Church, Baltimore, Md., in 1922. Dr. Dewart was

chaplain of the First Massachusetts Field Artillery on the United States-Mexican border in 1916, and of the One Hundred and First United States Field Artillery, in France, 1917-19.

Dickman, Joseph Theodore.

Dickson, Charles. American actor and playwright, died at New York, December 11. He was born at New York in 1860. His family name was Doblin, but throughout his professional career he was known as Dickson. For many years he was one of the most successful light comedians of the American stage, achieving success in support of Stuart Robson, William H. Crane and William Gillette, as well as when starring. He first attracted widespread public notice as Bean, the war correspondent, in Gillette's *Held by the Enemy*. He was one of the authors of the successful musical show, *The Three Twins*, and this proved so profitable that he retired from the stage and turned playwright, for twenty years, returning to the boards in 1926 to take a part in *The Great Gatsby*.

Dillon, John.

Dillon, John Francis.

Dines, William Henry. British meteorologist, died at Wallingford, England, December 24. He was born in 1855. He was on the engineering staff of an English railway as an apprentice before going to Corpus Christi College, Cambridge, where he took his degree in 1881, being a wrangler. From that time until his death he devoted himself to meteorology, winning high honors, especially through his explorations and studies of the upper regions of the air. He was a former president and an honorary fellow of the Royal Meteorological Society and a fellow of the Royal Society.

Dole, The Rev. Charles Fletcher.

Dolgorukoff, Prince Paul Dimitrievich.

Doran, Alban Henry Griffiths. British surgeon, died in August. He was born in London in 1849, the son of Doctor Doran, F.S.A., the well known antiquary and editor of *Notes and Queries*. He was educated at Nassau School, Barnes, Surrey, and in 1867 entered St. Bartholomew's Hospital, where he distinguished himself in scholarship. He was admitted a licentiate of the Society of Apothecaries and a member of the Royal College of Surgeons in 1871, and for awhile engaged in teaching, later becoming an anatomical assistant at the Royal College of Surgeons. In 1877 he was elected assistant surgeon to the Samaritan Free Hospital and was associated with several other well known surgeons in the surgical treatment of women. Resigning in 1909, he devoted himself to writing a catalogue of surgical instruments and to literary studies. His publications include: *The Morphology of the Mammalian Oestocula Auditiva* (Trans. Linn. Soc.) (1878); *Tumours of the Ovary* (1884); *Handbook of Gynaecological Operations* (1887); *Shakespeare and the Medical Society* (annual oration, Medical Society) (1899); Chapter XIV, *Medicine in Shakespeare's England* (1916); and *Burton (Dr. Slop), His Forces and His Foes (Journal of Obstet. etc. of the British Empire, vol. 23)*.

Dowd, William Carey. American newspaper publisher, died at Charlotte, N. C., September 28. He was born near Cary, N. C., Mar. 21, 1865, and graduated at Wake Forest College in 1889. In 1892 he bought the *Mecklenburg Times*, a weekly newspaper which later he consolidated with the *Charlotte Democrat*. In 1895 he acquired the *Charlotte News*, being its publisher at the time of his death. He was a member of the State senate and the assembly, being at one time speaker of the latter body. He was a delegate to the Democratic conventions of 1896 and 1900, and served in the latter year as a Presidential elector from North Carolina.

Drachsler, Julius.

Drew, John.

Droppers, Garrett.

Dumble, Edwin Theodore.

Duncan, Isadora.

Dunn, Arthur Wallace.

DuPuy, Paul Jacques.

Dyer, Brigadier-General Reginald Edward Harry.

Edgar, B. O. American electrical engineer and capitalist, died at his home near Chattanooga, Tenn., December 26. He was born at Rahway, N. J., in 1878, and graduated at Rutgers University in 1900 with the degree of E.E. After doing work in electrical engineering in New York City, California and the Northwest, in 1914 he became general manager of the Nashville, Tenn., Company and the Chattanooga Railway & Light Company, and when these two companies merged with the Chattanooga & Tennessee River Power Company into the Tennessee Electric Power Company, in June, 1922, he became vice president and general manager of the entire system.

Edgerly, Winfield Scott. American soldier, died at Farmington, N. H., September 10. He was born at Farmington, May 29, 1846, and after graduating from the United States Military Academy in 1870 was commissioned second lieutenant in the Seventh Cavalry, serving in this arm of the service through Indian uprisings, the Spanish-American War and the Philippine in-

surrection. In 1905 he was made brigadier general, and in 1907 was appointed commander of the Department of the Gulf. On Dec. 29, 1909, he was placed on the retired list on account of disability.

Egerton, Hugh Edward.

Ehret, George. American brewer, died at New York, January 20. He was born at Hofveiler, Germany, in 1836, and at the age of 21 followed his father, a master brewer, to the United States. Entering the family business, he became a master brewer within a short time and in 1866 established in New York the Hell Gate Brewery, which he developed until it had an annual output of nearly 1,000,000 barrels a year. During the World War, due to Mr. Ehret's absence in Europe, his American property was confiscated by the government under a mistaken belief in his German sympathies, but he actually was in Switzerland, and on his return to the United States resumed possession of his property. He was one of the largest real estate owners in New York City. Mr. Ehret served twice as Presidential elector for the Democratic Party.

Eickemeyer, Carl.

Eigenmann, Carl H.

Einthoven, Willem.

Emard, The Most Rev. Mgr. Joseph Medard. Canadian clergyman, Roman Catholic Archbishop of Ottawa, died at Ottawa, Ontario, March 28. He was born in 1853 and was ordained priest in 1876. He held many important posts throughout eastern Canada, and was for many years connected with the cathedral at Montreal as titular canon. From 1892 to 1923 he served as Bishop of Valleyfield, being chosen first bishop of that diocese when it was created. He was bishop of the Canadian army in the World War. In 1922 he was made Archbishop of Ottawa, a position he held at the time of his death.

Emery, Fred Parker. American educator, died at Hanover, N. H., January 16. He was born at Pembroke, N. H., Apr. 11, 1865, and after graduating at Dartmouth College in 1887 and taking post-graduate work there he studied at the University of Paris and the University of Berlin. Previous to going abroad he had been instructor of English at the Massachusetts Institute of Technology, and on his return from Europe in 1893 he was professor of English at the Pennsylvania State College. In 1894 he was called to Dartmouth as assistant professor in rhetoric and oratory, being made a full professor in 1895. He was for many years one of the most popular and highly esteemed professors at Dartmouth. He wrote: *Notes on English Literature* (1891), and edited an edition of Shakespeare's plays.

English, John Mahan.

Ericson, John Ernst.

Fairchild, Samuel W.

Felter, Harvey Wickes.

Ferdinand, Victor Albert Mainrad. King of Rumania.

Feustman, Leon Philip.

Field, James Alfred.

Fildes, Sir Luke.

Fink, Bruce.

Fish, Frank L. American jurist, died at Palmer, Mass., September 7. He was born at Newfane, Vt., in 1863, and began the practice of law in Vergennes, Vt., in 1890. He served as state attorney of Addison County, Vermont, 1892-1900, and became a national bank examiner in the latter year, holding the position until 1908. He served in the Vermont House of Representatives in 1908 and became a superior judge in 1912, later becoming chief justice of the Supreme Court of the State.

Fisher, Sydney George.

Fisk, Willard Clinton.

Fitzgerald, Martin. Irish publisher, died at Dublin, Ireland, March 9. He was born in 1867, and became publisher of *The Freeman's Journal*, the oldest nationalist newspaper in Ireland, which was subsequently the target for action by the government and others for its comment on British rule. This was particularly the case during the Anglo-Irish disturbances preceding the establishment of the Irish Free State, and the newspaper office was frequently raided. Fitzgerald, the publisher, and Patrick Hopper, the editor, were once imprisoned for their refusal to pay fines imposed under the defense of the realm act. They were later released, and the fines never were paid. Fitzgerald was also known as a race horse owner.

Fitzpatrick, Frederick F.

Flaming, John Donaldson.

Flemming, James Kidd.

Fiers, Robert de la Motte-Ango, Marquis de.

Flynn, Edmund James.

Foerster, Adolph Martin. American composer, died at Pittsburgh, August 10. He was born at that city, Feb. 2, 1864. After receiving his first musical instruction from his mother, he attended the Leipzig Conservatory, graduating in 1875. After his return to America he taught one year at the Fort Wayne, Ind., Conservatory, and then settled in Pittsburgh as a teacher of singing and a choral conductor. His works include a

violin concerto, numerous pieces for orchestra, chamber music, piano pieces and over a hundred songs.

Forsyth, Robert. American engineer, died at Chicago, Ill., September 11. He was born at Troy, N. Y., Sept. 28, 1849, and graduated at Rensselaer Polytechnic Institute, Troy, in 1869, with the degree of C.E. His professional career was concerned exclusively with the design, construction and operation of iron and steel works. He was superintendent of the steel works of the North Chicago Rolling Mill Company, 1871-83, and manager of the Union Steel Company, 1884-89, and in the latter year he became chief engineer and second vice president of the Illinois Steel Company, serving until 1896, when he retired to become a consulting engineer. He was a member of the board of directors of the John Olerar Library, and a member of the leading engineering and metallurgical societies of the United States and Great Britain.

Foster, Herbert Darling.

Fox, Sir Francis.

Francis, David Rowland.

Fraser, Sir John George.

Frowde, Henry.

Fuchs, Robert, fuks. Austrian composer and teacher, died at Vienna, February 18. He was born at Frauenthal, Feb. 15, 1847, and received his musical education at the Vienna Conservatory, where later he was one of the most distinguished professors, from 1875 to 1912. Among his pupils were Hugo Wolf and Gustav Mahler. His compositions include an opera, *Die Königsbraut* (Vienna, 1889), a comic opera, *Die Teufelselcke* (Leipzig, 1893), five serenades for orchestra, much excellent chamber music, and many works for the organ.

Fuertes, Louis Agassiz.

Fuller, Sarah. American educator, died at Newton, Mass., August 1. Miss Fuller, who was a teacher of the deaf, was born at Weston, Mass., in 1836, and was educated in the local schools. In 1869 she became connected with the instruction of the deaf, with a class of twenty pupils from which the Horace Mann School developed. She was associated with Alexander Graham Bell, teacher of the deaf and the inventor of the telephone. She wrote an illustrated primer and a set of phonetic charts which were of great use in the schools. She was the first instructor of Helen A. Keller, the blind, deaf and dumb woman who has achieved distinction for her writings and work in extending and improving instruction for the blind and deaf.

Fulton, John Hamilton.

Gage, Lyman Judson.

Gainsborough, Arthur Edward Joseph Noel, Fourth Earl of.

Gallizier, Nathan.

Galloway, Sir William.

Ganga Ram, Rai Bahadur, Sir Lala. British Indian engineer, died at Golders Green, London, July 10. Born in 1851 in the Punjab, he received his early training at the Thomason Engineering College, Dehra Dam, India, and at the age of 22 entered the Department of Public Works. In 1899 he was made an executive engineer and served in Central India. He was a pioneer in irrigating lands by means of electrical pumping, and he had an active share in promoting great schemes of hydro-electric installations in the Punjab. He gave much help, financial and professional, to the Benares Hindu University. His *Pocket Book of Engineering* is known in many countries. He received a knighthood in 1922.

Gardiner, Harry Norman.

Gardner, Alice.

Garezon, Rear Admiral Pedro. Peruvian naval officer, died at Lima, Peru, May 28. He commanded the Peruvian warships in the naval battle of Angamos between Chile and Peru, in 1879.

German, Samuel.

Garrison, Daniel Merzhon.

Gary, Elbert Henry.

Gaston, William Alexander.

Gates, Charles Winslow. Former Governor of Vermont, died, July 1. He was born at Franklin, Vt., Jan. 12, 1856, and after graduating at the St. Johnsbury Academy in 1880 became a teacher in the academy of his native town, and then entered business life as a merchant, being active from 1884 to 1913. He engaged in farming also and spent his life on the farm where he was born. He became a member of the Vermont House of Representatives in 1898 and was elected to the State Senate in 1900. He became state highway commissioner in 1904 serving until 1915 when he was elected Governor of Vermont for two years. He was president of the Franklin Telephone Company and a director of the Enosburg Falls Savings Bank and Trust Company, and was president of the board of St. Johnsbury Academy.

Gerhard, William Paul.

Gerry, Elbridge Thomas.

Gibney, Virgil Pendleton.

Gibson, Robert William.

Giegerich, Leonard Anthony. American jurist, died at New York, December 20. He was born at Rotz, Bavaria, Nov. 20, 1855, and was taken to the United States when one year old. He was educated at public and parochial schools, New York City, and at the La Salle Institute, and was admitted to the bar in 1877. After holding various minor offices, he became a judge of the Court of Common Pleas, 1891-95, and when that court was abolished he became a member of the Supreme Court bench of New York State. He served twenty-nine years, until his retirement in 1925. The degree of LL.D. was conferred on him by Manhattan College in 1903 and by St. Francis Xavier College in 1909.

Gilbert, Frank Bixby.

Gilchrist, Thomas Caspar.

Gillmore, James Clarkson. American naval officer, died at Washington, D. C., June 14. He was born at Philadelphia, Pa., July 10, 1854, and graduated at the United States Naval Academy in 1876. He received the Congressional Medal of Honor for his services in the Spanish-American War. In the Philippine insurrection he was held a prisoner by the Filipinos for more than eight months, having been captured with a landing party under his command. He was about to be shot when he objected to having his hands tied for the execution. During the consideration of his objection, word came that a landing party of Americans was moving forward, and the execution was postponed, Lieutenant Gillmore being released later. He was the last commodore in the United States Navy to fly the flag of that rank before it was abolished.

Ginzberg, Asher (Ahad Ha'am).

Girault, de la Corneille, Father Jean. Roman Catholic priest, died at New Orleans, La., December 12. Father Girault, who spent most of his life among the "Cajuns" of the lower Louisiana parishes, was widely known in connection with his work and responsibilities among the trappers and inhabitants of Southern Louisiana, where he was rector of St. Thomas's Church at Point-à-la-Hache. He came into prominence on the occasion of the Mississippi floods in the spring of 1927, when the levee at Caernarvon was dynamited to save New Orleans. His parishioners had refused to leave their farms and homesteads, and as Father Girault remained with them he not only exercised his ecclesiastical functions, but was appointed deputy sheriff and became the sole enforcer of law of the State as well as for his church. He was also coroner of Plaquemines Parish and superintendent of schools.

Glennan, James D.

Glidden, Charles Jasper.

Godfrey, Charles C.

Goodell, John M.

Goodman, William.

Goodspeed, the Rev. Dr. Thomas Wakefield.

Gordon, George Byron.

Gorguet, Auguste François Marie.

Graaf, Sir Jacobus Arnoldus Combrinck, K.C.M.G. Graham, Maxwell Henry. Canadian naturalist, died at Ottawa, July 5. He was born in England. Going to Canada in 1892, he became connected with the department of the interior as a naturalist in the parks branch. At the time of his death he was head of the wild-life division of the Northwest Territories branch of the department of the interior.

Grant, the Rev. Percy Stickney.

Grasselli, Caesar Augustin.

Gray, Hawthorne O.

Greenhill, Sir George.

Gressman, Hugo.

Grice, Ettalene M.

Griffin, John. New Jersey jurist, died at Jersey City, N. J., January 26. He was born in Jersey City, June 26, 1858, and was educated at the public schools. He was admitted to the New Jersey bar as attorney in 1881 and as counselor in 1884. He practiced in Jersey City, and for many years was counselor to the board of freeholders of Hudson County. On Mar. 20, 1913, he became vice chancellor of New Jersey.

Griggs, John William.

Gross, Harold Judson. American banker and politician, died at Providence, R. I., April 8. He was born in Providence, Apr. 15, 1866, and after receiving a high-school education entered the real estate and insurance business with his brother, George L. Gross. He later became vice president of the Union Trust Company and of the Maiden Lane Realty Company, and a director on various boards, including those of the Industrial Trust Company, the United Electric Railroad Company, the Title Guarantee Company and the Providence Institute for Savings. In 1900 he was aid on the staff of Governor Gregory, and for six years he was colonel of the First Rhode Island Light Infantry Regiment. He was police commissioner of Providence, 1904-10, and Lieutenant governor of Rhode Island, 1920-22, but in the latter year, as the Republican candidate for Governor, he was defeated.

Grossman, the Rev. Dr. Rudolph.

Grover, Oliver Dennett.
Gunn, James Newton.

Gutsall, Hiram S. American educator and architect, died at Ithaca, N. Y., September 29. He was born at Delhi, N. Y., in 1856, and was graduated from Syracuse University. He became connected with the Cornell University faculty in 1888, and was for many years a member of the faculty of the college of architecture, retiring in 1922. He designed numerous tablets on the Cornell campus and the seal of the University.

Haanel, Eugene.
Haas, George Christian Frederick. American educator and Lutheran clergyman, died at Staten Island, New York, September 30. He was born at Philadelphia, Pa., May 5, 1854, and was graduated at the University of Pennsylvania in 1876 and four years later at the Lutheran Theological Seminary at Philadelphia. He was pastor of St. Mark's Lutheran Church, New York, and for seven years prior to his death was a member of the faculty of Wagner College, Staten Island. He was president of the Evangelical Lutheran Ministerium of New York, and was one of the editors of the Lutheran League *Hymnal*. He was also a member of the general council of the publication board of the Lutheran Church. He composed the Lutheran League rally hymn.

Hadley, Herbert Spencer.

Hall, William H.

Hall, William Preble.

Hallowell, John White. American administrator, died at Boston, Mass., January 5. He was born at West Medford, Mass., Dec. 24, 1878, and after graduating from Harvard College in 1901 joined the organization of Stone & Webster, becoming a member of the firm in 1912. He was active in business until the World War, when he became assistant to Herbert Hoover, Federal food administrator, serving until March, 1919, when he became assistant to Secretary of the Interior Lane. He was active also in educational and charitable work, being a member of the Commission for Relief in Belgium, of the Educational Foundation, Inc., and an overseer of Harvard College, 1914-20. He was a member of the Harvard Fund Council from 1925 until his death, and was also president of the Associated Harvard Clubs.

Hammerslag, Arthur Arton.

Hamill, Ernest Alfred. American banker, died at Chicago, Ill., January 14. He was born at Bloomington, Ind., July 1, 1851, but in infancy was taken to Chicago, where the rest of his life was spent. He was educated at the public schools, and his first employment was in a hardware store. After spending some time on the Chicago Board of Trade, on July 16, 1889, he entered the employ of the Corn Exchange Bank, serving as vice president for nine years and as president for twenty years, until the bank was merged with the Illinois-Merchants' Trust Company, where he became chairman of the board. He was vice president of the Elgin National Watch Company and of the Illinois Trust Safety Deposit Company, treasurer of the Chicago Stock Exchange, and a member of the Chicago Board of Trade and the Art Institute of that city. He was active in philanthropic enterprises, being vice president of the board of trustees of Rush Medical College and a trustee of the Presbyterian Hospital and of the Chicago Home for Incurables.

Hamilton, Lord George Francis.

Harden, Maximilian.

Harker, Joseph Cunningham. British scenic artist, died April 16. He was born at Manchester, England, Oct. 17, 1855, and was a member of a theatrical family. He went to London in 1870, and after serving an apprenticeship to T. W. Hall, scene painter, established his own studio, becoming very successful. At one time he was associated with Sir Laurence Alma-Tadema. In 1885-88 he was in the United States, painting huge panoramas, then much in vogue.

Harlan, James S.

Harmon, Judson.

Harrell, Isaac Samuel. American educator, died at New York, May 17. He was born in Gates County, North Carolina, Dec. 29, 1894, and taught at Trinity College and the University of North Carolina before becoming a member of the faculty of the department of history of New York University, in 1924. He wrote *Loyalism in Virginia*.

Harrington, Sir John Lane.

Harrison, Elizabeth.

Hart, Thomas Norton. Former mayor of Boston, Mass., died at Swampscott, Mass., October 4. He was born at North Reading, Mass., Jan. 20, 1829, and after attending country schools went to Boston in 1842. He entered mercantile life, becoming later a partner in the firm of Philip A. Locke & Company, and then founding the firm of Hart, Taylor & Company. He retired from mercantile life in 1879, and from that year until 1903 he was a banker, president of the Mount Vernon National Bank. After serving as a member of the common council and the board of aldermen of Boston, he was elected mayor in 1889 and

again in 1890. Ten years later he was again chosen mayor, and also in 1901. He was a candidate for the mayoralty seven times. He was also postmaster of Boston, 1891-93. Mr. Hart's acts of philanthropy were numerous and generous.

Harty, Jeremiah J.

Haslam, Sir Alfred Seale.

Havard, Valery.

Haynes, The Rev. Dr. Lucius M. S. American clergyman, died at Minneapolis, Minn., August 16. He was born in 1838. He was known in many cities of the United States as a minister of the Baptist denomination, and had had charges at Oswego, Watertown, Norwich, Troy and Binghamton, all in New York State, as well as in New York City.

Heath, Perry Sanford.

Hebrard, Emile. French journalist, died April 9. He succeeded his father, also named Emile, as director of the famous newspaper of Paris, *Le Journal*, in July, 1914. His arduous work for France during and after the World War was held responsible for the illness and breakdown which necessitated his retirement from active life eighteen months before his death.

Hecht, Elias.

Heffron, The Right Rev. Patrick Richard. American Roman Catholic clergyman, died at Winona, Minn., November 28. He was born at New York, June 1, 1860. He was educated for business, receiving the degree of Master of Accounts from St. John's College, Minneapolis, in 1878, but studied for the priesthood, and was ordained in 1884. He became pastor of the Cathedral in St. Paul, Minn.; vice rector of St. Paul Seminary, 1896-97, and president, 1897-1910. He was consecrated bishop of the diocese of Winona, Minn., in 1910, and on Nov. 13, 1920, was made an assistant to the pontifical throne in recognition of his work in the diocese.

Hegar, he'gär, Friedrich. Swiss composer, died at Zurich, June 2. He was born at Basel, Oct. 11, 1841, and received his musical education at the Leipzig Conservatory. In 1868 he established himself in Zurich as conductor of the subscription concerts and a choral society, both of which he brought to a high level of achievement. From 1868 to 1906 he also conducted the Tonhalle Orchestra. In 1875 he founded a conservatory, of which he was director until 1914. Among Swiss composers he was one of the most prominent, and his male choruses a cappella have enjoyed an immense popularity.

Hellen, Paul César.

Helm, James Meredith. American naval officer, died at Washington, D. C., October 28. He was born at Grayville, Ill., Dec. 16, 1855, and graduated at the U. S. Naval Academy in 1875. After serving with surveying expeditions in Alaska and on various parts of the Pacific Coast, in 1898 he was in command of the gun-boat *Hornet* and distinguished himself in the Spanish-American War by capturing four vessels. He was in the lighthouse and coast guard service, and in 1908 commanded the battleship *Idaho*. In the latter part of his career he was identified chiefly with the conduct of navy yards and stations. His last active service, until he retired in 1919, was as senior member of the commission on navy yards and stations.

Hemphill, James Calvin.

Henderson, Gerard C. American lawyer, died at Willsboro, N. Y., August 31. He was born at Williamstown, Mass., Aug. 13, 1891, and graduated at Harvard University in 1912, receiving his law degree in 1916. He was admitted to the New York bar in 1920, and was general counsel of the War Finance Corporation, 1921-22, and 1923-25. He wrote: *The Position of Foreign Corporations in American Constitutional Law* (1917) and *The Federal Trade Commission* (1924).

Hendrix, the Rev. Dr. Eugene Russell.

Hengeler, Adolf.

Herbert, Mrs. Victor. Widow of the famous composer, died at New York, February 24. She was born at Vienna, Oct. 15, 1861. Under her maiden name, Therese Foerster, she began her career as a dramatic soprano, and at the time of her marriage in 1886, she was singing at the Stuttgart Opera, while Victor Herbert was a cellist in the orchestra.

Herrera y Pina, the Most Rev. José Juan de Jesús.

Herrin, William Franklin. American lawyer, died at San Francisco, Cal., February 28. He was born near Jacksonville, Ore., Aug. 7, 1854, and was educated at the Oregon State Agricultural College and Cumberland University. He practiced law in San Francisco, and from July 1, 1893, was chief counsel for the Southern Pacific Company, becoming a vice president of the company in March, 1910.

Higgins, James Henry. American lawyer and politician, died at Pawtucket, R. I., September 17. He was born at Lincoln, R. I., Jan. 22, 1876. After graduation at Brown University in 1898, he studied law at Georgetown University, and was admitted to the bar in 1900. He served as a member of the Rhode Island legislature, and was elected Governor of the State for

the terms 1907-08 and 1908-09, being the youngest man ever to hold the office.

Higginson, Sir George Wentworth Alexander.

Hill, Charles S. American officer of the U. S. Marine Corps, died by his own hand at Shanghai, China, September 5. He commanded the Fourth Regiment, United States Marine Corps, there. Colonel Hill was born in New Hampshire in 1867, and served twenty-six years in the U. S. Marine Corps. He was a graduate of both the Army and Navy War Colleges.

Hill, George Andrews.

Hilliard, Robert Cochran.

Hind, Charles Lewis.

Hine, Charles DeLano.

Hine, Francis Lyman.

Hirth, Friedrich.

Hodder-Williams, Sir (John) Ernest.

Hogarth, David George.

Hohenzollern-Sigmaringen, Prince William von. Head of the elder branch of the family which formerly reigned in Prussia, died at Sigmaringen, Germany, October 24. He was born at the castle of Benrath, Mar. 7, 1864, a son of the late Prince Leopold, whose candidacy for the throne of Spain was one of the causes of the Franco-Prussian War, 1870-71. The uncle of Prince William, Prince Charles of Hohenzollern-Sigmaringen, was chosen as Prince (later King) of Rumania, and on his death in 1914 Prince William was the next heir to the throne of that country. He declined it, however, and it went to his brother Ferdinand, who died July 20, 1927. Rumania's action in joining forces against the Central Powers in the War was highly displeasing to Prince William, who returned all his Rumanian decorations and was never reconciled to his brother.

Holiday, Henry.

Hollmann, Joseph.

Horr, the Rev. Dr. George Edwin.

Hough, Charles Merrill.

Howell, William Barberie. American jurist, died at East Orange, N. J., April 4. He was born at Freehold, N. J., July 5, 1865, and graduated in law at Columbian (now George Washington) University, Washington, D. C. After service in the Treasury Department, Washington, in 1897 he became assistant secretary of the treasury in charge of customs. In 1899 he was appointed to the Board of United States General Appraisers, later the United States Customs Court. He was presiding justice at the time of his death and was held to be one of the leading authorities in the United States on customs matters, especially with regard to textiles and wearing apparel.

Humbert, Charles.

Humphreys, Alexander Crombie.

Hunt, Thomas Forsyth.

Huntington, Clarence W. American railroad executive, died at Elizabeth, N. J., July 12. He was born at Newark, N. J., May 31, 1857. His first railroad work was done as a brakeman on the Chicago, Rock Island & Pacific Ry., in 1876. From this he rose through the various grades, and from 1914 to 1917 he was vice president and general manager of the Minneapolis & St. Louis Ry. He then became president of the Virginian Ry., holding the post until 1925, when the road was leased to the Norfolk & Western Ry. He was for many years chairman of the board of managers of the New Jersey state prisons.

Huntington, George Sumner.

Huntington, Henry Edwards.

Huntley, George Patrick. Irish-born actor who appeared in England and America, died at London, England, September 21. He was born at Fermoy, Ireland, of a theatrical family, and made his first appearance at the age of six, at Kilkenny. He was a member of his father's traveling troupe for many years. In 1891 he went to America, in support of Mr. and Mrs. Kendal. In 1901 he made his first great success as a comedian, in the rôle of Lord Plantagenet, in *Kitty Grey*, and thereafter his services were in constant demand by American and British managers, causing him to travel back and forth between London and New York. His last American appearance was in *Gentlemen Prefer Blondes*, in 1926.

Hurd, Henry Mills.

Hussey, Mary Dudley. American woman suffrage leader, died at Orange, N. J., October 26. She was born at New York City, in 1853. She was a pioneer in the woman's suffrage cause, and was one of the founders of the New Jersey Woman Suffrage Association. She received a law degree from New York University in 1898, and also studied medicine and practiced as a physician.

Hutchison, Benjamin Franklin. American naval officer, died at Utica, N. Y., September 17. He was born at Boonville, Mo., Feb. 12, 1868, and graduated at the U. S. Naval Academy in 1889. During the round-the-world cruise of the United States fleet, 1907-08, he commanded the battleship *Wyandott*, and he commanded the battleships *Kansas* and *Mississippi* during the

World War. After the signing of the armistice he served as administrator of floating equipment in New York harbor, and later as chief of staff of the admiral commanding the Pacific fleet. He reached the rank of rear admiral in 1923, and was commandant of the navy yard at Washington, D. C., when he was retired in June, 1927.

Hynicka, Rudolph Kelker. American politician and theatrical promoter, died at St. Petersburg, Fla., February 21. He was born at Myerstown, Pa., July 6, 1859, and received a common school education. After a five-year experience as a reporter on the newspapers of Cincinnati, Ohio, 1881-86, he received his first political office as clerk of the police court of Cincinnati, and thereafter, for more than forty years, he was one of the controlling powers in the political life of the city, as a Republican. From 1906 until his death he was identified with theatrical enterprises, owning or operating about forty theatres in various cities of the United States.

Ide, Fannie Ogden. American author of books for children, died at Brooklyn, N. Y., July 2. She was born at Brooklyn, Dec. 27, 1853, and was educated at private schools in that city. She wrote: *His Little Royal Highness*, (1897); *A Loyal Little Red-Coat* (1889); *A Little Queen of Hearts* (1892); *Courage* (1894); *Little Homespun* (1896); *Tattine* (1900); *Loyal Hearts and True* (1900); *Friendship, the Good and Perfect Gift* (1904); *Little Pierre and Big Peter* (1915).

Ingersoll, George Pratt.

Irish, Benjamin. British sportsman and farmer, died at London, March 15. He was born in 1863, and first came into prominence in the British sporting world in 1921 by winning the Gold Cup Stakes at Ascot. Two years later his horse Papyrus won the Epsom Derby, and in the same year he sent the horse to America to contend in a match race against the famous American thoroughbred Zev. The race was won by Zev by five lengths. Mr. Irish did not cross the ocean to witness the contest. Later he sold Papyrus to J. P. Hornung.

Irizar, Dr. Mario Diaz.

Iveagh, Edward Cecil Guinness.

Jackson, Holmes Condit.

Jackson, William A. American pioneer in the telephone industry, died at New York, November 14. He was born in New York State in 1848, and was taken to Michigan when young. He was in the employ of the Western Union Telegraph Company at Detroit in 1876, when he visited the Centennial Exposition at Philadelphia. There he became interested in the workings of the then newly invented telephone. He was the first president and general manager of the Michigan Bell Telephone Company, and when the company was sold he founded the Detroit Electrical Works, makers of electrical equipment. He was an incorporator of Highland Park, Mich., the site of the Ford industries, and built one of the first trolley lines with underground wires in the United States, to connect Highland Park with Detroit. He later became an official of several telephone companies. He retired in 1918.

James, Walter Belknap.

James, William Knowles.

Jeffery, Edward Turner.

Jerome, Jerome Klappa.

Jeserich, Paul. German chemist and criminologist, died at Berlin, November 18. He was born at Berlin, 1854, and was educated at the university of that city. For many years Dr. Jeserich was known as an expert in chemistry, especially as applied to the detection of crime and the apprehension of criminals. He was the first man to employ photography and micro-photography for these ends. He was called frequently "the German Sherlock Holmes."

Joergensen, Haakon. Danish police official, died at Copenhagen, May 9. He was born in 1879. He was honorary president of the international police conference held at New York in September, 1922, a member of the international police commission at Vienna, and a director of the international identification bureau, of Copenhagen. Mr. Joergensen was the inventor of a system of distant identification, by means of which accurate finger print measurements can be telegraphed. It depends on the numbering of the little loops, arches, whorls and other characteristics of the finger print.

Joffe, Adolph Abramowicz.

Johnsen, Einar A. American engineer, died at New York, May 13. He was born at Oslo, Norway (then called Christiania), in 1878, and graduated at Christiania Engineering College in 1902. After three years' work in Norwegian copper mines, he became associated with the late Alfred Noble, consulting engineer for the Pennsylvania R. R. tunnels under the Hudson and East Rivers, New York City. When those tunnels were completed, Mr. Johnsen engaged in similar work at Detroit, Mich. In 1915 he joined the engineering forces of the American Gas & Electric Company, and remained with that company until his death, engaging in the

construction of large power plants. He was the chief mechanical engineer of the company.

Johnson, Burt W.

Johnson, William Woolsey.

Johnston, Sir Harry Hamilton.

Jones, Andreus Aristheus.

Jones, Hugh Bolton.

Jonnart, Celestin Augustin Charles

Jordan, Jules. American composer, died at Providence, R. I., March 5. He was born at Willimantic, Conn., Nov. 10, 1850. He began his career as a concert tenor, having studied at Boston, Paris, and Milan. In 1870 he settled in Providence, where for thirteen years he was choir-master of Grace Church, and from 1880 on he was conductor of the Apollo Club. His works include a romantic opera, *Rip van Winkle* (Providence, 1897), two ballads for chorus and orchestra, *Barbara Frietchie* and *The Wind-swept Wheat*, a great quantity of sacred music, and many songs.

Joseph, Delissa. British architect, died in January. He was born in January, 1859, and was educated at Durham House School and Jews' College. He designed many public and private buildings in London, and was especially noted for his contributions to the architecture of the synagogue, in London and elsewhere. In 1890 he was elected a fellow of the Royal Institute of British Architects, and he was a member of the council of the institute, 1922-23. He wrote numerous articles, and letters to the London *Times* on the subject of higher buildings for London.

Judson, Harry Pratt.

Kagwa, Sir Apolo.

Kammer, Glenn D. American chemist and engineer, died at Pittsburgh, Pa., November 7. He was born at Ionia, Mich., in 1886, and in 1912 graduated in chemical engineering at the University of Pittsburgh. Entering the employ of the Standard Chemical Company in 1912, he later became assistant director of its radium research laboratory and engaged in the actual refining of radium. In his research work he developed a sensitive phosphorescent zinc sulphide as a base for radium luminous paint. In 1917 he became affiliated with the Radium Dial Company of Pittsburgh, of which he was vice president, director and chief chemist at the time of his death.

Kastalsky, Alexander Dmitrievitch.

Kato, Teikichi, Baron.

Kaufmann, Rudolph.

Kautz, Austin. American naval officer, died at Berlin, Germany, September 10. He was born in Kentucky in 1874, and after graduating at Stanford University in 1893 entered the U. S. Naval Academy. He was commissioned ensign in 1897, and during the Spanish-American War served on Admiral Sampson's flagship, the *New York*. During the World War he served on the gunboat *Machias*, a convoy for allied transports in the Mediterranean, and he later commanded the cruiser *Pittsburgh*, the cruiser *Detroit* and the battleship *Wyoming*. After the War he entered the War College at Newport, at which he graduated in 1920. He held the rank of captain, and was stationed at Berlin as naval attaché from April, 1927, until his death.

Keable, Robert.

Kelly, William Joseph.

Kelsey, Francis Wiley.

Keltie, Sir John Scott.

Kemper, Maximilian.

Kenny, Edward. Former Speaker of the New Jersey House of Representatives, died at East Newark, N. J., April 19. He was born at Newark in 1855 and was a graduate of Yale. He held various municipal offices before entering the State Legislature, where after several terms he became Speaker.

Kenyon (Lloyd Tyrell-Kenyon), Fourth Baron. English courtier, died November 29, at Gredington Hall, England. He was born at London, July 5, 1864, and was educated at Eton and at Christ College, Oxford. From 1900 to 1905 he served as lord in waiting to Queen Victoria and King Edward, and in 1916 was lord in waiting to King George. He was lord lieutenant of Denbighshire, pro-chancellor of the University of Wales, and president of the North Wales University College. He was also president of the National Museum of Wales. Lord Kenyon was in America in 1924 as the guest of Kenyon College in Ohio, towards the founding of which his grandfather, the second Lord Kenyon, had contributed £10,000.

Kerfoot, John Barrett. American author and editor, died at London, England, April 17. He was born at Chicago, Nov. 18, 1865, and was educated in Europe and at Columbia University, graduating in 1888. He was literary editor of *Life*, 1900-18, and editor of *Camera Work* since 1905. He wrote: *How to Read* (1916), and *American Pewter* (1923).

Kerr, Lord Walter Talbot.

Kershaw, John Felix.

Kiernan, John A. American livestock expert, died at Washington, December 15. He was born at Jersey City, N. J., in 1878. He graduated at New York University

in 1895, and was appointed assistant instructor in the bureau of animal industry in the Department of Agriculture in 1896. From 1917 until his death he had charge of the work of eradicating tuberculosis from the cattle of the United States.

Kirk, William Frederick. American journalist and author, died at Chippewa Falls, Wis., March 25. He was born at Mankato, Mich., Apr. 29, 1877, and was educated at the Chippewa Falls High School. He was employed by the Hearst newspaper interests from 1905, and had a wide reputation as a maker of verse (some of it in Scandinavian-American dialect) and as a writer on baseball. Besides several songs, he wrote the following books of verse: *Fleeting Fancies* (1904), *The Norse Nightingale* (1905); *Right Off the Bat* (1912); *Songs of Sergeant Swanson* (1918); *The Harp of Fate* (1925), and *Forever* (1925).

Kirkwood, Irwin.

Kirlin, J(oseph) Parker.

Knight, Austin Melvin.

Knilling, Eugen von. German statesman and former premier of Bavaria, died at Munich, Bavaria, October 20. He was born in 1865. Von Knilling became premier of Bavaria in 1922, and took a prominent part in the disturbed relations between Berlin and Munich at that time. In November, 1923, at the time of the famous Hitler-Ludendorff "putsch," he attained international prominence. He lost his office until February, 1924, regaining it when the monarchist movement failed.

Knox, William Elliott. American banker, died by his own hand at New York, February 4. He was born at Strabane, Ireland, Oct. 27, 1862, and was taken at an early age to New York. He was educated at the public schools of that city. From 1879 to 1885 he was connected with G. W. Carleton & Co., publishers, and in the latter year entered the employ of the Bowery Savings Bank. He rose through various offices until he became president in 1922. He was president of the savings bank section of the American Bankers' Association, 1914-1915, and president of the association, 1924-25. He delivered addresses and wrote articles on banking and economic subjects.

Koch, kūr, Friedrich. German composer, died at Berlin, January 30. He was born there, July 8, 1862. His works are masterly in workmanship but lacking in real inspiration, which latter fact militated against them even in his native land. He was better known as one of the foremost teachers of composition, and his success in this field won for him the distinction of election to the Prussian Academy of Fine Arts. He wrote an opera, *Die Halliger* (Cologne, 1897), two oratorios, two symphonies, and several works for chorus with orchestra.

Koehler, Herman J.

Kohns, Lee. American merchant, banker and philanthropist, died at New York, January 18. He was born in Columbus, Ga., Sept. 1, 1864, and moved to New York City at an early age. He graduated at the College of the City of New York in 1884. He was a nephew of Isidor, Nathan and Oscar Straus of New York, and was associated with the firm of L. Straus & Sons, from 1884 to 1923. He was also vice president of Abraham & Straus, Brooklyn, N. Y. He was a director of the Irving Bank-Columbia Trust Company. After his retirement from business in 1923 Mr. Kohns devoted himself to his philanthropies and to educational activities. One of his philanthropies was the endowment of a chair of American history, civilization and letters at the Sorbonne, Paris.

Krout, Mary Hannah.

Lacombe, Paul. French pianist and composer, died at Carcassonne, in July. He was born there in 1837, and was practically self-taught. His works include three symphonies, a requiem, several masses, and much chamber music.

Ladd, William Whitehead. American lawyer, died in New York, September 12. He was born in 1853. Graduating at the Columbia University Law School in 1875, he entered the law firm of Miller, Peet & Opdyke, of which he long continued to be a member. From 1882 until he retired in 1917 he served as judge advocate general of the National Guard of New York State. He was vice president of the Sons of the Revolution for many years and was governor general of the Society of Colonial Wars for three consecutive terms.

Laffan, the Rev. Robert Stuart de Courcy.

Landsberg, Max.

Lane, James Warren. American financier and manufacturer, died May 22, at St. James, N. Y. He was born in 1864 and graduated at the College of the City of New York in 1884. He was president of E. W. Bliss Company, manufacturers of torpedoes, and was a member of the boards of directors of many other corporations.

Lansdowne (Henry Charles Keith Petty-Fitzmaurice), Fifth Marquis of.

Lapie, B. ps. Paul. French educator, died at Paris

January 25. At an international meeting of four hundred philosophers at Harvard University in September 1926, he presented the seventy foreign delegates to the convention. In the same year he completed arrangements with Walter Hulhan, president of the University of Delaware, for selecting a group of students to be sent to France at the end of their sophomore year for their junior year work, for which they were to receive full credit at the University of Delaware. At the time of his death he was rector of the University of Paris.

Latour, Francisco Sanchez.

Laurel, Kay. American actress and film star, died in London, January 31. She was born in 1890 and made her first considerable success in Ziegfeld's Midnight Frolics in New York, before the War, as one of the beauties, and later she played important parts in comedies and motion pictures. Among the plays in which she appeared were *Whispering Wives*, *Quarantine* and *Nocturne*.

Lawyer, George. American lawyer and educator, died at Halifax, N. S., August 14. He was born at New York City, Sept. 24, 1865, and attended Hamilton College, at which he graduated in 1885, and the Albany Law School, receiving his law degree in 1887. He took up the practice of law at Albany in 1890, and in 1908 became a professor at the Albany Law School, continuing in both activities during the remainder of his life. He served as judge advocate of the New York National Guard, with the rank of major, from 1898 until 1918, and in November, 1921, was elected surrogate of Albany County.

Lazaro, Ladislav. American congressman from Louisiana, died at Washington, March 30. He was born near Ville Platte, La., June 5, 1872, and was educated at Holy Cross College, New Orleans, La. Completing the medical course at St. Isidore's College, New Orleans, in 1894, he practiced medicine until 1918. He was a member and president of his parish school board for four years and was interested in farming. He was elected to the Louisiana state senate in 1908 and 1912 without opposition, and was elected to Congress in 1918. He represented his district continuously until his death.

Leaf, Walter.

Lee, Edward W. American surgeon, died at Randolph, N. Y., September 8. He was born at Perrysburg, Ohio, in 1858 and was graduated in medicine at the University of Michigan in 1881, later at the College of Physicians and Surgeons, New York. He specialized in emergency cases and devoted most of his career to railroad surgery, serving for many years with the Erie R. R., and acting as president of the Erie Railroad Surgeons' Association, 1925-1927. During the World War he served as chief surgeon of the base hospital at San Juan, Porto Rico.

Leeds (George Godolphin Osborne), Tenth Duke of Lennox, Victor.

Le Queux, William Tufnell.

Leroux, Gaston.

Levermore, Charles Herbert.

Lewis, H. Edwin. American physician and editor, died at Ossining, N. Y., August 8. He was born at Providence, R. I., in 1875. He studied medicine at Brown University and the Vermont Medical School, graduating at the latter institution in 1897. He founded the *Vermont Medical Monthly*, and was its editor for some time. After serving as a member of the Vermont State Tuberculosis Commission, Dr. Lewis was sent as an American delegate to the British Congress of Tuberculosis held in London in 1901. He became managing editor of *The International Journal of Surgery*, published in New York, in 1906, and two years later he became connected with *American Medicine*, of which he was managing editor until his death. He was a former president of the American Medical Editors' Association.

Lewis, Thomas. British astronomer, died June 5. He was assistant at the Royal Astronomy, Greenwich, England, secretary of the Royal Astronomical Society, and joint editor of *The Observatory*. In 1907 he received the Lalande Prize of the French Academy, awarded annually since 1802 to the person who, in France or elsewhere, makes the most interesting research or contributes the most useful memoir of work in the field of astronomy.

Libbey, William. American educator, died at Princeton, N. J., September 6. He was born at Jersey City, N. J., Mar. 27, 1855. He graduated at Princeton University, 1879, and was successively assistant professor of physical geography and of histology, professor of physical geography, and director of the museum of geology and archaeology, at Princeton, from 1882 until his retirement in 1928. During the War he was a major in the ordnance department and assistant chief instructor of the small arms firing

school. He wrote (with Franklin E. Hoskins) *Jordan Valley and Petra* (1905).

Lunes, the Rt. Rev. Edwin Stevens.

Lupsius, Marie.

Laversidge, Archibald.

Lloyd, Alfred Henry.

Lloyd, Edward. British concert tenor, died at Worthington, England, March 31. He was born in London, Mar. 7, 1845, and began his career as a chorister at Westminster Abbey. His fame dates from his appearance at the Gloucester Music Festival of 1871. From that time until his retirement in 1900 he was in constant demand at all the great English festivals, where he created the leading parts in many oratorios, especially in those of Gounod, Sullivan and Elgar.

Lloyd, Marshall Burns. American inventor, died at Menominee, Mich., August 9. He was born at St. Paul, Minn., Mar. 10, 1858, and received a common school education. He made more than two hundred inventions, the most important of which were a combination bag holder and scale, for farmers; a machine for weaving bed springs; a new method and machinery for making thin, seamless steel tubing, and a new method of producing articles of wicker, including a loom for speedy weaving.

Loew, Marcus.

Loewenfeld, Is'vën-félt, Alfred von. German army officer, died at Berlin, December 2. He was born at Spandau, Prussia, Oct. 17, 1848, the son of Gen. Julius Loewenfeld, also an infantry commander. After receiving his education at the gymnasiums at Berlin and Frankfurt, and his military training at the Potsdam Military School, he was commissioned as a lieutenant in the Prussian Guards Regiment in 1868, and served with the regiment during the Franco-Prussian War. After commanding the palace guards and other units, he became a major general in command of the thirty-third infantry division in 1900. From 1901 until he was pensioned in 1913 he was a personal attendant of the Kaiser and an officer of the general staff. He was invited to attend the formal opening of Carnegie Institute in 1907, and received an honorary degree from the University of Pennsylvania on the occasion of that visit. During the War he was recalled to serve in command of the "Garde Corps," and he received the Iron Cross of the First Class from the Kaiser.

Long, John Luther.

Low, Juliette. Founder of the Girl Scouts of America, died at Savannah, Ga., January 17. She was born at Savannah in 1860, the daughter of the late Gen. W. W. Gordon and Eleanor Kinzie Gordon. She was the widow of William Low of London, England, and Savannah. She organized at Savannah, in 1912, the first troop of Girl Scouts, similar to the Girl Guides of England, and served as president of the Girl Scouts of America for several years. When she retired from active duty as president the position of founder was created for her.

Lowell, Guy.

Luckenbill, Daniel David.

Ludington, Charles Henry.

Luzzatti, Luigi.

Lyford, Ralph.

Lyman, Hart. American journalist, died at New York, October 30. He was born at Plymouth, Conn., Dec. 8, 1851. He graduated at Yale in 1873, and studied at the Universities of Berlin and Heidelberg, 1874-75. In 1875-76 he studied law at Minneapolis, Minn., but gave up the law to become a member of the editorial staff of the *New York Tribune*. In 1888 he became an editorial writer on the same newspaper, and in 1905 when Whitlaw Reid left the chair of editor-in-chief to become ambassador to Great Britain, Mr. Lyman succeeded him. He retired in 1918. Mr. Lyman served for a year as Isaac H. Bromley Lecturer at Yale University, delivering a series of lectures on journalism.

Lyman-Jenkins, Frank.

Mass, Anthony J.

Mabery, Charles Frederick.

MacAlpine, John E. Scotch marine engineer, died at Mount Vernon, New York, May 31. He was born in Paisley, Scotland, in 1869, and was educated at the University of Glasgow. Going to the United States in 1892 to be superintendent of the Dry Dock Engine Works of Detroit, he subsequently was four years at the U. S. Navy Bureau of Steam Engineering, Washington, D. C. He returned to Scotland where he made a study of the vibration of steamships, and in 1903 going back to the United States he supervised the completion and conduct of the trials of the United States destroyers *Hopkins* and *Hull* for Harlan and Hollingsworth, of Wilmington, Delaware. In 1904 he entered into partnership with his former chief, Admiral Melville, as consulting engi-

neers and naval architects, in the service of which he developed the reduction gear for marine turbines. In 1906 he went to Pittsburgh where, for the rest of his life, he was engaged with the Westinghouse interests in consulting work. He was a member of the Institution of Naval Architects; of the Institution of Engineers and Shipbuilders, of Scotland; and of the Society of Naval Architects and Marine Engineers, New York.

McCausland, Brigadier General John. Confederate soldier, died January 22, at McCausland, West Virginia. He was born in St. Louis, Mo., September, 1886, and was educated at the Virginia Military Institute, where he was graduated at the head of his class in 1857 and later became assistant professor of mathematics, and was assistant to Thomas J. ("Stonewall") Jackson. Entering the Confederate service he organized forces in the Kanawha Valley. On May 18, 1864, he was made a brigadier general, and, at the time of his death, was one of the last two surviving of the Confederate Army general officers.

McCook, John James.

McCune, A. W. American pioneer, died at Cannes, France, March 28. Born in Calcutta, India, in 1849, he went to Utah at the age of eight. On his father's ranch he herded cattle and sheep and fought against the Black Hawk Indians when only fourteen years old. As a railway contractor he participated in building the Union Pacific, and later became interested in mining in British Columbia. He engaged in the timber industry in Montana, and later bought an interest in the Cerro de Pasco mines in Peru. In 1889 he was defeated for the United States Senate from Utah.

McDaniel, George White.

McDonald, Howard.

McEvoy, Ambrose.

Mach, Edmund (Robert Otto) von.

McKean, Horace Grant.

McKenzie, Donald Duncan.

McLouth, Lawrence Amos.

McMillan, Charles. American engineer and educator, died at Princeton, N. J., September 19. He was born at Moscow, Russia, Mar. 24, 1841. He graduated at Rensselaer Polytechnic Institute, Troy, N. Y., in 1860 with the degree of C.E. and was assistant engineer, first of the Brooklyn, N. Y., water works and then of the Croton water works, New York City, 1860-65. In the latter year he became professor of road engineering at Rensselaer, and in 1871 professor of civil and mechanical engineering at Lehigh University. In 1875 he went to Princeton University as professor of civil engineering and applied mathematics and head of the university's civil engineering department, and remained in that position until his retirement in 1914, when he became professor emeritus. For many years he was the editor of *Smith's Topographical Drawing*.

MacPherson, Charles.

MacPherson, Maj.-Gen. Sir William (Grant).

McRae, Bruce. American actor, died at New York, May 7. He was born in India, of English parents, Jan. 15, 1867, and was the nephew of Sir Charles Wyndham, English actor, and of Bronson Howard, American dramatist. He made his first appearance on the stage Oct. 5, 1891, at Proctor's Twenty-Third Street Theatre, New York, in *Thermidor*, and thereafter had a uniformly successful career. He acted generally in society rôles. Among the well known actors and actresses whom he supported at various times were Marie Burroughs, Olga Nethersole, Herbert Kelcey and Effie Shannon, William Gillette, and Ethel Barrymore. His last appearance was in *The Legend of Lenora*, in 1927.

McShane, the Rev. Daniel L. American Roman Catholic missionary, died at Loting, China, June 4. He was born at Columbus, Ind., Sept. 13, 1888, and studied at St. Joseph's College, Rensselaer, Ind., and at St. Mary's Seminary, Baltimore, Md., and was the first priest to be ordained from the Maryknoll Seminary, Maryknoll, N. Y., Nov. 10, 1914. After filling several positions in the homeland he was assigned to mission work in China in 1919. In 1920 he was appointed pastor of the mission of Loting, in Kwangtung Province, South China, which became the nucleus of a strong Christian settlement. He died from smallpox, which he contracted from a Chinese waif whom he had rescued and baptized.

Madge, Sir William Thomas.

Madge, Walter Warren. American Congressman, died at Syracuse, N. Y., May 25. He was born at Groveland, N. Y., May 28, 1861, and was educated at Phillips Exeter Academy and at Harvard, graduating at the latter institution 1889. He was admitted to the bar in 1891, and practiced law in Syracuse. He was a member of the board of supervisors of Onondaga County, N. Y., 1892-93, and corporation counsel for Syracuse, 1904-1914. He was elected to the Sixty-

fourth Congress in 1915 as a Republican, from the Thirty-fifth District, which he represented until 1927.

Mallory, Marshall Hubert. American publisher, died at New York, September 21. He was born at Watertown, Conn., in 1843, and graduated at the Rensselaer Polytechnic Institute, Troy, N. Y., with the degree of civil engineer, but never practiced his profession. He traveled extensively abroad and later joined his brother, the Rev. George S. Mallory, in reviving *The Churchman*, the national Episcopalian weekly which was established in 1805, and with which he was connected for nearly fifty years, until his retirement in 1912.

Maltzan, Adolf Georg Otto (Ago), Friherr von (Baron Maltzan).

Manly, Charles Matthews.

Manouvrier, Leonce Pierre.

Manville, Charles B. American manufacturer, died at Pleasantville, N. Y., November 26. He was born at Watertown, N. Y., Dec. 16, 1834. He went to Milwaukee, Wis., in early manhood. While engaged in tailoring there he made experiments with a covering for heat-conveying pipes; at first he used a mixture of shoddy and clay, and when this proved successful he formed the Manville Covering Company for its manufacture. Later he developed the asbestos-magnesia covering, consisting of 15 per cent asbestos and 85 per cent magnesia, which is considered the standard. In 1900 Mr. Manville established the headquarters of his enterprises in New York and purchased the H. W. Johns Company, a rival. The company is now The Johns-Manville Corporation, a manufacturing concern of world-wide scope.

Mapleson, Col. Henry. British operatic impresario, died at Lausanne, Switzerland, September 27. He was born in London, Feb. 16, 1851. Destined originally for the army, he preferred to become associated with his father, the famous Col. James Henry Mapleson, as manager of Italian opera at Drury Lane and Covent Garden, London, and the Academy of Music, New York. In 1877 he married the French singer, Marie Rôse, from whom he was divorced.

Markievicz, Constance Georgine, Countess de.

Marshall, Charles Edward.

Marshall, Henry Rutgers.

Marshall, James Rush. American architect, died at Washington, D. C., June 2. He was born at Carlisle, Pa., Oct. 30, 1851. He spent three years with the class of 1871 at Rutgers College, and from 1871 to 1883 was in the office of the supervising architect of the Treasury Department, Washington, D. C. In 1883 he founded, with the late Joseph C. Hornblower, the firm of Hornblower & Marshall. He was the architect of the custom house, Baltimore, Md., the new National Museum building, Washington, D. C., the Army and Navy Club in Washington, and many private dwellings.

Martin, Victoria Clafin Woodhull.

Martiny, Philip.

Masterman, Charles Frederick Gurney. British statesman, author and journalist, died in London, November 17. He was born in 1873, attended Weymouth and Christ's College, Cambridge, and after an unsuccessful attempt to enter Parliament in 1903 was returned for West Ham (North) on the strong Liberal tide of 1906. In April, 1908, he was appointed Parliamentary Secretary of the Local Government Board and in July, 1909, he was transferred as Under-Secretary of the Home Department. Unseated in 1911 on petition, owing to irregularities of his agent, he was returned again in 1913 from South-West Bethnal Green, and in the same year was promoted from the Home Department to the post of Financial Secretary of the Treasury. In recognition of his services to Lloyd George in passing the National Health Insurance scheme he received appointment as Chairman of the National Insurance Commission in 1914 and in the same year attended Cabinet rank as Chancellor of the Duchy of Lancaster. Standing for the necessary reelection, he was defeated in a contest over the Ulster question, and failed again a few months later at Ipswich. Mr. Asquith, however, refused to accept his resignation, and he continued to serve until 1915, when his resignation was reluctantly accepted with the request that he serve on the Government Committee for the Relief of Distress, the Prince of Wales' Fund and other special committees on which he had served since the outbreak of the war. He was connected with Lord Beaverbrook in war propaganda, serving as Director of Wellington House (Propaganda Department) from 1914 to 1918. In 1928 he was returned to Parliament for the Rushmore Division of Manchester, but in the reflections of the following year the ill-luck which had attended his career returned and he lost his seat. He attained some prominence as a publicist, although his support of Lloyd George and the Liberal Party in the latter years of his life cost him political friends.

ships and journalistic associations. His publications included: *Tennyson as a Religious Teacher*, 1899; *The Heart of the Empire*, 1901; *From the Abyss*, 1902; *In Peril or Chance*, 1905; *F. D. Maurice*, 1907; *The Condition of England*, 1909; *The New Liberalism*, 1920; *How England is Governed*, 1920; and *England after War*, 1922.

Mathers, Thomas Graham.

Mathus, June (Mrs Sylvano Balboni) American actress and moving picture scenario writer, died at New York, July 26. She was born at Leadville, Colo., in 1892. She began her professional career as a vaudeville and musical comedy actress, and turned her attention to the motion picture field when the "feature" pictures made their appearance. Her first great success was achieved with the adaptation of *The Four Horsemen of the Apocalypse*, by Ibáñez, and at the time of her death she was planning the "picturization" of another book by Ibáñez. She was credited with the discovery of the talent of the late Rudolph Valentino, moving picture actor.

Mathews, Nathan. American lawyer, four times mayor of Boston, Mass., died at Boston December 11. He was born at Boston, Mar. 28, 1854. He graduated at Harvard in 1875 and studied also at the University of Leipzig. He practiced law at Boston since 1880 and was elected four times to the mayoralty, in 1891-95. He served on several important municipal commissions, and was special counsel for the United States Railroad Administration, 1917-19. He lectured at Harvard on government, 1909-10 and 1911-12. The university conferred the degree of LL.D. on him in 1909. He wrote *The City Government of Boston* (1895) and *Municipal Charters* (1914).

May, David. American merchant and head of a chain of department stores, died suddenly at Charlevoix, Mich., July 22. He was born at Kaiserslautern, Germany, in 1848, and went to the United States at the age of sixteen. Subsequently he founded a store in St. Louis which was capitalized at \$30,000,000 in 1927, with branches in various cities in the United States and Europe.

Maxim, Hudson.

Meara, Frank Sherman.

Megruer, Roi Cooper.

Mellen, Charles Sanger.

Mendes, Frederick de Sola.

Metcalf, James Stetson.

Miethe, Adolf.

Miller, Charles. American oil pioneer, died December 20 at Franklin, Pa. He was born of Huguenot parentage in Oberhoffen, Alsace, on June 15, 1843, and went to America with his father at the age of eleven, settling in Erie County, N. Y. After working as a clerk he joined the 74th Regiment, New York National Guard, in 1861, and later became commander of the Pennsylvania National Guard with the rank of major general. He was a member of the Pennsylvania State Board of Charities and was twice mayor of Franklin. While still a young man he engaged in oil production and was one of the pioneer producers in the Franklin district, being a founder of the Galena Signal Oil Company and an official of numerous other oil companies. He was builder and president of the Lake Erie, Franklin & Clarion Railroad, and was a director in many corporations. He also operated several famous stock-farms and had received numerous prizes in cattle exhibitions. Throughout his life he was interested in religious work, having conducted a Bible class which at one time numbered 1000 members and since 1890 he maintained the Miller Night School at Franklin at his own expense.

Miller, Charles R.

Miller, Louis E. American Jewish journalist, died at New York, May 22. He was born at Vilna, Russia, in 1866 and was educated in Moscow. He arrived in the United States at the age of seventeen, and soon became identified with Jewish publications. He was founder and first editor of *The Daily Forward*, New York, and he established the first Jewish morning tabloid newspaper. With a boyhood background of oppression in Russia, he found his most active field of public work during the World War, when he labored to wean the Jews of the east side of New York City from their hatred of Russia and consequent sympathy for the Central Powers. In politics he was a Socialist.

Minotow, Countess Agnes.

Mitchel, Ormsby MacKnight. American produce merchant, died at Rye, N. Y., October 2. He was born at New York in 1864. At the outbreak of the World War, his expert knowledge of the purchasing of grain won for him the appointment as purchasing agent of the French High Commission. He kept the French army and nation supplied with grain, which had become increasingly unavailable from home sources because of the War demands on agricultural land. When the United States entered the War he was made gen-

eral grain purchasing agent for the Allies extending his activities to every Allied country.

Mitchell, Edward Page.

Mitchell, John J.

Mittag-Leffler, Magnua Olof

Molkenbuhr, Hermann. German Socialist died December 22 at Berlin. Born at Wedel in Schleswig-Holstein in September, 1851, he became identified with the Socialists in his youth. He was a member of the Congress at Gotha in 1875 at which the followers of Marx and Lassalle joined forces, and in 1881 was forced to leave Hamburg to escape the activity against the Socialists. He went to America where he worked in tobacco factories until 1884, when he returned to Germany and again identified himself with the Socialist party, being elected to the Reichstag in 1890. In the same year he became editor of the *Hamburger Echo* to which he had contributed for years, and with which he remained until 1904, when he was appointed secretary of the executive committee of the Socialist party. He frequently served as a delegate to international congresses of his party and continued as a member of the Reichstag, in which he was known as an authority on social legislation, until his retirement in 1924. During the German revolution in November, 1918, he assisted the Kaiserin in escaping across the German border into Holland.

Mollenhauer, Emil.

Moncrieff, Robert Hope. British author and editor, died at London, August 10. He was born at Edinburgh in 1846, and was educated privately. He studied for the bar of Scotland and also took up teaching for a time, but he abandoned these occupations in favor of writing. He used several pen names the best known being "Ascott R. Hope," and he published *The World of Today*, *Bonnie Scotland*, and about 200 volumes of fiction and history, with schoolbooks, guide books, and others.

Monroe, Harriet Earhart. American lecturer and religious worker, died at Washington, D. C. July 16. She was born at Indiana, Pa., in 1842, and educated privately. She was president of the Atchison Collegiate Institute in Kansas. She wrote and lectured on travel and historical subjects, her works including *The Art of Conversation*, *Historical Lutheranism*, *History and Dramatization of the Life of Gustavus Adolphus*; and *Twice-Born Men in America*.

Montgomery, Dr. Edward Emmet. American gynecologist, died at Philadelphia, Pa., April 17. He was born at Newark, Ohio, May 15, 1849, and was educated at Denison University and the Jefferson Medical College, Philadelphia. He joined the faculty of the latter institution in 1892. He was the author of several textbooks, the most widely known being *Practical Gynecology* (4 eds.), and *Care of the Patient Before, During and After Operation in Gynecology and Abdominal Surgery* (1917).

Moore, Sir Frederick Robert. South African miner, farmer and statesman, died at Estcourt, Natal, March 18. He was born at Hermannsburg, Natal, in 1853, and was educated in his home town. In 1872 he was a diamond digger in the Kimberley mines, and was twice elected by his fellow miners as member of the Kimberley Mining Board. He returned to Natal in 1880, settling down to farming, which occupation he followed until his death. He was elected a member of the Legislative Assembly in 1886, and was one of the party which carried responsible government for Natal. He was prime minister of Natal, 1906-10. He received a knighthood in 1911, and was granted the freedom of the cities of London, Manchester and Bristol, England.

Moore, Fred Wadsworth. American athlete and manager, died at Cambridge, Mass., May 29. He was born at Independence, Iowa, in 1870, and graduated at Harvard University in 1893. He practiced law in Boston since 1896. When at Harvard he was manager of the football team for two seasons, and from 1913 was graduate treasurer of athletics.

Moore, Willis Luther.

Mordecai, Samuel Fox. American lawyer and educator, died at Durham, N. C., December 29. He was born at Richmond, Va., Dec. 12, 1852. He was educated at the University of Virginia, and was admitted to the bar of North Carolina in 1875. He was a member of the law firm of Battle & Mordecai, 1876-1904. He became a lecturer on law at Wake Forest College in 1900, and in 1904 went to Trinity College, North Carolina (now Duke University), as dean of the law school. He held the position until his death. In 1911 Trinity College conferred on him the degree of LL.D. He wrote: *Mechanics Liens* (1897); *Negotiable Instruments Law in North Carolina* (1899); *Law Scripta* (1905); *Mordecai's Law Lectures* (1907); 2d. ed., 1915; (with Prof. A. C. McIntosh) *Case Book on Remedies* (1910); *Mordecai's Law Notes* (1912-18); (additions to same, 1914-1918); *Questions and Answers on Real Property* (1922); *Questions and Answers on Second Property* (1928).

Morgenthau, Meno L. American merchant, died at New York, May 12. He was born at Mannheim, Germany, in 1860, and when he was six years of age he was brought to America. He was educated at the College of the City of New York. For several years he was engaged in the dry goods business, farming and teaching school, before taking up the candy trade. In 1896 he opened his first store in New York and at the time of his death he controlled twenty-nine Mirror candy stores.

Morrison, Charles Walthall. American musician, died at Oberlin, May 16. He was born at Covington, Ky., in 1856, and received his musical education at Oberlin, Leipzig and Berlin. In 1880 he joined the faculty of the Oberlin Conservatory of Music, becoming director in 1902.

Morrison, H. A. C. American portrait painter, died at Atlanta, Ga., October 1. He was born on Prince Edward Island, Canada, in 1853. His paintings are to be found in many Southern homes and in the State capitol, Atlanta, Georgia.

Morse, Charles Henry. American organist, died in Boston, June 4. He was born at Bradford, Mass., Jan. 5, 1858, and studied at the New England Conservatory of Music. From 1875 to 1884 he was professor of music at Wellesley College. Then he settled in Minneapolis, where he founded the Northwestern Conservatory of Music, of which he was director until 1891. From 1891 to 1899 he was organist of Plymouth Church, Brooklyn. In 1901 he became musical director at Dartmouth College, and was made full professor of music in 1916, being the first to hold the chair. He composed some church music, and edited several collections of works for the organ.

Morse, Charles Anthony.

Moyes, Canon James.

Muir, Joseph Johnstone.

Muldoon, Rt. Rev. Peter.

Murphree, Albert Alexander.

Myrick, Herbert.

Nabokoff, M. Constantine.

Nash, Arthur. American merchant, died at Cincinnati, Ohio, October 30. He was born in Tipton County, Indiana, June 26, 1870, and was educated at Greentown, Ind. At one time a clergyman, he abandoned the pulpit to enter clothing manufacturing. He developed a plan of coöperative industry by workers; and he was the author of *Golden Rule in Business* (1923).

Nathan, Dr. Paul. Jewish educator, died at Berlin, Germany, March 15. He was born in Germany in 1856, and for many years was one of the outstanding Jewish leaders and social workers in Germany. He played an important part in the formation of the school system in Palestine. He visited the United States in 1910.

Naumberg, Hirsch David.

Nelson, Adolphus P. American banker and politician, died at Grantsburg, Wis., August 21. He was born at Holmes City, Minn., Mar. 28, 1872. He was graduated at Hamline University, 1897. He was president of the First Bank of Grantsburg from 1896 until he died. In 1917 he was elected to Congress to fill the unexpired term of L. L. Lenroot. He was a member of the La Follette bloc and managed the La Follette presidential campaign in 1924. In 1919 he received the degree of LL.D. from Upper Iowa University.

Newton, Arthur. American astronomer, died at Washington, D. C., January 25. He was born at Oxford, Ohio, in 1868. He was associate astronomer at the United States Naval Observatory for more than 20 years. His article, "The Orbit of the Satellite of Neptune," was published by the Royal Astronomical Society of London and in the papers of the *American Ephemeris*.

Nicholls, The Rev. Dr. Samuel T. American clergyman, died at Philadelphia, Pa., November 19. He was born at Bristol, England, Dec. 28, 1867. Shortly after his ordination he went to America. He was pastor of the First Primitive Methodist Church in Philadelphia from 1890 until his death. In 1923 he was elected president of the General Conference of the Primitive Methodist Church.

Nichols, Lient-Col. Henry J.

Nicholson, Joseph Shield.

Nugent, James R. American politician, died at Trenton, N. J., April 26. He was born at Newark, N. J., July 26, 1864, and was graduated from Seton Hall College in 1882. He was admitted to the bar in 1893. In 1903 he became leader of the Democrat party in Essex County and held that post until 1925. At one time he led in the movement to elect Woodrow Wilson as Governor of New Jersey, but later he came into national prominence as an opponent of Mr. Wilson.

Nungesser, Captain Charles.

Nutting, Charles Cleveland.

O'Brien, Edward Charles.

O'Connell, Dennis Joseph.

O'Connor, John J. Bishop of the Roman Catholic Church, died at Newark, N. J., May 20. He was born June 11, 1855, at Newark, and was educated at Seton Hall College, N. J., the American College at Rome and the University of Louvain. He was ordained priest in 1877, and was professor of philosophy and theology at Seton Hall College and Seminary 1878-1895. He became pastor of St. Joseph's Church, Newark, in 1895, and was consecrated bishop of Newark July 25, 1901.

O'Donnell, Patrick

O'Higgins, Kevin Christopher.

Oliver, John.

O'Mara, Joseph.

O'Neil, Charles.

Ono, Yeihiro.

Operti, Albert.

Orndorff, William R.

Ospina, Gen. Pedro Nel.

Osterhaus, Hugo.

Osterholm, Dr. Martin. American educator, died at Tiffin, Ohio, December 10. He was born at Warburg, Sweden, Aug. 13, 1863, and went to the United States in 1882. He was a graduate student at the universities of Nebraska, Chicago and Yale. He was a member at various times of the faculties of Bethany College, Cotner University and Carthage College before becoming professor of modern languages at Heidelberg College, Ohio.

O'Sullivan, The Most Reverend Charles. Irish bishop, died at Killarney, January 28. He was born in East Kerry in 1862 and was educated at the Killarney Seminary. He was dean of Kerry from 1907 till he became Roman Catholic Bishop of Kerry and Aghadoc in 1917.

Outcalt, Miller. American jurist, died at Cincinnati, Ohio, January 13. He was born and educated in Cincinnati. Admitted to the bar in 1876, he became prosecuting attorney three years later, and had William H. Taft as his first assistant. He was elected Judge of the Common Pleas Court in 1888.

Paine, Willa Seaver.

Palmer, William Pendleton.

Paz y Melia, Antonio.

Peabody, Francis Weld.

Peach, Gen. Benjamin Franklin. Civil War veteran, died at Swampscott, Mass., May 26. He was born at Marblehead, Mass., Oct. 17, 1838. He was for many years active in the Massachusetts Volunteer Militia.

Peay, Austin.

Peck, Charles Howard. American surgeon, died at Newtown, Conn., March 28. He was born at Newtown, June 18, 1870, and graduated at the College of Physicians and Surgeons, Columbia University, 1892. Since 1895 he had been a practicing surgeon in New York City. He held the rank of colonel in the Medical Corps during the World War, and organized and directed the 3000-bed base hospital at Chaumont, France. He was appointed senior consultant in surgery of the American Expeditionary Forces. The Distinguished Service Medal was awarded to him in 1919. The contributions of Dr. Peck to the surgical literature of his day were numerous, covering especially abdominal surgery.

Pedrick, Col. William E. American artist, died in Trenton, N. J., August 11. He was born in 1869, and was educated at Princeton College. He was noted especially for his historical paintings, and was head of the School of Industrial Arts since 1922. For over 30 years he was connected with the New Jersey State National Guard.

Peet, Dr. Walter B. American rowing coach, died at Hammononton, N. J., June 22. He was born at New York, and after studying at Columbia University, became coach for its crews. He took a prominent part in laying out the course for the intercollegiate regatta at Poughkeepsie, N. Y. He was a practicing physician at one time and also wrote extensively on rowing matters.

Pendl, Emanuel.

Perl, Felix.

Pernot, Emile F. American pathologist died at Portland, Ore., February 2. He was born at New York in 1859, and was educated at Yale. For 35 years he made a study of tuberculosis, and in 1900 received the award of honor at The Hague Tubercular Congress for having been the first scientist to isolate the tubercular germ in poultry. For many years he conducted tuberculosis research work at the experimental station at Corvallis, Oregon.

Perry, The Rev. James De Wolf.

Pettis, Clifford Robert. American forester, died at Albany, N. Y., January 29. He was born at Delancy, N. Y., Aug. 10, 1877, and was graduated at Cornell University in 1901. In 1902 he became State Forester of New York. He was a national authority on reforestation, and developed the largest nursery of tree seedlings in the world, at Saratoga Springs, N. Y.

Mr. Pettis was originator of a forest fire-control system. His work, *Bulletin of Forest Nursery Practice*, was adopted as the handbook of the U. S. Forest Service.

Peugeot, Pierre French manufacturer, died at Paris, November 26. He was born near Paris in 1869. In addition to managing the affairs of one of the largest automobile plants in Europe, he was active in the social organization of his company's workers. He was a Commander of the Legion of Honor and mayor of the industrial town of Hermoncourt.

Pfister, Charles F. American financier, died at Milwaukee, Wis., on November 12. He was born at Milwaukee in 1859, and was educated in the University of Wisconsin. For many years Mr. Pfister was regarded as one of the outstanding figures in the business life of Milwaukee, and had numerous large interests.

Phillips, Clarence Coles. American artist, died at New Rochelle, N. Y., June 12. He was born at Springfield, Ohio, in 1882, and was educated at Kenyon College. His drawings in *Life* and his magazine covers attracted much notice, and he was one of the first artists to illustrate advertisements for widely known products.

Pierce, Henry Clay.

Pina, Juan José de Jesús, Herrera y, see Herrara.

Plummer, Charles.

Pollard, Edward Bagby. American educator and author, died at Chester, Pa., July 18. He was born at Stevensville, Va., Oct. 9, 1864, and graduated at Richmond College in 1884. He then entered the Southern Baptist Theological Seminary at Louisville, Ky., at which he was graduated in 1890. He also studied in the graduate department at Yale and at the University of Berlin. He was ordained in 1890, and his first pastorate was at New Haven, Conn. In 1902 he went to Georgetown, Ky., College, serving as professor of biblical literature and as pastor of the church there. Four years later he went to Crozier Theological Seminary at Chester, Pa., where he remained until his death. He wrote *Paul Judson and Semitic and Oriental Women*.

Potter, Charles Nelson. American jurist, died at Cheyenne, Wyo., December 21. He was born at Cooperstown, N. Y., Oct. 31, 1852, and was graduated at the University of Michigan in 1873. In that year he was admitted to the bar, and he settled at Cheyenne in 1876. He was elected a justice of the State supreme court in 1894, and was chief justice from 1905 until his death.

Potthast, Edward Henry.

Potts, Capt. Templin Morris.

Pounds, Charles Courtice.

Powell, Charles W. American botanist, died at Balboa, Canal Zone, August 18. He was born in St. Louis, Mo., in 1854, and was educated in the public schools of his native city. Mr. Powell studied orchidology for half a century, and spent many years in the Canal Zone. The Powell Orchid Garden in Balboa is a unique institution in tropical America. Several rare varieties of orchids discovered by Mr. Powell bear his name.

Powell, George Townsend.

Power, Frederick Belding.

Prather, J. Frank. American cattle breeder, died at Williamsville, Ill., May 12. He was born in 1863 at Chicago. He was a former president of the International Stock Breeders' Association and for 25 years was treasurer of the Illinois State Board of Agriculture.

Pratt, John Teale. American financier, died in New York June 17. Born in Brooklyn, N. Y., Dec. 25, 1873, he was graduated from Adelphi Academy in Brooklyn in 1892, and four years later received a diploma from Amherst College. In 1900 he received a law degree at Harvard University. He practiced law in New York City in 1908, shortly afterwards entering the railroad and financial fields. He was elected a director of the Delaware & Hudson R. R. in 1923. He was a large stockholder in Standard Oil companies. He was chairman of the National Budget Committee in 1919.

Prenter, William B.

Preston, Keith. American author, died at Evanston, Ill., July 7. He was born in Chicago, Sept. 29, 1884, and was educated at the University of Chicago and Indiana University. In 1913 he was associate professor of Latin at Northwestern University, and from 1919 to 1923 he was again a member of the faculty of that university. He afterwards joined the staff of the *Chicago Daily News* as literary editor. His published works included *Studies in the Diction of the Sermo-Amatorius of the Latin Comedy*; *Types of Pan*; *Splinters*; *Top of the Column*.

Procopie, Hjalmar.

Proctor, John. Baptist missionary, died in Shanghai, China, December 8. He was born near Palmyra, Mo., in 1869. He graduated at the William Jewell College, Liberty, Mo., and received his theological training at the University of Chicago Divinity School. He went to China in 1897 and for nearly 30 years was a missionary there. From 1906 until 1911 he was president of the Shanghai Baptist College.

Prohaska, Karl. Austrian composer, died in Vienna, in April. He was born at Modling, Apr. 25, 1869, and studied at Vienna and Berlin. From 1901 to 1905 he was conductor of the Philharmonic Orchestra in Warsaw. He then settled in Vienna, where he was professor at the conservatory from 1908 until his death. Among his works for chorus with orchestra, the best known are *Frühlingsfeier*, *Der Feind*, and *Pierrot Lunaire*. He also wrote numerous choruses a cappella for male and for female voices, and much chamber music. He left an opera *Madeleine Guimar*, in manuscript.

Przybyzowski, Stanislaw.

Rand, Charles Frederic.

Randolph, Harold.

Ratchford, Michael D.

Read, Melbourne Stuart.

Reclus, Armand.

Reed, James Hay. American jurist, died at Pittsburgh, Pa., June 17. He was born at Allegheny City, Pa. Sept. 10, 1858, and was graduated at the Western University of Pennsylvania in 1872. He was admitted to the bar three years later at Pittsburgh, where he practiced for half a century. He was appointed to the Federal Circuit Court in 1891, but resigned a year later on account of ill health. He was counsel for the Carnegie Steel Corporation and negotiated the sale of that property to the United States Steel Corporation. He was the father of Senator David A. Reed.

Reeves, Alfred Gandy.

Reid, George Thomas. American lawyer, died at Seattle, Wash., November 30. He was born at Etna Green, Ind., in 1871. He began to practice law in Tacoma, Wash., and in 1908 was appointed division counsel for the Northern Pacific R. R. In 1921 he became vice president of that road.

Reid, The Rev. Dr. Gilbert.

Reig y Casanova, Enrico. Cardinal. Archbishop of Toledo and Primate of Spain, died at Toledo, August 25. He was born at Valencia, Spain, in 1859, and in 1914 was consecrated Bishop of Barcelona. In December, 1922, he was created a cardinal, and in 1926 he attended the Eucharistic Congress of the Roman Catholic Church held at Chicago, being received, on his visit to America, by President Coolidge.

Remensnyder, Junius Benjamin.

Rommel, Harmon L. American politician, died at Hot Springs, Ark., October 14. He was born at Stratford, N. Y., Jan. 15, 1859. He was a member of the Arkansas legislature in 1886, and was a candidate for Governor on the Republican ticket three times. Colonel Rommel was chairman of the State Republican Committee for 28 years and for 13 years a member of the Republican National Committee.

Remsen, Ira.

Rennett, Hugo Albert.

Rhea, James C. American soldier, died at Brookline, Mass., on August 8. He was born in Iowa, Mar. 7, 1876, and graduated at the U. S. Military Academy in 1899. His first army assignment was in Cuba as second lieutenant, and in 1905 he was transferred to the Philippines where he served, with the rank of captain, until 1907. He returned to the United States, but was reassigned to the Philippines in 1911, serving there until 1915. In May, 1917, he was promoted to the rank of major and two months later was made a lieutenant colonel in the National army. Going to France in 1918, he was assistant chief of staff of the Second American Army Corps and saw active service in the battles of St. Mihiel, the Meuse and the Argonne. After the Armistice he served in Coblenz, Germany, and when he returned to the United States became head of the Citizens' Military Training Camps in New England. He received the rank of colonel in 1923 and two years later was made brigadier general.

Rhodes, James Ford.

Richards, Eugene Lamb, Jr. American lawyer and banker, died at Woodbridge, Conn., September 17. He was born at New Haven, Conn., in 1868, and in 1885 graduated at Yale. From 1887 Mr. Richards was a member of the New York bar, and appeared in many important political cases. He was New York State Superintendent of Banks, 1914-1917.

Rideout, Henry Milner.

Rigge, William Francis.

Robbins, Wilford Lash.

Robinson, Georges.

Robinson, Frederic Cayley.

Robinson, Silas Arnold. American jurist, died at Middletown, Conn., January 18. He was born in Pleasant Valley, N. Y., Sept. 7, 1840. He was admitted to the bar in 1863, and practiced at Middletown, Conn. He served there as probate judge, 1878-80, mayor, 1880-82, and in 1890 was appointed a justice of the Supreme Court of Connecticut. He became a justice of the Court of Errors in 1910, but was retired for age the same year.

Rockwell, The Rev. Joseph Horace. Roman Catholic

educator, died at Boston, Mass., August 1. Born in Boston in 1862, he studied at Boston College, and was for several years professor of rhetoric before studying theology at Woodstock, Md. He was ordained in 1895. In 1926, when the Jesuit province of New England was formed, he became its procurator. He had been president of Brooklyn and St. Francis Xavier Colleges and of the Association of Colleges of New York, 1911 to 1918.

Rodney, Gen. George Brydges.

Rogers, Howard Jason.

Roll, Sir James. Former Lord Mayor of London, died at Wanstead, Essex, January 30. He was born near London, Dec. 9, 1846. Of very poor parents, he had little schooling and entered an insurance firm as an office boy. He rose to be chairman of the company, retiring in 1916. He was Sheriff of the City of London, 1909-10, and Lord Mayor, 1920-21. He was created a baronet in 1921.

Roosevelt, James Roosevelt. American diplomat, died at Hyde Park, N. Y., May 7. He was born at Hyde Park, Mar. 27, 1854, and graduated at Columbia in 1877. In 1888 President Cleveland appointed Mr. Roosevelt to be chargé d'affaires and secretary of legation at Vienna, where he served until the end of the administration. He was also first secretary of the embassy in London. Mr. Roosevelt was a cousin of President Roosevelt.

Root, Azariah Smith. American librarian, died at Oberlin, Ohio, October 2. He was born at Middlefield, Mass., Feb. 3, 1862, and graduated at Oberlin College in 1884. He studied law at Boston University, 1884-85; at Harvard Law School, 1886-87, and at the University of Göttingen, 1898-99. Since 1887 he was librarian at Oberlin College, and professor of bibliography since 1890. Professor Root was president of the Bibliography Society of America, 1923-24, and of the Ohio Library Association, 1921-22. He was one of the founders of the Anti-Saloon League.

Ross, Mrs. Janet Anne.

Rothwell, Walter Henry.

Roversi, Dr. Luigi.

Rovsing, Thorild.

Rush, Thomas E. New York lawyer and public official, died at New York June 3. He was born at New York Jan. 16, 1867. He was educated at the College of the City of New York, New York University, and St. Francis Xavier College. He was admitted to the bar in 1890. After holding the post of State Comptroller, he was appointed Surveyor of the Port of New York by President Wilson in 1914, holding the position until 1920.

Russell, the Rt. Rev. William T.

Ryan, the Rev. Arthur Carlton. American missionary died at Scarsdale, N. Y., June 22. He was born at Grand View, Ia., in 1880, and graduated at Grinnell College in 1909. He prepared for the ministry at Oberlin College and was ordained in 1911. He went immediately to Turkey as a missionary, to aid in the Near East relief. He performed valuable services in the Italo-Turkish and Balkan Wars. He was recalled to the United States in 1925 to become general secretary of the American Bible Society.

Salmon, Lucy Maynard.

Salmon, Thomas William.

Sargent, Walter.

Sarruf, Yakub. Egyptian publisher, died at Cairo, July 10. He was born at Cairo in 1852. From 1878 to 1885 he was an instructor at the American University of Beirut, Syria. He was editor-in-chief and owner of *Al-Mukattaf*, the leading scientific magazine in the Arabic-speaking world, and joint founder and owner of a chain of newspapers in Egypt and the Sudan, the chief of which are *Al-Mukattam* of Cairo and the *Sudan Times* of Khartoum.

Sars, Georg Ossian.

Sartain, Emily.

Saulsbury, Willard.

Savage, Henry Milton.

Sazanoff, Sergius Dmitrievitch.

Schaefer, J. Louis. American banker, died at New York, February 5. Born in New York in 1866, he became associated with the export, import, shipping and banking firm of W. R. Grace & Co., being made treasurer of the company in 1895 and vice president in 1906. In 1924 he was made president of the Grace National Bank, besides having other banking connections. He was chairman of the committee on foreign commerce and revenue laws of the New York State Chamber of Commerce and a member of the Cotton Exchange of Dallas, Texas, and the New York Coffee Exchange. He was active in the work of the Lutheran Church.

Schmidt, Leopold.

Schwab, Frederick A. American newspaper man and music critic, died at Paris, June 6. He was born in 1844. He was sent to Europe by James Gordon Bennett as a reporter for *The New York Herald* to cover

the Austro-Prussian War of 1866, but reached Europe too late. He remained in Paris, writing theatrical articles for *La Liberté*, and later became music critic for *The New York Times*. He was the last survivor of the ten founders of the Lotos Club, New York. He organized Mme Sarah Bernhardt's tour of the United States. He spent the last twenty years of his life in Paris, where he wrote musical notes for the *Paris Herald*, prior to his retirement.

Scroeter, Jens Fredrik. Norwegian astronomer, died at Oslo, April 28. He was born in 1850. For many years he was head of Oslo University Observatory, and he wrote books on astronomy.

Searson, James William. American educator, died at Boston, Mass., July 7. He was born at Grand Island, Neb., Sept. 12, 1873, and was educated at the University of Nebraska and Columbia University. He taught in the State University of Nebraska from 1894 to 1911, when he went to the Kansas State Agricultural College as professor of English, remaining there until 1921. In the latter year he returned to the University of Nebraska as head of the English Department. Two days previous to his death he had begun his duties as professor of education in the summer session of Boston University. He was editor of the *American Educational Digest* (with Dr. Frank A. Weld) and author of *Studies in Reading* (with George E. Martin), 1910-13; *Kansas Readers*, 1916-17; and *Self-Correction in English*.

Seligman, Simon. German dealer in French art, died at Paris, September 21. He was born in Frankfurt, Germany, in 1854, but with his family moved to France and in 1878 he and his brother founded a business in French art objects of the eighteenth century and Middle Ages. He retired from business and devoted the last twenty years of his life to what was considered one of the greatest collections of thirteenth-century champlevé enamels in the world.

Sereso, Matilda.

Seton, the Most Rev. Robert.

Sherman, Charles Colebrook.

Shipley, Sir Arthur Everett.

Simon, Charles Edmund. American physician and pathologist, died at Baltimore, Md., November 9. He was born at Baltimore, Sept. 23, 1866, and graduated at Johns Hopkins in 1888, later attending the University of Pennsylvania medical school and then the University of Maryland from which he received the degree of M.D. in 1890. After serving at Johns Hopkins Hospital as assistant resident physician, in 1891 he began the practice of medicine in Baltimore. In 1897 he opened the first clinical laboratory in Baltimore, and between 1910 and 1920 he was professor of clinical pathology and physiological chemistry, teaching clinical laboratory methods to post-graduate students in medicine at the University of Maryland. In 1920 he was appointed lecturer in medical zoology at Johns Hopkins University, a position which he held for two years. In 1923 he became resident lecturer in filterable viruses, and full professor in June, 1927. He was the managing editor of the *American Journal of Hygiene* and the author of *Physiological Chemistry* (1901); *Infection and Immunity* (1911); and *Human Infection Carriers* (1919).

Sisowath, King.

Smith, Edward Henry. American author, died at New York, September 19. He was born at Leavenworth, Kan., in 1881, and was educated at Leipzig, Germany. He devoted about ten years to newspaper work before he commenced to write his books, most of which deal with crime. They include: *Release* (1921); *Famous Poison Mysteries* (1927); *Mysteries of the Missing* (1927).

Smith, Henry Preserved.

Smith, James, Jr.

Smith, Jesse Merrick.

Smith, William Strother. American naval officer, died at Newport, R. I., September 6. He was born in 1857 at Richmond, Va., and graduated at the U. S. Naval Academy in 1880. He passed through the successive grades until he became a rear admiral in 1918. During the Spanish-American war he served in the *Columbia* and the *Yankee*.

Sobieski, John. American soldier, died at Los Angeles, Cal., November 11. He was born in Warsaw, Poland, Sept. 10, 1842, the son of Count John Sobieski and a direct descendant of the last King of Poland. He was one of the most romantic figures in modern times—an exile at the age of six, a stowaway to the United States at 12, an Indian fighter at 16, a soldier of the Union army when 22, and a colonel in the Mexican army at 26. In 1858 he was a member of the Minnesota House of Representatives. It was said that he introduced the first bill on record advocating woman suffrage.

Solis-Cohen, Jacob.

Sologub, Feodor (Feodor Kugmich Teternikov).

Solomon, Solomon Joseph.

Sousa, Ernesto. Peruvian cabinet minister, died at Smelter, Peru, November 25. He was born at Cajamarca in 1866, and was educated at Lima. As Minister of Industry and Commerce, he died while engaged in studying the possibility of building a road from the coast to the rivers of the Peruvian forest. His death was attributed to a disease caused by the rarefaction of the air at a great altitude.

Spencer, Clarissa. American religious worker, died at Joplin, Mo., April 9. She was born at Kansas City, Mo., Dec. 17, 1870, and was educated at Goucher College. For 16 years she was general secretary of the world committee of the Y. W. C. A. in London, England, and she spent five years in Japan as a missionary of the Women's Foreign Missionary Society.

Speranza, Gino. American lawyer, died at Irvington, N. Y., July 18. He was born in Connecticut, Apr. 23, 1872, and was educated at the College of the City of New York and the New York Law School. He practiced law in New York from 1895, and for 15 years was legal adviser to the Italian consul general. He wrote *Race or Nation* (1925), and contributed to many magazines.

Springer, Frank. American paleontologist and author, died at Philadelphia, Pa., September 22. He was born at Wapello, Ia., June 17, 1848, and was educated at the University of Iowa. In 1869 he was admitted to the Iowa bar. Among his first scientific books was a volume on the revision of the palaeocrinoides, which he wrote between 1879 and 1886. He also wrote *Pentacrinus from East Indies* (1918); *Crinoids from Northern Canada* (1921); *Pentacrinus in Alaska* (1925); *Unusual Forms of Fossil Crinoids* (1926).

Squire, William Barclay.

Stalker, James

Stansbury, William Riley. Clerk of the U. S. Supreme Court, died at Washington, D. C., June 5. He was born at Washington, May 25, 1856. He entered the employ of the Supreme Court as an assistant clerk in 1882 and was made clerk in 1921.

Stanton, Frank Lebby.

Stanton, John R. American metallurgist, died at Galesville, Wis., April 28. He was born at New York in 1857, and was graduated from the Columbia School of Mines in 1882. He took a prominent part in the expansion of the copper-mining industry in the Michigan district, particularly between 1892 and 1905.

Starling, Ernest Henry. British physiologist, died at sea on May 3. He was born in Bombay, India, in 1866, and was sent to King's College School, London, for his early education, and afterwards studied at Guy's Hospital and Heidelberg. In 1890 while working at University College, London, he became associated with Bayliss, the great English physiologist of the time. The collaboration of these two men resulted in discoveries relating to the electrical phenomena of the heart, the action of nerves on the heart, the regulation of the circulation, and the movements of the intestines. During the World War, Professor Starling was British delegate on the Inter-Allied Scientific Food Commission, and also chemical adviser of the Saloniki forces. He was vice president of the Royal Society in 1918-19. He had honorary degrees from Dublin, Cambridge, Sheffield, Strassburg and Breslau Universities. His published works include *Elements of Human Physiology* (8th ed., 1908); *The Fluids of the Body* (1909); *The Feeding of Nations* (1919); *The Action of Alcohol on Man* (1923); *Principles of Human Physiology* (1925).

Stein, Hermann von.

Steindorff, Paul. American bandmaster, died at Oakland, Cal., February 18. As one of the promoters of the American Opera Company, at the beginning of the eighties of the past century, he was one of the pioneers of grand opera in English. Later he conducted Italian operas at the Tivoli Opera House, at San Francisco. From 1915 on he was conductor of the Oakland Municipal Band.

Steinway, Frederick T. American piano manufacturer, died at Northeast Harbor, Me., July 17. He was born at New York, Feb. 9, 1860. In 1919 he succeeded his brother, Charles, as president of the famous firm of Steinway & Sons. During his term of office the firm moved from its historical headquarters in East 14th Street, New York, to the new Steinway Hall in West 57th Street. Mr. Steinway was also prominent as a philanthropist and patron of music.

Stenhammar, Wilhelm.

Stephens, Ambrose E. B. American politician, died in Cincinnati, Ohio, February 12. He was born in Hamilton County, Ohio, June 8, 1862, and was educated at the Chickering Institute, Cincinnati. He was a member of the Ohio bar, and was elected to the U. S. House of Representatives in 1919, serving until his death. He was especially active in naval affairs.

Sternberg, Dr. Lev.

Stevens, Walter Leconte.

Stevenson, Sir Malcolm. British diplomat, died in

Cyprus, November 26. Born in Lisburn, Ireland, Mar. 25, 1878, he was educated at Trinity College, Dublin, and entered the Ceylon Civil Service in 1911. In 1917 he went to Cyprus as chief secretary to the government, and since 1920 had been high commissioner and commander-in-chief of the island. In 1923, he was made a Knight Commander of the Order of St. Michael and St. George.

Stewart, Lisenard. American philanthropist, died at New York, October 15. He was born in Westchester County, New York, June 19, 1855, and was educated at Yale. After his retirement from the presidency of the New York State Commission of Prisons in 1903, he interested himself in various philanthropic and civic organizations. He was especially interested in the New York Eye and Ear Hospital, Grace Church, and the New York Zoological Society.

Stokes, Adrian.

Stone, Ellen Maria.

Stover, Edward C. American ceramist, died at Trenton, N. J., July 10. He was the last of the founders of the Trenton School of Industrial Arts remaining on the board of trustees, and through his will the institution was to receive many fine specimens of his collection of old and modern objects of the ceramic art. Mr. Stover was one of America's pioneers in converting the ceramic industry from the old methods to a scientific basis, and contributed many important discoveries to the pottery industry.

Strachey, John St. Lo.

Strobel, Edgar Randolph. American dermatologist, died at Baltimore, Md., December 27. He was born at Baltimore in 1878, and in 1899 he took his medical degree at the Johns Hopkins Medical School. He was a member of the faculty of the school.

Suarez, Marco Fidel.

Sucher, Rosa.

Summers, Leland Lafin.

Sutro, Theodore.

Swain, Joseph.

Swaythling, Lord (Louis Samuel Montagu).

Talbot, Henry Paul.

Tanner, James. American lawyer and public official, died at Washington, D. C., October 2. He was born at Richmondville, N. Y., Apr. 4, 1844. In 1861 he enlisted in the Union army, and as a corporal in Company C, Eighty-seventh New York Infantry, served in numerous engagements of the Civil War, being so severely wounded in the second Battle of Bull Run, Aug. 30, 1862, as to require the amputation of both legs. He was employed as a clerk in the Ordnance Bureau of the War Department at Washington until 1865, when he returned to New York. While employed at the State Capitol at Albany, he carried on law studies, and was admitted to the bar in 1869. In that year he became U. S. deputy collector of customs in New York City and later served as collector of taxes in Brooklyn for four terms. He was active in the presidential campaign of Benjamin Harrison and in 1889 was appointed Commissioner of Pensions by President Harrison. He received appointment as Register of Wills of the District of Columbia by President Roosevelt in 1904. Advancing through numerous offices in the Grand Army of the Republic, he was elected commander-in-chief in 1905.

Taylor, Henry Martyn. British mathematician and barrister, died at Cambridge, October 16. He was born at Bristol, June 6, 1842, and was educated at Trinity College. For a time he was vice president of the Royal School of Naval Architecture and Marine Engineering, and was later admitted to the bar. He returned to Cambridge in 1869 as assistant tutor at Trinity College and was lecturer in mathematics from 1884 until 1894, when he lost his sight. Nevertheless, he continued to carry on his research work in mathematics, and also spent a number of years on stippling out scientific studies in the development of the Braille system. In recognition of his contributions to mathematical research he was made a fellow of the Royal Mathematical Society, Trinity College, in 1898.

Taylor, Price. British manufacturer, died at Toronto, Canada, July 15. Born in England in 1894, he was the fourth generation of his family to carry on the bell-making profession. He was manager of the Taylor works at Loughborough, England, and spent some time in war service. His death occurred while on a tour of the United States and Canada where his firm had installed several sets of chimes.

Teale, Ray Palmer. American economist, died at Myton, Utah, September 1. He was born in Fillmore County, Minnesota, Oct. 22, 1868, and was graduated at the University of Nebraska in 1897. In 1898 he entered the government employ as an economist in the Department of Agriculture, a position he held during the remainder of his life, with the exception of the years 1919-21, when he was special agent in charge of irrigation for the U. S. Bureau of the Census. He contributed to numerous periodicals on the subject of

water rights and irrigation, wrote government reports on irrigation and drainage, and was the author of *Irrigation in the United States* (1915).

Thayer, Col. Arthur. American soldier, died at Fort Totten, N. Y., August 16. He was born at Evansville, Ind., Feb. 1, 1864, graduated at the U. S. Military Academy in 1886, and saw active duty as a second lieutenant in the cavalry in the Indian campaigns. He later returned to West Point as an instructor in languages, and then served in the Spanish-American War, being cited for gallantry in the Battle of San Juan, Cuba, July 1, 1898. He participated in the Philippine insurrection, in which he was severely wounded. He received a second citation for bravery, Nov. 3, 1899. He was breveted captain for a perilous ride through hostile territory and for services in successive engagements. He was returned to West Point as instructor in 1903, was commissioned as colonel, July 1, 1916, and served in France during the World War. In 1922 he was made commanding officer of the New York General Depot, New York City.

Thomas, William Widgey. American diplomat, died at Portland, Me., April 25. He was born at Portland, Aug. 26, 1839, graduated at Bowdoin in 1869, and, in 1862, while studying law at Harvard, was dispatched by President Lincoln to carry a treaty to the Sultan of Turkey. He served as vice consul general at Constantinople, acting consul at Galatz, Moldavia, and consul at Gothenburg, Sweden, until 1865, when he resigned to resume his studies. Admitted to the Maine bar in 1866, he began the practice of law in Portland, and in 1869 entered public service as commissioner of public land. He was commissioner of immigration for Maine, 1870-73. He was sent by the State Legislature to Sweden in 1870, and returned with a group of 51 colonists who founded the town of New Sweden in the northern part of the State. After several terms in both houses of the State Legislature he was appointed by President Arthur as Minister to Sweden and Norway, a position he held under five Presidents. He was active in obtaining the services of King Oscar on three occasions in the settlement of controversies between the United States, Great Britain, and Germany.

Thompson, Frank Forrester. American educator, died at Lewistown, Pa., September 4. He was born at Milroy, Pa., Nov. 16, 1870, and graduated at Princeton in 1894. In 1897 he became instructor of physics at Union College, and from 1898 to 1901 he was instructor of electrical engineering at Pennsylvania State College. In 1903 he accepted a position as instructor of electrical science at Rutgers University, where since 1908 he was professor of electric engineering.

Thompson, Henry Dallas.

Thompson, William Gilman.

Thomsen, Vilhelm Ludvig Peter.

Titchener, Edward Bradford.

Torti, Ernesto. Italian dramatic baritone singer, died at Chicago, February 27. He was born at Milan, in 1886. He went to New York in 1913 as member of the Century Opera Company, and for two seasons had been with the Chicago Civic Opera Company.

Tothill, Admiral Sir Hugh Henry Darby. British naval officer, died in London, September, 25. He was born in Hampshire, Mar. 14, 1865, and entered the navy as a cadet in 1878. After periods on several battleships, in December, 1914, he was given command of the *Conqueror*. At Jutland Captain Tothill had command of two ships, the *Conqueror* and *Orion*. In April, 1917, he was promoted to rear admiral and appointed chief of supplies and transport. In 1919 Sir Hugh was appointed commander-in-chief in the East Indies and in 1921 he was made vice admiral, becoming an admiral in 1926. In addition to several British decorations, he received the Russian Order of St. Anne, the Japanese Order of the Rising Sun, the French Legion of Honor and the American Distinguished Service Medal.

Travis, Walter Jeremiah.

Treadwell, John P. American miner, died in New York City on November 6. He was born in 1841 and was active in mining in many countries, innovations which he introduced still being utilized in the gold mines of America, Africa and Australia. The famous Treadwell Mine, which he discovered and developed, was on Douglas Island off the Alaskan coast, and was believed to have yielded more than \$25,000,000 in ore. Mr. Treadwell was one of the organizers of the Western Pacific Railroad, and in its early years served on the board of directors. For the latter part of his life he was out of touch with mining.

Trench, Captain Martin Edwin. American naval officer, died at Worcester, Mass., January 6. He was born at Dennison, Minn., Nov. 30, 1869, and graduated at the U. S. Naval Academy in 1898. During the Spanish-American War he served on the battleship *Iowa*, and in the World War commanded the cruiser *Charleston*, one of the convoy vessels which accompanied the first detachment of the American Expedi-

tionary Forces across the Atlantic. At the time of his death he was governor of the American Virgin Islands.

Trieber, Jacob. American jurist, died at Scarsdale, N. Y., September 17. He was born at Raschkov, Germany, Oct. 6, 1853, and when a youth went to the United States. He was admitted to the bar in Arkansas in 1877. From 1831 to 1897 he was Master in Chancery of the United States District Court in eastern Arkansas, and the three following years was United States Attorney in that district. He was appointed to the bench in 1900. He was assigned to the Southern District of New York a month before he died.

Tripp, Guy Eastman.

Tschakste, Jan. See Chakste, Janis.

Tupper, Sir Charles Herbert.

Tupper, Henry Allen. Baptist minister, died at Baltimore, Md., September 29. He was born at Washington, Ga., June 22, 1856, and educated at Charleston College, Richmond College, and the University of Virginia. He was ordained in 1879, and held pastorates in Louisville, Ky., Baltimore, Md., Brooklyn, N. Y., and Washington, D. C. During the Spanish-American War he held special missions among soldiers in the Southern camps. He served as special commissioner to Mexico of the International Peace Forum in 1913. Dr. Tupper was a former president of the New York Baptist Ministers' Conference and vice president of the Southern Baptist Convention.

Turpin, François Eugene.

Tuxen, Lauritz. Danish painter, died at Copenhagen on November 21. He was born in Copenhagen, Dec. 9, 1853. In 1874 he studied in Paris, and in 1883 in Italy. For many years he was official painter at the Danish court, and he painted the famous Lauritz episodes of lives of royal persons of Europe. His "*Echoppes de Poissons*" and "*Nymdegab*" is in the Museum of Copenhagen, and "*Le Général Consul Pontoppidan*" is in the Museum of Hamburg.

Tyler, David Gardiner. American jurist, died in Charles City County, Virginia, September 5. A son of John Tyler, tenth President of the United States, he was born at East Hampton, N. Y., July 12, 1846. He received his education at Washington College, Lexington, Va., which is now Washington and Lee University. After studying in Germany for three years, he graduated from the law school of Washington College in 1869. He was a member of the Senate of Virginia, 1891-92 and 1900-04. From 1904 until 1920 he served as judge of the Fourteenth Judicial circuit of Virginia.

Vall, Valli (Mrs. Louis Dreyfuss). Musical comedy actress, died at London, England, November 3. She was born in Berlin, Germany, in 1882, and received her early schooling at London. At the age of 12 she made her first appearance on the stage, and soon became a favorite in London and Berlin. She went to New York in 1906 for the production of *Veronique*, and in 1908 was at Daly's in *The Merry Widow*, later appearing in other American cities with this play. In succeeding years she toured the United States in other productions.

Van Dyck, Francis Cuvier.

Van Vredenburg, Jonkheer. Dutch diplomat, died in Brussels, Belgium, December 4. He was born at The Hague in 1874. He was Dutch Minister to Belgium since 1919. During the World War he was president of the Anglo-German Commission for Prisoners in Holland.

Vaux, George, Jr. American lawyer and public official, died at Bryn Mawr, Pa., October 24. He was born at Philadelphia, Pa., Dec. 18, 1863, and was educated at Haverford College and the University of Pennsylvania. After being admitted to the bar, he was largely engaged in reformatory and penological work. He was a member of the United States Board of Indian Commissioners from 1906 until his last illness, and had been chairman for many years.

Vera, Princess. of Montenegro. A younger sister of Queen Helena of Italy, died at Cap d'Antibes, Nice, October 30. Princess Vera was born at Rieka, Montenegro, Feb. 10, 1887. She was the eighth of nine children of the late King Nicholas I of Montenegro.

Viana, Marquis de. Spanish court chamberlain, died at Madrid, April 5. He was for many years prominent at the Spanish court. He signed the marriage contract of King Alfonso and Queen Victoria in 1906. He served as grand master of the horse and grand huntsman to the sovereign, being next in official rank to the majordomo or grand master-in-chief of the court. The Marquis de Viana, who was well known in European capitals, spent considerable time in England. He visited the United States on the occasion of the international polo games as representative of the Spanish King.

Viera, Feliciano.

Vogelgesang, Carl Theodore.

Voorhees, Foster MacGowan.

Wade, Festus John.

Wadhams, Albion Varette.

Walcott, Charles Doolittle.
Waldestein, Sir Charles. See Walston.
Walker, Perley F. American engineer and educator, died in Lawrence, Kan., October 17. He was born at Embden, Me., Apr. 28, 1875, and graduated at the University of Maine in 1896. He studied later at Cornell University. He joined the faculty of the University of Kansas in 1905, and 10 years later was appointed head of the school of engineering; when that school was amalgamated with the school of architecture he continued as dean of the combined school. His book, *Management Engineering*, is well known.
Walsh, Henry Collins. American editor, died in Philadelphia, Pa., April 29. He was born in Florence, Italy, on Nov. 23, 1868, and went to the United States when he was nine years old. After graduating from Georgetown University, he became engaged in newspaper and magazine work. Later he was on the staff of the American Press Association. Mr. Walsh traveled extensively, and organized the Arctic and the Explorers' Clubs, and was president of the Travel Club of America.
Walston, Sir Charles.
Ward, the Reverend Felix, Roman Catholic clergyman, Provincial of the Passionist Fathers, died in Hoboken, N. J., June 9. He was born at Limerick, Ireland, in 1854, and went to the United States when a boy. He entered the Passionist Monastery at Pittsburgh, Pa., when he was 18, and in 1878 was ordained priest at St. Michael's Monastery, Union City, N. J. He contributed many articles to magazines and wrote a history of the Passionist Fathers.
Warfield, (Solomon) Davies.
Warner, Sam L. Motion picture producer, died at Los Angeles, Cal., October 5. He was born in Baltimore, Md., Aug. 10, 1887. In 1903, with his brothers, he converted an old store room at Newcastle, Pa., into a theatre to show motion pictures, and the following year they organized at Pittsburgh, Pa., the Duquesne Amusement and Supply Company, which was among the earliest of the motion-picture distributing agencies. In 1910 Warner Brothers began to make their own pictures, ultimately purchasing the old Vitagraph plant in Brooklyn, N. Y., and establishing studios on the Pacific coast.
Warren, General Sir Charles.
Warren, John Collins.
Warren, William Robertson.
Washburn, Frederic Leonard.
Waterman, Frederick Mather, Steel corporation executive, died at Mahwah, N. J., May 21. He was born at Wheaton, Ill., Jan. 30, 1873. Mr. Waterman was connected with the United States Steel Corporation continuously since it was organized in 1901, and was treasurer since 1922.
Weir, Robert Fulton.
Wellington, George Lewis.
Wermuth, Adolf. German public official, died at Berlin, October 12. He was born at Berlin in 1855. He held high office in the Imperial Treasury before being elected Burgomaster of Berlin in 1912, a post he held until he resigned in 1920. In 1893 he was German Imperial Commissioner to the World's Columbian Exposition at Chicago.
Wheeler, Benjamin Ide.
Wheeler, Wayne Bidwell.
White, Frank.
White, Henry.
White, Israel Charles.
White, James. British financier, died at Foxhill, England, June 28. He was born at Rochdale, England, in 1878, and was educated in the council schools there. He began work as a bricklayer, afterwards going into business as a builder. Mr. White was known as a very bold speculator with a passion for deals on a very large scale. He served on various corporation boards and was chairman of the Beecham Trust. He was interested in oil companies and in various theatrical and sporting enterprises in London and New York.
Whitfield, Henry Lewis.
Whitney, Milton.
Wicksteed, Henry King. Canadian engineer, died at Toronto, July 25. He was born in Quebec, May 25, 1855, and was graduated at McGill University, 1878. After his graduation he was employed on exploration work for the Canadian Pacific Ry. and in 1875 he was appointed chief assistant at Port Arthur. For many years after that he was engaged in exploratory trips for the Canadian Pacific and other roads. In 1914 and 1915 he was in Venezuela, locating a railway from the interior to the coast. On his return to Canada he engaged in extending lines for the Canadian Northern, and following the taking over of that road by the government he remained with the new organization until 1921, when he retired.
Wicksteed, the Reverend Philip Henry.
Wight, Frank Clinton.

Williams, Charles Richard. American editor, died at Princeton, N. J., May 6. He was born at Plattsburg, N. Y., Apr. 16, 1858, and graduated at Princeton in 1875. He studied later at the Universities of Leipzig and Göttingen. Princeton awarded him a Ph.D. degree in 1893. Dr. Williams was editor-in-chief of *The Indianapolis News* from 1892 until 1911. He wrote an important biography of Rutherford B. Hayes (1914), and edited the diary and letters of Hayes (5 vols., 1922-26).
Williams, David. American publisher, died at Lake George, N. Y., October 28. He was born at Waterford, Ireland, Dec. 23, 1841, and in 1850 was brought to the United States. He graduated at Middletown Academy in 1857, and was associated with his father in publishing *The Iron Age*. In 1868 he became sole proprietor of the magazine, and established *The Metal Worker* (1873), and *Carpentry and Building* (1879).
Williams, Sir Ralph Champneys.
Willison, Sir John Stephen.
Wilson, William Powell. American museum director, died at Philadelphia, Pa., May 12. He was born at Oxford, Mich., Oct. 17, 1844, and was graduated from Harvard in 1878, going to Europe where he took the doctor's degree at Tübingen in 1880. He was director of the school of biology at the University of Pennsylvania, 1890-94. In 1893 he founded and afterward directed the Philadelphia Commercial Museum.
Windisch-Graetz, Prince Albert of.
Wolf, Horace J. Jewish welfare worker, died at Rochester, N. Y., February 17. He was born at Cincinnati, Ohio, June 15, 1885. He graduated at the University of Cincinnati, 1909, and was ordained by Hebrew Union College shortly afterwards. Rabbi Wolf was active in civic and social welfare movements in Rochester and other parts of the country for 20 years.
Wolfe, Gen. S. Herbert. American insurance actuary, died at New York, December 31. He was born at Baltimore, Md., Mar. 19, 1874, and educated at the College of the City of New York. He made a specialty of examining insurance companies for state governments. In 1917 he was commissioned captain in the Quartermaster's Reserve Corps. He served with the American Expeditionary Forces in France, and received the rank of lieutenant colonel in October, 1918. In 1921 he was appointed brigadier general in the Officers Reserve Corps.
Wood, Josiah. Canadian statesman, died at Sackville, N. B., May 13. He was born at Sackville, Apr. 18, 1843, and educated there at Mount Allison University. From 1882 to 1896 he represented Westmoreland County, New Brunswick, in the Dominion House of Commons, and was mayor of Sackville, 1908-09. He was a senator of the Dominion, 1896-1912, and lieutenant governor of New Brunswick 1912-17.
Wood, Leonard.
Woodbury, Frank W.
Woolson, Irs. Harvey.
Work, Bertram G.
Worrell, John Austin. Canadian lawyer, died at Toronto, February 27. He was born at Smith's Falls, Ont., July 21, 1852, and educated at Trinity College, Toronto. He became a barrister in 1878, and a Queen's Counsel in 1889. He was one of the leaders of the Canadian bar, and was chancellor of Trinity University from 1914 until his last illness.
Worthen, Thomas Wilson Dorr. American educator, died at Middletown Springs, Vt., September 21. He was born at Theford, Vt., Oct. 3, 1845. He was graduated at Dartmouth College in 1872, joined the faculty of the college in 1878, and was professor of mathematics, 1898-1911.
Wright, Warren Huntington. American publisher, died at Swampscott, Mass., July 14. He was born at Boston, Mass., in 1864. He entered the employ of the publishing house of Little, Brown and Company as a boy in the wholesale department of which he later became head. In 1913 he became secretary and was made vice president in 1926.
Wyman, Walter Channing. American archaeologist, died at New York City, January 29. He was born in Boston, Mass., in 1850. For more than 40 years Mr. Wyman had been a collector of American relics. In 1898 he organized the archaeological department for the World's Columbian Exposition in Chicago.
Young, Sir Frederick William.
Young, the Rev. S. Hall. American clergyman and missionary, died near Clarksburg, W. Va., September 2. He was born at Butler, Pa., Sept. 12, 1847, graduated at Wooster College and the Western Theological Seminary, and went to Alaska in 1878, where he spent a number of years organizing missions. He was said to have established the first Protestant church in Alaska in 1879, and in 1901 was appointed superintendent of all Alaskan Presbyterian missions, his duties taking him to all parts of Alaska and the Siberian coast. He contributed many articles to magazines telling of his experiences in the Northwest.

Yusef, Mulai.

Zaghoul Pasha, Said.

Zeisler, Fannie Bloomfield.

Zevely, James W. American lawyer, died at East Hampton, N. Y., June 10. He was born at Lunn, Mo., Oct. 8, 1861, and graduated at the University of Virginia. He read law, and continued his studies while he was state librarian at Jefferson City, Mo., and later while inspector in the Department of the Interior in President Cleveland's second administration. He was admitted to the bar in 1902 and practiced at Muskogee, Okla., until 1917, when he became attorney for the Sinclair Consolidated Oil Company. As personal attorney for Harry F. Sinclair he was a witness in 1924 in the Teapot Dome oil investigation, in which the Sinclair Company and Albert B. Fall, former Secretary of the Interior, were involved.

Zingher, Abraham. American physician and bacteriologist, died at New York, June 5. He was born in 1855 and graduated at Cornell Medical School in 1908. In addition to his duties as assistant professor of bacteriology and hygiene at New York University and Bellevue Medical Schools, and pediatricist at the Post Graduate Hospital, New York, he was attending physician at the Willard Parker Hospital and carried on private practice and research work. He did notable work in the infantile paralysis epidemic of 1916. He served at Base Hospital 69 in France during the War. He was one of the men who worked with Dr. Schick of Vienna, during the latter's visit to the United States, in perfecting the anti-diphtheria serum. At the time of his death he was working on serums for the treatment of scarlet fever, rheumatism and measles.

NEGRI SEMBILAN, nā'grē sem'belān'. A federation of nine divisions, constituting a state in the Federated Malay States (q.v.).

NEJD, SULTANATE OF. See ARABIA.

NEOLITHIC AGE. See ARCHEOLOGY.

NETHERLANDS, THE, or HOLLAND. A constitutional monarchy of Europe, bordering on the North Sea, which bounds it on the west and south; bounded on the east by Germany and on the south by Belgium. Capital, The Hague.

AREA AND POPULATION. On Jan. 1, 1926, the total area was 12,593 square miles, exclusive of water; population, according to the census of 1920, 6,865,314; according to the communal lists for Dec. 31, 1925, 7,416,418; density per square mile in 1925, 588.9. According to the figures for 1925, 46.34 per cent of the population, or 3,436,582, were inhabitants of towns of 20,000 or more, the remainder being classified as rural. In 1926 the movement of population was: Births, 177,459; deaths, 73,348; marriages, 55,341. The emigration, mostly to North America, was 3020 in 1925. The largest cities with their populations, Dec. 31, 1925, were: Amsterdam, 718,046; Rotterdam, 552,343; The Hague, 398,416; and Utrecht, 149,819.

EDUCATION. Primary instruction is free and compulsory between the ages of seven and 13, the cost being shared by the state and the commons. Public elementary schools in 1923-24 numbered 3808 with 17,390 teachers and 527,585 pupils; private elementary schools numbered 3428 with 17,836 teachers and 561,618 pupils; public infant schools, 220 with 1237 teachers and 34,971 pupils; private infant schools, 1223, with 3165 teachers and 109,606 pupils. For higher education there are the four public universities at Leyden, Utrecht, Amsterdam, and Groningen, with totals of 384 members in the faculties and 6436 students. Besides there are a technical university, a private university, navigation schools, commercial schools, schools for working people, etc.

PRODUCTION. In 1925 the cultivated land amounted to 2,501,863 hectares, distributed as follows: arable land, 892,067; pasture, 1,258,756; gardens and orchards, 101,792; forest, 249,-

248. Large estates prevail in the provinces of Zealand, South Holland, Groningen, and North Holland; small estates in North Brabant, Guelders, Limburg, and Overijssel. The yield of the more important crops in 1925 was: Wheat, 686,490 quarters; barley, 422,826 quarters; oats, 2,203,506 quarters; rye, 2,016,501 quarters; sugar beets, 2,223,823 tons; flax, 10,852 tons. According to the latest available census of livestock there were 363,068 horses, 2,062,771 cattle, 668,211 sheep, and 1,519,245 pigs.

Coal is mined to some extent in Limburg; the output in 1925 was 6,848,567 metric tons, of which mines owned by the State produced 3,804,618 tons. Incomplete figures for the manufacturing industries in 1925 showed 315 distilleries, 10 sugar refineries, 19 beet sugar refineries, 13 salt works, 219 breweries, and 3420 tobacco factories. Diamond cutting and shipbuilding are other important occupations. In 1925, 5229 vessels of all kinds were engaged in the fisheries; the produce of the herring fisheries in the North Sea was valued at 10,146,611 guilders in 1925 and the quantity of oysters produced in the same year was 1,316,900 kilos.

COMMERCE. According to a British authority, the total value of Dutch exports in 1926 was 1,749,205,000 guilders and the total value of imports 2,441,903,000 guilders. The following table from the same source gives the value of the leading articles of import and export in 1926:

	Imports 1926	Exports 1926
Iron and steel of all kinds	129,697	86,700
Textiles, raw and manufactured	323,182	216,527
Cereals and flour	264,975	14,615
Coal	147,128	106,246
Rice and flour thereof	41,357	29,880
Mineral oil	59,456	8,099
Coffee	63,480	28,352
Butter	2,488	80,070
Margarine (raw and estab.)	5,492	61,835
Sugar	54,091	58,791
Cheese	441	69,964
Gold and silver	28,826	16,482
Wood	116,528	8,160
Skins	32,086	27,427
Copper	12,676	4,611
Paper	35,115	43,275
Soot, grease, tallow, suet	83,692	22,381
Zinc	5,965	11,799
Tobacco (unmanufactured)	87,552	2,218
Tin	3,879	628
Colours (painter's wares)	13,981	20,807
Seeds (colza, linseed, etc.)	72,591	17,080
Manures (all sorts)	59,441	21,045

FINANCE. The proposed budget of the Netherlands for 1928, presented to Parliament, Sept. 20, 1927, indicated further progress in government finance and reflected relatively satisfactory business conditions. It provided for expenditures under the "Ordinary Service" of 591,823,000 florins and receipts of 595,240,000 florins; under the "Extraordinary Service," estimated expenditures are 229,657,000 florins and receipts are 56,341,000 florins. The apparent deficit for the total budget is, accordingly, 169,899,000 florins. Other principal features of the budget proposals included a projected reduction of 20 per cent in income taxes, the redemption of the 1923A loan, amounting to 97,089,000 florins, and the conversion of the 1923B loan of 83,175,000 florins. The prospects for the 1928 budget were, however, much better than was indicated in the budget tables of receipts and expenditures. It was expected that legislation would

be passed applying practically all the favorable balance under the ordinary service to a pension fund.

In the extraordinary service expenditures is an item of 180,273,000 florins which refers to the redemption of the 1923A loan and conversion of the 1923B loan. Funds set aside specifically against this item amount to only 47,500,000 florins, to be received through the liquidation of a post-war export organization. However, in the practical handling of the budget, other receipts that will be applied against the expenditure comprise a loan of 84,000,000 florins to convert the 1923B loan, a sum of 25,000,000 florins to be received from the French government, and some 24,000,000 florins from municipalities that borrowed funds from the central government to carry out building programmes. As a result of these operations it was expected that the entire budget deficit would be reduced to somewhat over 40,000,000 florins.

The generally healthy condition of national finances was attributed largely to the heavy burden that has been imposed on taxpayers. The Minister of Finance was known to favor a policy of lower taxation in order to further industrial revival. The extent of budgetary progress was indicated by the fact that from 1918 to 1925 the budget closed each year with a deficit, expenditures in 1921 exceeding receipts by 296,000,000 florins. In 1925 there was a surplus for both services of 12,825,000 florins and in 1926 it was expected that the surplus would reach 15,376,000 florins.

The total public debt of the Netherlands on Sept. 1, 1927, was 2,020,018,000 florins, comprising 2,772,779,000 florins of consolidated debt and 147,239,000 florins of floating debt. The floating debt had shown a steady and marked decline since the high point of 858,663,000 florins in 1921. The foreign debt of the Netherlands treasury is only 100,000,000 florins, resulting from a loan placed in the United States in 1924.

COMMUNICATIONS. The number of vessels in the mercantile marine at the beginning of 1926 was 168 sailing vessels of 15,886 tons and 781 steamers of 1,311,976 tons. In 1925, 21,005 vessels of 27,303,000 tons entered the ports of The Netherlands and 21,018 vessels of 27,129,000 tons cleared. Of these 5463 Dutch vessels of 7,505,000 entered and 5465 vessels of 7,514,000 tons cleared. All the railways, totaling 2405 miles in 1925, are privately owned. In that year 47,151,000 passengers were carried; the revenue was 159,230,000 guilders.

ARMY AND NAVY. The strength of the Dutch army on Apr. 1, 1926, was 8047 officers and 340,160 men; the military budget for 1927 was 58,986,100 florins. The naval budget for the same year was 40,982,965 florins. See **MILITARY PROGRESS**; **NAVAL PROGRESS**.

GOVERNMENT. Executive power is vested in the sovereign and legislative power conjointly in the sovereign and the parliament, which is called the States-General and consists of two houses. The upper chamber is composed of 50 members, elected by the provinces, and the lower chamber of 100 deputies, elected directly. Ruling sovereign in 1927, Queen Wilhelmina Helena Pauline Marie, born Aug. 31, 1880, and crowned Sept. 6, 1898. The first chamber as a result of the elections of 1926 was composed of 16 Catholics, 7 Anti-Revolutionists, 7 Protestant Party, 6 Liberty Union, 3 Democrats, and

11 Social Democrats. The second chamber (lower house) elected in 1925 was composed of 31 Catholics, 24 Social Democrats, 13 Anti-Revolutionists, 11 Christian Historicals, 9 Liberty Union, 7 Democrats, and 5 members of other parties. The ministry as formed on Mar. 8, 1926, was as follows: President of the Council and Minister of Finance, Dr. D. J. de Geer; Foreign Affairs, F. B. van Blokland (appointed Mar. 30, 1927); Interior and Agriculture, Dr. J. B. Kan; Justice, Dr. J. Donner; Colonies, Dr. J. C. Koningsberger; War, J. M. J. H. Lambooy (appointed Apr. 24, 1926); Public Works, Dr. H. van der Vegt; Marine, J. M. J. H. Lambooy (ad interim); Labor, Commerce and Industry, Dr. J. R. S. de Bruine; Instruction, Science and Arts, Dr. M. A. M. Waszink.

HISTORY. As noted in the preceding **YEAR BOOK**, a revolt of considerable proportions broke out in the Dutch East Indies during the latter part of the year 1926. Sporadic riots and uprisings occurred during the first few months of 1927, but the government kept a firm hand on the situation and prevented the movement from spreading. It was definitely established that the revolt was the work of Communistic agitators and was largely financed from Moscow. Failure on the part of the leaders to get the millions of Japanese to follow them into armed insurrection and the loyalty of the native leaders connected with the government were the causes for the failure, because there was no doubt that, if the entire population rebelled, the meagre forces in the hands of the Dutch government would be unable to cope with such a situation.

In the spring the Dutch Upper Chamber rejected a treaty with Belgium which had been passed by the Lower Chamber in November, 1926. The treaty was purely economic and had been the subject of negotiation between the two countries for a long period of time. It dealt with the navigation of the Scheldt and Rhine Rivers and called for the construction of canals from Antwerp and Moerdijk on the Rhine and another from Antwerp to Buhort on the Rhine. The chief burden of the construction of these canals would be borne by Belgium. The chief objection to the measure seemed to be that Rotterdam would suffer as a commercial centre and the port of Antwerp in Belgium would be the chief gainer of any loss of trade at Rotterdam. Jonkheer Van Karnebeek, the Dutch Foreign Minister, was seriously perturbed by the rejection of the treaty and stated that he would resign his post because of it as soon as a successor could be named. His position was later taken by Jonkheer F. Belaerts Van Blokland, appointed Mar. 30, 1927.

Queen Wilhelmina opened the Dutch parliament on September 20, with a speech that dealt chiefly with economic conditions. She stated that the agricultural capacity of the country was increasing but that trade and industry were depressed. The government was giving special attention to the financial situation in an effort to reduce taxation in order to permit business to expand and thus bring about a return to prosperity.

NEVADA. POPULATION. According to the Fourteenth Census of the United States, the population of the State Jan. 1, 1920, was 77,407, and no subsequent estimate had been made to 1926. Capital, Carson City.

AGRICULTURE. The following table gives the

acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	368,000	688,000*	\$6,092,000
	1926	369,000	680,000*	6,900,000
Potatoes	1927	6,000	780,000	663,000
	1926	5,000	700,000	910,000
Wheat, winter	1927	5,000	120,000	150,000
	1926	5,000	120,000	132,000
Wheat, spring	1927	14,000	364,000	455,000
	1926	12,000	288,000	340,000

* tons.

MINERAL PRODUCTION. The combined value of gold, silver, copper, lead, and zinc mined in the State in 1926 was \$24,549,991, as against \$23,309,352 in 1925. This higher total resulted wholly from the increased production of copper, of which there were produced 101,827,937 pounds in 1926; in 1925, 79,300,224 pounds. The 1925 product had a total value of \$11,260,632. Gold production was, in 1926, 175,382 fine ounces; in 1925, it was 187,105 fine ounces, valued at \$3,867,798. Silver production was 6,518,983 fine ounces in 1926; in 1925, it was 7,096,618 fine ounces, valued at \$4,925,053. Lead produced in 1926 totaled 22,367,965 pounds; in 1925, 24,476,452 pounds, valued at \$2,129,451. Zinc production decreased to 10,817,833 pounds for 1926, from 14,821,293 pounds for 1925; for 1925, the product was valued at \$1,126,418. Outside of these three metals, the chief production in the mineral field was that of gypsum. There were produced in 1925, 350,130 short tons of gypsum; in 1924, 305,714 short tons. Its value was, for 1925, \$1,721,809; for 1924, \$2,063,089. The total value of the State's mineral production in 1925, duplications eliminated, was \$26,469,901; in 1924, \$26,225,943.

The value of the gold, silver, copper, lead, and zinc mined in Nevada decreased to about \$22,948,000 in 1927. There was a decided increase in the output of copper, but the other metals, especially gold and silver, decreased. The increase in copper, equivalent to about \$1,000,000, was not sufficient to balance the other decreases, especially since the average metal prices were much less than those of 1926.

The gold output decreased from \$3,625,461 in 1926 to \$3,013,400 in 1927, on account of the closing of the large mill of the Comstock Merger Mines (Inc.)

The silver production decreased from 6,518,983 ounces in 1926 to about 5,415,000 ounces in 1927, and the value from \$4,067,845 to \$3,070,300. The copper increased from 101,827,937 pounds in 1926 to about 117,470,000 pounds in 1927, and the value from \$14,255,911 to about \$15,271,000. The lead output decreased from 22,367,965 pounds in 1926 to about 16,810,000 pounds in 1927, and the value from \$1,789,437 to about \$1,138,000. The zinc recovered from ore mined in Nevada decreased from 10,817,833 pounds in 1926 to about 7,250,000 pounds in 1927 and from \$811,337 in value to about \$455,300.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Dec. 31, 1927, were \$2,016,215; their rate per capita was \$26.05. They included \$449,794 apportioned for education. Totals not included in the above, of \$90,764 in interest and of \$1,810,-

452 in permanent improvement outlays, brought the aggregate of State payments to \$3,917,431. Of this, \$1,682,049 was for highways; \$288,526 being for maintenance and \$1,393,523 for construction.

Revenue receipts were \$3,807,377; or per capita, \$49.19. Of their total, property and special taxes yielded 36.3 per cent, attaining a per capita rate of \$17.87. Earnings of departments and compensation paid the State for officials' services supplied 5.8 per cent of revenue; 12.3 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles, and from a gasoline sales tax.

Net State indebtedness on Dec. 31, 1926, was \$1,672,131, or \$21.60 per capita. Property subject to ad valorem taxation bore a valuation of \$202,987,353. State taxes levied thereon were \$1,309,933, or \$16.92 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 2,207.55. No new construction in 1927 was reported.

EDUCATION. Revision of the course of study for both elementary and high schools was reported. A Nevada Council of School Administration was formed, its purpose being to further study of the State's school problems. The total public school enrollment in the scholastic year 1925-1926 was 15,614. Of those enrolled 12,359 were in the elementary schools and 2310 in high schools. Expenditure for education amounted to \$1,490,019 for the public elementary schools and \$608,316 for public high schools. The salaries of teachers averaged, in elementary schools, \$1,278.61; in the high schools, \$1,806.99.

CHARITIES AND CORRECTIONS. Activities as organized up to the end of 1927 were distributed among several State agencies: the Board of Pardons and Parole Commissioners, the State Board of Prison Commissioners, the State Orphans' Home Directory, the Commissioners for the Care of the Indigent Insane and the State Board of Health, Child Welfare Division. The chief institutions were: State Orphans' Home, Carson City; Nevada Hospital for Mental Diseases, Reno; Nevada State Prison, Carson City. To the State Prison were admitted in 1926, according to the U. S. Department of Commerce, 123 prisoners; inmates on Jan. 1, 1927, numbered 231.

LEGISLATION. The State Legislature convened in biennial session in January. It enacted a statute to regulate the method of issuing county and municipal bonds. This provided that all issues must mature serially within 25 years, the installments being equal, except for the first; that an annual tax levy be made to meet principal and interest; and that bonds be sold to the best bidder, no bid of less than par being accepted. The State divorce law was amended to permit divorce action on the part of a resident of three months, instead of six, and to admit insanity of the spouse among the statutory reasons for granting divorce. The corporation law was revised in various respects to render it more liberal. The Legislature adjourned March 18.

POLITICAL AND OTHER EVENTS. An active gold rush in February and March followed on the reported discovery of a pocket of rich ore at Weepah, in the Tonopah district, by two boy campers digging for a gopher. Thousands of gold hunters hastened to the scene by automo-

bile, or sought neighboring territory. In the accounts of State Treasurer Malley investigators discovered in May a shortage of over \$500,000. The sum exceeded the amount for which this official was bonded, but Governor Balzar announced that he would meet deficiencies by borrowing until the receipt of the June tax installments.

OFFICERS. Governor, Fred B. Balzar; Lieutenant-Governor, Morley Griswold; Secretary of State, W. G. Greathouse; Treasurer, Ed Malley; Attorney-General, M. A. Diskin; State Comptroller, E. C. Peterson; Auditor, Iven Jeffries; Superintendent of Public Instruction, Walter W. Anderson.

JUDICIARY. Supreme Court: Chief Justice, J. A. Sanders; Associate Justices, Ben W. Coleman and Edward A. Ducker.

NEVADA, UNIVERSITY OF. A State institution of higher education at Reno, Nevada; founded in 1874. There was an enrollment of 869 students for the autumn term of 1927, of whom 524 were men and 345 were women. These were distributed among the various departments of the University as follows: arts and sciences, 608; normal school, 40; engineering, 161; agriculture, 29; home economics, 31. The summer session of 1927 had a registration of 130. There were 74 members on the faculty. The productive funds amounted to \$358,439.19, and the income for the year to \$536,927.57. The library contained 47,119 volumes. President, Walter E. Clark, Ph.D., LL.D.

NEW BRUNSWICK (brūnz'wīk). One of the Maritime Provinces of Canada, lying east of Maine and south of the province of Quebec. Area, 27,985 square miles; population, according to the census of 1921, 387,876. The capital is Fredericton, with a population in 1921 of 8114. The largest cities with their populations in 1921 are St. John, 47,166 and Moncton, 17,483. The chief industries are: Agriculture, mining, manufactures, fishing, and lumbering. The acreage and yield of the principal crops for 1926 were as follows: Wheat, 10,916 acres, 189,000 bushels; oats, 204,686 acres, 5,874,000 bushels; barley, 6558 acres, 148,000 bushels; rye, 320 acres, 5000 bushels; mixed grain, 2831 acres, 84,000 bushels; other grains, 48,297 acres, 1,038,000 bushels; potatoes, 42,744 acres, 4,321,000 cwts.; roots, 12,235 acres, 2,104,000 cwts.; hay and clover 559,019 acres, 704,000 tons; fodder corn, 3975 acres, 26,000 bushels. The livestock census in 1926 showed 53,159 horses; 116,530 milch cows; 107,932 other cattle; 156,616 sheep; 71,568 swine; and 854,621 poultry. The total value of the fisheries in 1925 was \$4,798,589. The province possesses various minerals including iron, gypsum, coal, building stone, antimony, copper, and manganese. The only active mining, however, is in coal and gypsum. The coal output in 1925 amounted to 207,189 short tons. In 1925-26 the exports from the Province amounted to \$97,876,375 and the imports for consumption amounted to \$26,904,574. In the same year there were 1941 miles of railways open for operation. The province is under a lieutenant-governor appointed by the governor-general of Canada, and a legislative assembly of 48 members elected for five years. As a result of the election held in August, 1925, the political grouping in the assembly was as follows: Conservatives, 35; Liberals, 12; Independent, 1. Lieutenant-governor in 1927. W. F.

Todd; Prime Minister, Minister of Public Works, and Attorney-General, J. B. M. Baxter; Secretary-Treasurer, A. J. Leger; Agriculture, Lewis Smith; Public Health, Dr. H. I. Taylor; President of the Executive Council, L. P. D. Tilley; Lands and Mines, C. D. Richards; Minister without Portfolio, E. A. Reilly. The province is represented by 10 members in the Canadian Senate and 11 in the House of Commons.

NEW CALEDONIA, kâl'ê-dô'nî-a. A French colony, comprising the island of New Caledonia, the southernmost of the Melanesian Islands; lying between 20° 1' and 22° 26' S. latitude, and 161° 30' and 144° 40' E. longitude; and the following dependencies: Isle of Pines, Wallis Archipelago, Loyalty Islands, Huon Islands, and Futuna and Alofi. The island of New Caledonia has a length greater than 248 miles and an average width of 31 miles. Area, 7650 square miles. Population, according to the census of 1921, 47,505, of whom 14,172 were free, 2310 of convict origin, and 25,123 Melanesians and Polynesians. Capital, Nouméa, with 9336 inhabitants in 1921. No convicts have been sent to the penal settlements on Nou Island since 1896. Coffee, copra, cotton, manioc, corn, bananas, tobacco, and pineapples form the principal agricultural products. The mineral resources are said to be very rich and varied, comprising cobalt, chrome, nickel, iron, manganese, all of which are abundant; also antimony, mercury, silver, gold, lead, copper, and cinnabar. In 1925 the value of mineral exports was 4,018,334 francs. The other leading exports include coffee, copper, copra, guano, and preserved meats. The chief imports are wine, coal, flour, and rice. In 1925, 176 vessels of 271,547 tons entered and 185 of 264,882 tons cleared the ports of New Caledonia. About two-thirds of those that entered were French. There is a narrow gauge railway from Nouméa to Paita, about 20 miles long; an extension to Bourail, a distance of 105 miles, has been proposed for some time. The colony is administered by a governor assisted by a privy council, made up of officials, and by an elected council-general. Governor in 1927, M. Guyon, appointed in 1925.

NEW ENGLAND FLOODS. See Floods.

NEWFOUNDLAND, nü'fūnd-land'. An island possession of Great Britain in the north-eastern part of the Gulf of St. Lawrence. Area, 42,734 square miles; population, according to the census of 1921, 259,358, estimated in 1924, 258,425. Dependent upon Newfoundland is the populated strip of Labrador, with an area of 120,000 square miles and a population in 1924 of 3874 (see below). Capital, St. John's, with a population in 1924 of 38,782. Other towns and their populations in 1921 were Bonavista, 4025; Harbor Grace, 3825; Carbonear, 3320. The birth rate in 1925 was 26.43 per thousand and the death rate 14.21 per thousand. The immigrants in the same year numbered 13,461 and the emigrants, 13,211. There were 1092 schools of all kinds in 1925, with a total attendance of 58,093.

The value of exports from the island, for the fiscal year 1925-26, amounted to \$27,563,213, or \$4,000,000 above the returns for the previous year; but since a large share of this increase is attributable to paper exports it is not an evidence of any substantial increase in the general purchasing power. Returns from paper and iron ore, although approximating two-thirds of the value of total exports, are distributed locally to a Newfoundland staff of about 5000 persons.

whereas the proceeds of the cod-fishery go directly into the hands of about 102,000 persons, or 38 per cent of the population. The dependence of the country's prosperity on the successful out-turn of the fisheries gives business in Newfoundland a speculative character, which the government was trying to ameliorate by promoting diversification in agriculture and other industries. Since its own revenues are derived largely from customs and excise sources, they likewise are very sensitive to variations in local income from the country's historic industry.

During the latter months of 1926 a direct steamship service was established between St. John's and the principal cities on the Great Lakes, and this opened a way for the exportation of fresh fish to these inland markets. In the export total for the 1925-26 period, products of the colony's fisheries accounted for \$14,549,000; manufactures (chiefly newsprint paper), \$8,590,000; products of the mines, \$1,938,000; and forest products, \$535,000. Miscellaneous goods comprised the remainder, \$1,951,000.

VALUE OF THE FOREIGN TRADE OF NEW-
FOUNDLAND FOR THE FISCAL YEAR
ENDED JUNE 30, 1926

Country	Dominion imports	Dominion exports (including reeports)
United Kingdom	\$5,785,093	\$6,460,197
Canada	11,826,406	1,987,541
United States	8,861,819	4,865,640
British West Indies	281,662	1,604,250
Other West Indies	653	1,022,245
Brazil	445	2,819,111
Holland	117,903	1,292,592
Italy	4,377	1,221,113
Portugal	27,448	2,532,773
Spain	153,813	3,408,254
All others	492,686	849,497
Total	27,552,305	27,563,213

The government railways opened in 1925 totaled 905 miles; private railways, 47 miles. The Newfoundland government railway showed a net loss of \$358,509 for the year ending June 30, 1925.

Executive power is vested in a governor, assisted by an executive council of not more than 10 members, and legislative power is vested in a council of not more than 24 members and an elected house of representatives of 36 members. Women were enfranchised by an act of the legislature passed in 1925. Governor and Commander-in-Chief in 1927, Sir William L. Allardye; Prime Minister and Minister of Education, W. S. Monroe; Justice, W. J. Higgins; Colonial Secretary, Sir J. R. Bennett; Finance and Customs, Sir J. C. Crosbie; Posts and Telegraphs, W. J. Woodford; without portfolio, A. B. Morine, M. S. Sullivan, Richard Cramm, Robert Duff, and J. J. Long; members of the government but who are not in the cabinet, Marine and Fisheries, C. Winsor; Public Works, W. McK. Chambers; Agriculture and Mines, W. J. Walsh.

HISTORY. Conflicting claims between Newfoundland and the Province of Quebec over the Labrador Peninsula had caused unsatisfactory litigation since 1902, as both Newfoundland and Quebec had granted concessions to identical areas of land in the interior of Labrador. By common consent the conflicting claims were re-

ferred to the judicial committee of the British Privy Council, who heard the arguments of the opposing counsel in December, 1926. The decision of the Privy Council, which is binding on both parties, was announced on Mar. 1, 1927, and by unanimous opinion the Newfoundland claim to the whole of the Labrador watershed draining into the Atlantic Ocean was practically upheld.

According to the decision, the boundary between Canada and Newfoundland in the Labrador Peninsula is a line drawn due north from the eastern boundary of Anse Sablon, as far as 52° north latitude, thence westward along that parallel until it reaches the Romaine River, then northward along that river and its headwaters or height of land, thence westward and northward along the crest of the watershed of the rivers flowing into the Atlantic Ocean, until it reaches Cape Chidley. It was reported that the Province of Quebec would employ a corps of technical experts to define exactly the area tributary to the Romaine River, on which the decision was assumed to rest. No action had been taken by the Newfoundland government on the numerous requests for concessions which have been received since the announcement of the decision.

The economic value of the disputed territory, covering about 120,000 square miles, exists in its fisheries, forests, water power and mineral wealth. There is practically no permanent population, except a few Eskimos and Indian trappers, and no accurate surveys have been made of the resources of the area. Each summer, several thousand Newfoundland families go to the Labrador coast to catch and cure codfish; in 1926, the catch amounted to 750,000 quintals, valued at \$3,000,000—a fairly representative taking for the last few years. The greater part of the forest area is practically inaccessible, and the resources may be said to be potential rather than actual. The coast is bare and forbidding, but the interior valleys are well wooded with spruce that has large potential value as pulp wood. The water power resources are almost unlimited. Very little is known respecting the mineral wealth. Enormous quantities of iron ore have been observed but they are inaccessible. An attempt was made to work a large deposit of iron pyrite but conditions made the operation commercially unprofitable.

NEW GUINEA, GIN'E. An island of the East Indies, the third largest in the world, ranking after Australia and Greenland. Area, variously estimated at from 310,000 to 335,000 square miles; population estimated to be slightly below 1,000,000. It is divided under Australian, Dutch, and British control, the distribution being as follows: The northeastern portion, constituting the former Kaiser Wilhelmsland, to Australia; the western part, to 140° E. longitude, to the Dutch East Indies; the southeastern part is the British colony of Papua. See DUTCH EAST INDIES, GERMAN NEW GUINEA, and PAPUA.

NEW HAMPSHIRE. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 443,083. The estimated population on July 1, 1927, was 455,000. The capital is Concord.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927

Crop	Year	Acres	Prod bu.	Value
Hay	1927	480,000	605,000 ^a	\$9,774,000
	1926	486,000	549,000 ^a	10,311,000

^a tons.

MINERAL PRODUCTION. Stone, the leading mineral product of the State, was produced to a total of 130,120 short tons in 1925, the latest year of available record; in 1924, to the total of 93,340 tons. The product in 1925 had a value of \$1,712,138; in 1924, of \$1,556,598. Of mica, in regard to which the State held second rank as a producer, the yield for 1925 was valued at \$246,833; for 1924, at \$98,235. Clay products for 1925 were valued at \$828,541; for 1924 at \$868,444. The total value of the State's mineral production in 1925 was \$3,464,837; in 1924, \$3,378,165.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$5,622,532; their rate per capita was \$12.41. They included \$590,457 apportioned for education. Totals not included in the above, of \$96,843 in interest and of \$1,759,628 in permanent improvement outlays, brought the aggregate of State expenditure to \$7,749,003. Of this, \$2,649,721 was for highways; \$1,626,117 being for maintenance and \$1,023,604 for construction.

Revenue receipts were \$7,199,558; or per capita, \$15.89. Of their total, property and special taxes yielded 43 per cent, attaining the per capita rate of \$6.83. Earnings of departments and compensation paid the State for officials' services supplied 8.7 per cent of revenue; 37.8 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles, and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$1,830,456, or \$4.04 per capita. Property subject to ad valorem taxation bore a valuation of \$673,250,335. State taxes levied thereon were \$3,064,587, or \$6.77 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 1,197.79. No new construction in 1927 was reported.

EDUCATION. The development of four-year curricula in the State normal schools, for the training of high school teachers, was reported by the State Commissioner of Education, in the *Journal of the National Education Association*. The school population of the state, according to a school census of October, 1926, was 89,577 children between the ages of 5 and 16 years. There were enrolled in the public schools in the school year 1926-1927, 76,453 pupils. Enrollment in private schools was 25,907. Those enrolled in public elementary schools numbered 59,743; in public high schools, 12,599. State and local expenditures on public education (and on mothers' aid) attained \$7,298,454. Salaries of teachers averaged, for men, \$2,144.81 in high and \$1,528.06 in elementary schools; for women, \$1,463.46 in high and \$1,044.20 in elementary schools.

CHARITIES AND CORRECTIONS. The State Board of Charities and Corrections has wide powers over the care of orphan and dependent children,

and likewise supervises and reports on almshouses, jails, reformatories, houses of correction, hospitals and county farms. The State institutions, with their populations on June 30, 1926, were: New Hampshire State Hospital, Concord, 1570; Laconia State School (feeble-minded children), Laconia, 420; New Hampshire State Industrial School, Manchester (delinquent boys and girls), 181; New Hampshire State Prison, Concord, 135; New Hampshire Soldiers' Home, Tilton; New Hampshire State Sanatorium, Glencliff (consumptives), 85. Tuberculosis patients in advanced stages were maintained by State appropriation at a private sanatorium in the town of Pembroke. Prisoners admitted to State prison in 1926, as reported by the U. S. Department of Commerce, numbered 33; the number of patients in State hospitals for mental diseases on Jan. 1, 1927, was 1,560.

LEGISLATION. Convening in regular biennial session, the State Legislature failed to pass a bill modifying the State primary system. After the floods of the first week of November, Governor Spaulding called a special session of the Legislature. This session convened November 29, and adopted measures recommended by the Governor, in order to furnish means for the restoration or replacement of damaged highways and bridges. The gasoline tax was increased to 4 cents a gallon, from 3 cents, the change to take effect January 1. An issue of \$3,000,000 of State bonds was authorized, and it was made possible to apply the added revenue from the gasoline tax to the gradual extinction of this issue.

POLITICAL AND OTHER EVENTS. Governor Spaulding was inaugurated January 6. The Amoskeag Company, long ranked as foremost among the manufacturers of textiles in New England, and having its headquarters at Manchester, rejected an offer reported to have been of \$42,000,000, for its properties. The stockholders at a meeting October 5 determined to continue operations, in spite of the New England textile depression and the receipt of the purchase offer, presumably based in great part on the company's hydro-electric resources. In the New England floods of the first week of November the Pemigewasset River at Plymouth reached a height of 28 feet, much the greatest recorded in 41 years. Flood damage estimated at nearly \$3,000,000 for public property alone was done in the State.

OFFICERS. Governor, Huntley N. Spaulding; Secretary of State, Hobart Pillsbury; State Treasurer, Henry E. Chamberlin; Attorney-General, Jeremy R. Waldron; Commissioner of Education, Ernest W. Butterfield.

JUDICIARY. Supreme Court: Chief Justice, Robert J. Peaslee; Associate Justices, John E. Allen, Thomas L. Marble, Oliver W. Branch, Leslie P. Snow.

NEW HAMPSHIRE, UNIVERSITY OF. A State institution of higher education at Durham, N. H.; founded in 1866 at Hanover, N. H., as a part of Dartmouth College, transferred to Durham as State College in 1893, and made the State University in 1923. It consists of a college of liberal arts, a college of agriculture, and a college of technology. The 1927-28 enrollment was 1601, which comprised 1127 men and 474 women. The summer session had a registration of 288 students. The faculty numbered 137. The endowment amounted to \$1,030,000, and the income for the year totaled \$1,417,449. The col-

lege year 1925-26 was the first under the millage law of 1925, which provides an annual amount equal to one mill for each dollar for the assessed valuation of the State. This fund, which in 1926-27 amounted to \$638,493.21, together with income from other sources, is sufficient for the maintenance of the institution and for the gradual construction of a complete physical plant in accordance with a comprehensive plan for the development of the University. In 1927 a \$200,000 classroom building was completed. The library contained 55,000 volumes. President Edward Morgan Lewis, M.A., LL.D., assumed his duties Sept. 1, 1927.

NEW HEBRIDES, *héb'ri-déz*. A group of islands in Melanesia, including the following islands; Espiritu Santo, Mallicolo, Efate or Sandwich Island, Epi, Erromanga, Tanna, Tutuna or Eronnan, and Anietyum. The group is under the joint administration of France and Great Britain, according to conventions of February, 1906, and Mar. 18, 1922. The interests of British, French, and natives are guaranteed; the conditions of land holding in the islands are fixed; and the regulation and recruitment of labor provided for. The area is approximately 5700 square miles and the population about 60,000 of whom, in 1925, 232 were British and 650 French. Many missionary schools have been established, chiefly by the Presbyterian faith. The land for the most part has not been cleared, but large tracts have been settled in the interior. The area under cultivation of the principal crops in acres in 1925 was as follows: Coconuts, British, 35,000, French, 25,110; coffee, British, 200, French, 2,425; maize, British, 500, French, 882; cotton, British, 2500, French, 4115; cocoa, British, 1250, French, 7005. Bananas, oranges, and all tropical fruits grow well. Trade is chiefly with Sydney and New Caledonia. The British imports in 1925 amounted to 6,107,509 francs and the French 15,896,723 francs. The combined exports were valued at 31,115,143 francs, of which about one-fourth were British. The chief imports are provisions, clothing, metals, and furniture and the chief exports are corn, copra, coffee, cotton, coconuts, and cacao. The joint revenue in 1925 was 1,420,614 francs and expenditure 852,748 francs. British revenue in 1925 amounted to £532 and expenditure to £16,622. Direct steamship communication has been established with France, via Tahiti and Panama. The British High Commissioner is Sir Eyre Hutson; French High Commissioner, M. Guyon; British Resident Commissioner, G. B. Smith-Rewse; French Resident Commissioner, M. Ballot (acting).

NEW JERSEY. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 3,155,900. The estimated population on July 1, 1927, was 3,749,000. The capital is Trenton.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1925 and 1926:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	274,000	487,900*	\$8,398,000
	1926	266,000	476,000*	8,212,000
Potatoes	1927	57,000	9,177,000	10,095,000
	1926	50,000	7,250,000	11,238,000
Sweet potatoes	1927	15,000	1,890,000	2,268,000
	1926	17,000	2,465,000	2,958,000
Corn	1927	179,000	7,160,000	6,086,000
	1926	188,000	8,648,000	6,918,000
Wheat, winter	1927	60,000	1,280,000	1,725,000
	1926	60,000	1,328,000	1,742,000

Crop	Year	Acreage	Prod. bu.	Value
Oats	1927	49,000	1,764,000	985,000
	1926	50,000	1,650,000	825,000
Peaches	1927	2,304,000	3,456,000
	1926	3,000,000	1,890,000

* tons.

MINERAL PRODUCTION. Clay products formed in 1925 the greater part of the State's mineral production, and of these the State was the third largest domestic producer. Their total value, for 1925 was \$46,010,624; for 1924, \$46,414,167. The chief part of this production came under the head of pottery, totaling in 1925, \$24,399,771. Zinc, the State's second most important mineral product, furnished most of the remainder of the yearly production total. There were mined in 1926, 161,253,000 pounds of recoverable zinc; in 1925, 178,522,000 pounds. Iron mines in the State continued to produce on a minor scale, shipping in 1926, 212,152 long tons of ore, as compared with 164,523 tons in 1925. Iron ore produced in 1926 was valued at \$925,403; in 1925, at \$678,021. Clay was produced to a value of somewhat less than \$1,500,000 a year. The total value of the mineral production of the State in 1925 was \$76,761,313; in 1924, \$75,271,009.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$43,277,237; their rate per capita was \$11.89. They included \$16,310,928 apportioned for education. Totals not included in the above, of \$2,754,156 in interest and of \$27,535,509 in permanent improvement outlays, brought the aggregate of State expenditure to \$73,566,902. Of this, \$30,229,334 was for highways; \$6,481,535 being for maintenance and \$23,747,799 for construction.

Revenue receipts were \$68,615,205; or per capita, \$18.85. Of their total, property and special taxes yielded 62.7 per cent, attaining the per capita rate of \$11.81. Earnings of departments and compensation paid the State for the services of officials supplied 5.8 per cent of revenue; 19.7 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles.

Net State indebtedness on June 30, 1926, was \$57,350,885, or \$15.76 per capita. Property subject to ad valorem taxation bore a valuation of \$5,771,603,846. State taxes levied thereon were \$32,779,872, or \$9.01 per capita.

TRANSPORTATION. The number of miles of railroad line in the State Jan. 1, 1927, was 2,297.36. There were constructed in 1927, according to the *Railway Age*, 1.10 miles of first, 9.23 miles of third and 8.27 miles of fourth or other track.

EDUCATION. Among the features of the year's educational development were the organization of normal school training for high school teachers; activity in the training of teachers in actual service; the extension of the junior high school movement. An increase of vocational education of adults was reported. The State Normal School at Montclair was converted into a normal college, to serve in the preparation of teachers for the public secondary schools. The school population of the State in 1927 was estimated at 788,188. There were enrolled in the day public schools 739,010 pupils. Of these, 638,162 were enrolled in common schools (special schools and

classes excepted) and 94,081 in high schools. The operating expenses of the schools for the year ending June 30, 1927, were \$66,407,736. The salaries of all teachers averaged \$1,907.95.

CHARITIES AND CORRECTIONS. A State Department of Institutions and Agencies has full charge of charitable, reformatory, correctional and penal institutions, boards and commissions. It includes a division of Parole and Domestic Relations. Institutions under its supervision are: State hospitals at Trenton and Greystone Park; Sanatorium for Tuberculous Diseases, Glen Gardner; State Village for Epileptics, Skillman; State Board of Children's Guardians, Jersey City; State colonies for Feeble-Minded Males, at New Lisbon and Woodbine; State Institution for the Feeble-minded, Vineland; New Jersey Home for Disabled Soldiers, Kearny; New Jersey Home for Disabled Soldiers, Sailors, Marines, and their Wives and Widows, Vineland; State Prison, Trenton; New Jersey Reformatory, Rahway; Reformatory for Women, Clinton; State Home for Boys, Jamesburg; State Home for Girls, Trenton.

LEGISLATION. The Legislature convened in regular annual session January 11. Governor Moore in his message recommended action on the report of his Water Policy Commission; the formation of a comprehensive plan of highway improvement to cost some \$163,500,000; the adoption of means for raising about half of this amount on issues of indebtedness. The Legislature enacted in all more than 300 measures. Among the most notable laws passed were those relating to highway improvement and to taxation. A two cents a gallon tax on sales of motor gasoline was voted, and per contra, the personal property tax on licensed motor vehicles was abolished. This was done by repealing an act under which municipalities had possessed the power to levy such a tax. Governor Moore refused approval of the gasoline tax measure and of the automobile tax repeal, and both bills were repassed over his dissent and so put on the statute books. A measure providing for the issue of \$30,000,000 of State bonds for the purpose of highway construction was passed.

Important changes were made in the traffic code. It was required that all automobiles coming upon a main thoroughfare from a side street or road must come to a full stop. A driver following a trolley car was required to keep fully ten feet behind it, and to turn from the tracks when the car came to a stop. A tax of 1½ cents a mile was laid on the mileage run within the State by motor vehicles engaged in interstate traffic, and owners of such vehicles were required to file with the State Motor Vehicle Department monthly statements of such mileage, with payment of tax therefor. The acceptance of an automobile as bail for the driver was forbidden.

Proposals offering five amendments to the State constitution were voted by the legislators for presentation to the people at a special election. These were: (1) an amendment to enable communities to make their own zoning regulations; (2) an authorization of power to create water supply, sewerage, drainage and meadow reclamation districts with power to issue indebtedness and to raise taxes for service of debt, for the purposes of improvements; (3) a simplification of the process for amendment of the State constitution; (4) a change in the duration of the terms of service of legislators

and Governors, by which the sessions of the Legislature would be biennial and Governors would serve for four years, and would be elected in years to coincide with the election of the President of the United States; (5) a clarification of the provision for the appointment of judges of the Court of Common Pleas. Occasioned by a dispute over the relative merits of the wire cable and the eye bar for the construction of the Hudson River Bridge, a measure to give the State House Commission power of veto over acts of the Port of New York Authority was enacted. Later, in accordance with the wish of New York, it was repealed (April 1). Crime legislation included a measure rendering it permissible but not mandatory to impose life sentences on habitual criminals; one obliging second offenders to serve sentences previously commuted; elimination of the minimum term provision in the case of life sentences; increase of penalties for assault, robbery and breaking and entering when armed; increase of restriction on the sale of machine guns. A commission was created to study the probation system. Among other bills passed were those providing: equalization of dower and courtesy; regulation of the establishment of branch banks; measures to stop the sale of fraudulent securities; appropriation for a bridge between Bayonne and Port Richmond; authority to the Boxing Commissioner to decide the allowable admittance charge for boxing bouts. The session failed to ratify a treaty with the States of New York and Pennsylvania for the allocation of the use of the waters of the Delaware River. See CITY PLANNING.

POLITICAL AND OTHER EVENTS. At a special election on September 20, voters of the State passed on five proposed constitutional amendments. They rejected four, these being Nos. 2 to 5, as given above, under *Legislation*. One amendment proposal (No. 1, above), to enable municipalities other than counties to make and enforce zoning ordinances, was ratified. The proposed amendment bearing on the time of election of a Governor was urged by the Republican Party and warmly opposed by the Democrats, who had been able to elect a succession of Governors in non-Presidential years, although the State usually had gone Republican for President.

At the regular State election on November 8, the Republican majority in both houses of the Legislature was maintained, and the issue of \$30,000,000 of State bonds to render possible the completion of the highway programme in 12 years was approved. Members of the State Constabulary accused of criminal acts in connection with an attack in the previous year on a farm house near Jutland, occupied by Timothy Meaney, in which his sister was shot to death and a brother wounded, were tried in June. A captain and one trooper were convicted of manslaughter, and another trooper was convicted of assault and battery. In the earlier part of the year agitation against the old State Sunday enforcement law was carried on at Red Bank, Plainfield and elsewhere, largely on behalf of moving picture houses hopeful that the law might be amended in such manner as to enable them to give Sunday performances; a bill for the amendment of the law failed of passage at the Legislature session.

The Holland Vehicular Tunnel, passing under the Hudson River between Jersey City and the Borough of Manhattan in the City of New

York, completed in the year, was opened November 11, and carried over 52,000 motor vehicles without serious difficulty or delay in its first 24 hours of regular traffic. Representatives of the State joined those of New York and of Pennsylvania January 13 in signing a treaty for the division among the three States of the rights in the water of the Delaware River, 600,000,000 gallons a day being allowed New Jersey, the like quantity to New York, and to Pennsylvania 800,000,000 gallons; the Legislature however failed to ratify this treaty. A system for the permanent registration of voters in municipalities of over 15,000 population—personal registration not being required elsewhere—went into effect at the beginning of the year.

OFFICERS. Governor, A. Harry Moore; Secretary of State, John F. S. Fitzpatrick; Treasurer, William T. Read; Comptroller, Newton A. K. Bugbee; Attorney-General, Edward L. Katzenbach.

JUDICIARY. Chancellor, Edwin Robert Walker; Supreme Court: Chief Justice, William S. Gummere; Justices: Samuel Kalisch, Frank S. Katzenbach, Jr., Thomas W. Trenchard, Charles W. Parker, Charles C. Black, James F. Minturn, Luther A. Campbell, Frank T. Lloyd.

NEW JERUSALEM, CHURCH OF THE. An organization which is also known as the New Church, and popularly called Swedenborgian, because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it are the General Convention of the New Jerusalem and the General Church of the New Jerusalem, the former organized in Philadelphia in 1817, and the latter, which differs from the former mainly in its stricter attitude toward Swedenborg's writings (considering them as the Word of the Lord revealed at His Second Coming) having separated from the parent body in 1891. The first society of the New Church in the United States was founded in Baltimore in 1792. The polity of the church is a modified episcopacy; the worship of the church is generally liturgical, chants being extensively used. Missionary work is carried on in Denmark, Sweden, Germany, France, Switzerland, Lettland, Czechoslovakia, Austria, South Africa, India, Japan, and British and Dutch Guiana.

The amount expended for missions and benevolences during 1926 was \$19,070. In 1926 the General Convention consisted of about 5442 communicant members, united into 85 societies, territorially organized as 12 associations and seven societies. The ministerial membership was 112. Educational institutions of the New Church include a theological school at Cambridge, Mass., a Junior College at Urbana, Ohio, and the Waltham School for Girls, Waltham, Mass. Periodicals include the *New-Church Messenger*, weekly, Brooklyn, N. Y.; the *New-Church Review*, quarterly, Boston, Mass.; the *New-Church League Journal*, monthly, Boston, Mass.; and *The Helper*, weekly, Philadelphia, Pa. The Convention meets annually.

The General Church, in 1927, had a worldwide membership of 1911, with 39 ministers and 24 societies, 15 of which were in the United States and Canada, two in England and others in France, Belgium, Holland, Sweden, Natal, New South Wales, and Brazil. A Native Mission was maintained in South Africa. Eight societies

conducted parochial schools for the elementary grades. The headquarters are at Bryn Athyn, Pa., where the Bishop resides and there is a cathedral church. In addition there is the Academy of the New Church, with departments from kindergarten to junior college and theological school, the enrollment for 1927-28 being 275. The General Church holds a triennial General Assembly, the Councils meet annually, and the Consistory weekly. Among its periodicals are *New-Church Life*, the official monthly, *New-Church Sermons*, *The Journal of Education*, and the *Bulletin*.

NEW MEXICO. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 360,350. The estimated population on July 1, 1927, was 392,000. The capital is Santa Fe.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	226,000	464,000	\$8,158,000
	1926	212,000	468,000	5,566,000
	1927	166,000	2,430,000	2,316,000
Corn	1926	221,000	4,420,000	8,845,000
	1927	25,000	150,000	172,000
	1926	212,000	4,876,000	5,364,000
Wheat, spring	1927	30,000	420,000	504,000
	1926	87,000	777,000	878,000
	1927	171,000	2,894,000	1,915,000
Grain sorghum	1926	195,000	4,095,000	1,688,000
	1927	195,000	975,000	2,828,000
	1926	195,000	838,000	2,179,000
Beans, dry	1927	95,000	70,000	6,930,000
	1926	120,000	75,000	4,612,000

* tons.

MINERAL PRODUCTION. Production of copper, the chief element in the State's yearly mineral output, was exceptionally high in 1926. There were produced 82,848,096 pounds of copper, as compared with 76,467,245 pounds in 1925. Copper produced in 1925 had a total value of \$10,852,751. There were produced in 1926, 20,105 fine ounces of gold, and in 1925, 29,572 fine ounces; in value, \$415,600 in 1926 and in 1925, \$611,300. Silver production was, in 1926, 496,834 fine ounces as against 799,673 fine ounces in 1925; in value, \$309,900 in 1926 and in 1925, \$554,973. Lead production in 1925, the latest year of available statistics, was 3210 short tons; in 1924, 1817 short tons; in value, \$558,545 in 1925 and in 1924, \$290,761. There were produced in 1925, 9246 short tons of zinc and in 1924, 10,380 short tons; in value, \$1,405,415 in 1925 and in 1924, \$1,349,348. Of coal, next in importance after the metals, there was mined in 1926, 2,817,923 net tons; in 1925, 2,556,851 tons. Coal mined in 1926 attained a value of \$8,916,000; in 1925, of \$8,611,000. Petroleum production increased sharply to 1,627,000 barrels for 1926, from 1,060,000 barrels for 1925; in value it totaled \$3,300,000 for 1926 and for 1925 \$1,815,000. The total value of the State's mineral production in 1925 was \$25,548,804; in 1924, \$23,913,528.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$4,040,042; their rate per capita was \$10.47. They included \$893,333 apportioned for education. Totals not included in the above, of \$140,414, in interest and of \$1,742,592 in

permanent improvement outlays, brought the aggregate of State expenditures to \$5,923,048. Of this, \$2,293,053 was for highways; \$679,341 being for maintenance and \$1,613,712 for construction.

Revenue receipts were \$6,717,199; or per capita, \$17.40. Of their total, property and special taxes yielded 24.3 per cent, attaining the per capita rate of \$4.23. Earnings of departments and compensation paid the State for officials' services supplied 16.2 per cent of revenue; 17.6 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$3,827,497, or \$9.92 per capita. Property subject to ad valorem taxation bore a valuation of \$313,561,903. State taxes levied thereon were \$1,856,194, or \$4.81 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 2,998.10. There were built in 1927, according to the *Railway Age*, 0.43 miles of first and 13.95 miles of second track.

EDUCATION. The State did away with the need to employ teachers holding emergency certificates, according to the report of Lois Randolph, State Superintendent, in the *Journal of the National Education Association*. The Legislature made appropriation for a supervisor of high schools and a supervisor of rural schools.

CHARITIES AND CORRECTIONS. The correctional and charitable activities of the State in 1927 were not organized under a single administrative agency. The following institutions functioned independently of one another: School for the Deaf, Santa Fe; Institute for the blind, Alamogordo; New Mexico Insane Asylum, Las Vegas; Reform School, Springer; State Penitentiary, Santa Fe; State Miners' Hospital, Raton; Home and Training School for Mental Defectives.

POLITICAL AND OTHER EVENTS. At the election on November 8, the proposal to change the term of the Governor from two years to four was approved. The change was to occur in 1928, making the election of a Governor coincide with the Presidential election. In February started in Albuquerque a movement to change the name of the State from New Mexico to Albuquerque. Litigation with Texas proceeded during the year, over the issue of the proper boundary along the line of the Rio Grande River, which had changed its course at certain points after the settlement of the original boundary. Bronson Cutting, Republican, of Santa Fe was appointed United States Senator, December 29, by Governor Dillon to fill the unexpired term of Andrieus Aristieus Jones, deceased.

OFFICERS. Governor, R. C. Dillon; Lieutenant-Governor, Edward Sargent; Secretary of State, Jennie Fortune; State Auditor, Miguel A. Otero, Jr.; State Treasurer, Warren R. Graham; Attorney-General, Robert C. Dow; Superintendent of Public Instruction, Lois Randolph.

JUDICIARY. Supreme Court: Chief Justice, Frank W. Parker; Associate Justices, C. M. Botts, Samuel Bratton, John C. Watson.

NEW SOUTH WALES. One of the six original states of the Commonwealth of Australia; located in the southeast part of the continent; bounded on the north by Queensland; on the south by Victoria; on the east by the Pacific Ocean; and on the west by South Australia. Area, inclusive of the Federal Territory, 310,-

372 square miles; population, including aborigines, according to the census of 1921, 2,101,968. The Federal Territory in 1921 had an area of 912 square miles and 2572 inhabitants. Sydney, the capital, had a population in 1921 of 905,047, including suburbs and shipping. At the end of 1927 the population was estimated at 2,360,326, for all of New South Wales, and 1,039,390 for Sydney. Other towns with their populations at the end of 1925 were: Newcastle and suburbs, 98,050; Broken Hill, 23,760; Auburn, 16,790; Parramatta, 16,030; Granville, 16,110; Bankstown, 15,850; and Lithgow, 13,310. The movement of population in 1925 was: Births, 54,615; deaths, 20,823; marriages, 18,522. During the same year the immigrants numbered 55,201 and the emigrants, 42,208. Education is controlled by the state and instruction is compulsory between the ages of seven and 14. At the beginning of 1926 there were 3216 government schools, with 10,777 teachers, with 336,810 pupils enrolled, and an average attendance of 269,214. There were 696 private schools, of which 479 were Roman Catholic, with 2783 teachers and 66,486 pupils.

The chief agricultural crop is wheat and the principal fruit crop is oranges. Other grains and other citrus fruits, potatoes, tobacco, bananas and apples, are raised. Wool, tallow, bacon and hams are important products. The production of wool in New South Wales during the year ended June 30, 1927, amounted to 495,820,000 pounds—91,165,000 pounds or 22.5 per cent greater than the previous record total reached in 1911. The value of the wool clip was estimated at £35,237,000. On June 30, 1925, the state had 47,100,000 sheep, 2,876,254 cattle, 647,503 horses, and 339,669 swine. The estimated value of forestry products for the fiscal year 1925 was £209,733.

The mineral production of New South Wales in 1925 was valued at £19,800,000 and constituted a record for the state, being over £1,000,000 in excess of that for the best previous year. The annual value of the minerals produced in New South Wales is more than twice that assigned to the combined output of all the other states of the Commonwealth. The principal factors are coal, coke, silver, lead, zinc, and limestone cement. From a record output of 11,618,216 tons in 1924, the production of coal dropped slightly to 11,426,199 tons in 1925 and thence to 10,885,766 in 1926. The value of the coal at the pit mouth, however, rose from \$45,270,690 in 1925 to \$45,922,820 in 1926, because of increases in price. About 25,000 men are employed in the collieries. In 1926 the State produced 597,663 tons of coke valued at \$4,576,530.

The external commerce in 1926 was as follows: Imports, overseas, £84,005,975; exports, overseas, £54,008,745. On June 30, 1926, 5742 miles of government railways were open; the revenue for 1925-26 was £16,939,032; the expenditure, £12,519,993; the number of passengers carried, 130,725,581. There are seven private railways having a total mileage of 112 miles (mainly colliery lines).

Executive power is vested in a governor assisted by a cabinet, and legislative power in a bicameral legislature, consisting of a legislative council and a legislative assembly. The legislative council which must not consist of less than 21 members is appointed for life by the crown, and consisted of 97 members in 1926. There are

90 members in the legislative assembly. Governor in 1927, Admiral Sir Dudley R. S. De Chair; prime minister and colonial secretary, John Thomas Lang.

On May 26, the bitter strife which for some time had divided the Labor Ministry in New South Wales resulted in the dismissal of his colleagues by Premier Lang. The prime minister himself resigned but was immediately commissioned to form a new government. Lang was bitterly denounced by the Right Wing of the Labor party as an out and out Communist. On October 15 Lang and his Labor government were compelled to resign. As a result of the elections of October 8, 35 Nationalist and 13 members of the Country party were elected which gave the opposition a majority of six over the 42 Labor members elected. The new premier was T. R. Bavin, the leader of the Nationalist-Country Party coalition.

NEW YORK. POPULATION. A census by the State was taken in 1925. This showed a population of 11,162,151, compared with 10,385,227 by the Federal Census in 1920. The population of New York City increased from 5,020,048 in 1920 to 5,873,356 in 1925. The Borough of Manhattan decreased from 2,284,103 in 1920 to 1,945,029 in 1925. All the other boroughs increased their populations. The estimated population on July 1, 1927, was 11,423,000. The capital is Albany.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	4,918,000	7,389,000*	\$83,277,000
	1926	4,915,000	6,469,000*	96,708,000
Corn	1927	668,000	22,542,000	21,640,000
	1926	670,000	23,450,000	20,167,000
Potatoes	1927	270,000	28,620,000	85,775,000
	1926	248,000	29,016,000	46,426,000
Oats	1927	1,000,000	35,000,000	19,250,000
	1926	1,017,000	34,578,000	17,289,000
Wheat, winter	1927	289,000	6,069,000	7,586,000*
	1926	270,000	4,725,000	6,237,000
Wheat, spring	1927	12,000	222,000	289,000
	1926	9,000	162,000	207,000
Barley	1927	188,000	5,452,000	4,362,000
	1926	179,000	5,066,000	3,800,000
Buckwheat	1927	213,000	4,478,000	3,757,000
	1926	190,000	3,591,000	3,196,000
Apples	1927	13,600,000	19,370,000
	1926	40,875,000	20,350,000

* tons.

MINERAL PRODUCTION. The production of pig iron contributed the largest item to the list of the state's mineral products for 1925, and the output of this product thereafter rose to 2,389,665 long tons for 1926, from 2,161,036 tons for 1925. The value of pig iron produced was \$44,970,196 for 1926 and for 1925 \$40,435,443. Coke was produced to the quantity of 2,827,805 short tons in by-product ovens in 1926, as against 2,219,409 tons in 1925; in value, \$17,455,226 for 1926 and for 1925, \$12,968,066. Cement production was 8,795,768 barrels in 1926; in 1925, 8,769,564 barrels. In value, cement shipments totaled \$14,864,066 in 1926 and in 1925 \$14,967,642. Of gypsum there were produced in 1925, the latest year of available statistics, 1,730,254 short tons; in 1924, 1,474,491 tons; in value, \$16,219,906 in 1925 and in 1924, \$14,329,246. Clay products totaled \$24,550,751 in 1925; in 1924, \$26,140,688. The production of ferro-alloys was 115,764 long tons in 1925 and in 1924

86,230 tons; in value, \$12,811,534 in 1925 and in 1924, \$8,355,416. Of salt there were produced 2,001,580 short tons in 1926; in 1925, 2,053,970 short tons. The product had a value of \$6,564,829 for 1926 and for 1925 of \$7,133,244. Stone production was important, being 8,869,200 short tons in 1925 and 7,557,320 short tons in 1924; in value, \$12,358,238 in 1925 and in 1924, \$10,981,814. Petroleum, natural gas, sand and gravel, iron ore and lime formed important elements in the aggregate of the State's mineral output. The total mineral production of the State, duplications eliminated, was \$102,035,557 for 1925; for 1924, \$95,435,299.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$134,937,125; their rate per capita was \$12.01. They included \$42,900,554 apportioned for education. Totals not included in the above, of \$13,269,511 in interest and of \$37,395,329 in permanent improvement outlays, brought the aggregate of State expenditure to \$185,601,965. Of this, \$48,305,330 was for highways; \$22,951,019 being for maintenance and \$25,354,311 for construction.

Revenue receipts were \$193,939,730, or per capita, \$17.27. Of their total, property and special taxes yielded 54.6 per cent, attaining the per capita rate of \$9.43. Earnings of departments and compensation paid the State for officials' services supplied 3.7 per cent of revenue; 31.3 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles.

Net State indebtedness on June 30, 1926, was \$222,554,217, or \$19.81 per capita. Property subject to ad valorem taxation bore a valuation of \$19,018,981,378. State taxes levied thereon were \$30,364,423, or \$2.70 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 8,358.10. There were built in 1927, according to the *Railway Age*, 3.49 miles of first and 11.39 miles of second track.

EDUCATION. Large State appropriation measures were enacted at the 1927 session by the Legislature for the remuneration of teachers in the public schools of the State. The law was not a typical equalization measure, as it apportioned the distribution among the subdivisions of the State generally, the wealthier ones, such as New York City, sharing with the less fortunate. It was estimated that in that city the law would render it possible to pay up to \$4656 a year to high school class room teachers, and up to \$3654 in the elementary grades. Municipal legislation increased the salaries of teachers in New York City in December. The school population of the State in the scholastic year 1925-1926, as based on the State census, was 2,633,167 individuals between the ages of 5 and 18 years. There were enrolled in the public schools in that year, duplications eliminated, 1,961,375 pupils. Of these, 1,643,215 were in the elementary schools and 318,160 in high schools. Total expenditures for education in the schools of the State were \$257,672,042. The salaries of teachers averaged \$2,046.12.

CHARITIES AND CORRECTIONS. These two activities of the State, as organized in 1927, were under separate departments. The Department of Charities consisted of a State Board of Char-

ities of 15 members, from the several judicial districts, and had as the chief executive of the Department a Director of Charities appointed by the Board. Various divisions had the functions of care of dependent adults, child welfare, hospitals and sanatoria, the blind, inspection of institutions and administration of State institutions. Such State institutions were: the State Training School for Girls, Hudson; State Agricultural and Industrial School, Industry (boys); Thomas Indian School, Iroquois; State Hospital for Incipient Tuberculosis, Raybrook; State Orthopedic Hospital, West Haverstraw; State Women's Relief Corps Home, Oxford (soldiers' and sailors' widows); the New York House of Refuge, while under private direction, received State support. The State Department of Mental Hygiene had control of institutions for mental treatment.

The Department of Correction, Raymond F. C. Kieh, Commissioner, had charge of the penal institutions of the State. These and their numbers of inmates, as stated in 1927, were: Auburn Prison, 1438; Clinton Prison, 1564; Great Meadow Prison, 1047; Sing Sing Prison, Ossining, 1590; Dannemora State Hospital, 602; Matteawan State Hospital, 1006; New York State Reformatory, Elmira, 1204; Institution for Defective Delinquents, Napanoch, 598; New York State Reformatory for Women, Bedford Hills, 325; Albion State Training School, 228; State Prison for Women, Auburn, 101.

The number of patients in State hospitals for mental disease on Jan. 1, 1927, was stated by the U. S. Department of Commerce as 43,538.

LEGISLATION. The Legislature convened in regular annual session January 5. It voted the submission to the people of nine amendments to the State constitution, for their ratification in November, 1927. Of these the first required the Governor to submit to the Legislature a budget comprising a complete plan of State expenditure for the ensuing year and of estimated revenues, and with this plan to submit a bill or bills for the required appropriations; the power of the Legislature to alter appropriations thus proposed was limited. Another amendment proposal rendered the debt total of all cities, as computed to ascertain margin under debt limit, net of water supply debts, and further permitted the City of New York to incur debt up to \$300,000,000 for construction and equipment of rapid transit lines, not to be reckoned in computation of its borrowing power as based on assessed valuations. Proposal Three rendered it possible for counties instead of localities to bear a portion of the expense jointly incurred by railroads, the State and local government bodies for the elimination of railroad grade crossings. Proposal Four raised the salary of the Governor to \$25,000; of the Lieutenant-Governor to \$10,000; and of each member of the Legislature to \$2500 a year. Proposal Five made the Governor the head of the Executive Department. Proposal Six set the terms of the Governor and other elective State officials and of State Senators at four years, those of Assemblymen at two years, and rendered the election of Governors and other State officers coincident with that of Presidents, starting with 1928. Remaining amendment proposals were of minor significance.

With regard to criminal law, there were enacted some seven more of the measures recommended by the Baumes Commission, whose

powers the Legislature again extended. These rendered life imprisonment the minimum sentence for fourth offenders found guilty of armed felony, instead of a sentence from 25 years to life; enabled the prosecution to appeal cases, except in case of the verdict of "not guilty"; and required a judge to have a copy of a defendant's criminal record before he should pass sentence. A bill to place further restriction on the sale of fire-arms in the State failed of passage. A measure restricting the allowed weekly hours of work for women to 48, save for an added 78 hours in any one year, was enacted. State aid to the support of public schools was increased, in accordance with the recommendations of the Friedsam commission, by some \$16,500,000, of which the chief part under the terms of the increase was to go to schools within the city of New York.

Among the measures passed many had particular reference to the City of New York. One of these provided a commission to revise the tenement house law. The emergency rent laws were once more extended for the period of a year. An appropriation of \$1,000,000 was made as the State's half of the year's contribution to the requirements of the Board of Port Authority, previously created by inter-State treaty, for work on the proposed bridge over the Hudson River between upper Manhattan and the New Jersey shore. In order to offset the action of the Legislature of New Jersey, to like effect, the Legislature of New York granted the Governor a power of veto over acts of the Board of Port Authority. Licenses of theatres presenting immoral plays were by enactment rendered revocable.

Provision was made for the cession to the city of New York of the State land on Ward's Island, to be vacated by the State on account of the removal of institutions to other sites, and to be employed by the city for the location of a plant for sewage disposal. Authority was granted the City of New York to remove the elevated railroad structure from Fulton Street in Brooklyn. With regard to the New York City water supply plans, the tri-State compact as to the use of the waters of the Delaware River was approved; the other States concerned, however, did not ratify it. A bill to give the city the right to proceed with the development of a water supply system in several counties east of the Hudson River, in accordance with a plan alternative to the Delaware River development, failed of passage.

Among measures that failed to reach the statute books were: a bill to form a new judicial district in the area of Greater New York, vetoed by the Governor; the Governor's own plan of water power development, through a commission to investigate and, if feasible, to plan, public power development through a quasi-private corporation with State-backed credit; the veto of a measure of the legislative majority, proposing an investigation of the subject on other terms, the State being left, by the power development deadlock, under the Miller act which favored private power development. The Legislature failed to enact a tax on sales of motor gasoline, to finance the increased school subvention.

POLITICAL AND OTHER EVENTS. At the State election on November 8, nine proposals to amend the State constitution came up for ratification. The contest over one of these, the term-extending proposal, seemed the chief feature of the polit-

ical campaign of the year. (See above, under *Legislation*.) This proposal was rejected by a vote of 1,256,157, against, to 578,863, in favor; or by about 2.3 to 1; adverse majorities being scored not only in New York City but in every county in the State. The proposal had Republican Party support, and was opposed by the Democrats, Governor Smith making a campaign against it, on the ground that it was designed to elect Republicans to the office of Governor on the Republican Presidential voting strength.

The other eight amendment proposals discussed above were all approved. The Republican majority in the Assembly was materially increased. A charter providing a form of government for the populous suburban county of Westchester, with an elected President, Vice President and Commissioner of Finance, was submitted to the voters of that county, and rejected. The City of Buffalo elected a new council, to replace its previous commission government.

The higher courts early in the year passed on the validity of that feature of the Baumes laws as to criminal procedure and penalties which rendered the life sentence on habitual criminals mandatory on judges to pronounce under certain circumstances. The Court of Appeals on February 23 sustained this provision as constitutional, it having been strenuously opposed by some members of the lower courts. The State law limiting the resale price of theatre tickets was declared unconstitutional February 28 by the United States Supreme Court, on the general ground that the State had not in this matter the same power as in dealing with a traffic affecting public utilities or necessities. For the time being, the way seemed open for the resumption of limitless price raising in theatre tickets at New York, but later in the year United States District Attorney Tuttle, in that city, prosecuted the ticket middlemen for failure to pay to the Federal government a virtually punitive tax on excess prices for the tickets they had sold, and compelled many of the dealers to enter into agreements to limit their own prices.

In regard to the status of religion in the public schools, the Court of Appeals took important action by denying, May 10, a suit of the Freethinkers' Society to prevent the school authorities of White Plains from granting school time for religious instruction at private expense to pupils whose parents so desired. The Court of Appeals raised the requirements for law students, by making two years of college or equivalent study obligatory.

The plan of consolidation of State departments adopted with the ratification of the necessary constitutional amendment at the election of November, 1925, went into effect Jan. 1, 1927. The number of elected State officers was reduced to four, the Governor, Lieutenant-Governor, Comptroller and Attorney-General. The office of Secretary of State became appointive. That of State Treasurer was abolished, its functions passing to the Division of Finance in the Department of Taxation and Finance. The office of State Engineer and Surveyor was abolished, and the Division of Engineering in the Department of Public Works assumed its functions. The administrative organization of the State government was grouped chiefly within eighteen departments, as follows: Executive, Audit and Control, Taxation and Finance, Law, State, Pub-

lic Works, Conservation, Agriculture and Markets, Labor, Education, Health, Mental Hygiene, Charities, Correction, Public Service, Banking, Insurance, Civil Service.

Governor Smith, inaugurated January 1, entered his fourth term of office. In his message to the Legislature, he recommended the passage of resolutions memorializing congress in accordance with the referendum vote of November 1926, in favor of modification of the Volstead law. He pointed out at the same time that the Eighteenth Amendment must be treated as part of the law of the State and that sheriffs and peace officers generally must do their sworn duty and help enforce Federal prohibition laws. With the new executive term a consolidation of State bureaus went into effect, occasioning a reduction in the number of employees. Governor Smith, called on by a New York lawyer, Charles C. Marshall, in the April *Atlantic Monthly*, to state his views as a Catholic on allegiance to church and to State, replied in the next issue of the same periodical, asserting that as a Catholic he placed allegiance to State foremost in all matters relating to his official duty, and denying the authority of the church to control his acts in this sphere. The Governor appointed in February the heads of 14 State departments and agencies; among them were six Republicans.

Following the report of a special commissioner on the conduct of the Presser parole case by the Parole Board and Commissioner of Corrections Long, Commissioner Long resigned, February 9, and was replaced by Raymond F. C. Kieb, who reorganized the Parole Board. Commissioner of Public Works Greene, in a report to the Legislature February 14, asserted that the State Barge Canal had not fulfilled its purpose, that it should be taken over by the Federal government, and that 15 canal terminals that had cost some \$7,000,000 and proved of little use should be sold by the State. The Peace Bridge connecting Buffalo and Fort Erie, Ont., was completed, and opened to traffic June 1, thereafter carrying a reported daily average of 12,800 vehicles, on a toll basis.

New York and Vermont signed a treaty May 11 to build jointly a bridge over Lake Champlain. Mrs. Florence E. S. Knapp, former Secretary of State, accused of irregularities in the conduct of the 1925 State census, was the subject of investigation by a special commissioner.

Important progress was made in public structural projects in and about New York City. Samuel Untermyer as special counsel for the Transit Commission conducted in May an investigation of rapid transit lines with a view to gaining information relative to a plan for their unification under public ownership. In September he presented a report recommending the recapture of the Brooklyn-Manhattan subway lines, the purchase by negotiation of the Interborough subway lines, with provision for the Manhattan Elevated, and the leaving of elevated lines in Brooklyn and of surface lines throughout the city in the hands of the present owners; the acquired lines to be owned by the city and to be operated at a five-cent fare. Plans for a Tri-Borough Bridge, to connect Manhattan, Bronx and Queens boroughs, were submitted to the city Board of Estimate March 24, and money was later voted for preliminary work, in anticipation that the State Legislature would later allow the city to create a quasi-

private corporation to finance the cost of the project, some \$25,000,000, and levy tolls to meet charges.

The Port of New York Authority gained from the Legislatures of New York and New Jersey approval for the construction of a \$16,000,000 bridge over the Kill van Kull between Baronne, N. J., and Port Richmond, on Staten Island, and work on this undertaking was begun. The Port Authority let contracts for the foundations of piers for the Hudson River Bridge, to span the river between Washington Heights in Manhattan and Fort Lee, New Jersey, and ground was broken with ceremonies September 18. The Holland Vehicular Tunnel between Canal Street, Manhattan, and Jersey City was completed, and was opened November 11. It carried on November 13, its first full traffic day, 51,748 vehicles, and in its first fortnight of operation earned \$173,914 in tolls.

A city measure was enacted in May granting tax exemption for 20 years on multiple-family houses built by limited dividend corporations. It was expected that land for such housing would be furnished in the City of New York by the city government, which would rent it to the corporations at low rates, in order to promote the elimination of inferior tenements, and which would obtain the land by a process known as excess condemnation. This process consisted in the city's obtaining by condemnation more land than the minimum required for the site of an improvement, such as a public park or a street widening, and subsequently putting the superfluous land to other use. The City of Rochester inaugurated December 1 a subway transit route built in the depression formerly occupied by the bed of the Erie Canal in its passage through the city, which the municipality had acquired in 1922, after the abandonment of the original canal route. See **CELEBRATIONS**; **CITY PLANNING**; **CRIME**.

OFFICERS. Governor, Alfred E. Smith; Lieutenant-Governor, Edwin Corning; Secretary of State, Robert Moses; Comptroller, Morris S. Tremaine; Attorney-General, Albert Ottinger; Commissioner of Education, Frank P. Graves.

JUDICIARY. Court of Appeals: Chief Judge, Benjamin N. Cardozo; Associate Judges, Cuthbert W. Pound, Frederick E. Crane, William S. Andrews, Irving Lehman, Henry T. Kellogg, John F. O'Brien.

NEW YORK UNIVERSITY. A non-sectarian coeducational institution of higher education in New York City; chartered in 1831. It comprises the following divisions: at University Heights, college of arts and pure science, college of engineering, Guggenheim School of Aeronautics; at Washington Square, graduate school, school of law, school of commerce, accounts and finance, Washington Square College, school of retailing, school of education, university extension division, institute of education; at Wall Street division, the graduate school of business administration, and courses in the schools of commerce, accounts, and finance, and of retailing; medical college, on E. 26th Street; and dental college, on E. 23rd Street. The enrollment for the year 1926-27 in all divisions of the University, after deducting all duplications, was 31,657. The enrollment in the different degree-conferring units was as follows: University College of Arts and Pure Science,

866; school of law, 1931; University and Bellevue Hospital Medical College, 449; college of engineering, 476; graduate school, 324; school of education, including both graduate and undergraduate divisions, 2671; school of commerce, accounts, and finance, including the Wall Street division, 1123; Washington Square College, 5545; graduate school of business administration, 479; school of retailing, 544; and college of dentistry, 483. In other divisions the enrollment was as follows: extension division, 2802; department of fine arts, 1574; institute of education, 3059; public health (correspondence) courses, 108; life insurance training courses, 174. The enrollment in the summer school of 1927, held at Washington Square, was 4453. The faculty of the University numbered 1341, for the year 1926-27, including 51 appointments or promotions of professorial rank, made in the previous university year, nine of the new appointments being of the rank of full professor, and 14 promotions being to that rank. The productive funds for the year 1925-26 amounted to \$3,604,211.39, and the income to \$4,870,415.62. The libraries contained 253,000 volumes. The Nichols Chemistry Building at University Heights, costing \$600,000, was completed and was dedicated in the autumn of 1927. Chancellor, Elmer Ellsworth Brown, Ph.D. LL.D.

NEW ZEALAND, zē'land, DOMINION OF. A self-governing British dominion in the southern Pacific Ocean, about 1200 miles east of Australia; consisting mainly of two islands, North and South Islands; but comprising also Stewart Island and Chatham Island and a number of small islands. Capital, Wellington.

AREA AND POPULATION. The total area excluding the annexed islands is 103,568 square miles, distributed as follows: North Island, 44,131; South Island, 58,120; Stewart Island, 662; Chatham Islands, 372; outlying islands, 284. According to the census of 1921 the population was 1,218,913. The population, April 1, 1927, was 1,439,980 for New Zealand proper inclusive of Maoris (64,234); residents of Cook and other annexed islands, 14,088, and of Western Samoa (mandated territory), 42,028. The movement of population in 1926 was: Births, 28,473; deaths, 11,819; marriages, 10,680. New Zealand's great problem, like that of Australia, is the securing of suitable immigrants. To this end the New Zealand government cooperates very closely with Great Britain, as it is the policy of the Dominion to restrict its immigrants, so far as possible, to British stock and the policy of Great Britain to keep its emigrants within the Empire. In carrying out these policies both countries lend material aid as well as encouragement to prospective migrants of British stock, and special inducements are offered to approved farm laborers, domestics, and miners, the classes most needed in the Dominion.

Immigration from the British Isles into New Zealand during the year ended Mar. 31, 1927, reached a total of 14,943, a figure not equaled in any single year since 1880. Of arrivals, 8457 were males and 6486 females.

Since enactment of the Empire Settlement Act in 1922, New Zealand has received as contributions toward passage money, grants totaling £328,810 and loans amounting to £11,215 from

the Imperial government. The number of assisted immigrants showed an increase of 48 per cent over the previous year. Of the total number of immigrants, 37 per cent were men, 30 per cent women, and 33 per cent children. Farmers, farm laborers, and miners accounted for 14 per cent of the men's total, and, as they went direct to the farms and the mines, only 23 per cent of the total number of immigrants came into competition for other occupations in the labor market. These "nominated" immigrants found positions awaiting them on arrival in practically every case.

The estimated population of the chief cities of New Zealand on Apr. 1, 1927, was as follows: Auckland, 202,400; Wellington, 126,750; Christchurch, 122,000; Dunedin, 83,250.

EDUCATION. Education is compulsory between the ages of seven and 14. At the end of 1926 there were 2601 public primary schools, 6883 teachers (including 700 probationers) 216,807 scholars on the rolls, and an average attendance of 194,097. The native schools numbered 130, with 282 teachers and 6591 pupils; the private primary schools numbered 301, with 26,778 pupils. For secondary education there were 41 incorporated or endowed schools with 568 teachers and 13,651 students. The University of New Zealand was formerly solely an examining body, but by act of 1926 it now actually consists of the four university colleges: Otago University, Dunedin; Canterbury University College, Christchurch; Auckland University College, and Victoria University College, Wellington. The total number of students in 1926 was 4653.

PRODUCTION. About two-thirds of the surface of New Zealand is suitable for agriculture and grazing. In 1926 the acreage under cultivation was 18,518,123 acres and the number of persons engaged in agricultural, pastoral, and dairying pursuits was 137,451. Revenue from the Crown lands of New Zealand reached £147,154 in 1926 and was devoted, as in previous years, to the cost of education, the old age pension fund, expenses of administration and collection, and other items. In 1927 8,976,000 acres were administered—6,731,289 by lease and the remainder through the Forest Service.

The chief crops with their acreage, production, and yield per acre in 1926 were as follows: Wheat, 151,673 acres, 4,617,000 bushels, 30.44 bushels per acre; oats, 102,485 acres, 4,116,000 bushels, 40.16 bushels per acre; barley, 25,969 acres, 935,000 bushels, 36.01 bushels per acre. The livestock in the same year numbered: Horses, 314,867; cattle, 3,452,486; sheep, 24,904,993; and pigs, 472,534. Wool exported or used for home consumption in 1925 amounted to 200,536,472 pounds. The chief minerals are coal, gold, and silver. The quantity mined and the value in 1925 was as follows: Gold, 114,696 ounces (£472,364); silver, 495,268 ounces (£60,773); coal exported, 138,083 tons (£235,047); coal consumed locally, 1,976,912 tons (£1,976,912). Industrial statistics for 1925 were as follows: Number of factories, excluding mines and quarries, 4547; hands employed, 80,327; value of land, buildings, etc., £49,978,843; estimated produce, £84,101,313.

The six leading industrial activities, arranged in order of the number of persons engaged in them, were as follows:

LEADING INDUSTRIES IN NEW ZEALAND

Industry	Employees	Salaries and wages	Added value
Building	9,942	£2,429,831	£5,459,257
Sawmilling	9,643	2,819,670	4,175,042
Printing	7,223	1,621,631	1,296,411
Clothing	6,544	844,888	1,168,595
Meat freezing	5,798	1,466,867	2,720,144
Butter and cheese .	4,140	888,882	3,843,980

COMMERCE. The trade and commerce of New Zealand in 1926 did not show such favorable results as in the previous year, but there was no actual financial depression and the country enjoyed a moderate degree of prosperity. Money was available at reasonable interest rates for conservative business ventures and credit abroad was not lacking. The most serious phase of the general trade was the reduced price obtainable for wool and most primary products. At the close of the year conditions were much improved and the first wool sales of 1927 showed considerable advance in price and demand.

The overseas trade of New Zealand in 1926 was valued at £95,105,138 against £107,718,679 for the previous year, or a decrease of £12,553,541. Exports from the Dominion declined £9,986,697—from £55,262,272 in 1925 to £45,275,575 in 1926. The value of imports into New Zealand fell to £49,889,563 in 1926 from £52,456,407 in the previous year, a decrease of £2,566,844. The falling off in the shipments of primary products was largely incident to the lower price of wool—a decline in export values from £17,738,738 in 1925 to £11,830,188 in 1926, although, in 1926, 34,948 more bales were shipped than in 1925. Declines also occurred in exports of butter, frozen meat, skins and hides. A slight increase, on the other hand, was recorded for shipments of cheese, worth £5,939,359 in 1926 compared with £5,800,808 in 1925, and of sausage casings valued for the two years at £780,811 and £675,848, respectively.

Of the total exports from New Zealand, British countries bought to the value of £39,526,924, or 87.31 per cent, which is 1.17 per cent above 1925. Imports from the United Kingdom were valued at £34,005,656, or 68.28 per cent of the total against 72.75 per cent in 1925. Exports to the United States increased slightly to 8.43 per cent of the total and Australia's share from 4.52 to 6.75 per cent. A feature of New Zealand's import business was a steady and increasing demand for merchandise from the United States. In 1925 this trade reached a value of £8,885,265 and in 1926, £10,004,264, or an increase of £1,118,999.

FINANCE. The revenue estimates for 1926-27 were £24,266,200 and the expenditure of £23,986,616. During the year ended Mar. 31, 1927, taxation in New Zealand amounted to £12 5s. 6d. per person, as compared with £12 7s. 11d. for the preceding year and £12 3s. 3d. for the year ended Mar. 31, 1925. The total amount collected during the 1926-27 period reached £17,437,827, the bulk of which was obtained from customs duties and income taxes. Fees collected under the motor vehicles act amounted to £395,797 for 1926-27, as compared with £86,681 for the preceding year.

The public debt of New Zealand as of Dec. 31, 1926, amounted to £239,000,000, of which 51.38 per cent is directly interest bearing. The five main divisions of the debt are as follows:

	Per cent
Productive works	28.50
Land settlement and forest	10.81
Investments	14.07
Indirectly productive purposes	8.64
Financially unproductive	39.98

Before the War, the unproductive debt of the country was only 20 per cent of the total, but during the six years ended March, 1920, the war debt of £80,000,000 raised the percentage of the unproductive debt. The total war debt increased to over £82,000,000, but has since been reduced nearly £7,000,000.

COMMUNICATIONS. At the end of 1925 the registered vessels of New Zealand numbered 579 of 123,693 net tons. In the same year 656 vessels of 2,122,741 tons entered the ports of the Dominion and 663 of 2,139,192 tons cleared. For the first 10 months of 1926, according to the *New Zealand Year Book* for 1927, 567 vessels of 1,868,844 tons entered and 553 vessels of 1,871,103 tons cleared. The latest railroad statistics, those for 1926, showed that the government lines earned £1,992,334, which was reduced after interest had been charged off and also appropriations for betterments, to an unappropriated surplus of £21,023. This latter figure compares with a deficit of £87,736 in 1925. The New Zealand State railways reported 3138 miles open for traffic in 1926 as against 3085 in 1925. The private lines total about 116 miles.

GOVERNMENT. Executive power is vested in a governor-general and legislative power in the governor-general and a general assembly of two houses, namely the Legislative Council of 42 members (September, 1926) appointed for seven years but to be elected after the expiration of the terms of members sitting in 1923, and the House of Representatives, consisting of 80 members, elected by the people for three years. The governor-general in 1927 was Gen. Sir Charles Fergusson. The cabinet was constituted as follows: Prime Minister, Minister of Railways, Native Affairs, etc., J. G. Coates; Finance, W. D. Stewart; Postmaster-General, Telegraphs, External Affairs, Immigration, etc., W. Norworthy; Labor, Mines, and Marine, G. J. Anderson; Lands, Industries and Commerce, A. D. McLeod; Minister for Cook Islands, Sir M. Pomare; Internal Affairs, R. F. Bolland; Agriculture and State Forests, O. J. Hawken; Attorney-General, Justice, and Defense, F. J. Rollston; Health, J. A. Young; Education, R. A. Wright; Public Works, K. S. Williams.

HISTORY. New Zealand enjoyed a very quiet year, no outstanding event of importance being reported in the press. The session of parliament which opened on June 23 was greatly exercised over the question of the tariff. The government, while it had a working majority, was considerably hampered by a strong minority. The tariff question was placed in the hands of a commission of experts with power to recommend changes in the existing schedules. Other vexatious problems which were discussed pro and con were the question of religious instruction in the schools, and prohibition. New Zealand schools had never had religious instruction of any description, but there had lately been a widespread demand for the daily reading of the Bible. This demand had been chiefly voiced by Protestant organizations and had been attacked by Roman Catholics and teachers' organizations.

The last Parliament failed to pass such a measure, but the proponents of the bill hoped to pass it in the 1927 Parliament; however, such action did not occur. The liquor trade had been regulated by license and the prohibitionists had been active in their demands for complete prohibition, while another group demanded government control of the sale of liquor. The government determined to keep the license system.

See LEAGUE OF NATIONS.

NICARAGUA, nē'ka-rā'gwā. The largest of the Central American republics. It is bounded on the north by Honduras, on the east by the Caribbean Sea, on the south by Costa Rica, and on the west by the Pacific Ocean. Capital, Managua.

AREA AND POPULATION. The area is estimated at about 49,200 square miles, of which 4500 square miles is lake area. Population, according to the census of 1920, 638,118, or about 14 inhabitants to the square mile. The coast line is 300 miles on the Atlantic and 200 miles on the Pacific. The population consists almost entirely of Indians and negroes and mixtures of the two with white blood. The proportion of pure white blood is about 10 per cent. About 75 per cent of the population lives in the western half of the country. The eastern and western sections differ greatly and there is very little communication between them, the journey by trail and river being difficult. Travelers going from one coast to the other usually go by way of Costa Rica or through the Panama Canal.

The population of the various cities in Nicaragua in 1926 as shown by a census made by their respective departments of sanitation was reported to be as follows: Managua, the capital, 32,536; Leon, 23,565; Granada, 18,066; Masaya, 13,763; Chinandega, 10,307; Rivas, 4081; Matagalpa, 3142; and Corinto, 2307.

EDUCATION. According to the latest available statistics, there were 460 state elementary schools, with 1105 teachers and 30,210 pupils; three secondary schools, with 37 teachers and 259 pupils; five professional schools with 219 students; three normal schools with 35 teachers and 222 students; 76 private schools (elementary) with 5557 students. For higher education there are the Central University at Leon; and the Eastern and Southern University at Granada. From 50 to 75 per cent of the people are classed as illiterate, chiefly because much of the money originally appropriated for education is spent for war purposes in connection with the many revolutions which have convulsed the country.

PRODUCTION, ETC. The chief sources of national wealth are agriculture, timber, and mining. The development of agriculture has been hampered somewhat by the lack of labor. The banana is the chief product of the eastern part of the country. The foodstuffs for the inhabitants have to be imported, chiefly from the United States. In the western part the principal crops are coffee, sugar cane, cacao, corn, and beans, the average coffee crop being estimated at 22,500,000 pounds. The western part of the country raises most of its own foodstuffs and occasionally has a surplus for export. There are valuable forest woods, especially mahogany and cedar, which enter into the exports; also dye woods, gum, and medicinal plants. The mineral resources include gold, silver, copper, and precious stones.

Notwithstanding political unrest, 1926 was a year of prosperity and internal development for Nicaragua. There was an unusually good coffee crop. Government finances were favorable at the beginning of 1926, largely due to heavy collections during the previous year, but, despite the large return throughout 1926, excessive expenditures for military purposes added to the indebtedness of the government and created a serious financial situation at the close of the year. For the east coast the year was one of exceptional difficulties. The basic industries, banana and mahogany, were seriously hampered by revolutionary activities and suffered heavy losses, in consequence of the attendant disorders. Mercantile interests likewise suffered, all commercial intercourse for months having been at a standstill.

COMMERCE. In 1926 the foreign trade for Nicaragua was greater than in any year since 1920. The total foreign trade for the year amounted to \$23,283,238, of which \$10,254,512 represented imports and \$13,028,726 exports. In 1925 the imports were \$10,376,291 and the exports \$12,359,585, or a total of \$22,735,876.

STATEMENT SHOWING VALUE OF PRINCIPAL
ARTICLES EXPORTED DURING THE YEARS
1925 AND 1926

Articles	1925	1926
Bananas	\$1,786,053	\$1,225,661
Beans	7,270	7,845
Cacao	27,112	45,791
Coconuts	43,858	21,627
Coffee	5,627,133	8,100,397
Corn	54,770	56,013
Cotton	69,516	7,700
Gold	586,268	686,265
Hides and skins	219,452	164,512
Lard	27,044	2,085
Rubber	92,203	103,507
Silver	78,481	33,782
Sugar	1,559,165	876,228
Wood:		
Cabinet	1,853,035	1,342,238
Dyewoods	57,758	65,365
All others	320,522	289,710
Total	13,359,585	13,028,726

IMPORTS, BY PRINCIPAL ARTICLES, FOR THE
YEARS 1925 AND 1926

Articles	1925	1926
Cement	\$24,872	\$33,666
Chemicals, drugs, and medicines	459,980	371,595
Cotton goods	2,669,589	2,102,998
Fibres, vegetable, manufactures of	293,332	259,688
Food products:		
Coffee	13,864	19,214
Fish and products	74,659	67,433
Flour, wheat	585,132	487,110
Fruits and products	74,850	70,666

Meat and dairy products	137,237	165,554
Rice	92,384	180,293
Sugar	80,012	28,265
Vegetables and products	174,132	146,514
All other	319,900	315,065
Gasoline	169,588	169,642
Hides and skins and manufactures	865,578	851,384
Iron and steel manufactures	682,245	843,664
Liquors, wines, and other beverages	280,210	290,991
Paper and manufactures of	155,857	155,790
Petroleum	146,921	140,060
Silk goods	843,032	342,790
Woolen goods	164,980	124,014
All other imports	3,145,955	3,627,479
Total	10,376,291	10,254,512

FINANCE. The internal debt on Feb. 1, 1926, amounted to \$2,867,000 and the external debt on the same date \$772,260. The latest statistics

for budgetary finance (1924) showed total receipts amounting to \$2,211,706 as against \$2,097,286 in 1923. Customs collections were \$1,261,349 and \$1,005,000 and internal revenue collections \$926,323 and \$999,310 respectively. The remainder was made up from consular fees and miscellaneous sources. Budget expenditures amounted to \$1,580,000, the same as for 1923.

COMMUNICATIONS. In 1925, 1792 vessels of 786,689 tons entered the ports of Nicaragua and 1732 vessels of 786,545 tons cleared. The Pacific Railroad of Nicaragua is the only line in the republic, having a total length of 146 miles.

GOVERNMENT. Executive power is vested in a president who acts through a responsible ministry, comprising departments of foreign affairs and public instruction, finance, interior, justice, war and marine, and public works; legislative power is in a bicameral legislature consisting of a chamber of 40 deputies elected for four years by universal suffrage, and a senate of 13 members elected for six years. President in 1927, Alfonso Diaz. On Feb. 25, 1927, Congress approved, and on March 2 the president published, the election of General Bartolomé Viquez and Deputy Francisco José Argüello as First and Second Designates for the Presidency of the Republic.

HISTORY

The United States government continued to hold complete sway over the Republic of Nicaragua during the entire year 1927. As noted in the previous YEAR BOOK, that tiny country was war torn and the plaything of the Conservative and Liberal forces. The United States intervened on the side of the Conservative leader, Diaz, against his Liberal opponent, Sacasa. On January 10, President Coolidge sent a message to Congress in which he defended his policy. The chief importance of the document was an attack on the Government of Mexico for attempting to establish a government in Nicaragua which was hostile to the United States and a menace to the Panama Canal. In his message he stated: "I have the most conclusive evidence that arms and munitions in large quantities have been on several occasions since August, 1926, shipped to the revolutionists in Nicaragua. Boats carrying these munitions have been fitted out in Mexican ports and some of the munitions bear evidence of having belonged to the Mexican government. It also appears that the ships were fitted out with the full knowledge of, and, in some cases, with the encouragement of Mexican officials, and were, in one instance at least, commanded by a Mexican naval reserve officer. The United States cannot, therefore, fail to view with deep concern any serious threat to stability and constitutional government in Nicaragua tending toward anarchy and jeopardizing American interests, especially if such state of affairs is contributed to or brought about by outside influence or by any foreign power." The President's message, while not causing much of a stir at Washington, was, nevertheless, a subject of bitter attack in the opposition press throughout the United States and brought forth many denunciatory speeches in both houses of Congress.

In the meantime sporadic fighting continued in Nicaragua between Liberal and Conservative forces. The United States government as a direct aid to Diaz, had lifted the embargo on

arms as far as he was concerned and sent more warships and marines to the country. On January 10, three more neutral zones were established in the country. By the end of February eight cities had been "neutralized" as well as the railway from Corinto to Managua. The only two cities of any importance that had not been declared neutral zones were Matagalpa and Granada. During February the situation was further complicated by the appearance of a British cruiser in Nicaraguan waters. The British Ambassador at Washington gravely stated that the cruiser was merely a base of refuge for British nationals in Nicaragua and did not intend to land armed forces. All kinds of rumors were abroad concerning the alleged violation of the Monroe Doctrine and in some quarters it was even hinted that Great Britain was planning to intervene in behalf of the Liberals under Sacasa. However, the matter blew over early in March, when the United States landed 1600 more American marines at Corinto and the British Chargé d'Affaires stated that he thought British interests would be adequately protected by American men and ships. The British ship was thereupon recalled from Nicaraguan waters.

Although several attempts were made in the first few months of the year to effect some reconciliation between the two warring parties in the country, it was not until early in April that a real effort was made to bring about harmony. This effort consisted of the sending of Henry L. Stimson, former Secretary of War, to Nicaragua as the personal emissary of President Coolidge to determine whether he could find a common ground for the settlement of the difficulties. His instructions called for him to consult with American Minister Eberhardt and Admiral Latimer, in charge of American forces, and to convey to them "certain views of the Administration which cannot conveniently be taken up by correspondence and get information from them as to the entire situation in that country for the use of the government which they cannot very well give through correspondence."

After conferences with President Diaz and Dr. Sacasa, Mr. Stimson held a meeting with General Moncada early in May. Moncada stated that inasmuch as the United States government was prepared to take the field against his army he was perforce ready to lay down his arms. Washington officially declared that no threat of force was used against the Liberals, whose position had been weakened just prior to the conference by serious reverses at the hands of the Conservatives.

These setbacks and the attitude taken toward the Liberals accomplished the desired purpose and on May 6 the State Department at Washington announced a formula for peace in Nicaragua. The terms were as follows: (1) Complete disarmament on both sides; (2) an immediate general peace to permit planting for the new crop, in June; (3) a general amnesty to all persons in rebellion or exile; (4) the return of all occupied or confiscated property to its owners; (5) participation in the Diaz cabinet by representatives of the Liberals; (6) organization of a Nicaraguan constabulary on a non-partisan basis, commanded by American officers; (7) American supervision of the 1928 election; (8) the continuance temporarily in the country of a sufficient force of American

marines to guarantee order pending the organization of the constabulary.

The Liberal forces almost immediately began to turn their arms over to the United States forces and the Conservatives did likewise. About the middle of May, Mr. Stimson reported to the Department of State as follows:

The civil war in Nicaragua is now definitely ended. Nearly all the Government troops and practically the entire insurgent army of Moncada have been disbanded and substantially all of their arms have been turned over to our custody. We have received thus far 6200 rifles, 272 machine guns, and 5,000,000 rounds of ammunition. There has been very little disorder and not a single American shot has been fired against the organized forces of either side. Among the Nicaraguans themselves bloodshed has substantially ceased since our action of May 4. I believe that our action meets general approval among the thinking men and women of Nicaragua irrespective of party. Almost the only malcontents are the extremely small group of personal associates of Sacasa, who, through their well-organized press bureaus in Mexico, Costa Rica, Guatemala, and the United States, have sought to convey an entirely false impression of the situation. The views of these men who have done no fighting for their cause carry little weight in Nicaragua. The fighting men of the insurgent army have taken a truer and more generous view of our action and are preparing to cooperate in the future work. In this work of conciliation and reconstruction the Diaz Government has taken an encouraging lead. Amnesty was declared even before the troops were disarmed and pledges have been given to restore the courts and congress to the status existing before the Chamorro coup d'état. There has also been promised the appointment of Liberal local officials in the Liberal provinces. I am bringing with me the formal request of the Government for American supervision at the 1928 election.

Needless to say, the Stimson peace proposals were not hailed everywhere as the panacea for the ills of the country. Despite his optimistic report concerning disarmament there were attacks on American marines which resulted in the deaths of several. Of course these attacks were reported as the work of unorganized guerrillas, but there was a feeling that they were really inspired by the Sacasa government. Sacasa, himself, said he could not understand why the United States persisted in recognizing and upholding the Diaz regime, even at the expense of American lives. Senator La Follette said, "The admission by our State Department that Mr. Stimson, speaking for President Coolidge, threatened open warfare on the Liberals is an amazing revelation that the President, in carrying forward his policy of ruthless imperialism in Central America, is ready to violate the constitution, which gives the war-making power solely to Congress. This course has already gone far in destroying the good will of all Latin America toward the United States. Our mutual friends have become our potential enemies." Dr. Sacasa stated that the Liberals would remain aloof from the Diaz government "because dignity demands it." He himself, left Nicaragua and took refuge in Costa Rica, thence proceeding to Guatemala in June where he followed his profession of medicine.

In the meantime, according to reports of Admiral Latimer, the disarming of Nicaraguan forces proceeded rapidly and the Marine forces were gradually reduced. In compliance with the Stimson report, President Coolidge appointed Gen. F. R. McCoy, U. S. A., the chairman of the commission to supervise the elections of 1928.

One of the Liberal Generals who refused to accept the Stimson formula was Sandino, who operated about 100 miles north of Managua. In

June he seized American mines and refused to heed the demands of Major Hatfield of the United States Marines to lay down his arms. The result was a battle in which the Americans suffered some casualties and the rebels, according to press accounts, suffered severe losses. Skirmishes were of common occurrence in the next few days and the events gave rise to criticism in American quarters of the Nicaraguan policy. Secretary of State Kellogg issued a statement in which he declared that Sandino and his band were nothing more than common outlaws who did not have the support of either party in Nicaragua. Sandino's actions were also condemned by Moncada, the former leader of the Liberal forces in the field. Throughout the remainder of the year the Sandino forces were engaged in combat with Marine forces and suffered severe losses, while the Marine casualties were comparatively light. The resistance of Sandino, however, was sufficiently great to cause the dispatch of 1000 additional Marines to the country at the very end of the year.

In December the American State Department announced that Dr. W. W. Cumberland, formerly financial adviser to the Government of Haiti, would make a trip to Nicaragua "to make a financial and economic survey of Nicaragua and to investigate the country's resources and requirements, in order that the Nicaraguan government and the Department of State may have the benefit of his recommendations regarding the advisability of a loan to provide an additional revenue for the payment of claims arising out of the recent revolution, for establishing and maintaining an efficient national guard to preserve order in the country, for the expenses of holding Presidential elections next year, for the construction of the long contemplated and apparently much needed railway between the capital and the Atlantic coast and for other public works." The American government was to pay the expenses of the survey.

NICHOLS, LIEUT.-COL. HENRY J. American military surgeon, died at Ancon, Panama, on September 5. He was born on May 21, 1877, at Milwaukee, Wis., and graduated at Yale in 1899 and in medicine at the University of Pennsylvania in 1904. Dr. Nichols entered the U. S. Army Medical School in 1905. He was made a captain in 1909, obtained his majority in 1916, and in 1918 became lieutenant-colonel. During the cholera epidemic in the Philippine Islands in 1908 he was in charge of a hospital. He was active in research and experimental work and he won praise and promotion for his services during the World War. Colonel Nichols was editor of *The American Journal of Tropical Medicine* in 1926 before he was transferred to the Canal Zone.

NICHOLSON, JOSEPH SHIELD. British economist, died at Edinburgh on May 12. He was born at Wrawby, Lincolnshire, Nov. 9, 1850, and educated at Edinburgh, Cambridge, and Heidelberg universities. He became professor of political economy at Edinburgh in 1880. His writings represented a compromise between the methods of the historical school of German economics and those of the British deductive school. He closely followed the great work of John Stuart Mill in his selection of material but in Professor Nicholson's work *Principles of Political Economy* (3 vols., 1893-1901), statistical and historical discussion is employed in-

stead of the abstract reasoning from simple assumption which characterizes Mill's works. Among his other important writings are: *Strikes and Social Problems* (1896); *Elements of Political Economy* (1903); *Rents, Wages, and Profits in Agricultural and Rural Depopulation* (1906); *Life and Genius of Ariosto* (1914); *The Neutrality of the United States* (1915); *War Finance* (1918); *Inflation* (1919); *Revival of Marxism* (1920).

NIGERIA, COLONY AND PROTECTORATE OF. A West African territory, belonging to Great Britain, divided into two groups of provinces, known respectively as the Northern and Southern Provinces. The area is approximately 335,700 square miles and the population, according to the census of 1921, 18,070,608, of whom 9,998,314 were in the Northern Provinces (area, 258,000 square miles). There were 3900 Europeans in 1921. For administrative purposes the mandated territory of Kamerun is attached to Nigeria. The seat of government is at Lagos. In 1925 in the Northern Provinces there were 53 government schools and 124 unassisted private schools, the total average attendance in the government schools being about 2125. It was estimated that there were more than 28,000 Mohammedan schools, with about 316,000 pupils. In the Southern Provinces in the same year there were 49 government schools with an average attendance of 7751; 205 assisted schools with an enrollment of 37,077; 3200 unassisted schools, with an enrollment of 133,900. The chief products are palm kernels, palm oil, rubber, peanuts, animal products, shea-butter, ivory, cacao, kola nuts, coffee, drugs, and tobacco. The forests supply mahogany, which is exported. Iron, lead, and tin are worked by the natives, and gold, silver, lignite, monazite, galena, and manganese ore are found. Nigeria is the sixth largest producer of tin in the world, the total output in 1926 being 8632 tons of tin concentrates. The imports in 1925 were valued at £16,278,349 and the exports £17,370,161. The chief article of import was manufactured goods and the chief articles of export, palm oil and palm kernels. The total shipping which entered and cleared from the ports of Nigeria was 2,655,001, of which 1,616,079 was British. The revenue in 1925-26 was £8,268,928 and the expenditure £6,583,167; public debt, £19,309,210. Railways open for traffic in 1926 totaled 1265 miles.

It was expected that the linking in March, 1927, of the eastern and western divisions of the Nigerian Railway, by the construction of a line from Makurdi to Kaduna, would greatly benefit the northern Nigerian tin industry. Heretofore the tin fields have had but a single outlet to the sea, by means of the Bauchi light railway, which connected in turn with the Lagos-Kano line at Zaria. The new line not only provided a second tide-water outlet at Port Harcourt, where good harbor accommodations exist, but, what was more important, placed the fields in direct rail connection with the government's Udi coal fields at Anugu.

The administration is in the hands of a governor and an executive and legislative council. Governor, Sir G. Thompson.

NOBEL PRIZES. On December 10 the annual distribution of Nobel Prizes was made at Stockholm in the presence of the King, Gustave V, the Crown Prince, and other notable personages. The Peace Prize for 1927 was presented to Ferdinand Buisson of Paris and Prof. Ludwig Quidde of Germany. M. Buisson, who was born Dec. 20, 1841, at Paris, had been engaged ceaselessly in working for peace throughout the world since 1879. He had been connected with the Education Department at Paris and was a professor at the Sorbonne (1896-1902) and also a deputy in Parliament. He was honorary president of the League of the Rights of Man and had written thousands of articles in furtherance of his peace ideas. Professor Quidde of the University of Munich was born in 1858 at Bremen and for many years held a chair of history in Munich. He published *Caligula, A Study in Caesarean Insanity* in which, it was asserted, in thinly veiled form he was endeavoring to show the dangers to be anticipated from the occupation of the Hohenzollern throne by Kaiser Wilhelm. He was ostracized by many of his friends for this work, and from that time on devoted himself assiduously to the interests of international peace and to opposing militarism. He was a Democratic member of the Reichstag and was accused of treason in 1924 but was released after an investigation.

The Nobel prize in Physics for 1927 was divided between Prof. Arthur Compton, Professor of Physics at the University of Chicago and Prof. Charles T. R. Wilson of Cambridge University. Professor Compton was well known for researches connected with X-rays and radio activity and was the author of the book *X-ray and Electrons*, published in 1926. Professor Wilson was known for his work in the observation of electrified particles. (See PHYSICS.) The 1927 award of the Nobel prize in Medicine was made to Dr. Julius Wagner-Juregg, a psychiatrist of Vienna, Austria, for the discovery of the malarial treatment of paralysis. The 1926 Prize in Medicine was given to Prof. Johannes Fibiger of Copenhagen. The Nobel Prize for Literature for 1926 was awarded to Grazia Deledda, the Italian authoress. The recipient, who was born at Nuoro in Sardinia in 1874, began her literary career as a journalist but soon devoted herself to the writing of novels in many of which the scenes are laid in Sardinia where she depicts life with vividness. Her style is marked by its originality and her most celebrated works are: *Nell'azzurro*; *Elias Portolu*; *Genere*; *Canne al vento*; *Il Nostro Padrone*; *Colombi e Sparvieri*; *Marianna*; and *Siree*.

No awards in either Chemistry or Literature were made in 1927.

NORTH CAROLINA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,559,123. The estimated population, on July 1, 1927, was 2,897,000. The capital is Raleigh.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1927	1,727,000	857,000 ^a	\$83,558,000
	1926	1,985,000	1,213,000 ^a	69,748,000
Tobacco	1927	650,000	468,000,000 ^b	120,744,000
	1926	565,000	386,460,000 ^b	102,025,000
Corn	1927	2,352,000	53,626,000	48,800,000
	1926	2,376,000	52,272,000	45,999,000
Hay	1927	952,000	902,000 ^c	15,974,000

	1926	174,000	1,378,000	2,412,000

^a bales, ^b pounds, ^c tons.

MINERAL PRODUCTION. Clay products, which led in importance in the mineral industry of the State, attained for 1925 a total value of \$3,868,962; in 1924, \$4,000,431. Stone production was also important, being 1,565,690 short tons for 1925 and 1924, 1,340,840; with a value of \$3,478,855 for 1925 and of \$3,133,510 for 1924. Sand and gravel, feldspar, clay, coal and mica were chief among the minor products. The total mineral production of the State in 1925 was \$9,504,063; in 1924, \$9,261,467.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$16,292,822; their rate per capita was \$5.75. They included \$1,923,579 apportioned for education. Totals not included in the above, of \$16,635 expended in public service enterprises, \$5,214,374 in interest and \$24,280,205 in permanent improvement outlays, brought the aggregate of State expenditure to \$45,804,036. Of this, \$23,990,981 was for highways; \$2,940,310 being for maintenance and \$21,050,671 for construction.

Revenue receipts were \$36,474,774; or per capita, \$12.87. Of their total, property and special taxes yielded 21.8 per cent, attaining the per capita rate of \$2.81. Property tax receipts were limited to payments of arrears from former years. Earnings of departments and compensation paid the State for officials' services supplied 11.1 per cent of revenue; 43.1 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$119,162,556, or \$42.03 per capita. Property not being subject to ad valorem taxation, there was no assessed valuation reported in 1926.

TRANSPORTATION. The number of miles of railroad line in the State Jan. 1, 1927, was 5,307.90. No new track was built in 1927.

EDUCATION. The State equalization fund was more than doubled by act of the General Assembly, the appropriation being \$3,250,000, as against a previous appropriation of \$1,500,000.

CHARITIES AND CORRECTIONS. The State Board of Charities and Public Welfare, as functioning in 1927, was composed of seven members, one by law a woman, elected by the General Assembly on recommendation of the Governor for

six-year terms and serving without salary. It supervised State charitable and penal institutions, inspected those of the counties, provided for the disposal of dependent, delinquent and neglected children and licensed certain of the child caring private agencies. In 1917 there was created a statewide system of public welfare with the county as the basic unit. The Commissioner of Public Welfare, the executive officer of the board, works through six divisions: child welfare, mental health and hygiene, institutions, county organization, education and publicity and Negro work. The General Assembly of 1927 increased the appropriation for mothers' aid to \$50,000 a year, as the State's part; established a farm colony for women offenders; gave a small grant to the school for delinquent negro girls now being run by the State Federation of Colored Women's Clubs; provided for the uniform classification of county prisoners; and made several minor changes in the laws relating to state institutions.

Institutions under the supervision of the board with inmate populations were as follows: State Hospital for the Insane, Raleigh, 1841; State Hospital for the Insane, Morganton, 2148; State Hospital for the Insane (Negro), Goldsboro, 1569; Caswell Training School for the Feeble-minded, Kinston, 548; State Prison, Raleigh, 1580; Eastern Carolina Training School for Boys, Rocky Mount, 31; Jackson Training School for Boys, Concord, 450; State Home and Industrial School for Girls, Samarcaand, 300; Morrison Training School for Boys (Negro), Hoffman, 100; N. C. Orthopaedic Hospital, Gastonia, 100. According to statistics of the U. S. Department of Commerce, 580 prisoners were admitted to the State Prison in 1926 and its inmates on Jan. 1, 1927, numbered 1580.

Other State institutions not under supervision of the Board are: State School for the Blind and Deaf, Raleigh, 175; School for the Deaf, Morganton, 300; Sanatorium for the Treatment of Tuberculosis, Sanatorium, 350; Confederate Soldiers' Home, Raleigh, 69; Confederate Women's Home, Fayetteville, 35.

LEGISLATION. The State Legislature convened in regular biennial session January 5. A bill to authorize an issue of \$30,000,000 of State bonds for road construction was introduced in both houses. There was enacted a statute to regulate county finances. It required the public sale of county bonds on tenders obtained in sealed bids, and required a county referendum to approve issue of bonds for any save necessary purposes. Limits on the terms of duration of bond issues were set at from 10 to 40 years in accordance with the durability of the property created or obtained with the proceeds. A measure was enacted to provide through issue of State bonds \$2,000,000 for the purchase of the State's portion of the tract of 482,000 acres, lying partly in North Carolina and partly in Tennessee, to be acquired by those States and presented to the United States government to form the projected Great Smoky Mountains National Park. A law was passed which had for its purpose the suppression of practices attributed to the Ku Klux Klan; it rendered unlawful organizations that kept their membership secret, and forbade the wearing of masks or hoods. The State law providing a Presidential preference primary vote was repealed, with the result that the instruction of delegates to national party conventions

in favor of a specified Presidential aspirant automatically became the function of the State party convention.

POLITICAL AND OTHER EVENTS. The State sold April 25, \$10,000,000 of its bonds and an equal amount of notes, to finance its highway programme. The State Supreme Court early in June affirmed the validity of the county finance act of 1927, against which it had been advanced that the measure, amended in passage, had not been constitutionally thrice passed in the same form. The court at the same time declared valid the issue of school bonds by Guilford County, although these had not been ratified by popular vote, as the act required; a provision of the State constitution covering rights to minimum school requirements was held to form sufficient warrant for the issue of the Guilford County bonds.

OFFICERS. Governor, Angus Wilton McLean; Lieutenant-Governor, J. Elmer Long; Secretary of State, W. N. Everett; State Treasurer, B. R. Lacy; Auditor, Baxter Durham; Attorney-General, Dennis G. Brummitt; Superintendent of Public Instruction, A. T. Allen.

JUDICIARY. Supreme Court: Chief Justice, W. P. Stacy; Associate Justices, W. J. Adams, Heriot Clarkson, George W. Connor, W. J. Brogden.

NORTH CAROLINA, UNIVERSITY OF. A State institution for higher education at Chapel Hill, N. C.; founded in 1795. The enrollment in the autumn of 1927 was 2631 regular students, with 3350 in extension courses. There were 1457 registered for the summer session. The faculty had 215 members. The productive funds of the institution amounted to \$1,455,569.26, and the annual income to \$1,096,803.35. The library contained 190,000 volumes. President, Harry Woodburn Chase, Ph.D., LL.D.

NORTH CENTRAL, formerly NORTH-WESTERN, COLLEGE. A coeducational institution of higher education at Naperville, Ill.; founded in 1861. Due to confusion with other institutions of the same name, it was decided in 1926 to change the name of the college to North Central College. In the autumn of 1927 there was an enrollment of 576 students, of whom 302 were men, and 276 women. There were 41 members on the faculty. The productive funds of the College amounted to \$680,000, and the income for the year was \$131,000. The library contained 15,000 volumes. President, Edward Everett Rall, Ph.D.

NORTH DAKOTA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 646,872. On July 1, 1925, it was 641,192, according to a census taken by the State. No estimate was made in 1927. The capital is Bismarck.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927.

Crop	Year	Acreage	Prod. bu.	Value
Wheat, spring	1927	9,846,000	124,970,000	\$129,969,000
	1926	9,653,000	77,081,000	90,185,000
Flaxseed	1927	1,242,000	10,184,000	18,787,000
	1926	1,880,000	7,590,000	14,649,000
Oats	1927	959,000	28,975,000	14,884,000
	1926	1,008,000	18,162,000	12,350,000
Hay	1927	2,400,000	3,648,000*	28,826,000
	1926	2,590,000	2,188,000*	22,788,000
Clover	1927	2,125,000	45,888,000	15,991,000
	1926	2,024,000	84,408,000	11,855,000

Crop	Year	Acreage	Prod bu.	Value
Barley	1927	1,668,000	42,406,000	25,020,000
	1926	1,472,000	21,050,000	9,688,000
	1925	1,381,000	23,068,000	18,450,000
Rye	1926	1,222,000	9,287,000	6,780,000
	1927	113,000	11,526,000	5,763,000
Potatoes	1926	94,000	7,520,000	9,024,000
	1927			

* tons.

MINERAL PRODUCTION. Coal mining, the only considerable mineral industry in the State, was moderately active in 1926. There were mined in 1926, 1,156,000 short tons of coal, as against 1,324,620 tons in 1925. The coal produced in 1925 had a total value of \$2,445,000. Clay products totaled \$149,744 in 1925, and in 1924, \$163,855, and formed the next largest item of mineral output. The total mineral production of the State in 1925 was \$2,662,029; in 1924, \$2,735,477.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$8,127,563; their rate per capita was \$12.68. They included \$1,654,799 apportioned for education. Totals not included in the above, of \$5,257,335 expended in public service enterprises, \$1,454,159 in interest, and \$1,807,526 in permanent improvement outlays, brought the aggregate of State expenditure to \$16,646,583. Of this, \$1,665,700 was for highways; \$293,856 being for maintenance and \$1,371,844 for construction.

Revenue receipts were \$18,491,476; or per capita, \$28.84. Of their total, property and special taxes yielded 27.8 per cent, attaining a rate of \$8.02 per capita. Earnings of departments and compensation paid the State for officials' services furnished 7 per cent of revenue; 14 per cent was derived from the sale of licenses, chiefly on incorporated companies and on motor vehicles and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$3,852,762, or \$6.01 per capita. Property subject to ad valorem taxation bore a valuation of \$998,355,506. State taxes levied thereon were \$4,213,060, or \$6.57 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 5,274.08. No new track was constructed in 1927.

EDUCATION. The school population of the State in 1927 was reckoned at 217,936. There were enrolled in the public schools in 1926, 173,554 pupils. Of these, 149,294 were in the elementary schools and 24,568 in the high schools. Expenditures for public school education in the State formed a total of \$15,333,835. The salaries of teachers averaged \$105.23 a month.

CHARITIES AND CORRECTIONS. The North Dakota State Board of Administration, from the time of its creation in 1919, exerted full control of all State institutions. Those under its charge included not only the welfare institutions but the State university and no less than eight other State schools of higher learning. It likewise had physical charge of the State Capitol and of State property. The welfare institutions reported under its control and their respective populations in 1927 were: School for the Deaf, Devil's Lake, 115; School for the Blind, Bathgate, 32; Tuberculosis Sanatorium, Dunkeith, 116; Institution for the Feeble-minded, Grafton, 528; Hospital for the Insane, Jamestown, 1437;

State Training School, Mandan, 180; State Penitentiary, Bismarck, 305. According to statistics of the Department of Commerce, patients in the State hospital for mental diseases on Jan. 1, 1927, numbered 1400, 236 having been admitted in 1926; the number admitted as prisoners in 1926 to the State Prison was 210.

LEGISLATION. The Legislature convened in regular biennial session on January 4. A bill was passed to abrogate the system in virtue of which the State fund had sole possession of the field of furnishing insurance to cover workmen's compensation contingencies, and permitting insurance in this field by companies; but the Governor vetoed this measure. A bill to forbid the teaching of the theory of evolution was defeated in the Legislature. The State law prohibiting the sale of snuff was repealed. The State law relating to the debt incurring powers of the municipalities was consolidated into a single enactment, in which the debt limit for the local governmental bodies was set at 5 per cent of assessed valuations.

POLITICAL AND OTHER EVENTS. The State Railroad Board opened, April 7, an investigation of the railroad freight rates on all fuel products produced or used within the State. Owing to the harvesting of a larger spring wheat crop than in the previous year, and to the prevalence of moderately good farm product prices, business conditions in the State improved in the autumn and were in general notably better than in some years.

OFFICERS. Governor, A. G. Sorlie; Lieutenant-Governor, Walter Maddock; Secretary of State, Robert Byrne; State Treasurer, C. A. Fisher; Auditor, John Steen; Attorney-General, George F. Shafer; Superintendent of Public Instruction, Bertha R. Palmer.

JUDICIARY. Supreme Court: Chief Justice, Luther E. Birdzell; Associate Justices: A. M. Christianson, A. G. Burr, John Burke, W. L. Nuessle.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education at University Station, Grand Forks, N. D.; founded in 1883. The enrollment for the autumn of 1927 was 1685, of whom 1034 were men and 651 women. This number was distributed as follows: graduates, 37; liberal arts, 764; commerce, 123; education, 364; engineering, 211; law, 65; medicine, 51; and high school, 70. For the summer session of 1927 the total registration was 461, of whom 168 were men, and 293 women. The faculty numbered 128. The productive funds totaled \$1,700,000 and the income for the year \$816,000, exclusive of boarding department and trust funds, being derived as follows: from Federal land funds, \$65,000; student fees and rent, \$62,000; other local income, \$68,000; state appropriation for maintenance, \$500,000; State appropriation for buildings and improvements, \$100,000; and State appropriation for public service, \$21,300. The general university library contained 90,000 volumes. President, Thomas F. Kane, Ph.D., LL.D.

NORTHERN TERRITORY. A territory belonging to the Commonwealth of Australia, situated in the central and northern part of the island continent; transferred to the Commonwealth, Jan. 1, 1911. Area, 523,620 square miles; population, according to the census of 1921, exclusive of aborigines, 3367; estimated in 1927, 4066. The aborigines are estimated to number

about 20,000. Principal town, Darwin, on the harbor of Port Darwin. While the soil is capable of a varied production of crops of tropical and semi-tropical zones, agriculture has not been developed chiefly because the climate is unsuitable for Europeans. Down to June, 1925, the total value of all minerals produced was £3,400,420. The imports in 1925-26 were £20,636; exports, £41,944; revenue, £81,812; expenditure, £339,299; debt, £2,270,097. Administrator, F. C. Urquhart.

NORTHWESTERN UNIVERSITY. A co-educational institution of higher education at Evanston and Chicago, Ill.; founded in 1851. It is composed of the college of liberal arts, the graduate school, the school of engineering, and schools of commerce, journalism, music, education, and speech, in Evanston; and the schools of law, medicine, dentistry, commerce, and journalism, in Chicago. For the autumn term of 1927 there was an enrollment of 9690, of whom 4250 were registered in the school of commerce in Chicago. For the summer session of 1927, 1963 students were enrolled. The faculty of the University numbered 742, an increase of 40 over 1926. The endowment, as of June 30, 1927, was \$14,979,691.46, and the income from these funds for the fiscal year 1926-27 was \$769,092.84. In the various libraries of the University there were approximately 270,000 bound volumes and 140,000 pamphlets. President, Walter Dill Scott, Ph.D., LL.D.

NORTHWEST PROVINCES. The Prairie Provinces of Canada. See CANADA.

NORTHWEST TERRITORIES. The term applied to the large tract in Canada to the east of the Yukon Territory, stretching northward to the Arctic from the Prairie Provinces and westward to the north of Hudson Bay and Hudson Strait; comprising the territories formerly known as Rupert's Land and the Northwestern Territory, excepting those portions which form the provinces of Manitoba, Saskatchewan, Alberta, and the Yukon Territory. Area, 1,322,954 square miles; population, according to the census of 1921, 7988. They are under the administration of the Northwest Mounted Police, directed by a commissioner at Ottawa, aided by a deputy commissioner, and a council of five. Commissioner, William Wallace Cory.

NORWAY. A constitutional monarchy of northwestern Europe, occupying the western and northern half of the Scandinavian peninsula and separated from Sweden by the Kjolen Mountains, with an extreme length of 1110 and an extreme width of 250 miles; formerly united with Sweden, but separated, June 7, 1905. Capital, Oslo.

AREA AND POPULATION. The area is 124,064 square miles and the population according to the census of 1920, 2,649,775, of whom 1,864,371 lived in rural districts. The capital, Oslo, had a population of 258,483 on Dec. 1, 1920. Other large cities with their populations in 1920: Bergen, 91,443; Trondhjem, 55,030; and Stavanger, 43,778. Before Jan. 1, 1925, the capital, Oslo, was called Christiania. The movement of population in 1925 was: Births, 58,254; deaths, 30,228; marriages, 16,292; emigration, 7099, of whom 6110 went to the United States.

EDUCATION. Elementary instruction is compulsory, the school age being from 6½ to 14 in towns and seven to 14 in rural districts. According to the latest available statistics, there

were in the country districts 5892 public elementary schools with 294,612 pupils and in towns 3466 classes with 112,753 pupils. There were also 228 secondary schools and 13 normal schools. The only university is at Oslo.

PRODUCTION, ETC. Almost three-fourths of the land of Norway is unsuitable for cultivation. Of the remainder over four-fifths is forest. According to the *Statesman's Year Book* for 1927, the acreage and produce of the principal crops for 1925 were as follows:

Crops	Acreage		Produce (quarters)
	1925	1925	
Wheat	22,027	59,569	
Barley	138,901	596,330	
Oats	240,558	1,252,243	
Rye	22,131	74,414	
Mixed corn	18,773	100,631	
Potatoes	116,634	38,065,610 ^a	
Hay	1,639,177	2,428,391 ^b	

^a bushels, ^b tons.

The latest livestock census showed 183,887 horses; 1,150,617 cattle; 1,523,819 sheep; 275,783 goats, and 252,950 swine. The forests and fisheries are the two chief single sources of wealth. The timber exports were valued at 73,701,957 crowns in 1925 and wood pulp and paper at 312,960,720 crowns. The fisheries were valued at approximately 132,098,000 crowns. Pyrite is the most important mineral product for both its sulphur and copper content. The production of ore in 1926 amounted to approximately 25,000,000 crowns as compared with about 32,000,000 in 1924 and 1925. The decline in value was largely attributable to the rise of exchange, although export figures showed a reduction in the output of ore as well. There were 10,190 manufacturing establishments, which employed 145,900 workers.

COMMERCE. Norway's foreign trade, by value, showed a considerable decline in 1926 as compared with 1925, both imports and exports having fallen off; the former dropping to 1,093,000,000 crowns from 1,379,000,000 crowns, and the latter to 811,000,000 crowns from 1,047,000,000 crowns. The actual trade, however, did not show a corresponding decrease, as the substantial drop in import and export values was largely accounted for by the appreciation of the crown from an average annual value of \$0.1788 for 1925 to \$0.2233 for 1926, and to declining prices in world markets. Norway's import surplus apparently was reduced from 332,000,000 crowns to 282,000,000 crowns in 1926, but, computed on a gold basis, there was actually a slight increase in Norway's import surplus during 1926, the rise in the value of the crown during that year having been about 24 per cent. Consequently a comparison by crown values of Norway's foreign trade during the last two years is very misleading. As compared with 1925 there was in 1926 an increase of goods imported for consumption, but imports of goods for productive purposes decreased. This change is undoubtedly attributable to the appreciation of the crown, which facilitated foreign competition and reduced domestic activity.

Many of Norway's important export items increased in volume in 1926, as compared with 1925, especially fish, canned goods, cod-liver oil, worked metals, and Norway nitrates, with the result that the total volume of exports in 1926 was about 6 per cent above the 1925 level and

about 18 per cent above the 1913 level. Exports of timber, cellulose, and paper dropped appreciably, as a result of a labor conflict in the paper industry, Aug. 15, 1926, which lasted until October 5. The sharp decline in exports of

cement (included in "Mineral Manufactures") from 174,018 metric tons in 1925 to 29,055 metric tons in 1926 likewise is attributable mainly to a labor conflict which caused a long stoppage of work.

FINANCE. The state budget for 1927-28 was voted in Parliament of July 5, 1927, and provided for a total of 398,100,000 crowns, as against the government's original proposal of 384,000,000 crowns. This represents a further reduction from the two previous fiscal years, when the approved budgets were estimated at 413,000,000 crowns in 1926-27 and 440,500,000 crowns in 1925-26. The budgets in the past two fiscal years have been characterized by retrenchment.

The 1927-28 budget included a new income item of 25,000,000 crowns provided through the abolition of prohibition. In addition to the approved total for the current fiscal year there was to be added 15,000,000 crowns to cover losses by the State through participation in the efforts to control the currency under the so-called exchange agreement. At the same session Parliament voted a reduction of 10 per cent in the wages of State employees, effective January 1, 1928.

Norway's debt to foreign countries was reduced by about 170,000,000 crowns during 1926. This reduction, however, was only nominal, since the greater part of it represents merely the appreciation in value of the Norwegian crown. If both that part of the debt which is in foreign currency and that part which is in Norwegian crowns be calculated on a gold basis, the result shows an increase during 1926 of 95,000,000 gold crowns. The movements of the most important groups from May 1, 1919, to Jan. 1, 1927, are shown in the accompanying table in the following column.

Since the decision in August, 1927, by the Supreme Court of Norway that a commune (township) or municipality may be declared bankrupt, six communes have declared their inability to meet their financial obligations and

have been placed under the supervision of the central administration. The present financial difficulties were not a sudden development, but rather the cumulative result of heavy borrowing during the difficult post-war years.

COMMUNICATIONS. The total registered mercantile marine of Norway on Jan. 1, 1926, consisted of 3698 vessels of 1,661,904 net tons. During 1925, 9360 vessels of 6,380,624 tons entered the ports of Norway and 9343 vessels of 6,322,770 tons cleared. Norway at the close of June 1926, had 4400 kilometers of railroad, of which 3997 kilometers were State owned and 403 kilometers privately owned. The total includes 165 kilometers of electrically operated lines, of which 123 kilometers were state-owned. The operating revenues of state railways during the year amounted to 96,688,606 crowns, and operating expenses to 92,187,002 crowns; other revenues reached 3,453,948 crowns and other expenses 3,027,900 crowns. The rolling stock in operation comprised 557 locomotives, 12,711 freight cars, and 1122 passenger cars. The competition from motor bus operation has affected certain sections of the state railways so keenly that railway passenger earnings had steadily declined. The railway authorities solicited the government to operate motor buses in connection with the trains. A committee has been organized in the Norwegian Parliament to study this question and to report on the relation between railway operation and bus traffic.

Operating revenues of the privately owned railways during 1926 totaled 4,417,108 crowns, and operating expenses 3,810,867 crowns; other operating revenues amounted to 177,634 crowns and other expenses to 527,468 crowns. The rolling stock in operation at the close of the year consisted of 45 locomotives, 651 freight cars, and 65 passenger cars. The equipment was in good condition.

ARMY AND NAVY. Military service is universal and compulsory from the age of 18 to 55. The strength of the regular force in 1926 was 1160 officers and 3245 other ranks; the numbers trained in that year were approximately 20,000; and the number available on mobilization, 300,000. The military budget for 1926-27 was 31,819,500 crowns. The main vessels of the fleet numbered only four, and were of old model. In addition there were a number of destroyers, torpedo boats, minelayers, and submarines, with about 36 seaplanes and 20 other planes. The entire navy is designed for coast defense duty. The

naval budget for 1926-27 was 12,040,802 crowns.

GOVERNMENT. Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the parliament or Storting of 150 members, elected by universal suffrage, without distinction of sex. King in 1927, Haakon VII (born Aug. 3, 1872; elected King, Nov. 18, 1905). The members of the cabinet, appointed Mar. 5, 1926, were: Premier and Minister for Foreign Affairs, I. Lykke; Education and Ecclesiastical Affairs, W. C. Magelsen; Justice, K. Øyen; Agriculture, O. L. Baerøe; Public Works, A. Venger; Social Affairs, P. A. Morell; Finance, F. L. Konow; Defense, I. E. Christensen; Commerce and Industry, D. Robertson.

HISTORY. Early in April the Norwegian Parliament translated into law the popular vote which was held on the prohibition question which came before the people in October, 1926. (See preceding YEAR BOOK.) The complete abolition of the prohibition law was not provided for and a certain amount of local option was granted. In towns of 4000 or less a referendum must be held on the subject every six years to determine the attitude of that town for the succeeding six years. Certain hours were provided for the sale of liquor, which was not to be sold or served to minors. The sale was prohibited on holidays and the days immediately preceding or following such days. Norway first adopted prohibition in 1917 and absolute prohibition was approved by the voters at a special referendum in 1919. The government attempted to repeal the measure in 1924 but was defeated on the issue, whereupon the referendum of 1926 was planned by the succeeding government. The resumption of the liquor traffic caused very little excitement or interest throughout the country.

In October a general election was held which resulted in sharp gains for the Labor group, which returned 59 members as compared with 34 in the former Storting. It was generally believed that the falling off in the membership of Conservatives and Liberals was due in a large measure to the period of severe depression which the country had suffered throughout the year.

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution of higher education at Notre Dame, Ind.; founded in 1842. The enrollment for the autumn term of 1927 was 2850, which represented an increase of 218 over 1926-27. The summer session enrollment was 915. The faculty numbered 163, of whom 13 were new members. The library contained approximately 200,000 volumes. President, the Rev. Matthew J. Walsh, C.S.C., Ph.D.

NOVA SCOTIA, nō'vā skō'shā. One of the Maritime Provinces of Canada. Area, 21,428 square miles; population, according to the census of 1921, 523,837. Capital, Halifax, with a population in 1921 of 53,372. Other large towns: Sydney, 22,545; Glace Bay, 17,007; Amherst, 9908; Dartmouth, 7899; New Glasgow, 8974; Sydney Mines, 8327; Truro, 7562; Yarmouth, 7093. In 1924 the movement of population was: Births, 11,801; deaths, 6533; marriages, 2999. Education is free, compulsory, and undenominational. There are four universities and 3062 schools, with 3381 teachers and 116,871 pupils.

In the technical schools there were 4519 pupils. Nova Scotia is largely an agricultural and fruit-growing country. The chief product is apples, the output of which, in 1925, was about 1,147,267 barrels. The output of the chief minerals in 1925 was: Coal, 3,288,321 long tons; crude gypsum, 471,174 short tons; coke, 198,926 short tons; and small quantities of steel ingots, pig iron, limestone, and dolomite. Nearly 24,000 men are employed in the fisheries, which, next to British Columbia, are the most extensive in Canada. The total market value of fish caught in 1925 was \$10,500,000. The imports for consumption in 1925 were valued at \$22,068,108 and the exports at \$13,940,356. There are 1451 miles of railway.

Executive power is vested in a lieutenant-governor appointed by the Dominion government of Canada for five years, who acts through a responsible ministry or council; and legislative power in a council of 21 members appointed for life by the crown, and an assembly of 43 members. The province is represented in the Dominion senate by 10 members and in the house of commons by 16. Lieutenant-governor in 1927, James C. Tory; Premier, Provincial Secretary, and Treasurer, E. N. Rhodes; Public Works and Mines, Col. G. S. Harrington; Attorney-General, W. L. Hall; Highways, P. C. Black; Natural Resources, J. A. Walker; Ministers without Portfolios, Dr. Le Blanc and J. F. Fraser.

NOVAYA ZEMLYA, Nō'vā Zem'bla. The Soviet government renewed its activities in the archipelago of Novaya Zemlya. On June 30, 1924, it issued a decree centralizing its interests in the arctic islands to the north of European Russia. It appointed a commissioner who, from his headquarters at Archangel, supervises the affairs of these islands, of which the most important are the north and south islands of Novaya Zemlya, Kolguev and Waigatch.

NUNGESSER, CAPTAIN CHARLES EUGÈNE JULES MARIE. French aviator who was lost in the Atlantic Ocean about May 8. He was born in Paris on Mar. 15, 1892. He attended the professional college at Armentières and later the School of Arts and Crafts at Lille. In 1910 he was employed as mechanic at La Brayelle Aerodrome near Douai, where, without a teacher, he succeeded in learning to fly. He then went to Argentina, South America, and led the life of a cowboy. At the outbreak of the World War he returned to France and was drafted into the Second Hussars. After a few weeks on the firing line he won the rank of brigadier and transfer to the Aviation Corps where he distinguished himself. By the time of the Armistice this French ace had accounted for 45 enemy planes and two balloons. He also had won 28 palms to his military cross, had received 17 wounds and scars, and had been honored with military distinction by all the allied countries. In the early morning of May 8, 1927, with François Coli he started from Le Bourget, Paris, to attempt a non-stop flight to New York and nothing more was heard of them or the plane. See AERONAUTICS.

NUTRITION, HUMAN. See FOOD AND NUTRITION.

NUTS. See HORTICULTURE.

NUTTING, CHARLES CLEVELAND. An American geologist, died at Iowa City, Iowa, on January 23. He was born in Jacksonville, Ill., May

25, 1858, and was educated at Blackburn University, receiving degrees in 1880 and 1882. He conducted various scientific explorations in Central America for the Smithsonian Institution (1882-84), in Florida (1885) on the Saskatchewan River (1891) and was naturalist of the *Albatross* Hawaiian expedition in 1902. In 1890 he became professor of zoology at the University of Iowa, and from 1896 was professor of zoology and curator of the American Museum of Natural History in New York.

NYASSALAND, or NYASALAND, PROTECTORATE. A British protectorate, formerly known as British Central Africa; situated on the southern and western shore of Lake Nyassa, extending northward to the Zambezi River. Area, 37,890 square miles; population in 1925, 1458 Europeans, 724 Asiatics, and 1,205,801 natives. The chief towns are Blantyre and Zomba, the seat of the government. Education is in the hands of foreign missionary societies, under which there were in 1925, 2663 schools, with 197 European teachers, 163,804 pupils enrolled and an average attendance of 111,509. Among the chief products are tobacco, coffee, cotton, tea, and livestock. The imports in 1925-26 were valued at £591,654; and exports at £564,926. The chief articles of export are tobacco, cotton, fibres, corn and tea; of import, manufactures of cotton, provisions, and raw materials. Great Britain supplied more than half of the imports. Revenue for 1925-26 was estimated at £322,160 and expenditures at £301,934. The administration is under a commander-in-chief, aided by an executive and legislative council, composed of nominated members. Governor and Commander-in-Chief in 1927, Sir C. C. Bowring.

OATS. The production of oats in 1927 of twenty-eight countries reporting to the International Institute of Agriculture, Rome, was estimated at 3,386,584,000 bushels, which was slightly less than the production of these countries in 1926 and only 1.6 per cent above their average yield for the five years 1921-1925. The acreage was reported as 1.3 per cent below that of the preceding year and of the five-year period. The leading countries in 1927, as estimated, produced the following yields: Canada 480,697,000 bushels, Germany 434,687,000 bushels, France 372,539,000 bushels, Poland 235,549,000 bushels, Czechoslovakia 90,742,000 bushels, and Sweden 77,416,000 bushels. In 1926 Great Britain produced about 180,000,000 bushels and the Soviet Republics 987,679,000 bushels. Argentina, the principal oat producing country of South America, reported a yield of 66,276,000 bushels for the crop year 1926-1927. The 1927 oat crop of the United States, as estimated by the Department of Agriculture, was 1,195,006,000 bushels grown on 42,227,000 acres, or at the rate of 28.3 bushels per acre. In 1926 the production was 1,246,848,000 bushels on 44,177,000 acres and the rate per acre 28.2 bushels. A survey concluded during the year pointed out that the average yield per acre of oats in the last forty years has increased 14 per cent corresponding to an increase in the average annual production of about 165,000,000 bushels. On the basis of the average farm price on December 1, 45c. per bushel, the total value of the 1927 crop was \$537,276,000 and the total value of the 1926 crop on a corresponding basis of 39.8c. was \$496,582,000.

Oat production was reported by all states and those reporting the highest production were the

following: Iowa 197,076,000 bushels, Minnesota 120,493,000 bushels, Illinois 102,204,000 bushels, and Wisconsin 93,247,000 bushels. The average yield per acre ranged from 11 bushels in Florida to 50 bushels in Washington, and the average farm price per bushel on Dec. 1, 1927, from 35c. in North Dakota to 80c. in Florida. During the year ended June 30, 1927, the United States exported 9,245,000 bushels of oats and 104,334,000 pounds of oatmeal and imported 99,000 bushels in the form of grain. The average cost of producing oats in 1926, as reported by the Department of Agriculture and based on 4045 reports, was \$17.99 per acre and 53c. per bushel. A new variety of oats developed cooperatively by the Department of Agriculture and the Iowa Agricultural Experiment Station and described as having high yielding power, stiffness of straw and resistance to stem rust, was distributed to farmers in 1927 under the name of "Logold." In the sections infested by the European corn borer farmers are advised not to continue to sow oats in disked corn stubble, as the stalks remaining in the fields afford favorable living conditions for the insect.

OBERLIN COLLEGE. A non-sectarian co-educational college at Oberlin, Ohio; founded in 1833. The registration for the autumn term of 1927 was 1669, while that of the summer session was 220. In 1926-27 the faculty had 226 members. The productive funds of the institution amounted to \$14,222,796, and the income for the year to \$1,290,531. The library contained 285,417 bound volumes and 195,759 unbound volumes. A gift of \$100,000 from Andrew H. Noah, of Akron, announced in November, was the first contribution to a fund to be raised for the construction of residence halls for male students. President, Ernest Hatch Wilkins, Ph.D., Litt. D.

OBITUARY RECORD OF THE YEAR. See NECROLOGY.

O'BRIEN, EDWARD CHARLES. American diplomat, died June 21 at Montevideo, Uruguay. Born Apr. 20, 1860, at Fort Edward, New York, he was educated at Granville (N. Y.) Military Academy and at Georgetown University. He became disbursing officer for the House of Representatives at Washington, D. C., in 1889, and was president of the Board of Docks of the City of New York from 1895 to 1898. In 1905 he became Minister to Paraguay and Uruguay serving until 1909 when he resigned.

OCEANIA, Ōshē-ān'ia, FRENCH ESTABLISHMENTS IN. A French colonial possession, consisting of groups of small islands, scattered throughout a wide area of the eastern Pacific. The total area of the establishments is estimated at 1520 square miles; population in January, 1924, 31,703, of whom 25,569 were natives. The principal island is Tahiti, which contains the chief town, Papeete, with a population of 4601, of whom 2126 are Frenchmen. The group of islands of which Tahiti forms a part is known as the Society Islands. The other groups are the Marquesas Islands, Tuamotu Island, Leeward Islands, the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. Various tropical fruits are grown and exported. Pearls and mother-of-pearl are important products. Imports in 1925, 43,966,400 francs; exports, 50,550,511 francs. The chief imports are tissues, wheat, flour, and metal work, and the chief exports, copra, mother-of-pearl, vanilla, coconuts,

and phosphates. The local budget for 1926 was expected to balance at 11,590,633 francs. The most important islands are connected by a New Zealand steamship company with San Francisco, New Zealand, and Australia. The administration is in the hands of a governor assisted by an administrative council.

O'CONNELL, DENNIS JOSEPH. Roman Catholic bishop, died at Richmond, Va., on January 1. He was born at Charleston, S. C., and was educated in his native city at St. Charles' Seminary and St. Mary's College. After being ordained priest he became secretary to Cardinal Gibbons at Baltimore. For some time he was head of the American College in Rome, Italy, and on his return was appointed rector of the Catholic University of America. He was consecrated auxiliary bishop of San Francisco in 1909, and bishop of Richmond, Va., Jan. 16, 1912.

O'DONNELL, PATRICK. Irish Roman Catholic cardinal, died at Carlingford, County Louth, on October 22. He was born on Nov. 23, 1855, at Glenties, County Donegal. His ancestors had been leaders in Donegal almost since the beginning of Irish history. He was educated at Maynooth University, and turned to the church when a very young man. He became successively priest, rector and monsignor until, at the unusually early age of 32, he was consecrated Bishop of Raphoe, Donegal. He was then the youngest bishop in the world. After the death of Cardinal Logue, in 1924, he was elevated to the archbishopric of Armagh and primacy in Ireland, and he was called to Rome and made a cardinal on Dec. 14, 1925.

OFFICERS RESERVE CORPS. See **MILITARY PROGRESS.**

O'HIGGINS, KEVIN CHRISTOPHER. Irish statesman, died at Blackrock, Dublin, July 10. He was born at Stradbally, June 7, 1892, and was educated at Saint Patrick's College, Carlow, and the National University of Ireland. He studied law until 1918 when he entered into the Sinn Fein movement. He was appointed Minister of Home Affairs in 1919 and began to introduce measures to bring peace to the country, insisting always that the Republicans should surrender, lay down their arms and fight their political battles with ballots. When the Irish Free State came formally into being in 1922 he continued to act as Minister of Home Affairs. He was inflexible in his insistence upon the observance of the oath of allegiance to King George, which he termed "a strict but fair interpretation of the Anglo-Irish treaty."

The maintenance of such an attitude and utterances like this made him hated and he came later to be called "the Mussolini of Ireland." But he did not fear criticism even within his own boundaries if the criticism was legal and in accordance with the Constitution. A few months before his death he demurred at a suggestion of President Cochrane to initiate steps for a censorship of the press because, he said, in a country like Ireland one must be careful to see that the press is kept free. He ignored the visit of an emissary of the Pope to investigate conditions in Ireland. He paid no heed to a proposal for a truce from De Valera, and he opposed the release of political prisoners. In 1924 when there came a mutinous communication from officers in the Irish Free State army he led in the ousting of the entire Army Cabinet. In 1925 he was made Minister of Justice. On June 23,

1927, on the return of the government to power he took over the Ministry of Foreign Affairs in addition to the Ministry of Justice. He also acted as vice president of the Executive Council. A few days after his return from Geneva, where he had attended the League of Nations Conference, he was murdered. He was the author of *Civil War and the Events Which Led to it* (Dublin, 1922). See **IRISH FREE STATE**, under *History*.

OHIO. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 5,759,394. The estimated population on July 1, 1927, was 6,710,000. The capital is Columbus.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	3,376,000	109,720,000	\$84,484,000
	1926	3,591,000	147,231,000	88,389,000
Hay	1927	3,144,000	5,186,000*	47,483,000
	1926	2,943,000	4,089,000*	56,584,000
Wheat, winter	1927	1,610,000	28,890,000	36,225,000
	1926	1,789,000	40,252,000	51,120,000
Wheat, spring	1927	5,000	88,000	110,000
	1926	6,000	132,000	166,000
Oats	1927	1,900,000	60,800,000	27,860,000
	1926	1,980,000	75,240,000	29,844,000
Potatoes	1927	118,000	12,180,000	14,616,000
	1926	107,000	10,058,000	17,099,000
Tobacco	1927	29,000	24,012,000*	3,746,000
	1926	44,200	37,389,000*	3,776,000
Barley	1927	155,000	4,185,000	3,013,000
	1926	116,000	3,712,000	2,301,000
Sugar beets	1927	37,000	381,000*	...
	1926	35,000	340,000*	2,383,000

* tons, † pounds.

MINERAL PRODUCTION. Ranking second among the States in the production of pig iron in 1925, Ohio slightly increased its pig iron output in 1926, shipments from the blast furnaces attaining 9,177,127 long tons in 1926, as against 8,857,615 tons in 1925; in value, \$176,433,401 for 1926 and for 1925, \$173,418,068. Coal production, on the other hand, again declined somewhat, to 27,872,488 net tons for 1926, from 28,034,112 tons for 1925. The value of the coal produced in 1926 was \$54,759,000; in 1925, \$54,057,000. The number of mines reckoned as of commercial size that operated in 1926 was 625; in 1925, 639; and in 1924, 750. The coking industry was less active, by-product ovens yielding in 1926, 4,547,836 short tons of coke, as compared with 7,105,129 tons in 1925; in value the yield was higher, however, being \$40,344,524 in 1926, and in 1925, \$34,190,691. After iron, clay products furnished the highest contribution to the yearly mineral production. They attained the value of \$97,991,821 for 1925, the latest year of available statistics; for 1924, of \$97,831,641. In their production Ohio led all other States. Natural gas was produced to the quantity of 43,235,000 M cubic feet in 1925, and in 1924 of 47,396,000 M cubic feet; in value \$22,377,000 for 1925 and for 1924, \$24,203,000. From the natural gas were extracted, during 1926, 9,900,000 gallons of gasoline, as against 8,701,000 gallons in 1925; in value, \$1,275,000 for 1926 and for 1925, \$990,000. Petroleum production was 7,322,000 barrels in 1926; in 1925, 7,212,000 barrels. The product was valued at \$19,500,000 for 1926 and for 1925 at \$18,280,000. The leading producer of lime,

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	1,131,000	1,455,000 ^a	13,408,000
	1926	1,121,000	1,322,000 ^b	14,328,000
Oats	1927	1,112,000	21,128,000	9,296,000
	1926	1,340,000	37,520,000	13,882,000

^a bales, ^b tons

MINERAL PRODUCTION. Increased yearly production of petroleum raised the State in 1926 to the second rank in regard to quantity of petroleum produced, and to that of the leading producer, in point of the value of the year's petroleum output. There were produced in 1926, 179,272,000 barrels of crude petroleum, as against 176,768,000 barrels in 1925; in value, \$410,000,000 as estimated for 1926, and \$348,230,000 for 1925. Natural gas production in 1925 was 249,285,000 M cubic feet; for 1924, 214,452,000 M cubic feet. In value it was \$36,121,000 for 1925 and for 1924, \$31,045,700. From natural gas were refined in 1926, 478,500,000 gallons of gasoline, as compared with 390,861,000 gallons in 1925; in value, \$41,400,000 for 1926 and for 1925, \$40,973,000. Zinc production declined slightly to 272,567 short tons for 1926, from 283,371 tons for 1925; in value it was \$40,885,050 for 1926 and for 1925, \$43,072,392. There were mined 69,704 short tons of lead in 1926; in 1925, 79,946 tons. The product for 1926 had a value of \$11,152,640; for 1925, of \$13,910,604. The quantity of coal mined in 1926 was 2,842,673 net tons; in 1925, 2,325,840 tons. Coal produced was valued at \$9,042,000 for 1926 and for 1925 at \$7,667,000. The output of gypsum, clay products and stone was considerable. The total of the State's mineral production in 1925, duplications eliminated, was \$501,767,118, in 1924, \$393,030,665.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$15,598,617; their rate per capita was \$6.73. They included \$1,903,822 apportioned for education. Totals not included in the above, of \$138,539 in interest and of \$14,162,095 in permanent improvement outlays, brought the aggregate of State expenditure to \$29,899,851. Of this, \$13,302,681 was for highways; \$2,002,111 being for maintenance and \$11,300,570 for construction.

Revenue receipts were \$30,929,038; or per capita, \$13.34. Of their total, property and special taxes yielded 17.1 per cent, attaining a per capita rate of \$2.28. Earnings of departments and compensation paid the State for officials' services furnished 7.6 per cent of revenue; 44.4 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles and from the gross production tax and the sales tax on gasoline.

Net State indebtedness on June 30, 1926, was \$3,336,826, or \$1.44 per capita. Property subject to ad valorem taxation bore a valuation of \$1,674,826,952. State taxes levied thereon were \$4,187,067, or \$1.81 per capita.

TRANSPORTATION. The number of miles of railroad line in the State January 1, 1927, was 6,

580.97. In 1927 were built, according to the *Railway Age*, 57.02 miles of first track.

EDUCATION. Legislation for the equalization of school standards played an important part in the educational activity of the year. The Legislature appropriated \$1,500,000 a year to be distributed among school districts with the purpose of enabling them to maintain at least an eight-month school term. A rural school aid act was also passed. The number of pupils enrolled in the public schools of the State in the scholastic year 1924-1925 was 654,742, of whom 330,352 were boys and 324,390 were girls. The average daily attendance in grade schools was 386,549; in high schools, 70,223. Expenditures on the schools were, for general control, \$1,461,304; for salaries and instructional service, \$19,037,744; total including debt service and other expenditure, \$27,409,395. The average of the salaries of 18,401 teachers was \$1,001.04.

CHARITIES AND CORRECTIONS. Leading State institutions for the care and custody of individuals were: State Penitentiary, McAlester; State Reformatory, Granite; State Industrial School for Girls, Tecumseh; State Training School, Pauls Valley; State Industrial School for Colored Girls, Taft; State Training School for Negro Boys, Boley; School for the Deaf, Sulphur; Oklahoma School for the Blind, Muskogee; State Institute for the Feeble-minded, Enid; State tuberculosis sanatoria at Clinton and Tahlequah; Soldiers' Tubercular Sanitarium, Sulphur; Union Soldiers' Home, Oklahoma City; Oklahoma Confederate Home, Ardmore; State hospitals for the insane at Norman and Vinita; Western Hospital for the Insane, at Supply; Walker State Home; West Oklahoma School for White Children, Helena; Deaf, Blind and Orphans' Institute (colored), Taft. Inmates of State prisons and reformatories on January 1, 1927, according to statistics furnished by the U. S. Department of Commerce, numbered 2681; patients in State hospitals for mental disease, 3566.

LEGISLATION. The Legislature convened in regular biennial session January 4, and adjourned March 24. Appropriations made by the session totaled about \$33,000,000. A bill to permit the piping out of the State of natural gas originating in Oklahoma was enacted but vetoed by the Governor. A supreme court commission was created, to consist of seven members, nominated by the Governor, and approved by at least seven members of the court. Further regulations of the insurance companies were enacted in a measure sent to the Governor. A two-mill State tax levy was applied. A measure was enacted requiring that municipal bonds to be issued by subdivisions of the State should be repaid gradually in installments year by year.

POLITICAL AND OTHER EVENTS. Gov. Henry S. Johnston was inaugurated in January and soon became involved in bitter political differences with members of the legislative majority. By resolution of the State Senate he was asked, February 25, to dismiss his executive secretary, Mrs. O. O. Hammond, and declined to do so. Soon after assuming office he removed certain of the members of the Insurance Board, and of the Flood Control Commission, and removed the entire Highway Commission, against whom there had been complaint. Advocates of a proposed increase in the production tax on petroleum, lead and zinc demanded in September that he call a special election for the early

ratification of the desired measure. They presented a petition said to contain 50,000 signatures, but the Governor declined to call a special election, thus leaving the proposal to be voted on at the next succeeding general election. In October certain members of the Legislature petitioned the Governor to call a special session, and, on his failing to do so, a call for a session was issued over the names of four Legislature members.

The purpose of the session was to institute an impeachment of the Governor. An injunction against the members seeking to convene the Legislature was sought by the State administration, and was denied in the District Court at Oklahoma City November 28. The State Supreme Court shortly after reversed the lower court and granted an injunction against the holding of a session. Members of the Legislature, in sufficient number for a quorum of either house, nevertheless gathered at the capitol on December 6. At first they were admitted, but later on an armed force of National Guardsmen under the command of the adjutant-general prevented their access to the legislative chambers. The members of the lower house, to the number of 52 acted as an investigating committee, meeting at the Huckins Hotel, and after several days a bill of impeachment was found. Senators, to the number of about 38, subsequently met, despite court action, in an Oklahoma City hotel, to take action on the impeachment.

The Governor obtained a District Court injunction against the Senate members to forbid their holding an impeachment trial. They passed a resolution affirming the exclusive jurisdiction of their own body as a court in impeachment matters, December 28. On the following day, however, the Senate members adopted the view of the group holding that the session was not regularly convened and the impeachment bill not legally found. In this course the Senators' vote coincided with the position of the State Supreme Court, that the statutory Section 79, a measure initiated at the polls some years before, providing for the calling of the Legislature by action of its own members, was unconstitutional.

The U. S. Supreme Court refused February 21 to review the case relating to the Red River boundary between Oklahoma and Texas. Heavy petroleum production in the State, particularly in the Seminole field, in the course of the year, caused disturbance in the oil industry. A number of the producers in Oklahoma united in an effort to check the hasty drawing of oil from this field, and on May 12 named a Tulsa operator, Ray H. Collins, to act as industrial dictator, to take steps to promote economical production. Oklahoma City by a popular vote of November 29 approved bond issues to a total of \$10,329,000 for storm sewers, a conduit, public school improvements, acquisition of railroad property in the city, and other purposes.

OFFICERS. Governor, Henry S. Johnston; Lieutenant-Governor, W. J. Holloway; Secretary of State, Graves Leeper; State Auditor, A. S. J. Shaw; Attorney-General, Ed Dabney; State Treasurer, R. A. Sneed; Superintendent of Public Instruction, John S. Vaughan; State Examiner and Inspector, John Rogers.

JUDICIARY. Supreme Court Justices: Charles W. Mason, E. F. Lester, James I. Phelps, John

B. Harrison, Robert A. Hefner, Albert C. Hunt, Fred P. Branson, J. W. Clark, Fletcher Riley.

OKLAHOMA, UNIVERSITY OF. A coeducational State institution of higher education at Norman, Okla.; founded in 1892. The enrollment for the autumn of 1927 totaled 4898, of whom 3204 were men and 1694 were women. These were distributed as follows: graduate school, 194; arts and sciences, 2730; business, 200; education, 95; engineering, 672; fine arts, 351; law, 269; medicine, 190; nursing, 93; pharmacy, 104. For the summer session 2220 students registered, including 675 men and 1545 women. The faculty had 236 members. The productive funds of the University amounted to \$3,200,000, and the income of 1926-27 to \$2,027,500, from the following sources: State appropriations, for maintenance, \$1,237,500, buildings and equipment as follows: Library, \$250,000, medical school, \$250,000, infirmary, \$130,000; land, \$10,000; from student fees, \$150,000. The library contained 80,000 volumes. President, William Bennett Bizzell, Ph.D., LL.D.

OLD AGE PENSIONS. Laudable progress had been made in mothers' pensions and workmen's compensation, for example, but in only six States in the Union in 1927 were there to be found on statute books schemes providing for old age non-contributory systems of social insurance. And this in the face of the industrialization of the country with the greater proportion of the working population reduced to the wage-earning class. It was becoming increasingly true that for this group superannuation sets in early: 45 years is considered too old for new workers in many industrial companies. It was the estimate of the American Association for Old Age Security that fully 1,800,000 aged persons in the United States were dependent upon relatives, public aid, or private philanthropy for support. The United States stood, among the populous nations, with China and India in its disregard of the problem of old age.

Point is given to these observations by the results of an extensive study of industrial pension systems made by the Pennsylvania Old Age Pension Commission. Some 3000 of the larger industrial firms in the United States were circularized. Of the 1600 replies received, only 370 firms had formal pension schemes and another 224 paid pension allowances in individual cases. The total number of recipients did not exceed 100,000. The average pension amounted to \$485 per year. Private pension systems were for the most part confined to public service industries. Only the largest and most prosperous concerns could afford private pension schemes. The report was of the opinion that private pension schemes were hopelessly inadequate in coping with old age, did not protect the employee, and that "the mixture of charity and business was hardly desirable."

PROGRESS IN UNITED STATES. At the beginning of 1927 four States had non-contributory old-age pension laws on their statute books. These were Kentucky, Montana, Nevada, and Wisconsin, as well as Alaska. During the year Colorado and Maryland passed similar laws, raising the total to six. In Wyoming the legislature passed a bill but the governor vetoed it. Legislatures of 1927 authorized the study of the plan by commission in the following States: Arkansas, California, Iowa, Maine, and New Jersey. The 1926 New York commission was con-

tinued. In Indiana, Nebraska, and Washington old age pension bills passed a single house of the legislature.

It may be of interest at this point to state the status of these American attempts to cope with the problem. In only two States were the laws operative. Montana had paid pensions since 1923 and Wisconsin (in a few counties) since 1925. In all, one thousand persons were the recipients of such pensions. In almost all the States the laws were operated through the county officials. In Nevada and Maryland the retirement age was set at 65; in the other States it was 70. In Nevada, Wisconsin, Colorado, and Maryland the maximum amount of the pension was \$1.00 per day; in Montana it was \$300 per year; in Kentucky, \$250. State residence requirements were high. Wisconsin, Colorado, and Maryland demanded a continued State residence of 15 years for eligibility; Kentucky and Nevada demanded 10 years; Montana, 25 years. The weakness of all the systems was that the pensions must come from county funds. In only one State, Wisconsin, were State contributions made and here it was but one-third of the amount paid out.

In New York State, during the year, there was considerable activity evidenced. The State Federation of Labor, at its meeting in August, decided to support actively in its legislative program an old-age pension plan. In December, a meeting, called by the American Association for Old Age Security, enlisted the support of labor, civic and fraternal organizations toward the same end. It should be said that the American Association for Old Age Security was organized early in the year for the purpose of enlisting interest in old-age pensions. Bishop Talbot of Pennsylvania was president. Abraham Epstein, formerly research director of the Pennsylvania Commission on Old Age Pensions, was executive secretary.

In the spring of 1927 Canada adopted a non-contributory old-age pension system for the whole country. The following countries had the non-contributory system: Australia, Denmark, Finland (in part), Great Britain (in part), Irish Free State, Isle of Guernsey, Newfoundland, New Zealand and Norway.

The following countries had the contributory insurance system: Austria, Belgium, Bolivia (in part), Brazil (in part), Bulgaria, Chile, Cuba (in part), Czechoslovakia, France, Germany, Great Britain, Greece, Iceland, Italy, Netherlands, Poland, Portugal, Rumania, Russia, Jugo-Slavia, Spain, Sweden, Switzerland (one canton), Uruguay.

Japan still practiced voluntary insurance exclusively.

CANADA. The Canadian non-contributory pension bill passed both houses of the Parliament in March. The general scheme for all the provinces was laid out by the act; upon acceptance by a particular province the Federal government assumed half of the pension. The maximum pension was \$240 a year. The pensioner must be: a British subject, 70 years or over, a Canadian resident for 20 years, and a resident of the province for the last 5 years, and may not have (with the pension allowance) an income in excess of \$365 per year.

OLIVER, JOHN. Canadian statesman, died in Victoria, B. C., on August 18. Born in Derbyshire, England, July 31, 1856, he had very little

schooling in his early days, going to work in the coal mines when he was 10 years of age. His family emigrated to Canada when he was 13. Always longing for independence he left home when quite a young man and took up a homestead, in the Delta district of British Columbia, which was then subject to disastrous floods, but converted gradually by him into a rich farm. Gradually he worked his way to membership in the provincial legislature, and, in a few years, notwithstanding reverses, he became known as one of the leaders of the Liberal party in British Columbia. In 1916 he received the dual posts of Minister of Agriculture and of Railways, and on Mar. 6, 1918, he became Premier of British Columbia.

OLYMPIC GAMES. The Olympic Games were to be held in 1928 at Amsterdam, Holland. According to arrangements made during 1927, it was planned to have the United States entered in practically every event with perhaps the exception of hockey and some other minor sports. Germany for the first time since the World War was to participate in this classic and it was the opinion of those competent to judge that that country would seriously challenge the supremacy won by the United States in former Olympic contests.

OMAN. An independent Moslem state in southeastern Arabia, extending for about 1000 miles along the southern coast of the Gulf of Oman; guaranteed in its integrity by Great Britain and France. Area, about 82,000 square miles; population estimated at 500,000; chiefly Arabs, but with a considerable negro element along the coast. The capital, Muscat, and the neighboring town of Matrah, have a combined population of about 20,000 made up almost entirely of negroes and Baluchis. Imports, which consist chiefly of rice, coffee, and cotton piece goods, and exports, which comprise dates, dried limes, pomegranates, and dried fish, are from and to India for the most part. The reigning Sultan in 1927 was Seyyid Taimur bin Faisal bin Turki, who succeeded his father Oct. 5, 1913.

O'MARA, JOSEPH. Irish dramatic tenor, died in Dublin, August 5. He was born in Limerick, July 16, 1866, and studied singing in Milan. He made his debut at the Royal English Opera House, London, Feb. 4, 1891, in Sullivan's *Ivanhoe* and immediately became a prime favorite on the operatic as well as the concert stage. In 1902 he organized his own company, with which he toured England and Ireland, and in 1908 he made a very successful tour of the United States.

O'NEIL, CHARLES. American naval officer, died February 28. He was born in Manchester, England, Mar. 15, 1842, and went to the United States at an early age. He entered the navy in 1861 and very soon became an officer on the sloop of war *Cumberland*. He was at the capture of Fort Hatteras, and was in an engagement with the Confederate iron-clad *Merrimac* and attacks on Fort Fisher. He won rapid promotion, eventually becoming rear-admiral in 1901. He retired in 1904.

ONO, YEMURO. Japanese banker, died at Tokio on November 26. He was born in 1864 at Yamagawa and studied at the Doshisha University, Kyoto, until 1880 when he went to the United States. He graduated from Oberlin College in 1887, and received the degree of Ph.D. at the University of Michigan in 1889. He returned to

Japan the year following and established a political school. He held several important banking posts and in 1913 became governor of the Industrial Bank of Japan.

ONTARIO. The second largest province of the Dominion of Canada (after Quebec), situated between Quebec on the east and Manitoba on the west. Area, 407,262 square miles; population according to the census of 1921, 2,933,662. The capital is Toronto, with a population in 1921 of 521,893. Other large cities: Ottawa (capital of the Dominion), 107,843; Hamilton, 114,151; London, 60,950. In 1925 there were 7069 elementary schools and 408 secondary schools, attended by 727,325 pupils, and taught by 17,977 certificated teachers.

Agriculture is the chief occupation of the province. The land under cultivation was estimated at 14,000,000 acres. The acreage and yield of the more important crops in 1926 were: Wheat, 922,512 acres, 20,018,000 bushels; oats, 2,831,755 acres, 94,864,000 bushels; barley, 449,095 acres, 13,967,000 bushels; rye, 86,355 acres, 1,580,000 bushels; flax, 7712 acres, 97,000 bushels; mixed grain, 770,981 acres, 27,293,000 bushels; other grains, 463,781 acres, 15,024,000 bushels; potatoes, 153,468 acres, 8,916,000 cwts.; roots, 107,181 acres, 16,495,000 cwts.; hay and clover, 3,883,722 acres, 4,443,000 tons; fodder corn, 367,772 acres, 3,211,000 tons. The farm values for 1925 were: Land, \$879,212,000; buildings, \$490,027,000; improvements, \$184,188,000; livestock, \$233,160,000. The total value of the metallic mineral production in 1925 was \$62,740,622; of the non-metallic minerals, \$23,052,014. The revenue for 1924-25 was \$46,602,803, and the expenditure, \$45,402,178. There are about 11,000 miles of railway.

The executive power is vested in a lieutenant-governor appointed for five years by the governor-general of Canada, and a responsible ministry; legislative power is in a single chamber of 111 members, elected for four years. Women have the franchise and the right to election to the chamber. Ontario is represented in the Dominion Senate by 24 members and in the House of Commons by 82. Lieutenant-governor in 1927, W. D. Ross; Prime Minister and President of the Council, G. Howard Ferguson; Attorney-general, W. H. Price; Treasurer, J. D. Monteith; Secretary and Registrar, L. Goldie; Education, G. Howard Ferguson; Agriculture, J. S. Martin; Public Works and Highways, G. S. Henry; Lands and Forests, W. Finlayson; Mines, Charles McCrea; Labor and Health, Dr. Forbes Godfrey; Ministers without Portfolio, R. J. Cooke, Leeming Carr, and D. Jamieson. Sale of liquor at government stores throughout Ontario was begun June 1. The new law which replaced the prohibition statute allows the government to sell liquor to persons possessing permits. See CANADA.

OPERA. See MUSIC.

OPERTI, ALBERT. Italian artist, died in New York on October 29. Born at Turin, Italy, Mar. 17, 1852, he entered the British navy as midshipman after attending high school in Dublin and Glasgow. Concluding that his real calling was to be painting, he resigned from the navy in 1868 and studied art in London and Paris. He went to New York in 1890 and commenced work as illustrator, caricaturist and scenic artist. Having made a study of Arctic history he

accompanied Lieut. Robert E. Peary on two expeditions into the polar regions.

OREGON. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 783,389. The estimated population on July 1, 1927, was 890,000. The capital is Salem.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Wheat, winter	1927	900,000	23,400,000	\$26,208,000
	1926	880,000	16,720,000	20,064,000
Wheat, spring	1927	165,000	3,882,000	3,788,000
	1926	146,000	1,986,000	2,383,000
Barley	1927	91,000	3,185,000	2,452,000
	1926	82,000	2,296,000	1,492,000
Hay	1927	1,138,000	2,342,000 ^a	25,143,000
	1926	1,147,000	2,084,000 ^a	21,294,000
Potatoes	1927	52,000	6,240,000	4,680,000
	1926	45,000	4,500,000	4,500,000
Corn	1927	81,000	2,918,000	2,770,000
	1926	75,000	2,475,000	2,475,000

	1926	804,000	8,816,000	4,408,000
Hops	1927	16,000	15,040,000 ^b	3,760,000
	1926	13,000	16,900,000 ^b	4,225,000

^a tons, ^b pounds.

MINERAL PRODUCTION. In point of total value of output, stone, sand and gravel and clay products constituted the chief part of the State's mineral production. The total of the State's mineral production in 1926, duplications eliminated, was \$7,826,711; in 1924, \$7,364,232.

The value of gold, silver, copper, and lead produced in Oregon in 1927 as estimated by the U. S. Bureau of Mines, was \$365,000, an increase of \$30,260, or 9 per cent, as compared with the value of metals produced in 1926. Gold increased 3 per cent, the output being estimated at 13,600 ounces, valued at \$281,000. The output of silver, 31,700 ounces, also showed an increase but there was a decrease in value, making the production \$18,000 in value. Copper amounting to 505,000 pounds, valued at \$65,700, showed an increase of 70 per cent in quantity and 58 per cent in value.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of the general departments of the State government in the fiscal year ending Sept. 30, 1926, were \$10,692,453; their rate per capita was \$12.23. They included \$444,105 apportioned for education. Totals not included in the above, of \$20,587 expended in public service enterprises, \$2,774,337 in interest and \$8,369,488 in permanent improvement outlays, brought the aggregate of State expenditure to \$21,856,815. Of this, \$9,343,838 was for highways; \$2,480,483 being for maintenance and \$6,863,355 for construction.

Revenue receipts were \$22,936,659; or per capita, \$26.54. Of their total, property and special taxes yielded 27.6 per cent, attaining a per capita rate of \$7.26. Earnings of departments and compensation paid the State for officials' services furnished 5.2 per cent of rev-

enue; 46.8 per cent was derived from the sale of licenses, chiefly on incorporated companies and on motor vehicles and from a gasoline sales tax.

Net State indebtedness on Sept. 30, 1926, was \$38,110,862, or \$43.61 per capita. Property subject to ad valorem taxation bore a valuation of \$1,084,537,619. State taxes levied thereon were \$5,031,170, or \$5.76 per capita.

TRANSPORTATION. The number of miles of railroad line in the State on Jan. 1, 1927, was 3,392.86. There were built in 1927 according to the *Railway Age* 47.25 miles of first track.

EDUCATION. By law the minimum requirement for certification of elementary school teachers was increased, from the previously existing requirement of 36 weeks, to 48 weeks from Jan. 1, 1929 to 60 weeks from Jan. 1, 1931 and to 72 weeks from Jan. 1, 1933. The school population of the State in 1927 was 256,885. There were enrolled in the public schools 185,959 pupils. Of these, 144,701 were in the elementary schools and 41,258 in high schools. Expenditure for public school education totaled, for the year, \$23,783,553. The salaries of teachers averaged, for men, \$167 60 a month; for women, \$119.08 a month.

CHARITIES AND CORRECTIONS. The State Board of Control exerted the central authority with regard to institutions of the State for individual care and custody. According to its latest biennial report, these institutions, with their populations on Sept. 30, 1926, were: Oregon State Hospital, 1861; Eastern Oregon State Hospital, 786; Oregon State Penitentiary, 499; State Institution for the Feeble-minded, 805; Oregon State Training School, 193; Oregon State Tuberculosis Hospital, 162; Oregon State School for the Blind, 46; Oregon State School for the Deaf, 119; Oregon State Industrial School for Girls, 72; Oregon State Soldiers' Home, 115; Oregon Employment Institution for the Blind, 54. According to statistics furnished by the Department of Commerce, inmates of the State penitentiary on Jan. 1, 1927, numbered 572; persons in State hospitals for mental disease, 2019.

LEGISLATION. The Legislature convened in regular biennial session January 10. It had before it the problem of meeting a State deficit of about \$1,500,000 in the form of overdue obligations left on its hands by the outgoing State administration. A provision of the State constitution limited the amount of taxation that could be imposed; Governor Patterson recommended that the Legislature initiate an amendment of this feature of the constitution and that it abstain from avoidable appropriation measures. It nevertheless enacted a considerable number of bills providing money for salary advances, armory construction, payment of claims and buildings for higher education, to an aggregate of \$1,800,000; these the Governor in large part vetoed. Measures submitting to the voters at a special election proposals to increase the State tax base to \$3,500,000 and to give the State Tax Commission supervision over county assessors were passed.

POLITICAL AND OTHER EVENTS. At a special election on June 28, proposals to raise taxes in order to restore State finances were heavily defeated. The Governor's proposed remedy of a State income tax was rejected by a majority of more than 20,000. The plan to fix a tax levy

base of \$3,500,000 and that to have the State Tax Commission supervise local assessments went down before still heavier majorities. The amendment of the State constitution with regard to the disqualification of negroes from the suffrage was approved, as were an amendment to criminal procedure and one to do away with swearing unregistered voters at the polls. A pay increase to \$10 for legislators and a measure relative to raising money for a veterans' memorial hospital in Portland were disapproved.

OFFICERS. Governor, I. L. Patterson; Secretary of State and State Auditor, Sam A. Kozar; Treasurer, Thomas B. Kay; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, Charles A. Howard.

JUDICIARY. Supreme Court: Chief Justice, Thomas A. McBride; Associate Justices, Henry J. Bean, John L. Rand, George M. Brown, George H. Burnett, Harry H. Belt and O. P. Coshaw.

OREGON, UNIVERSITY OF. A State institution of higher education at Eugene, Oregon; founded in 1872. The enrollment for the autumn term of 1927 was 3073, divided as follows: freshmen, 881; sophomores, 703; juniors, 574; seniors, 474; graduate students, 95; law school, 73; medical school, 223; specials, 50. Of this total 1753 were men and 1320 women. In the summer session of 1927, 1243 were registered, of whom 332 were men, and 911 women; of these 1035 were under-graduate and 208 graduate students. The faculty in the autumn term of 1927 numbered 204.

In October, Burt Brown Barker, LL.B., an attorney of New York City, was elected vice president of the University, to be associated with the president in the administration of its affairs. The total income for the year 1927 was \$1,625,918.16. The main library contained 179,567 volumes and the medical school library 7500. During the year the University received a gift of \$128,500 from the General Education Board for the medical school and a bequest valued at approximately \$50,000 from Mrs. Mary Ross Woodward, for the construction of a men's dormitory. President, Arnold Bennett Hall, J.D., LL.D.

OREGON STATE AGRICULTURAL COLLEGE. An institute for higher education at Corvallis, Oregon; founded in 1868, when the State designated Corvallis College as the recipient of the Federal land-grant funds and began to appropriate State funds. It was permanently designated as the State agricultural college in 1870 and became wholly a State institution in 1885. Degrees are granted in 10 schools. The enrollment for the fall term of 1927 was 3433, of whom 2312 were men and 1121 women. The summer session registration was 1194. There were 299 members on the teaching faculty. The income for 1926-27 from the original land-grant fund and other Federal funds, from the State of Oregon (millage tax), student fees, etc., as well as certain appropriations from Oregon counties for extension work, totaled \$2,417,932, as follows: resident instruction, \$1,340,779; agricultural experiment station, \$241,951; extension service, \$298,775; student activities funds, \$165,151; miscellaneous, \$371,276. There were 75,221 volumes in the library. A new poultry building, of brick and terra cotta, three stories high, was completed during the year, the cost being \$106,976. New greenhouses, costing \$61,749, were also completed. A new Physics

Building, costing \$144,377, and the Memorial Union Building, costing \$500,000, were under construction.

ORISKANY, N. Y. See CELEBRATIONS.

ORNDOFF, WILLIAM R. American educator, died at Ithaca, N. Y., November 1. He was born Sept. 9, 1862, at Baltimore, Maryland, and was educated there at City College and Johns Hopkins University. He afterwards studied at the Universities of Greifswald, Berlin, Heidelberg and Munich. He joined the department of chemistry at Cornell University and eventually became professor of organic chemistry. He translated Dr. E. Salkowski's *Laboratory Manual of Physiological and Pathological Chemistry* (1904), and was co-author in the revision of Remsen's *Organic Chemistry* (1922).

OSPINA, GENERAL PEDRO NEL. Colombian statesman and ambassador, died July 1. Born in Bogotá, July 24, 1858, he was the son of a former president of Colombia. He received an early education in Bogotá afterwards studying at the University of California and Europe. He served in the State Assembly of Antioquia for several years, and distinguished himself on the side of the government during the revolutionary years of 1889-1902. For a brief period he was Minister of War. At the outbreak of the World War he was Minister to Belgium, returning home to become Governor of Antioquia where he contributed much to the development of its industries.

OSTERHAUS, HUGO. American naval officer, died at Castle Point, N. Y., on June 11. Born June 15, 1851, at Belleville, Illinois, he was graduated at the U. S. Naval Academy in 1870, and rose in successive promotions till he became commander in 1901, captain in 1906, and rear-admiral in 1909. After serving at sea he was a member of the teaching staff of the Naval Academy in 1892-95, in 1897-99 and in 1901-03. He commanded the *Cincinnati* from 1904 to 1905, was member of the board of inspection and survey 1905-07, commanded the second division of the Atlantic fleet in 1910, and was commander-in-chief of that fleet in 1911. On June 15, 1913, he was retired.

OTTAWA. See CELEBRATIONS.

PACIFIC RELATIONS, INSTITUTE OF. This Institute, as described in the *YEAR BOOK* for 1925, is an unofficial conference and research body made up of study groups in the various countries of the Pacific area, maintaining permanent headquarters and a central secretariat at Honolulu, Hawaii. It is definitely an inquiry body, endeavoring through the frank revelation of facts about the countries and the peoples involved to arrive at a clearer understanding of the problems which arise amongst these countries and peoples. It does not essay to solve those problems, but to give to the world data upon which such solutions might be based. It seeks to arrive at these more or less obscure data through two channels: (1) a full, free discussion of the factors which usually do obscure facts—prejudices, racial and national antipathies, misconceptions, and grievances; (2) organized research into vital conditions in the countries themselves.

1927 CONFERENCE. The second biennial conference of the Institute took place in Honolulu

in July. Nine national groups located or having vital interests in the Pacific area met through their unofficial representatives around the discussion tables of the Conference. The members numbered 136, 5 each from Australia and New Zealand, 15 from Canada, 14 each from China and Great Britain, 3 each from Korea and the Philippines, 18 from Japan, and 44 from the United States. The Hawaii Council had 15 members.

President Ray Lyman Wilbur of Stanford University, California, presided over the general sessions of the Conference and the meetings of the Pacific Council. The Conference agenda covered a wide range of questions vital to the existence of Pacific peoples. These subjects were developed principally in informal round table discussions, based upon the results of research presented in the form of data papers by the various groups and circulated among the members in advance.

The programme consisted first of three general sessions at which the background was painted in, in preparation for the detailed discussion of concrete problems which was to follow. Comprehensive addresses were made covering the physical, or geographic, aspect of the Pacific area as it has bearing upon the relations of its peoples; the races of the Pacific as a key to an understanding of their diverse attitudes and interests; and the essence of the Pacific problem of peaceful relationship as it presents itself to the world. Further brief statements were made on behalf of the respective national groups attending the conference, in which were given résumés of conditions in those countries during the two-year interim since the first conference. These statements presented succinctly the aims, aspirations and grievances of each nation. The subjects were as follows:

1. China's External Political Relations (a) Tariff Autonomy, (b) Extraterritoriality (c) Concessions, Settlements and Leased Territory. 2. Population and Food Supply in Pacific Countries. 3. The Mandated Territory of the Pacific. 4. International Education and Interracial Relations. 5. An Evaluation of Foreign Missions as a Factor in Pacific Relations. 6. Communications in the Pacific Area. 7. Foreign Investments as an Influence in the Orient. 8. Diplomatic Relations between Pacific Countries. 9. Industrialization of the Orient. 10. Problems of Immigration and Emigration on the Pacific.

PACIFIST MOVEMENTS. See PEACE AND PEACE MOVEMENTS.

PACKING INDUSTRY. See LIVESTOCK.

PAHANG, pūhāng'. See FEDERATED MALAY STATES.

PAINE, WILLIS SEAVER. American banker, died in New York City on April 13. Born in Rochester, N. Y., Jan. 1, 1848, he was graduated from the Rochester Collegiate Institute in 1864, and from the University of Rochester in 1868. While still in college he studied law, continued this work after graduation and was admitted to the bar in 1869. He became New York State Superintendent of Banks in 1885. Later he was chairman of the finance committee of the Tradesman's National Bank and president of the Consolidated National Bank of New York. Mr. Paine was an organizer of the trust company section of the American Bankers Association. His books on the New York and National banking laws went through many editions.

PAINTING AND SCULPTURE. The year 1927 in the art world was noteworthy for an unprecedented activity in the auction galleries,

in which the grand total of sales far outstripped the season of 1925-26, and also by the astonishing number of significant exhibitions held in New York galleries. (See ART EXHIBITIONS.)

Through the bequest of the late Lord Iveagh, the British nation came into possession of his wonderful estate, outside of London, to be used as an art museum for his collection of old masters, principally English eighteenth century, and valued at 300,000 pounds.

Interesting single events in the world of art were: the discovery of a Rembrandt painting among old paintings stored away in the National Art Museum of Budapest; a fine example by Rubens, "Saint Cecelia," was unearthed in London; a painting by Titian was discovered in Vienna, a religious subject, "Virgin Reading a Book with the Christ Child in her Arms"; "Portrait of a Nun," by Velásquez, found in a convent in Spain. In Venice the Palazzo Balbi a beautiful sixteenth century edifice was restored, richly furnished and opened to the public; also the Ca'd'Oro, one of the most beautiful of Venetian palaces of the fifteenth century was thrown open as a public museum. The Italian government purchased the famous Villa Farnesina, erected in Rome in 1511 after designs by the famous architect Peruzzi, to be used as a public monument. The long anticipated statue erected to the memory of Paul Cézanne was completed in the Luxembourg Gardens, Paris, and in Spain occurred the centenary celebration of its great painter Francisco Goya.

In New York City the old Gracie Mansion was converted into a Museum of the City of New York; and a "Gallery of Contemporary Art," the first in America, was established by New York University. The new buildings for the California School of Fine Arts were completed and opened in San Francisco. The commission for the monument to "The Pioneer Woman," to be erected in Oklahoma through the generosity of E. W. Marland, was awarded to Bryant Baker as the result of a nation-wide vote. His model depicts a young mother in a sunbonnet with a Bible under her arm, leading her little son by the hand. Maurice Sterne, in competition with ten of America's foremost sculptors, was awarded the commission for the monument to "New England's Founders," to be erected as a gift from the late Mrs. Rogers Kennedy. The winning design consists of a large base with figures in relief surmounted by two monumental figures of a young man and a young woman, the whole treated in a simple yet grandiose manner.

BIBLIOGRAPHY. Notable art publications of the year include: Frank Jewett Mather, Jr., *Modern Painting*; André S. Blum, *A Short History of Art: From Prehistoric Times to the Present Day*; a vast and complicated subject compressed into one volume more perhaps like a compilation of innumerable facts than a history of art; Thomas Bodkin, *The Approach to Painting*; Clive Bell, *Landmarks in Nineteenth Century Painting*, a sprightly and entertaining volume; Oscar Hagen, *Art Epochs and their Leaders*; John C. Van Dyke, *New Guides to Old Masters, Florence*; an interesting and stimulating guide-book by America's veteran art critic; Isham and Cortissoz, *History of American Painting*; E. A. Gardiner, Litt.D., *The Art of Greece*, a scholarly work; Wehle and Bolton, *American Miniatures*, a fine comprehensive treatment;

Spanish Art, the *Burlington Magazine* monograph containing the most comprehensive view of this subject yet published in English; Joseph Pijoan, *History of Art*; a monumental work in Spanish; E. Flagg, *Early American Children's Books*; Osbert Burdett, *William Blake*; The Hon. Evan Charteris, K. C., *John Sargent*; Franz Drey, *Carlo Crivelli*, a critical and scholarly volume; J. B. Manson, *Life and Work of Edgar Degas*; an excellent exposition of this modern master; R. L. Hobson, *Chinese Art*, a monumental effort.

NECROLOGY. The necrology list of 1927 included, among American painters and sculptors: Edward Henry Potthast, well-known mural and landscape painter, especially noted for brilliantly handled beach scenes; Elizabeth Wentworth Roberts, landscape painter; Frederick Melville Dumond, painter of the western desert, brother of Frank Vincent Dumond; Helen K. McCarthy, landscape and portrait painter; Oliver Dennett Grover, landscape painter, well-known member of the Chicago Artists' Association. Also, Guy Lowell, internationally known architect, designer of the Boston Museum of Fine Arts, the new Court House, for New York City, and many other important public buildings; Dr. George Byron Gordon, director of the University of Pennsylvania Museum, one of the world's best-known archaeologists, whose untimely death was caused by a fall down a flight of steps; John Fraser, president of the J. J. Gillespie Fine Arts Gallery of Pittsburgh; George Leland Hunter, tapestry expert and writer; Max Williams, art collector and dealer in prints, Henry E. Huntington, world-famous art collector.

In Great Britain the list includes: Sir Luke Fildes, R. A., veteran figure and portrait painter; Ambrose McEvoy, portrait painter, well known for his charming renditions of the British aristocracy and wealthy Americans; Frederick Cayley Robinson, painter; Sir Whitworth Wallis, Keeper of the Birmingham Art Museum; John Crompton, headmaster of Heatherley's Art School; Henry Holliday, designer of stained glass and painter of the oft reproduced "Meeting of Dante and Beatrice"; Sir Sidney Colvin, veteran art critic; J. D. Milner, Director of the National Portrait Gallery; Martin Leggett, print expert, and Eugene Cremetti, well-known art dealer.

From Spain were reported the deaths of Gili Roig, landscape painter; Enrique Estevan, painter of military subjects; Mariano Pedrero, painter and illustrator; Olivier Aznar, portrait painter; Martinez Acosta, landscape painter. In France occurred the death of Armand Guillaumin, last member of the original group of Impressionists, and intimate friend of Monet, Renoir, Pissarro and Cézanne, aged 87 years. Others from the European list were: Ettore Ximenes, one of Italy's foremost sculptors; Adolph Hengler, Munich painter and teacher; Professor Darmstädter, connoisseur of porcelain; Hermann Muthesius, a pioneer in modern architecture and arts and crafts in Germany; Giulio Glatzer, well-known Hungarian painter; Dr. Gabriel de Ferey, late director of the Museum of Fine Arts, Budapest; M. Fierens-Gevaert, of the Royal Museum of Brussels, and Abraham Preyer, retired art dealer, also of Brussels. See also ART EXHIBITIONS; ART MUSEUMS; ART SALES; and special biographical articles on artists who had died during the year.

PALÆONTOLOGY. See GEOLOGY.

PALESTINE. A territory comprising that part of historic Palestine which lies to the west of the River Jordan; formerly a vilayet of the Turkish province of Syria; since the War a new state organized under British mandate, providing a national home for the Jews.

AREA AND POPULATION. The area of Palestine under British mandate is about 9000 square miles. The population, according to the census of Oct. 23, 1922, was 757,182, of whom 590,890 were Moslems; 83,794 Jews; 73,024 Christians; 7028 Druses; 163 Samaritans; 265 Bahais; and the remainder Sikhs, Hindus, and Metawilehs. Capital, Jerusalem, with a population in 1922 of 62,678. Other large towns with their populations in 1922 are: Jaffa, 47,709; Haifa, 24,634; Gaza, 17,480; Hebron, 16,577; Nablus, 15,947. The Jewish settlements are grouped in the four districts of Judea, Samaria, and Upper and Lower Galilee. The total population of Jews permanently settled in Palestine has risen since the war from 55,000 to 130,000, or nearly 70 per cent of the entire population. The fact that the proportion of immigrants having independent means is rapidly increasing is even more important for the future economic development of the country than is the increase in the actual number of immigrants.

Fewer immigrants entered Palestine in 1926 than in 1925, the total for the year being 13,910; emigration, which in 1926 totaled 9429, left a net gain of 4481. The tide of emigration set in early in June, 1926, on account of the crisis and continued to the end of the year. It is estimated that 13,000 tourists visited Palestine in 1926, 75 per cent coming from the United States.

EDUCATION. The approximate number of children between the ages of three and 18 in Palestine is as follows: Moslems, 175,000; Jews, 48,000; Christians, 25,000. The schools maintained by the government number 315 and contain 19,881 scholars, the great majority of whom are Moslems. The Christian and Jewish communities provide to a very large extent for the education of their own children. The Zionist organization controls 255 educational institutions attended by about 25,500 pupils. The Christian schools, maintained by various foreign and local religious bodies, number about 184, including several secondary schools and two higher colleges; some 15,700 pupils are on their rolls. There are also about 50 private Moslem schools maintained by local committees and attended by about 3500 children. A Hebrew University on Mount Scopus, Jerusalem, was inaugurated on Apr. 1, 1925.

PRODUCTION. Agricultural production was lower in 1926 than in 1925, the adverse weather conditions having such a serious effect that the crop of oranges, the only export commodity of importance, totaled only 1,515,000 cases as against 2,148,000 cases in 1925. The decrease was attributed to frosts at the beginning of 1926. Owing to the increased production of Jaffa oranges, growers were endeavoring to develop new markets for this product. Keener competition was being encountered abroad from Spanish oranges, and the need of new markets was considered important. England continued to be Palestine's most important market for oranges, followed by Egypt and Turkey. Cereal crops were badly affected by abnormal heat dur-

ing the growing season. The 1926 crop of tobacco totaled 1,040,000 pounds, as against 1,270,000 pounds in 1925. Acreage planted was slightly less, but quality was reported to be better.

Industrial production during 1926 included 44,500 tons of artificial Portland cement; 4,563,563 sand-lime bricks; and 489 tons of cigarettes, cut tobacco, and tumbak as against 434 tons in 1925. The production of salt is a government monopoly; during 1926, 5549 tons of salt were sold, as compared with 4794 tons in 1925.

COMMERCE. Palestine's foreign trade in 1926, exclusive of goods in transit and specie shipments, was marked by a 12 per cent reduction in imports as compared with 1925. The imports in 1926 were valued at ££6,429,245 (\$32,146,225). Imports in transit in 1926 amounted to ££73,251 as compared with ££71,776 in 1925; the corresponding values for specie imports were ££10,835 and ££193,656. The grand total of imports during 1926 thus reached the aggregate of ££6,513,331, as compared with ££7,603,923 in 1925. The export trade of Palestine, exclusive of transit, specie, and reexport items, during 1926 amounted in value to ££1,275,625 (\$6,378,125).

FINANCE. Returns for the 1925-26 fiscal year in Palestine showed receipts of ££2,739,090 and expenditures of ££2,040,330, or a surplus of ££698,760. The Palestine loan of £4,500,000 was approved by the British government at the end of 1926. From this loan the government has made provision of about £2,000,000 for payment on account of Palestine's public debt; the balance is designated for public works—railway construction, port improvement, etc.—and for the acquisition of the existing railway from the British government.

The Government of Palestine had taken steps for the issuance of a separate currency for Palestine in place of the Egyptian currency now circulating. The standard unit was to be the Palestine pound, divided into 1000 mills and equivalent in value to the pound sterling. It was expected that the currency would be ready for issue during the second half of 1927. The Egyptian money now in circulation, which is estimated at ££1,300,000, will be gradually withdrawn.

COMMUNICATIONS. During 1926 foreign shipping to the extent of 2651 steam and sailing vessels, with an aggregate register of 1,614,434 tons entered Palestine ports. In the coastal trade 1043 vessels of 728,958 tons were engaged. The railway lines total slightly over 774 miles and are all operated by the government.

GOVERNMENT. Under the constitution adopted on Sept. 1, 1922, executive power is vested in a High Commissioner and an executive council, and legislative power in a body of 22 members besides the High Commissioner, consisting of 10 official and 12 unofficial members. The latter are elected and there must be not less than two Christian and two Jewish members. The Jewish population has an unofficial elected National Committee to represent the Jewish population in its dealings with the administration. The British government and Palestine administration recognize the World Zionist Organization which in Palestine is represented by the Palestine Zionist Executive, as the agency of the Jewish people in all matters pertaining to the upbuilding of the Jewish National Home.

High Commissioner in 1927, Field-Marshal Lord Plumer (appointed July 1, 1925).

HISTORY. Palestine passed through a very severe year in 1927 from the point of view of economic development. The crops were poor, trade was stagnant, and a severe earthquake added to the woes of the country in July. Extensive property damage was placed at \$1,000,000 to \$2,000,000 and the number of casualties at 1000 of whom about 200 were killed. Many of the newer houses built since the war were destroyed, while the older ones which had been through many earthquakes previously suffered the least damage. Press accounts stated that it was the worst disturbance in more than a century. In December serious labor troubles were reported from the orange groves of Petach Tikveh, when Jewish laborers attempted to prevent Arab workers from going to the groves. For the Zionist movement, see **JEWS**.

PALMER, WILLIAM PENDLETON. An American steel manufacturer, died at Cleveland, Ohio, December 17. He was born in Pittsburgh, Pa., June 17, 1861, and graduated from the Central High School of his native city in 1878. He commenced his business career as an office boy in the employment of the Carnegie Company in Pittsburgh. He became secretary of Carnegie, Phipps and Company in 1887, assistant to the president of the Carnegie Steel Company, 1895, and in 1899 he was appointed president of the American Steel and Wire Company, a post he held until his death.

PANAMA. A republic of Central America, lying between Costa Rica and Colombia, constituting an independent state after November, 1903; formerly a department of Colombia. Capital, Panama.

AREA AND POPULATION. Panama has an extreme length of 480 miles, and its width varies from 37 to 110 miles. The area is estimated at 32,380 square miles; population, according to the census of 1921, 442,486. The natives are a mixed race, combining Spanish, Indian, and negro blood. The larger cities are: Panama, the capital, 59,458; Colon, 31,203. The movement of population in 1925 was: Births, 12,013; deaths, 6020; marriages, 589. Of the births, 8617 were illegitimate.

EDUCATION. Elementary education is compulsory and free for all children from seven to 15 years of age. There were 446 primary schools in 1926, with 1492 teachers and an enrollment of 54,214 pupils; the number of private schools reached 71 with an enrollment of 9156 pupils; and the enrollment in the night schools for adults was 1345. The number of students enrolled in the National Institute amounted to 1573. In the industrial and vocational courses the enrollment was 573, with an average attendance of 520.9. In the Normal School the enrollment was 696 and the average attendance 666.2. The enrollment in the higher courses (law, pharmacy, agriculture) was 67 and the average attendance 58 students.

PRODUCTION. Panama possesses a very rich soil, but only a very small part of it is properly cultivated. The chief product is the banana, but the growing of coffee, sugar and tobacco is becoming important. The banana crop in 1925 was valued at \$1,500,000. Coffee is grown in the regions along the Costa Rican frontier. Other products include rubber, cacao, coconuts, cabinet woods, copaiba, sarsaparilla, and ipecacuanha.

COMMERCE. In 1926, the total foreign trade amounted to \$16,938,729, of which \$14,288,729 represented imports and \$2,650,000 exports (estimated). The imports in 1925 were valued at \$14,592,053 and the exports at \$2,796,000 (estimated).

FINANCE. As the National Assembly had passed no budget law for the two-year period from July 1, 1927 to June 30, 1929, President Chiari issued decree No. 65 on Aug. 19, 1927, basing the new budget on the former but omitting items valid once only and adding others authorized by the National Assembly. The budget for 1927-28 was balanced at \$14,302,488, to be expended as follows by the following ministries: Government and Justice, \$3,943,932; foreign relations, \$595,875; treasury, \$3,766,740; public instruction, \$3,050,500; agriculture and public works, \$2,945,441. Special funds available outside the regular budget included: Chiriqui Railroad extension loan, \$2,351,261; highway loan, \$365,389; Bocas del Toro waterworks, \$100,000; sum for payment on national defense bonds, \$6500; and deposit in National City Bank of New York for payments on the loans of 1926-36 and 1926-61, \$188,077.

COMMUNICATIONS. A railway 47 miles long, belonging to the United States government, connects the ports of Colon and Panama. In the Province of Bocas del Toro, the United Fruit Company owns about 140 miles of track with branches. This railroad line extends into Costa Rica and its eventual terminal will be Port Limon.

GOVERNMENT. Under the constitution adopted Feb. 13, 1904, and amended Dec. 26, 1918, executive power is vested in the president elected for four years and ineligible for the succeeding term; and legislative power in a chamber of deputies of 46 members, elected for four years. President in 1927, Rodolfo Chiari, assumed office, Oct. 1, 1924.

HISTORY. At the beginning of the year there was serious opposition to the treaty signed between Panama and the United States which was discussed in the preceding YEAR BOOK. The legislature virtually rejected the treaty and suggested that President Chiari negotiate further with the United States. The provisions of the treaty virtually made Panama a possession of the United States in war time and a military protectorate in peace time. Another cause of friction, which was the basis of an exchange of notes between the two governments, and which caused considerable anti-American feeling in the Central American republic, was the claim that the stores operated in the Canal Zone caused a considerable loss of trade in the neighboring country. To the government's contention that these stores were operated in violation of the Canal Treaty, President Coolidge replied that this matter was specifically provided for by the treaty of 1926 and would be cleared up when that treaty was ratified. Panaman organizations threatened the use of the boycott against American goods.

A slight flurry was caused in the Assembly of the League of Nations in September when the representative from Panama claimed that his country had sovereignty over the entire Panama Canal Zone despite the rights which had been granted to the United States government there. If the United States failed to recognize this sovereignty the League should in-

tervene and the matter should be taken up with the Permanent Court of International Justice at The Hague. Secretary of State Kellogg stated shortly afterwards that there had never been any discussion concerning the sovereignty of the Canal Zone with the Panaman government and that, even if there were, the League of Nations had absolutely no jurisdiction in the matter. The President of Panama requested the League delegate to explain his actions, which were not in accord with his own (the President's) views. Nothing further came of the subject and the year closed without any action being taken on the troublesome question of the treaty with the United States.

PANAMA CANAL. The total number of commercial transits and the aggregate tolls collections for the calendar year 1927 established new high records for a year's traffic through the Canal. The commercial transits, 6085 in number, exceeded by 610 the previous record of 5475 transits for the fiscal year ending June 30, 1927, and the tolls collected aggregated \$26,231,022.94, which was \$1,940,059.40 in excess of the collections making the previous record of \$24,290,963.54 for the fiscal year ending June 30, 1924. In 1926, \$23,901,540.04 was collected for 5420 transits.

of 43,084 ships with a Panama Canal net tonnage of 189,925,662 and carrying 200,741,014 tons of cargo, transited the Canal, paying \$180,295,060.65.

PANAMA CANAL ZONE. The strip of land five miles wide on each side of the Panama Canal granted to the United States in the treaty of Nov. 18, 1903. Area, 441½ square miles, of which 106½ are taken up by Gatun Lake; civil population, June 30, 1926, 27,692, of whom 7990 were Americans. The above-mentioned treaty provided that the cities of Panama and Colon were to remain within the jurisdiction of Panama, but the United States was to have control over both the cities and their harbors in matters pertaining to sanitation and quarantine. The status of the zone is that of a military reservation under the governor of the Panama Canal, appointed by the President of the United States. Governor in 1927, Col. Meriwether L. Walker, U. S. A. See PANAMA CANAL.

PAN AMERICAN LABOR CONGRESS. See TRADE UNIONS.

PAN AMERICAN UNION. An international organization maintained by the 21 American republics for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a Govern-

* Includes \$3,400.54 collected against a transit of December, 1926.

Of the total of 6085 commercial transits for the year, 1336 were tank ships, of a combined net tonnage of 7,641,345, Panama Canal measurement, carrying a total of 7,083,480 tons of mineral oil products, and yielding \$6,659,189.94 in tolls. This class comprised 21.9 per cent of the total commercial transits for the year and 26.6 per cent of the total Panama Canal net tonnage, paid 25.4 per cent of the tolls collected, and carried 24.3 per cent of the total cargo carried in commercial vessels through the Canal during the year.

From the opening of the Panama Canal to traffic, Aug. 15, 1914; to Dec. 31, 1927, a total

ing Board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a director general and assistant director chosen by this board.

During the year six important Pan American meetings were held; the Third Pan American Commercial Conference with representatives from each republic of the continent, assembled at Washington, which had a success surpassing all expectations; the First Pan American Conference of National Directors of Public Health, Washington; the International Commission of Jurists, Rio de Janeiro; the Second Pan Amer-

ican Standardization Conference, Washington; the Inter-American Commission on Commercial Aviation, Washington; and the Third Pan American Congress of Architects, Buenos Aires. The Union carried on its activities to give effect to the treaties, conventions, and resolutions of the sixth international conference, and prepared a programme for the seventh conference. During the year the Union followed its usual custom of furnishing illustrated material and programmes of study for stimulating the study of Latin-American history and culture in the schools of the United States.

Among the publications of the Union in use in universities, colleges, and schools throughout the United States and in various other lands were: *Seeing South America, Ports and Harbors of South America, Seeing the Latin Republics of North America, and Viajando por Los Estados Unidos*. In addition to these, the Union publishes a *Bulletin*, in Spanish, Portuguese, and English, and booklets on South American countries, their capitals, products, agriculture, education, etc. During the year about 50 of these publications were issued. Statistical matter compiled by the Union related to inter-American commerce, and included a general survey of Latin-American trade for the year. The Union extended its services to women's clubs, and continued its policy of giving radio nights, introducing Latin-American music into the United States. The Pan-American Sanitary Bureau, located in the Union building at Washington, placed at the disposal of the republics of the continent the results of the sanitary progress of the year. It issues the *Pan American Sanitary Bulletin* monthly and distributes it throughout the Latin-American republics. The director general was Dr. L. S. Rowe; assistant director, Dr. Esteban Gil Borges. The headquarters are in the Pan American Union Building at Washington, D. C.

PAN-PACIFIC EDUCATIONAL CONFERENCE. See EDUCATION.

PAN-PACIFIC UNION. During 1927, this union organized branches in the Orient and in America, as well as of the Pan-Pacific Research Institution to conduct scientific investigations. Under its auspices the Junior Pan-Pacific Science Council also was organized. The Pan-Pacific Research Institution in Honolulu has seven acres of land and several fine buildings, the main one being used as a guest house for visiting scientists and as an assembly place for small science conferences. One of the buildings is used by students of all Pacific races who attend the University of Hawaii preparing themselves as future scientific workers; another building is turned over to the Junior Council as a museum, laboratory, lecture hall and for their radio experiment rooms and for photographic work.

Balboa or Pan-Pacific Day, September 17, was observed in many of the larger cities about the Pacific, the Pan-Pacific clubs holding their annual meetings and inviting men of all Pacific races. The Pan-Pacific Union had called for 1928, three important conferences—the Second Pan-Pacific Press Congress in Honolulu in July, the Second Pan-Pacific Commercial Conference in Los Angeles in August, and the First Pan-Pacific Women's Conference to meet in Honolulu early in July. In the summer of 1929 the Pan-Pacific Medical Congress was to be held in

Hawaii and in 1930 the Pan-Pacific Ethical Conference.

PAPER. The statistical report of the American Paper and Pulp Association, covering the year 1927, indicated decreased production of both paper and wood pulp, the estimates showing a decline in total United States paper production of 3 per cent and 6.5 per cent for United States wood pulp products. The United States wood pulp products for 1927 stood at 4,117,000 tons, as compared with 4,395,000 tons in 1926. There was a decrease for all varieties except sulphate pulp which, used in the production of kraft and for test liner board, showed an increased demand in these fields. The estimated wood pulp production in 1927 by classes, as compared with 1926, is as follows:

UNITED STATES WOOD PULP PRODUCTION, 1927

	1927	1926
Mechanical	1,580,000	1,774,000
Soda	482,000	497,000
Sulphate	575,000	523,000
Sulphite	1,545,000	1,599,000
Total	4,117,000	4,395,000

In 1927 paper production was approximately 9,703,496 tons as compared with 10,000,000 in 1926. The most notable decline was in newsprint where the United States production was 11 per cent less than in the preceding year. This was not due to a decline in the consumption but was largely due to an increase of imports of newsprint into the United States. The estimated total production of wrapping paper showed an increase of 70,000 tons in 1927, due to the increased production of Southern kraft paper. Book paper showed a slight decrease, though in some individual fields there were more favorable tonnage reports. The decline in residential building in 1927 affected the production of felts and building paper, while the production of boards was slightly below that of the previous year. Writing and tissue paper showed increases over 1926. The accompanying table, compiled by the American Paper and Pulp Association gives comparative figures for the two years in the leading departments of paper production.

UNITED STATES PAPER PRODUCTION

	1927	1926
Newsprint*	1,485,495	1,686,000
Book	1,376,000	1,411,000 ^b
Board	3,577,000	3,650,000 ^b
Wrapping	1,520,000	1,450,000 ^b
Writing	515,000	500,000 ^b
Tissue	310,000	300,000 ^b
Hanging	118,000	110,000 ^b
Cover	26,000	24,285
Felts and building	582,000	600,000 ^b
Absorbent	70,000	65,000
All other	124,000	203,115
Total	9,703,495	10,000,000

* Newsprint Service Bureau figures.

^b Approximate—no census made in 1926.

Paper base stocks valued at \$113,632,216 were imported into the United States in 1927, as compared with imports valued at \$121,505,691 in 1926. These imports included: pulpwood, classified as rough, 431,251 cords valued at \$4,239,933; peeled, 1,074,330 cords valued at \$11,013,862; and rossed, 91,216 cords valued at \$1,230,550; wood and other pulp mechanically ground, 219,285 tons valued at \$5,961,821; sulphite wood pulp, 924,986 tons valued at \$68,

487,471. The latter was of two kinds, bleached and unbleached, and was supplied principally by: Canada, 350,910 tons valued at \$23,397,895; Sweden, 346,244 tons, valued at \$20,607,401; Finland, 74,701 tons valued at \$3,781,986; Norway, 67,675 tons, valued at \$5,020,809; Germany, 50,828 tons valued at \$3,589,647. Sulphate wood pulp, unbleached (kraft pulp) valued at \$20,084,298, as compared with a valuation of \$21,193,459 in 1926, came principally from Sweden which supplied 176,444 tons valued at \$10,262,487 and from Canada which supplied 138,660 tons valued at \$9,029,923; imports of sulphate wood pulp, bleached, totaled 10,789 tons, valued at \$708,712, as compared with 16,147 tons, valued at \$1,264,028 in 1926. The imports of rags for paper stock totaled 388,107,988 tons, valued at \$7,646,864, a decrease from 1926, when the total value was \$10,372,689.
